[7:2:208] The second of the suborientations within cosmocentrism is that which shall henceforth be known as reinvigorationism and remains similar in essence to the reascensionist movement but the reinvigorationist movement differs in that it advocates for the return of the worldwide and human-wide enthusiasm for space exploration on a cultural, philosophical, and intellectual level rather than just a financial and economic level.

[7:2:209] This makes reinvigorationism highly cosmocentric by its nature as it not only advocates for the centralisation of The Cosmos, but also the practices associated with The Cosmos which can be collectivised in the term of astrocentrism which remains a closely associated term to that of cosmocentrism.

[7:2:210] Cosmocentrism refers to the centralisation of the whole, animate, and devotional entity known as The Cosmos within which we reside and remain aligned to the cosmic order meanwhile astrocentrism refers to the centralisation of the practices involved in astronomy, the visual aspects of astronomy and space, and the practices associated with devotion to and experiences of The Cosmos in society rather than of The Cosmos itself; of course, by conducting the practices within Astronism, the achievement of astrocentrism is all the more likely.

[7:2:211] Reinvigorationism refers to the advocacy for the return, in a new 21st century way, to the first decades of the Space Age and the cultural power and influence that it wielded which is usually visualised through retronist forms of art and advertising.

[7:2:212] Reinvigorationism holds parallels with reascensionism for the latter advocates for the return of philosophy to its believed rightful place as one of the central pillars of society while reinvigorationism advocates for a similar process to occur, but instead with regards to space exploration.

[7:2:213] Reinvigorationism, largely due to its close resemblance to the ideas within reascensionism, does hold a particularly prominent place within the philosophy of Astronism as its central premise is that of change, societal transformation, and augmentations to our individual mentalities which are common traits of some of the other major tents of Astronism.

[7:2:214] The third of the belief orientations of cosmocentrism is that which shall henceforth be known as spaciostemism which is the belief orientation that is also held in the orientational branch of spacioscientism that is predicated on the belief that humanity's enknowledge of space must occur via the exploration of space rather than just our observation of it.

[7:2:215] Essentially, spaciostemism advocates for the notion that humanity's attainment of knowledge of space through its exploration is enough of a rationality for space exploration without need of any other rationality to ornament it.

[7:2:216] Spaciostemism is expected to be one of the most simple yet effective arguments in support of space exploration for it places the greatest importance on knowledge and our attainment of knowledge as the most important elements of everything we do and applies this rationality to the context of space exploration.

[7:2:217] That which is to be henceforth known as coalescentism is the fourth of the belief orientations of cosmocentrism and pertains to the notion that through space exploration, the diverse cultures and communities of humanity will be united together for the common vision and ambition of space exploration and civilisation.

[7:2:218] Coalescentism is considered to be one of the most relevant belief orientations in the present times in which war, division, discrimination, and persecution are at some of the highest levels in history in some regions.

[7:2:219] It is one of the principal beliefs within Astronism that the Humanic Exploration of The Cosmos holds a unifying universality that continues to hold the potential to make humanity come together as one for our residence in The Cosmos and our positions under the stars is the one ultimate unifying commonality amongst all of humanity and this is a powerful attribute that is not to be undermined.

[7:2:220] It is for this reason alone that Astronism is considered to be a unifying philosophy and also universal by its very theme; there is considered to be nothing more unifying than The Cosmos.

[7:2:221] The fifth instalment of the belief orientations of cosmocentrism is that which shall henceforth be known as philosophisationism which pertains to the notion that through space exploration and civilisation, many new philosophies, religions, ideologies, and schools and systems of thought will emerge that will contribute to the entirety of human philosophy and thought.

[7:2:222] This will take place as revolutionary developments take place in these fields, the first of such revolutions is of course designated as being the Astronist philosophical tradition which invoked the Astronomic Revolution and the Reascensionist Revolution, both of which spawned the beliefs of reascensionism, transcensionism, cosmocentrism, reinvigorationism, and many others.

[7:2:223] Space exploration for the purpose of exponential developments in humanity's philosophical traditions, cultural enrichments, and societal improvements to intellectuality, education and ability is of course linked to spaciostemism and spacioscientism.

[7:2:224] However, this remains distinct from these two other orientations in that this particular orientation pertains to the philosophical revolutions and developments in human worldviews and thought traditions that will emerge directly because of the Humanic Exploration of The Cosmos both within and outside of the Astronic tradition itself which is itself considered to be the first of all philosophical traditions that is fundamentally predicated upon the theme of space and all that such theme entails.

[7:2:225] That which is to be known as cultural progressivism pertains to the notion that space exploration, discovery, and civilisation are momental and profound contributors to the development and enrichment of human culture and so therefore they must be initiated with the correct philosophical foundations in order to achieve further human cultural development.

[7:2:226] Cultural progressivism is therefore also closely associated with spaciostemism, philosophisationism, spacioscientism, and is also closely related to reinvigorationism in the context of the cultural aftereffects of the Humanic Exploration of The Cosmos.

[7:2:227] That which shall be henceforth known as the transhumanist argument refers to the notion that space exploration, discovery, and civilisation by humans will greatly advance the beliefs and ideas set out in transhumanism.

[7:2:228] This will be achieved through greater biomedical research, the adaptation of the human body to the harsh environments of space and other planets, as well as the advancement of technology that can be inputted within the human body for the achievement of transhumanist ideals.

[7:2:229] The Astronist Tradition stands in support of the transhumanist argument for it maintains its allegiance to the majority of the ideals upheld by transhumanism, especially some of its fundamental principles, of which the Humanic Exploration of The Cosmos is considered to be an integral addition to according to the Astronist Tradition.

[7:2:230] That which is to be henceforth known as resolutionism shall henceforth pertain to the notion that via space exploration and civilisation, humanity will gain the ability and opportunity to practically and realistically answer some of the most profound questions that have sought answers throughout human history.

[7:2:231] These questions include the following: what is the nature of the Universe? Is the destiny of humankind bound to Earth? Are we and our planet unique? Is there life elsewhere in the Universe?

[7:2:232] Resolutionism holds that the answering of these questions would progress humanity so far that not conducting the Humanic Exploration of The Cosmos would cause such a loss of progression that humanity would not ever be able to recover.

[7:2:233] Resolutionist thought focuses on the answers of specific questions as the primary rationality for the Humanic Exploration of The Cosmos rather than general acquisition of greater amounts of knowledge as is upheld within spaciostemism/spacioscientism.

[7:2:234] That which is to be henceforth known as spaciodestinism shall henceforth pertain to the notion that space exploration, discovery, and civilisation is the inherent, intrinsic, and perhaps even divinely instructed destiny for humanity as a sentient species.

[7:2:235] Spaciodestinism, in this context, stands as its own distinct belief orientation, but actually, this belief orientation resides at the heart of cosmocentricity as it is believed in cosmocentrism and wider Astronism that it is humanity's destiny to explore space as part of transcensionism.

[7:2:236] Spaciodestinism is an essential part of the beliefs of Astronism, but in this context, it of course merits its own categorisation as a belief orientation; the destiny of humanity resides in space and this is a powerful rationality for the Humanic Exploration of The Cosmos.

[7:2:237] Sentientism is one of the prominentmost tenets of the philosophy of Astronism as it is classified as one of The Seven Tenets of Association, but it also exists in this expological context as one of the suborientations of cosmocentrism as a rationality for humanity's exploration and subsequent civilisation of space.

[7:2:238] Of course, sentientism pertains to the notion that the possibility of discovering sentient life beyond The Earth on other planets is the primary rationale pertinent enough for the exploration and civilisation of space by humanity.

[7:2:239] There also exists two smaller suborientations within cosmocentrism, the first which is to be henceforth known as missionism which states the notion that humanity holds a duty to explore space as the only known sentient species that has the capabilities of doing so; this remains another powerful rationale for the exploration of space according to our present knowledge.

[7:2:240] However, missionism of course disregards the orientation of sentientism, but missionism does hold a pertinent point for our present circumstances of knowledge.

[7:2:241] Perhaps as our circumstances of knowledge continue to improve and the Sentient Revelation, as it shall henceforth be appellated occurs, which is obviously a central belief in Astronism, then the belief orientation of missionism will still exist, but it will need to be augmented to suit those new circumstances of knowledge.

[7:2:242] This process is to be henceforth known as conceptual permutation which pertains to when a conceptual of any kind is officially changed by authority of The Institution of The Philosophy of Astronism due to the changes that have occurred in the external environment that makes said conceptual no longer fully viable in its original form.

[7:2:243] The final suborientation within cosmocentrism is that which shall henceforth be known as arcadianism which involves the notion that space exploration and civilisation will lead to the discovery of idyllic worlds.

[7:2:244] This especially supports the notion that space and worlds beyond The Earth hold future promise, freedom, the ability for people to make new starts in their lives, and the opportunity to enjoy the paradises of newly discovered planets.

[7:2:245] Arcadianist thought constructs space and other worlds as a collective paradise to which people are able to travel in order to reinvigorate and renew their lives by leaving behind their troubles; that which shall be henceforth known as the Arcadian Promise is the appellation pertaining to this promise of new life.

[7:2:246] Arcadianism is considered to be a very powerful rationale for individuals to want to participate in space exploration and civilisation for their own personal reasons and therefore, this belief orientation is expected to be a popular one for individuals to personally relate to.

[7:2:247] Arcadianism is one of the only individualistic rationales for space exploration, especially so within cosmocentrism as the majority of the orientations mentioned herein as part of the cosmocentrist tradition are collectivistic by their natures rather than individualistic.

[7:2:248] This means that they are concerned with the human-wide benefits of space exploration and present these as the most pertinent elements for the rationality of space exploration and civilisation while individualistic rationality pertains to personal benefits of space exploration, of there are few examples in the orientation of cosmocentrism, but arcadianism is the most prominent of these examples.

[7:2:249] It is important to note that most belief orientations can be interpreted and presented to resemble either an individualistic or a collectivistic identity, but in this context, I speak of the unaltered and original forms of the belief orientations and what their true natures hold tendencies towards.

[7:2:250] The second orientational branch of the Astronic philosophical approach to the question of space exploration and civilisation, especially regarding its importance, its purpose, its immediacy, its ethics, and its end goals is that which shall be henceforth referred to in this context of survivalism.

[7:2:251] Just as the orientational branch of cosmocentrism held its own categorised themes so does that of the survivalist branch with its rationality for space exploration primarily centred on physiological and environmental factors.

[7:2:252] For this reason, survivalism can be described as the simplistic or fundamental orientation as its rationale for the Humanic Exploration of The Cosmos is founded upon basic physiological needs rather than complex desirable and conceptual needs.

[7:2:253] It is important to note that although it may seem as though these different orientational branches and the suborientations residing within them oppose and undermine other orientational branches and their suborientations, the point is that a diversity of outlooks are presented herein which then, in the name of the Philosophical Spirit, should justify their views against opposing branches and suborientations that hold juxtaposed beliefs and ideas about the space exploration.

[7:2:254] Furthermore, it is also important to notionise that all of the orientational branches introduced herein and their suborientations can be accurately described as pro-space meaning that they all advocate for space exploration in the way that the Humanic Exploration of The Cosmos has outlined human interactions and ventures in space, but crucially, it is the reasons that they prioritise that makes them distinguished from one another.

[7:2:255] Before we delve into the four primary suborientations of the survivalist branch, let us define what survivalism in this context refers to it; survivalism refers to a mode of thought and rationality in relation to space exploration and civilisation that focuses on the formation of rationality by the physiological needs of humans as well as by the needs and circumstances the environment.

[7:2:256] Survivalism therefore takes a different approach than other orientational branches as it does not consider philosophical, theological, cultural, and more broadly, conceptual and desirable rationalities for the Humanic Exploration of The Cosmos to be valid for it instead opts for a secular, non-philosophical, and non-cultural rationale for space exploration and development.

[7:2:257] That which shall be henceforth known as ancillism refers to the first branch of survivalism that is to be introduced herein and is a belief orientation that can be primarily encapsulated by the notion that humanity must establish colonies on other worlds as substitutes for The Earth if The Earth is ever cataclysmically destroyed by an asteroid strike, or if human civilisation of The Earth collapses by some other environmentally-triggered or autotriggered reason.

[7:2:258] The ancillist branch of this orientational collectivity is considered to be largely apocalyptic by its nature as it is based upon the prediction that humanity's civilisation will at some experience mass devastation by its own doing or by the forces of the cosmic environment hence the essential requirement for space exploration and civilisation and this remains the reason by ancillism is also interchangeably and colloquially known as apocalyptic survivalism.

[7:2:259] The second belief orientation of the wider survivalist orientational branch is that which shall henceforth be known as hyperenvironmentalism; this is a belief orientation that is predicated upon the notion that by humanity's exploration of space, the huge demand on The Earth's resources will be lessened and therefore less damage will occur.

[7:2:260] As a result, The Earth's environment will have the chance to begin to recover due to the lower levels of human population, irresponsible consumption, and the general utility of Earth's resources will falls in alignment with the views of environmentalism.

[7:2:261] This is considered to be an extremely important and powerful branch of survivalist rationality as it directly connects to present day concerns for the environment of The Earth and provides a solution that considers and meets both the needs and wants of humanity as a species as well as the necessary protection of The Earth's environment and other non-anthropoc species.

[7:2:262] The third of the four branches of survivalism is that which shall be henceforth referred to as dispersionism, or alternatively known as disperalism which pertains to the belief orientation maintaining that it is the nature of humans to disperse themselves across a variety of lands and territories and so argues that overpopulation on The Earth demonstrates humanity's inherent and intrinsic need for dispersal across different planets.

[7:2:263] The final branch of the orientational grouping under the banner of survivalism is that which is to be referred to as profusionism which pertains to the belief orientation firmly holding that the natural resources of space are so abundant when compared to those of the single planet of The Earth that we needn't worry about the depletion of resources in space.

[7:2:264] However, profusionism does acknowledge that humanity's responsible utility is essential to cosmic preservation and therefore regulation of the utilisation of spacial resources should be establishment and vested as the responsibility of multiple independent and non-biased authorities to upkeep with a central authority that oversees such regulatory policies and enforcements to ensure that cosmoenvironmentalist principles are upheld.

[7:2:265] The third orientational branch is that which shall be henceforth known as remunerationism predicates its rationality for the Humanic Exploration of The Cosmos as the commercialisation and utilisation of space for commercial purposes.

[7:2:266] The remunerationist branch for space exploration rationality upholds its categories as commercial, economic, and financial rationality; the remunerationist approach is essential to practical execution of space exploration for without the funds to propel the space industry forwards, its realistic completion is undermined by the setback of financial inadequacy.

[7:2:267] Therefore, remunerationism is a belief orientation branch that focuses on the commercial, economic, and financial rationality for space exploration; the remunerationistic orientation also manages to pervades aspects of other orientational branches and their suborientation as it seems to extend in ways that the other branches lack the ability to.

[7:2:268] That which shall be henceforth known as harvestationism is a major suborientation of the remunerationist branch that is structured upon the belief that space technologies and space-related industry hold yields that would greatly outweigh any profit/return on investment that could ever be possible on The Earth.

[7:2:269] The harvestationist rationality for space exploration is the most prominent orientation of the remunerationist branch as it expounds that which companies and investors are listing out for the most.

[7:2:270] They wish to find the connection between space exploration and civilisation and the creation of profits that far exceed any that had been previously achievable in the economy of The Earth.

[7:2:271] That which shall henceforth be known either as servitisationism, or as fabricationism refers to the second branch of remunerationism holding the notion that space exploration and discovery will allow companies to manufacture a greater variety of new products to humanity thus allowing for wider degrees of choice for consumers.

[7:2:272] The fact that companies will hold the ability to manufacture a larger range of products from new materials as well as providing the ability for entrepreneurs to innovate entirely new inventions that can then experience mass commercialisation which is one of the essential predications for the previously introduced orientation of harvestationism.

[7:2:273] Space exploration and discovery will initiate product innovations that we cannot yet even image which, although being categorised within the belief orientation of servitisationism, this will hold instrumental impacts for that of harvestationism.

[7:2:274] That which shall henceforth be known as proconsumerism is a belief orientation of remunerationist inclination that is predicated upon the notion that space exploration and civilisation will generally benefit the end consumer in a multitude of ways, especially when space exploration, or spacisation, is considered as the next logical step after globalisation.

[7:2:275] The final element of remunerationism is that which shall henceforth be referred to as diminutionism which is founded by the notion that via space exploration and civilisation, the prices of many products will be reduced to the greater amount of resources available through the utility of resources on planets other than The Earth, thus simultaneously benefitting both companies and consumers.

[7:2:276] It does remain important to emphasise that the Astronist Tradition holds a contentious relationship with the remunerationist orientational branch of its own creation as it is one of the hallmarks of Astronist belief that space exploration and civilisation should not be initiated purely for materialistic possession and certainly not at the expense of cosmic environmental degradation.

[7:2:277] However, the essential premise of the message of remunerationism is understood and acknowledged by the Astronist Tradition for without the possibility of financial capitalisation, the encouragement of governments, corporations and investors funding the practical elements of the Humanic Exploration of The Cosmos, it would not be able to occur as prophesied by the Astronist Tradition.

[7:2:278] It also remains crucial to reaffirm that the Astronist Tradition shall always align itself with the orientational branch of cosmocentrism foremost without all other orientational branches following behind that of cosmocentrism.

[7:2:279] This is because it is the penchant of belief for the Astronist Tradition that the philosophical, theological, spiritual, and cultural elements of human space exploration and civilisation remain the most important for the foundations of the practically endless grand endeavour of exploration, civilisation, and discovery that humanity is about to embark upon.

[7:2:280] The Astronist Tradition posits that it intends for Astronism to be the philosophy which humanity will take with it to the stars which pertains to my destiny as Cometan and particular reason why I have been gifted this ability to think of ideas that far outstretch my own person in this very time and in this very place; the notionise that my founding of Astronism is out of pure coincidence is not enough of a rationality to convince me that destiny does not exist.

[7:2:281] Astronism will be the philosophy that humans take with them to the stars; it shall remind them of their origins upon The Earth; it shall constantly propel them forwards in their mental, philosophical, intellectual, spiritual, and physical capacities; and it shall keep consistent with its message of cosmocentricity, sentientism, transcensionism, reinvigorationism, reascensionism, and all other concepts, theories, and belief orientations that become central to its identity as a philosophy.

[7:2:282] The fourth orientational branch is that which shall henceforth be known as spaciopoliticism, or also known as spaciolegalism, which retains the categorisations including political, economic and legal rationality for the initiation and execution of the Humanic Exploration of The Cosmos.

[7:2:283] That which is to be known as spaciomilitarism, or the militarisation of space, refers to the notion that space is a fertile ground for developments in military technology and the flexing of a nation or organisation's power over others.

[7:2:284] Spaciomilitarism is absolutely and vehemently opposed to by the entirety of the Astronist philosophical tradition which has been omniaffirmed through The Omnidoxy and particularly Astronism is opposed to the militarisation of space in general as both a practice and belief orientation.

[7:2:285] That which is to be known as spacioeconomism refers to the second belief orientation of spaciopoliticism notionising that space exploration and civilisation will become the primary driver of economic growth in the future and it is towards the space industry that economists should look for growth that remains unrivalled even when compared to the entire history of economic growth on The Earth.

[7:2:286] The final orientational branch for the rationality of the Humanic Exploration of The Cosmos is spacioscientism which collectivises belief orientations that focus on academic and technological rationality and generally notionises that space exploration and civilisation are forges of academic and technological progression and education.

[7:2:287] That which is to be known as spaciostemism is the spacioscientistic form of cosmocentrism and so spaciostemism is the same as cosmocentrism in that it advocates for space exploration using the rationalities that form cosmocentricity, but remains all philosophical and spiritual elements and just focuses on the importance of space exploration for furthering the academic and scholarly study and contemplation of space whom also either directly or indirectly support the general principles expounded by cosmocentrism.

[7:2:288] Educationism is the second belief orientation of the wider orientational branch of spacioscientism focusing on the notion that space exploration and civilisation will promote the education of people both young and old in an untold amount of ways.

[7:2:289] An example of this is the encouragement of children to be interested in becoming astronauts who are themselves a combination of engineers and scientists, and some are doctors therefore educative benefits of space exploration and civilisation are distinguished from the element of sheer enknowledgement of such subjects and activities.

[7:2:290] Educationism is a belief orientation focuses on connecting the Humanic Exploration of The Cosmos to the pre-scholarly and pre-academic forms of education, primarily via the education of children and adolescents for it is by their awareness and enthusiasm for space exploration, as informed by their wonderment of The Cosmos and perhaps also their adherence to Astronism, that they will intend to study so as to embark on a career that focuses on the space industry in some way.

[7:2:291] The bolstering of the space industry is an essential element of the belief orientation of educationism for without the interest and enthusiasm for younger generations and encouraging them to pursue careers, either of an academic or corporate nature, in the space industry will be instrumental to the practical realisation of the Humanic Exploration of The Cosmos.

[7:2:292] That which is to be henceforth known as the belief orientation of concomitism is predicated upon the notion that with the furtherance of space exploration and civilisation, there will be major advancements in other disciplines and fields of study such as healthcare and medicine, transportation, energy, information technology and industrial productivity as a direct result of developments in space exploration and civilisation.

[7:2:293] Concomitist rationalities for the Humanic Exploration of The Cosmos in the way it has been characterised and prophesied by the Astronist Tradition are expected to be some of the most powerful rationalities for although they hold a remunerationist air, they are fundamentally rooted in their furtherance of different disciplines rather than simply existing for the maximisation of profit and the commercialisation of space as is the remit of the remunerationist school.

[7:2:294] Concomitism therefore carves out a unique role within the spacioscientific school that also connects it with suborientations within and outside its own orientational branch.

[7:2:295] Communicationism is another major branch of spacioscientism holding the notion that via the furtherance of space exploration and civilisation, there will be profound advancements in communication technologies as part of the wider process advocated by spacism and philosophically grounded by cosmocentrism by the notion that space and its components become the centrality for human civilisations rather than humanity itself or The Earth as a single planet.

[7:2:296] Additionally, observationism is the second to last suborientation categorised within spacioscientism notionising that via the furtherance of space exploration and civilisation, there will be profound advancements in humanity's ability to observe phenomena and record it more efficiently, such as biological phenomena, meteorological phenomena, and most importantly to the Astronist Tradition, astronomical phenomena to speak of only a few examples.

[7:2:297] Finally, that which is to be henceforth known as automationism refers to the spacioscientific belief orientation that through the exploration and civilisation of space, humanity's capabilities to design and construct robots and other forms of automated machinery will be propelled forwards by the challenge of spaceflight and space exploration by creating a practical and necessary reason for the development of advanced robotics which is a proponent of the beliefs within transhumanism.

[7:2:298] Now that The Five Orientations of Space Exploration Rationality have been briefly outlined, it is clear for us to realise both the depth and breadth of this area of philosophical contemplation as the reasons for which we do something firmly remains something that is encapsulated within the auspices of philosophical contemplation and discipline; the protection of all elements under the auspices of philosophy is one of the primary goals of the Astronist Tradition as influenced by the reascensionist movement.

[7:2:299] From the introduction of these five orientational branches and the suborientations residing within them, we can understand that space exploration rationality is something that will continue to develop as a major topic of philosophical contemplation and debate which remains of the primary goals of the Astronist Tradition to achieve.

[7:2:300] The Five Orientations of Space Exploration Rationality are herein established so as to provide structure to the overall discussion of the rationale for space exploration and although these established orientational branches are affirmed herein, they are not exhaustive.

[7:2:301] Despite the fact that the Astronist Tradition encourages all post-omnidoxically created belief orientations to be classified as suborientations within one of these five orientational branches, the Tradition does acknowledge that new orientational branches may be established, but to be recognised and labeled as such by the Tradition, such proposed orientational branches must need to hold enough distinction to command their categorisation as orientational branches.

[7:2:302] The Five Orientations of Space Exploration Rationality formulate the foundations of the entire discipline of study of expology for they remain the cornerstone quintet of philosophical contemplations regarding space exploration and therefore, they also remain in close association with contemplations and discussions of the human-cosmos relationship, as well as the wider role, identity, and purpose of humanity in relation to its position within The Cosmos.

[7:2:303] That which is to be henceforth known as the explorative cycle refers to one of the central elements of expology for expology primarily deals with the explorative cycle.

[7:2:304] The explorative cycle refers to the idea that sentient beings will never stop with the exploration of The Cosmos and that this is our ultimate purpose; to explore, to enknowledge ourselves, and to progress our civilisations into space and throughout The Cosmos.

[7:2:305] This is central to the entirety of Astronism and is to be henceforth categorised as an automatic belief orientation of Astronism referred to as peregrinism, or also known as peregrinationism and very closely related to the wider belief structure underpinned by transcensionism.

[7:2:306] The explorative cycle also leads our expological study to focus on the topic of how The Cosmos is to be explored, including in the following forms: physically, mentally, emotionally, philosophically, spiritually, technologically, socially, culturally, religiously, financially, economically and in all other perceivable ways.

[7:2:307] The principles and philosophies of astronomy say that space exploration should become, and is inevitable to become the central aspect of human civilisation and culture.

[7:2:308] The enculturation of space exploratory activities, or spacioenculturation, is also another important element in the study of the explorative cycle and involves the engrainment of space exploration into humanity's culture, or into world culture, thus positioning space exploration as the main part of human purpose, function, and societal and educational structure; this is an essential part to the realisation of one of the central tenets of Astronism, known as astrocentrism, or to complete the process of astrocentralisation.

[7:2:309] An incredibly pertinent aspects of expology is the study of the interactions between humanity and xenolic species, particularly those species which are not human, but are categorised as sentient in their level of intelligence; the contemplation and discussion of this topic is herein demarcated as territories of the study of philosophy.

[7:2:310] Xeno-ethics is a new branch of ethics dealing with how humans are to treat non-human species and involves the formation of a new set of moral principles directed towards how non-human species, both of a sentient or non-sentient intelligence, are to be interacted with both personally, professionally, and organisationally.

[7:2:311] The Motto of Five is herein introduced as the founding collectivity of principles for Xeno-ethics which is structured by five distinct precepts that are focused on different aspects of treatment for non-human sentient beings in particular.

[7:2:312] The first principle of The Motto of Five is that which is to be known as harmless accord which refers to practice of communicating that humanity means no harm upon the initial interaction between humanity and a non-human sentient or non-sentient species.

[7:2:313] This communication will of course be difficult due to the complete incoherence in language from both sides as well as a lack of understanding of the culture of the newly discovered form of sentient life, however, the principle of harmless accord is one that must always be pursued as the priority in any situation in which there exists xeno-anthropic interaction.

[7:2:314] The principle of harmless accord is herein put into place so as to demonstrate to the non-human sentient beings that they are respected and treated with worth and that they must always be interacted with in such a way that they are considered as living, breathing beings that share the similar feelings, pains, and goals that we humans also share.

[7:2:315] The second principle of The Motto of Five is that which is to be henceforth known as mutual appreciation which involves growing the relations of appreciation between both parties.

[7:2:316] Mutual appreciation is a process that is expected to take place across a long period time bolstered by multiple regular interactions and encounters between humanity and another sentient species in order to build up a strong interspecies relationship predicated upon understanding and relational clarity.

[7:2:317] Meanwhile, the third instalment in The Motto of Five collectivity is that which is to be known as humanity's understanding of new existences refers to the fundamental differences in the histories, languages, cultures, religions that remain evolutionarily different to our own.

[7:2:318] It is the evolutionary difference that is crucial to any discussion of xeno-ethics because unlike general human ethics wherein humans on The Earth have developed along the same evolutionary path, the beings which one will be interacting with in a xenolic environment will not have experienced the same evolutionary path.

[7:2:319] We just need to continually remind ourselves that in xeno-ethics, we are simply just dealing with differences in culture as is the case human-to-human ethical circumstances, but we are instead dealing with differences in evolution which holds a much wider chasm of differences than those in cultural difference; by this notion, we understand the distinction between evolutionary difference and cultural difference and the severity of the former when compared to that of the latter.

[7:2:320] The fourth of The Motto of Five forming the foundations of the Astronist approach to xeno-ethics is the acceptance of discord which involves the notion that humanity must accept if a xenolic species wishes to have no contact.

[7:2:321] That which shall be henceforth known as the process of xenoenculturation is the fifth and final part of The Motto of Five and involves the enculturation of humanity's culture into the xenolic culture to form a newly combined culture.

[7:2:322] Xeno-ethicists are herein categorised to be cross-disciplinary because despite the fact that their subject has been introduced within this expological disquisition, their particular discipline is also categorised to be as part of the Astronist inclusive discipline of contology, one half of which deals with ethics, specifically Astronist ethics, of which xeno-ethics remains a unique and prominent branch of.

—

[7:2:323] As a brief surceasion to this discourse, I must address the term that is known pre-Astronistically as skywatching; in the Astronist context, it is not to be confused as an informal term for stargazing as skywatching isn't synonymous with stargazing.

[7:2:324] Skywatching, in the Astronist context, refers specifically to when a person is watching the night sky for no particular reason as a process of initiation, the most

prominent example of which is optimism, although this is distinguished from stargazing as stargazers are looking for particular celestial bodies either for their study or for devotional purposes, there is a greater sense of informality for skywatchers.

[7:2:325] Furthermore, a skywatcher is a person looking at the sky without a specific understanding of what they are looking for in terms of the celestial bodies that are presently observable; for this reason, a skywatcher would often see cosmic phenomena, such as a shooting star, by chance rather than intentionally waiting for the next meteor shower to occur.

[7:2:326] Stargazing is also distinguished from skywatching in the fact that stargazing is accompanied by astronomical equipment if conducted scientifically, or devotional trinkets if conducted for devotional purposes while skywatching involves no such items.

—

[7:2:327] Linking commercial, entrepreneurial and business-based studies with space exploration is one of the primary elements of the discipline of expology as the development of the space industry is one of the most integral elements to the realisation of space exploration, hence the prominence provided to the subject of business and its integration with space exploration.

[7:2:328] Therefore, I shall now introduce three primary and foundational belief orientations or approaches to the conduct of businesses in the context of space in simultaneity with the conduct of the Humanic Exploration of The Cosmos.

[7:2:329] Collaborationism is the first of these three methods to be introduced and in this context (as it, as a term, used in other non-Astronist contexts) relates to the idea that different space-related companies should agree to work together towards a common goal or for the successful achievement of a project despite them being rivals in the space industry.

[7:2:330] This is most usually to be underpinned by the notion of superabundantism which states that the abundance of opportunities in space relative to the amount of companies in the space industry should diffuse rivalism that is rife in other much more densely populated industries that only have The Earth's relatively limited resources and population to carve out their business for.

[7:2:331] The collaborationist approach is expected to be the largest opposer to the approach of rivalism which states that the space industry is something with unlimited amounts of potential for profiteering and therefore companies must employ a system of rivalry into their operations and employees that promotes one's company's disproximation from others in the industry so as to stop other companies from gaining dominance.

[7:2:332] This is characteristic of the majority of the on-Earth businesses in all industries which pride themselves upon their competitive advantages; this would be an example of taking Earth business culture and applying it to the context of space business culture.

[7:2:333] Although competition is very good for business, the method of rivalism does not seek to acknowledge competition for its end goal is the domination of the market rather than the acknowledgement of the right of their competitors to hold their own well-deserved share of the market.

[7:2:334] Therefore, by this notion, one must not make the mistake by saying that rivalism is a huge proponent of competition for that is not the case; in fact, it is actually the collaborationist approach that is most associated with its acknowledgement of the need of competition and the acceptance of the right of competitors to compete in the marketplace.

[7:2:335] Spacism is the third of the three methods to introduce herein and in this particular context, the term relates to the use of information collected from space satellites for the utility of a non-space related business or organisation.

[7:2:336] The general notion of spacism is that outer space needs to become one of the key providers to humanity in all ways, including information, material resources, economic growth, employment opportunities etc and rests at the heart of the Space movement in conjunction with the ideology of Astronarianism and its different orientations, each of which hold differing views on the role of spacism due to their different interpretations.

[7:2:337] Spacism, therefore, in the context of expology relates to the much wider belief orientation structuring Astronarianism and that which rests at the heart of the Space movement, but its general premise in the context of expology has been stated herein with those following spacism to be henceforth referred to as spacarians, or spacists whom create, follow, and implement spacistic policies, methods, and practices in their businesses.

[7:2:338] The topics of spaceflight, satellites, commercialisation of space, sentient life, and the colonisation of space are all topics that do also remain essential to contemplation within expology.

[7:2:339] The centrality of space exploration and space discoverment in Astronist Philosophy is reflected in the entire inclusive discipline of study of expology; space exploration relates to space travel while space discoverment relates to the identification of new species, worlds, or ideas through space exploration.

[7:2:340] The notion of the existence of space revelation involves a major discovery of anything in space or on another world that is considered to have perception-changing and world-changing consequences and are much more infrequent than space discoverments; the categorisation of space revelations, in the Astronist Tradition, is a responsibility bestowed to The Institution of The Philosophy of Astronism.

[7:2:341] Space revelations may also be referred to as cosmorevelations, astrovevelations, or spaciorevelations and can essentially be understood as examples of discoveries made beyond The Earth and it is these revelations that drive forward the Humanic Exploration of The Cosmos.

[7:2:342] Dissatisfactionism is the belief orientation in which one feels and experiences dissatisfaction with the era in which they were born because of the prospective lives of those in the future.

[7:2:343] In the context of Astronism, this is expected to be a common occurrence, especially in relation to cosmic exploration, technological advancement, improvements in life longevity, and the greater knowledge of The Cosmos that will be achieved amongst future generations directly due to the initiation of the Humanic Exploration of The Cosmos.

[7:2:344] Meanwhile, that which shall henceforth termed as dissociationism refers to the instance in which an Earthian loses their association to The Earth either naturally and gradually over time or intentionally, an example of which is when a person chooses not to call The Earth “home” anymore.

[7:2:345] Dissociationism is also expected to become a common occurrence during the established stages of the Humanic Exploration of The Cosmos, especially when extraplanetary births occur frequently which refers to when a child is born and raised on a spacecraft or on a planet that is different from both of their parents.

[7:2:346] This demonstrates a loss of connection between the offspring and where their ancestors were born and lived and from which their physical appearance is derived.

[7:2:347] Dissociationism is considered to be an unstoppable and inevitable occurrence as part of the entire process of the Humanic Exploration of The Cosmos; this is something that needs to be prepared for and contemplated well in advance of its occurrence so that we are able to understand the mental and social consequence of such an inevitable occurrence.

[7:2:348] It is important to state herein that this part of the discourse will become even more definitionalist than the segments of this discourse thus far; this is due to the fact that a huge amount of aspects of space exploration and expological study need to be encompassed with a large body of new terminology which the writing style of definitionalism is best poised to encapsulate.

[7:2:349] That which shall henceforth be referred to as either exoforaging, or exoresourcing pertains to the act of hunting and taking resources from an exoplanet during its exploration as part of the wider process of the Humanic Exploration of The Cosmos.

[7:2:350] Missionism is a major belief orientation in expology holding that the Humanic Exploration of The Cosmos is a solemn mission for each human to undertake or at least contribute to; in this way, humanity's exploration of The Cosmos is presented as two-dimensional in the sense that it is a societal mission in addition to a personal responsibility for growth in all aspects.

[7:2:351] Those whom believe this orientation are to be known as missionists, those whom contribute to the Humanic Exploration of The Cosmos in some way are to be known as either protribers, or protributers as they conduct that which is to be known as protribution, but those whom do not contribute to the Humanic Exploration of The Cosmos in any part of their lives are to be known as antributers as they conduct that which is to be known as antribution.

[7:2:352] Sacrificialism is another belief orientation holding that many humans will die during the Humanic Exploration of The Cosmos, but that these are necessary deaths that must occur for the Exploration to succeed.

[7:2:353] Sacrificialism is part of the realm of cosmic philosophy known as cosmic realism which largely opposes much of the way in which the Astronist Tradition presents the Humanic Exploration of The Cosmos as well as celestials and their phenomena in general, for the Tradition presents these in a distinctly idealistic way.

[7:2:354] Sacrificialism states herein that although its beliefs are harsh and unforgiving, they are nevertheless realistic if we wish for the Humanic Exploration of The Cosmos to be successfully achieved.

[7:2:355] Although the orientation of the Astronist Tradition is not necessarily leaning towards cosmic realism, as it is instead more associated with cosmic idealism, the Astronist Tradition does recognise the importance of the perspective of space exploration and civilisation taken by cosmic realists, whom themselves hold their originations from within Astronism and are therefore part of the philosophy too as an alternative collectivity of belief orientations from those which are expounded by the Astronist Tradition.

[7:2:356] That which is to be referred to as a potential person in the context of xeno-ethics is a biological entity that is not currently considered to be a person, but which is capable of developing into a person as the ascription of the title "person" is dependent upon the extent of the sentience of that entity as "person" is an equaliser and ascribing to anything without sentience or with a lesser sentience deconstructs one's own sentience.

[7:2:357] The term that is to be known as hypermigration refers to the process of a seasonal mass movement of colonies and larger civilisations to different regions and continents of a planet in order to avoid catastrophic changes in the climate that make the environment malignant to human or wider biological survival.

[7:2:358] Masternavigation shall henceforth refer to a computer system used to track orbital patterns of planets within known star systems with it requiring constant updates with the latest software to stay up-to-date with galactic changes.

[7:2:359] Proceedence is a course suggested by a targeting computer's navigation computer to allow the vehicle or vessel on which it was installed to intercept or rendezvous with a designated target.

[7:2:360] That which is to be referred to as astrogative stowage is a data storage device installed in many astromech droids storing a limited number of hyperspace coordinates, and allows the droid to plot courses for smaller starships that were not equipped with navigational computers.

[7:2:361] Astrogator datacard is a card, either physical or on a screen via a device that displayed the certification of an astrogator so he/she could enter a particular region or travel beyond a certain point in space.

[7:2:362] Realspace is one of the travel dimensions of space that is contrasted with hyperspace and verspace, referring to when a spacecraft travels through space without the aid of technological to make the travel faster such as through hyperspace.

[7:2:363] The term hyperspace refers to one of the travel dimensions of space that is contrasted with realspace and verspace, referring to when a spacecraft travels faster through space by the aid of technology, typically at or close to the speed of light.

[7:2:364] Furthermore, that which is introduced as verspace is one of the travel dimensions of space that is contrasted with realspace and hyperspace, referring to when a spacecraft travels through or very close to a celestial entity in space, the most common example of which would be flying through a nebula or via flybys of planets, moons, and other celestials.

[7:2:365] That which is to be henceforth known as an autoplotter is a basic tool of hyperspace navigation which is usually stored in a strongbox under the main engineering console with a galactic chart of pulsars and other variable stars.

[7:2:366] It is to be applied in circumstances when the navigation computer systems of a starship had suffered a catastrophic failure and by manually plotting the position of at least two such stars, a spacer could plot a rudimentary course for the hyperdrive and avoid being stranded in the depths of space.

[7:2:367] The term that is herein introduced as navitive generally relates to astronavigation, especially the instruments, softwares, and navigational charts and programmes used to complete astronavigational endeavours.

[7:2:368] A navitive beacon is a frequency communicable via all channels that is used a way to guide spacecraft to a particular set of coordinates, usually a space station, especially in dangerous or inaccessible areas of space.

[7:2:369] A navitive compensator is a mechanism within a navigational computer in which compensation for statistical error is taken into account, particularly the data being used as part of the navigation is old, has been used an insufficient amount of times, or has been retrieved by an unreliable source.

[7:2:370] That which is to be henceforth referred to as a divagator refers to a computer-based simulation of all movements of various bodies that occupied an asteroid field so that starships are able to navigate asteroid fields with relatively low risk.

[7:2:371] Using a sophisticated algorithm to monitor and predict the locations of the asteroids, it would allow starships to navigate the field safely, but the chart was best used in a sparsely occupied field; when a field had many obstacles, the chart's computer could not keep up.

[7:2:372] That which shall be henceforth referred to as a techniscope is either an astronavigational instrument or a general navigational instrument that can be used to find his or her bearings in unfamiliar territory.

[7:2:373] Galactic coordinates enables every location in the galaxy to be specified by a set of three numbers and by convention, the system was centred not on the actual galactic center, but on the planet Earth, which is to be dignified with the coordinates 0,0,0.

[7:2:374] A galactic positioning chip is a chip placed into every spacecraft for security purposes in order to track every spacecraft by a central system.

[7:2:375] That which is to be known as to dechip, to conduct dechipping, or to be dechipped, as conducted by a dechipper refers to the practice of locating and removing the galactic positioning chip from out of a spacecraft which should be considered an illegal practice due to the fact that it defies the security system put in place to track spacecraft.

[7:2:376] To be unchipped refers to a spacecraft that is purposefully and illegally manufactured without a galactic positioning chip and so therefore cannot be tracked unless it is later chipped.

[7:2:377] That which is to be known as an astrobuoy refers to a buoy used to guide starships into craftyards while a craftyard is a place where starships were either constructed or repaired, typically located in orbit around a planet.

[7:2:378] That which will be known as chironavigation, as operated by a chironavigator, refers to something similar to ectonavigators as a type of navigator, but they were not used aboard starships and were instead carried in one's hand for use on the ground.

[7:2:379] That which is to be known as a hyperbeacon is an object located near the opening of a hyperlane to signal that the hyperlane is either open or closed for use.

[7:2:380] A hypercompass is an astronavigational instrument which allowed starships to navigate by orienting on the center of the galaxy; these devices will most often serve as backups in case of navigation computer failure, and could be used in both hyperspace and realspace.

[7:2:381] That which is to be referred to as a hyperbuoy is a type a holographic projection linked in with a starship's navigation computer that will provide the pilot with a visual marker for desired hyperroutes.

[7:2:382] Hyperbuoys will provide a reference for the point at which a vessel needs to enter hyperspace and they also will ensure a vessel is a safe distance from any hazards before they enter hyperspace.

[7:2:383] That which will be henceforth known as hyperial timetable refers to a meticulously calculated timetable generated by on board and ground-based computers and this schedule will be used by pilots to execute hyperspace jumps to arrive at locations at a predetermined time.

[7:2:384] That which will be referenced as an elatro pertains to a type of galactic mapping system enhancement to astrographic databases which will be considered highly useful by independent spacefarers, or spacers, and also act as a supplement providing local information on points of interest and anomalies.

[7:2:385] It is also to give warnings and advisories regarding the safety of various locations, especially concerning factional and political information, for space stations and nebulae, among others.

[7:2:386] A lightstation, as it shall from here on in be known, refers to an unmanned space station operated by computers and robotics whose primary purpose is to navigate spacers and so acts an astronavigational beacon.

[7:2:387] That which is to be henceforth referred to as an astromap pertains to a graphical and digital representation of a star system or wider area so that individuals could astronavigate through unfamiliar terrain with many functions depending on the software and quality of the manufacturer.

[7:2:388] This is part of the wider astronavigational system of one's spacecraft which is notably to be bought separately from the actual spacecraft unless the astronavigational system is preinstalled.

[7:2:389] That which is to be known as a navibeacon refers to a space-bound navigational device placed by survey teams to help guide starships to their destinations.

[7:2:390] A totor is a type of computational device with a "dead-reckoning" program written into it with the reckoner being employed when conventional types of navigation are not possible, due to the occurrence of storms or other cosmic phenomena that make space travel difficult or impossible.

[7:2:391] That which is to be henceforth referred to as a spotpointer pertains to a tiny navigational device essential for travellers on densely urbanised worlds, especially in the largest cities of a planet.

[7:2:392] Locators will weigh less than an ounce, fit easily in the palm of most humanoid species, and consisted of a screen, three or four buttons, and a tiny communication link installed inside of it.

[7:2:393] The communication link tied in with a system of geosynchronous satellites to provide a detailed interactive map with the quickest route to any destination the user chose to input; this is because locators require a satellite system to function which pertains to the why they are useless when taken offworld.

[7:2:394] That which is to be henceforth known as an oppidator is a specialised datapad consisting of an incorporated network of miniaturised sensors and data transmitters to connect to frequencies actively broadcasting information.

[7:2:395] Locking on to these frequencies, the compass allowed the user to use this information to determine the position of the user and possible routes to a destination, as well as other local conditions that might impeded or assist in travel.

[7:2:396] Traffic data, information on local businesses, customs, landmarks, and government facilities will also be able to be accessed quickly from an up-to-date compass.

[7:2:397] That which is to be referred to as a hyperture refers to a type of safety harness that served to safely restrain the passengers and pilots of spacecraft and airspeeders.

[7:2:398] They are considered to be an essential component for seating aboard spacecraft because an individual would risk injury if he or she was not restrained when a ship took off, landed, accelerated, decelerated or performed high-speed manoeuvres.

[7:2:399] A locomotive tracker, or alternatively known as a hypertracker pertains to a form of technology used to track spacecraft through hyperspace meanwhile that which will be referred to as an arovert is a hovering or suspended screen used for advertising and public service announcements throughout cities.

—

[7:2:400] That which shall henceforth be referred to as frontiership pertains to the notion that the Humanic Exploration of The Cosmos is the next great frontier, or cultural age which humanity will embark upon the realisation of; the frontiership pertains to the overall understanding that the Humanic Exploration of The Cosmos is tetral by its nature meaning that it is consistent of four integral parts.

[7:2:401] The Humanic Exploration of The Cosmos is equally a technological, sociocultural, philosophical, and economic endeavour as well as being both a period and a transperiodical process rather than simply a singular occurrence.

[7:2:402] Space research promotes green technology and the development of telepresence technology through the process of cosmic exploration.

[7:2:403] That which is to be henceforth referred to as infotainment exists in the context of space in the form of space-related documentaries and other forms of media that are both entertaining about space and philosophy, particularly the philosophy of Astronism, and educational.

[7:2:404] Major improvements in global interconnected communication which continues to hold high potentiality for advancement will be achieved through the initiation and continued commitment to the Humanic Exploration of The Cosmos which will greatly improve space technology which will itself lead to such successes spoken of herein.

[7:2:405] Through the exploration of space, we have managed to identify and visualise an integrated picture of The Earth, its resources, and climatological data through the communication data set from the perspective of space stations.

[7:2:406] Furthermore, space research has held a significantly positive impact for innovations in non-space related industries including the development of heart pacemakers for the healthcare industry which demonstrates space research and cosmic exploration as an entire human process of development to be a multi-industry innovator and catalyst for change and advancement.

[7:2:407] The Population Argument for cosmic exploration states that due to the projected increase in the population of The Earth throughout the 21st century, that cosmic exploration is therefore imperative to be initiated so as to avoid mass shortages of energy and water, as well as to stop increasing damage to the natural environment.

[7:2:408] The Population Argument doesn't necessary state overpopulation, for that is opposed to by the Astronist Tradition, but instead suggests that cosmic exploration is the superior way to handle the rapid increase in the human population due to the increased demand for non-renewable energy sources present on The Earth.

[7:2:409] Cosmic exploration is entirely interconnected with the principles of sustainability, renewable energy consumption, and environmentalism which demonstrates the theoretical link between the movement of spacism and environmentalism as two political philosophies, the former of holds Astronist origins and is outlined within The Astronist Methodology.

[7:2:410] Cosmic exploration shall complement humanity in every possible way; socially, culturally, philosophically, financially, economically, mentally, physically, and spiritually.

[7:2:411] Provisions for water and energy are of paramount importance for the furtherance of a healthy humanity; cosmic exploration is the only long-term solution to the increase of the resources available to us.

[7:2:412] It is not only part of humanity's nature to expand itself, but it is also humanity's destiny, hence the reason for the vehement disapproval of the notion of overpopulation by the entire of the Astronist Tradition.

[7:2:413] We are beginning to realise our destiny as we continue on in this century and understand that The Earth is just a singular planet and that its resources are not only finite, but limited; if one does not consider the philosophical argument for the cosmic destiny of humanity, simply look towards the practical situation of humanity and in that you will see that our destiny is pointed towards the stars.

[7:2:414] In fact, The Earth is telling us itself that we are not destined to only populate its own surface through the demonstration of the limitations of the resources it holds, especially in comparison to the incomprehensibly large pool of energy that is present beyond the atmosphere upon other planets, celestials, and progenies of The Cosmos.

[7:2:415] The contributions of the cosmic exploration process to the development of humanity is endless in all fields, but that which must precede all other contributions is the development of ideas and the stabilising of the foundations of why, how, with whom, and for whom are we to conduct the Humanic Exploration of The Cosmos; the philosophies must precede the action for it is upon the philosophies that the actions take place for they are ultimately guided by them.

