If people do not believe that mathematics is simple, it is only because they do not realize how complicated life is.
John von Neumann

Do not worry about your difficulties in mathematics; I can assure you that mine are still greater.
Albert Einstein

I dedicate this book to my son, Alexandru, to whom I spoke about mathematics during a time in which he had not yet come into contact with the formalism and symbolism of mathematics. I am sure that the potential “shock” of this contact will thereby be at least ameliorated.

Contents

Foreword	7
Introduction	15
“Mathematics is ...”	23
1. Primary concepts of mathematics	29
1.1 What is a number?	35
1.1.1 Ordinal and cardinal numbers	37
1.1.2 Axiomatization of numbers and arithmetic	40
1.1.2.1 Arithmetical axiomatization	41
1.1.2.2 Logical axiomatization	54
1.1.3 Do numbers exist?	65
1.1.4 From natural numbers to integer, rational, real, and complex numbers	69
1.1.4.1 From natural numbers to integers	75
1.1.4.2 From integers to rational numbers	79
1.1.4.3 From rational numbers to real numbers	83
1.1.4.3.1 Dedekind’s “cuts”	84
1.1.4.4 From real numbers to complex numbers	89
1.2 What is a set?	99
1.2.1 The logical nature and the mathematical nature of set	100
1.2.2 Can there be sets of any things?	105
1.2.3 Set and class	112
1.2.4 Set theories, infinity, and paradoxes	118
1.2.4.1 Cantorian set theory	119
1.2.4.1.1 Burali-Forti and Russell paradoxes	123
1.2.4.2 Axiomatized set theories	128
1.2.4.2.1 The simple theory of types	129
1.2.4.2.2 Zermelo’s theory	132
1.2.4.2.3 Zermelo-Fraenkel theories	134
2. Methods of mathematics	145
2.1 Method of self-reference and self-application	145
2.2 Method of abstraction, generalization, and extension ...	148
2.3 Axiomatic method	159
2.4 Proof method	162
3. Language of mathematics	167
3.1 Definition	171

3.1.1 Validity criteria of a definition	172
3.1.2 Roles of definition	177
3.2 Propositions of mathematics – axiom, lemma, theorem, corollary, consequence, conjecture	182
3.2.1 Incompleteness of mathematics	190
4. Symbolism of mathematics	199
4.1 Conceptual reading of symbolic expressions	205
5. Structures of mathematics	217
5.1 Classical (set-theoretic) structure	217
5.1.1 Equivalent structures	220
5.2 Mathematical structures and types of mathematical structures	226
5.2.1 Bourbaki typology	228
6. Roles of mathematics	237
6.1 Representational role	238
6.2 Semantic role	240
6.3 Descriptive role	242
6.4 Constitutive role	243
6.5 Inferential role	244
6.6 Explanatory role	245
6.6.1 Insects, evolution laws, and mathematics	248
6.7 Predictive role	251
7. Application and applicability of mathematics	257
7.1 What is a mathematical model	259
7.2 Inferential character of application of mathematics	267
7.3 From the “mysteries” of the success of applied mathematics	270
8. Understanding mathematics	281
8.1 Problems solved through the conceptual approach	291
Afterword	301
Bibliography	307