[7:2:416] The Water Argument could perhaps be considered a segment of The Population Argument, but it does hold its own specificities with regards to the supply of clean drinking water and the growing inability of this singular planet upon which reside to provide this for us without supplement.

[7:2:417] Furthermore, that which shall be known as The Disaster Argument notionises that cosmic exploration and space research is imperative for humanity due to the growth in our ability to predict natural disasters upon The Earth before they occur with deep penetration observations and images; from the superior perspective of space, we are able

to predict what will occur and see its causes and damages before they will reveal themselves to us on your own accord.

[7:2:418] The use of technology in space as part of the humanic exploration, it is essential that we aim to deflect or destroy potentially cataclysmic asteroids that travel too close to The Earth which, if the impact would be successfully, would destroy the majority of the human population; there is an imperative need for space exploration so as to avoid the occurrence of such an astronomical catastrophic end to human civilisation.

[7:2:419] The notion of an astronomically-induced end to humanity is not something that is considered to be likely to occur according to the Astronist Tradition, especially not as a focus for philosophical concern due to the incentrality of apocalypses in Astronism and especially due to the predicted destinal occurrence of the Humanic Exploration of The Cosmos by the Tradition which would rapidly decrease the chances of an astronomically-induced end to humanity.

[7:2:420] The practice of equipping spacecraft, satellites, and space stations with self-healing technologies and capabilities and midlife maintenance is essential to the efficient utility of these components of space travel so as to conduct reutility which involves the continuous augmentation of spacecraft, satellites, or stations of any kind as an alternative to the wastage of crafts that currently takes place.

[7:2:421] Reutility is to be conducted in order to improve upon the limitations of the crafts without disposing of them due to component failure, limitations in their capacity of fuel, their internal energy systems, and the general harshness of different extraterrestrial environments which do hold an impact on the long-term health of the mechanisms within the craft.

[7:2:422] In order to achieve reutility, in-orbit maintenance of craft is essential such as involving the diagnosis of issues, the replacement of failed components, recharging, refuelling, or de-boosting after extensive utility.

[7:2:423] It has been stated pre-omnidoxically that the true initiation of the Humanic Exploration of The Cosmos will trigger humanity's next industrial revolution; the most important element of this statement herein is the inclusivity of all of humanity.

[7:2:424] This is because previous industrial revolutions have occurred in select countries with certain privileges and infrastructures with poorer and less developed countries only just now experiencing the industrial revolutions that had occurred over a hundred years earlier in developed and reigning countries.

[7:2:425] The Space Industrial Revolution must and will be an industrial revolution for all of humanity to observe and feel the effects of, both economically, culturally, but most importantly, philosophically and spiritually which sets the Space Industrial Revolution far apart in its nature from those industrial revolutions of the past.

[7:2:426] The Space Industrial Revolution will not discriminate against the poor for space exploration is for all and this is as it should be for the omnality of Astronism commands it as such.

[7:2:427] I shall herein introduce two new useful terms, the first of which can be applied whenever one's view of humanity's exploration of The Cosmos is markedly characterised by the economic factors or is centred on the practical or financial gain of cosmic exploration and this is to be henceforth known as being aphular.

[7:2:428] Oppositely, when one's understanding and description of humanity's exploration of The Cosmos is distinctly less centred on the economic and financial gains of cosmic exploration and is more focused on and holds a centrality for the cultural, social, spiritual, and most importantly, the philosophical importance of cosmic exploration, as manifested in the Humanic Exploration of The Cosmos tenet, this is to be henceforth known as being sophular in one's outlook.

[7:2:429] With the introduction of these two terms comes a plethora of derivatives for each including aphularism, aphularise, aphularisation, aphularly, aphularity, aphularistic and aphularist for aphular meanwhile there includes sophularism, sophularise, sophularisation, sophularly, sophularity, sophularistic and sophularist for sophular.

[7:2:430] Of course, I, as Cometan, am a staunch sophularist and therefore so is the Astronist Tradition as a direct proponent of the Cometanic understanding of Astronism meanwhile there are expected to be many individuals whom are aphularistic in their orientations and outlooks for they consider The Cosmos only in terms of economic growth, wealth accumulation, and profitability which is herein stated omnidoxically authority to be a distinguishing mark of a person that does not identify as an Astronist, or does not truly understand the meaning, function, ability, sanctity, and true beauty of The Cosmos for all they do consider consider The Cosmos to be is something to be exploited for materialistic, economic, and financial reward so as to satisfy their own greediness.

[7:2:431] This does not mean to say that there exists no elements of aphularity within Astronism and the Astronist Tradition for there does indeed in many instances which are identifiable herein as part of The Omnidoxy, but the centrality of the purpose of the Humanic Exploration of The Cosmos and the overall orientation of Astronism firmly resides within the sophular position.

[7:2:432] The Sophular-Aphular Dichotomy is expected to be one of the most important and efficient ways of differentiating between worldviews that are truly cosmocentric, those which are pseudocsmocentric, and those which are acosmocentric, the latter two of which are both considered to be characteristics of an aphular position in contrast with the truly cosmocentric sophular position formed and affirmatively taken by Astronism.

[7:2:433] That which shall henceforth be known as interbonding is technical communicative practice that will work towards mass interplanetary communications by linking minor celestials, such as moons, or satellites via the shielding of radio emissions in order to allow greater communicability between different major planetary and lunar bodies with populations reside on or orbiting them; therefore, interbonding is absolutely essential to the establishment of mass interplanetary communications which is itself crucial to the success of the Humanic Exploration of The Cosmos.

[7:2:434] Furthermore, due to the weak surface gravity of The Moon, it will take much less energy to boost materials from The Moon's surface into orbit as compared with the energy required to do so from The Earth's surface; this will allow for the cost and time of transportation to be lowered and for it to become much more efficient to contribute to space construction sites.

[7:2:435] In this way, low-gravity manufacturing harnesses immense potential for the development of multiple industries including both medicine and construction, the latter of which will be complement by the efficient building of habitats that include exercise facilities, operations control, private crew quarters, airlocks, spaces to shelter rovers and lander vehicles, a wardroom, laboratories, a mess hall, and facilities in which hydroponic gardening can take place for a self-sustained facility.

[7:2:436] The affordability of space travel, space civilisation, and space exploration and the creation of space markets for the development of a space industry is essential to the realistic execution of the Humanic Exploration of The Cosmos.

[7:2:437] Innovating technologies that hold the power to drive down the cost of space accessibility due to the saturation of the market for telecommunications and information collection missions is consequential to the development of a space industry and it is upon this that the future of economic space exploration dependents following and simultaneous to an era of mass missions.

[7:2:438] The economically sufficient era of space exploration will occur when humankind is able to build reusable space transportation systems through reutility which hold higher payload efficiencies than the present systems utilised.

[7:2:439] The maintenance of peace in space is imperative to the success of the Humanic Exploration of The Cosmos and so any notion of the militarisation of The Cosmos is herein entirely rejected by omnidoxical authority and is therefore upheld by Astronism and the Astronist Tradition.

[7:2:440] The question of space ownership is also essential to expological study and contemplation and therefore here on in and henceforth, this shall remain a territory of philosophical study with the first orientation holding that space belongs to humanity which is to be termed as the belief orientation of anthroproprietorship, or anthroproprietism.

[7:2:441] Meanwhile, that which is to be referred to as a state of autoproprietorship, or the belief of autoproprietism is that space belongs to itself with the belief that space belongs to sentient beings in a general sense being henceforth termed as sentoproprietorship, or known as sentoproprietism.

[7:2:442] As part of this discussion, I herein introduce a brand new new prefix known as sento- which relates to sentient beings, or the quality of a being holding sentience rather than them being non-sentient, another term for which is that of being asentient.

[7:2:443] Essentially, by these notions, we can understand that space/cosmic exploration is not only the solution to our cultural and philosophical issues as is propounded by the core tenets of Astronism, but that it is also instrumental in resolving some of the most long-standing problems of our present society, the primary issue of which is the development of sustainable energy sources; this formulates both a cultural/philosophical dimension and a practical/economic dimension to the core tenets of Astronism.

[7:2:444] Space privatisation is another prominent topic that is to be discussed within the context of expology which is of course in close association with the belief orientation of spaciocapitalism which is automatically in support of privatisationism which is a systematic support for privatisation, commercialisation, and commodification of space, its phenomena, and its progeny.

[7:2:445] We should also introduce herein the term that shall be henceforth referred to as philosophisation or religionisation or more generally the systemisation of space which Astronism is considered to be the first, most famous, and the primary proponent and manifestation of, especially so due to its theme, its predication, its intentions, and its core tenets.

[7:2:446] The process of systemisation in the context of philosophy (philosophisation) and religion (religionisation) refers to the transformation of a subject, an object, a place, or a concept into a system of belief and a system of thought which Astronism is the latest example of as Astronism primarily predicated upon the development of its philosophy around space and space exploration.

[7:2:447] Anti-privatisationism, and the anti-privatisationist movement, pertains to a whole body of beliefs, organisations, politics, and policies that oppose the commercialisation, commodification, and to a certain extent, the institutionalisation of space with a variety of belief orientations along the spectrum from some literalist interpretations leading to liberal understandings which are less stringent on their views regarding the privatisation of space.

[7:2:448] Baronism refers to the instance of and advocacy for the circumstances in which private companies or their founders hold greater sway of space exploration than national

or international governments and governmental organisations; this is considered to be a spaciocapitalist belief orientation.

[7:2:449] Governmentalism, in the context of expology, is the belief orientation opposed to baronism, and upholds that governments should control space exploration rather than private companies and their owners.

[7:2:450] That which is to be known as the Golden Age of Space Exploration pertains to the period in the history of human space travel when space travel transcends the financial, economic, and scientific spheres and becomes centrality of societal structure, cultural influence, intellectuality, and philosophical tradition.

[7:2:451] Essentially, only considered to occur once the process of cosmocentralisation has occurred, or cosmocentrism has been fully implemented.

[7:2:452] I, as Cometan, consider the words of Patanjali about 2,500 years ago to be emphatically related to how I presently feel at the beginning of my journey to found and establish the philosophy of Astronism and the wider Astronist tradition of philosophy; Patanjali's words are as follows.

[7:2:453] "When you are inspired by some great purpose, some extraordinary project, all your thoughts break their bounds."

[7:2:454] "Your mind transcends limitations, your consciousness expands in every direction, and you find yourself in a new, great, and wonderful world."

[7:2:455] "Dormant forces, faculties, and talents come alive, and you discover yourself to be a greater person by far than you ever dreamt yourself to be."

—

[7:2:456] There are a large amount of pre-Astronist phrases and customs that pertain to and involve The Cosmos, the cosmic phenomena, and the cosmic progeny, particularly the stars which are herein classified within the Astronic tradition as both pre-Astronist Astronic superstitions or as pre-Astronist Astronic phrases.

[7:2:457] The first of these is the introduction of the phrase "wishing upon a star" which is to be henceforth known as the act of precatoration, which means to precatorate, and is to be conducted by precatorator.

[7:2:458] To thank one's lucky stars is another pre-Astronist which is to be referred to as the act of felistellation, or to felistellate, and is to be conducted by a felistellator and means to be grateful for one's destiny and one's place of insignificance in the brilliant grandness of The Cosmos.

[7:2:459] The phrase known as “we are all in the gutter, but some of us are looking at the stars” pertains to the act of looking up to the stars as from a place of suffering and despair is to be henceforth known as the act to anastellate, or the conduct of anastellation.

[7:2:460] This links to the philosophy of Buddhism which is predicated upon the notion that suffering is an inherent element of human existence upon The Earth and that alleviation from suffering should be positioned as our most important goals.

[7:2:461] I, as Cometan, see a link here between Astronism and Buddhism because Astronism agrees that suffering is present throughout the world, but instead of following a samsaric method for alleviation from that suffering, Astronism instead proposes as an astral, transcensional, and cosmocentric method of our alleviation from suffering, essentially meaning that Astronism considers the stars and more widely, The Cosmos, to be the primary liberator of humanity from suffering through philosophical contemplation, faithful belief, enthusiastic exploration, enknowledgemental discovery.

[7:2:462] The eyes-in-the-cosmos is a pre-Astronist phrase that is to be referred to in the term herein created and known as to enchirate, the act of enchiration, or enchirism and pertains to the concept that the stars are looking down upon all sentient life, protecting sentient life, and guiding the individual destinies of sentient beings.

[7:2:463] The pre-Astronist phrase of the stars in one’s eyes is to be henceforth known as to prostellate, or the act of prostellation meaning that one understands the cosmocentric and multiplanetary future of humanity as well as the importance of spreading cosmocentric and astrocentric ideas to all sentient beings.

[7:2:464] Reaching for the stars is another common pre-Astronist phrase that is herein to be known as to aspellate, or the act of aspellation and means that one holds the visionary personality and spirit to formulate grand ambitions on a scale that is markedly cosmic and achieve them.

[7:2:465] This is essentially in relation to intellectual and philosophical ambitions, or ambitions that are being the generation of profit, and so does not usually include business ambitions and instead focuses more on creative ambitions.

[7:2:466] One of the most important pre-Astronist phrases that is to be categorised as part of the Astronic tradition known as “it is written in the stars” which is to be known as to interscribe, or the act of interscription which pertains to the notion and belief that cosmic progeny and phenomena are integrally linked to the destiny of humanity as a whole and individual humans.

[7:2:467] Catching a falling star is the third to last phrase to be addressed herein and is to be known as to auspicate, or is the act auspication which pertains to taking opportunities to achieve one’s ambitions as soon as they arise for such opportunities will be gone as quickly as they arose.

[7:2:468] Blue sky thinking, which is to be known as to rastellate, or the act of rastellation, means to think beyond the present reality; this is to envision the potential realities of the future and to formulate ambitions that are linked to the realisation of those future realities.

[7:2:469] To be born under a lucky star is to be henceforth known as to nastellate, or as the act of nastellation meaning to have been granted natural abilities and talents that make oneself distinct from others; to be fortunate due to one's ambitions, abilities, talents, and ideas is to be part of the Astronic tradition.

—

[7:2:470] Astronism on theism is expected to be one of the foremost topics of discussion for philosophers, theologians, and lay peoples alike regarding the philosophy of Astronism due to the motional and flowing nature of theism and its interactions with Astronism as demonstrated herein as part of the Omnidoxy.

[7:2:471] For this reason, this discursal appendage will outline each of the pre-Astronist arguments in support of theism and those not supporting theism, after which I shall list the notions of logic that are recognised by the Astronist Tradition as valid for support of theism or those not in support of theism, however, this list is not exhaustive.

[7:2:472] Reason for the inclusion of notions of logic instead of simple arguments is to closer associate the Astronist Tradition with the principles of philosophy which is predicated upon rationality and logicity, of which notions of logic are a manifestation.

[7:2:473] The following arguments are those which are pre-Astronist and are in support of theism, the first of which pertains to the aesthetic argument which holds that due to the beauteousness of nature, sentient and non-sentient beings, as well as cosmic progeny and phenomena, that there must exist some transcendent designer of such beautiful entities.

[7:2:474] The Christological argument holds that the validity of Jesus's claims as the son of God and his resurrection prove that God does exist, which is of course the particularly Christian form of theism.

[7:2:475] The cosmological argument upholds that whatever the first cause of the universe is, that is God as that relates to cosmogony, as the origin of existence.

[7:2:476] The argument from degrees upholds that due to the hierarchical structure of existence, there always relates to a ultimate point or degree, being that the greatest, largest, or most superior form of something; the most superior of superiors is that of God.

[7:2:477] The argument from desire upholds that the anthropic penchant for eternal happiness must be capable of satisfaction due to the fact that all natural desires are capable of being satisfied.

[7:2:478] The argument from religious experience notionises that the religious experiences of thousands of individuals throughout history points to the existence of God.

[7:2:479] The fine-tuned universe argument upholds that the conditions allowing sentient and non-sentient life to exist in the universe are only able to occur due to universal dimensional physical constants and if any of those constants were to change even slightly, the universe would not be conducive to development of matter and the structure that it holds presently.

[7:2:480] The argument from love notionises that due to the existence of love, there does exist a creator that shares this quality of love.

[7:2:481] The miracle argument notionises that the occurrence of many miracles throughout history with their own individual witnesses leans towards the existence of God.

[7:2:482] The argument from morality states that due to the existence of a moral order, there must exist a creator God that oversees the commandment of this moral order as the perfect manifestation of morality.

[7:2:483] The Proof of the Truthful argument states that there must exist a necessary existent; essentially, an entity that exists that cannot not exist.

[7:2:484] The ontological argument states that there must exist something in the most superior state of being beyond which nothing else may exist or may be possible to think to exist.

[7:2:485] Pascal's Wager is an argument supporting theism holding that if a person believes in God but God doesn't exist, they stand to have only finite losses (comfort of the concept of immortality) whereas if one doesn't believe and God does exist, then that person stands to risk infinite losses, such as one's residence in hell for eternity.

[7:2:486] The teleological argument states that the perceived evidence of the deliberate design of the natural and cosmic world demonstrates the need for a designer, therefore pertaining to the existence of a creator God.

[7:2:487] The following arguments either support atheism or deny the validity of theism without aligning to atheism and firstly includes that which is known as The Atheist's Wage which is a counter-argument to the previously mentioned Pascal's Wager in which provided is an extension of the original wager with the result ending in the notion that living in good morality is ultimately superior to living in a bad morality, whether one believes in God or not, therefore the question of the existence of God and God's role in the moral order is subsequently removed.

[7:2:488] The problem of evil states that if God truly exists omnipotently, omnibenevolently and omnisciently, then why would a loving and merciful God create all the evil that exists in the world.

[7:2:489] The argument from free will states that omniscience and free will hold an incompatibility that forms a conception of God that is ultimately contradictory.

[7:2:490] The argument of the problem of Hell notionises that the very existence of a place in which souls are eternally damned contradicts a just, merciful, moral, and omnibenevolent God and this is therefore used as an argument against the existence of God.

[7:2:491] The argument from inconsistent revelations holds that due to the fact that there exists no universality in the nature, role, and identity of God and that each individual must either accept or reject a revelation solely based upon the authority of its proponent which is tantamount to believing due to one's fear.

[7:2:492] The argument from non-belief states that if God existed in the omnipotent, omniscient and omnibenevolent way that he is proposed to exist, then every reasonable person would have been brought to believe in God; however, this hasn't happened, and so therefore God cannot exist in the way aforescribed.

[7:2:493] The argument of theological noncognitivism states that religious language, such as words like God, are not cognitively meaningful and therefore exist merely as concepts rather than commanding any physicality which reduces their overall ability to present meaning.

[7:2:494] The argument known as Occam's razor states that simpler solutions are more likely to be correct than complex ones can work both in favour of theism, but also in favour of atheism.

[7:2:495] The former of which is achieved when it is stated that it is simpler to suggest that God does exist monotheistically (such as in Christianity and Islam) while the latter is achieved by stating that it is simpler to believe that there exists no God at all so as to avoid having to justify God's ontology, nature, role, and identity.

[7:2:496] The analogy of Russell's teapot is last of the arguments for atheism and states that the philosophic burden of proof must lie upon a person making claims that are unfalsifiable rather than moving such a burden of disproof to others.

[7:2:497] Notions of logic supporting theism that are recognised by the Astronist Tradition firstly include the notion that if there is a creation, then there must be a creator.

[7:2:498] Similarly, though distinct, is the notion of logic stating that such which is designed and not just simply created must have a designer to design it.

[7:2:499] If there is no God then there is no purpose or first cause to our existence.

[7:2:500] God needn't reveal itself to that which it creates nor need that which it had created intercede with that which had created them though knowing still that God resides.

[7:2:501] To be is to be created and so to be without a creator is to be not therefore there must be a creator.

[7:2:502] The notions of logic supporting atheism, or something other than standard theism, that are recognised by the Astronist Tradition firstly include the following notion that a creation needn't be created by something, but may instead be its own creator.

[7:2:503] A creator needn't exist if its creations cannot ever know of the trueness of its existence.

[7:2:504] To be created by an external force beyond our existentiality means that we cannot and will not ever know of the truth of ourselves.

[7:2:505] An assumption it is to suggest that the creator of something is also its sustainer.

[7:2:506] To have been created by a God does not mean to say that our humanly formed wishes will always be granted by that God if we do conduct those which we perceive to be good deeds.

Philosophical Astronomy & Scientific Astronomy

[7:3:1] It is important to raise the question and issue of the distinction between philosophical astronomy and cosmology and that of scientific astronomy and cosmology as a topic of particularly expological concern due to expology's focus on The Cosmos is to be explored which these two forms of astronomical study demonstrate different approaches to and which also raises metaphilosophical questions within the context of expology.

[7:3:2] The distinction between philosophical astronomy and scientific astronomy is of particular importance for the Astronist philosophical tradition, primarily because of the thematic nature of Astronism and its adoption of The Cosmos as its central element of inspiration, knowledge, devotion, and belief which, despite these perhaps existing subconsciously in scientific astronomy, these elements do not exist openly or clearly.

[7:3:3] By addressing the distinction between philosophical astronomy and scientific astronomy, we must first address the distinction between philosophy and science themselves, the former of which is dependent upon rational argument while the latter is more dependent upon the empirical ability of ideas to be proven factual correct or incorrect.

[7:3:4] Despite science originating from within philosophy, these two subjects are intrinsically different by their core natures for the former is designed to often verify the reasoned arguments made by the latter which, in itself, does demonstrate a connection between the two, which has not ever been denied herein that there exists ample connections, but in this case, connections do not constitute whole similarities.

[7:3:5] The goal of science remains empirical verifiability while the goal of philosophy, from the Astronist perspective, entails the construction of reasoned arguments, the discussion of arguments, the reconstruction of such arguments to improve them, and finally, the dissemination of such arguments without the requirement to actually prove their correctness or incorrectness which is because, in philosophy, an argument's correctitude or incorrectitude will be signified by the argument's inability to logically withstand open scrutiny.

[7:3:6] Therefore, in understanding this fundamental difference in the nature of philosophy and the nature of science, we can begin to understand how they both diverge in the context of astronomy as they do diverge in a similar way to a general context.

[7:3:7] To preface this discussion, it is also important to note that despite the inherent differences in approach to astronomical and cosmological understanding between scientific and philosophical forms of astronomy, the two are perfectly suited and furthermore destined to not only interact with one another, but to bolster each other in their own ways which is especially so believed from the perspective of the Astronist Tradition.

[7:3:8] Scientific astronomy is concerned with the empirical discovery of space, the mathematical quantification of cosmic entities, and the justification of such theorems through the application of experiments.

[7:3:9] Meanwhile, philosophical astronomy is concerned with the contemplation of The Cosmos, its progeny and its phenomena in both measurable and immeasurable terms.

[7:3:10] A conceptual qualification occurs that attempts to explore The Cosmos by conceptual means and to form ideas about the nature of The Cosmos, the way it acts, and its eventual fate as well as primarily being concerned with what The Cosmos means to people and the translation of astronomical practice to people's lives as another form of quantification, but importantly, the empirical verifiability of such ideas is not computed in a philosophical context which ultimately defines it from scientific astronomy.

[7:3:11] Philosophical astronomy is primarily concerned with the meaning of what is found in scientific astronomy as philosophers of astronomy maintain that scientific astronomy does not hold centrally the emotional and meaningful aspects space and celestial entities which leaves scientific astronomy disproximated from human lives and belief.

[7:3:12] It is also a primary goal of philosophical astronomy, as manifested by Astronist Philosophy, to further proximate astronomical themes to human lives so ensure that The Cosmos, its progeny, and its phenomena not only exist to humans through the transference of information, but also that these mean something more to humans through belief and meaning.

[7:3:13] Scientific astronomic notions can only be based upon facts and proven theories meanwhile philosophical astronomic notions are based upon reasoned arguments and certain forms of belief.

[7:3:14] Belief, therefore, does hold a place of importance within philosophical astronomy which does further approximate philosophy to a religious nature, but all beliefs within philosophy are distinct from their religious counterparts in that they must be based upon reasoned arguments rather than through divine proclamations.

[7:3:15] These two forms of astronomy are not only interconnected with one another, but they feed off each other for ideas as scientific astronomy is manifested as the discipline of study of immemoriality in Astronist Philosophy while philosophical astronomy demonstrates the initial sparks of ideas and wonders that are later formed into full scientific theories that are able to be observed and proven.

[7:3:16] Therefore, the relationship between these two forms of astronomy are as close as ever and they exist as one under the umbrella of astronomy itself; they have their own functions, features, and utilities and they each have an important role to play, especially so

in the Astronist vision of philosophical astronomy, which The Omnidoxy herein introduces.

—

[7:3:17] That which is to be henceforth referred to as lunar denialism, also known as selenodenialism refers to one's denial that the 20th century moon landings occurred and the widespread adherence to this orientation throughout many institutions, religious traditions, and organisations demonstrates a huge movement against cosmocentricity.

[7:3:18] We cannot trust those whom adhere to such anti-Astronist agendas; such people either hold their own intentions for their deniality or they remain openly or indirectly in opposition to all that Astronism stands for and represents.

[7:3:19] You will find such people to be deniers of many other astronomical events, cosmic notions, Astronist beliefs, and future ambitions in The Cosmos via incomplete arguments that demonstrate no logic other than their attempt to achieve their intentions.

[7:3:20] Anti-Astronism, also known as anti-Astronist sentiment, anti-Kosma, anti-Cosmism, or anti-Neocosmism despite the widespread support for the philosophy and its principles, is expected to be rife in certain communities, especially in those that see space and the notions of the future of humanity in space as a threat to their own current identities and beliefs.

[7:3:21] Lunar denialism, alongside the Flat Earth Theory, are both prominent examples of that which is anti-Astronic; such ideas are not true theories or beliefs, they are simply anti-Astronic conspiracies.

[7:3:22] Cosmodenialism is that which lunar denialism exists within and pertains to a wider state of deniality or denial mentality towards the notion of The Cosmos as it is propounded in Astronism especially in the Astronist cosmology, but also through its cosmocentric orientation, astronocentricity, sentientism, and other concepts and beliefs.

[7:3:23] Cosmodenialism is denial of either the existence of The Cosmos beyond The Earth in the most extreme of cases, but most commonly, it is the denial of the important role of The Cosmos, humanity's subordination to The Cosmos, and humanity's existential duty to explore The Cosmos, all of which are firmly held by Astronism which essentially means that cosmodenialism, within which lunar denialism and other forms of denialism directed towards astronomical topics, are actually synonymous with anti-Astronism.

The Study of Astronist/Astronic Hobbies (Hobbology)

[7:4:1] A discipline within expology is that which is henceforth known as hobbology and deals with all hobbies, and activities that are non-Astronist originative that people can partake in that are in alignment with cosmical devotion, or are intertwined with aspects of cosmic observation, education, or non-devotional appreciation.

[7:4:2] Hobbologists are tasked with categorising different non-Astronist originative activities into different classifications according to their features, as well as the justification for the choices of their categorisations.

[7:4:3] With the development of an Astronist/Astronic tradition of hobbies comes an essential element to wider Astronist culture and also demonstrates the breadth and depth of how far the process of Astronisation or Astronistisation can extend.

[7:4:4] Almost every hobby can be Astronised, we will be demonstrated herein as the following list of hobbies will all be explored through the scope of Astronism in such a way that they are applied to a cosmical theme and/or context which makes them Astronic and thus part of the Astronic tradition of thought and culture.

[7:4:5] Through the Astronisation/Astronistisation of these many different hobbies, Astronism and the culture that resides within and emits from it transcends even from the category of philosophy and demonstrates, perhaps in the most practical and visible of ways, the diversity of Astronism and its applicability to a vast range of instances.

[7:4:6] 3D Printing is applied to the philosophy of Astronism in the instance that people will create 3D prints of astronomical objects as ornaments, philosophic trinkets, or other items that are associated with Astronism, or hold a cosmic theme.

[7:4:7] Amateur Radio is a hobby that is applied to the Astronic tradition through the creation of radio segments, or entire radio shows and stations dedicated to philosophical discussions of an Astronic theme, or to discuss the latest news in the world of Astronism.

[7:4:8] Aquascaping is the hobby of arranging aquatic plants, as well as rocks, figurines and other ornaments in a fish tank, but to Astronise this hobby, each ornament that is used should be of a cosmic theme, or the aquatic plants used should hold cosmical names.

[7:4:9] Baking is Astronised through the decoration of baked goods using cosmical symbols and theme, or through the naming of such goods with cosmical names.

[7:4:10] Board/tabletop games holds a wide potentiality for Astronisation due to the fact that there are a huge amount of new board games that can and will be developed using a

cosmical theme, some of which will be marketed as extensions of previously developed games, while others will be new and unique.

[7:4:11] Book restoration is a hobby that, on the surface, may not seem to hold any potentiality to be Astronised, but in fact, the restoration of old cosmological, philosophical, astronomical, and even old theological works would be classified as the Astronisation of this hobby, and considering the extent of literary works dedicated to these subjects, there exists an enormous amount of works that remain in need of restoration.

[7:4:12] Calligraphy is a beautiful and ancient art form and hobby that holds a prime position to be Astronised for a number of reasons, the first of which is because this hobby is widespread and its Astronisation will bring Astronic beliefs, ideas, and culture to places that perhaps Astronism, presented as a philosophy, may not be able to penetrate; the Astronisation of calligraphy will include the depiction of cosmic progeny and phenomena using the calligraphic style, as well as the writing of quotes of Cometan in languages suited to calligraphic writing.

[7:4:13] Candle making is another popular hobby that is in need to be Astronised which will primarily involve the depiction of cosmic progeny and phenomena on the outside face of the candle and may also include the writing of Cometanic quotes or omnidoxical insentensations somewhere on or in the candle.

[7:4:14] Colouring is a universal hobby conducted by children most popularly, but now also by trend, the hobby is transversing into the popularity of some adults for relaxation purposes; the Astronisation of colouring is essential, but also fairly simple, and will mainly include the outlining of all the different types of cosmic progeny and phenomena to be coloured in with colours of choice, or by a colour guide.

[7:4:15] Creative writing is an essential element to philosophy as the two, from the viewpoint of Astronism, go hand-in-hand with one another; the Astronisation of creative writing will include writings with a cosmic or philosophical theme, especially with a distinct Astronic influence.

[7:4:16] The Astronisation of crocheting will include simplistic depictions of cosmic progeny and phenomena.

[7:4:17] Similarly, cross-stitching, which allows the hobbyist to become more intricate with the details of the depiction, can be Astronised to form complex cosmical patterns, entities, as well as stitching short omnidoxical insentensations and Cometanic quotes.

[7:4:18] For crossword puzzle to be Astronised it must consist of cosmical or philosophical words and topics only rather than other subjects, either specific to Astronist terminology, or about cosmology, astronomy, and philosophy as general subjects.

[7:4:19] The extremely popular hobby of dancing, in which ever form or style that it may take place, shall be Astronised either by the naming of dance moves after cosmic progeny and phenomena, or by dancing to music that is spacial or cosmical by its theme.

[7:4:20] Digital arts encompasses variety of artistry that is conducted via digital platforms and computers and across all of these art forms, no matter the time, the process of Astronisation shall include the depiction of cosmic progeny and phenomena, or cosmical patterns, or it shall involves somewhere philosophical debating, a Cometanic quote, or omnidoxical insentensation.

[7:4:21] The Astronisation of the hobby of drama will involving the acting out of space exploration related scenes or acting in roles depicting philosophers.

[7:4:22] The hobby of drawing can be Astronised in a similar way to that of colouring and will involve a rich tradition of drawing a huge range of cosmical progeny and phenomena, thus forming new traditions and movements of drawing; the Astronisation of drawing will also involve the depiction of philosophers.

[7:4:23] Embroidery is considered to hold a high potentiality for Astronisation as the embroider is able to create beautiful intricate pieces that will feature the vast amount of cosmic progeny and phenomena that is in present existence, as well as including fantastical progeny and phenomena as part the tradition of chimericalism or also known as cosmic exaggerationism.

[7:4:24] Fashion design can be Astronised through the designing of all different types of clothing and accessories by including cosmical patterns, cosmic symbols, and astronic symbols, but in particular, forming fashion brands around these types of patterns on clothes, or at least creating full fashion lines featuring such patterns; the featuring of cosmical patterns on clothing and accessories is nothing new, but it is the association of clothes with the philosophy of Astronism that makes them Astronised, or by including specific types of patterns and symbols that make them Astronised; the Astronisation of fashion design is herein considered to be one of the most important spheres to Astronise, yet also, one of the most difficult due to the huge amount of saturation of the sphere of fashion.

[7:4:25] The Astronisation of floristry is another important sphere for Astronisation to occur within due to the sphere's universality and the Astronisation of this sphere, like many others in this listation, involves the arrangement of flowers to resemble cosmical patterns, cosmical progeny and/or phenomena, or to feature Astronist symbols, or it may involve the creation of new artificial flowers featuring cosmical/astronic imagery on their petals and stalks.

[7:4:26] Hydroponics is to be Astronised due to its importance usage in space colonies and it will be Astronised in such a way that practicing hydroponics is included within the auspices of the discussions held by Astronists; the ethicality, practicality, and intentionality

of hydroponics and the inclusion of hydroponics into Astronic discussions in this way forms its Astronisation.

[7:4:27] Jewellery making will involve a similar process of Astronisation to that of the sphere design with either product lines or entire brands centred on the designing of jewellery of a variety of qualities and price ranges featuring cosmical patterns, cosmic imagery of progeny and phenomena, as well as Astronic symbols.

[7:4:28] Jigsaw puzzles are another important product that is to be Astronised with relative ease in comparison to other products and spheres and will involve the designing of jigsaw puzzles whereby the finishing image is a realist cosmical progeny or phenomena, a chimericalist image, an Astronic symbol or another form of imagery that is related to Astronism.

[7:4:29] Knitting, like crocheting and cross-stitching, is another hobby that is to be Astronised in a similar way to those spheres and will include the encouragement of people to knit clothing items or other products featuring cosmical imagery or Astronic symbols as part of the Astronisation process.

[7:4:30] Lacemaking is a niche hobby yet is still worth to be Astronised due to the large amount of uses of lace in many different products globally and will include depiction of cosmical patterns and imagery in the lace or alternatively, the lace may feature Astronic symbols, but this will be a rarity in comparison.

[7:4:31] Lapidary is another of the niche hobbies addressed in this listation, but is again, worth being Astronised due to the widespread sphere of producing and selling stones, rocks, and gems; to Astronise lapidary, this would involve the depiction of simple versions of cosmical progeny and phenomena into the surface, or it may involve the engraving of Cometic quotes into the surface of the stone or gem as forms of Astronic influence and belief.

[7:4:32] Lego® building has become not only a popular hobby in recent years, but an entire industry which means that it is primely positioned to be Astronised; the Astronisation of Lego® building will involve the use of Lego® bricks to create cosmical progeny and phenomena of all types, which could either be created at home using one's own separately bought bricks, or they could be developed within Lego® themselves and sold as box sets; whether Lego® chooses to associate their sets with Astronic belief is another element for further discussion which opens up a wider conversation regarding the association of the philosophy of Astronism with a specific product, especially in a commercial setting, which is discussed as part of the commerciality of Astronism.

[7:4:33] Partying is a major aspect of our lives no matter who we are, what we believe, or where we live so it would make sense to want to conduct the Astronisation of partying swiftly due to the wide variety of opportunities involved with this particular form of Astronisation; in a general sense, the Astronisation of partying will involve playing music

that can be described and categorised as Cometanic, the decorating of clubs with cosmical patterns and imagery, the naming of alcoholic drinks after cosmical progeny/phenomena, or related people, events, or ideas to Astronism, however, this list is by no means exhaustive.

[7:4:33a] The Astronisation of dinner parties will involve the cooking and baking of foods that have astronomical or cosmical themes, or hosting such parties with dress codes that are astronomical theme.

[7:4:33b] In a similar manner, the Astronisation of garden party will involve the making of food that is astronomical by theme, the direction of the dress code to one that is astronomical or any element of the party that features Cometanic quotes.

[7:4:33c] Cocktail parties are similarly Astronised by serving drinks that have astronomical names, or a cocktail party that involves naming drinks by cosmic progeny, cosmic phenomena, or by something Astronic, or philosophic in character or appellation.

[7:4:33d] Tea parties are also Astronised in the same way, but this may also involve using cutlery and china that features cosmical imagery and patterns, or features Cometanic quotes.

[7:4:33e] Balls are wonderful occasions that were once regularly attended and widely popular, but have largely declined in popularity in present times, but hold a high potentiality for Astronisation as they can be decorated astronomically in addition to both the males and females wearing cosmical clothing and accessories, or indeed the ball could be held in the name of fundraising for the philosophy of Astronism.

[7:4:33f] A costume party would be Astronised through attendees dressing up in costumes featuring cosmical progeny and phenomena as well as related figures in the fields of astronomy or philosophy.

[7:4:33g] As previously mentioned regarding the Astronisation of balls, the Astronisation of fundraising parties primarily involve organising such fundraising parties in aid of philosophy in a general sense, and of course especially for the philosophy of Astronism, or a particular denomination or element of Astronism in particular.

[7:4:33h] A dance party would be Astronised by only using Cometanic-style music or by using lights that reflect cosmical patterns, progeny, and/or phenomena, or through the decoration of the dance floor or the party room cosmically or astronomically.

[7:4:34] Clubbing, as a leisure activity wherein people enter an inside space in which loud music is playing, can be Astronised through the naming of club as a astronomically, philosophically, or Cometanically themed term or phrase, the decoration of the club inside and outside with cosmic progeny and phenomena, doing the same for the marketing materials for the club, and also naming the drinks and spaces inside the club with a

cosmical theme, but this list of possibilities still does not remain exhaustive of the possibilities.

[7:4:35] Metalworking is primarily Astronised through the focus on building up the industry and hobby of orrery building, or orrery-making which is considered to be a really important measure of one's astronicity as to whether they can build orreries using any type of material and the regularity with which they build orreries.

[7:4:36] Model building is again another important hobby regarding orrery-making, but it could also be Astronised through the building of other types of astronomically-themed models, such as the construction of single cosmic progeny or phenomena in either a detailed or undetailed way.

[7:4:37] Origami remains an easy hobby to Astronise as it can be organised as either the origamist creating cosmical shapes and patterns out of paper, or the paper itself already featuring cosmical shapes and patterns which are then made into different shapes and figurines afterwards.

[7:4:38] Painting is a hugely important hobby that is in need of swift Astronisation due to the fact that Astronism remains an incredibly and uniquely visual philosophy due to its astronomical theme; painting cosmic progeny and phenomena as an alternative to astrophotography is something that has not yet been explored enough with new art movements expected to be developed directly as a result of the establishment of the philosophy of Astronism.

[7:4:39] Philately is a niche hobby that is also easily Astronisable depending upon the extent to which postage stamps are distributed and also remains highly dependent upon the extent to which The Institution of The Philosophy of Astronism is able to create relationships with postage stamp manufacturers and distributors.

[7:4:40] The Astronisation of photography results in the bolstering, dissemination, and organisation of astrophotography so as to promote as a branch of photography that can be linked to philosophic reasons; one could argue that the Astronisation of photography is already in occurrence, but it is the association in people's minds between astrophotography and astronism and conducting astrophotography for philosophic reasons that will be the main part of photographic Astronisation that is yet to be fully developed.

[7:4:41] Playing musical instruments can be Astronised by only playing Cometanic music, or cosmically-sounding music, or by decorating one's musical instruments with cosmical patterns and shapes.

[7:4:42] Pottery is a hobby that easily be Astronised through the decoration of anything made in pottery by a cosmic pattern, or by cosmical progeny or phenomena, or by inscribing a Cometanic quote somewhere on the pottery piece.

[7:4:43] Quilling can be Astronised via the shaping of materials, including paper, fabric, or glass into the shapes of cosmical progeny or phenomena, or by decorating those materials with cosmical imagery.

[7:4:44] Reading about cosmical or philosophical subjects is to become the Astronised version of the hobby of reading, especially when the books one is reading are connected, related, or associated with the philosophy of Astronism, or are Cometanic by their authorship.

[7:4:45] Scrapbooking about one's philosophical ideas or cosmical observations, or of one's own personal philosophic journey is the primary way in which the Astronisation of the hobby will occur.

[7:4:46] Sculpting, as both a profession and a hobby, will be Astronised through the sculpting of cosmic entities as well as the sculpting of other figures but decorating them with cosmical patterns and shapes.

[7:4:47] The hobby of singing can be easily Astronised through the direction of songwriting towards songs that are cosmically-related, or that are related to philosophy in general or Astronism specifically.

[7:4:48] Sketching a cosmic scene either in the chimericalist or cosmic realist traditions, or sketching to include a Cometanic quote, Cometan myself, or to include a philosophical quote would be the primary ways in which sketching or drawing can be Astronised.

[7:4:49] The hobby of soapmaking is astronisable through the depiction a cosmic entities and cosmical patterns and shapes on the outside and insides of soaps, or through the inscribing of Cometanic quotes on the front side's of soap bars during their making.

[7:4:50] Video gaming is a sphere and industry that is easily astronisable due to the fact that video games about space exploration can be considered Astronised games, especially if they are officially associated to or sponsored by the philosophy of Astronism through relations to The Institution by the video game developers.

[7:4:51] Watching movies only related to astronomy/cosmology, space exploration, philosophy in general, or about Astronism or Cometan specifically would be considered the Astronisation of film watching as a hobby.

[7:4:52] Watching television, specifically documentaries about space, philosophy in general, cosmology, astronomy, Cometan, or Astronism, would be the primary way in which a person would Astronise the watching of television as a hobby.

[7:4:53] The hobby of woodcarving can also easily undergo the process of Astronisation through the creation of woodcarvings that include cosmical patterns and imagery, or that feature inscriptions of Cometanic or Astronistic quotes, terms, or beliefs.

[7:4:54] Worldbuilding is a lesser-known hobby that involves the creation of a new world in which characters and places reside and events occur through some art form or medium, primarily that of literature and now most popularly through animation and video game development; the Astronisation of this will be achieved through the imagination of the huge amount of worlds existent in The Cosmos and manifesting one's imagination of such worlds through some artistic medium.

[7:4:55] The Astronisation of astronomy, as a hobby rather than a subject, is the most important entry to this listation to the philosophy and practices of Astronism because I, as Cometan, have also attempted to stress the difference between philosophic astronomy and scientific astronomy, Astronism of course pertains to and is manifested as the former rather than the latter; astronomy is Astronised through conducting astronomy for reasons of belief and contemplation rather than for reasons of experimentation.

[7:4:56] Camping can become an Astronised hobby, but only if astronomical aspects are incorporated during some part of a camping trip, or if a philosophical debate is organised as part of the camping trip.

[7:4:57] Landscaping is a popular hobby that can easily be Astronised if the landscapes in one's garden or some other place are decorated by a cosmically theme, or that they somewhere feature Cometanic or Astronic quotes.

[7:4:58] Geocaching is one of the few hobbies that cannot be presently Astronised but could be in the far future in a spacial setting if items are put somewhere at a certain set of coordinates that a person must use a spacecraft to find them.

[7:4:59] Graffiti can be Astronised via the depiction of cosmical progeny or phenomena, or other astronomical imagery through graffiti art or by quoting Cometanic sayings through graffiti art.

[7:4:60] High-power rocketry can be Astronised through the engraving of Cometanic quotes on the outside and inside of rockets or by quoting a belief of Astronism or a saying from The Omnidoxy upon the successful liftoff of a rocket.

[7:4:61] Skydiving is a hobby that can be Astronised by conducting it for cosmic devotional and philosophical purposes, or by doing so for an Astronic charity.

[7:4:62] The same can be said for the hobby of freefalling; it can be Astronised either for cosmic devotional and philosophical purposes, or by conducting such activities in order raise funds for The Institution or one of its charitable causes.

[7:4:63] The hobby of hedge-shaping, or topiary, as part of the wider sphere of gardening, can easily be Astronised by shaping hedges and shrubs so as to resemble cosmical entities and shapes.

[7:4:64] Debating is a hobby that is considered to be important to bolster further as the establishment of the philosophy of Astronism continues, particularly the sense that it is the art of argumentation; of course, to Astronise a debate, one need only to redirect the topic of the debate towards that of an astronomical, cosmological, or philosophical nature.

[7:4:65] Astronist Astrology involves the appreciation of the different positions of cosmical entities, but does not incorporate divination from these, nor does it apply these to human affairs, and nor does it use the zodiac system to categorise the cosmical entities for the zodiac system is not considered to be Astronist in culture or ethos.

[7:4:66] Satellite watching is considered to be a hobby presently in low frequency, but one that the philosophy of Astronism (and therefore The Institution of The Philosophy of Astronism) does intend to oversee the popularisation of, particularly due to its proximity in theme to that of Astronism.

[7:4:67] Microscopy can be Astronised by conducting it for philosophical purposes only, such as in the case as to derive a cosmoapplication; essentially, for microscopy to be Astronised, the reason for which a person conducts it must relate to the philosophy of Astronism in some way.

—

[7:4:68] That which shall be henceforth referred to as projectionism pertains to the instance in which a person associates themselves and people close to them with figures in television shows or books.

[7:4:69] I, as Cometan, can admit that I have partook in this mental activity and have found it quite thought-provoking and stimulating for one's imagination and even though the term projectionism is firstly introduced herein to refer to this instance, I am certainly not the first person to have experienced this, however, putting a term to an instance has transformed into one of my most enjoyable hobbies.

[7:4:70] To refer to the night sky as astro or astral means a night sky that is starry; astro is to be classified in the same way as a night sky is clear, but instead refers to the degree or extent to which stars are visible in the night sky therefore introducing the terms of volastro, midastro, and vacastro, the former of which pertains to a very starry sky, the middle of which pertains to a medium amount of stars in the sky, and the latter of which pertains to a small, yet visible amount of stars in the sky; the term, astro, is therefore used in a general sense, but to refer specifically to the extent of the astrality of the night sky, a person is to henceforth use these three terms introduced herein.

The Cosmodora

[7:5:1] Come all!
[7:5:2] Pull together
[7:5:3] for it is starward we strive.

[7:5:4] We will
[7:5:5] believe forever
[7:5:6] for never shall we die.

[7:5:7] Come all!
[7:5:8] Hear our cries
[7:5:9] Join the others in pride.

[7:5:10] See all!
[7:5:11] Think together.
[7:5:12] Observe the stars.

[7:5:13] Come all!
[7:5:14] For the better
[7:5:15] Unite with philosophers now.

[7:5:16] Heed they
[7:5:17] All we cherish.
[7:5:18] For what we wish to be.

[7:5:19] Come all!
[7:5:20] Hold your ground.
[7:5:21] Embrace those better in mind.

[7:5:22] Lead they
[7:5:23] All who suffer
[7:5:24] as the new worlds arise.

[7:5:25] Come all!
[7:5:26] Pull together
[7:5:27] and take our prize.

[7:5:28] All listen,
[7:5:29] Take our thoughts,
[7:5:30] Spread the wise,
[7:5:31] Open your eyes and minds,
[7:5:32] And forever know your heart.

The Appellations for The Study of Astronism & The Recategorisation of Astrology

[7:6:1] The studyship of The Philosophy of Astronism is just as pertinent as its followership hence we it remains important to assign appropriate appellations for the study of The Philosophy with the following appellations provided alongside their preferences according to the Astronist Tradition.

[7:6:2] Astronology / Astronologist / Astronological (preferred)

[7:6:3] Kosmalogy / Kosmalogist / Kosmalogical (primary)

[7:6:4] Sophistics / Sophicist / Sophicistic (primary)

[7:6:5] Cosmistics / Cosmicist / Cosmicistic (primary)

[7:6:6] Cosmicology / Cosmicologist / Cosmicological (alternative)

[7:6:7] Celestology / Celestologist / Celestological (alternative)

[7:6:8] Millettistics / Millettist / Millettistic (alternative)

[7:6:9] Astronismology / Astronismologist / Astronismological (existent though not preferred)

—

[7:6:10] Astrology has existed in the belief systems of humanity since humanity had first gazed upon The Cosmos and interpreted the stars, but with a long history comes a diversification of that which astrology is, arguably a distortion of that which astrology truly is; for this reason, as part of the development of the philosophy of Astronism, it seems only prudent to make some augmentations to the present state of astrology, hence the introduction of a new understanding, or a recategorisation of astrology to become known as neoastrology, Astronist astrology, Uniquitarian astrology, or philosophical astrology.

[7:6:11] The development of the uniquitarian approach to understanding and interpreting astrology is obviously predicated upon the Uniquitarian Principle which states that humans are not equal, but they are instead unique from one another existentially, ontologically, and characteristically.

[7:6:12] The development of philosophical astrology in replacement of the presently dominant pseudoscientific astrology is essential to the approach taken by the Astronist Tradition in understanding astrology as a system of belief rather than a science.

[7:6:13] The recategorisation of astrology from a pseudoscience to a branch of cosmic philosophy is therefore tantamount to other instances in The Omnidoxy in which a pre-Astronist conceptual has been reinstated as part of something else, or has been changed in such a way that its essential application or understanding is augmented.

[7:6:14] From the Traditional Astronist position, astrology should not be considered, nor should it consider itself to be science and this is crucial to understanding the transition that astrology needs to make from being a pseudoscience to coming under the auspices of philosophy, specifically cosmic philosophy.

[7:6:15] However, to cast aside its ideas, beliefs, history, and its contemplations, especially due to their close proximity to an astral theme, is considered reactive rather than proactive and in the Astronist spirit, we intend to keep Astronism proactive rather than reactive or deactive.

[7:6:16] Furthermore, to keep within the principles of the Philosophical Spirit, it is important that Astronism takes Astrology and recategorises it so that it is able to become part of the territory of cosmic philosophy.

[7:6:17] However, it is also important to reiterate that Astrology's beliefs should not be entirely intertwined with those of Astronism, although they can be associated with them as a further dimension to the complex relationship between Astrology and Astronism which has also been addressed elsewhere within The Omnidoxy.

[7:6:18] It is the importance that Astrology attaches to astronomical events that Astronism shares with Astrology in principle, as well as of course the theme they do hold in commonality with one another.

[7:6:19] This is albeit the fact that Astronism, as an organised philosophy, and Astrology, presently as a pseudoscience, interpret these astronomical events from different angles, the former of which of course takes a philosophical view of The Cosmos while Astrology takes a divinational view of The Cosmos.

[7:6:20] It also remains important to note that although Astronism accepts Astrology to be part of the wider Astronist tradition of philosophy as part of cosmic philosophy, and although it does consider there to be useful aspects of functionality to Astrology, it does not consider Astrology to be true in the sense that some would quickly proclaim.

[7:6:21] Instead, Astronism takes an informal stance on Astrology meaning that it does not consider Astrology to be true, yet the principles of cosmocentricity that exist at the core of Astrology, albeit the fact that Astrology has never used such a term, are related to and appreciated by Astronism.

[7:6:22] Having said this, the relationship between Astronism and Astrology still remains one of tension and complexity as it is not the intention of Astronism to become too closely associated with Astrology due to its generally negative perception by the scientific and many of the major religious communities.

[7:6:23] It is the intention of Astronism to nurture Astrology for what it is at its core and in its principles, to recategorise it, to welcome it within the auspices of the Astronist tradition of philosophy, but also to remove its association with magic whilst simultaneously not changing its proclamations and postulated beliefs that are essentially cosmocentric at their core.

[7:6:24] Therefore, we understand and postulate herein that there exists a caveat placed on Astrology before it is absorbed as part of Astronism and the wider Astronist tradition which primarily includes its dissociation with magic, the development of new forms of astrology, as well as the removal of certain aspects of the traditions of clairvoyance that have existed for many centuries.

[7:6:25] The Astronist Tradition heralds that which is to be known as the astrological revival which involves the recategorisation of astrology and subsequently its transformation into becoming something of a belief system within the Astronic tradition of thought rather than being classified as a pseudoscience as this classification undermines the rich tradition of thought that has persisted for millennia; it is the penchant of the Astronist Tradition to endearingly take astrology under its auspices in order to make the best of that which astrology has to offer.

[7:6:26] There have existed many objections to astrology throughout its tumultuous history, but it has become the nature of the Astronist Tradition not simply to object astrology due to its present disconnection from the tradition of astrology, but instead to change astrology to become more Astronist/Astronic in its nature, and especially to become more philosophic.

[7:6:27] St. Augustine understood the determinism of astrology to conflict with the doctrines of Christianity, particularly those of man's free will and responsibility, and God not being the cause of evil.

[7:6:28] Another failure of astrology that he cited exists in the inability of astrology to explain how twins who behave differently although conceived at the same moment and born at approximately the same time, however, this is challenged by the unquitarian approach to Astrology originating from within Astronist astrology to suggest that even though twins hold similar birth dates, they still remain unique to each other's ontologies and personages.

[7:6:29] Meanwhile, Avicenna accepted the principle that planets may act as agents of divine causation, and although he acknowledged that the movements of planets influence life on The Earth in a deterministic way, he argued against the possibility of exactly

determining the influence of such astronomical phenomena, especially relating this to the clairvoyant nature of some practitioners of Astrology.

[7:6:30] Similar to the view of Astronism, Avicenna did not deny the core dogma of Astrology, but he did deny the ability of individuals to derive precise and fatalistic predications directly from the movement of astronomical objects.

[7:6:31] Despite the fact that the Astronist Tradition is welcoming of astrology on the condition that it can complete its recategorisation, Astronism does continue to reject the deification of the stars, or any other cosmic progeny or phenomena because deification is a form of religious understanding and practice rather than that of a philosophic/philosophical nature.

[7:6:32] Astronist traditions of astrology include devotional, exploratory, and philosophical astrology which are all new traditions of astrology that are to be dually considered as subcategories of astrology that of course hold closer associations to the philosophy of Astronism than the pre-Astronist traditions of astrology.

[7:6:33] That which shall be henceforth referred to as devotional astrology relates the movements of cosmic progeny and the occurrences of cosmic phenomena with the times for which a person should conduct cosmic devotions and other forms of cosmolatry, such as astrolatry, cosmomancy, and astromancy.

[7:6:34] That which is to be known here on in as exploratory astrology is a new Astronist tradition of astrology relating the movements of cosmic progeny and the occurrences of cosmic phenomena with the times, directions, and instances of space exploration.

[7:6:35] Philosophic astrology is a new branch of astrology founded by the Astronist Tradition herein and relates the movements of cosmic progeny and the occurrences of cosmic phenomena with the times for which a person should undertake philosophical contemplations, or should schedule certain types of philosophical debates and after the recategorisation of astrology the following subcategories of astrology shall all also be considered to reside under the auspices of the Astronic philosophical tradition under the category of general astrology itself.

[7:6:36] Geographic and ethnic traditions of astrology: Burmese astrology, Celtic astrology, Chinese astrology, Egyptian astrology, Hellenistic astrology, Mayan astrology, Nādi astrology, Tibetan astrology, Vietnamese astrology, and Western astrology.

[7:6:37] Functional traditions of astrology include the following: Agricultural astrology, Electional astrology, Horary astrology, Horoscopic astrology, Medical astrology, Meteorological astrology, Natal astrology, Political astrology, and sidereal/tropical astrology.

[7:6:38] Religious traditions of astrology include the following: Buddhist astrology, Hindu astrology, and Islamic astrology.

[7:6:39] Recent traditions of astrology include the following: Astrocartography, Cosmobiology, Deep space astrology, Financial astrology, Locational astrology, Psychological astrology, Sun sign astrology, and Synoptical astrology.

[7:6:40] That which is to be known as hemideification refers to the association of different cosmic progeny with specific Gods, although it is important to note that these cosmic progeny are worshipped or deified as Gods; planetary hemideification, stellar hemideification, and galactic hemideification.

[7:6:41] Astronism understands and stipulates the concentric nature of The Cosmos while simultaneously stipulating the incentric nature of The Universe.

[7:6:42] An astrotheologian, or astrotheologist follows astrotheological study which involves the study of systems of belief that are predicated and focused upon cosmic entities and the events that occur in The Cosmos as considered to be both essential and central parts of the belief system.

[7:6:43] Exopanism, as followed by exopanists, refers to the application of the panspermia hypothesis to the philosophy of Astronism in such a way that it formulates a new school of Astronist eschatology and thanatology which is to be further explored post-omnidoxically.

[7:6:44] To exopan, or to conduct exopanning, refers to the act of attempting to find out the true origins of why humanity holds residence upon The Earth as derived from the panspermia hypothesis; furthermore, exopanism formulates an eschatology that is predicated upon the notion that humanity is without the answers to its origination and that due to humanity's origination was not Earthly or Earth-bound, this is propositioned as a notion of logic through the assumption that the panspermoa hypothesis is true by stating that because humans did originate upon The Earth, their destiny is not tied to The Earth; this can either be henceforth referred to as the Panspermian Logic or the Exopanist Notion.

[7:6:45] Supplicationism, or supplicationist theology refers to a form of theology that is pre-Astronist in its originations, although the term of supplicationism is of course first introduced herein as part of The Omnidox which makes the term Astronist in origin.

[7:6:46] Supplicationism, or supplicationist theology is a type of theology that is present in many religious and philosophical traditions that involves a predication upon asking or requesting God for something in particular, or generally wanting or even expecting something in return from communication with God or from God's intercessions with corporeal existence; this may also be colloquially appellated as The Loud God.

[7:6:47] That which exists as an associated categoriser to supplicationist theology is colloquially appellated as The Mediator God, or as conciliationism, or conciliationist theology which involves the rationality of communication and interaction with God for the purposes of solving a dispute of some kind; for conciliatory purposes.

[7:6:48] That which exists as the opposite categoriser to supplicationist theology is colloquially appellated as The Silent God, or as conjurationism, or conjurationist theology which includes religious and philosophical traditions that do not expect nor do they interact with God for any purpose beyond that of God's creator role.

[7:6:49] The Supplicationist-Conjurationist Dichotomy is utilised by the Astronist Tradition in order to distinguish between the theology of Astronism, which is henceforth aligned to the conjurationist form, from that of other religious and philosophical traditions, the majority of which are aligned to supplicationist theology.

Contiguous Philosophy

[7:7:1] That which is herein introduced as contiguance, or contiguous philosophy, contiguantics, contiguant expology, or contiguous cosmology refers to an area of study within expology dealing with the nature of humanity's exploration of The Cosmos as part of transcensionism, especially regarding beliefs of when, how, where, who, and why humanity should explore The Cosmos as part of humanic transcension.

[7:7:2] Contiguous philosophy is therefore expected to become a major element to the Astronist philosophical tradition and shall continue to remain one of the Tradition's most distinct areas of contemplation that the Tradition will become primarily known for.

[7:7:3] The topic of contiguance is especially important to the Astronism due to the fact that Astronism primarily concerns itself with the theme of space exploration so the circumstances of space exploration should be particularly of focus for those following and studying Astronism to contemplate deeply and debate extensively.

[7:7:4] Of course, prior to the introduction of this discourse, I have already extensively introduced and discussed the many different belief orientations regarding the reasons for the initiation of the Humanic Exploration of The Cosmos in the way in which I, and therefore subsequently the Astronic tradition, have envisioned.

[7:7:5] The term contiguance, or contiguancy is an extremely important term within the philosophy of Astronism as it pertains to the notion that the Humanic Exploration of The Cosmos is not definite to occur and that certain occurrences must be secured unless The Exploration shall not occur.

[7:7:6] Therefore, humanity's achievement of transcensionism will be lost forever; the following belief orientations and their respective schools understand the contiguous definition of the Humanic Exploration of The Cosmos and base their orientations accordingly.

[7:7:7] Although I have already introduced and explained The Five Orientations, these are distinct from the schools of thought in this particular discourse; The Five Orientations pertains to the different rationalities for space exploration, however, the three schools of thought, or orientations introduced in this discourse do not pertain to space exploration rationality, but are instead more concerned with the chronology or periodisation of space exploration so it remains important to make a distinction between contiguous philosophical schools and The Five Orientations of Space Exploration Rationality, although they do remain closely associated with one another.

[7:7:8] To be contiguous, or to be in a state of contiguance, or contiguancy, refers to an achieved level of development for humanity's civilisations beyond The Earth as part of the Humanic Exploration of The Cosmos.

[7:7:9] The definition of contiguance for the Humanic Exploration of The Cosmos, at its very basic level, involves a multiplanetary human civilisation with significant populations in all major settlements, that the populaces of such settlements are in at least the second generation and that humanity is on the cusp of interstellar travel with the aim of the exploration of other star systems, the discovery of non-human sentient life, and the civilisation of such star systems.

[7:7:10] To achieve the state of contiguance herein described is of course a state that will only be achieved quite far into the process of the Humanic Exploration of The Cosmos, but contiguance achievement is herein, for Astronists, considered to be the most pivotal point to achieve in the Humanic Exploration of The Cosmos.

[7:7:11] To further designate the significance of the state of contiguance, introduced herein are the terms of pre-contiguance and post-contiguance, the former of which pertains to the period in the Humanic Exploration of The Cosmos whereby the state of contiguance hasn't been achieved while the latter pertains to the period after contiguance achievement.

[7:7:12] Another integral element to contigant philosophy is that which shall be henceforth appellated as The Degradation; this is the appellation relating to the period in human history proceeding humanity's inability to initiate the Humanic Exploration of The Cosmos in which humanity's technological, scientific, cultural, philosophical, and societal maturity and civility degrades without hope of return to the potentiality it once held pre-degradation according to the definist school of contiguance.

[7:7:13] Degradation philosophy, or degradation expology is a significant area of study and contemplation within contigant philosophy and notionises that if the Humanic Exploration of The Cosmos doesn't occur by a specified time then extreme famine, poverty, regression, stagnation and societal purposelessness will occur and that human potentiality will decline past the point of no return.

[7:7:14] The Degradation can be considered the equivalent of the concept of Armageddon, or an apocalypse which is a concept present in many religious traditions so therefore Astronism holds its version of such concepts, but of course Astronised in such a way that it becomes in relation to space exploration and the theme of The Cosmos.

[7:7:15] There exists three main schools of thought of contigant philosophy including indefinitism/indefinitivism, definitism/definitivism, and ultradefinitism/ultradefinitivism.

[7:7:16] Each of these schools of thought hold differing beliefs regarding whether the definitive achievement of contiguance holds any bearing on the state of humanity's achievement of transcension.

[7:7:17] Essentially, the definitivist school believes that there exists a definite connection between the achievement of the state of contiguance and the achievement of humanity's

transcension meanwhile the indefinitivist school upholds that there does not hold a particularly pressing time period for the achievement of contiguance and that therefore, humanity's transcension is not entirely dependent upon the achievement of contiguance so less of a connection between the two is displayed within the indefinitivist school of thought.

[7:7:18] The first of the schools of thought to introduce presently the only suborientation for is indefinist school, also known as the indefinitivist school, the primary suborientation for which is that known as eonism, also spelt as aeonism.

[7:7:19] Eonism, followed by eonists, upholds the the belief orientation that is not in opposition to contiguance, but nevertheless maintains that there does not exist any definite period of time predetermined for the Humanic Exploration of The Cosmos to occur and that the exploration will occur under an indefinite period that should neither be predicated and nor should it be rushed, pressured, or prophesied.

[7:7:20] That which is known as the definist, or the definitivist school also only holds one suborientation which is to either be referred to as termism, or periodism.

[7:7:21] This particular suborientation pertains to the belief held that there exists a definite period for the Humanic Exploration of The Cosmos to occur and that beyond this period, the exploration will not occur and that humanity's transcension will be missed forevermore without hope for redemption and is of course closely associated with the aforeintroduced notion of the possibility of The Degradation.

[7:7:22] The final school of contiguan philosophy is the ultradefinist school, or also known as the ultradefinitivist school, the first of the four suborientations within which is to be known as centurialism.

[7:7:23] Centurialism refers to the belief orientation holding that the Humanic Exploration of The Cosmos must have at least begun by the turn of the twenty-second century unless The Degradation of humanity will occur.

[7:7:24] The second of the suborientations of the ultradefinist school is that which shall be henceforth known as sesquianism which holds the belief orientation that the Humanic Exploration of The Cosmos must have at least begun by midway through the twenty-second century unless The Degradation of humanity will occur.

[7:7:25] Tricenturialism is the third suborientation to introduce and pertains to the belief orientation holding that the Humanic Exploration of The Cosmos must have at least begun by the turn of the twenty-third century unless The Degradation of humanity will occur.

[7:7:26] Finally, that which shall henceforth be referred to as hemicenturialism pertains to the belief orientation holding that the Humanic Exploration of The Cosmos must have at

least begun midway through the twenty-first century unless The Degradation of humanity will occur.

Astronism By Country

[7:8:1] Abkhazian Astronism

[7:8:1a] Astro-Abkhazian philosophy refers to the presence of The Philosophy of Astronism in the Republic of Abkhazia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Abkhazia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:1b] The Institution of the Philosophy of Astronism for the Republic of Abkhazia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:5c] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:5d] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:6] American Samoan Astronism

[7:8:6a] Astro-American Samoan philosophy refers to the presence of The Philosophy of Astronism in the Territory of American Samoa under management and philosophical

jurisdiction of *The Institution of the Philosophy of Astronism for the Territory of American Samoa*, which is under authority of *The Institution of the Philosophy of Astronism for the United States of America*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:6b] The Institution of the Philosophy of Astronism for the Territory of American Samoa oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:6c] American Samoa is split into three districts and holds one Grand Observatory in the capital of Pago Pago.

[7:8:6d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:6e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:7] Andorran Astronism

[7:8:7a] Astro-Andorran philosophy, also known as Il·lustració'ism, refers to the presence of The Philosophy of Astronism in the Principality of Andorra under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Principality of Andorra*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:7b] The Institution of the Philosophy of Astronism for the Principality of Andorra oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:7c] Andorra is split into seven parishes and holds one Grand Observatory in the capital city of Andorra la Vella, which is also the only observatory in the principality.

[7:8:7d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:7e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:8] Angolan Astronism

[7:8:8a] Astro-Angolan philosophy, also known as Angolan Iluminação'ism, refers to the presence of The Philosophy of Astronism in the Republic of Angola under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Angola*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:8b] The Institution of the Philosophy of Astronism for the Republic of Angola oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:8c] Angola is split into eighteen provinces and holds one Grand Observatory in the capital city of Luanda.

[7:8:8d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:8e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:9] Anguillan Astronism

[7:8:9a] Astro-Anguillan philosophy, as part of British Astronism, refers to the presence of The Philosophy of Astronism in Anguilla under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Anguilla*, which is under authority of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:9b] The Institution of the Philosophy of Astronism for Anguilla oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:9c] Anguilla is split into fourteen districts and holds one Grand Observatory in the capital city of The Valley, which is also the only observatory in the Overseas Territory.

[7:8:9d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:9e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:10] Antigua-Barbuda Astronomy

[7:8:10a] Astro-Antigua-Barbuda philosophy refers to the presence of The Philosophy of Astronomy in Antigua and Barbuda under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronomy for Antigua and Barbuda*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronomy*.

[7:8:10b] The Institution of the Philosophy of Astronomy for Antigua and Barbuda oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:10c] Antigua and Barbuda is split into six parishes and two dependencies and holds one Grand Observatory in the capital city of St John's.

[7:8:10d] This national branch of The Institution of The Philosophy of Astronomy manages the official representation and depiction of Astronomy throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:10e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:11] Argentine Astronomy

[7:8:11a] Astro-Argentine philosophy, also known as Argentine Estrellism, refers to the presence of The Philosophy of Astronomy in the Argentine Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronomy for the Argentine Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronomy*.

[7:8:11b] The Institution of the Philosophy of Astronomy for the Argentina Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:11c] Argentina is split into twenty-three provinces and holds one Grand Observatory in the capital city of Buenos Aires.

[7:8:11d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:11e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:12] Armenian Astronism

[7:8:12a] Astro-Armenian philosophy, also known as Lusa'vorut'yunism, refers to the presence of The Philosophy of Astronism in the Republic of Armenia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Armenia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:12b] The Institution of the Philosophy of Astronism for the Republic of Armenia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:12c] Armenia is split into eleven administrative divisions and holds one Grand Observatory in the capital city of Yerevan, which is one of the two observatories in the nation.

[7:8:12d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:12e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:13] Aruban Astronism

[7:8:13a] Astro-Aruban philosophy, as part of the denomination of Verlichting'ism, refers to the presence of The Philosophy of Astronism in Aruba under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Aruba*, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of the*

Netherlands, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:13b] The Institution of the Philosophy of Astronism for Aruba oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:13c] Aruba is split into six districts and holds one Grand Observatory in the capital city of Oranjestad, which is also the only observatory in the country.

[7:8:13d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:13e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:14] Australian Astronism

[7:8:14a] Astro-Australian philosophy refers to the presence of The Philosophy of Astronism in the Commonwealth of Australia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Commonwealth of Australia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:14b] The Institution of the Philosophy of Astronism for the Commonwealth of Australia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:14c] Australia is split into eleven districts, including both state and external territories, and holds two Grand Observatories in the capital city of Canberra and the largest city of Sydney.

[7:8:14d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:14e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:15] Austrian Astronism

[7:8:15a] Astro-Austrian philosophy, as part of the denomination of Aufklärung'ism, refers to the presence of The Philosophy of Astronism in the Republic of Austria under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Austria*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:15b] The Institution of the Philosophy of Astronism for the Republic of Austria oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:15c] Austria is split into eleven provinces and holds one Grand Observatory in the capital city of Vienna.

[7:8:15d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:15e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:16] Azerbaijani Astronism

[7:8:16a] Astro-Azerbaijani philosophy, also known as Maariflandirme'ism, refers to the presence of The Philosophy of Astronism in the Republic of Azerbaijan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Azerbaijan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:16b] The Institution of the Philosophy of Astronism for the Republic of Azerbaijan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:16c] Azerbaijan is split into ten regions and holds one Grand Observatory in the capital city of Baku.

[7:8:16d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:16e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:17] Bahamian Astronism

[7:8:17a] Astro-Bahamian philosophy refers to the presence of The Philosophy of Astronism in the Commonwealth of the Bahamas under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Commonwealth of the Bahamas*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:17b] The Institution of the Philosophy of Astronism for the Commonwealth of the Bahamas oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:17c] The Bahamas is split into thirty-two districts and holds one Grand Observatory in the capital city of Nassau, which is also one of the two observatories in the country.

[7:8:17d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:17e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:18] Bahraini Astronism

[7:8:18a] Astro-Bahraini philosophy, also known as Bahraini Tanwir as part of the larger denomination of Tanwir'ism, refers to the presence of The Philosophy of Astronism in the Kingdom of Bahrain under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Bahrain*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:18b] The Institution of the Philosophy of Astronism for the Kingdom of Bahrain oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:18c] Bahrain is split into four governorates and holds one Grand Observatory in the capital city of Manama, which is also the only observatory in the nation.

[7:8:18d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:18e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:19] Bangladeshi Astronism

[7:8:19a] Astro-Bangladeshi philosophy, also known as Bangladeshi Jbālānaism as part of the larger Jbālānaism denomination, refers to the presence of The Philosophy of Astronism in the People's Republic of Bangladesh under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the People's Republic of Bangladesh*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:19b] The Institution of the Philosophy of Astronism for the People's Republic of Bangladesh oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:19c] Bangladesh is split into sixty-four districts and holds one Grand Observatory in the capital city of Dhaka.

[7:8:19d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:19e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:20] Barbadian Astronism

[7:8:20a] Astro-Barbadian philosophy refers to the presence of The Philosophy of Astronism in Barbados under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Barbados*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:20b] The Institution of the Philosophy of Astronism for Barbados oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:20c] Barbados is split into eleven parishes and holds one Grand Observatory in the capital city of Bridgetown, which is also the only observatory in the nation.

[7:8:20d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:20e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:21] Basotho Astronism

[7:8:21a] Astro-Basotho philosophy, also known as Leseli'ism, refers to the presence of The Philosophy of Astronism in the Kingdom of Lesotho under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Lesotho*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:21b] The Institution of the Philosophy of Astronism for the Kingdom of Lesotho oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:21c] Lesotho is split into ten districts and holds one Grand Observatory in the capital city of Maseru, which is one of the two observatories in the kingdom.

[7:8:21d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:21e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:22] Belarusian Astronism

[7:8:22a] Astro-Belarusian philosophy, also known Prasviatliennie'ism, refers to the presence of The Philosophy of Astronism in the Republic of Belarus under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Belarus*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:22b] The Institution of the Philosophy of Astronism for the Republic of Belarus oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:22c] Belarus is split into six regions and one special administrative district and holds one Grand Observatory in the capital city of Minsk.

[7:8:22d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:22e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:23] Belgian Astronism

[7:8:23a] Astro-Belgian philosophy refers to the presence of The Philosophy of Astronism in the Kingdom of Belgium under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Belgium*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:23b] The Institution of the Philosophy of Astronism for the Kingdom of Belgium oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:23c] Belgium is split into ten provinces and holds one Grand Observatory in the capital city of Brussels.

[7:8:23d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:23e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:24] Belizean Astronism

[7:8:24a] Astro-Belizean philosophy refers to the presence of The Philosophy of Astronism in Belize under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Belize*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:24b] The Institution of the Philosophy of Astronism for Belize oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:24c] Belize is split into six districts and holds one Grand Observatory in the capital city of Belmopan, which is one of the two observatories in the country.

[7:8:24d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:24e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:25] Beninese Astronism

[7:8:25a] Astro-Beninese philosophy, also known as Beninese L'illuminationism as part of the larger L'illuminationism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Benin under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Benin*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:25b] The Institution of the Philosophy of Astronism for the Republic of Benin oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:25c] Benin is split into twelve departments and holds one Grand Observatory in the capital city of Porto Novo.

[7:8:25d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:25e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:26] Bermudan Astronism

[7:8:26a] Astro-Bermudan philosophy, as part of the larger British Astronism denomination, refers to the presence of The Philosophy of Astronism in the British Overseas Territory of Bermuda under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the British Overseas Territory of Bermuda*, which is under authority of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:26b] The Institution of the Philosophy of Astronism for the British Overseas Territory of Bermuda oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:26c] Bermuda is split into nine parishes and two incorporated municipalities and holds one Grand Observatory, which is also the only observatory in the overseas territory.

[7:8:26d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:26e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:27] Bhutanese Astronism

[7:8:27a] Astro-Bhutanese philosophy refers to the presence of The Philosophy of Astronism in the Kingdom of Bhutan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Bhutan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:27b] The Institution of the Philosophy of Astronism for the Kingdom of Bhutan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:27c] Bhutan is split into twenty districts and holds one Grand Observatory in the capital city of Thimphu, which is also the only observatory in the kingdom.

[7:8:27d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:27e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:28] Bissau-Guinean Astronism

[7:8:28a] Astro-Bissau-Guinean philosophy, also known as Bissau-Guinean L'illuminationism as part of the larger L'illuminationism denomination, refers to the presence of The Philosophy of Astronism in the Kingdom of Lesotho under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Guinea-Bissau*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:28b] The Institution of the Philosophy of Astronism for the Republic of Guinea-Bissau oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:28c] Guinea-Bissau is split into eight regions and holds one Grand Observatory in the capital city of Bissau.

[7:8:28d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:28e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:29] Bolivian Astronism

[7:8:29a] Astro-Bolivian philosophy, also known as Bolivian Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Plurinational State of Bolivia under management and philosophical jurisdiction of *The*

Institution of the Philosophy of Astronism for the Plurinational State of Bolivia, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:29b] The Institution of the Philosophy of Astronism for the Plurinational State of Bolivia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:29c] Bolivia is split into nine departments and holds one Grand Observatory in the capital city of La Paz.

[7:8:29d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:29e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:30] Bonaire Astronism

[7:8:30a] Astro-Bonaire philosophy, also known as Bonaire Verlichting'ism as part of the larger Verlichting'ism denomination, refers to the presence of The Philosophy of Astronism in the Special Municipality of Bonaire under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Special Municipality of Bonaire*, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of the Netherlands*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:30b] The Institution of the Philosophy of Astronism for the Special Municipality of Bonaire oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:30d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:30e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:31] Bosnian Astronism

[7:8:31a] Astro-Bosnian philosophy, also known as Prosvjetiteljstva'ism, refers to the presence of The Philosophy of Astronism in Bosnia and Herzegovina under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Bosnia and Herzegovina*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:31b] The Institution of the Philosophy of Astronism for Bosnia and Herzegovina oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:31c] Bosnia and Herzegovina is split into two federations and ten autonomous cantons and holds one Grand Observatory in the capital city of Sarajevo.

[7:8:31d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:31e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:32] Botswanan Astronism

[7:8:32a] Astro-Botswanan philosophy refers to the presence of The Philosophy of Astronism in the Republic of Botswana under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Botswana*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:32b] The Institution of the Philosophy of Astronism for the Republic of Botswana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:32c] Botswana is split into nine districts and holds one Grand Observatory in the capital city of Gaborone.

[7:8:32d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:32e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:33] Brazilian Astronism

[7:8:33a] Astro-Brazilian philosophy, also known as Brazilian Iluminação'ism as part of the larger Iluminação'ism denomination, refers to the presence of The Philosophy of Astronism in the Federative Republic of Brazil under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federative Republic of Brazil*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:33b] The Institution of the Philosophy of Astronism for the Federative Republic of Brazil oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:33c] Brazil is split into twenty-six states and holds three Grand Observatories in the capital city of Brasília as well as in the largest cities of Rio de Janeiro and São Paulo.

[7:8:33d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:33e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:34] British Astronism

[7:8:34a] Astro-British philosophy refers to the presence of The Philosophy of Astronism in the United Kingdom of Great Britain and Northern Ireland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:34b] The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:34c] The United Kingdom is split into one-hundred counties and holds one Grand Observatory in the city of Preston, and the largest Astronist observatory in the world in the capital city of London called The People's Grand World Eidouranium.

[7:8:34d] The United Kingdom also hosts four main denominations of The Philosophy of Astronism in the kingdom, including Scottish Astronism, Northern Irish Astronism, Welsh Astronism, and English Astronism.

[7:8:34e] The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland is responsible for the administration of institutions of The Philosophy of Astronism in the kingdom's various overseas territories and dependencies.

[7:8:34f] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:34g] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:35] Bruneian Astronism

[7:8:35a] Astro-Bruneian philosophy, also known as Bruneian Pencerahanism as part of the larger Pencerahanism denomination, refers to the presence of The Philosophy of Astronism in the Nation of Brunei, Abode of Peace, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Nation of Brunei, Abode of Peace*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:35b] The Institution of the Philosophy of Astronism for the Nation of Brunei, Abode of Peace, oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:35c] Brunei is split into four districts and holds one Grand Observatory in the capital city of Bandar Seri Begawan.

[7:8:35d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:35e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:36] Bulgarian Astronism

[7:8:36a] Astro-Bulgarian philosophy, also known as Prosveshthenie'ism, refers to the presence of The Philosophy of Astronism in the Republic of Bulgaria under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Bulgaria*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:36b] The Institution of the Philosophy of Astronism for the Republic of Bulgaria oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:36c] Bulgaria is split into twenty-seven provinces, and a metropolitan capital province, and holds one Grand Observatory in the capital city of Sofia.

[7:8:36d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:36e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:37] Burkinan Astronism

[7:8:37a] Astro-Burkinan philosophy, also known as Burkinan Illuminationism as part of the larger Illuminationism denomination, refers to the presence of The Philosophy of Astronism in Burkina Faso under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Burkina Faso*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:37b] The Institution of the Philosophy of Astronism for Burkina Faso oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:37c] Burkina Faso is split into thirteen administrative regions and holds one Grand Observatory in the capital city of Ouagadougou.

[7:8:37d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:37e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:38] Burmese Astronism

[7:8:38a] Astro-Burmese philosophy, also known as Aasi'panyar'ism, refers to the presence of The Philosophy of Astronism in the Republic of the Union of Myanmar under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of the Union of Myanmar*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:38b] The Institution of the Philosophy of Astronism for the Republic of the Union of Myanmar oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:38c] Myanmar is split into fourteen states and regions, and holds one Grand Observatory in the capital city of Nay Pyi Taw.

[7:8:38d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:38e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:39] Burundian Astronism

[7:8:39a] Astro-Burundian philosophy, also known as both Burundian Éclaircisementism as part of the larger Éclaircisementism denomination, and Burundian Mwangazaim as part of the larger Mwangazaim denomination, refers to the presence of The Philosophy of Astronism in the Republic of Burundi under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Burundi*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:39b] The Institution of the Philosophy of Astronism for the Republic of Burundi oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:39c] Burundi is split into eighteen provinces and holds one Grand Observatory in the capital city of Bujumbura.

[7:8:39d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:39e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:40] Cabo Verdean Astronism

[7:8:40a] Astro-Verdean philosophy, also known as Cabo Verdean Iluminação'ism as part of the larger Iluminação'ism, refers to the presence of The Philosophy of Astronism in the Republic of Cabo Verde under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Cabo Verde*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:40b] The Institution of the Philosophy of Astronism for the Republic of Cabo Verde oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:40c] Cape Verde is split into twenty-two municipalities and holds one Grand Observatory in the capital city of Praia.

[7:8:40d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:40e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:41] Cambodian Astronism

[7:8:41a] Astro-Cambodian philosophy, also known as Bamphluism, refers to the presence of The Philosophy of Astronism in the Kingdom of Cambodia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Cambodia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:41b] The Institution of the Philosophy of Astronism for the Kingdom of Cambodia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:41c] Cambodia is split into twenty-five provinces and holds one Grand Observatory in the capital city of Phnom Penh.

[7:8:41d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:41e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:42] Cameroonian Astronism

[7:8:42a] Astro-Cameroonian philosophy, also known as Cameroonian Éclaircisementism as part of the larger Éclaircisementism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Cameroon under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Cameroon*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:42b] The Institution of the Philosophy of Astronism for the Republic of Cameroon oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:42c] Cameroon is split into ten semi-autonomous regions and holds one Grand Observatory in the capital city of Yaounde.

[7:8:42d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:42e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:43] Canadian Astronism

[7:8:43a] Astro-Canadian philosophy refers to the presence of The Philosophy of Astronism in Canada under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Canada*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:43b] The Institution of the Philosophy of Astronism for Canada oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:43c] Canada is split into ten provinces and three territories, and holds one Grand Observatory in the capital city of Ottawa.

[7:8:43d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:43e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:44] Caymanian Astronism

[7:8:44a] Astro-Caymanian philosophy, as part of the larger British Astronism denomination, refers to the presence of The Philosophy of Astronism in the Cayman Islands under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Cayman Islands*, which is under authority of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:44b] The Institution of the Philosophy of Astronism for the Cayman Islands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:44c] The Cayman Islands is split into six districts and holds one Grand Observatory, which is also the only observatory in the Cayman Islands.

[7:8:44d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:44e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:45] Central African Astronism

[7:8:45a] Astro-Central African philosophy, also known as Central African Éclaircisementism as part of the larger Éclaircisementism denomination, refers to the presence of The Philosophy of Astronism in the Central African Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Central African Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:45b] The Institution of the Philosophy of Astronism for the Central African Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:45c] Central African Republic is split into fourteen prefectures and holds one Grand Observatory in the capital city of Bangui.

[7:8:45d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:45e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement

[7:8:46] Chadian Astronism

[7:8:46a] Astro-Chadian philosophy, also known as both Chadian Éclaircisementism as part of the larger Éclaircisementism denomination, and as Chadian Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Chad under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Chad*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:46b] The Institution of the Philosophy of Astronism for the Republic of Chad oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:46c] Chad is split into twenty-three regions and holds one Grand Observatory in the capital city of N'djamena.

[7:8:46d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:46e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:47] Chilean Astronism

[7:8:47a] Astro-Chilean philosophy, also known as Chilean Estrellism, refers to the presence of The Philosophy of Astronism in the Republic of Chile under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Chile*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:47b] The Institution of the Philosophy of Astronism for the Republic of Chile oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:47c] Chile is split into fifteen regions and holds one Grand Observatory in the capital city of Santiago.

[7:8:47d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:47e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:48] Chinese Astronism

[7:8:48a] Astro-Sino philosophy, also known as Chinese Qǐshì as part of the larger Qǐshì'ism denomination, refers to the presence of The Philosophy of Astronism in the People's Republic of China under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the People's Republic of China*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:48b] The Institution of the Philosophy of Astronism for the People's Republic of China oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:48c] China is split into twenty-two provinces, five autonomous regions, four municipalities, and holds Grand Observatories in each of those municipalities.

[7:8:48d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:48e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:49] Colombian Astronism

[7:8:49a] Astro-Colombian philosophy, also known as Colombian Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Colombia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Colombia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:49b] The Institution of the Philosophy of Astronism for the Republic of Colombia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:49c] Colombia is split into thirty-two departments and one capital district, and holds one Grand Observatory in the capital city of Bogotá.

[7:8:49d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:49e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:50] Comoran Astronism

[7:8:50a] Astro-Comoran philosophy, also known as Comoran Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Comoros under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Union of the Comoros*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:50b] The Institution of the Philosophy of Astronism for the Union of the Comoros oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:50c] Comoros holds one Grand Observatory in the capital city of Moroni.

[7:8:50d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:50e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:51] Congolese Astronism

[7:8:51a] Astro-Congolese philosophy, also known as Congolese Éclaircisementism as part of the larger Éclaircisementism denomination, refers to the presence of The Philosophy of Astronism in either the Republic of the Congo, or the Democratic Republic of the Congo, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of the Congo*, and *The Institution of the Philosophy of Astronism for the Democratic Republic of the Congo* respectively, both national subsidiaries for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:51b] The Institution of the Philosophy of Astronism for the Republic of the Congo oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:51c] The Republic of the Congo is split into twelve departments and holds one Grand Observatory in the capital city of Brazzaville.

[7:8:51d] The Institution for the Philosophy of Astronism for the Democratic Republic of the Congo oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:51e] The Democratic Republic of the Congo is split into twenty-six provinces and holds one Grand Observatory in the capital city of Kinshasa.

[7:8:51f] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout these territories, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout these territories.

[7:8:51g] It is The Institution alone that is granted the status of proprietor to the philosophy in these territories as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:52] Costa Rican Astronism

[7:8:52a] Astro-Costa Rican philosophy, also known as Costa Rican Estrellism as part of the larger Estrellism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Costa Rica under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Costa Rica*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:52b] The Institution of the Philosophy of Astronism for the Republic of Costa Rica oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:52c] Costa Rica is split into seven provinces and holds one Grand Observatory in the capital city of San José.

[7:8:52d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:52e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:53] Croatian Astronism

[7:8:53a] Astro-Croatian philosophy, also known as Prosvjećivanje'ism, refers to the presence of The Philosophy of Astronism in the Republic of Croatia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Croatia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:53b] The Institution of the Philosophy of Astronism for the Republic of Croatia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:53c] Croatia is split into twenty-one counties and holds one Grand Observatory in the capital city of Zagreb.

[7:8:53d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:53e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:54] Cuban Astronism

[7:8:54a] Astro-Cuban philosophy, also known as Cuban Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Cuba under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Cuba*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:54b] The Institution of the Philosophy of Astronism for the Republic of Cuba oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:54c] Cuba is split into sixteen provinces and holds one Grand Observatory in the capital city of Havana.

[7:8:54d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:54e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:55] Curaçaoan Astronism

[7:8:55a] Astro-Curaçaoan philosophy, also known Curaçaoan Verlichting as part of the larger Verlichting'ism denomination, refers to the presence of The Philosophy of Astronism in Curaçao under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Country of Curaçao*, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of the Netherlands*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:55b] The Institution of the Philosophy of Astronism for the Country of Curaçao oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:55c] Curaçao holds one Grand Observatory in the capital city of Willemstad, which is also the only observatory in the country.

[7:8:55d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:55e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:56] Cypriot Astronism

[7:8:56a] Astro-Cypriot philosophy, also known as Cypriot Diafótisi'ism as part of the larger Diafótisi'ism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Cyprus under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Cyprus*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:56b] The Institution of the Philosophy of Astronism for the Republic of Cyprus oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:56c] Cyprus is split into six districts and holds one Grand Observatory in the capital city of Nicosia.

[7:8:56d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:57] Czech Astronism

[7:8:57a] Astro-Czech philosophy, also known as Osvíceníism, refers to the presence of The Philosophy of Astronism in the Czech Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Czech Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:57b] The Institution of the Philosophy of Astronism for the Czech Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:57c] Czechia is split into thirteen regions and holds one Grand Observatory in the capital city of Prague.

[7:8:57d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:57e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:58] Danish Astronism

[7:8:58a] Astro-Danish philosophy, also known as Danish Op'lys'ningism as part of the larger Op'lys'ningism denomination, refers to the presence of The Philosophy of Astronism in the Kingdom of Denmark under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Denmark*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:58b] The Institution of the Philosophy of Astronism for the Kingdom of Denmark oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:58c] Denmark is split into five administrative regions and holds one Grand Observatory in the capital city of Copenhagen.

[7:8:58d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:58e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:59] Djiboutian Astronism

[7:8:59a] Astro-Djiboutian philosophy, also known as Djiboutian Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Djibouti under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Djibouti*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:59b] The Institution of the Philosophy of Astronism for the Republic of Djibouti oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:59c] Djibouti is split into six administrative regions and holds one Grand Observatory in the capital city of Djibouti, which is one of the two observatories in the country.

[7:8:59d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:59e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:60] Dominican Astronism

[7:8:60a] Astro-Dominican philosophy, refers to the presence of The Philosophy of Astronism in the Dominican Republic, and the Commonwealth of Dominica which are also known as Dominican Estrellism, and Dominican Astronism respectively, with the latter form sharing a strong connection with the British form of Astronism.

[7:8:60b] These operations are under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Dominican Republic*, and *The Institution of the Philosophy of Astronism for the Commonwealth of Dominica*, both of which are national subsidiaries for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:60c] The Institution of the Philosophy of Astronism for the Dominican Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:60d] The Dominican Republic is split into thirty-three provinces and holds one Grand Observatory in the capital city of Santo Domingo.

[7:8:60e] The Institution of the Philosophy of Astronism for the Commonwealth of Dominica oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:60f] Dominica is split into ten parishes, and holds one Grand Observatory in the capital city of Roseau, which is also the only observatory in the country.

[7:8:60g] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout these territories, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout these territories.

[7:8:60h] It is The Institution alone that is granted the status of proprietor to the philosophy in these territories as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:61] Dutch Astronism

[7:8:61a] Astro-Dutch philosophy, also known as Dutch Verlichting as part of the larger Verlichting'ism denomination, refers to the presence of The Philosophy of Astronism in the Netherlands under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of the Netherlands*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:61b] The Institution of the Philosophy of Astronism for the Kingdom of the Netherlands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:61c] The Netherlands is split into twelve provinces and holds one Grand Observatory in the capital city of Amsterdam.

[7:8:61d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:61e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:62] Ecuadorian Astronism

[7:8:62a] Astro-Ecuadorian philosophy, also known as Ecuadorian Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Ecuador under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Ecuador*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:62b] The Institution of the Philosophy of Astronism for the Republic of Ecuador oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:62c] Ecuador is split into twenty-four provinces and holds one Grand Observatory in the capital city of Quito.

[7:8:62d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:62e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:63] Egyptian Astronism

[7:8:63a] Astro-Egyptian philosophy, also known as Egyptian Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Arab Republic of Egypt under management and philosophical jurisdiction of *The*

Institution of the Philosophy of Astronism for the Arab Republic of Egypt, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:63b] The Institution of the Philosophy of Astronism for the Arab Republic of Egypt oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:63c] Egypt is split into twenty-seven governorates and holds one Grand Observatory in the capital city of Cairo.

[7:8:63d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:63e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:64] Emirati Astronism

[7:8:64a] Astro-Emirati philosophy, also known as Emirati Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the United Arab Emirates under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the United Arab Emirates*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:64b] The Institution of the Philosophy of Astronism for the United Arab Emirates oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:64c] The United Arab Emirates is split into seven emirates and holds two Grand Observatory in the capital city of Abu Dhabi, and in the city of Dubai.

[7:8:64d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:64e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:65] Equatorial Guinean Astronism

[7:8:65a] Astro-Equatorial Guinean philosophy, also known as Equatorial Guinean Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Equatorial Guinea under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Equatorial Guinea*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:65b] The Institution of the Philosophy of Astronism for the Republic of Equatorial Guinea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:65c] Equatorial Guinea is split into seven provinces and holds one Grand Observatory in the capital city of Malabo.

[7:8:65d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:65e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:66] Eritrean Astronism

[7:8:66a] Astro-Eritrean philosophy, also known as Eritrean Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in Eritrea under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the State of Eritrea*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:66b] The Institution of the Philosophy of Astronism for the State of Eritrea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:66c] Eritrea is split into six administrative regions and holds one Grand Observatory in the capital city of Asmara, which also one of the two only observatories in the nation.

[7:8:66d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:66e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:67] Estonian Astronism

[7:8:67a] Astro-Estonian philosophy, also known as Valgustusism, refers to the presence of The Philosophy of Astronism in the Republic of Estonia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Estonia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:67b] The Institution of the Philosophy of Astronism for the Republic of Estonia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:67c] Estonia is split into fifteen counties and holds one Grand Observatory in the capital city of Tallinn.

[7:8:67d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:67e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:68] Ethiopian Astronism

[7:8:68a] Astro-Ethiopian philosophy, also known as Megeletiism, refers to the presence of The Philosophy of Astronism in Ethiopia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federal Democratic Republic of Ethiopia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:68b] The Institution of the Philosophy of Astronism for the Federal Democratic Republic of Ethiopia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:68c] Ethiopia is split into thirteen provinces and holds one Grand Observatory in the capital city of Addis Ababa.

[7:8:68d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:68e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:69] Falkland Islands Astronism

[7:8:69a] Astro-Falkland Island philosophy, as part of the larger British Astronism denomination, refers to the presence of The Philosophy of Astronism in the Falkland Islands under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Falkland Islands*, which is under authority of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:69b] The Institution of the Philosophy of Astronism for the Falkland Islands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:69c] The Falkland Islands holds one Grand Observatory in the capital city of Stanley, which is also the observatory on the Falkland Islands.

[7:8:69d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:69e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:70] Faroese Astronism

[7:8:70a] Astro-Faroese philosophy, also known as Faroese Op'lys'ningism as part of the larger Op'lys'ningism denomination, refers to the presence of The Philosophy of Astronism in the Faroe Islands under management and philosophical jurisdiction of *The*

Institution of the Philosophy of Astronism for the Faroe Islands, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of Denmark*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:70b] The Institution of the Philosophy of Astronism for the Faroe Islands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:70c] The Faroe Islands are split into thirty municipalities and holds one Grand Observatory in the capital city of Tórshavn.

[7:8:70d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:70e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:71] Federated Micronesian Astronism

[7:8:71a] Astro-Micronesian philosophy refers to the presence of The Philosophy of Astronism in the Federated States of Micronesia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federated States of Micronesia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:71b] The Institution of the Philosophy of Astronism for the Federated States of Micronesia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:71c] Micronesia is split into four states and holds one Grand Observatory in the capital of Palikir.

[7:8:71d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:71e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:72] Fijian Astronism

[7:8:72a] Astro-Fijian philosophy refers to the presence of The Philosophy of Astronism in Fiji under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Fiji*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:72b] The Institution of the Philosophy of Astronism for the Republic of Fiji oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:72c] Fiji is split into fourteen provinces and holds one Grand Observatory in the capital city of Suva.

[7:8:72d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:72e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:73] Filipino Astronism

[7:8:73a] Astro-Filipino philosophy, also known as Paliwanagism, refers to the presence of The Philosophy of Astronism in the Republic of the Philippines under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of the Philippines*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:73b] The Institution of the Philosophy of Astronism for the Republic of the Philippines oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:73c] The Philippines is split into eighty-one provinces and holds one Grand Observatory in the capital city of Manila.

[7:8:73d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:73e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:74] Finnish Astronism

[7:8:74a] Astro-Finnish philosophy, also known as Valistusism, refers to the presence of The Philosophy of Astronism in the Republic of Finland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Finland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:74b] The Institution of the Philosophy of Astronism for the Republic of Finland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:74c] Finland is split into nineteen regions and holds one Grand Observatory in the capital city of Helsinki.

[7:8:74d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:74e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:75] French Guianese Astronism

[7:8:75a] Astro-French Guianese philosophy, also known as French Guianese Lumières'ism as part of the larger Lumières'ism, refers to the presence of The Philosophy of Astronism in Guiana under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Guiana*, which is under authority of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:75b] The Institution of the Philosophy of Astronism for Guiana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:75c] French Guiana is split into twenty-two communes and holds one Grand Observatory in the capital city of Cayenne.

[7:8:75d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:75e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:76] French Astronism

[7:8:76a] Astro-French philosophy, also known as French Lumières'ism as part of the larger Lumières'ism denomination, refers to the presence of The Philosophy of Astronism in the French Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:76b] The Institution of the Philosophy of Astronism for the French Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:76c] Domestically, France is split into eighteen regions and holds one Grand Observatory in the capital city of Paris.

[7:8:76d] France also holds five overseas collectivities, one overseas territory, and one special collectivity, which have their own supersubsidiary institutions, which are under the direct authority of *The Institution of the Philosophy of Astronism for the French Republic*.

[7:8:76e] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:76f] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:77] French Polynesian Astronism

[7:8:77a] Astro-French Polynesian philosophy, also known as French Polynesian Lumières'ism as part of the larger Lumières'ism denomination, refers to the presence of

The Philosophy of Astronism in the Overseas Collectivity of French Polynesia, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for French Polynesia*, which is under the authority of *The Institution of the Philosophy of Astronism for the French Republic* a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:77b] The Institution of the Philosophy of Astronism for French Polynesia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:77c] French Polynesia is split into five administrative subdivisions and holds one Grand Observatory in the capital city of Pape'ete, which is also the only observatory in French Polynesia.

[7:8:77d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:77e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:78] Gabonese Astronism

[7:8:78a] Astro-Gabonese philosophy, also known as Gabonese Éclaircisementism as part of the larger Éclaircisementism denomination, refers to the presence of The Philosophy of Astronism in the Gabonese Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Gabonese Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:78b] The Institution of the Philosophy of Astronism for the Gabonese Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:78c] Gabon is split into nine provinces and holds one Grand Observatory in the capital city of Libreville.

[7:8:78d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:78e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:79] Gambian Astronism

[7:8:79a] Astro-Gambian philosophy refers to the presence of The Philosophy of Astronism in the Islamic Republic of the Gambia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Islamic Republic of the Gambia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:79b] The Institution of the Philosophy of Astronism for the Islamic Republic of the Gambia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:79c] The Gambia is split into eight local government areas and holds one Grand Observatory in the capital city of Banjul, which is also one of the two only observatories in the country.

[7:8:79d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:70e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:71] Georgian Astronism

[7:8:71a] Astro-Georgian philosophy, also known as Ganmanat'lebloba'ism, refers to the presence of The Philosophy of Astronism in Georgia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Georgia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:71b] The Institution of the Philosophy of Astronism for Georgia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:71c] Georgia is split into nine regions and one city, as well as two autonomous republics, and holds one Grand Observatory in the capital city of Tbilisi.

[7:8:71d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:71e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:72] German Astronism

[7:8:72a] Astro-German philosophy, also known as German Aufklärung'ism as part of the larger Aufklärung'ism, refers to the presence of The Philosophy of Astronism in the Federal Republic of Germany under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federal Republic of Germany*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:72b] The Institution of the Philosophy of Astronism for the Federal Republic of Germany oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:72c] Germany is split into sixteen federal states and holds one Grand Observatory in the capital city of Berlin.

[7:8:72d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:72e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:73] Ghanaian Astronism

[7:8:73a] Astro-Ghanaian philosophy refers to the presence of The Philosophy of Astronism in the Republic of Ghana under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Ghana*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:73b] The Institution of the Philosophy of Astronism for the Republic of Ghana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:73c] Ghana is split into ten administrative regions and holds one Grand Observatory in the capital city of Accra.

[7:8:73d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:73e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:74] Greek Astronism

[7:8:74a] Astro-Greek philosophy, also known as Greek Diafótisi'ism as part of the larger Diafótisi'ism denomination, refers to the presence of The Philosophy of Astronism in the Hellenic Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Hellenic Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:74b] The Institution of the Philosophy of Astronism for the Hellenic Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:74c] Greek is split into thirteen regions and holds one Grand Observatory in the capital city of Athens.

[7:8:74d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:74e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:75] Greenlandic Astronism

[7:8:75a] Astro-Greenlandic philosophy refers to the presence of The Philosophy of Astronism in Greenland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Greenland*, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of Denmark*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:75b] The Institution of the Philosophy of Astronism for Greenland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:75d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:75e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:76] Grenadian Astronism

[7:8:76a] Astro-Grenadian philosophy refers to the presence of The Philosophy of Astronism in Grenada under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Grenada*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:76b] The Institution of the Philosophy of Astronism for Grenada oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:76c] Grenada is split into six parishes and holds one Grand Observatory in the capital city of St George's, which is also the only observatory in Grenada.

[7:8:76d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:76e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:77] Guamanian Astronism

[7:8:77a] Astro-Guamanian philosophy refers to the presence of The Philosophy of Astronism in the Territory of Guam under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Territory of Guam*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:77b] The Institution of the Philosophy of Astronism for the Territory of Guam oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:77c] Guam is split into nine villages and holds one Grand Observatory in the capital city of Hagåtña, which is also the only observatory in Guam.

[7:8:77d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:77e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:78] Guatemalan Astronism

[7:8:78a] Astro-Guatemalan philosophy, also known as Guatemalan Estrellism as part of the larger Iluminaciónism, refers to the presence of The Philosophy of Astronism in the Republic of Guatemala under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Guatemala*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:78b] The Institution of the Philosophy of Astronism for the Republic of Guatemala oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:78c] Guatemala is split into twenty-two departments and holds one Grand Observatory in the capital city of Guatemala City.

[7:8:78d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:78e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:79] Guinean Astronism

[7:8:79a] Astro-Guinean philosophy, also known as Guinean L'illuminationism as part of the larger L'illuminationism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Guinea under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Guinea*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:79b] The Institution of the Philosophy of Astronism for the Republic of Guinea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:79c] Guinea is split into eight regions and holds one Grand Observatory in the capital city of Conakry.

[7:8:79d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:79e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:80] Guyanese Astronism

[7:8:80a] Astro-Guyanese philosophy refers to the presence of The Philosophy of Astronism in the Co-operative Republic of Guyana under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Co-operative Republic of Guyana*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:80b] The Institution of the Philosophy of Astronism for the Co-operative Republic of Guyana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:80c] Guyana is split into ten regions and holds one Grand Observatory in the capital city of Georgetown.

[7:8:80d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:80e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:81] Haitian Astronism

[7:8:81a] Astro-Haitian philosophy, also known as Haitian Syèk'limyè'ism, refers to the presence of The Philosophy of Astronism in the Republic of Haiti under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Haiti*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:81b] The Institution of the Philosophy of Astronism for the Republic of Haiti oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:81c] Haiti is split into ten departments and holds one Grand Observatory in the capital city of Port-au-Prince.

[7:8:81d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:81e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:82] Honduran Astronism

[7:8:82a] Astro-Honduran philosophy, also known as Honduran Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Honduras under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Honduras*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:82b] The Institution of the Philosophy of Astronism for the Republic of Honduras oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:82c] Honduras is split into eighteen departments and holds one Grand Observatory in the capital city of Tegucigalpa.

[7:8:82d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:82e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:83] Hong Kongese Astronism

[7:8:83a] Astro-Hong Kongese philosophy, also known as Hong Kong Qǐshì as part of the larger Qǐshì'ism denomination, refers to the presence of The Philosophy of Astronism in Hong Kong under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Hong Kong Special Administrative Region of the People's Republic of China*, which is under authority of *The Institution of the Philosophy of Astronism for the People's Republic of China*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:83b] The Institution of the Philosophy of Astronism for the Hong Kong Special Administrative Region of the People's Republic of China, oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:83c] Hong Kong is split into eighteen administrative districts and holds one Grand Observatory, which is also the only Astronist observatory in Hong Kong.

[7:8:83d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:83e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:84] Hungarian Astronism

[7:8:84a] Astro-Hungarian philosophy, also known as Megvilá'gosodásism, refers to the presence of The Philosophy of Astronism in Hungary under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Hungary*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:84b] The Institution of the Philosophy of Astronism for Hungary oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:84c] Hungary is split into nineteen counties and the capital, and holds one Grand Observatory in the capital city of Budapest.

[7:8:84d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:84e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:85] Icelandic Astronism

[7:8:85a] Astro-Icelandic philosophy, also known as Uppljómunir'ism, refers to the presence of The Philosophy of Astronism in Iceland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Iceland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:85b] The Institution of the Philosophy of Astronism for Iceland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:85c] Iceland is split into eight regions and holds one Grand Observatory in the capital city of Reykjavik, which is also the only Astronist observatory in the country.

[7:8:85d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:85e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are

deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:86] Indian Astronism

[7:8:86a] Astro-Indian philosophy encompasses a vast array of denominations and derivations, the single largest of which is Prabodhanism form of Hindi Indian Astronism, and refers to the presence of The Philosophy of Astronism in the Republic of India under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of India*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:86b] The Institution of the Philosophy of Astronism for the Republic of India oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:86c] India is split into twenty-nine states and holds two Grand Observatories in the capital city of New Delhi, and in the city of Mumbai.

[7:8:86d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:86e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:87] Indonesian Astronism

[7:8:87a] Astro-Indonesian philosophy, also known as Indonesian Pencerahanism as part of the larger Pencerahanism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Indonesia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Indonesia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:87b] The Institution of the Philosophy of Astronism for the Republic of Indonesia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:87c] Indonesia is split into thirty-four provinces and holds one Grand Observatory in the capital city of Jakarta.

[7:8:87d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:87e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:88] Iranian Astronism

[7:8:88a] Astro-Iranian, also known as Astro-Persian philosophy, or as *روشنگری*, refers to the presence of The Philosophy of Astronism in the Islamic Republic of Iran under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Islamic Republic of Iran*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:88b] The Institution of the Philosophy of Astronism for the Islamic Republic of Iran oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:88c] Iran is split into thirty-one provinces and holds one Grand Observatory in the capital city of Tehran.

[7:8:88d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:88e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:89] Iraqi Astronism

[7:8:89a] Astro-Iraqi philosophy, also known as Iraqi Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Iraq under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Iraq*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:89b] The Institution of the Philosophy of Astronism for the Republic of Iraq oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:89c] Iraq is split into nineteen governorates and holds one Grand Observatory in the capital city of Baghdad.

[7:8:89d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:89e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:90] Irish Astronism

[7:8:90a] Astro-Irish philosophy refers to the presence of The Philosophy of Astronism in the Republic of Ireland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:90b] The Institution of the Philosophy of Astronism for the Republic of Ireland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:90c] Ireland is split into thirty-one counties and holds one Grand Observatory in the capital city of Dublin.

[7:8:90d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:90e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:91] Israeli Astronism

[7:8:91a] Astro-Israeli philosophy, also known in Hebrew as אֶסְטְרוֹ-יִשְׂרָאֵלִי, refers to the presence of The Philosophy of Astronism in Israel under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the State of Israel*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:91b] The Institution of the Philosophy of Astronism for the State of Israel oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:91c] Israel is split into six administrative districts and holds two Grand Observatories in the capital city of West Jerusalem, and in the city of Tel Aviv-Yafo.

[7:8:91d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:91e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:92] Italian Astronism

[7:8:92a] Astro-Italian philosophy, also known as Illuminazione'ism, refers to the presence of The Philosophy of Astronism in Italy under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Italian Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:92b] The Institution of the Philosophy of Astronism for the Italian Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:92c] Italy is split into twenty regions and holds one Grand Observatory in the capital city of Rome.

[7:8:92d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:92e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:93] Ivorian Astronism

[7:8:93a] Astro-Ivorian philosophy, also known as Ivorian Illuminationism as part of the larger Illuminationism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Côte d'Ivoire under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Côte d'Ivoire*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:93b] The Institution of the Philosophy of Astronism for the Republic of Côte d'Ivoire oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:93c] Ivory Coast is split into fourteen districts and holds two Grand Observatories in the capital city of Yamoussoukro, and in the city of Abidjan.

[7:8:93d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:93e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:94] Jamaican Astronism

[7:8:94a] Astro-Jamaican philosophy refers to the presence of The Philosophy of Astronism in Jamaica under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Jamaica*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:94b] The Institution of the Philosophy of Astronism for Jamaica oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:94c] Jamaica is split into fourteen parishes and holds one Grand Observatory in the capital city of Kingston.

[7:8:94d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:94e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:95] Japanese Astronism

[7:8:95a] Astro-Japanese philosophy, also known as Keihatsu'ism, refers to the presence of The Philosophy of Astronism in Japan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Japan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:95b] The Institution of the Philosophy of Astronism for Japan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:95c] Japan is split into forty-seven prefectures and holds one Grand Observatory in the capital city of Tokyo.

[7:8:95d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:95e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:96] Jordanian Astronism

[7:8:96a] Astro-Jordanian philosophy, also known as Jordanian Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in Jordan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Hashemite Kingdom of Jordan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:96b] The Institution of the Philosophy of Astronism for the Hashemite Kingdom of Jordan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:96c] Jordan is split into twelve governorates and holds one Grand Observatory in the capital city of Amman.

[7:8:96d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:96e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:97] Kazakh Astronism

[7:8:97a] Astro-Kazakh philosophy, also known as Aqartizm, refers to the presence of The Philosophy of Astronism in Kazakhstan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Kazakhstan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:97b] The Institution of the Philosophy of Astronism for the Republic of Kazakhstan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:97c] Kazakhstan is split into fourteen regions and holds one Grand Observatory in the capital city of Astana.

[7:8:97d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:97e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:98] Kenyan Astronism

[7:8:98a] Astro-Kenyan philosophy, also known as both Kenyan Mwangazaism as part of the larger Mwangazaism denomination, and Kenyan Kutaalamikaism as part of the larger Kutaalamikaism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Kenya under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Kenya*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:98b] The Institution of the Philosophy of Astronism for the Republic of Kenya oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:98c] Kenya is split into forty-seven counties and holds two Grand Observatories in both the capital city of Nairobi, and in the city of Mombasa.

[7:8:98d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:98e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:99] Kiribati Astronism

[7:8:99a] Astro-Kiribati philosophy refers to the presence of The Philosophy of Astronism in the Republic of Kiribati under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Kiribati*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:99b] The Institution of the Philosophy of Astronism for the Republic of Kiribati oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:99c] Kiribati is split into three island groups and holds one Grand Observatory in the capital of Bairiki.

[7:8:99d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:99e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:100] Kittitian-Nevisian Astronism

[7:8:100a] Astro-Kittitian and Nevisian philosophy refers to the presence of The Philosophy of Astronism in Saint Kitts and Nevis under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federation of Saint Christopher and Nevis*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:100b] The Institution of the Philosophy of Astronism for the Federation of Saint Christopher and Nevis oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:100c] Saint Kitts and Nevis is split into fourteen parishes and holds one Grand Observatory in the capital city of Basseterre.

[7:8:100d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:100e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:101] Korean Astronism

[7:8:101a] Astro-Korean philosophy, also known as Jomyeongism, refers to the presence of The Philosophy of Astronism in the Republic of Korea, and the Democratic People's Republic of Korea, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Korea*, and *The Institution of the Philosophy of Astronism for the Democratic People's Republic of Korea* respectively, both of which are national subsidiaries for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:101b] The Institution of the Philosophy of Astronism for the Republic of Korea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:101c] The Republic of Korea is split into eight provinces, one special self-governing province, six metropolitan cities, one special, and one metropolitan autonomous city, and holds one Grand Observatory in the capital city of Seoul.

[7:8:101d] The Institution of the Philosophy of Astronism for the Democratic People's Republic of Korea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction, in which there are to be one of each in the same building, called *The Korean People's Grand Observatory & Planetarium of Pyongyang*.

[7:8:101e] The Democratic People’s Republic of Korea is divided into nine provinces, as well as the special city of Rason, and the capital city of Pyongyang.

[7:8:101f] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout these territories, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout these territories.

[7:8:101g] It is The Institution alone that is granted the status of proprietor to the philosophy in these territories as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:102] Kosovar Astronism

[7:8:102a] Astro-Kosovar philosophy refers to the presence of The Philosophy of Astronism in the Republic of Kosovo under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Kosovo*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:102b] The Institution of the Philosophy of Astronism for the Republic of Kosovo oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:102c] Kosovo is split into seven districts and holds one Grand Observatory in the capital city of Prishtina.

[7:8:102d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:102e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:103] Kurdish Astronism

[7:8:103a] Astro-Kurdish philosophy, also known as Zelalbûna’ism, refers to the presence of The Philosophy of Astronism in Kurdish majority territories, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kurdish Peoples*, which is under direct authority of other institutions of Astronism, within whose territory Kurdish peoples reside.

[7:8:136d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:136e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:137] Nauruan Astronism

[7:8:137a] Astro-Nauruan philosophy refers to the presence of The Philosophy of Astronism in the Republic of Nauru under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Nauru*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:137b] The Institution of the Philosophy of Astronism for the Republic of Nauru oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:137c] Nauru is split into fourteen administrative districts and holds one Grand Observatory in the capital city of Yaren, which is also the only Astronist observatory in the nation.

[7:8:137d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:137e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:138] Nepalese Astronism

[7:8:138a] Astro-Nepalese philosophy, also known as Jyōti'ism, refers to the presence of The Philosophy of Astronism in Nepal under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federal Democratic Republic of Nepal*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:138b] The Institution of the Philosophy of Astronism for the Federal Democratic Republic of Nepal oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:138c] Nepal is split into seven provinces and holds one Grand Observatory in the capital city of Kathmandu.

[7:8:138d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:138e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:139] New Caledonian Astronism

[7:8:139a] Astro-Caledonian philosophy, also known as New Caledonian Lumières'ism as part of the larger Lumières'ism denomination, refers to the presence of The Philosophy of Astronism in New Caledonia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Special Collectivity of New Caledonia*, which is under authority of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:139b] The Institution of the Philosophy of Astronism for the Special Collectivity of New Caledonia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:139c] New Caledonia is split into thirty-three municipalities and holds one Grand Observatory in the capital city of Noumea, which is one of the two observatories in the special collectivity.

[7:8:139d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:139e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:140] New Zealand Astronism

[7:8:140a] Astro-New Zealander philosophy refers to the presence of The Philosophy of Astronism in New Zealand under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for New Zealand*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:140b] The Institution of the Philosophy of Astronism for New Zealand oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:140c] New Zealand is split into sixteen regions and holds two Grand Observatories in the capital city of Wellington, as well as in the city of Auckland.

[7:8:140d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:140e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:141] Nicaraguan Astronism

[7:8:141a] Astro-Nicaraguan philosophy, also known as Nicaraguan Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Nicaragua under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Nicaragua*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:141b] The Institution of the Philosophy of Astronism for the Republic of Nicaragua oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:141c] Nicaragua is split into fifteen departments and holds one Grand Observatory in the capital city of Managua.

[7:8:141d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:141e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:142] Nigerien Astronism

[7:8:142a] Astro-Nigerien philosophy, also known as both Nigerien L'illuminationism as part of the larger L'illuminationism denomination, and as Haske'ism as distinct form of Astro-Nigerien philosophy, and refers to the presence of The Philosophy of Astronism in the Niger under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of the Niger*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:142b] The Institution of the Philosophy of Astronism for the Republic of the Niger oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:142c] Niger is split into seven regions and one capital district, and holds one Grand Observatory in the capital city of Niamey.

[7:8:142d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:142e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:143] Nigerian Astronism

[7:8:143a] Astro-Nigerian philosophy consists of three main derivations including Lëkanism, Haska'karkaism, and Mmeppeanya'ism, and refers to the presence of The Philosophy of Astronism in Nigeria under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federal Republic of Nigeria*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:143b] The Institution of the Philosophy of Astronism for the Federal Republic of Nigeria oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:143c] Nigeria is split into thirty-six states and holds two Grand Observatories in the capital city of Abuja, as well as in the city of Kano, and also features one rare Grand World Eidouranium in the city of Lagos.

[7:8:143d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:143e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:144] Niuean Astronism

[7:8:144a] Astro-Niuean philosophy refers to the presence of The Philosophy of Astronism in Niue under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Niue*, which is under authority of *The Institution of the Philosophy of Astronism for New Zealand*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:144b] The Institution of the Philosophy of Astronism for Niue oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction and Niue is split into fourteen villages.

[7:8:144c] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:144d] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:145] Norwegian Astronism

[7:8:145a] Astro-Norwegian philosophy, also known as Norwegian Op'lys'ningism as part of the larger Op'lys'ningism denomination, refers to the presence of The Philosophy of Astronism in the Kingdom of Norway under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Norway*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:145b] The Institution of the Philosophy of Astronism for the Kingdom of Norway oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:145c] Norway is split into nineteen counties and holds one Grand Observatory in the capital city of Oslo.

[7:8:145d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:145e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:146] Omani Astronism

[7:8:146a] Astro-Omani philosophy, also known as Omani Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in Oman under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Sultanate of Oman*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:146b] The Institution of the Philosophy of Astronism for the Sultanate of Oman oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:146c] Oman is split into eleven governorates and holds one Grand Observatory in the capital city of Muscat.

[7:8:146d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:146e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:147] Pakistani Astronism

[7:8:147a] Astro-Pakistani philosophy consists of many derivations, the largest of which by far is Gi'ānaism, and refers to the presence of The Philosophy of Astronism in the Islamic Republic of Pakistan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Islamic Republic of Pakistan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:147b] The Institution of the Philosophy of Astronism for the Islamic Republic of Pakistan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:147c] Pakistan is split into eight administrative divisions, all with their own denominations of The Philosophy of Astronism, and holds one Grand Observatory in the capital city of Islamabad, as well as a rare Grand World Eidouranium in the city of Karachi.

[7:8:147d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:147e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:148] Palauan Astronism

[7:8:148a] Astro-Palauan philosophy refers to the presence of The Philosophy of Astronism in the Republic of Palau under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Palau*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:148b] The Institution of the Philosophy of Astronism for the Republic of Palau oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:148c] Palau is split into sixteen states and holds one Grand Observatory in the capital city of Koror.

[7:8:148d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:148e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:149] Palestinian Astronism

[7:8:149a] Astro-Palestinian philosophy, also known as Palestinian Tanwir as part of larger Tanwir'ism denomination refers to the presence of The Philosophy of Astronism in the State of Palestine under management and philosophical jurisdiction of *The Institution of the*

Philosophy of Astronism for the State of Palestine, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:149b] The Institution of the Philosophy of Astronism for the State of Palestine oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:149c] Palestine is split into sixteen administrative divisions and holds one Grand Observatory in the capital city of East Jerusalem.

[7:8:149d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:149e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:150] Panamanian Astronism

[7:8:150a] Astro-Panamanian philosophy, also known as Panamanian Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Panama under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Panama*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:150b] The Institution of the Philosophy of Astronism for the Republic of Panama oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:150c] Panama is split into ten provinces and holds one Grand Observatory in the capital city of Panama City.

[7:8:150d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:150e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:151] Papua New Guinean Astronism

[7:8:151a] Astro-Papua New Guinean philosophy refers to the presence of The Philosophy of Astronism in Papua New Guinea under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Independent States of Papua New Guinea*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:151b] The Institution of the Philosophy of Astronism for the Independent States of Papua New Guinea oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:151c] Papua New Guinea is split into twenty-two provinces and holds one Grand Observatory in the capital city of Port Moresby.

[7:8:151d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:151e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:152] Paraguayan Astronism

[7:8:152a] Astro-Paraguayan philosophy, also known as Paraguayan Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Paraguay under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Paraguay*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:152b] The Institution of the Philosophy of Astronism for the Republic of Paraguay oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:152c] Paraguay is split into seventeen departments and one capital district, and holds one Grand Observatory in the capital city of Asuncion.

[7:8:152d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:152e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:153] Peruvian Astronism

[7:8:153a] Astro-Peruvian philosophy, also known as Peruvian Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Peru under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Peru*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:153b] The Institution of the Philosophy of Astronism for the Republic of Peru oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:153c] Peru is split into twenty-five regions and province of Lima and holds one Grand Observatory in the capital city of Lima District.

[7:8:153d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:153e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:154] Polish Astronism

[7:8:154a] Astro-Polish philosophy, also known as Oświecenie'ism, refers to the presence of The Philosophy of Astronism in the Republic of Poland under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Poland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:154b] The Institution of the Philosophy of Astronism for the Republic of Poland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:154c] Poland is split into sixteen provinces and holds one Grand Observatory in the capital city of Warsaw.

[7:8:154d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:154e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:155] Portuguese Astronism

[7:8:155a] Astro-Portuguese philosophy, also known as Portuguese Iluminação'ism as part of the larger Iluminação'ism denomination, refers to the presence of The Philosophy of Astronism in Portugal under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Portuguese Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:155b] The Institution of the Philosophy of Astronism for the Portuguese Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:155c] Portugal is split into eighteen districts and holds one Grand Observatory in the capital city of Lisbon.

[7:8:155d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:155e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:156] Puerto Rican Astronism

[7:8:156a] Astro-Puerto Rican philosophy, also known as Puerto Rican Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in Puerto Rico under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Commonwealth of Puerto Rico*, which is under authority of *The Institution of the Philosophy of Astronism for the United States of America*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:156b] The Institution of the Philosophy of Astronism for the Commonwealth of Puerto Rico oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:156c] Puerto Rico is split into seventy-eight municipalities and holds one Grand Observatory in the capital city of San Juan.

[7:8:156d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:156e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:157] Qatari Astronism

[7:8:157a] Astro-Qatari philosophy, also known as Qatari Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in Qatar under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the State of Qatar*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:157b] The Institution of the Philosophy of Astronism for the State of Qatar oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:157c] Qatar is split into seven municipalities and holds one Grand Observatory in the capital city of Doha, which is also the only Astronist observatory in the state.

[7:8:157d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:157e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:158] Réunionese Astronism

[7:8:158a] Astro-Réunionese philosophy, also known as Réunionese Lumières'ism as part of the larger Lumières'ism denomination, refers to the presence of The Philosophy of Astronism in Réunion under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Réunion*, which is under authority of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:158d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:158e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:159] Romanian Astronism

[7:8:159a] Astro-Romanian philosophy, also known as Iluminism, refers to the presence of The Philosophy of Astronism in Romania under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Romania*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:159b] The Institution of the Philosophy of Astronism for Romania oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:159c] Romania is split into forty-one counties and holds one Grand Observatory in the capital city of Bucharest.

[7:8:159d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:159e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:160] Russian Astronism

[7:8:160a] Astro-Russian philosophy, also known as Russian Prosvetleniye'ism as part of the larger Prosvetleniye'ism denomination, refers to the presence of The Philosophy of Astronism in the Russian Federation under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Russian Federation*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:160b] The Institution of the Philosophy of Astronism for the Russian Federation oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:160c] Russia is split into twenty-two republics, nine krais, forty-six oblasts, three federal cities, one autonomous oblast, and four autonomous okrugs, and holds one Grand Observatory in the capital city of Moscow.

[7:8:160d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:160e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:161] Rwandan Astronism

[7:8:161a] Astro-Rwandan philosophy, also known as Rwandan Mwangazaism as part of the larger Mwangazaism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Rwanda under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Rwanda*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:161b] The Institution of the Philosophy of Astronism for the Republic of Rwanda oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:161c] Rwanda is split into five provinces and holds one Grand Observatory in the capital city of Kigali.

[7:8:161d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:161e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:162] Saint Helenian Astronism

[7:8:162a] Astro-Saint Helenian philosophy, as part of the larger British Astronism denomination, refers to the presence of The Philosophy of Astronism in Saint Helena, Ascension, and Tristan da Cunha, under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the British Overseas Territory of Saint Helena, Ascension, and Tristan da Cunha*, which is under authority of *The Institution of the Philosophy of Astronism for the United Kingdom of Great Britain and Northern Ireland*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:162b] The Institution of the Philosophy of Astronism for the British Overseas Territory of Saint Helena, Ascension and Tristan da Cunha, oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:162c] Saint Helena, Ascension, and Tristan da Cunha is split into three administrative areas, but holds no Grand Observatories.

[7:8:162d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:162e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:163] Saint Lucian Astronism

[7:8:163a] Astro-Lucian philosophy refers to the presence of The Philosophy of Astronism in Saint Lucia under management and philosophical jurisdiction of *The Institution of the*

Philosophy of Astronism for Saint Lucia, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:163b] The Institution of the Philosophy of Astronism for Saint Lucia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:163c] Saint Lucia is split into twelve districts and holds one Grand Observatory in the capital city of Castries City, which is also the only Astronist observatory in the island nation.

[7:8:163d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:163e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:164] Saint Martinois Astronism

[7:8:164a] Astro-Martinois philosophy, as part of the larger Lumières'ism denomination, refers to the presence of The Philosophy of Astronism in the Collectivity of Saint Martin under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Collectivity of Saint Martin*, which is under authority of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:164b] The Institution of the Philosophy of Astronism for the Collectivity of Saint Martin oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:164c] Saint Martin holds one Grand Observatory in the capital of Marigot, which is also the only Astronist observatory in the French collectivity.

[7:8:164d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:164e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a

role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:165] Salvadoran Astronism

[7:8:165a] Astro-Salvadoran philosophy, also known as Salvadoran Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Republic of El Salvador under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of El Salvador*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:165b] The Institution of the Philosophy of Astronism for the Republic of El Salvador oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:165c] El Salvador is split into fourteen departments and holds one Grand Observatory in the capital city of San Salvador.

[7:8:165d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:165e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:166] Samoan Astronism

[7:8:166a] Astro-Samoan philosophy, also known as Le Mala'mala'maism, refers to the presence of The Philosophy of Astronism in Samoa under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Independent State of Samoa*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:166b] The Institution of the Philosophy of Astronism for the Independent State of Samoa oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:166c] Samoa is split into eleven political districts and holds one Grand Observatory in the capital city of Apia, which is also the only Astronist observatory in the state.

[7:8:166d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:166e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:167] Sammarinese Astronism

[7:8:167a] Astro-Sammarinese philosophy, also known as Sammarinese Iluminismoism as part of the larger Iluminismoism denomination, refers to the presence of The Philosophy of Astronism in the Republic of San Marino under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of San Marino*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:167b] The Institution of the Philosophy of Astronism for the Republic of San Marino oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:167c] San Marino is split into nine municipalities and holds one Grand Observatory in the republic, which is also the only Astronist observatory in the country.

[7:8:167d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:167e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:168] São Toméan Astronism

[7:8:168a] Astro-São Toméan philosophy, also known São Toméan Iluminação'ism as part of the larger Iluminação'ism denomination, refers to the presence of The Philosophy of Astronism in the Democratic Republic of São Tomé and Príncipe under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Democratic Republic of São Tomé and Príncipe*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:168b] The Institution of the Philosophy of Astronism for the Democratic Republic of São Tomé and Príncipe oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:168c] São Tomé and Príncipe is split into two provinces and holds one Grand Observatory in the capital city of São Tomé, and another in Príncipe.

[7:8:168d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:168e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:169] Saudi Arabian Astronism

[7:8:169a] Astro-Saudi philosophy, also known as Saudi Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Kingdom of Saudi Arabia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Saudi Arabia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:169b] The Institution of the Philosophy of Astronism for the Kingdom of Saudi Arabia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:169c] Saudi Arabia is split into thirteen regions and holds one Grand Observatory in the capital city of Riyadh, which is one of the two Astronist observatories in the kingdom.

[7:8:169d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:169e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:170] Senegalese Astronism

[7:8:170a] Astro-Senegalese philosophy, also known as Senegalese Illuminationism as part of the larger Illuminationism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Senegal under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Senegal*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:170b] The Institution of the Philosophy of Astronism for the Republic of Senegal oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:170c] Senegal is split into fourteen regions and holds one Grand Observatory in the capital city of Dakar.

[7:8:170d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:170e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:171] Serbian Astronism

[7:8:171a] Astro-Serbian philosophy, also known as Prosvećenje'ism, refers to the presence of The Philosophy of Astronism in the Republic of Serbia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Serbia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:171b] The Institution of the Philosophy of Astronism for the Republic of Serbia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:171c] Serbia is split into twenty-four districts and holds one Grand Observatory in the capital city of Belgrade.

[7:8:171d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:171e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a

role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:172] Seychellois Astronism

[7:8:172a] Astro-Seychellois philosophy refers to the presence of The Philosophy of Astronism in the Republic of Seychelles under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Seychelles*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:172b] The Institution of the Philosophy of Astronism for the Republic of Seychelles oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:172c] Seychelles is split into twenty-six administrative regions and holds one Grand Observatory in the capital city of Victoria, which is one of the two Astronist observatories in the republic.

[7:8:172d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:172e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:173] Sierra Leonean Astronism

[7:8:173a] Astro-Sierra Leonean philosophy refers to the presence of The Philosophy of Astronism in the Republic of Sierra Leone under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Sierra Leone*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:173b] The Institution of the Philosophy of Astronism for the Republic of Sierra Leone oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:173c] Sierra Leone is split into twelve districts and two areas, and holds one Grand Observatory in the capital city of Freetown.

[7:8:173d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:173e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:174] Singaporean Astronism

[7:8:174a] Astro-Singaporean philosophy refers to the presence of The Philosophy of Astronism in the Republic of Singapore under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Singapore*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:174b] The Institution of the Philosophy of Astronism for the Republic of Singapore oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction and Singapore holds one Grand Observatory in the city-state.

[7:8:174c] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:174d] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:175] Slovak Astronism

[7:8:175a] Astro-Slovak philosophy, also known as Osvietenie'ism, refers to the presence of The Philosophy of Astronism in the Slovak Republic under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Slovak Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:175b] The Institution of the Philosophy of Astronism for the Slovak Republic oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:175c] Slovakia is split into eight regions and holds one Grand Observatory in the capital city of Bratislava.

[7:8:175d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:175e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:176] Slovenian Astronism

[7:8:176a] Astro-Slovenian philosophy, also known as Razsvetljenstvo'ism, refers to the presence of The Philosophy of Astronism in the Republic of Slovenia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Slovenia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:176b] The Institution of the Philosophy of Astronism for the Republic of Slovenia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:176c] Slovenia is split into five regions and holds one Grand Observatory in the capital city of Ljubljana.

[7:8:176d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:176e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:177] Solomon Island Astronism

[7:8:177a] Astro-Solomon Island philosophy refers to the presence of The Philosophy of Astronism in the Solomon Islands under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Solomon Islands*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:177b] The Institution of the Philosophy of Astronism for the Solomon Islands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:177c] Solomon Islands is split into ten administrative areas and holds one Grand Observatory in the capital city of Honiara, which is also the only Astronist observatory in the country.

[7:8:177d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:177e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:178] Somali Astronism

[7:8:178a] Astro-Somali philosophy, also known as Nuurinism, refers to the presence of The Philosophy of Astronism in Somalia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Federal Republic of Somalia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:178b] The Institution of the Philosophy of Astronism for the Federal Republic of Somalia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:178c] Somalia is split into eighteen regions and holds two Grand Observatories in the capital city of Mogadishu, as well as in the city of Hargeisa.

[7:8:178d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:178e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:179] South African Astronism

[7:8:179a] Astro-South African philosophy refers to the presence of The Philosophy of Astronism in the Republic of South Africa under management and philosophical

jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of South Africa*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:179b] The Institution of the Philosophy of Astronism for the Republic of South Africa oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:179c] South Africa is split into nine provinces and holds one Grand Observatory in the capital city of Cape Town.

[7:8:179d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:179e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:180] South Ossetian Astronism

[7:8:180a] Astro-South Ossetian philosophy refers to the presence of The Philosophy of Astronism in South Ossetia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for South Ossetia*, which is under direct authority of *The Institution of the Philosophy of Astronism for Georgia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:180b] This subnational branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:180c] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:181] South Sudanese Astronism

[7:8:181a] Astro-South Sudanese philosophy refers to the presence of The Philosophy of Astronism in South Sudan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of South Sudan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:181b] The Institution of the Philosophy of Astronism for the Republic of South Sudan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:181c] South Sudan is split into twenty-eight states and holds one Grand Observatory in the capital city of Juba.

[7:8:181d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:181e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:182] Spanish Astronism

[7:8:182a] Astro-Spanish philosophy, also known as Spanish Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in the Kingdom of Spain under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Kingdom of Spain*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:182b] The Institution of the Philosophy of Astronism for the Kingdom of Spain oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:182c] Spain is split into seventeen autonomous communities and two autonomous cities, and also holds two Grand Observatories in the capital city of Madrid, as well as in the city of Barcelona.

[7:8:182d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:182e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:183] Sri Lankan Astronism

[7:8:183a] Astro-Sri Lankan philosophy, also known as Dae'numaism, refers to the presence of The Philosophy of Astronism in Sri Lanka under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Democratic Socialist Republic of Sri Lanka*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:183b] The Institution of the Philosophy of Astronism for the Democratic Socialist Republic of Sri Lanka oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:183c] Sri Lanka is split into nine provinces and holds one Grand Observatory in the capital city of Colombo.

[7:8:183d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:183e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:184] Sint Maartener Astronism

[7:8:184a] Astro-Maartener philosophy refers to the presence of The Philosophy of Astronism in Sint Maarten under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Constituent Country of Sint Maarten*, which is under authority of *The Institution of the Philosophy of Astronism for the Kingdom of the Netherlands*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:184b] The Institution of the Philosophy of Astronism for the Constituent Country of Sint Maarten oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:184c] Sint Maarten holds one Grand Observatory in its capital city of Philipsburg, which is also the only Astronist observatory in the constituent country.

[7:8:184d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:184e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:185] Sudanese Astronism

[7:8:185a] Astro-Sudanese philosophy, also known as Sudanese Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in the Sudan under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of the Sudan*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:185b] The Institution of the Philosophy of Astronism for the Republic of the Sudan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:185c] Sudan is split into eighteen states and holds one Grand Observatory in the capital city of Khartoum.

[7:8:185d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:185e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:186] Surinamese Astronism

[7:8:209d] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:210] Venezuelan Astronism

[7:8:210a] Astro-Venezuelan philosophy, also known as Venezuelan Estrellism as part of the larger Iluminaciónism denomination, refers to the presence of The Philosophy of Astronism in Venezuela under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Bolivarian Republic of Venezuela*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:210b] The Institution of the Philosophy of Astronism for the Bolivarian Republic of Venezuela oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:210c] Venezuela is split into twenty-three states, a capital district, and the Federal Dependencies, and holds one Grand Observatory in the capital city of Caracas.

[7:8:210d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:210e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:211] Vietnamese Astronism

[7:8:211a] Astro-Vietnamese philosophy, also known as Giác Ngộ'ism, refers to the presence of The Philosophy of Astronism in Vietnam under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Socialist*

Republic of Vietnam, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:211b] The Institution of the Philosophy of Astronism for the Socialist Republic of Vietnam oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:211c] Vietnam is split into fifty-eight provinces and holds one Grand Observatory in the capital city of Hanoi.

[7:8:211d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:211e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:212] Vincentian Astronism

[7:8:212a] Astro-Vincentian philosophy refers to the presence of The Philosophy of Astronism in Saint Vincent and the Grenadines under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for Saint Vincent and the Grenadines*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:212b] The Institution of the Philosophy of Astronism for Saint Vincent and the Grenadines oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:212c] Saint Vincent and the Grenadines is split into six parishes and holds one Grand Observatory in the capital city of Kingstown, which is also one of the two only Astronist observatories in the nation.

[7:8:212d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:212e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:213] Wallisian and Futunan Astronism

[7:8:213a] Astro-Wallisian and Futunan philosophy, as closely related to the larger French Astronism denomination, philosophy refers to the presence of The Philosophy of Astronism in Wallis and Futuna under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Territory of the Wallis and Futuna Islands*, which is under authority of *The Institution of the Philosophy of Astronism for the French Republic*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:213b] The Institution of the Philosophy of Astronism for the Territory of the Wallis and Futuna Islands oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:213c] Wallis and Futuna is split into three traditional kingdoms, but does not hold any Grand Observatories.

[7:8:213d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:213e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:214] Yemeni Astronism

[7:8:214a] Astro-Yemeni philosophy, also known as Yemeni Tanwir as part of the larger Tanwir'ism denomination, refers to the presence of The Philosophy of Astronism in Yemen under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Yemen*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:214b] The Institution of the Philosophy of Astronism for the Republic of Yemen oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:214c] Yemen is split into twenty-two governorates and holds one Grand Observatory in the capital city of Sana'a.

[7:8:214d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including

efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:214e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:215] Zambian Astronism

[7:8:215a] Astro-Zambian philosophy, mainly known as Zambian Astronism with a minority adhering to Zambian Chidziwitsoism as part of the larger Chidziwitsoism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Zambia under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Zambia*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:215b] The Institution of the Philosophy of Astronism for the Republic of Zambia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:215c] Zambia is split into ten provinces and holds one Grand Observatory in the capital city of Lusaka.

[7:8:215d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:215e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:8:216] Zimbabwean Astronism

[7:8:216a] Astro-Zimbabwean philosophy, also known as Zimbabwean Chidziwitsoism as part of the larger Chidziwitsoism denomination, refers to the presence of The Philosophy of Astronism in the Republic of Zimbabwe under management and philosophical jurisdiction of *The Institution of the Philosophy of Astronism for the Republic of Zimbabwe*, a national subsidiary for the worldwide *Institution of the Philosophy of Astronism*.

[7:8:216b] The Institution of the Philosophy of Astronism for the Republic of Zimbabwe oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction.

[7:8:216c] Zimbabwe is split into eight provinces and two cities with provincial status, and holds one Grand Observatory in the capital city of Harare.

[7:8:216d] This national branch of The Institution of The Philosophy of Astronism manages the official representation and depiction of Astronism throughout this territory, including efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the territory.

[7:8:216e] It is The Institution alone that is granted the status of proprietor to the philosophy in this territory as any other organisations or institutions proclaiming such a role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

—

[7:8:217] As an appendage to this long discourse outlining the presence of The Philosophy of Astronism in each country and dependent territory on The Earth, it seems suitable to introduce that which shall be henceforth referred to as omninationism.

[7:8:218] Omninationism is a belief orientation of the Astronist Tradition and involves a set of principles upheld by the wider Astronist philosophical tradition stating that to avoid the regressions that nationalism can cause, but also to acknowledge the importance of nationality and nationalism as social drivers, forms of identity, and conceptual associations that remain useful to the furtherance of Astronism, especially regarding its dissemination into particular territories, the philosophy and political ideology of omninationism is established.

[7:8:219] Omninationism is an outlook that can be employed by an organised philosophy, a religion, a company, or even an individual and upholds the importance of nationalism whilst also not particularly focusing on any particular branch of nationalism specific to a country by embracing all countries and territories without holding any particular connection to any one nation.

[7:8:220] Omninationism encompasses the nationalisms of all nations, acknowledges their individualities, but does not discriminate between them or superiorise one over another.

[7:8:221] An example of omninationist principles put into practice is the inclusion of all countries, regions, and dependent territories in this discourse about the spread and presence of The Philosophy of Astronism; there was no particular focus on any one

country as Astronism holds no specific particularity for any one nation for it is instead an omninational philosophy.

[7:8:222] Some religions and philosophy are associated with particular nations which are known as ethnic religions, or national religions, and although there does exist nationalised branches of Astronism, The Philosophy as a whole holds not particular affiliation with any one nationality; this is unlike the philosophies of Confucianism and Taoism, for example, which hold particular associations with Chinese identity and nationality.

[7:8:223] For this reason, omninationalism may also be termed as ectonationalism because through the development of omninationalist principles, The Philosophy of Astronism transcends nationalism by continuing to acknowledge its importance, but also recognising all nationalisms so as not to favour one over any other in particular.

[7:8:224] Omninationalism can be categorised as part of the presence of omnism within The Philosophy of Astronism and it is omnism that continues to hold a particular thematic hold over Astronism which is considered to be a positive contribution and that which is to be known as spaciomnism refers to any application of omnistic principles to the context of space exploration.

[7:8:225] As an extension to the omnistic atmosphere intrinsic to the nature of The Philosophy of Astronism, that which is to be henceforth referred to as neomnism pertains to the principle that Astronism must be extended to all peoples of all nations, civilisations, and planets.

[7:8:226] Therefore, the true conduct of the dissemination of Astronism should be done by an inclusivistic approach as opposed to an exclusivistic approach; Astronism is for all as is reflected in its omnal nature and which is also part of its adherence to the principles of the Philosophical Spirit.

—

[7:8:227] Alongside the development of the philosophy of Astronism, there has existed the development of the wider Astronic philosophical tradition which encompasses Astronism as just one branch of its tradition, albeit it being and remaining the founding and central branch of course.

[7:8:228] While the Astronic philosophical tradition doesn't hold any particular orientations of belief itself as it is largely just a collection of different philosophies, religions, and belief systems, it does encompass a distinct theme which informs a lot of what it considers its principles to be, the most important of which include cosmocentrism and astrocentrism.

[7:8:229] Of course, despite the fact that the philosophy of Astronism is the founding philosophy of the Astronic tradition, there are pre-Astronist religions and philosophies

that share similar values, principles, and themes to Astronism and so therefore also would be considered Astronic and would be categorised within the Astronic tradition of thought.

[7:8:230] By this notion, the time has come to address the fact that there exist Cometanic philosophies other than Astronism as well as pre-Astronist philosophies, religions, and systems of thought and belief that are considered by the Astronist Tradition to become part of the Astronic tradition.

[7:8:231] Of course, other communities may not recognise this categorisation, but this is nevertheless upheld by the Astronist Tradition to be a fair categorisation of systems according to their natures and substances.

[7:8:232] A list of distinct organised conceptuels that are considered to be henceforth categorised as part of the Astronic philosophical tradition, or the Astronic category of religions; it is important note that this list is not exhaustive as The Institution of The Philosophy of Astronism is herein vested with the authority, post-omnidoxically, of conducting the process known as traditionisation, or to traditionise which refers to when a philosophy, religion, or other type of system of thought is officially considered and subsequently recognised to be collectivised within a wider philosophical or thought tradition rather than remaining a standalone system of thought:

[7:8:232a] Astronism

[7:8:232b] Astrology (Western, Chinese, Indian and other traditions of astrology)

[7:8:232c] Astrolatry / Astrotheology

[7:8:232d] Astromancy

[7:8:232e] Earth religion

[7:8:232f] Astral religion

[7:8:232g] Transhumanism

[7:8:232h] Cometanism

[7:8:232i] Nature religion

[7:8:232j] Russian cosmism

—

[7:8:233] With the development of the Astronic philosophical tradition and particularly with the creation and establishment of reascensionism comes a renewed pertinence in the

measurement of religious and philosophical demographics which has resulted my understanding of the current issues and inadequacies of this discipline.

[7:8:234] A number of fundamental aspects are unresolved which include the following:

[7:8:234a] Whether to count "historically predominant religious cultures.

[7:8:234b] Whether to count only those who actively "practice" a particular religion.

[7:8:234c] Whether to count based on a concept of "adherence".

[7:8:234d] Whether to count only those who expressly self-identify with a particular denomination.

[7:8:234e] Whether to count only adults, or to include children as well.

[7:8:234f] Whether to rely only on official government-provided statistics.

[7:8:234g] Whether to use multiple sources and ranges or single "best sources".

[7:8:235] The development of a new set of principles regarding the measurement of religious and philosophical populations resolving the issues outlined above which will subsequently development a methodology for demographic measurement of religions, organised philosophies, and philosophies in a wider sense that is promoted and encouraged to be implemented by The Institution of The Philosophy of Astronism.

[7:8:236] It is essential that religious and philosophical and belief persecution in general are all worked to be reduced globally, after the success of which will come greater clarity of people's true beliefs and ideas which are the fruits of humanity rather than the overbearing, dominant and obscuring religious traditions that are presently unrealistically monopolising certain countries in the inhabitants suffering from widespread persecutions and discriminations for their expression of their true beliefs.

Astronism By U.S. State

[7:9:1] Alabamian Astronism

[7:9:1a] Astro-Alabamian philosophy, Alabamian Astronism, or Alabamian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Alabama under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Alabama, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:1b] The Institution of the Philosophy of Astronism for the State of Alabama oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:1c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:2] Alaskan Astronism

[7:9:2a] Astro-Alaskan philosophy, Alaskan Astronism, or Alaskan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Alaska under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Alaska, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:2b] The Institution of the Philosophy of Astronism for the State of Alaska oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:2c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:3] Arizonan Astronism

[7:9:3a] Astro-Arizonan philosophy, Arizonan Astronism, or Arizonan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Arizona under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Arizona, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:3b] The Institution of the Philosophy of Astronism for the State of Arizona oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:3c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:4] Arkansan Astronism

[7:9:4a] Astro-Arkansan philosophy, Arkansan Astronism, or Arkansan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Arkansas under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Arkansas, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:4b] The Institution of the Philosophy of Astronism for the State of Arkansas oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:4c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:5] Californian Astronism

[7:9:5a] Astro-Californian philosophy, Californian Astronism, or Californian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of California under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of California, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:5b] The Institution of the Philosophy of Astronism for the State of California oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:5c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:6] Coloradan Astronism

[7:9:6a] Astro-Coloradan philosophy, Coloradan Astronism, or Coloradan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Colorado under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Colorado, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:6b] The Institution of the Philosophy of Astronism for the State of Colorado oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:6c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:7] Connectican Astronism

[7:9:7a] Astro-Connectican philosophy, Connectican Astronism, or Connectican Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Connecticut under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Connecticut, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:7b] The Institution of the Philosophy of Astronism for the State of Connecticut oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:7c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:8] Delawaran Astronism

[7:9:8a] Astro-Delawaran philosophy, Delawaran Astronism, or Delawaran Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Delaware under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Delaware, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:8b] The Institution of the Philosophy of Astronism for the State of Delaware oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:8c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:9] Floridian Astronism

[7:9:9a] Astro-Floridian philosophy, Floridian Astronism, or Floridian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Florida under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Florida, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:9b] The Institution of the Philosophy of Astronism for the State of Florida oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:9c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:10] Georgian Astronism

[7:9:10a] Astro-Georgian philosophy, Georgian Astronism, or Georgian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Georgia under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Georgia, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:10b] The Institution of the Philosophy of Astronism for the State of Georgia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:10c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:11] Hawaiian Astronism

[7:9:11a] Astro-Hawaiian philosophy, Hawaiian Astronism, or Hawaiian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Hawaii under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Hawaii, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:11b] The Institution of the Philosophy of Astronism for the State of Hawaii oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:11c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:12] Idahoan Astronism

[7:9:12a] Astro-Idahoan philosophy, Idahoan Astronism, or Idahoan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Idaho under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Idaho, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:12b] The Institution of the Philosophy of Astronism for the State of Idaho oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:12c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:13] Illinoisan Astronism

[7:9:13a] Astro-Illinoisan philosophy, Illinoisan Astronism, or Illinoisan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Illinois under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Illinois, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:13b] The Institution of the Philosophy of Astronism for the State of Illinois oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:13c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:14] Indianan Astronism

[7:9:14a] Astro-Indianan philosophy, Indianan Astronism, or Indianan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Indiana under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Indiana, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:14b] The Institution of the Philosophy of Astronism for the State of Indiana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:14c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:15] Iowan Astronism

[7:9:15a] Astro-Iowan philosophy, Iowan Astronism, or Iowan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Iowa under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Iowa, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:15b] The Institution of the Philosophy of Astronism for the State of Iowa oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:15c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:16] Kansan Astronism

[7:9:16a] Astro-Kansan philosophy, Kansan Astronism, or Kansan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Kansas under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Kansas, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:16b] The Institution of the Philosophy of Astronism for the State of Kansas oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:16c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:17] Kentuckian Astronism

[7:9:17a] Astro-Kentuckian philosophy, Kentuckian Astronism, or Kentuckian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Kentucky under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Kentucky, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:17b] The Institution of the Philosophy of Astronism for the State of Kentucky oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:17c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:18] Louisianan Astronism

[7:9:18a] Astro-Louisianan philosophy, Louisianan Astronism, or Louisianan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Louisiana under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Louisiana, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:18b] The Institution of the Philosophy of Astronism for the State of Louisiana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:18c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:19] Mainian Astronism

[7:9:19a] Astro-Mainian philosophy, Mainian Astronism, or Mainian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Maine under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Maine, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:19b] The Institution of the Philosophy of Astronism for the State of Maine oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:19c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:20] Marylander Astronism

[7:9:20a] Astro-Marylander philosophy, Marylander Astronism, or Marylander Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Maryland under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Maryland, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:20b] The Institution of the Philosophy of Astronism for the State of Maryland oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:20c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:21] Massachusite Astronism

[7:9:21a] Astro-Massachusite philosophy, Massachusite Astronism, or Massachusite Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Massachusetts under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Massachusetts, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:21b] The Institution of the Philosophy of Astronism for the State of Massachusetts oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:21c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:22] Michiganian Astronism

[7:9:22a] Astro-Michiganian philosophy, Michiganian Astronism, or Michiganian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Michigan under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Michigan, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:22b] The Institution of the Philosophy of Astronism for the State of Michigan oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:22c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:23] Minnesotan Astronism

[7:9:23a] Astro-Minnesotan philosophy, Minnesotan Astronism, or Minnesotan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Minnesota under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Minnesota, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:23b] The Institution of the Philosophy of Astronism for the State of Minnesota oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:23c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:24] Mississippian Astronism

[7:9:24a] Astro-Mississippian philosophy, Mississippian Astronism, or Mississippian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Mississippi under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Mississippi, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:24b] The Institution of the Philosophy of Astronism for the State of Mississippi oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:24c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:25] Missouriian Astronism

[7:9:25a] Astro-Missourian philosophy, Missouriian Astronism, or Missouriian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Missouri under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Missouri, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:25b] The Institution of the Philosophy of Astronism for the State of Missouri oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:25c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:26] Montanan Astronism

[7:9:26a] Astro-Montanian philosophy, Montanan Astronism, or Montanan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Montana under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Montana, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:26b] The Institution of the Philosophy of Astronism for the State of Montana oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:26c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:27] Nebraskan Astronism

[7:9:27a] Astro-Nebraskan philosophy, Nebraskan Astronism, or Nebraskan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Nebraska under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Nebraska, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:27b] The Institution of the Philosophy of Astronism for the State of Nebraska oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:27c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:28] Nevadan Astronism

[7:9:28a] Astro-Nevadan philosophy, Nevadan Astronism, or Nevadan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Nevada under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Nevada, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:28b] The Institution of the Philosophy of Astronism for the State of Nevada oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:28c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:29] New Hampshireite Astronism

[7:9:29a] Astro-New Hampshireite philosophy, New Hampshireite Astronism, or New Hampshireite Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of New Hampshire under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of New Hampshire, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:29b] The Institution of the Philosophy of Astronism for the State of New Hampshire oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:29c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:30] New Jerseyan Astronism

[7:9:30a] Astro-New Jerseyan philosophy, New Jerseyan Astronism, or New Jerseyan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of New Jersey under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of New Jersey, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:30b] The Institution of the Philosophy of Astronism for the State of New Jersey oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:30c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:31] New Mexican Astronism

[7:9:31a] Astro-New Mexican philosophy, New Mexican Astronism, or New Mexican Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of New Mexico under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of New Mexico, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:31b] The Institution of the Philosophy of Astronism for the State of New Mexico oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:31c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:32] New Yorker Astronism

[7:9:32a] Astro-New Yorker philosophy, New Yorker Astronism, or New Yorker Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of New York under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of New York, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:32b] The Institution of the Philosophy of Astronism for the State of New York oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:32c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:33] North Carolinian Astronism

[7:9:33a] Astro-North Carolinian philosophy, North Carolinian Astronism, or North Carolinian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of North Carolina under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of North Carolina, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:33b] The Institution of the Philosophy of Astronism for the State of North Carolina oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:33c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:34] North Dakotan Astronism

[7:9:34a] Astro-North Dakotan philosophy, North Dakotan Astronism, or North Dakotan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of North Dakota under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of North Dakota, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:34b] The Institution of the Philosophy of Astronism for the State of North Dakota oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:34c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:35] Ohioan Astronism

[7:9:35a] Astro-Ohioan philosophy, Ohioan Astronism, or Ohioan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Ohio under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Ohio, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:35b] The Institution of the Philosophy of Astronism for the State of Ohio oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:35c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:36] Oklahoman Astronism

[7:9:36a] Astro-Oklahoman philosophy, Oklahoman Astronism, or Oklahoman Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Oklahoma under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Oklahoma, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:36b] The Institution of the Philosophy of Astronism for the State of Oklahoma oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:36c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:37] Oregonian Astronism

[7:9:37a] Astro-Oregonian philosophy, Oregonian Astronism, or Oregonian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Oregon under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Oregon, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:37b] The Institution of the Philosophy of Astronism for the State of Oregon oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:37c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:38] Pennsylvanian Astronism

[7:9:38a] Astro-Pennsylvanian philosophy, Pennsylvanian Astronism, or Pennsylvanian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Pennsylvania under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Pennsylvania, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:38b] The Institution of the Philosophy of Astronism for the State of Pennsylvania oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:38c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:39] Rhode Islander Astronism

[7:9:39a] Astro-Rhode Islander philosophy, Rhode Islander Astronism, or Rhode Islander Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Rhode Island under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Rhode Island, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:39b] The Institution of the Philosophy of Astronism for the State of Rhode Island oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:39c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:40] South Carolinian Astronism

[7:9:40a] Astro-South Carolinian philosophy, South Carolinian Astronism, or South Carolinian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of South Carolina under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of South Carolina, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:40b] The Institution of the Philosophy of Astronism for the State of South Carolina oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:40c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:41] South Dakotan Astronism

[7:9:41a] Astro-South Dakotan philosophy, South Dakotan Astronism, or South Dakotan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of South Dakota under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of South Dakota, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:41b] The Institution of the Philosophy of Astronism for the State of South Dakota oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:41c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:42] Tennessean Astronism

[7:9:42a] Astro-Tennessean philosophy, Tennessean Astronism, or Tennessean Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Tennessee under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Tennessee, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:42b] The Institution of the Philosophy of Astronism for the State of Tennessee oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:42c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:43] Texan Astronism

[7:9:43a] Astro-Texan philosophy, Texan Astronism, or Texan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Texas under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Texas, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:43b] The Institution of the Philosophy of Astronism for the State of Texas oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:43c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:44] Utahan Astronism

[7:9:44a] Astro-Utahan philosophy, Utahan Astronism, or Utahan Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Utah under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Utah, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:44b] The Institution of the Philosophy of Astronism for the State of Utah oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:44c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:45] Vermonter Astronism

[7:9:45a] Astro-Vermont philosophy, Vermonter Astronism, or Vermonter Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Vermont under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Vermont, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:45b] The Institution of the Philosophy of Astronism for the State of Vermont oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:45c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:46] Virginian Astronism

[7:9:46a] Astro-Virginian philosophy, Virginian Astronism, or Virginian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Virginia under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Virginia, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:46b] The Institution of the Philosophy of Astronism for the State of Virginia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:46c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:47] Washingtonian Astronism

[7:9:47a] Astro-Washingtonian philosophy, Washingtonian Astronism, or Washingtonian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Washington under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Washington, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:47b] The Institution of the Philosophy of Astronism for the State of Washington oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:47c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:48] Washingtonian D.C. Astronism

[7:9:48a] Astro-Washingtonian D.C. philosophy, Washingtonian D.C. Astronism, or Washingtonian D.C. Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Washington D.C. under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Washington D.C., a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:48b] The Institution of the Philosophy of Astronism for the State of Washington D.C. oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:48c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:49] West Virginian Astronism

[7:9:49a] Astro-West Virginian philosophy, West Virginian Astronism, or West Virginian Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of West Virginia under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of West Virginia, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:49b] The Institution of the Philosophy of Astronism for the State of West Virginia oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:49c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:50] Wisconsinite Astronism

[7:9:50a] Astro-Wisconsinite philosophy, Wisconsinite Astronism, or Wisconsinite Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Wisconsin under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Wisconsin, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:50b] The Institution of the Philosophy of Astronism for the State of Wisconsin oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:50c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the

same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

[7:9:51] Wyomingite Astronism

[7:9:51a] Astro-Wyomingite philosophy, Wyomingite Astronism, or Wyomingite Astronism refers to the presence of The Philosophy of Astronism in the U.S. State of Wyoming under management and philosophical jurisdiction of The Institution of The Philosophy of Astronism for the State of Wyoming, a subnational subsidiary for The Institution of The Philosophy of Astronism for the United States of America, as part of the worldwide Institution of The Philosophy of Astronism.

[7:9:51b] The Institution of the Philosophy of Astronism for the State of Wyoming oversees the construction and maintenance of observatories and planetariums throughout its jurisdiction. Ultimately, this subnational branch is accountable to the national Institution yet remains the primary official representative for Astronism throughout the territory of the state. This involves all efforts to protect the identity of the philosophy with the intention of further disseminating it throughout the state.

[7:9:51c] This subnational branch of The Institution continues to act as the proprietor of Astronism on behalf of the national Institution as it deals with the day-to-day operations of its particular state. Furthermore, any other organisations or institutions proclaiming the same role are deemed as unauthorised proprietors and are therefore considered as part of the anti-Institutionist movement.

The Motional Nature of Astronism

[7:10:1] The majority of elements of the philosophy of Astronism are unique and original to myself as its founder, Cometan.

[7:10:2] I want to continue on in this spirit by developing and instilling a nature for the philosophy of Astronism that does too remain original and unique and distinct from any other philosophical or religious nature that is currently or has ever been existent in the world.

[7:10:3] For this reason, I shall now introduce that which is to be henceforth known either as motionism, motionalism, or developmentalism which are three interchangeable terms pertaining to the same intrinsic and unique nature of Astronism.

[7:10:4] Motionism refers to the unique identity of Astronism that is characterised by the philosophy's penchant for change; the notion that Astronism's identity is predicated on its nature to change as the environments in which it resides, and the people that follow the philosophy, also change.

[7:10:5] I, as Cometan, understand and have created Astronism to be an animate entity; one that is living and breathing and changing just as we humans do; I expect this to create greater strength in the bond between the philosophy and its followers as well as distinguish the nature of Astronism from many of the unchanging, rigid, and non-dynamic forms of philosophy and religion existing pre-Astronistally.

[7:10:6] It is important to introduce the philosophy of Astronism as one that holds an understanding that its most prominently held concepts and beliefs now will certainly not be the same as in a thousand years time, and neither in just two hundred years' time with the consideration of the current rate of acceleration of the progression of humanity in knowledge and understanding.

[7:10:7] It is a major failure of many of the world's religious traditions that they have not managed to change as the societies have changed and values, beliefs, perceptions, and knowledge have also changed which perhaps pertains as to why we are currently seeing a religious decline in many developed countries.

[7:10:8] This anthropomorphises Astronism to become an entity that is considered to be alive which is exactly how I, as Astronism's founder, do consider the true nature of the philosophy to be.

[7:10:9] The most fundamental and unique nature and identity of Astronism is the philosophy's motional nature; for Astronism to be motional means that it moves as society moves, but that it holds the ability to move efficiently and simultaneously as society moves.

[7:10:10] However, this should also not be misinterpreted to mean that when the majority of societal thought and belief directs itself away from the core concepts, principles, and beliefs of Astronism then Astronism must also go the way of society for this is incorrect.

[7:10:11] Instead, the motional nature of Astronism pertains to the movement of the philosophy in accordance to the changing environment of the society in which Astronism resides, but also staying in alignment with some of the core concepts, beliefs, and principles of Astronism.

[7:10:12] For this reason, we realise the importance of the development and establishment of The Institution of The Philosophy of Astronism as the proprietor of The Philosophy as one of its most prominent responsibilities is managing the motional nature of Astronism, that which will be changed about Astronism when society changes and deciding elements that will not be changed, but doing so in a way that is efficient, yet thoughtful, logical, and perceptive.

[7:10:13] To maintain the motional nature of Astronism and to uphold the principles of motionism itself, The Institution of The Philosophy of Astronism must take a prominent and leading role in the management of the motional nature of Astronism as part of a wider duty to upkeep The Institution's proprietorship role for the philosophy of Astronism.

[7:10:14] I see Astronism as a biological or cosmological system and entity; it grows, it decays, it augments, and it has the possibility to die, but also holds a survivalist nature; Astronism will endure during persecution and degradation because it holds the same nature as humans; to live, to succeed, and to survive.

[7:10:15] One of the arguments against motionism is encompassed that due to the constantly changing nature of Astronism requiring authentication, this places a great deal of authority to The Institution of The Philosophy of Astronism as a singular organisation; this is considered to provide The Institution with too much power.

[7:10:16] However, by vesting these many responsibilities into The Institution of The Philosophy of Astronism remains essential because The Institution is the proprietor of Astronism and therefore remains the most trustworthy entity with regards to the management of Astronism; The Institution should therefore have power because it holds the authority to make decisions about the operations and the future of The Philosophy.

[7:10:17] Despite the fact that Astronism's motional nature will continue either way, The Institution still holds the sole proprietorship status and is able to grant authenticity and officiality to all changes occurring to Astronism and within it.

[7:10:18] For those wondering, yes, this does continue to be in alignment with the Philosophical Spirit due to the notion that shall be henceforth termed as Institutional necessity.

[7:10:19] Institutional necessity refers to an aspect of the role of proprietorship of The Institution of The Philosophy of Astronism for the philosophy of Astronism which is to be known as gatekeepership.

[7:10:20] The nature of The Institution's proprietorship is three-pronged meaning that it holds three distinct components, the first of which and the element addressed here is The Institution's gatekeepership.

[7:10:21] Gatekeepership involves the role of The Institution allowing certain elements of Astronism to be officially taken out of The Philosophy whilst also accepting new conceptals into The Philosophy in an official capacity; The Institution is the gatekeeper of what is added to and what is taken out of Astronism and this subsequently forms a major element to their overall role as the proprietor of The Philosophy.

[7:10:22] The remaining two components of the three-pronged nature of The Institution's role as the proprietor of Astronism includes those which are to be known as protectorship and sustainership.

[7:10:23] The protectorship of The Institution pertains to its responsibility of defending the philosophy of Astronism at all costs and always keeping the best interests of the furtherance of The Philosophy as the central focal point; the sustainership of The Institution pertains to its responsibility of the financially-sound, ethical, and sustainable management of all aspects of the philosophy of Astronism as well as the other systems of thought included within the Astronic philosophical tradition that The Institution holds proprietorship over.

[7:10:24] So as not to digress too far into the study of The Institution and its inner works, known either as institutiology or institutionology, we shall return to the primary topic of our discourse; the motional nature of Astronism despite the fact that this remains integrally intertwined with the workings, role, and functions of The Institution.

[7:10:25] That which is known as initialism in the context of the contemplation on the nature of systems of thought pertains to the instance in which a religion or philosophy prides itself on its continued adherence to the original teachings and ideas of the system of thought's founder, or founding members; it is from initialism that the concept of tradition holds its roots.

[7:10:26] The nature of Astronism is the opposite of initialism and this is to be henceforth referred to as continualism which involves the principle and understanding that the original teachings, ideas, and beliefs of Astronism will not stay the same as societies continue to progress.

[7:10:27] However, the core element of continualism that defines it from general motionism is that continualist thought states that the very fact that the original teachings of the philosophy will develop and progress as society progresses should be held in pride by

Astronism and its followers just as many pre-Astronist religious and philosophical traditions, aligned with initialist thought, pride themselves on their keeping to the original teachings, beliefs, and principles of their founding figure(s).

[7:10:28] Instead, Astronism prides itself on the founding of new traditions as old traditions become incompatible with the movements and changes in the surrounding the society; this is considered to be an important part of the survivalist mechanism of Astronism.

[7:10:29] The opposite of a religion or philosophy holding a motional nature like Astronism is a static nature, the former of which is associated with the continualist school of thought to which Astronism is adhered and prioritises progression, neotradition, and developmentation of new conceptuals while the latter of which is aligned to the initialist school of thought and emphasises up-keeping traditions, steadfastness of principle, and the homogenisation of conceptuals, beliefs, and interpretations (also known as the process of streamlining).

[7:10:30] For example, a belief like sentientism that is proven then becomes classified as a confirmed belief from which the belief orientation then undergoes a transformation into a fact rather than just a belief.

[7:10:31] That fact must then still be promulgated as a fact to people that refuse to accept it, and of the proving of sentient life on other planets, there will still be many people that refuse to believe that fact even after the evidence is found and presented to them; this process is known as factual promulgation and is therefore distinguished from belief promulgation.

[7:10:32] Also as part of the discussion and contemplation on the nature of Astronism is the conceptual shape of The Philosophy for its shape informs much of how it resides and functions in the world.

[7:10:33] It is postulated herein that the religion of Christianity is circular in shape and linear in direction which means that its central beliefs and practices function in a way that is circular, or repetitional while its linear direction means that it is predicated upon an end goal or its main beliefs are centred on a cumulation, or a final event.

[7:10:34] Alternatively, Astronism is linear in direction whilst also being spherical in shape because it shares the shape of The Cosmos; this means that Astronism is predicated upon the achievement of a goal or the occurrence of an event or the completion of a process while it is spherical in shape meaning that its conceptual aesthetics are multifaceted, multi-interpretive, and multi-dimensional due to the fact that they are not rested upon the monodimensionality of doctrine and dogma.

[7:10:35] The shapes of The Cosmos can generally include concentricity, sphericity, and discoidal entities.

[7:10:36] The recategorisation of conceptals is expected to be a common occurrence within the philosophy of Astronism especially as conceptual recategorisation is essential to the motional nature of Astronism.

[7:10:37] Transcensionism, sentientism, and reascensionism are examples of two conceptals, now presently categorised as belief orientation which once they are achieved, will undergo the process of conceptual recategorisation to become facts; this recategorisational process is the nature of the philosophy of Astronism.

[7:10:38] Consistency in principle but fluidity in concept is the nature of Astronism and The Philosophy is also herein and henceforth to be described as an animated conceptual collectivity abbreviated to ACC.

[7:10:39] This pertains to the animated nature of Astronism, its constitution of conceptuality, and the notion that it exists as a collection of different conceptals across all the different types.

—

[7:10:40] To describe Astronism as form of nature worship would be an inaccurate description, however, to notionise that nature worship takes a central role to the philosophy of Astronism would be an accurate assumption.

[7:10:41] Astronism considers The Cosmos as a whole, as well as its progeny and phenomena, to be included as part of the term nature, despite such celestials and cosmic events generally not being considered as part of nature in the same way we understand the interconnectivity of trees, plants, animals, rivers etc.

[7:10:42] Although Astronism does not consider the performance of astrolatry to be in any way central to its beliefs and practices, it does consider worshipping the stars, or cosmic progeny and phenomena in a wider sense as an important element to the achievement of a cosmocentric understanding of existence, as well as supporting the centralisation of The Cosmos and its components into human belief systems, practices, and spirituality.

[7:10:43] For this reason, Astronism provides importance to the practice of astrolatry though this is largely only acceptable in an unorganised and ambiguous sense; in this spirit, cosmodeification and astrodeification are both not accepted in Astronism.

[7:10:44] Cosmodeification or astrodeification is the process and practice of considering individual celestials, celestials collectively, or The Cosmos as a whole entity to be deities in their right, the first two forms of which are generally referred to as instances of astrodeification while the latter form is referred to as cosmodeification.

[7:10:45] Astronism prioritises that which shall henceforth be referred to as cosmolatry pertains to the devotion to and worship of The Cosmos, a whole animate collectivity of cosmic progeny and phenomena, as a deity, a divine manifestation, or a directly divine product.

[7:10:46] A similar term known as cosmomancy is distinguished from that of cosmolatry as it refers to divination by The Cosmos as a form of philosophic divination which involves divination by means of philosophical contemplation, the formation of notions of logic, and through physical and intellectual exploration of the subject rather than by supernatural means.

[7:10:47] To briefly digress, those which are to be termed as logicities is another term for that which is known as a logical notion, or notion of logic.

[7:10:48] Returning to the topic of our discourse, I shall now introduce that which is to be henceforth termed as naturianism, as followed by a naturian, which is a person that regularly spends their time exploring any type of majoratively natural environment, which also includes space exploration, but for a naturian, this practice is conducted specifically in order to enhance their own philosophicality, their own spiritual awareness, their own enknowledgement, experience and connection with nature, as well as to improve their understanding of the divinatory elements of nature; to come to see nature as a directly divine product.

[7:10:49] As has already been addressed in this discourse is the general non-association between The Cosmos as a whole, as well as its progeny and phenomena, and the term of nature and it is for this reason, as Astronism does consider cosmic progeny and phenomena and their culmination into The Cosmos to be form a category of nature, the term henceforth known as cosmonature, or to be cosmonatural are both introduced herein.

[7:10:50] Cosmonature refers to a category of nature that specifically relates to environment of space as well as the cosmic progeny and phenomena residing within it, The Earth is a component of which, as if part of an ecosystem and this is just like in the same way that a forest is the environment and the trees, ponds, animals, and plants are all progeny and the chirping of birds, the decaying of leaves, and the flowing of the river are all phenomena.

[7:10:51] For something to be cosmonatural is either an animate (presently unknown if exist) or inanimate entity that is physically suspended in space rather than an entity, either animate or inanimate, that holds residence within a biosphere such as The Earth or another planet, or moon that holds the elemental components to support physical entities upon its surface unlike a gas planet for example.

[7:10:52] The notion of the existence of nature spirits has existed for millennia, but the notion of the existence of cosmic spirits, or celestial spirits is something that holds its

originates within the philosophy of Astronism, specifically herein and now as part of this discourse.

[7:10:53] A cosmic spirit, or celestial spirit is a non-physical element contingent to the physical elements of a cosmic progeny or phenomena; the spirit of a cosmic entity refers to its metaphysical components that make that entity directly divine and separates that cosmic entity from other animate or inanimate entities that are not directly divine.

[7:10:54] Common to most forms of nature worship is a spiritual focus on the individual's connection and influence on some aspects of the natural world and reverence towards it and this is no different for the existence of nature worship within Astronism, but of course, the form of worship is directed towards cosmic progeny and phenomena, or to The Cosmos as a whole, and therefore prioritises that a person should focus on their personal connection to and relationship with The Cosmos.

[7:10:55] It also remains important to distinguish between the terms of cosmic worship and cosmic devotion, the former of which pertains to the understanding that The Cosmos as a whole, or its progeny or phenomena, is a God or is to be treated as or communicated with as a God which is a form of cosmodeification which is generally not accepted by the Astronist Tradition, but nevertheless persists to exist within Astronism.

[7:10:56] Instead, cosmic devotion is reverence, awe, and wonderment for The Cosmos, its progeny, and its phenomena and although this involves communication towards these entities, it does not involve communication with them that is expected to be reciprocated or that communication with them is going to result in real physical resolutions to any particular problem.

[7:10:57] Is Astronism a form of Neopaganism? Astronism is technically a form of neopaganism from the perspective of Christianity because it does not focus on the worship of the proposed one true God and does not explicitly follow the theology of monotheism.

[7:10:58] Astronism is not generally considered to be polytheistic by its nature, although facets of it may be considered as such and factions of the philosophy may identify themselves to be such, and instead opts to associate with considerably more complex and ambiguous forms of theology including deism, panentheism, and transtheism.

[7:10:59] Cosmocentrism could be considered a prominent form of nature-reverence and therefore a form of nature worship and due to the centrality of cosmocentrism to the philosophy of Astronism, The Philosophy can therefore be considered a form of nature worship, specifically a form of astrotheology, astrolatry, and astromancy.

[7:10:60] The role of the divinity of The Cosmos is a pertinent topic for philosophical discourse to the philosophy of Astronism; The Cosmos is often depicted as being a direct manifestation of that which is referred to as The Divine rather than being considered the fallen creation found in dualistic cosmology, or the realm of punishment which is how it is

considered in the Christian tradition, or an existence in which suffering dominates which is a notion that is central to Buddhist philosophy.

[7:10:61] It is fairly safe to regard elements of Astronism as sharing commonalities with neopagan forms of religious practice and theology, however, to say that Astronism is neopagan by its nature is inaccurate and somewhat offensive to the unique of Astronism and its true place as commanding a distinct philosophical tradition of its own, that which is of course known as the Astronist philosophical tradition.

—

[7:10:62] Messages in bottles have been used as a form of communication and commemoration for time immemorial but with a lack of an official term that shall now be herein created and introduced as the practice of contancy and applied to the context of sending a message or form of commemoration, such as placing a person's ashes into a spacecraft, is to be henceforth referred to as the practice as spacioncy.

—

[7:10:63] Also as part of my discourse on the nature of Astronism comes the essential factor that is to be known as foundationism which shall pertain to a distinct and affirmed focus on the principal elements of the philosophy of Astronism, or any other system of thought, rather than the in-depth, particular, or oppositely, the peripheral elements of the system of thought.

[7:10:64] An example of the application of a foundationist approach to understanding Astronism would consist of a person's prioritisation of The Seven Tenets of Association alone over all other conceptals within the philosophy of Astronism.

[7:10:65] That which is to be henceforth referred to as pre-foundationism entirely encompasses the beliefs and practices that have existed pre-Astronistally but are herein categorised as beliefs and practices as part of the Astronic philosophical tradition and includes the following practices and beliefs.

[7:10:66] The belief in the existence of sentient life in the universe other than humanity, which is known as sentientism in the Astronist tradition of thought as part of cosmic pluralism, is a pre-foundationist belief orientation.

[7:10:67] The belief in astrolatry, astromancy, and nature worship are pre-foundationist beliefs as part of Astronism and is closely associated with the Astronistally-originating beliefs of cosmic devotion, cosmic worship, cosmolatry, and cosmomancy.

[7:10:68] The belief that upon one's death, one goes to the stars which is known as transtellation in Astronic contexts and is a pre-foundationist belief as it existed prior to the founding of Astronism yet is considered and categorised as part of Astronism.

[7:10:69] The practice of waiting for the first star to be spotted in the night sky before doing something is a pre-Astronist and therefore a pre-foundationist practice that is to be henceforth known in the Astronist philosophical context as the practice of optism as practiced by optists and is part of Astronism.

[7:10:70] Divination by the stars, known as astromancy, astrology, or horoscopy, are herein classified, when considered as a belief orientation, as part of the Astronic philosophical tradition.

[7:10:71] The construction of buildings oriented towards an astronomical target, known in an Astronic context as the practice of alignmentation, is also a pre-foundationist practice.

[7:10:72] The creation of calendars using astronomical objects, known as the practice of horoastronation in an Astronic context, pertains to another pre-foundationist practice.

[7:10:73] Astronic superstition is the branch of Astronism that collectivises all superstitions relating to or involving stars, or other cosmic progeny and phenomena; this is contrast with the branch of Astronism known as Astronic belief.

[7:10:74] Now I shall list a set of superstitions that are pre-Astronist in their origination, but are herein classified as part of the Astronic philosophical tradition, particularly as part of the philosophy of Astronism.

[7:10:75] The superstition that pointing at the stars will bring one bad luck due to the divinity of the stars and how it is considered to be rude to point at divinity is to be henceforth referred to as chiration which is the action of doing this while chironism refers to the superstition specifically.

[7:10:76] The superstition that wishing upon the first star to be appear in the night sky will grant that wish to come true with an additional act as part of this superstition being that a person should recite a song with a cosmic theme, such as the Star Light, Star Bright nursery rhyme, or the I See The Moon lullaby is a form of the latterintroduced precatoration which is to be henceforth referred to as urcatoration, or to urcatorate.

[7:10:77] The superstition that when the evening star is low in the sky, there will be a poor harvest for farmers or when the Dog Star appears, this means there is a drought on its way, or when Cancer's Beehive is difficult to discern but the sky is clear, a storm is soon to follow is to be henceforth referred to as the belief of agrostellation, or agrostellationism.

[7:10:78] In seafaring superstition, the superstition that depending on the direction of the way a shooting star travels, that predicts the way the winds will blow is to be henceforth referred to as anemostellation, or anemostellationism.

[7:10:79] The belief that glimpsing the North Star means one's vessel is close to home is to be henceforth referred to as the belief of boreanism.

[7:10:80] The superstition that the way in which stars are positioned in relation to rings around the moon determines a prediction for the weather is to be referred to as meteorostellation; for example, a ring around the moon with a single star situated inside it means clear weather is to follow while spotting more than one star inside the ring determines that many rainy days are to occur in the coming week.

[7:10:81] A similar superstition states that seven stars around the moon predicts that seven hours of rain will subsequently follow and is considered as part of meteorostellation.

[7:10:82] The pastime of counting the stars is to be henceforth known as stellaration, or to stellarate, and the associated superstition to this is the belief that attempting to count the stars in the night sky will bring back luck which is to be known as mistellarism.

[7:10:83] The superstition that an unmarried person looking for love is permitted to stellarate, but they are only allowed to count a maximum of seven stars on seven consecutive nights and after this, the first person of their preferred sex to shake their hand after those seven consecutive nights of stellaration will be the one they fall in love with and marry.

[7:10:84] There is a branch of Astronic superstition that focuses on the cosmic phenomena of a shooting star/falling star which is in fact a meteor falling through The Earth's atmosphere, but despite understanding what this phenomena is scientifically, a range of superstitions have arisen that pre-Astronically that are now classified as part of Astronism and include the following beliefs and this branch of Astronic superstition is referred to as stellarism.

[7:10:85] The superstition that witnessing a shooting star will bring oneself good luck is part of stellarism.

[7:10:86] The superstition that upon seeing a shooting star one should make a wish that will come true exactly as it is wished for rather than the idealised way in which we imagine that wish to come is to be henceforth known as to precatorate, the act of precatoration, or precatorationism which is the belief orientation.

[7:10:87] The superstition that shooting stars are a person's soul that is undergoing the process of transtellation is to be henceforth referred to as pneumastellation, or pneumastellationism.

[7:10:88] The superstition that fallen stars are souls that have been released from purgatory, thus allowing them to finally begin the ascent to heaven, is to be henceforth referred to as the belief orientation is empyreanism.

[7:10:89] The superstition that shooting stars are the souls of a baby that is about to be born falling to The Earth ready to begin a new life is to be henceforth referred to as pnuemafantism.

[7:10:90] The superstition that a shooting star positioned on your right in the nights sky presents good luck while one positioned on your left indicates misfortune to follow, but one may switch one's position so as to change their luck as the shooting star appears and disappears is to be henceforth referred to as the belief of dextronism.

[7:10:91] The superstition that while seeing a shooting star during a trip, either in a car, a boat, or in an airplane means that that trip will be a successful one.

[7:10:92] The term that is to be known as pre-foundationism collectively refers to ideas, beliefs, and theories that existed prior to the founding of the Astronist philosophical tradition and the philosophy of Astronism yet existed only as such in an unorganised manner and after the founding of the Astronist tradition of philosophy, the beliefs in question became organised, most of which as part of the process that is to be henceforth known as orientisation.

[7:10:93] That which is to be known as to orientise, or the act of orientisation pertains to a form of conceptual organisation manifested as the transformation of an idea, theory, or unorganised belief into a systematic, labeled, and categorised belief orientation; this largely relates to the nature of belief orientations and how an idea, theory, or unorganised belief or set of beliefs attain the label as being belief orientations.

[7:10:94] The prevalencies of pre-Astronist Astronic beliefs in the world is considered to be a major area of study yet to be conducted as part of philosophical demographics discipline and refers to a prodormant time period.

[7:10:95] The term prodormant, or prodormancy relates to a period of time or state of affairs in which a society, or even the world has not yet undergone the widespread Institutional introduction of Astronism.

[7:10:96] Post-foundationism refers to a body of ideas and beliefs that hold an cosmical or Astronic theme which hold originates after the founding of the philosophy of Astronism but are nevertheless considered to be part of the philosophy of Astronism due to their Astronic theme and nature.

[7:10:97] All superstitions that arise during the Humanic Exploration of The Cosmos are herein considered to be classified as Astronic; this classification of superstitions and beliefs is to be herein introduced as spacefaring lore, or spacefaring superstition and is to be part of Astronic superstition, or Astronic belief depending upon the nature of the specific subject.

—

[7:10:98] There does not exist any form or instance of sacrilege in the entirety of the Astronic philosophical tradition for there exists no instances of sanctity within the Astronic tradition, particularly within the philosophy of Astronism.

[7:10:99] You can degrade, joke, or misuse anything within Astronism and you do the same with me as Cometan, or anything I create, write, or say for this would stay in alignment with the principles of the Philosophical Spirit.

[7:10:100] I do not and have never thought of myself so highly that I should not, my works should not, or my beliefs should not be joked about, degraded, or otherwise undermined or disregarded.

—

[7:10:101] This is an appellatological discourse appendage relating to the eponymy of the appellations for The Philosophy of Astronism as well as the prevalence of eponymous appellations for other philosophical and religious traditions.

[7:10:102] It has long since been held that Astronism, as an appellation, is eponymous to the fictional character of Jesse Millette pertaining to the wider Astronist culture and therefore it is he after whom the Astronist/Astronist philosophical tradition and Astronist culture is structure around.

[7:10:103] The appellation of Cometanism is of course the main eponymous appellation for the philosophy of Astronism as designated by the founder of the philosophy, Cometan.

[7:10:104] No other appellations for the philosophy of Astronism are eponymous, but there are many other religious and philosophical traditions that have been staunchly eponymous since their very inceptions.

[7:10:105] List of eponymous religious and philosophical traditions: Confucianism (Confucius), Zoroastrianism (Zoroaster), Mohism (Mozi), Epicureanism (Epicurus), Platonism (Plato), Manichaeism (Mani), Lutheranism (Martin Luther), Calvinism (John Calvin), Bahá'í Faith (Bahá'u'lláh), and Bábism (Báb).

[7:10:106] List of religious and philosophical traditions that are that which shall be henceforth known as desonym: Christianity (Jesus of Nazareth, Jesus Christ) and Buddhism (Siddhartha Gautama, the Buddha).

[7:10:107] The term herein first introduced as desonymous is used to pertain to a person that has achieved a title that has been designated by others because of something they have achieved or done in their lives, and after which something has been founded using that title.

[7:10:108] Here is a list of non-eponymous religious and philosophical traditions (largely due to the multitude of founders of the tradition): Taoism (Laozi), Cheondoism (Ch'oe Che-u), Jainism (Parshvanatha), Judaism (Abraham), Islam (Muhammad), Druze (Hamza ibn 'Alī ibn Aḥmad), Yazidism (Sheikh Adi ibn Musafir), Sikhism (Guru Nanak), Methodism (John Wesley), Anglicanism (Thomas Cranmer), Presbyterianism (John Knox), Baptists (John Smyth), Quakers (George Fox), Spiritism (Allan Kardec), Mormonism (Joseph Smith), Caodaoism (Ngô Văn Chiêu), Pentecostalism (Charles Fox Parham), Wicca (Gerald Gardner), Rastafarianism (Marcus Garvey), and Hinduism (Saptarishi) amongst many other traditions and denominations.

[7:10:109] Therefore, we can understand the multifarious nature of The Philosophy of Astronism because depending upon which appellation is used to refer to The Philosophy, it may be eponymous or non-eponymous, for example, referring to The Philosophy as Astronism, Cosmism, Sophism, or Kosma are all non-eponymous appellations while Astronism, Astronistism, and Cometanism are eponymous appellations.

—

[7:10:110] The transhistoricity of Astronism refers to the postulation that Astronism is relevant or holds significance throughout the history and future of humanity and is therefore not intertwined with a particular form of society or any particular stage in historical development.

[7:10:111] The primary argument for the transhistorical nature of Astronism that humanity has always revered or contemplated the stars in some form throughout its history and even though Astronism has originated in the Omnidoxy by Cometan in the 21st century, some of the core beliefs it prioritises have been held throughout human history.

[7:10:112] Considering this argument from the futural perspective, the transhistoricity of Astronism is postulated by the belief that humanity's exploration of The Cosmos shall extend, after its initiation, throughout the history of human existence due to the countless amounts of planets and other cosmical progeny to explore as part of humanity's solemn existential purpose.

[7:10:113] The notion of the transhistoricity of Astronism remains closely linked to the motional nature of Astronism with the latter being a precursory vehicle to the securement of the former.

[7:10:114] The motional nature of Astronism shall inform its overall transhistorical characteristics with its motional nature allowing Astronism to reconfigure itself to the current circumstances of the societies and eras into which it enters and holds a presence in the community of inhabitants in particular regions of a land; this is a continuous process which will make Astronism the ultimate transhistorical belief system denoting the importance of its motional nature.

[7:10:115] Also closely related in the study of the transhistoricity of Astronism are the two other postulations made about Astronism, namely its omnality and universality which, together with transhistoricity, make up the Astronic Triumvirate on the nature of Astronism.

[7:10:116] The motional nature of Astronism drives forward the Astronic Triumvirate with omnality representing Astronism's resonance to all peoples, universality denoting Astronism's resonance to all space, and transhistoricity pertaining to Astronism's resonance to all time.

The Nature of Philosophership

[7:11:1] A term of importance to myself as Cometan and to Astronism as well as the wider Astronist philosophical tradition is that of philosophership as the creation and subsequent exploration of this term pertains to the foundations of Astronist or Astronist metaphilosophy.

[7:11:2] Philosophership relates to the state, fact, and set of characteristics involved with being a philosopher and is therefore integral to how the Astronist Tradition understands the identity of a philosopher, the role of a philosopher both societally and personally, as well as the collection of qualities involved with being a philosopher which are informed by the accumulation of the addresses that have been made pertaining to the nature of philosophy and the identity of the philosopher through The Omnidoxy in order to form Astronist metaphilosophy.

[7:11:3] That which is to be henceforth referred to as the attention concept pertains to the notion of logic that the extent of the attention that something is able to generate is a quantifier of its ability to sustain itself; this applied in relation to the philosophy of Astronism and stipulates that the extent of the attention that Astronism and its component parts are able to generate will fundamentally determine the extent of the success of Astronism.

[7:11:4] The reason why economies are seeing decline is because governments and organisations are aiming for equality which is not a practical economic parameter/goal; economics is predicated on inequality and disparity so attempting to achieve economic equality is defying the purpose of economics as a whole.

[7:11:5] That which is to be henceforth referred to as sophisticationism relates both to economics and can be applied to the majority of other instances and is a supporting belief orientation and methodology of unquitarianism.

[7:11:6] Sophisticationism pertains to the belief that simplicity in measurement, observation, and thought is neither sufficient nor logical because that which is being measured, observed, and thought about is not simplistic and therefore should not be approached to in a simplistic manner and should instead be considered according to a complex manner.

[7:11:7] The utility of philosophy, utilitarian philosophy, or philosophic utilitarianism pertains to a metaphilosophical approach to understanding how a philosophy should be considered, presented and applied in such a way that focuses on the extent of the utility of that philosophy when applied to societal circumstances and bases the value of philosophy on the extent to which it can be utilised for the benefit of the most amount of people.

[7:11:8] The difference between the terms of philosophic and philosophical is that the former pertains to philosophy in general as a discipline, philosophies as systems of

thought or belief systems, or philosophers themselves while the latter of which pertains to the characteristics of being in alignment with the Philosophical Spirit and especially in displaying those characteristics.

[7:11:9] That which is to be henceforth known as philosophic optimality refers to the extent to which a particular aspect of a philosophy is favoured over another or can also be interpreted as a technique of tirition involving the emphasis of certain understandable and relatable aspects of a philosophy during tiritive sessions and processes over others in order for people to understand or to relate more easily to the philosophy being tiritied.

[7:11:10] The definition of philosophership and its nature, which is to be akin to entrepreneurship, is an important element to protect according to the Astronist Tradition especially due to the fact that philosophership is fundamentally linked to identity and will subsequently have consequences on the role and applicability of philosophy itself on society.

[7:11:11] Due to the fact that philosophership is closely associated with entrepreneurship, I now introduce that which is to be known as philosophic enterprise, which is to ensophise, as conducted by an ensopher, or to do ensophising and pertains to the application of skills, knowledge and personal attributes to apply creative ideas and innovations to practical situations, usually to sustain funds, and the philosopher is the connection between ideas/ concepts and their application to the physical world.

[7:11:12] Philosophership is fundamentally linked to identity and elemental to the worldly application and manifestation of philosophy, hence the imperativeness of its study, contemplation, and its enhanced understanding of.

[7:11:13] Philosopherial management shall henceforth pertain to the application of ensophisational practices to the institutional environment including institutionalisation of ideas, self-funding, new philosophy establishment (NPE), new conceptual development (NCD), and small philosophy management in both the corporate, public, and academic sectors.

[7:11:14] The product of philosophership is ideation and turning that process and product of ideation into something that is self-sustaining, meaning that it is able to translation to the physical world through monetary means, continues to be a topic that is connected to my own personal form of philosophership; Cometanic philosophership.

[7:11:15] This is because I want my philosophership to not only be characterised by the development of Astronism and the Astronic philosophical tradition, but also to formulate a systematic understanding how an organised philosophy to is to be translated to the practical world of monetary value, self-sustainment, and the funding of furtherance and operations; just like opportunity is central to entrepreneurship, it also remains integral to the establishment of the concept of philosophership.

[7:11:16] Opportunity-centred philosophership is essential to the establishment of the nature of philosophership; it involves the grasping of opportunities whenever and wherever they do arise in the name of the furtherance of philosophy in a general sense or of a specific organised philosophy.

[7:11:17] That which is to be henceforth known as the space of ideas theory pertains to the notion that the extent of ideas that are available is potentially endless (though this quality remains distinct from that of infinite) and that it is the philosophers of us whom are the explorers and the extractors of the many ideas existing in the space of ideas.

[7:11:18] Creative value and conceptual value are presently points of contention for the topic of metaphilosophy and the formulation of a greater understanding of what the value of a philosophy is and the differences in value between different conceptals specifically within the philosophy of Astronism.

[7:11:19] That which is to be known as truncation theory derives from Astronarianism and is generally predicated by the notion that the operations of something, especially in a financial sense, should be conducted according to three year intervals; in the context of the study of metaphilosophy and the nature of philosophership, this would relate to how The Institution of The Philosophy of Astronism should conduct its plans scheduled for three year periods into the future rather than any longer or any shorter; it is believed by with the application of truncation theory to the operations of The Institution, both efficiency and relevancy will be sustained.

[7:11:20] As the final element to the study of the nature of philosophership in this particular discourse, which is itself certainly not exhaustive of this wide area of study, that which is to be known as the belief orientation of entrepreneurialism is introduced.

[7:11:21] Previously in this discourse, I have spoken of the importance of the entrepreneurial spirit to the nature and identity of philosophership, but entrepreneurialism further reaffirms this understanding of the identity of a philosopher to become synonymous with the personhood of an entrepreneur.

[7:11:22] A philosopher, or specifically the founder of a philosophy, or the manager of an organised philosophy is a risk-taker, a developer, an investor of both time, money, and effort, as well as centrally and integrally being an ideator; a person who forms their living and income from the creation of ideas and the creation of conceptual value for those ideas.

The Psychonautics of Astronism

[7:12:1] This discourse on the psychonautics of Astronism is encapsulated by the notion and prediction made herein by myself as Cometan that astronomical observation and cosmic devotion will cause psychedelic effects as comparable to those felt as part of religious prayer or religious ecstasy which is to be henceforth known as the instance or quality of astrogenic.

[7:12:2] Astropsychedelia is herein introduced and established as a joint branch of study between cosmic philosophy, psychedelia and psychology and involves any and all instances in which a person is induced into any type of psychological state beyond that of normality directly due to either one's observation or exploration of, one's devotion to, or one's imagining about a particular celestial, a group or type of cosmic progeny or phenomena, or about The Cosmos as a whole.

[7:12:3] The personal inspiration of myself as Cometan is notably not considered to be any type of hallucination or hold origins of any psychedelic nature due to the fact that I have never once taken a drug of such a kind nor will I ever do so, especially not for aiding my imagination, for in that area, I am plentiful of ideas without support of an externality.

[7:12:4] That which shall be henceforth referred to as oneiration, to oneirate, or to be an oneirator pertains to the instance in which a dream takes a specific theme, principally astroneiration, or one's dreams of the stars.

[7:12:5] That which is to be referred to as astroyoga, or also known as cosmoyoga, pertains to a new tradition of the practices of yoga which incorporate within them Astronist practices and devotions and in addition to this, they incorporate Astronist forms of art and depiction; within psychonautics, there is a particular interest in how practitioners of yoga and the astroyogic tradition can achieve altered states of consciousness; astroyoga is herein and henceforth introduced, but it will be more deeply explored in its own extraomnidoxical Cometanic text.

[7:12:6] When a person experiences an hallucination that they are in space or unrealistically close to distant celestial bodies or cosmic phenomena is to be henceforth referred to as an astrocination, or for someone to astrociate.

[7:12:7] That which is to be henceforth referred to as an astrotrance shall pertain to an abnormal state of wakefulness in which a person is not self-awareness or is not altogether responsive to external stimuli as caused by cosmic devotion, astronomical observation, or cosmic phenomenal witnessment.

[7:12:8] Sophormation, as it is to be henceforth known, pertains to a fundamental change in a person's philosophicality, their adherence to a philosophy, or to their philosophic life in a general sense directly from a specific set of events, practices, or beliefs.

[7:12:9] One's philosophic life is expected to be a commonplace term first used in the context of Astronism and pertains to the segment of an individual's life regarding their philosophicality in contrast to their religiosity, their ideology, their career, or their family and is therefore closely linked to one's philosophicality.

[7:12:10] That which is to be henceforth referred to as astroscopy, or to be astrosopic shall pertain to when a person is physically in outer space rather than upon a celestial body, which is to be known as terrascopy, or to be terrascopic, or on some sort of spacecraft, which is to be known as mechoscropy, or to be mechoscopic.

[7:12:11] When a person's dream involves them physically floating in space or being close to a cosmic progeny or phenomena, this is to be henceforth referred to as astroneiration, to astroneirate, or an astroneiric dream and is expected to be commonplace for those involved in the psychonautic elements and abilities of Astronism.

[7:12:12] Altered states of consciousness in the context of the philosophy of Astronism involves philosophically-induced or astronomically-induced states of consciousness which pertain to two non-pharmacological ways in which an altered state of consciousness may exist alongside spiritual experiences, meditation, learning, or emotional development and it is this that remains the primary area or topic of study for psychonautics when applied to Astronism.

[7:12:13] That which is herein introduced as neurophilosophy attempts to explain philosophical experiences, feelings, and behaviour in neuroscientific terms.

[7:12:14] It is the study of correlations of neural phenomena with subjective experiences of philosophicality, astronomical observation, devotional practices, mechoscropy and astroscopy and hypothesises to explain these phenomena; this contrasts with the psychology of philosophy which instead studies mental rather than neural states.

[7:12:15] Researchers in the field will attempt to explain the neurological basis for a range of philosophical and astronomical experiences.

[7:12:16] It remains important to state that this list is not exhaustive and also, that in the context of our introductory discussion of psychonautics in the Omnidoxy, we presently have no experience of the true abilities of Astronism to induce altered states of consciousness and therefore, as Cometan, my understanding of the psychonautics in relation to Astronism remains low due to the fact that research, study, experimentation, and practice of Astronic psychonautics has not yet been applied; when an omnidoxical discourse introduces a subject in this way, it is to be henceforth referred to as precurial meaning that there is very little known and understood about a topic that has been introduced and established by the Omnidoxy herein.

[7:12:16a] Enknowledgement is the first major instance of psychonautic experience and behaviour within Astronism for enknowledgement does infer notions of an altered state of

consciousness due to one's raised knowledge, awareness, and understanding of the world around them, however, the biological effects of this are yet to be discovered although the philosophic and spiritual effects are herein affirmed.

[7:12:16b] Transcension and one's belief in transcensionism is the second major instance of psychonautic experience and behaviour within Astronism and is perhaps the most clear example of an altered state of mind with transcension encompassing both a spiritual, emotional, philosophic, and perceptual transformation as well as biological, physiological, and sensory enhancement.

[7:12:16c] Imaginity is herein introduced as the state of consciousness in which a person feels a combination of strong excitement and philosophicality due to an onset of philosophical ideas which is how I, as Cometan, have felt and experienced during my time founding Astronism and writing the Omnidoxy for I have undergone imaginity; again, although not presently measured and tested, imaginity is expected to hold significant effects on a person's state of consciousness and is expected to be closely associated with those altered states of consciousness achievable through enknowledgement.

[7:12:16d] Wonderment and other philosophical emotions are expected to hold particular importance to Astronic psychonautics due to the fact that it is these emotions that are leading a person's beliefs and imagination with regard to The Cosmos and are therefore deeply engrained into the practices of Astronism, namely cosmic devotional practices.

[7:12:16e] Philosophical argumentation and debatabation is another element of the Astronic philosophical tradition that could lead to the achievement of altered states of consciousness through one's obsession and experience of exhilarating debates with equally matched intellectual and philosophical argumenters.

[7:12:16f] Astronomical observation is an essential element to the practices and beliefs of the philosophy of Astronism and although astronomical observation is also made separate from the beliefs and practices of Astronism, there is a notion herein stated that astronomical observation itself, perceived through a purely scientific lens, could itself hold the potentiality for the achievement of altered states of consciousness.

[7:12:16g] Penultimately, witnessing cosmic progeny or phenomena, as part of astronomical observation, though markedly considered and perceived through a more philosophic lens, will also inevitably cause altered states of consciousness due to the grandiosity and magnificence of that which is witnessed and visualised as a type of interaction between The Cosmos and humanity's visuality.

[7:12:16h] Astroscopy and mechoscopy are expected to hold potentially the highest instances of psychonautic experience and behaviour within the auspices of the philosophy of Astronism, however, the true and specific elements of an altered state of consciousness for those experiencing astroscopy and mechoscopy are yet to be visualised and measured thereafter.

[7:12:16i] Finally, the consequences of cosmic devotional practices which pertains to the psychological, emotional, and spiritual effects of enacting cosmic devotions and especially focuses on the connection between cosmic devotional practices and the direct reactants in our psychologies to those practices.

[7:12:17] Astronic/Astronist anthropology, or also known as sophoanthropology, pertains to the study of the human as it relates to philosophy as a discipline of study and organised philosophy as a societal pillar.

[7:12:18] Additionally, that which is to be known as spacioanthropology relates to the study of the human as it relates to outer space and space exploration which is of course the primary thematic element of the entire philosophy of Astronism; for this reason, Astronism may be accurately described as a spacioanthropological philosophy.

[7:12:19] That which is to be known as the Astronic anthropological principle uniquely upholds the notion that humankind is fourfold in nature (known as tetratomism) and comprises of mind (consciousness), body (physicality), cosmos (environment), and indirect divinity (product of the cosmic environment which is directly divine).

[7:12:20] The anthropology of philosophy, as distinct from the aforeintroduced discipline of sophoanthropology, refers to the study of philosophy in relation to other social institutions, especially religions and ideologies, as well as the comparisons of different forms of philosophy across a range of cultures.

[7:12:21] The evolutionary origin of philosophy relates to a field of study within the anthropology of philosophy dealing with the notion that philosophy, as a social institution, is tied to the evolutionary nature of humanity, and does itself hold an evolutionary nature.

[7:12:22] Additionally and similarly, the evolutionary development of philosophy is a field of study close in proximity to the evolutionary origin of philosophy dealing with the notion that philosophy itself as a discipline, but especially organised philosophies, hold evolutionary natures that are tied to the evolutionary nature of humanity.

[7:12:23] That which is herein introduced as the new term of monouniversal, or relating to the nature of holding monouniversality pertains to when one feels that they are as one with the universe, which is also known pre-Astronistally and non-Astronistally as the oceanic feeling; monouniversality is expected to be a common feeling, experience, and verbal expression as part of the psychonautic elements of the philosophy of Astronism.

[7:12:24] That which is to be known as the philosophic experience pertains to a type of subjective experience which is interpreted within a framework of an organised philosophy and in the context of the Astronic tradition, most commonly pertains to notions of enknowledgement or raised levels of philosophicality through cosmic agency, including

astronomical observation, cosmic witnessment, wonderment, philosophic argumentation, or imagininity.

[7:12:25] The term that has just been utilised as cosmic agency shall henceforth pertain to the functions and utilities of The Cosmos, especially its interactions with the human perceptual, sensory, and philosophic experience.

[7:12:26] Meanwhile, that which is to be known as divine agency shall pertain to the functions and utilities of a creator God, especially regarding God's interactions with the human experience of emotions, occurrences, and truths.

[7:12:27] The cognitive science of philosophy pertains to the study of philosophical thought and behaviour from the perspective of the cognitive and evolutionary science.

[7:12:28] The field of study adopts methods and theories from a broad variety of disciplines including cognitive psychology, evolutionary psychology, cognitive anthropology, artificial intelligence, neurophilosophy, philosophic psychology, developmental psychology, sociology, and spaciology.

[7:12:29] Practitioners in this field seek to explain how human minds acquire, generate, and transmit philosophic thoughts, practices, and schemas by means of ordinary cognitive capacities.

[7:12:30] The application of psychological states to the philosophy of Astronism is an important elements to the psychonautics of Astronism because the alteration of psychological states as caused by the effects of the beliefs and practices of Astronism is central to psychonautic studies with the psychological states listed below comprising just a handful of the potentially much longer list of specific states that a person may experience as part of psychonautic Astronism.

[7:12:31] The first is aporia which, when applied to the context of Astronism, pertains to a state of puzzlement due to one's thoughts regarding the complexity of The Cosmos, or due to a complex observation, theory, or belief orientation regarding The Cosmos, or one of its progeny or phenomena.

[7:12:32] The second of these psychological states is dysphoria which, when applied to Astronism, pertains to one's feeling of dissatisfaction with life due to their understanding of humanity's current disfulfilment of humanity's destiny, or the fact that astronomy and philosophy are not presently valued according to their actual worths in today's society; these are just two examples of how a person may experience dysphoria in relation to Astronism, but it could arise in a number of different ways.

[7:12:33] That which is known as the gnostic state, as derived from the practices of Chaos magic, pertains to when a person's mind is focused on only one point, thought, or goal and all other thoughts are thrust out which can be applied to the context of Astronism

through the focusing of one's mind on one particular belief orientation within Astronism, or focusing oneself on a singular cosmic progeny or phenomena during astronomical observation.

[7:12:34] Astronic hypnosis pertains to the state of being hypnotised through astronomical observation, especially by witnessing a cosmic phenomena, or through cosmic devotional practices.

[7:12:35] That which is known as repetition compulsion when applied to the context of Astronism pertains to wanting to relive or re-experience astronomical observation, cosmic devotion, or another practice or feeling associated with the philosophy of Astronism, either due to attachment theory, or due to the positive mental associations made with those acts and practices.

[7:12:36] Solipsism syndrome refers to a psychological state in which a person feels that the world is not external to his or her mind which a person could possibly experience in relation to the philosophy of Astronism, but this is to be explored post-omnidoxically as are many of the other elements of Astronic psychonautics.

[7:12:37] Periods of extended isolation may predispose people to this condition which is a major concern for the psychological wellbeing of all spacefarers.

[7:12:38] This particular syndrome has been identified as a potential concern for individuals living in outer space for extended periods of time with potentially harmful effects on a person's mentality.

[7:12:39] Noctcaelador is a psychological construct, introduced by the psychologist William E. Kelly in 2003 to describe an "emotional attachment to, or adoration of, the night sky" which is an essential element to the thematic foundations as well as the practices and beliefs of the philosophy of Astronism; however, there does exist divergences in terminology for noctcaelador is a pre-Astronist and non-Astronist term for emotional attachment and adoration of the night sky while in an Astronic context, this is instead referred to as nocturnalism, though this term itself should not be confused with noctism.

[7:12:40] According to Kelly, "noctcaelador has been associated with higher openness to experience, investigative and artistic vocational interests, sensation-seeking, a rational, cognitive approach to problem solving and need for cognition, a propensity to engage in fantasy, a tendency to become deeply involved and attentive to stimuli of interest, and a willingness to consider unusual ideas and possibilities" which is entirely supposed by notions within and beliefs regarding the benefits and abilities of the philosophy of Astronism for individual persons.

[7:12:41] It remains important to note that Astronism rejects the existence of the occurrence of astral projection and disdains the use of the term astral with this type of so-called out-of-body experience.

[7:12:42] Self-experimentation may commonly take place during Astronic anthropology due to the fact that a person may record their own reactions and experiences when observing cosmical progeny and phenomena, or during a philosophical argumentation.

[7:12:43] That which is to be known as the act of to sophosicate, or the action of sophosication refers to the reading of philosophical texts and treatises purely and only with the intention of increasing one's own philosophicality.

—

[7:12:44] That which is to be henceforth referred to as to orbate, to be an orbator, to conduct orbation, or to conduct an act that is orbational refers to the action of spinning a globe with one's eyes closed to choose a place to travel which is a popular practice.

Rhemnology

[8:1:1] Rhemnology is a major discipline within Astronist Philosophy dealing with the combination of philosophies, concepts, theories, and traditions relating to the topic of advancement and the pre-Astronist philosophical discipline of eschatology, within a structured set of Astronist philosophical disciplines.

[8:1:2] These disciplines remain branches of rhemnology and consist of tiritology, transanthropology, and Astronist Eschatology which itself consists of the following branches: Astronist Thanatology, Astronist Necrology, Mortology, Incorporeology, and Dysteleology.

[8:1:3] All discussions of advancement, such as in the discourse entitled *The Advancement of Humanity*, are considered to be within the wider discipline of rhemnology and do not have a specific discipline of their own.

[8:1:4] Astronist Philosophy prides itself upon its ambitious initiatives to direct the trajectory of humanity's attention towards the stars, and the times are approach wherein the concepts and beliefs of *The Philosophy of Astronism* will need to be applied to our lives for humanity shall begin *The Exploration of The Cosmos*.

[8:1:5] Before we begin to discuss rhemnological issues in each of the different disciplines within this disquisition, we must first hold a precursory discussion of some of the major ambitions of the Astronist philosophical tradition.

[8:1:6] The most principal of these is the essentiality of Humanity's Exploration of The Cosmos which shall forevermore remain a central aspect to all Astronist philosophies and the wider Astronist Tradition.

[8:1:7] Humanity's Exploration of The Cosmos is the most important aspect of Astronist Philosophy and is considered to be of the highest priority for humanity to achieve according to the entirety of Astronist Philosophy, not simply the Astronist Tradition.

[8:1:8] Humanity's Exploration of The Cosmos is also considered to be the one and only defining aspect of humanity's Greater Advancement, as it is to be henceforth known in Astronist Philosophy.

[8:1:9] All efforts proceeding until the end of this introductory and precursory discussion are in the direct of aid of initiating and achieving Humanity's Exploration of The Cosmos.

[8:1:10] However, before we can discuss such efforts, it must first be understood by all that before any physical or practical efforts are made, humanity must be intellectually, culturally, and philosophically ready for *The Grand Endeavour*, as it may be referred to in Astronist Philosophy, amongst a plethora of other appellations.

[8:1:11] Terraforming is considered an absolutely necessary endeavour in the Astronist Tradition in order to achieve greater spacial colonisation for the advancement of humanity, yet there exists discussions about terraforming ethics that certainly do question the ethicality of such endeavours to the Astronist Tradition majoratively argues against.

[8:1:12] The Astronist Tradition certainly upholds the cosmocentric ethical stance of the need for balance between the advancement of humanity and the preservation of the existing planetary ecologies.

[8:1:13] The Astronist Tradition does not advocate for the destruction of ecologies, in fact, any destruction of any creation that isn't manufactured by humanity is considered a grave act of evility within Astronist Ethics which are henceforth known as Acts of Villence.

[8:1:14] Take, for example, a planet that is inhabited by non-sentients but has a rich ecology of many non-sentient species, it would be considered a villent act to try and knowingly alter the ecology of the planet to suit the means of humanity, especially if that meant the alteration of habitats.

[8:1:15] However, if on that same planet, there was a region, or continent that had little inhabitant species and that which is known as a Wasteland Ecology, then it would be considered an Act of Accence, as well as an act of Utilence.

[8:1:16] All understandings of ethics in relation to human acts during Humanity's Exploration of The Cosmos can be broken down into three major categorisations; Acts of Villence, Acts of Accence, and Acts of Utilence.

[8:1:17] Villency involves all acts that are considered harmful and inspired by evility; Accency involves all acts that are considered to be positive, ethically good, and properly conducted for non-destructive purposes; Utilency involves all acts that are considered to be utilisations, or improvements of already existing entities, though this may involve parts of both villence and accence.

[8:1:18] Another example of an Act of Villence would be to either knowingly or unknowingly be destructive, ignorant, or disregarding to an entity other than oneself, such as the destruction of habitats, the removal of species for one's own gain or survival, or the purposeful and gradual dwindling of a species for one's own gain or survival.

[8:1:19] Forevermore, from the Astronist perspective, shall it remain villent act to go to worlds and expect the inhabitants of those worlds to bow to our commands; that is not the Astronist way and that is certainly not the way by which we shall conduct our exploration of The Cosmos.

[8:1:20] Any such act of villence is always condemnable without any exceptions, even despite the power, or the supposed virtue of an individual, and any reason for doing such

is not permitted, especially if such a reason is based upon the expansion or supposed advancement of humanity.

[8:1:21] It must be said now herein and shall hopefully be echoed henceforth and forevermore; if we do not set out on this endeavour of cosmical proportions in the right way and if we do not conduct our cosmic expedition in good manner now, we condemn our descendants to centuries and even millennia of villence, corruption, misdeed, and destruction, as our current human history has largely consisted of.

[8:1:22] But it is the proportions in which we speak of in the Omnidoxy and their contextualisations that are the most frightening; the vast amounts of space, the advanced technologies, and the new mentalities that shall certainly not mirror our own present mentalities.

[8:1:23] It is this contextualisation that is the most terrifying if the cosmical endeavour is not conducted in good practice for the potential for evility will be evermore within the reach of many greater amounts of peoples and the fact remains that it takes only one ruptured soul to cause the destruction of many.

[8:1:24] Our ideals and principles should not become expendable in the face of reality for if such occurs, then what becomes of the purposes of such ideals and principles?

[8:1:25] To define Acts of Accence from those of utilence is simply achieved by narrowing down the essential reason for one's action; if one sets out to complete their act with good purpose and conducts such an act with any effect to any other external entity then that is considered an accencial act.

[8:1:26] If, however, the act is conduct for good purpose but only with the intention of utility, personal gain, or affects any external entities, either positively or negatively, then that is considered an act of utilence.

[8:1:27] Utilency can be exemplified in the scenario of a terraformational act that is conducted on a largely ecological lifeless world that is still harbours non-sentient life; conducting the terraformation leads to the vibrancy of ecosystem but causes the disruption or even extinction to the non-sentients that presides upon the planet previously, but new life has emerged due to the terraformational act, that act would then be considered one of utilency.

[8:1:28] Essentially, Acts of Accence affect absolutely no other external entity and still achieve the terraformation, but Acts of Utilence do affect external entities, but from such acts, new life emerges, the ecosystem is made larger and more vibrant, or the species of which are more diverse than they initially were.

[8:1:29] Positive Utilence is when an act of utilence is successful and has largely positive effects and leans towards being characteristic of accency, and Negative Utilence is when an

act of utilence isn't successful and has largely negative effects, thus leaning such acts towards a characteristic of villency.

[8:1:30] Ethical issues in relation to terraforming can therefore be split by two variables; the advancement of humanity and the preservation of the existing planetary ecologies; the extent to which one of such variables is sided with is often the greatest identifier of the purpose of the terraformational act; respectively split into Advancemental Terraforming and Preservational Terraforming.

[8:1:31] Of course, there shall always exist pro-terraformers and anti-terraformers, but there could also exist non-terraformers; those whom believe that terraforming isn't necessary for the achievement of space colonisation, or the advancement of humanity.

[8:1:32] The Astronist Tradition is highly environmentalistic in its beliefs and holds ecocentrism at the heart of Humanity's Exploration of The Cosmos and appreciates ecocentrist concerns in relation to the processes involved with terraforming, especially due to humanity's past and current treatences towards the environment of The Earth.

[8:1:33] To combat this, the Astronist Tradition establishes the foundations for ethics in relation to, not terraforming activities, but the wider activities involved with Humanity's Exploration of The Cosmos, and it is imperative that these principles are respected and abided by in order to ensure the protection of the ecologies of all worlds.

[8:1:34] The economic costs of terraforming are obviously going to far outweigh the current investment budgets that institutions and individuals are presently willing to afford to such activities.

[8:1:35] However, we must not fear such obstacles for the time is not now that such investments are needed for we have neither begun our cosmical explorations, and nor are the peoples of the world ready in understanding the importance of The Cosmos and humanity's future amongst it.

[8:1:36] For this, we rely upon The Philosophy of Astronism to bring astronomy, cosmology, cosmocentricity, and a general philosophical conception of The Cosmos to the peoples of The Earth.

[8:1:37] Once the peoples of the world understand The Cosmos in this Astronist way, and once the endeavour of Humanity's Exploration of The Cosmos has begun, the investments towards terraforming other worlds shall follow without any doubt.

[8:1:38] From that position, the infrastructure of terraforming, and all related industries involving space shall need to be established from the very beginning, without prior structures in place.

[8:1:39] Essentially, the Astronist Tradition necessitates that the philosophical infrastructures must first be enlaid before the economic and political infrastructures involved with the practical aspects of Humanity's Exploration of The Cosmos.

[8:1:40] To the doubters of terraforming, and the wider context of Humanity's Exploration of The Cosmos, and to those whom say the Astronist perspective is overly optimistic, we return with our understanding of this opposition as a great complement to the Astronist Tradition and an accurate appraisal of its general approach to all things.

[8:1:41] We must always preside over topics, especially those involving The Cosmos, with an inherent and continuing sense of optimism for it is The Cosmos that we hope to explore and gain greater knowledge of; it is this hope that stands as the central aspect of The Philosophy of Astronism and it is this hope that remains the feeder to all the optimism witnessed through the Astronist philosophical tradition.

[8:1:42] Finally, to address the political issues and concerns with terraforming and other prophesied advanced spacial activities, the implementation of Astronarianism is considered to hold the precepts for the correct political, economic, and societal structure need to be in existence for the proper execution of such advanced spacial activities.

[8:1:43] Essentially, Astronarianism is considered to be the necessary precursory to combatting the practical political issues that may well arise when considering the events of humanity's past.

[8:1:44] Space colonisation is, of course, the centralmost aspect to Humanity's Exploration of The Cosmos of which during our discussions, a number of pre-Astronist concepts and concerns have been identified, whilst new Astronist approaches have also been identified and shall be discussed within this discourse.

[8:1:45] We shall address the pre-Astronist reasons for space colonisation first, of which the survival of human civilisation is the foremost of these reasons.

[8:1:46] The survival of human civilisation is the principal reason for the colonisation of space for the Astronist Tradition perceives it as a risk and miss opportunity for humanity to remain monoplanetary.

[8:1:47] Survivalism is the centralmost instinct of all living entities and shall continue to be forevermore; the colonisation of space further ensures the survival of humanity through the expansion of humanity into larger regions and onto multiple worlds.

[8:1:48] The utilisation of the vast resources in space is the second reason for the colonisation of space as it is considered by the Astronist Tradition to be a great disservice to the creations of The Cosmos to not safely and environmentally utilise them for the purposes of humanity expansion and survival.

[8:1:49] The resources of The Earth, as one planet within The Cosmos, cannot compare to the vast potentiality that The Cosmos itself has to offer; the utility of such resources would be able to become realised if space colonisation occurred.

[8:1:50] The expansions of humanity that occurred across The Earth had done so with the deaths of millions, the extinction of species, and the destroyed lives of native settlers; the colonisation of space would not have these consequences.

[8:1:51] Although, it could be argued that far greater consequences could occur from space colonisation, the Astronist Tradition upholds that its own existence and adherence will prevent such occurrences or any related, or worse occurrences from happening.

[8:1:52] Humanity's demands on the resources available on The Earth are gargantuan, and only getting greater by the day, and because the Astronist Tradition is strictly pro-populationism in its approach, the only way of alleviating The Earth from such resource demand would be to allow humanity to expand out into new worlds.

[8:1:53] This alleviation will have only positive effects for the resource demands required by the human population of The Earth, and will help the conservation of the environment against such problems as climate change, extinctions, and pollutions of all kinds.

[8:1:54] The simple reason of spreading humanity throughout The Cosmos is pre-Astronist but is highly Astronist in style nonetheless and although its logic is simplistic, it remains a cornerstone to the entire purpose of cosmic exploration, just as well as space colonisation.

[8:1:55] The commercialisation and industrialisation of space will provide untold amounts of wealth and new job opportunities and industries for people to embrace including self-employment, or large scale mass employment organisations, thus defying any economic issues initially faced by the costs of space colonisation.

[8:1:56] Now, we move onto the Astronist originative ideas in relation to the reasons for space colonisation, the premier one of which is the advancement of humanity, which can be considered an overarching reason for space colonisation.

[8:1:57] The advancement of humanity is the essential reason for the colonisation of space and this reason pervades all others and therefore, is integral to all discussions of space colonisation.

[8:1:58] The second of the Astronist originative reasons is for the exploration and colonisation of space to bring brand new perspectives of The Cosmos, as well as The Earth and humanity's places within it, which will inevitably only support other related Astronist concepts and theories.

[8:1:59] In turn, this will eventually cause human culture and our religious and philosophical traditions to change dramatically, as the Astronist Tradition has prophesied;

this relates to the argument that in order for humanity to truly realise and understand the solemnity of Astronist Philosophy, the exploration and colonisation has to occur.

[8:1:60] Simply, but excitingly, the discovery of new worlds is central to the Astronist approach towards arguing for space colonisation for the potential in scientific, ecological, biological, and discover in all other subjects is unprecedented in the face of the potentiality of The Cosmos which is why the colonisation and exploration of deep space is highly advocated by the Astronist Tradition.

[8:1:61] In Astronist Philosophy, both the colonisation and the exploration of The Cosmos are considered to be necessary precursory actions and processes to humanity's discovery and the eventually solvement of the mysteries held within The Cosmos.

[8:1:62] From the perspective of the Astronist philosophical tradition, space colonisation is simply considered to be the natural course of action for humanity; to expand into territories unknown and to embark upon untold adventures; the exploratory instinct of humanity is only encouraged by the Astronist Tradition.

[8:1:63] The umbrella concept known as Planetary Habitability involves four different concepts within it that relate to the habitability of human to worlds, or the need for life's occurrence to take place in a wider sense.

[8:1:64] Firstly, we must address the concept of suitability; due to the natural constructs of some planets, they won't ever be suitable for humanity's survival such as gas giants, though their moons pose greater opportunities for suitability.

[8:1:65] Survivability is another aspect of suitability that needs to be considered for humans need to be able to survive in comfortable conditions in order for the planet to be suitable, or at least become suitable through the processes of terraforming.

[8:1:66] Other planets will be naturally more suitable for the human biological structure to handle which leads us to an address of the next concept within Planetary Habitability.

[8:1:67] This is known as The Forty Billion Habitables which relates to the forty billion estimated Earth-habitable worlds that exist within the Milky Way, which means there are forty billion plus Earth-like planets in the Milky Way which are naturally structured to support life, thus supporting all arguments for sentience beyond The Earth as proposed by the Astronist Tradition.

[8:1:68] Panspermians of Astronist Philosophy believe in the idea of panspermia, of which the Astronist Tradition is a supporter due to panspermial thought being highly cosmocentric rather than geocentric or anthropocentric.

[8:1:69] The discussion of panspermia provides the subject of Planetary Habitability with a much wider breadth of discussion, thus making the topic an important contributor to wider discussions of advancement within rhemnology.

[8:1:70] The experimentation of the suitability of worlds is only held to occur by the Astronist Tradition if the exploration of The Cosmos is in occurrence for the Astronist Tradition is a supporter of the notion that not all research can be conducted from The Earth; humanity must go out and experience The Cosmos if it is going to explore and colonise it.

[8:1:71] To conclude our introduction to the discussions of rhemnology, two definitions have been provided below for the concepts of Space Survivalism and all currently identified variations of Cosmic Travel and the generally Astronist approaches to these two concepts, which must also be widened and discussed during Astronist philosophical debates.

[8:1:72] Space Survivalism – a pre-Astronist concept that is now structured in a full Astronist philosophical approach that understands space exploration, and colonisation to be the only viable long-term option for humanity's survival.

[8:1:73] Interplanetary Travel, Interstellar Travel & Intergalactic Travel - Astronist ideals that are believed to one day occur through the achievement of precursory triumphs such as the exploration of The Cosmos, the colonisation of The Solar System, and the cosmocentric culture and philosophy of humanity.

[8:1:74] We stand upon the cusp of the most grand of all voyages and so lucky should we consider ourselves by that very fact alone.

[8:1:75] Everything we do, everything we are, and everything we should hope to be, must all be directed towards the stars, and The Cosmos in which all the stars reside.

The Dissemination of Astronism (Tiritology)

[8:2:1] It remains not enough for the birth of The Philosophy of Astronism into the world; to presume its dissemination throughout the world without conscious effort is the error of ignorance to the realities of ideas and their circulations.

[8:2:2] Removing the gravity and uniqueness of the insentences and philosophies of The Philosophy of Astronism from the equation, we may all relate to the instances in which our ideas are created and our vehement belief in them, and the vocation that develops thereafter for their transmissions to every other person of the world.

[8:2:3] Returning back to the context of The Philosophy of Astronism, it remains essentially practical and natural to want the ideas of The Philosophy to be extended and expounded to every other person on The Earth and beyond so they know the important message that has been constructed and is manifest in The Omnidoxo herein.

[8:2:4] To that end, it remains only prudent that a subject is found in the name of this facet of understanding and manifestation of The Philosophy of Astronism, and this is to be henceforth known as tiritology, two major branches of which are philosophical marketing and philosophical advertising which are aforeaddressed in a separate discourse due to their special designation as codisciplines.

[8:2:5] Tiritologists are tasked with understanding the procedures of tirition in its many forms, the acts of tiritors and tiritresses in the variety of methods they choose to utilise for their tiritional works.

[8:2:6] In addition to this, tiritologists, as well as tiritors, are all mandated with the commission of developing new methods and philosophies of tirition for the further dissemination of The Philosophy of Astronism in new contexts, new technologies, and in future eras.

[8:2:7] To make the distinction between the two, tiritologists are the studiers of tirition, and although tiritors must also contemplate tirition, their essential role is to action it in the ways they deem most efficient and ethical.

[8:2:8] Tiritological thought focuses on one main principle; the ways in which The Philosophy of Astronism can be disseminated in different societies, on different platforms, and across different geographical areas with the essential goal being to let all of humanity know of The Philosophy of Astronism.

[8:2:9] Tirition, or to tirit an idea, is to take it in its most understandable and comprehensive form and aim it outward and to send it in different directions to different

areas, cultures, and contexts; the numerous trajectories of the idea correspond as the methods of tirition, and these are studied in tiritology.

[8:2:10] Tirition is the way in which The Philosophy of Astronism may be disseminated and there should exist no shame in establishing the dissemination of The Philosophy, or of any idea for that matter, at the heart of one's Philosophical Spirit.

[8:2:11] The very fact that one feels so enamoured with their philosophical association so much so that they feel a great urge to conduct tirition and to spread their philosophical knowledge and interpretation to others; essentially, this is the Philosophical Spirit for the sharing of philosophies leads to their discussion, which is the essence of the Philosophical Spirit.

[8:2:12] If we call ourselves philosophers, then we know we must act and think in terms of logic, then it persists to be true that the founding of The Philosophy of Astronism and its subsequent dissemination is only logical; why else are ideas formed if they are not to be shared?

[8:2:13] Essential to logic is purpose and to founding a philosophy such as this without any intention to share it with the world is firstly illogical, and secondly borderline criminal when the world is in need of its words so desperately.

[8:2:14] It remains the mission of tiritors of all ages, genders, nationalities, and orientations to speak of The Philosophy of Astronism to their relatives, their most trusted friends, their acquaintances, and even those they do not yet know.

[8:2:15] How else can The Philosophy of Astronism change the world and point humanity in the direction The Philosophy believes humanity should be trajectured if humanity does not know of The Philosophy and its ideas?

[8:2:16] By this notion, tirition is essential to the development of The Philosophy of Astronism, not only for its growth in popularity, but also for the development of the entire Astronist philosophical tradition.

[8:2:17] If we look back in the history of philosophy, religion, and ideas in general, they become stronger, more refined, and essentially better when they have travelled across a multitude of lands, and have been interpreted by a multitude of people.

[8:2:18] If The Philosophy of Astronism is not to be tiritied, then how can we hope for its greater development? By this notion, we hope for that which shall never come for we do not work towards it if we do not enact tirition.

[8:2:19] The more that The Philosophy is disseminated, the greater the amount of minds that shall come across it and criticise it and interpret it and most importantly, discuss it

which will only inevitably lead to its greater development, refinement, and overall improvement as a fully augmented tradition of philosophy.

[8:2:20] This principle stands at the heart of tirition and forms the basis of the majority of tiritional philosophies.

[8:2:21] Tiritional philosophies demonstrates the various different ways that tirition can be implemented, each of which portray a unique approach to how tiritions should be enacted, and tiritors should act themselves.

[8:2:22] Underpinning all of these philosophies of tiritology that stand unique to the discipline from all other disciplines of Astronist Philosophy, are the Three Tiritional Orientations.

[8:2:23] This triad of orientations forms the basis upon which the philosophies are established and thus, exist at the heart of tiritological knowledge and theoretical application.

[8:2:24] The first of the Three Tiritional Orientations is that which is henceforth known as dynamism; this involves the use of vigorous activity and aggressive expansive technique for continual growth and progression of The Philosophy of Astronism.

[8:2:25] Some examples of methods associated with dynamistic approaches to tirition are the rapid construction of Astronist philosophical buildings, the integration of The Philosophy into the education system of a nation state, and also working towards establishing very close relations and associations between The Philosophy and the government of the targeted nation in the form of diplomatic relations, huge investments, and private deals for philosophical distribution and propagation.

[8:2:26] Dynamistic approaches to tirition therefore involve the most determined and motivated techniques to further The Philosophy of Astronism in a particular region, or nation state, or amongst a particular group of people, especially when a quick dissemination of The Philosophy is required.

[8:2:27] A dynamist orientation to tirition is characterised by a strong and vehement need for The Philosophy's integration and expansion, and may be justified in use when there may be considerable opposition to the expansion of The Philosophy, therefore more a determined, aggressive, and active approach must be employed.

[8:2:28] The second of Three Tiritional Orientations is that which is henceforth known as Reservism; this essentially involves the dissemination technique of The Philosophy of Astronism in a gradual and somewhat timid way without excessive operations and management.

[8:2:29] Reservist techniques include the distribution of The Omnidoxo, its commercialisation and sale in stores, the establishment of philosophical societies, and generally allowing time for people to become aware of The Philosophy and to begin to discuss its many branches, concepts, and disciplines rather than taking quick, and aggressive dissemination techniques like in a dynamistic approach.

[8:2:30] The third and final tiritational orientation is that which is henceforth known as aloofism which is generally characterised by the use of non-personal strategies of awareness, knowledge, and dissemination of The Philosophy of Astronism, or any one of its principal concepts and beliefs.

[8:2:31] Aloofist consists of advertisement and dissemination to the public masses, typically involving mass advertising campaigns, websites, commercials, and all other aspects of marketing and promotion; aloofist approaches could be accused of commercialising The Philosophy of Astronism and is generally positioned in-between dynamist and reservist orientations.

[8:2:32] In addition to the Three Tiritational Orientations, there also are the Four General Stances which exist as secondary to the orientations when applied, but allow tiritologists to more specifically categorise each philosophical approach.

[8:2:33] Naturalism is the first of these General Stances and in a specifically tiritological sense, relates to the belief that the dissemination of The Philosophy of Astronism should be wholly left to its own natural growth, rather than any organised or systematic attempt to grow it and because of this belief, is the direct oppositism to artificialism which is lattermentioned in this discourse.

[8:2:34] One of the most principal aspects of naturalism is the idea and belief that if the words and ideas of The Philosophy of Astronism are true and of such great importance, then it shall be popularised by its own accord of existence and the people of the world will all be aware of it as a result, whether tirition occurs or not.

[8:2:35] It can be inferred that the naturalist stance to tirition is rather opposed to the essential principal idea of tirition altogether because tirition is artificial in its own essence and generally, none of the orientations of tirition, and even the most modest and reserved of philosophical approaches, advocate for the total naturalistic view with most featuring in some way, an aspect of the artificialistic stance.

[8:2:36] Due to the essential nature of this General Stance, naturalism does not totally conform to any of the Three Tiritational Orientations, and neither does it totally encompass any one of the tiritational philosophies, though some of the philosophies do exhibit fragments of the naturalistic stance.

[8:2:37] Even the influence of naturalism is therefore fairly limited when compared to its counterpart stances, it is necessary to always have naturalism present in all tiritological

discussions as it demonstrates one end to the tiritological spectrum, and identifying every part of a spectrum of ideas stands in alignment with the Philosophical Spirit.

[8:2:38] The directly opposing General Stance to naturalism is henceforth known as artificialism which involves the belief that the dissemination of The Philosophy of Astronism is best conducted in an organised and systematic way; in a way that is measured and managed.

[8:2:39] Although artificialism is directly opposed to naturalism, neither does it totally conform to any of the Three Orientations and is applicable to all of the tiritional philosophies and unlike naturalism, is fiercely supportive of the essence of tirition and tiritional works and efforts.

[8:2:40] The third General Stance to tirition is henceforth known as accommodationism which largely involves the adjustment or adaptation of the words and insentensations expounded in The Omnidoxy in order to achieve the goal of The Philosophy being accepted and embraced by a particular government or a nation, or of the peoples of that nation, to better accommodate The Philosophy to their particular culture.

[8:2:41] The accommodationist stance towards tirition is neither reservist, dynamist, or aloofist in nature, and rather than being an actual approach, is more of a general understanding about tirition, and thus, can be reinterpreted several ways.

[8:2:42] The accommodationistic stance towards tirition resembles a sense of eagerness to be accepted and embraced by that which is known, in tiritology, as the gatekeeper, which may be the government of a nation, the people of a nation, or the religion, ideology, or philosophy of a nation; it is that which controls whether The Philosophy of Astronism will be accepted and embraced, or whether it will be unaccepted and ostracised.

[8:2:43] The oppositism to accommodationism, assimilationism is the General Stance towards tirition that involves the belief that all nations, cultures, and peoples who want to be followers of The Philosophy of Astronism should not want to omit basic parts of The Philosophy due to cultural clashes, and believes in the assimilation of followers than the assimilation of The Philosophy to them.

[8:2:44] The assimilationist stance is not endorsed by the Astronist philosophical and tiritological tradition due to its largely non-philosophical approach, but similar to the inclusion of naturalism in our discussions, we must also include this General Stance despite it not conforming to the wider Astronist philosophical tradition.

[8:2:45] Now that we have established the Three Tiritional Orientations and the Four General Stances, we can now introduce the Philosophies of Tiritology which involves the different philosophical approaches to, and methods of tirition; additionally, the philosophies introduced herein are ordered randomly, and not in order of relevance, nor is

it to demonstrate a greater amount of agreement with any particular philosophical approach.

[8:2:46] The first of the philosophies of tiritology discussed herein is henceforth known as solitism; solitists believe that the best dissemination technique for The Philosophy of Astronism is through the discussion of The Philosophy between individuals, rather than through the mass circulation of texts, advertisements, governmental alliances, and promotions conducted by The Institution of The Philosophy of Astronism as is characteristic of a dynamistic orientation.

[8:2:47] Solistic approaches to tirition are firmly reservist in leaning due to them expounding ideas of gradual dissemination rather than swift dissemination like in dynamist and aloofist orientations.

[8:2:48] Institutionalism is the belief, in a tiritological sense, that The Philosophy of Astronism is best disseminated through the orders, documentations, and efforts directly attributed to and originating from the works and operations of The Institution of The Philosophy of Astronism.

[8:2:49] This may also include The Institution's global network of representative institutions and subsidiary organisations and due to its core nature, is very dynamistic in leaning as The Institution's works are vast and wide-reaching, and are largely centred on governmental relations, the institutionalisation of The Philosophy of Astronism, and high-level diplomatic works.

[8:2:50] The institutionalistic philosophical approach is characterised high-level, large-scale efforts to further The Philosophy towards growth, institutionalisation, and global integration; institutionalists think of The Philosophy's expansion on a global scale and the highest levels of society.

[8:2:51] The next of the philosophies of tirition is known either as statism, or governmentalism; whichever name that it is given, the essential principle of the approach remains the same and is characterised by the belief that the best type of dissemination for The Philosophy of Astronism is through a relationship between The Philosophy itself, or its authoritative governor, The Institution of The Philosophy of Astronism, and the government of the targeted nation.

[8:2:52] This close-knit bond is expected to lead to a greater amount of leeway in the mass distribution of The Omnidoxy, as well as in gaining funding from the government for the purposes of enriching our philosophical educations.

[8:2:53] Due to the very core nature of this philosophical approach, it is labelled as dynamistic in leaning due to its application at the highest levels of a nation, and its ambitions for a relatively quick result.

[8:2:54] The belief that The Philosophy of Astronism is best disseminated through the establishment of many societies and clubs in the philosophy's name, or in the name of one of its schools, denominations, or disciplines; this philosophical approach to tirition is henceforth known as fellowism.

[8:2:55] Fellowists believe that these established clubs and societies, properly henceforth known as oracusias, are the most efficient way to encourage the mass leaning and discussion of The Philosophy of Astronism throughout the nation in subject, and also, throughout all the nations of the world.

[8:2:56] Despite presenting itself in a fairly dynamistic fashion, fellowism is in fact categorised herein as reservist in leaning, as the principle stands that these oracusias must grow naturally themselves, and even though they may be promoted and perhaps even invested by governments, they remain a gradual technique for the dissemination of ideas, but a powerful one nonetheless.

[8:2:57] The next of the tiritional philosophies is henceforth known as pneumaism; this entails the belief that the best method for dissemination involves focusing on the idea of the Philosophical Spirit in all promotional works and tiritional efforts.

[8:2:58] Furthererso, this means the philosophical approach works towards igniting the Philosophical Spirit in all peoples which it argues is already present in every human being, even in those whom have not yet used theirs, or even been aware that it existed within them, and proposes that the Philosophical Spirit must guide all tiritional efforts.

[8:2:59] By this rare notion, pneumaists apply a sense of spirituality to philosophy by entrusting all tiritional works and journeys to their Philosophical Spirits which, in itself, presents a new dimension of considering the Philosophical Spirit; a spiritual, and mystical dimension that is not now, in these very insentences, being openly demonstrated.

[8:2:60] Pneumaistic thinking is staunchly reservist in learning due to its very nature in waiting for one's Philosophical Spirit to guide their tiritional vocations and works through imagination, the creation of ideas, new philosophical concepts, inspiration, and motivation to conduct tirition.

[8:2:61] The next of the philosophical approaches to tirition is that which is aptly henceforth known as subordinatism; this entails the belief that The Philosophy of Astronism is best disseminated throughout active supportive works such as through the operations of The People's Constitutional Company of Jesse Millette, and the promotion of the Jesse Millette® brand.

[8:2:62] These operations and their promotional efforts are considered subordinate to the promotion of The Philosophy of Astronism, but nevertheless, their importance is promulgated in this approach.

[8:2:63] This also may include the development of local, national, and international relations between non-governmental organisations and The Institution of The Philosophy of Astronism is wholly in aloofist in leaning.

[8:2:64] One of the most prominent dynamistic approaches to tirition is henceforth known as naologism which entails the belief that The Philosophy of Astronism is best disseminated through the construction of as many Astronist philosophical buildings as absolutely possible, including planetariums, observatories, and eidouraniums.

[8:2:65] This supports all notions of astronomism, which works towards the centralisation of astronomy in a particular society, and is perhaps the most expensive, but one of the most effective methods of philosophical promulgation.

[8:2:66] Renditionism is the next philosophy of tirition that is to be introduced herein and consists of the belief that The Philosophy of Astronism is best disseminated through the rapid production, commercialisation, and worldwide distribution of Astronist renditions including statues, icons, bracelets, ornaments, and furniture, of which have philosophical meanings and ornamentations.

[8:2:67] Renditionist approaches to tirition are wholly dynamist in leaning and are considered to be one of the most effective manifestations of Astronist ideas, and an efficient promulgation method of Astronist Culture.

[8:2:68] Promotionism involves the belief that The Philosophy of Astronism is best disseminated through the marketing and advertising of The Philosophy just as if it was a service, like other products, services, organisations, and brands are promoted.

[8:2:69] Promotionism is closely associated with subordinatism, but is made distinct by its focus as a specific marketing practice for philosophies rather than the promotion of The People's Constitutional Company of Jesse Millette, or The Five Astronist Characters with the intent of promoting The Philosophy as a subsequence; promotionist approaches to tirition are very much aloofist in leaning.

[8:2:70] Advocist thought in relation to tiritional efforts entails the belief that The Philosophy of Astronism is best disseminated through the payment of prominent believers, or believers with a distinct want to be publicised, to go through a series of publicity campaigns to promote and advocate for The Philosophy of Astronism.

[8:2:71] This is usually conducted through national media outlets and is a philosophical approach that is certainly aloofist in leaning and is closely associated with the other aloofist philosophies of subordinatism and promotionism.

[8:2:72] Educationalism is the belief that The Philosophy is best disseminated through utilising Astronist phrontisteries as channels for philosophical debate, and dissemination.

[8:2:73] This dynamistic leaning philosophical approach to tirition also entails generally gaining strong influence in the education systems of countries for the purpose of philosophical expansion.

[8:2:74] Educationalist approaches to tirition utilise a variety of education-related resources in order to achieve the dissemination of The Philosophy of Astronism throughout a particular nation.

[8:2:75] The next philosophy to introduce is reservist in leaning and is henceforth known as founderism and is characterised by the belief that The Philosophy of Astronism is best disseminated through the orations, legend, and life of the Founder of The Philosophy of Astronism, Brandon Taylorian.

[8:2:76] This philosophical approach is totally fixated on the endeavours and attributed quotes and beliefs of Taylorian throughout his life and so, founderists believe the emphasis of this in tirition, is the most efficient method for dissemination, and is often utilised in other philosophical traditions.

[8:2:77] Padronism, similar to founderism in its nature, instead focuses on the dissemination of The Philosophy of Astronism through the speeches, quotes, and actions of a particular Padron of The Institution of The Philosophy of Astronism, and is similarly reservist in leaning like founderism.

[8:2:78] Phenomenism is an important and prominent philosophical approach in tiritional methodologies and involves the belief that The Philosophy of Astronism, including its beliefs, concepts, orientations, and disciplines of study are best disseminated through the occurrences of both major and minor astronomical events.

[8:2:79] This also involves the promotion of how these astronomical events link to philosophy and the importance of their observance, as well as their significance in society and is firmly reservist in leaning.

[8:2:80] Phenomenist thought pervades all Astronist Philosophy and is extremely important in Cosmic Devotions and in astronism, Cosmic Philosophy, and the general centralisation of astronomy and celestial events in society.

[8:2:81] Associatism is the next tiritional philosophy and entails the belief that The Philosophy of Astronism is best disseminated through the investment and promotion of non-Astronist space exploration, space agencies, and space companies.

[8:2:82] This philosophy also includes the promotion of like-minded thinkers, organisations, and groups by The Institution of The Philosophy of Astronism in the effort of resulting in the promotion of The Philosophy itself.

[8:2:83] These investments would originate from The Institution of The Philosophy of Astronism, and is an alternative from directly funding the promotion of The Philosophy itself, and is staunchly aloofist in leaning.

[8:2:84] Popularism is the next tiritonal philosophy to be introduced herein and is characterised by a belief that The Philosophy of Astronism is best disseminated through The Philosophy being referenced, represented, discussed, or endorsed in products of popular culture.

[8:2:85] This includes television programmes, films, non-philosophical books, non-philosophical advertising campaigns by companies and brands, popular music, and in non-philosophical art.

[8:2:86] Popularism is certainly aloofist in its notions of promotion to mass audiences and its efforts towards engraining The Philosophy of Astronism as a staple of popular culture for greater promotion.

[8:2:87] Ecclesialism involves the belief that The Philosophy of Astronism is best disseminated through the establishment of relations with churches of the Christian faith in a particular nation.

[8:2:88] This involves working towards The Philosophy of Astronism being officially accepted, and perhaps even supported by the church for the wider dissemination of the Astronist philosophical tradition.

[8:2:89] Ecclesialist thought is most usually in relation to churches with influence in the government, or in the society in general, or with a state church, or the church of the majority of the population.

[8:2:90] As is obvious by the nature of its approach, ecclesialism is has a staunchly dynamist leaning and advocates of this approach consider the church an important ally in the acceptance of The Philosophy of Astronism into the cultural and philosophical traditions of the society.

[8:2:91] Religionism, similar to ecclesialism by its nature, is characterised by the belief that The Philosophy of Astronism is best disseminated through the establishment of relations and working towards the official acceptance of The Philosophy by the dominant religion of the nation in subject.

[8:2:92] This philosophical approach to the methods of tirition is strongly dynamistic in its convictions and considered fundamental to the dissemination of The Philosophy of Astronism in particular religious nations.

[8:2:93] Translationism involves the idea and belief that the proper translation of The Omnidoxy to capture its messages and principles with accuracy is the best methodology of dissemination.

[8:2:94] Translationist thought is characterised by its reservistic leaning and is considered a prudent technique of dissemination and one that establishes The Philosophy on the right and proper standing ready for its publicity in the nation.

[8:2:95] The third to last tiritinal philosophy to be introduced during this discourse is henceforth known as characterism and employs a belief that The Philosophy of Astronism is best disseminated through its reference in other forms of Astronist Literature, especially via its representation through the beliefs and actions of The Five Astronist Characters.

[8:2:96] Firmly aloofist by its nature, characterism adopts an approach that depends on specific coordinations between The Institution of The Philosophy of Astronism and The People's Constitutional Company of Jesse Millette and requires a fierce integration between The Philosophy of Astronism and Astronist Literature.

[8:2:97] Technologism necessitates the belief that The Philosophy of Astronism is best disseminated through technological channels and generally by technological means.

[8:2:98] All tiritinal works and efforts that involve digital and technological tools and technique are all categorised into this philosophical approach and is certainly aloofist in leaning.

[8:2:99] The last philosophical approach to tiritinal that is introduced herein is that which is henceforth known as entrepreneurialism and entails the belief that individual determination and vocation is the greatest method of tirition for The Philosophy of Astronism.

[8:2:100] Entrepreneurialism is definitely dynamistic in leaning due to it demanding quicker results from individual rather than from the bureaucratic tendencies of larger groups and organisations and prides itself upon motivation, determination, and individual vocation in the dissemination of The Philosophy of Astronism.

[8:2:101] Entrepreneurialism is often considered a microcosm of other tiritinal approaches due its ability to be applied to other tiritinal philosophies and may be studied in order to derive greater meaning about other philosophical approaches.

[8:2:102] To conclude our introductions of the philosophical approaches to the practices of tirition, it must be understood that in the reality of application, none of these philosophies acts alone, but instead, a concoction of philosophical approaches from the list aforeintroduced must be employed for a comprehensive tiritinal strategy.

[8:2:103] Though not considered to be tiritational philosophies in their own right, there exists insularism and exsularism, which form a dichotomy in comparison to one another.

[8:2:104] To define each in proper terms involves understanding insularism as a distinct lack of interest in different denominations, branches, disciplines, concepts, and theories beyond those of one's own knowledge, familiarity, or background.

[8:2:105] Specifically in a tiritological context, essentially, not wishing to venture beyond one's own capacity for philosophical knowledge, concepts, and perspective; philosophical insularity demonstrates a distinct lack of interest for other philosophies, or other schools, disciplines, and denominations other than that which they are familiar with.

[8:2:106] Oppositely, exsularism, as the oppositism of insularism, demonstrates a distinct open-mindedness in relation to other denominations, schools, branches, and disciplines of The Philosophy of Astronism other than those with which one is familiar.

[8:2:107] Unlike the insularist attitude, exsularists are vehemently in alignment with the Philosophical Spirit and the principles that it presents and not without the attitude of exsularism, can one really call themselves a true philosopher.

[8:2:108] Exsularism, in a specifically tiritological context, demonstrates a distinct openness to one's attitude in relation to the way in which they approach tiritational works and the attitude of exsularism is the attitude that all good tiriters should have.

[8:2:109] Similar to the dichotomy of insularism and exsularism, there also exists a second dichotomy; this forms between the ideas of imperialism and that which is henceforth known as unimperialism.

[8:2:110] Imperialist approaches, in tiritological terms, encompasses the belief that philosophical expansion should be conducted on an imperialistic basis, or attitude, and that tirition should be viewed as the practice of expansion, and by its very core essence, is intrinsically dynamistic.

[8:2:111] In this school of thought, tirition is considered to only be achievable through imperialistic expansionist efforts and its associated mindset; as aforementioned, the imperialistic attitude stems from the dynamistic approach, and could be argued as an extreme version of the tiritational orientation of dynamism.

[8:2:112] Its oppositism, however, is that which is henceforth known as unimperialism which encompasses that tirition should not be conducted on an imperialistic basis or attitude for reasons of ethics, dignity, reputation, and argues against the aggressive nature of the imperialistic approach.

[8:2:113] Instead, unimperialist approaches tend to advocate for a reservist, or aloofist methods rather than dynamistic, but unimperialism and imperialism are essential mindsets rather than fully formed philosophies, or approaches.

[8:2:114] A tiritier brings the unimperialist or imperialist mindset and attitude to the philosophical approach that they have chosen; a tiritier cannot be imperialist or unimperialist without first knowing the philosophical method or approach that they shall use to complete the tiritition.

[8:2:115] Essentially, the tirititional orientation involves how someone approaches the choosing of a the philosophical method; the philosophical method is what shall actually be conducted as part of the tiritition, and the tirititional dichotomies involve the attitude with which implements their chosen method.

[8:2:116] The entire purpose of tiritition is to expand the influence, the knowledge, and the awareness of The Philosophy of Astronism and this involves taking the tiritition in a global context for the expansion of The Philosophy worldwide and eventually, far beyond this one world.

[8:2:117] For the former to be achieved, all tiritiers should employ an attitude of globalism, known as Globalised Tiritition, if they are to follow that which is known as The Proper Way; the idea that tiritition should always be considered in a global context in alignment with the occurrences in the world today progressed by the process of globalisation.

[8:2:118] The Astronist Tradition embraces globalisation and in a tiritological context, attempts to utilise globalisation as force to propel The Philosophy of Astronism to become a worldwide philosophy; this is henceforth known as the concept of The Utility of Globalisation.

[8:2:119] This incorporates thinking on a global scale in everything a tiritier does; it involves considering the global impacts; it entails understanding each and every language, culture, mindset, and worldview and the application of The Philosophy of Astronism to them without also losing the most precious parts of The Philosophy itself.

[8:2:120] Globalism remains an important theory within tiritology and all tiritiers must consider its central and integral place within tirititional philosophies, orientations, and dichotomies, as well as its utilisation for the achievement of tiritition.

[8:2:121] Existing within Globalised Tiritition, there also exists Continental Tiritition and Intercontinental Tiritition, both of which are considered microcosms of wider globalist tiritition.

[8:2:122] The former of which consists of a tirititional mindset and tiritition conducted across a continent, to every set of peoples of that continent in all their diversities of religion, language, culture, and worldviews.

[8:2:123] The latter of which consists of a tiritational mindset and tirition conducted across a different continents, to every set of peoples of those continents in all their diversities of religion, language, culture, and worldviews.

[8:2:124] In addition to this also, there too exists Omnination Tirition which refers to considering tirition in relation to every nation on The Earth without exception, no matter their political system, or stage of development, and is very similar to Globalised Tirition, but holds a distinct stance about the importance of that which is known as originism in Astronist Philosophy.

[8:2:125] I speak of The Philosophy of Astronism on a global scale, but certainly, the greater and more Astronist stance to take is that which is known as Interplanetary Tirition; despite the times of present not requiring this type of applied tirition, we must still plan for it as there shall certainly exist, one day, civilisations far beyond this one world.

[8:2:126] Interplanetary Tirition mirrors earthly tirition and the philosophical approaches, orientations, stances, and dichotomies addressed in this discourse do still certainly apply even on other worlds.

[8:2:127] The topographies may be different; our views of The Cosmos will most definitely have changed, but the humanity within each of us will still remain constant, and due to this, the ways in which we build, think, and feel shall continue to be the similar even though the context in which we live and in which we apply tiritational approaches will be wholly different.

[8:2:128] Interplanetary Tirition is a type of tirition that is inevitable if one follows the ideas of Astronist Philosophy, and is something that we must now prepare for if we are to master its many facets.

[8:2:129] The preparatory works that are required begin herein with The Omnidoxy, but too, shall transcend beyond this single document, and no doubt, new philosophers of the Astronist Tradition shall bring along their ideas for Interplanetary Tirition, to which they shall contribute, if their ideas merit inclusion.

[8:2:130] Despite its inapplicability to our current earthly circumstances, Interplanetary Tirition and the many new difficulties and opportunities in perfect balance that it shall bring forth, is the essential ambition, and from there, as human civilisation progresses and new political, philosophical, religious, and social events and revolutions take place, we shall need to begin to discuss Interstellar Tirition, Galactic Tirition, and eventually Intergalactic Tirition.

[8:2:131] Many will think of these ideas as mad, but they simply cannot extent their thoughts to the same extent of those whom believe in these ideas, but to extend one's

mind beyond that which they once thought was impossible is the essential principle of Astronist Philosophy.

[8:2:132] One should always think beyond, to the very edges of their conceivability; they should always be pushing the boundaries of their conceivability, always attempting to reduce their inconceivability and to increase conceivability; this begins with the decisions one makes and the way in which one addresses and approaches the dilemmas that confront them; this is the essence of Astronist Philosophy and this is what it means to be a philosopher in its wider context.

[8:2:133] So, conceiving tirition in its widest extent on the grandest of scales from individual tirition to intergalactic tirition is an example of how we must think; we must always think upon these scales for if not, we can never hope to achieve the greatest of our ambitions.

[8:2:134] In your mind, go to the furthest point of your conceivability as we have done in the context of tirition and then it is important that we return to the present time and the circumstances of the present day so that we may then conduct and implement the ideas and theories we have conceived into our preparatory works.

[8:2:135] By the notion of Interplanetary Tirition, we have designated an important and fundamental principle within Astronist Philosophy; the mindset and approach of omnism; the ability to perceive something in its widest extent, whilst also simultaneously perceiving each different extent individually, and the complexities involved between each new level of understanding.

[8:2:136] Omnist approaches are synonymous with Astronist approaches to understanding most ideas, especially ideas of a cosmical, tiritional, or metaphysical theme as they attempt to understand The Cosmos and all abstract ideas to the fullest extent that the individual can possibly presently conceive, whilst also understanding the importance of each microcosm of the wider understanding.

[8:2:137] Similar to the philosophical approach to tirition, aforeintroduced as technologism, that which is known as Digital Tirition involves all methods, tools, and instances wherein tiritional works are incorporated into digital platforms, or digital tools are used to perform tiritional activities.

[8:2:138] To those whom see the digitalisation of the world a threat to their cause, they are too short-sighted to see the opportunities that digital channels and tools can offer their own cause, and therefore, should not be at the helm of any cause at all.

[8:2:139] If we are to look at anything in an Astronist way, then we are to see the opportunities present in that which is introduced, whether it be new or pre-existing entity.

[8:2:140] Opportunism, with regards to its mainstream definition, is often considered to lack the implementation of principle or preparation, but from the Astronist perspective, there exists no better demonstration of the knowledge of one's principles and the evidence of their preparation if they are ready to take opportunities as soon as they arise.

[8:2:141] Opportunist attitudes are applauded in the Astronist Tradition for they derive shrewdness, keenity, and a distinct ability to see the bustling world around oneself and be astute enough to pick out the many potential opportunities that come their way.

[8:2:142] Tiritional efforts depend upon opportunism for tirition cannot exist without grasping the opportunities that the world presents and nor can it exist without enabling the utility of new techniques and tools as they newly introduced.

[8:2:143] Cosmicism, in Astronist Philosophy, is a far-reaching and pervading term that has many different definitions and applications depending on the discipline in subject, and the context in question, however, for the purposes of this discourse, we must introduced cosmicism in its tiritological context.

[8:2:144] Cosmicism is considered a mindset for tirition of The Philosophy of Astronism rather than a fully augmented philosophy or approach to tirition, and encompasses the belief that The Philosophy of Astronism addresses concepts, theories, and ideas that are of concern, that impact upon, and that should be considered by the entirety of humanity no matter their sexuality, nationality, religiosity, philosophicality, gender, or income.

[8:2:145] By this notion, we begin to impart ideas relating to the concept that is known as the Universality of Astronism; again, the belief that The Philosophy is universal in relation to the concerns of humanity and by that notion, transcends all human forms of hierarchy and classification, the principal forms of which being nationality, income, sexuality, religiosity, gender, and philosophicality.

[8:2:146] This also interconnects with other aforementioned philosophical approaches and techniques of tirition such as globalism, interplanetary tirition, digital tirition, and other forms.

[8:2:147] The cosmicistic approach to tirition is unique from all other forms cosmicism in other disciplines and branches of Astronist Philosophy, and it remains an important grounding to the concept of the Universality of Astronism, and wider Astronist universalism.

[8:2:148] Tiritology consists of its own unique group of terminologies that depart the discipline from others and do define it as its own main discipline within wider Astronist Philosophy.

[8:2:149] When a tiritional field is referenced, that determines a particular country, or region of focus in tiritional efforts.

[8:2:150] When a tiritional form is referenced, that determines the apparatus used for tiritional efforts to be enacted, an example of which would be the galvanisation of the mass media, or the establishment of a distribution network for mass circulation of The Omnidoxy.

[8:2:151] Finally, when tiritional campaign is referenced, that determines a specific set of efforts considered collectively for the achievement of the completion of a fully augmented tirition.

[8:2:152] Before we begin to discuss the opportune strategies that should be employed for a successful tirition in whichever philosophical orientation, stance, approach, or mindset, we must first discuss an aspect of tirition that relates to the philosophy of naologism, and also relates to wider naology which makes these next few concepts and philosophies transdisciplinary.

[8:2:153] This involves an introduction to the different types and classifications of Astronist philosophical buildings and the philosophies that are associated with them from a tiritional perspective.

[8:2:154] Firstly, there exists self-initiated Astronist philosophical buildings which also exclude eidouraniums, but do mainly focus on planetariums and observatories.

[8:2:155] The philosophy associated with this is henceforth known as independentism, and refers to a planetarium or observatory, or some other smaller Astronist philosophical building, or monument that is initiated by an individual, or a group rather than by The Institution of The Philosophy of Astronism itself.

[8:2:156] These types of Astronist philosophical buildings are called Independent Planetariums, or Independent Observatories, and are not under the jurisdiction of The Institution of The Philosophy of Astronism, unless they have been jurisdised, or are later donated to The Institution.

[8:2:157] In its tiritological sense, independentism may be used as a technique for tirition to encourage people of construct planetariums and observatories upon their own accord for their own communities and towns.

[8:2:158] Donationism, the next philosophical approach in relation to naologism, involves a class of Astronist philosophical buildings that are donated to The Institution of The Philosophy of Astronism by an external group, most commonly an independentist group or individual, or a scientific group that no longer requires the building for scientific purposes.

[8:2:159] These are known as either Donated Planetariums, or Donated Observatories, or Donationist Planetariums, or Donationist Observatories, and once they are donated, they

automatically become jurisdised, and are then officially under the jurisdiction of The Instituion of The Philosophy of Astronism.

[8:2:160] Another part of donationism is the belief held by some donationists that The Philosophy of Astronism is best supported by donations alone, and advocates for all followers of The Philosophy to donate to the cause in order to further The Philosophy and The Institution that manages it.

[8:2:161] The second to last type of Astronist philosophical building to be discussed in the context of naologism are the Uninitial Planetariums and Uninitial Observatories, the philosophy associated with them accordingly henceforth known as Uninitialism.

[8:2:162] Uninitialism relates to a planetarium or observatory that was already constructed either before the Founding of The Philosophy of Astronism, or wasn't built by The Institution of The Philosophy of Astronism for either a scientific or philosophic purpose.

[8:2:163] These planetariums or observatories are then bought by The Institution of The Philosophy of Astronism and are then Astronised and converted into philosophical buildings, the process of which may be used as a tiritional tactic for the purpose of creating cause, especially to restore or reinvigorate a building to become part of and important to the wider community again.

[8:2:164] The last type of Astronist philosophical building in relation to naologism is that which is henceforth known as a Astronised Planetarium, or a Astronised Observatory, which is a building that was not previously used as a philosophical building but has gone under a process of Astronistisation and philosophisation to make it Astronist in appearance and philosophical in purpose.

[8:2:165] Finally, in relation to the concepts of naologism, we come to one of its most principal philosophies; that which is henceforth known as autochthonism, and the instance in which it exists known as autochthoneity.

[8:2:166] Autochthonism is the prevailing philosophy of management of Astronist philosophical buildings and holds that each of which should be operated as independent organisations with a business wing and a charitable wing.

[8:2:167] It also holds that Astronist philosophical buildings should not be financial subsidiaries of The Institution of The Philosophy of Astronism, although they do remain under the jurisdiction of The Institution.

[8:2:168] Autochthonist approaches to naological management forms a operational structure that is considered the most efficient for the functioning of the philosophical building, no matter its size or location.

[8:2:169] Autochthonist approaches also uphold that by its management philosophy, is positioned to create a self-sustaining business model for the philosophical building in question.

[8:2:170] In order to form the basis of tiritology and tiritional works, in this discourse, I have outlined those which can be collectively classified as Opportune Strategies for the implementation of tirition.

[8:2:171] These strategies of opportunity are not all needed to be implemented, and neither are they all implementable that the present time, yet the majority are and it is one's interpretation and subsequent application of these strategies that demonstrates their orientations and their philosophical associations with the philosophies of tirition aforementioned.

[8:2:172] In this discourse, the Opportune Strategies will only be introduced and briefly discussed, and what the world shall do with them and what the people of the world shall do them with is up to the world and up to the people of the world.

[8:2:173] The first of such strategies being The Reascension of Philosophy which is, of course, central to the purpose of Astronism itself, and in tiritological terms, is angled towards focusing on Astronism as heralding the return and reemergence of philosophy as a societal structure.

[8:2:174] Further so, the belief that philosophy is integral to the needs of every human in their search for greater, deeper knowledge is also part of The Reascension of Philosophy concept.

[8:2:175] In a tiritional context, this concept can be used to determine the purpose of The Philosophy, its centrality in human life, and its general integrality to knowledge and structure in human society.

[8:2:176] In this sense of the concept, The Reascension of Philosophy also becomes its own reaffirmation that philosophy, as heralded by The Philosophy of Astronism, is central to human thought, action, emotion, knowledge, and perception.

[8:2:177] The next concept of the Opportune Strategies collective is that which is henceforth known as The Galvanisation of Space Exploration which is angled towards focusing on the exploration of space, and related sciences in the promotion of Astronist cosmic philosophical ideas.

[8:2:178] In this instance, the activities of space exploration, education, and technology are all utilised as drivers of interest and attention through their usage as promotional techniques.

[8:2:179] Revival of the Cosmical is the next concept of the Opportune Strategies and is angled towards focusing on cosmical phenomena and entities as an alternative to the materialistic and spiritualistic aspects of the world.

[8:2:180] Essentially, as is expounded by astronomism and wider Astronist Philosophy, especially within Cosmic Philosophy, the centralisation of all things cosmical, whether these be cosmical events, cosmical knowledge and study, or cosmic devotion, is of the utmost importance.

[8:2:181] This is considered to be of extreme importance as a tiritional technique for all tiriters to grasp and utilise and relates back to the entire spirit of Cosmic Philosophy and Astronist Philosophy and their traditions.

[8:2:182] The concept doesn't advocate for the removal of materialistic and spiritualistic aspects from the world, but instead, encourages greater attention on that which is cosmical as a valuable and uniquely beneficial source of reason, intellect, and purpose.

[8:2:183] The Opportune Global South is a concept within the Opportune Strategies of tiritology that embraces that which is known amongst scholars as the Global South, meaning the least developed countries in South America, Africa, and Asia.

[8:2:184] This concept is considered integral to tiritional efforts in that it focusing on the Global South as a place for philosophical growth due to its rapid population growth and incorporates targeting The Philosophy of Astronism towards people with lack of wealth, freedom, and education and provides them with The Cosmos as a logical and rational outlet for devotion, knowledge, and understanding about humanity and the wider universe.

[8:2:185] This is also an important concept for the reason that it presents The Philosophy towards a type of people that are generally low in wealth, freedom, and education, and it shall therefore be insightful as to how these people understand The Philosophy and how they accept and incorporate it into their pre-existing worldviews.

[8:2:186] The concept that shall be henceforth known as The Death of the East-West Dichotomy is angled in favour of the argument that the historical dichotomy between the Eastern and Western worlds is no longer valid, especially so in the envisioned world by Astronist Philosophy, and will be especially dead by the time of space exploration.

[8:2:187] This concept also holds that The Philosophy of Astronism is not bound by this dichotomy, but also argues that pre-Astronist philosophies and their philosophers were undoubtedly bound to the dichotomy due the times and circumstances in which their philosophies were founded.

[8:2:188] This is how The Philosophy of Astronism is considered to be part of the Transcendent Philosophy movement, which harks a new era of philosophy in simultaneity with the New Philosophy, Advanced Philosophy, and Organised Philosophy movements.

[8:2:189] Transcendent Philosophy is composed of philosophies that are argued to be transcendent over all preceding philosophies, especially due to the times in which they were founded, the contexts in which they were founded, or the topics they address.

[8:2:190] According to the Astronist Tradition, The Philosophy of Astronism is considered the founding philosophy and pioneer of the Transcendent Philosophy movement.

[8:2:191] The Astronist Globalist Outlook is a concept in and of itself, but is also very closely associated with wider globalism in relation to tiritology and involves the general globalistic outlook and approach towards all tiritational efforts without compromise or exception.

[8:2:192] That which is henceforth known as the concept of Humanity's Philosophy is a concept of tirition that firmly links the concept of the Universality of Astronism to tiritology by advocating for the idea that The Philosophy of Astronism is a philosophy that all humans can prescribe to and a philosophy that concerns the entirety of humanity.

[8:2:193] Accelerative Procedures is a tiritational concept that is influenced by dynamism and is angled towards focusing on refining the procedures of The Institution of The Philosophy of Astronism so that it can act efficiently and effectively in every circumstance.

[8:2:194] This may also be known as The Debureaucratization of The Institution; involving its purification and refinement for the acceleration of its procedures to better function as a tiritational tool.

[8:2:195] The concept which is known as The State of World Socialism addresses the current influence of communism and socialism and their derivations in various countries around the world.

[8:2:196] This concept calls for the analysis of world communism and socialism and identifies the opportunity for the tirition of The Philosophy of Astronism in post-Soviet and currently socialist countries such as those in Eastern Europe, Russia, China, and Vietnam.

[8:2:197] Philosophical Transcendence Over Religion is the next concept to be introduced and briefly discussed in this discourse and is angled towards focusing on the idea that The Philosophy of Astronism and the topics it addresses and the ideas it tiritits sit beyond the affairs of the world's religions and both their internal and inter-religious quarrels.

[8:2:198] Closely associated with the era and movement of Transcendent Philosophy, this concept positions The Philosophy of Astronism, and wider philosophy in general, as being

above what might be considered trivial disagreements that are evidently and abundantly found in religious discussion, practice, and theory.

[8:2:199] This concept can be utilised as a means of tirition; not to discourage religious observance, but instead to demonstrate the nature of philosophy and its ability to rise above all other concepts in the themes and ideas that it poses.

[8:2:200] The next concept of tiritology to be introduced and defined herein is that which is henceforth as the Academation of Astronism; the process of academation meaning, in this context, the institutionalisation of a topic into the education system, especially higher and scholarly education.

[8:2:201] This process of academation in relation to The Philosophy of Astronism is comprised of the belief that the promotion and establishment of the various academic disciplines and areas of study within Astronist Philosophy is the most important aspect of the philosophy to tirit.

[8:2:202] The Political, Economic, and Societal Game is an important concept of tirition angled towards the interactions of The Philosophy of Astronism with the politics, economics, and societal grievances of the world and its peoples.

[8:2:203] This remains a powerful concept of tirition, especially in relation to the Global South and targeting philosophical growth in those regions and simultaneously positions The Philosophy of Astronism as a social, political, and economic philosophy that can be used to enhance and advance societies through its social, political, and economic branch known as Astronarianism.

[8:2:204] This transcends beyond the usual territory of The Philosophy of Astronism into the political, economic, and societal realm and breaths new dimensions into the applications of Astronist Philosophy.

[8:2:205] The next of the tiritional concepts is that which is known as The Philosophical Purpose and as one of the most prominent of tiritional concepts, it entails a reiteration of the purpose of The Philosophy of Astronism and holds its primary focus on the end goals of The Philosophy, therefore it can be described as far-reaching and omnistic in its outlook.

[8:2:206] The Philosophical Purpose endeavours to create an emphasis on that which is The Philosophy of Astronism is understood to represent, and the goals it ambitions to reach.

[8:2:207] Throughout all our tiritional efforts, but also, throughout all our philosophical contemplations, we must always remember the purpose of The Philosophy of Astronism, as that is what ultimately defines it from all other philosophies; its goal of gaining enough knowledge of The Cosmos so that we may be able to understand it, accept it, and eventually, live amongst it beyond this one world.

[8:2:208] It is this purpose that all tiriters should be expounding to their listeners for it is this purpose that we all conduct our contemplation in aid of and so, without such end goals as we have outlined, there would be no grounds to our philosophical efforts.

[8:2:209] The next of the tiritational concepts is that which is henceforth known as Tiritational Technologisation; if technologisation involves the galvanisation of technological techniques, tools, and apparatus, and in a tiritational context, for the purpose of improving tiritation.

[8:2:210] Therefore, this concept involves a long endeavour of the development of specific technologies for their utility in tiritational circumstances, the forefront of which The Philosophy of Astronism must also be.

[8:2:211] Tiritational Methodology involves the study of the different methods of tiritation utilised by tiriters in their efforts for philosophical dissemination in order to draw comparisons between methods in order to derive conclusions about their circumstances and consequences.

[8:2:212] As a study in and of itself, Tiritational Methodology can be understood as a disciplinary branch of tiritology and one that requires extensive knowledge and experience of tiritational approaches and philosophies so that they may conduct in-depth investigations into the methods in subject.

[8:2:213] In tiritological terminology, that which is known as the tiritational method relates collectively to the tiritational orientation, philosophy, and strategy that have been chosen and also includes the channels through which the tiritation will be enacted.

[8:2:214] The tiritational contextualisation is an important procedure to conduct during any study of tiritational methods for it involves considering the tiritation in subject with reference to the political, social, environmental, and technological aspects of its surroundings in the specific geographical area in which the tiritation was, is, or shall be applied.

[8:2:215] The contextualisation of a tiritation and its methods provides the tiritirer, and the tiritologist with a greater understanding of the tiritation itself and the extent of its successes in a particular environment and in particular circumstances; essentially, the contextualisation of a tiritation is a test to derive the extent it can withstand a particular set of circumstances.

[8:2:216] A Philosophically Driven Tiritological Method is the next of the tiritational concepts discussed in this discourse and entails the suggestion that all tiritational approaches and practices must be conducted under the auspices and in the name of philosophical contemplation, conceptualisation, contextualisation, and the general principles of The Philosophy of Astronism.

[8:2:217] The next of the tiritional concepts that is introduced in this discourse is henceforth known as The Five Tools of Tirition; these form that which is known as the tiritional apparatus and in some way, in whichever context, must be utilised in all tiritional works.

[8:2:218] The Five Tools of Tirition are composed of the Omnidoxy, logic, culture, experience, and philosophical tradition; the way in which a tiritier utilises these five components remains to their own accord in association with the orientation, the philosophy, and the method of their choosing.

[8:2:219] The ways in which The Five Tiritional Tools are utilised shall derive one's philosophical orientation and approach to tirition and each of which are central to tiritology.

[8:2:220] In addition to The Five Tiritional Tools, there also exists those which are collectively known as Tiritological Complements; these are disciplines without Astronist origination that contribute extra features, emphasis certain aspects of tiritology and that which is henceforth known as Tirition Theory, and also provide new ideas from the perspective of their discipline.

[8:2:221] The primary Tiritological Complements include anthropology, sociology, psychology, marketing, business management, communication studies, construction law, journalism, architecture, art, media studies, photography, politics, public services, public relations, publishing, tourism, and hospitality.

[8:2:222] The next of the tiritional concepts is known as the Heralding Essentiality of Cosmic Tirition; this involves the belief in the continual affirmation of the importance of The Cosmos, our enknowledgements about astronomy, philosophy, and cosmology, and the role of The Cosmos in our daily lives.

[8:2:223] This concept supports the cause that The Cosmos is the most central aspect of our lives and should be raised to the most important aspect of any tiritional activity and understands tiritional and philosophy only through the scope of the centrality of The Cosmos.

[8:2:224] This concept is interconnected with many other philosophies of the Astronist Tradition, including astronomism, Cosmic Philosophy, cosmicism, and stands in alignment with the general principles and beliefs of Astronist Philosophy.

[8:2:225] The Grand Endeavour is one of the most important tiritional concepts and involves understanding the entire purpose of tirition to be a never-ending journey to speak of, convince, champion to the minds and hearts of all peoples the importance of The Cosmos, and the manifestation of this principle in The Philosophy of Astronism.

[8:2:226] This concept is interconnected in a multitude of different ways to other concepts such as the Universality of Astronism, and its application to The Five Tiritonal Tools.

[8:2:227] This concept also speaks of the Philosophical Way; a proposed system of life that is geared towards applying one's philosophical affiliation to the way in which one lives and perceives the world around them.

[8:2:228] The Grand Endeavour also relates to tiritonal efforts and struggles on a human-wide, planetwide, and cosmoswide scale according to the context in which it is applied and understands tiriton as striving to change, educate, and philosophise the world.

[8:2:229] Part of tiritonal terminology, a tiritonal manifesto is a literary work, other than The Omnidoxy itself, that outlines tiritonal approaches, methods, and practices, and ignites a discussion of these, and typically found in an academic and scholarly context for the purposes of enriching tiriton theory and wider tiritology.

[8:2:230] The Common Concealment is a concept of extreme important in both tiriton theory and tiriton practice and relates to how tiritonal activities have the tendency to quickly become non-philosophical in their natures, meaning they expound a particular interpretation of The Philosophy of Astronism, rather than allow free interpretation in the way that the Philosophical Spirit guides one's thoughts and imagination.

[8:2:231] This concept further emphasises the importance of the establishment of discussion halls in Astronist philosophical buildings, and societies to discuss Astronist Philosophy so as to curb any type of notions and tendencies that lean away from the principles of the Philosophical Spirit.

[8:2:232] Tiriters must teach the concept of Common Concealment to their listeners in order to express warning to them about this common mistake and its non-philosophical ways.

[8:2:233] Moving on now to the concept that is henceforth known as the Trility of Tirition; this concepts addresses what it says are the three principal aspects of the nature of tiriton.

[8:2:234] Firstly, this includes that which is known as Expoundation, which relates to the explanation of Astronist philosophical ideas through tiritonal activities.

[8:2:235] Secondly, the aspect of Interpretation, which involves the listeners and receivers of the expoundation and how they must interpret the concepts that have been explained to them in their own way.

[8:2:236] Thirdly, the aspect of traditionality relates to the expounded version of the philosophy, and its interpretation through the filter of that which is officially or traditionally held in the Astronist philosophical tradition, and that which is expounded by

The Institution of The Philosophy of Astronism as not necessary the right way, but the traditional way.

[8:2:237] Exploring the Trility of Tirition concept allows both tiriters and followers alike to understand tirition through its three main forms of activity and for learners of tiritology, provides a simple framework to understand the nature of tirition at its most basic, foundational level.

[8:2:238] The Ecclesial Acceptance of Philosophy concept is of course closely associated with the philosophy of ecclesialism, as aforeintroduced, and specific relates to the ambition of gaining the acceptance of The Philosophy of Astronism for its concepts and worldview from the higher echelons of a church and its leadership, especially when publicly announced.

[8:2:239] Similarly, though distinct by the nature of its addressed topic, the concept of Religio-Philosophical Coexistence encompasses the belief that The Philosophy of Astronism and religions can coexist with one another without conflicting upon one another unless either of the entities begins to encroach on either side's themes and the topics explored.

[8:2:240] Ultimately, this concept holds that religions and philosophies, although similar, are essentially different in their natures by the topics they address and although they do have commonalities without question, they are ultimately distinct from one another and it is one of the principal purposes of The Philosophy of Astronism to maintain that distinction.

[8:2:241] The Cosmic Exploratory Principle is a concept in tiritology that entails the belief that the exploration of The Cosmos is so essential and so imminent and so intrinsically linked to the future and destiny of humanity that all of humanity must know of The Philosophy of Astronism so that they can gain a philosophical view of The Cosmos.

[8:2:242] This concept is perhaps the most fundamental to all of Astronist Philosophy, especially the branch of Cosmic Philosophy, for it maintains that The Philosophy of Astronism is central to cosmic philosophical understanding and that The Philosophy is the only worldview that speaks of The Cosmos in such a way that centralises and emphasises it, and supports the existence of sentience as well as the exploration of The Cosmos.

[8:2:243] Additionally, this concept maintains that all tiritional efforts and works must be directed towards creating a greater awareness of cosmic exploration as the essential purpose and destiny of human existence, and because of the topic it addresses, this particular concept retains its centrality and importance above the majority of other tiritional concepts.

[8:2:244] Tiritional Enterprise, also more simply known as The Enterprise, is less of a concept of tirition and more of relates to organised tiritional works and activities,

especially when conducted by a group for a specific purpose, like trying to raise awareness of an issue or concept.

[8:2:245] Rhemnological Tirition is a type of tiritional effort that is specifically philosophical geared towards the advancement of the awareness of the ideas of rhemnology by their associations and infusions with tiritional practices and works, an example of which would be the concept of the Cosmic Exploratory Principle.

[8:2:246] Personalism is a philosophical stance that has many meanings and applications within Astronist Philosophy alone, but in the context of tiritology, it relates to a technique of tiritional works that expound the belief that there exists a distinct and personal relationship that one can choose to grow between themselves and The Cosmos.

[8:2:247] Personalists consider The Cosmos, as whole and ordered entity in and of itself, to be in constant flux due to The Universe beyond it, and theistic personalists would attribute this to some Divine being's presence beyond that.

[8:2:248] Essentially, personalism advocates for the awareness of this relationship that is available to be built by all, but mains that this isn't a spiritual relationship, but instead, a cosmical, physical, and mental relationship between oneself and The Cosmos surrounding.

[8:2:249] This particular concept fosters enknowledge of The Cosmos as its key aim, but beyond this, there exists a mission to bring the often distant and abstract elements and entities of The Cosmos, as well as The Cosmos in its entirety, to a personal level that each and every human can connect with.

[8:2:250] For this reason, personalism remains an important philosophical approach within Astronist Philosophy, and especially so within Cosmic Devotion, and is actually considered a form of adoration and laudation as feats of devotion.

[8:2:251] That which is known as the Non-preaching Policy, despite its title, is actual a tiritional concept principally, but is also an important implemented policy of The Institution of The Philosophy of Astronism that tells tiriters not to preach to disseminate The Philosophy of Astronism.

[8:2:252] This may also be known as non-sermonism and is an important policy to follow as it maintains the distinction between the religious forms of dissemination such as evangelisation and preaching from the philosophical forms of dissemination such as through discussion, advertisement, or eventing.

[8:2:253] Sophistic Exertions is another important tiritional concept maintain that sophists, as the employees and volunteers of Astronist philosophical buildings, must also be disseminators of The Philosophy of Astronism in a non-sermonic way.

[8:2:254] This concept also expresses the fact that sophists should remain neutral in their expressions and should also disseminate the official form of The Philosophy of Astronism rather than a form that is biased or influenced during the times of the day when they are in service as they must fulfil a professional capacity.

[8:2:255] The concept that is henceforth known as A Philosophy of People expounds the idea that those whom are famous or those whom lead such lives of achievement and those whom struggle through hardship and follow their vocations, or those whom gain fame posthumously, are the greatest form of disseminating the principles of The Philosophy of Astronism.

[8:2:256] The next of the tiritational concepts is that which is henceforth known as Educative Rudiment which entails that by simply educating the masses of the most basic principles of The Philosophy is the best form of tirition without exploring concepts from different disciplines of The Philosophy of Astronism.

[8:2:257] That which is termed as outreach in the context of tiritology collectively relates to all charitable, communitarian, and humanitarian works of The Institution of The Philosophy of Astronism, or of one of its subsidiary organisations.

[8:2:258] This is used as a means to spread further awareness of The Institution and The Philosophy of Astronism, but also to position The Institution itself a charitable institution, as well as to promote some of its subsidiary organisations through outreach works, which remain an important form of tirition from the subordinatist approach.

[8:2:259] The Astronist Worldview is a concept that has been aforementioned throughout The Omnidoxy and shall be lattermentioned too; also known as The Cosmoview, or The Uniview, this is a major concept that formed outside of tiritology, but is now considered to be part of it as a major tiritational concept.

[8:2:260] This concept places the general Astronist view of the world, of humanity, and of The Cosmos and the future and destiny of humanity in The Cosmos at the centre of their tiritational trajectories and efforts.

[8:2:261] Self-philosophisation is a concept that originates within tiritology, but is also applicable to most other aspects of Astronist Philosophy, and wider philosophy in general, and may also be called self-tirition, or autotirition.

[8:2:262] Essentially, the concept entails teaching oneself about The Philosophy of Astronism and becoming a follower of The Philosophy through no interaction with any other person regarding The Philosophy before they begin their followership.

[8:2:263] Essentially, self-philosophisation is exactly that; it is one's own private, self-taught philosophical association rather than being influenced by others, though adverts and promotional works of The Institution may have given the awareness of The

Philosophy of Astronism to the individual initially, but does not consist of any interactions with tiriters especially and consists of one's own research and enknowledgement.

[8:2:264] Cosmic Transcendence is both a tiritational concept and a tiritational technique and consists of portraying cosmical events, phenomena, and affairs as being higher and transcendent above the affairs of humanity.

[8:2:265] By this notion, The Cosmos and its progeny are placed between humanity and The Divine in a hierarchy of existence and supports similar notions about the centrality of The Cosmos and is certainly part of the Transcendent Philosophy era.

[8:2:266] We now end our discourse on tiritology with the outline of the infusion between The Philosophy of Astronism and the established religions and other philosophies of the world and how Astronist tiritational efforts and concepts can be integrated into the basic beliefs of some of the world's pre-Astronist religions and philosophies.

[8:2:267] Astro-Christianity - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Christian scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of God's creation of The Cosmos.

[8:2:268] Astro-Islam - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Islamic scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of Allah's creation of The Cosmos.

[8:2:269] Astro-Buddhism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Buddhist scripture and philosophy, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of The Cosmos as a pure manifestation of the material world.

[8:2:270] Astro-Hinduism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Hindu scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of Brahma's creation of The Cosmos.

[8:2:271] Astro-Judaism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Jewish scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of God's creation of The Cosmos.

[8:2:272] Astro-Sikhism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Sikh scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of God's creation of The Cosmos.

[8:2:273] Astro-Shintoism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Shinto culture and philosophy, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of the pure creation of The Cosmos.

[8:2:274] Astro-Taoism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Taoist scripture and philosophy, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of the pure creation of The Cosmos.

[8:2:275] Astro-Animism - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Animist scripture, theology, and practice, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of the pure creation of The Cosmos and the encouragement of animists to attribute a soul to cosmical entities and phenomena to achieve a personal relationship and spiritual connection to The Cosmos, thus developing Cosmic Animism.

[8:2:276] Astro-Baha'i Faith - in the context of tiritology, relating to a technique of tiriters that attempt to apply Astronist Philosophy to Bahai scripture and theology, and suggest that the Astronist philosophical tradition is simply pointing humanity towards a greater consideration of the pure creation of The Cosmos.

[8:2:277] Please note that these outlines relation to the different religions and philosophies, of course, does not include all of the world's pre-Astronist religions and philosophies, and neither should these be taken so solemnly; instead, these should be viewed as introductory statements to which tiritologists shall contribute to throughout the eras to come.

[8:2:278] Finally, the majority of religions all around the world have disseminated themselves through that which is termed, in the Astronist philosophical tradition, as parturitism.

[8:2:279] The parturitist approach to the dissemination of ideas consists of the designation of a person's religious or philosophical association at their birth due to the religion or philosophy of their parent's choice, or the traditional religious association of their family.

[8:2:280] However, The Philosophy of Astronism takes a different stance with regards to the designation of one's philosophical association; instead, Astronist Philosophy supports that which is henceforth known as comprehensionism.

[8:2:281] Comprehensionism is the belief that people's philosophical association should not be chosen for them, but instead, must be their own decision when they are comprehensive enough to make the decision themselves.

[8:2:282] Comprehensionist approaches are firmly held by the Astronist Tradition to be the ethical and logical way of the dissemination of The Philosophy of Astronism, but also, the most genuine way for only those who wish to follow the philosophy shall do so; no one shall be bullied and no one shall be forced.

[8:2:283] If an idea has to force people to believe it, then it is not authentic in any sense, and should be entirely avoided, but this is not what The Philosophy of Astronism stands for as it is true and real and genuine and shall only be followed if the follow wills it so by their own accord.

[8:2:284] Comprehensionism is a striking symbol of the authenticity of The Philosophy of Astronism and proves its forward-thinking approach to tirition based upon freedom of their beliefs.

[8:2:285] Tiritology remains a major branch of Astronist Philosophy, as part of wider Astronology because if one does not share their ideas with the world, then why else should one have such ideas to begin with; and then, why must the world care what you say? You must shout and then shout louder and louder and louder until the entire world understands.

The Transformation of Humanity (Transanthropology)

[8:3:1] As we discuss advancement within the auspices of rhemnology, we must address the inevitabilities of the future that many professionals are now working towards and this has formed the pre-Astronist philosophy of transhumanism which the Astronist discipline of transanthropology now addresses from an Astronist perspective and attempts to add to transhumanism and its vast potential for philosophical contemplation and discussion.

[8:3:2] It is important to make clear that in the Astronist philosophical tradition, Astronist Transhumanism is not considered a branch of Astronist Humanism, but instead, a distinct and separate branch of Astronist Philosophy in and of itself.

[8:3:3] There are two forms of Astronist Transhumanism which are applicative to different subject areas; the first of which is henceforth known as Transastronism which deals with all philosophical aspects of transhumanism and is the majorative form discussed within this discourse.

[8:3:4] Secondly, we have that which is henceforth known as Transastronarianism which deals with all the political and social aspects that arise when contemplating transhumanist topics.

[8:3:5] Separate from the mainstream definition of transhumanism, there exists a specific definition for Astronist Transhumanism to form its own distinctiveness and is first demonstrated within this discourse, and is as follows.

[8:3:6] Astronist Transhumanism is the collection of philosophies, theories, and concepts that relate to the transformation of the human condition beyond its current means through the use of technologies, for the enhancement of human intellect and physiology, all of which are considered from a uniquely Astronist perspective.

[8:3:7] As has been aforementioned, the philosophy and utility of the term cosmicism is widespread throughout all discourses with regards to Astronist Philosophy, but in the context of transhumanism, it takes a unique form.

[8:3:8] Transhumanist Cosmicism, as part of transastronism, understands that the development of higher conditions for humanity's psychology and physical ability should only be enacted for the purposes of space exploration and the achievement of cosmical advancement as the highest priority.

[8:3:9] Cosmicistic thought in relation to transhumanism looks for the trajectory of all transhumanist philosophies, theories, and concepts to be aimed towards the goal of space exploration and the advancement of humanity into The Cosmos.

[8:3:10] Cosmicistic thought on this matter, like many other philosophies in relation to all subjects, vary widely and can be split into two different veins themselves; the first being Positive Cosmicism and Negative Cosmicism.

[8:3:11] Positive Cosmicism considers all avenues of transhumanism, as long as they are trajected towards space exploration and cosmic advancement, as good, proper, and ethical.

[8:3:12] Negative Cosmicism only considers a few avenues of transhumanism to be ethical and is much more concerned with the affects of the avenues enacted on the participants and entities effected by consequence.

[8:3:13] Transanthropology is a major discipline within Astronist Philosophy dealing with all ideas transhumanism, the Astronist approaches to such transhumanist ideas and the many currents involved with the transhumanist movement with the aim of developing a clear Astronist Transhumanism movement, also to be known as Cosmic Transhumanism, within wider transhumanism.

[8:3:14] A pivotal branch of transanthrology and Astronist Transhumanism that forms the basis of positions and orientations of belief within the discipline, the effects of which have already been demonstrated by the divisions between Positive and Negative Cosmicism, is that which is henceforth known as Transastronist ethics.

[8:3:15] Transastronarian ethics, as the name suggests, deals with the Astronist approach to ethics in relation to transhumanist theories and concepts which, in this discourse, shall be outlined as we explore each of the major branches of transhumanist thought.

[8:3:16] Essentially, transastronism can be considered a product of the process of syncretisation between transhumanism and The Philosophy of Astronism, and the same can be said of Astronarianism and transhumanism to form transastronarianism.

[8:3:17] Astronist Philosophy always maintains a strong stance in its beliefs during any syncretisation in order to retain the purpose for its own creation and in order not to lose its own identity, and there exists no exception for transhumanism for The Philosophy of Astronism must retain its identity during the process of its syncretism with transhumanist philosophy.

[8:3:18] The Astronist approach to transhumanism and its rationalisation for some of the futurist concepts and seemingly fictional philosophies is that which is to be henceforth known as farthinking.

[8:3:19] Farthinking involves thought that focuses upon topics that remain far beyond the current means of human ability, development, and civilisation, but endeavours to contemplate and discuss such topics in order to prepare for what they understand to be the inevitable, or the most ideal version of the future of humanity.

[8:3:20] Farthought, although the proper origination of the term exists within Astronist Transhumanism, can be considered to exist at the heart of many other aspects of Astronist Philosophy, especially Cosmic Philosophy, as well as being closely tied to the Philosophical Spirit.

[8:3:21] Farthinkers are considered to be special types of philosophers within the Astronist Tradition for they only contemplate topics that are far beyond the current means of humanity, and although they may often be idealistic in their notions, they lay at the heart of the essence of the Philosophical Spirit, and Astronist Transhumanism, as a futureview and philosophy of humanity.

[8:3:22] Farthought forms the foundation of the Astronist approach to transhumanism and provides the rationalism and purpose to the Astronist addresses to transhumanist ideas; this provides such ideas with legitimacy and authenticity.

[8:3:23] As we now begin to discuss each transhumanist philosophy in further depth, we must structure our discussions upon the transastronist and the transastronarian approaches to the philosophies discussed further the former deals with the philosophical aspects of the philosophies and the latter deals with the social and political aspects of the philosophies.

[8:3:24] Therefore, we shall structure our discussions upon exploring the philosophies from these two different perspective of Astronist Transhumanism in order to cover all bases with our discussion.

[8:3:25] To discuss the philosophies of transhumanism, we must first designate the proper means of categorisation in order to further structure our discourse.

[8:3:26] The two categories of existence here are the pre-Astronist philosophies and the post-Astronist philosophies of transhumanism, the later of which largely consist of Astronist philosophies of transhumanism with the former consisting of non-Astronarian originative philosophies, but are nonetheless approached by Astronist thought to structure Astronarian Transhumanism.

[8:3:27] In right chronological fashion, we shall commence with the pre-Astronist philosophies of transhumanism first, which consists of that which is known as extropianism, and is based upon the actions and beliefs of extropians which are largely optimistic in their views of the future and advocate for the furtherance of transhumanist ideals in the form of their own volunteerism to achieve such.

[8:3:28] The Astronist approach to extropianism develops a worldview and lifestyle for people in which they attempt to achieve each of the tents of extropianism for the purpose of witnessing and contributing to the exploration of space.

[8:3:29] As has been outlined in pre-Astronist times, the five tenets, or founding concepts of extropianism, or extropism, are Endless Extension, Transcending Restriction, Overcoming Property, Intelligence, and Smart Machines.

[8:3:30] It must be made clear that extropianism, in the Astronist Transhumanist tradition, is not the philosophy that addresses each of these concepts, but instead is a lifestyle and conduct that collects these five concepts of transhumanist thought together in a way that is comprehensive for people to follow and reflect in their own lives.

[8:3:31] If one is an extropian, one is actively conducting their life in some way, or their life's vocation in such a way that is directed towards achieving or contributing to the achievement of at least one of these concepts.

[8:3:32] The Astronarian view of extropianism stands in support of each of the principles of extropian thinking, especially so in the optimistic future of humanity, and our advancements in computational power, technologies, and life extension methods.

[8:3:33] However, the Astronarian approach to extropianism always places emphasis upon The Cosmos and space exploration, and understands extropian thinking to be an important ally in achieving space exploration and galvanising a wider human thought trajectory towards placing emphasis upon space exploration and The Cosmos.

[8:3:34] Depending upon one's theological and ethical beliefs, certain aspects of extropian tenets may go beyond one's moral compass which makes Astronarian Transhumanism a vastly diverse philosophical branch with boundless interpretations.

[8:3:35] Extropians are also supporters of cryonics, which is considered to be greatly important to the efforts of the reality of space exploration in the near future before we can develop greater technologies and in this way, the extropian approach to many topics becomes aligned with the Astronist approach due to the shared interest in human advancement.

[8:3:36] Uniquely, extropianism combines the two forms of Astronarian Transhumanism; transastronism and transastronarianism because it affects our philosophical contemplations, as well as our social and political circumstances in simultaneity.

[8:3:37] Extropianism is the physical manifestation of transhumanist beliefs into a comprehensive set of lifestyle ideals, conducts, and studies that are reflective of one's belief in transhumanist principles.

[8:3:38] Essentially, extropianism can be said to exist as the applicative form of transhumanist belief; the collection of conducts that people may wish to follow in order to advance wider transhumanism; the Astronist approach extropianism attempts to incorporate space exploration, interplanetary travel, planetary colonisation, and the centrality of The Cosmos into the tenets of extropian conduct.

[8:3:39] Pre-Astronarian transhumanism was founded upon five major currents, of which extropianism was the first and the philosophy that is next to be discussed, immortalism, is the second of the five currents.

[8:3:40] One of the most important aspects of conduct in extropianism is the belief in the achievement of life extension and although the scientific methods and technologies of life extension are not discussed within The Omnidoxy, the application of immortalist thinking is made.

[8:3:41] The Astronist approach to transhumanist thought is centred on the prioritisation of space exploration and cosmic advancement and considering our current dilemma with the extent of time it takes to travel from one entity in space to the next, the concept of life extensions is not considered unethical in the Astronist Transhumanist approach.

[8:3:42] If we were to shy away from the technique of life extensions due to our worries of divinical disapproval, then we turn away from an integral method of realistically travelling through space without causing mass death in the process.

[8:3:43] One of the rationalisms of Astronist Transhumanism is best introduced in this context and it is that if The Divine did not approve of us advancing ourselves, then why would The Divine have provided us with the tools and the knowledge and the imaginations to conduct such advancements?

[8:3:44] Debatory rhetoric could be utilised to argue back that just because something exists, or we have the ability to do something doesn't make it right, like murder for example.

[8:3:45] The Astronist return to this argument would be that the exploration of space is our highest priority and that if we are to realistically travel to greater distances in space, we shall inevitably require some form of life prolongation in order to complete such vast journeys.

[8:3:46] Immortalism as a concept on its own removed from the context of space exploration is not wholly encouraged by the Astronarian Transhumanist approach, especially when it is wanted only for the purposes of vanity and not for some greater purpose like the advancement of humanity, or space exploration.

[8:3:47] Essentially, whether Astronarian Transhumanists agree with immortalism or not is dependent upon the purpose for which immortalism arises in a particular circumstance for there exists Justified Immortalism and Unjustified Immortalism.

[8:3:48] The former being that which the Astronist Transhumanist approach deems as sufficient rationale for immortalist beliefs and the latter being that which the Astronist

Transhumanist approach deems as insufficient rationale for immortalist beliefs, which is usually predicated on whether the rationale is supportive of space exploration or not.

[8:3:49] Transastronist concerns with immortalism revolve around the theological and philosophical consequences of the realisation of immortalist beliefs on human psychology, interpersonal relationships, and our connections with The Cosmos, The Universe, and The Divine.

[8:3:50] Transastronarian addresses to immortalism involve deep concerns with the consequences of immortalism on the human societal structure, product demand, political struggle, and the wider human civilisation.

[8:3:51] Just by imagining some of the affects of implementing immortalism on human societies would either herald the coming of the idealistic visions of transhumanist, or the destruction and devolvement of human civilisation entirely which is why transastronarian discussion on the matter is of paramount importance.

[8:3:52] Transhumanism and its philosophies and concepts are so polarising that they are considered to be one of the greatest igniters of philosophical debate for Astronist Transhumanism is certainly a philosophically oriented subject rather than a scientifically oriented subject.

[8:3:53] The ability of humans to make ourselves immortal is not supported by Astronist Transhumanism, and neither is it deemed at all possible by wider Astronist Philosophy to remain in alignment with the principle of limitation within The Cosmos, but life extensions are considered wholly possible and in the case of space exploration, absolutely necessary.

[8:3:54] If we are to go beyond our current means, we must do so in more ways than one; to go beyond The Earth is one feat, to go beyond in thought in another, and to go beyond in these two ways requires our bodies to do so in a very similar way; it is only logical that if one part of ourselves advances, so must all the rest of ourselves.

[8:3:55] Postgenderism, in all its aspects, is majoratively disapproved of by The Philosophy of Astronism, and wider Astronist Philosophy due to its founded attempts to destroy social fabrics of human interaction, intimacy, reproduction, and our biologies.

[8:3:56] In abstract principle and theory, the postgenerist agenda is considered idealistic and not wholly dangerous, but its applications to the world in both a philosophical, mental, physical, and societal sense are considered wholly destructive.

[8:3:57] The only sense in which Astronist Philosophy is somewhat partially supportive of postgenderism is in its goal to reduce the stereotypes of gender roles, and gender stratification, as well as its advocacy for the development of certain technologies such as neurotechnology, biotechnology, and assistive reproductive technologies.

[8:3:58] However, the way in which these new technological developments would be implemented and the approach and purpose of their utility would see Transastronism and Transastronarianism depart from postgenderism.

[8:3:59] Another reason for Astronist Philosophy's disavocation for postgenderism is the distinct lack of contribution that postgenderism makes to the Astronist objectives of space exploration, interplanetary travel, and space colonisation, as well as the wider discovery and centrality of The Cosmos.

[8:3:60] Essentially, the ambitions of the Astronist and the postgenderist approaches to transhumanism are vastly departed from one another and Astronist Philosophy sees no tangible purpose to the majority of the goals of postgenderism.

[8:3:61] To conclude, Astronist Philosophy sees postgenderism not as a viable, or contributory aspect to the advancement of humanity, but instead, a cultural movement that has arisen out of the emphasis on gender roles and hierarchies in each of our societies.

[8:3:62] Thus, Astronist Transhumanism does not consider postgenderism to be part of transhumanism for it does not see postgenderism as an advancement, but more as an argument against social stigmas.

[8:3:63] Singularitarianism is the next pre-Astronist philosophy within transhumanism and although Astronist Transhumanism supports the idea that superintelligence is an inevitability rather than a fantasy, it prescribes to watered-down version of Singularitarianism.

[8:3:64] Astronist Transhumanism certainly advocates for the advancement of computational intelligence and wider technologies for the purpose of putting them to use in a cosmic exploratory sense.

[8:3:65] However, Astronist Transhumanism approaches the idea of the technological singularity with skepticism about its real-world applications to society and does not at all subscribe to the predictive tendencies of certain believers of this movement.

[8:3:66] Instead, Astronist Transhumanism considers the technological singularity to be superintelligence for certain groups of humanity firstly, and the masses of humanity secondly.

[8:3:67] Singularitarians believe that the singularity must be used for the benefit of humanity, and Astronist Transhumanism would agree with this as a desirable goal, but it also emphasis caution for the nature of man is dominance and such superintelligencia would become the singlemost desired weapon to be used against one another for that is the naturity of humanity, no matter the stupidity and narrowness of thought that naturity demonstrates.

[8:3:68] Essentially, such a singularity would change the face of humanity forever, and Astronist Transhumanism argues that humanity as a whole, is not mature enough to guide the singularity in a prudent way.

[8:3:69] Astronist Transhumanists argue that there needs to occur countless societal, political, and behavioural changes first before the singularity can firstly take place, and secondly be applied to our civilisation on The Earth.

[8:3:70] Despite this, Astronist Transhumanism wholly supports the notion that there will exist the technological singularity of superintelligence, and wholly supports notions that this superintelligence would be the greatest enabler of humanity's exploration of The Cosmos.

[8:3:71] Such superintelligence should only be used for cosmical endeavours and for the betterment of human lives from the stance of Astronist Transhumanism and for the development of hyperspace technologies, life extensions, cryonics, and methods of quickly civilising planets and moons.

[8:3:72] Essentially, the Astronist approach to singularitarianism is wholly structured upon and oriented towards The Cosmos, of course, and the usage of superintelligence for the development of advanced spacial technologies.

[8:3:73] Technogaianism is the last of the major currents of transhumanism that is considered to be pre-Astronist and is wholly environmentalistic in outlook by the theme of the topic it addresses in relation to transhumanism and the purpose for which transhumanism should ultimately be utilised for.

[8:3:74] Technogaianism involves the belief in the use of technologies, both present and future, in order to help restore The Earth's environment; technogaians understand technology as an aid to environmentalist objectives, rather than an obstruction to their cause.

[8:3:75] Astronist Transhumanism supports the utility of technology in a sustainable, non-intrusive, and safe way for the furtherance of environmentalist ideals and works towards the development of greater technologies.

[8:3:76] Technogaianism is wholly supported by Astronist Transhumanism in order to see technology as a fundamental ally to the ambitions of the movement of environmentalism.

[8:3:77] There exists five different methods and branches of technogaian thought, and it is these that shall now be introduced, and addressed from an Astronist perspective, dependent solely upon the beliefs of Astronist Transhumanism, Astronist Ethics, and wider Astronist Philosophy.

[8:3:78] Astronist Philosophy fully supports the utilisation of technology for the monitoring of the environment as one of the most important, and positive aspects of using technology to assist in the protection of the environment.

[8:3:79] These conducts of monitoring are certainly utilised for the benefit of humanity, such as to signal how climates are changing, or how the wider environment is changing, but this is also argued to be for the benefit of the environment in equal measure.

[8:3:80] This equality is what the Astronist approach to environmental monitoring supports as it is believed that our conducts of such methods of technogaianism should be done so as to benefit both humanity and the environment in a strict equal measure.

[8:3:81] The next of the methods of technogaianism is known as geoengineering which uses two forms of technology - carbon dioxide removal and solar radiation management - in order to reduce the severity of climate change.

[8:3:82] Astronist Transhumanism supports the methods of geoengineering and climate engineering in order to curb the forces of nature in order to protect humanity, especially when using technology to limit the acuteness of natural disasters.

[8:3:83] This provides a positive utilisation of technology for the betterment of the peoples of humanity, but also, for the protection of the environment from itself; this does not mean to say that the environment requires human input in order to function properly, but instead, considers the positive symbioticity of humanity and the environment in their assistance of one another.

[8:3:84] Genetic Engineering is the next method of Technogaianism to be addressed, and is also understood to be an important factor in the protection of the environment, but oppositely from geoengineering, genetic engineering focuses not on changing the environment, but instead, altering humans to suite the environment so as to use less light, eat less meat, or to require less from the environment around them.

[8:3:85] Astronist Transhumanism, and even wider Astronist Ethics and Philosophy support the initial principles and purposes of Genetic Engineering for its motives are pure and its methods are considerably less harmful than other methods of environmental or anthropic alterations.

[8:3:86] To create a genetic engineering industry that is able to function safely, securely, and efficiently will require mass amounts of investment and it is towards this industry's establishment that Astronist Transhumanism certainly does work.

[8:3:87] To all those whom provide the argument that genetic engineering is playing the creator, they must consider the fact that the alteration of humans is simply the destiny of humanity for if the technology exists, the inevitability of its utility is simply a matter of time rather than a matter of circumstance.

[8:3:88] The method, however, remains primitive in its progress at best, and although Astronist Transhumanism supports it from a philosophical perspective, the application, actioning, and the operations of such genetic engineering organisations must be heavily regulated in order to reduce the chances of foul play and mispractice.

[8:3:89] Like many other miraculous opportunities that technology provides, we must also practice caution in its mass distribution for there will always be those whom wish to use such technologies for destructive purposes, and this relates not only to the genetic engineering method, but all other technological methods that pose opportunities to be misused.

[8:3:90] The second to last of the items of discussion with respect to technogaianism is known as prometheanism which is a pre-Astronist philosophical orientation that advocates for the utility of The Earth as determined by the needs of humanity and that which aligns with the interests of humanity with regards to our future endeavours.

[8:3:91] Although the previously enviro-egalitarian stance opposes this orientation, it is an important one to consider and is not wholly disavowed by the Astronist approach for humanity's needs remain paramount in our greater efforts to colonise space, explore The Cosmos, and so on.

[8:3:92] Prometheanist perspectives on the environment are wholly humanity-leaning, meaning that the requirements of humanity are placed at the forefront rather than on an equal footing with those of the environment.

[8:3:93] This is an important aspect of discussion because it shall divide people on the issue of enviro-egalitarianism which is extremely important for the proper debate of the subject, and is in alignment with the Philosophical Spirit.

[8:3:94] The most important aspect of prometheanism from the Astronist perspective is its orientation towards the furtherance and prioritisation of humanity as a whole rather than any particular subsect of humanity, or any one cause.

[8:3:95] Prometheanism is in strong alignment with Astronist Philosophy in this regard of its humanwide tendencies of orientation which leads to form the foundations of other aspects of Astronist Philosophy such as the betterment of peoples, the needs of humanity, and the Sacrificial Cause.

[8:3:96] Not strictly part of technogaianism from its mainstream definition, but instead added by the Astronist approach to technogaianism, terraforming activities are considered to be the most important form of technogaian methods and is therefore justifiably added to our discourse on the topic.

[8:3:97] As was discussed previously, the method of terraformation is considered to be integral to the practical human colonisation of planets, both within our star system, and in those beyond; those which are interstellar.

[8:3:98] Until now, terraformation hasn't been recognised as fitting within technogaianism, but by the technologies and mechanisms involved in the conductation of terraforming activities, no doubt is left to its place within technogaianism.

[8:3:99] Now, the ethics, logistics, economics, politics, and potential methodologies of terraformation will not, and should not be discussed in relation to technogaianism, for the purpose of its inclusion here to simply outline the Astronist transhumanist philosophical approach to terraforming; the more practical applications of the method are discussed at the very beginning of this disquisition as part of rhemnology.

[8:3:100] It should now be clear that terraforming activities are wholly supported by the Astronist philosophical approach to technogaianism, as part of transhumanism, and is extremely prometheanistic in its leaning as it advocates for the entire retransformation of a planet's whole environment in order to suit the needs of humanity; thus, an important topic of debate.

[8:3:101] Essentially, however, the Astronist Tradition terraformative activities as a necessity to the practical colonisation and exploration of The Cosmos; further so, it is believed that humanity will have no choice but to alter the environments of worlds beyond our own in order to suit our own needs.

[8:3:102] Terraformation is therefore proposed to become an absolutely integral industry and one that we cannot shy ourselves away from due to its centrality to the survival of humanity beyond The Earth; the Astronist Tradition, as well as wider Astronist organisations and The Company itself should all be in support of these terraformative endeavours.

[8:3:103] Technogaianism is a form of Gaia Philosophy which, like in its mainstream definition, encompasses all concepts and contemplations related to life on The Earth in Astronist Philosophy, and although anthropic life is somewhat discussed with Gaia Philosophy, the majority of it addresses insentient, or animal life.

[8:3:104] Although the innemny of such ideas has all but dissolved, this doesn't mean that we cannot consider such from a philosophical perspective as contemplations on the concept of The Gaia are abundant with new theories, especially as we develop our knowledges of space and The Gaia therefore becomes a microcosm and similar concept to that of The Cosmos.

[8:3:105] Gaia Philosophy, and the subsequent concept of The Gaia, has perhaps much wider breadth than the mainstream definition gives it credit for, which provides Astronist

Philosophy with a unique opportunity to expand Gaia Philosophy and provide it with a framework of Astronist characteristics.

[8:3:106] Further to this, we shall continue our contemplations and discourse upon Gaia Philosophy in the branch of Astronist Philosophy henceforth known as Gaianology which has been discussed already within The Omnidoxy within the disquisition of Aid & Stewardship, as part of the wider discipline of Abettology.

[8:3:107] Apart from the pre-Astronist major currents of transhumanism, there also exists three other orientations of transhumanism, including libertarian transhumanism, techno-progressivism, and evolutionism.

[8:3:108] Libertarian transhumanism involves the belief in the right to human enhancement and the utilisation of a free market system in order to guarantee this right and the Astronist Transhumanist approach stands in general support of this belief as it is believed that in order to conduct transhumanist endeavours, huge investments will be required from the free market and private investors.

[8:3:109] In addition, the Astronist Transhumanist approach also supports the concept of the right to enhance oneself as long as it is not physically detrimental to another, but certainly not just aesthetic enhancement, but physical enhancement for the improvement of one's physical ability to do something, or one's mental approach to conceive something.

[8:3:110] It is believed to be a fundamental human right by some Astronist Transhumanists of libertarian leaning that they should be free to enact enhancements upon themselves in both mental and physical ways so long as this does not lead to the detriment of others.

[8:3:111] Techno-progressivism is a pre-Astronist stance within transhumanism that considers the importance of the convergence of technological and social change and the Astronist Tradition of transhumanism has no grounds with which to argue against this stance as its purpose is justifiable, its means are fair and democratic, and its ambitions are in alignment with those of the Astronist approach to transhumanist thought.

[8:3:112] The final concept of discussion which is not necessarily part of mainstream transhumanism but the Astronist approach considers it to exist within transhumanism is that which is known as evolutionism.

[8:3:113] Evolutionism, in its Astronist transhumanist sense, considers the enhancement of humans in both physicality and mentality as merely part of the greater evolution of humanity and that by applying transhumanist activities, one is encouraging the furthering evolution of humanity to a greater state of mind, and body for greater achievement and ability.

[8:3:114] Evolutionism is a form of justifiability for the activities that transhumanism proposes, although it can be considered to be a unique philosophical orientation in its own

right and it is something that is generally supported by the Astronist Tradition for the purposes of advancement and furtherance.

[8:3:115] However, the Astronist Tradition, like in the majority of the ideas discussed within this discourse, caution is expressly encouraged to be practised due to the potentially destructive and detrimental natures of some of the ideas discussed.

[8:3:116] Although an idea may not be pernicious in its initial creation and in its original form, it has certainly been proven, especially so in humanity's recent past and even in the times of present, that ideas can easily be manipulated into becoming the opposite of the original version of the idea's founder; this was the case for the ideas of communism.

[8:3:117] Therefore, we must practise caution if we are going to realise the ideas of transhumanism in their proper forms as outlined here and now within The Omnidoxy.

[8:3:118] Futherso, this leads to ideas about the protection of ideas; in the past, ideas have often been left to be abused by the world, as has happen with many of the ideologies and philosophies of the recent past.

[8:3:119] Their initial principles and their original core beliefs are distorted by others, so much so that the distorted, or interpreted ideas of the philosophy become known as the philosophy itself; this version overshadows the original, pure version of the philosophy.

[8:3:120] However, the invention of the Astronist Tradition protects The Philosophy of Astronism from this as the original version of the Astronist interpretation and approach is preserved this way for the Astronist Tradition is the original version, and all that does not conform to the Astronist Tradition is considered neo-astronarian which halts any type of overshadowing.

[8:3:121] This too, however, does not eliminate the principles of the Philosophical Spirit are all people are able to still provide their interpretations and form new branches of The Philosophy from their own perspectives, so The Philosophy remains unlike religious dogma and doctrine.

[8:3:122] Ending the digression onto the topic of the protection of ideas, underpinning all of these stances on transhumanist ideas is the philosophical principle, for this withstands all conceptualisations within The Omnidoxy and is to be understood as the guiding light for all whom read The Omnidoxy.

[8:3:123] The Philosophical Principle commands that all whom read The Omnidoxy do so in the context of their own beliefs; if one does not believe in the beliefs expounded in The Omnidoxy as classified by the Astronist Tradition, then they must apply their own beliefs to that which they have read.

[8:3:124] The Omnidoxy is not a doctrinal book; it is a founding book; it founds The Philosophy, it founds ideas, but most importantly, it founds the ignition of your own ideas as perched upon your own interpretation of the text you read.

[8:3:125] Essentially, you need not agree with the entire Astronist Tradition, in fact, it is near impossible that you agree in its entirety due to the vastness of the subjects it covers, and the great deal of diversity in the positions it takes.

[8:3:126] That which The Omnidoxy, and by extension, The Philosophy of Astronism hopes to achieve is one's introduction to new ideas, new interpretations, and new perspectives on topics they may already know, those they will not, and those they may have known of but not formally encountered.

[8:3:127] If you do anything whilst reading The Omnidoxy, do this; think in this way; think in the way of the Philosophical Spirit for that is the most rewarding of ways to interact with The Omnidoxy, and the wider Philosophy of Astronism.

—

[8:3:128] I have only one piece of advice for those whom compose as I do; if a tear does not fall from your eye as you play the notes, then the piece you are composing hasn't enough emotion.

[8:3:129] It is simple; if you do not cry when playing your piece, then why do you think the world should shed a tear?

—

[8:3:130] I need no light,
[8:3:130a] to be shone onto me,
[8:3:130b] for I do already hear,
[8:3:130c] the applaud of the world roaring.

[8:3:130d] Once I do step,
[8:3:130e] upon the stage,
[8:3:130f] all the peoples of the world,
[8:3:130g] shall know the name of Cometan.

[8:3:130h] So, listen, I do not know all the answers,
[8:3:130i] as neither do yourselves, nor any other,
[8:3:130j] yet I do know and feel,
[8:3:130k] that I have been given my own lantern,
[8:3:130l] which I am to use to add to the lights of the world.

[8:3:130m] And so, the truths you do profess to harbour,
[8:3:130n] are of no interest to me,

[8:3:130o] for I have grown up in a world of proclaimed truth,
[8:3:130p] that at their core,
[8:3:130q] seem to hold no truth at all.

[8:3:130r] And it is by that notion that I never write nor speak in truths,
[8:3:130s] but instead, I satisfy my mind with ideas, and those alone,
[8:3:130t] for they are all I do need to change the world,
[8:3:130u] and I shall forever carry them with me wherever I do go.

The Paucity of Cosmic Thinking

[8:4:1] This short discourse is placed to discuss the fact that there exists a very distinct lack of presence or expression about The Cosmos, astronomy, space exploration, and philosophy in our societies of the present time.

[8:4:2] We needn't blame other entities for this lack of cosmicism in our world for there exists no one cause to the issue, but instead, the very fact that it exists at all is trouble, especially due to its prevalence in other contexts in past times of human history.

[8:4:3] This is what the reascension of philosophy and the introduction of Astronist Philosophy is set to change; a change must occur in the way in which humanity thinks, especially so from our self-centredness that seems to be prevalent in today's world; instead, our attentions should be cosmic-centred.

[8:4:4] To begin thinking cosmically, our attention spans will need to be widened to new widths and heightened to new heights for without such changes, I fear for humanity and the way we head, which at present, I cannot understand, nor envision.

[8:4:5] I see no future for humanity other than in the stars; it is the only logical step for humanity to take; it will provide humanity with ample reason for humanity's existence.

[8:4:6] Humanity has always been searching for the reason of its own existence; for its own purpose as to why it exists on a planet in the vastity of The Cosmos, but it seems only logical that the providence of The Cosmos is the reason for which humanity exists.

[8:4:7] All the centuries of humanity's existence, we have searched for our purpose in all manner of things, yet the truth has always been there in the form of the stars, but only a few people have ever managed to look for long enough and to think deeply enough about the stars in order to see the truths they hold.

[8:4:8] The irony is copious, I understand, but it is often the ironies that speak the greatest of truths for it remains true that humanity exists blind to the truths set out before them; this is why knowledge is paramount, and philosophy, as the inspiriter of knowledge.

[8:4:9] And it is upon this endeavour that The Philosophy of Astronism is embarked and vocated to realising to the world for it is essentially believed that cosmocentricity is absolutely key to the eradication of the paucity of thinking in a cosmic context, and for cosmical ventures.

Astronic Eschatology

[8:5:1] Astronist Eschatology is one of two major branches of rhemnology, the other being that of the theme of advancement, and deals with the Astronist philosophical perspective on death, judgement, destiny, the nature of the soul, the Astronist traditions of grievance, and all contemplations related to humanity's finality.

[8:5:2] Astronist Eschatology itself consists of five major philosophical disciplinary branches which are each discussed within this overarching discourse on Astronist Eschatology and includes Astronist Thanatology, Astronist Necrology, Mortology, Incorporology, and Dysteleology.

Astronic Thanatology

[8:5:3] The premier branch of Astronist Eschatology is Astronist Thanatology which deals with the foundational philosophical views on death from the Astronist perspective, answering questions including the nature of death, what death is, why death occurs, and addresses the Astronist traditional perspectives to different ideas about the afterlife, as well as whether the afterlife exists at all.

[8:5:4] Astronist Thanatology, by the very nature of the topics it addresses, is controversial, especially when applying traditional Astronist views to the pre-existing perspectives on death and the afterlife, and where other philosophies and religions pronounce we go when we die.

[8:5:5] Again, we must take the Astronist traditional perspectives within the context of the Philosophical Principle, and one should apply one's own interpretations and beliefs to them in order to come to a coherent and fully formed perspective on this multi-faceted topic.

[8:5:6] The Heavenly Finality is perhaps the most desired of all endings to one's existence and can perhaps be described as humanity's incessancy to want to survive in some way, without holding the capability to accept the end as what it is; the end.

[8:5:7] Not wholly supported, though not wholly opposed by the Astronist Tradition, the idea of the Heavenly Finality is left with the stigmatism that it remains too good to be true and is ultimately too humanly when considering its conceptual foundations.

[8:5:8] To see all one's loved ones again; to meet The Divine, the creator of The Cosmos and The Universe and all other existences; to be with The Divine for eternity in complete purity, and contentment; when the prophecies of heaven are listed they conveniently ultimations of the human variety.

[8:5:9] Meeting The Divine specifically, as its own eschatological consideration here, demonstrates an immense amount of importance on the part of oneself if one believes they are going to meet The Divine; the creator of the entirety of The Cosmos, The Universe, and all other existences.

[8:5:10] To doubt such a meeting is not strictly atheistic, but in fact, can be considered as staunchly theistic; why do we need to meet The Divine?

[8:5:11] In fact, is it not a greater demonstration of one's belief in The Divine if one still believes in The Divine even if they also believe that they will never meet The Divine?

[8:5:12] Again, deep debates must be conducted on these ideas if we are to further develop them from religious dogma; we must inject the essence of the Philosophical Spirit into such topics if they are to be broadened as nothing can be off limits when a philosophical debate is conducted no matter the circumstances, nor the nature of the topic; if people wish not to participate in such a debate, they will be free to exit.

[8:5:13] Ultimate & Eternal Freedom are prominent concepts of other traditions in relation to the afterlife which are, again, infused with the dreams of every human; convenience again seems to have prevail over logic and reality.

[8:5:14] Salvation of the Soul is a concept that will be further discussed in the discipline of incorporeology due to it relating more to the concept of having a soul and the Soul's Journey.

[8:5:15] Dimensional Movement is a concept of other traditions that the Astronist approach is more inclined to side with due to the vaguity of its words which could be interpreted, from an Astronist perspective, as leading to further existence in another cosmical, or universal dimension; this would therefore be supported by the Astronist approach as it is so vague that the concepts of The Cosmos and The Universe can be incorporated into it.

[8:5:16] The Next Realm Idea is another similar concept that the Astronist approach is more inclined to side with philosophically as it speaks of some further existence beyond this current Cosmos which would therefore exist within The Universe, whether by Divine creation or not depending on one's perspective on theology.

[8:5:17] Whatever one's beliefs related to the Next Realm Idea, it remains true that the Astronist approach is inclined to this idea due to the successful incorporation of its own ideas.

[8:5:18] The idea that death is a Continuation of Life Rather Than Termination is again, another idea that could be intertwined with those of the Astronist Tradition because it could easily be said that death leads to another existence somewhere else either within The Cosmos, or in The Universe as wider whole.

[8:5:19] Reincarnation is an approach to eschatology that the Astronist Tradition is half-hearted in its support as it does not undermine The Cosmos, nor The Universe, and nor The Divine, but the very core of its beliefs are largely illogical and rely heavily on incorporeality to explain such an important set of circumstances.

[8:5:20] To reiterate, reincarnation is certainly not supported by the Astronist Tradition, it cannot be said that anything within reincarnation doctrine conflicts with the fundamental aspects of Astronist Cosmology, although the Astronist Tradition continues to have many issues with the rationality for this concept.

[8:5:21] Recognising death as a Natural Process is certainly with the alignment of the Astronist Tradition as death is certainly considered to be a natural process that cannot be reversed, altered, or otherwise removed.

[8:5:22] The Journey of the Soul, also known as The Soul's Journey, is a concept that is to be latterdiscoursed within the discipline of incorporeology which twice proceeds this discourse but still lies within this disquisition.

[8:5:23] Considering the Death Awakening idea is a concept rather than a fully formed eschatology, and so, it cannot be challenged by the Astronist Tradition as it does not harm the Tradition's ideas for the concept it addresses is wholly inpernicious so death can be considered an awakening rather than a rest, as is majoratively believed in certain traditions of eschatological thought.

[8:5:24] In another major tradition, death is considered to be the Inevitable Result of Worldly Pleasures which is not addressed by the Astronist Tradition and therefore, it remains neither an advocate of this, nor an oppositism to this idea.

[8:5:25] The reason for the neutrality of the Astronist Tradition, or even its inconspicuity on these beliefs of different eschatologies is due to the fact that eschatology has historically been a realm of religious tradition rather than philosophical.

[8:5:26] While there exists a vague Astronist Eschatology, it shall forever remain exactly that; vague, because the purpose of The Philosophy of Astronism is not the same as the religious traditions of the world which attempt to teach a specific eschatology; instead, The Philosophy of Astronism explores these different eschatologies through writing and debate in order to demonstrate new ideas.

[8:5:27] Perhaps there will one day come a neo-astronist eschatology, but the fact stands that the Astronist Tradition's eschatology must remain wholly vague, and even inconspicuous in order to retain its status as a philosophy rather than a religion.

[8:5:28] If nothing at all happens, then what? Does this mean we have no purpose? This is a stance most commonly taken by atheists with little philosophical foundation to support the rationality for the proposal; just because you believe in nothing doesn't mean you

escape from having to rationalise and justify your beliefs as believers must also do so; atheists are no different in this way.

[8:5:29] If nothing at all happens and one believes in the philosophical orientation of naturalism, then you believe in the essence of nature, which is simply a microcosm of The Cosmos within The Universe, therefore, your stance is largely Astronist in leaning?

[8:5:30] If not, then what? And do not even dare to attempt to say that you haven't ever thought about such a topic because that will anger the philosophers more than ever before and further exemplify the need for the philosophical reascension and the growth of The Philosophy of Astronism worldwide.

[8:5:31] If one has no beliefs because one hasn't taken the time to think, then one must make the time for these important questions for your incessancy to say they do not matter is only a fool's response whom wishes not to contemplate questions that may exist beyond their corporeality.

[8:5:32] Well, this is philosophy and that is the essence of the text you are reading and it is the ambition of The Philosophy of Astronism to engrain so deeply this sense of thinking into the minds of all people to eliminate non-thinkers by encouraging them to think; to become excited to think; to be guided to think if that is their requirement; that is all on this.

Astronic Necrology

[8:5:33] Astronist Necrology is a very minor branch of Astronist Eschatology dealing with the Astronist view of different funerary procedures and is thus distinct from Astronist Thanatology; this branch of Astronist Eschatology is considered to be important for those whom wish to understand the Astronist perspective on different funerary traditions in order to incorporate this into their decisions for their own funeral, or for a funeral of their relative, or friend.

[8:5:34] However, in order to make the distinction, mortology is the branch of Astronist Eschatology dealing with the funerary traditions of Astronist Philosophy which Astronist Necrology does not address; only the funeral practices of other traditions.

[8:5:35] The traditional religious funeral ceremony remains quaint and importantly founded on religious observance in order to link to the specific religious eschatology and is further ornamented by hymns, eulogy, committal, and interment into the churchyard.

[8:5:36] The religious seal that such ceremonies are provided is the most important part of all its features as it demonstrates the incorporeal gravity of the ceremony taking place; wholly Astronist funerary traditions do not often hold this religious seal of approval, but instead, hold a philosophical aquistance that is considered to be the equivalent.

[8:5:37] The traditional burial ceremony set the grounds for the inspiration of the major Astronist funerary tradition of klemation and all its features and ornaments, therefore, a great deal of credit must be provided to the pre-Astronist religious ceremonies.

[8:5:38] Cremation is an essential part to the Astronist funerary tradition of etolation and thus is supported by the Astronist mortological tradition.

[8:5:39] A fairly new phenomenon inspired by the environmentalist movement, Green Funerals feature biodegradable coffins so that one's remains can become one with The Earth which is certainly supported by the Astronist mortological tradition despite not being officially part of the tradition itself, however, klemation ceremonies can be altered to include biodegradable coffins, then making Green Funerals a branch of klemation ceremonies in a case.

[8:5:40] Humanist funerals focus on celebrating the life of the person rather than acknowledging any religious symbols, eschatological ideas, and perhaps neither any Astronist philosophical aquistances.

[8:5:41] This doesn't make humanistic funerals anti-philosophical, nor anti-Astronist, but instead, trying to achieve the removal of all ornamentations of religion and philosophy surrounding death in order to simply just focus on the person whose funeral it is; this can only be respected by the Astronist mortological tradition.

Astronic Funerary Traditions (Mortology)

[8:5:42] Mortology is a major branch of Astronist Eschatology dealing with the contemplation of the collection of traditions and funerary practices associated with the Astronist philosophical tradition.

[8:5:43] Mortologists study these different proposed funerary practices and form the variety of philosophical groundings for each of the practices as inspired by the writings in this discourse of The Omnidoxy.

[8:5:44] For this reason, mortology remains a branch of Astronist Eschatology of extreme importance as it acts as the founder of the entire Astronist funerary tradition and of course, has formed the entire mortological tradition that exists within Astronist Philosophy.

[8:5:45] Essentially, mortology is the synonym for the Astronist funerary traditions when considered collectively as well as the official disciplinal study for this topic.

[8:5:46] The initial renditional object within mortology, as derived from wider Astronist Rendition, is that which is henceforth known as a cosmissary.

[8:5:47] A cosmissary is either a type of ossuary, or coffin that features cosmical ornamentations both exteriorly and interiorly, and is used in all Astronist funerary procedures whenever any type of ossuary or coffin is required.

[8:5:48] An important tradition in mortology is that of organ donation which is considered a major act of charity to promise just one of one's organs to another person after one's death.

[8:5:49] Although this practice isn't prevalent in any other tradition, it is a sign of goodwill in the Astronist Tradition and is considered to be one of the greatest acts of charity that any one single person can conduct.

[8:5:50] However, organ donation is certainly not a compulsory aspect of the Astronist funerary tradition and neither is its practices associated with any particular practice within the Astronist Tradition of funerary procedures.

[8:5:51] The first of the two major practices of mortology is that which is henceforth known as etolation, the decider of which is an etolee, and the practitioner of which is an etoler.

[8:5:52] Literally pertaining to "up to the stars" in Astronist Etymology, etolation, also known as etolment, and in a non-Astronist context, simply known as a space burial, or spacement, involves one's cremation and sending them on a spacecraft into space, either alone, or accompanied by the cremated remains of others.

[8:5:53] The trajectory of the spacecraft can either be fixed or can be non-trajectured, meaning the coordinates of the spacecraft and neither its final destination are fixed; this is also known as Probing Fix.

[8:5:54] Often, the spacecraft will also be used as a probe to transmit information back to The Earth, or other planetary colonies wherever they may be; the spacecraft will also be used to send out signals to other star systems with the hope of communicating to distant worlds.

[8:5:55] One of the pioneers of etolation, although when first conducted it was, of course, not termed as etolation, were some of the cremated remains of Clyde Tombaugh which still remain upon the New Horizons spacecraft to this day

[8:5:56] The idea of sending one's ashes into space is by no means originative from Astronist ideas, but establishing it as a funerary tradition and after the philosophical ornaments are added to it, it becomes uniquely Astronist and that is what is termed as etolation; thus, etolation is much different from sending one's ashes into space.

[8:5:57] Etolation involves philosophical association, and a greater meaning, purpose, and ambition for one to decide to send one's ashes into space.

[8:5:58] In addition, the building of the etolative, or the etolational industry is an important aspect, as part of the wider mortology industry which advocates for the establishment of businesses in proper mortological funerary practices.

[8:5:59] If one wishes to have their cremated remains sent in a single spacecraft alone without others, then this would cost a much greater fee than if they were to be sent up with others of course.

[8:5:60] The philosophical implications and ambitions of etolation are vast and deeply set for they run at the heart of etolation's inclusion into mortology with the five most prominent of which are listed below.

[8:5:61] The Exploration of The Cosmos: the fact that the only way one could hope to explore the vast distances of The Cosmos is if they were sent there in their cremated remains which is comforting for some people to know; that they will, in some form, explore The Cosmos.

[8:5:62] Astronomic Assistance: the belief that by using the spacecraft to transmit information back to The Earth, the person would be assisting in further astronomic and scientific research, and also holds that the greater the amount of spacecraft that are sent out in this manner, the greater amount of knowledge we shall gain about The Cosmos.

[8:5:63] One With The Stars: by choosing etolation, one is considered to become part of The Cosmos as a travelling probe, thus fulfilling the long-held belief that our afterlives consist of going to the stars.

[8:5:64] Cosmical Meaning: by choosing etolation, one may consider their ashes to hold greater meaning than their ashes being kept in one's house, or being buried in a graveyard on The Earth; to be sent out into space commands a greater amount of purpose and meaning to one's remains and due to them being added onto the Etolation Register if they so wish, they will be remembered forevermore.

[8:5:65] Untold Possibilities: by choosing etolation, one may become excited about the infinite amount of possibilities that could be the final destination of their remains, or the idea of the immense distance that one's ashes may travel in the probe.

[8:5:66] The second of the two practices of mortology is that which is henceforth known as klemation, which is chosen by a klematee, and is a ceremony conducted either by a klemater, or klematress.

[8:5:67] The klemational procedure involves the burial of a person in a cosmissary in the ground with an orrery place overground; this can be conducted in a designated place on the estate of an Astronist philosophical building, in a designated place in a church graveyard, on the land owned by the individual, or another designated piece of land that

is authorised to have klemations practiced there and is typically run either as a business or a charity, which are called klemariums.

[8:5:68] That which is henceforth known as a xenarium may be placed over the klemation site which consists of a carved out piece of stone, known as a demial, which may be arranged in different ways and patterns above the klemation site around the orrery.

[8:5:69] The different symbols engraved and carved out of demials is considered an offshoot branch of mortology known as Klemic Symbology, and is not part of the main Astronist philosophical tradition, and so is not further mentioned in *The Omnidoxy*, yet has its own book entitled *The Comprehensive & Explanatory Handbook of Klemic Symbology for Utility on Xenariums*.

[8:5:70] Demials are often frequently lit by battery lights which are henceforth known as ideniculs, especially for those whom can afford to keep them lit, but for those whom cannot afford, they are often left unlit, or may be part of a Klemary Garden, which is defined in a following insentensation.

[8:5:71] Demials, in addition to being engraved and carved out to represent klemic symbols, may also be engraved with the individual's full name, a personal message, their greatest achievement, or their most aired belief.

[8:5:72] In addition, there exist two different types of klemational graves; the first is henceforth known as a kentary which includes all of the different features aforementioned.

[8:5:73] The second of which is henceforth known as a unopary which only includes a couple of the features aforementioned, usually either missing the orrery, or the ideniculs.

[8:5:74] It is also of extreme importance and of relative unquity that klemation burial ceremonies are required to only be conducted during a clear night sky when the stars are either fully, or partly visible; this is one of the only compulsory aspects of the entire klemational tradition and the belief in this is henceforth known as The Naeran Principle.

[8:5:75] Klemary Gardens, as aforementioned, are defined as a collective klemation site with added privacy away from public areas (although public can visit if they wish), they guarantee ideniculs for every member, as well as uniquely designed orreries for each member also.

[8:5:76] Klemary Gardens are specially designed to walk through with walkways provided and structured sites for klemation are designated during the process of one's express of interest into being klemated.

[8:5:77] Klemary Gardens, as opposed to other sites, are the preferable site for klemation ceremonies to take place because they are specially designed to deal with such ceremonies

and Klemary Gardens can be found on the estates of some Astronist philosophical buildings, but are more commonly private businesses.

[8:5:78] Importantly, though not considered as one of the two major funerary practices of the Astronist Tradition, there does exist a tradition of cryonics in the Astronist Tradition which is, of course, supported by the Astronist philosophical tradition.

[8:5:79] Cryonics is an important and growing aspect of funerary tradition and it is believed by the mortological approach that it should be considered as a type of funerary tradition rather than just a technique of life extension, or technological innovation.

[8:5:80] The cryonics industry is encouraged to be further developed from the perspective of the Astronist Tradition for those whom can afford such procedures which exists in alignment with some ideas of transhumanism.

[8:5:81] The final aspect of mortology to be discussed in this discussed is the major celebratory ceremony of a Stellar Festival, which wholly distinct from Starlight Festivals in their purpose, meaning, and circumstance.

[8:5:82] Stellar Festivals are most likely to take place in the privacy of one's home, or in a Klemary Garden, or wherever a loved one is buried; it is a yearly intimate festival in which stargazing takes place for the purpose of remembering one's loved ones; people may also choose this evening to spread the ashes of their loved ones, or to conduct etolation.

[8:5:83] Often enough, may people also follow The Naeran Principle for this ceremony too, as is also required for the funerary ceremony of klemation.

[8:5:84] Stellar Festivals are more popular in some parts of the world than others, but it remains a personal ceremony that takes place on the anniversary of a loved one's death so the timing, the place, and the way in which the ceremony is conducted is all unique and personal to one's own familial wishes.

[8:5:85] There are various different names for Stellar Festivals around the world in the many different denominations of Astronism, with the most prominent of these translations listed as follows with their associated geographical region, or language or people group.

[8:5:85a] Najji (Arab World)

[8:5:85b] Kinta (Madagascar)

[8:5:85c] Estrella Festival (Spanish World)

[8:5:85d] Kokebi Fēsītīvali (Amharic)

[8:5:85e] Tārakā (Bangladesh)

[8:5:85f] Tārō (Gujarati)

[8:5:85g] Tauraruwa (Hausa)

[8:5:85h] Sternenfest (German)

[8:5:85i] Festival des étoiles (French World)

[8:5:85j] Tähti Festivaali (Finnish)
[8:5:85k] Staar Tyohaar (Hindi)
[8:5:85l] Stjörnu Hátíð (Icelandic)
[8:5:85m] Sutāfesutibaru (Japanese)
[8:5:85n] Sṭār Habba (Kannada)
[8:5:85o] Jıldız Mayram (Kyrgyz)
[8:5:85p] Perayaan Bintang (Malay)
[8:5:85q] Nakṣatram (Malayalam)
[8:5:85r] Tārā Utsava (Marathi)
[8:5:85s] Míngxīng Jiérì (Sino World)
[8:5:85t] Festiwal Gwiazd (Polish)
[8:5:85u] Saṭāra Tī'uhāra (Punjabi)
[8:5:85v] Zvezdnyy (Russian)
[8:5:85w] Taru Uḷela (Sinhala)
[8:5:85x] Tamasha la Nyota (Swahili)
[8:5:85y] The ṣkālṣ Tāī (Thai)
[8:5:85z] Yıldız Festivali (Turkish)
[8:5:85ab] Lễ Hội Sao (Vietnamese)

[8:5:86] Stellar Festivals remain the most personal aspect to mortology and the Astronist funerary tradition and for this reason alone, should be considered as personal sacred ceremonies with a philosophical purpose, and meaning, within a personal context.

The Soul in Astronic Philosophy (Incorporeology)

[8:6:1] The philosophical discipline of incorporeology deals with all Astronist approaches to the concept of the soul which, according to Astronist Philosophy, is to be considered triadic in its nature; cosmical, universal, and partly divinical.

[8:6:2] There exists two main approaches to incorporeology henceforth known as Corpic and Incorpic with the former relating to the disbelief in the existence of a soul and the latter relating to the belief in the existence of a soul, and all related concepts towards these two orientations.

[8:6:3] Incorporeological studies often begin with investigations into the nature of the soul, its proposed journey from the perspective of different traditions, and its debate around all the various aspects of soul.

[8:6:4] Corpic approaches to incorporeology form as naturalism in their orientation and incorpic approaches to incorporeology form as cosmicism in their orientation.

[8:6:5] The Astronist Tradition is majoratively incorpic in its leaning, therefore it is cosmicistic in its orientation due to the fact that the majority of the features associated with the concept of the soul including reason, character, feeling, consciousness, memory, perception, and thinking form the abilities of philosophy, thus the Astronist Tradition's opposition to the concept of the soul would be contradictory to the Philosophical Spirit.

[8:6:6] Corpic approaches to the nature of the soul are characterised by an incessant belief in the naturalisation of the soul, meaning that the soul is simply a part of nature, as part of the human body, or any other living entity, rather than a separate and distinct entity.

[8:6:7] Corpic approaches make no distinction between the soul and the body, thus positioning corpicism as holding a disbelief in the soul and its proposed separated and distinct nature, as well as a disbelief in incorporeality in general.

[8:6:8] Corpic approaches identify the soul as merely an irrational figment of the human desire to hold some higher purpose for their own existence which is conveniently in alignment with ideas about the afterlife.

[8:6:9] Incorporealism is specifically a belief in the centrality of the soul, as placed above the body, humanity, The Cosmos, The Universe, and is brought to a Divine, or partly Divine level, thus making a solid connection between each person's soul and The Divine, as is common practice in many other traditions when addressing the soul and its nature.

[8:6:10] Oppositistically to corpicism, incorpic approaches to the nature of the soul are characterised by a belief in the soul's ethereal essence; essentially holding that the soul is

absolutely distinct from the body and does conduct that which is henceforth known as The Soul's Journey, however, incorporeal ideas don't necessarily have to be incorporeal in their leaning.

[8:6:11] Incorporeal approaches to the soul staunchly uphold the idea that the centrality is an entity that must be preserved in some way, notably considering that incorporealism does not speak of how to preserve one's soul, but simply the importance of this practice.

[8:6:12] Incorporeal approaches identify the soul as the most intrinsic element to the existence of life, and while cosmicism is majoratively associated with corporealism, there does exist Cosmic Incorporealism which holds that The Cosmos itself has a soul.

[8:6:13] This belief is certainly styled in an Astronist way and due to the raising of The Cosmos to a higher level by providing it with a soul, the concept of cosmocentricity is further supported as is the priority of the Astronist Tradition to uphold.

[8:6:14] Alternatively, corporealism does not believe The Cosmos has a distinct soul in and of itself, mainly due to the lack of rationality involved in such a proclamation, but also because The Cosmos itself is not a strictly living entity like a human, or an animal.

[8:6:15] However, Cosmic Incorporealism counteracts this by claiming that due to the movements of cosmical entities, the cosmical order, and the entirety of the cosmical system, The Cosmos is alive in a way and is certainly a self-functioning entity, entirely by its own accord as underpinned by The Universe, and formed by The Divine.

[8:6:16] Many traditions of religion and philosophy have all attempted to understand the concept of the soul; each great theologian and many of the most extolled philosophers have contemplated the soul and provided their ideas to the world about what the soul, its utility, its journey, its purpose, and its nature.

[8:6:17] If the Astronist Tradition is to depart from such traditions to carve out its own path, it must take upon a new perspective of the soul from a characteristically Astronist approach for I have never wished to simply add, or repeat the words of philosophers passed, but instead, found new inconsistencies, and in this case, we are to found a new inconsistency regarding the soul.

[8:6:18] The approaches of incorporealism and corporealism in relation to the soul are simply the precursors for which we use to address, challenge, and debate all pre-Astronist religious and philosophical understandings of the soul, but these two ideas do not form the Astronist Tradition's ultimate standing on what the soul is, where the soul resides, the Soul's Journey, and neither the ultimate purpose of the soul.

[8:6:19] All pre-Astronist discussions of the soul consisted of it being a miraculous and almost sacred entity to be preserved and eventually judged by The Divine; this is the case for the majority of religious traditions in relation to the soul; either that the soul is existent

within ourselves as humans for which we then must offer to The Divine, or it is existent in all things around us in the natural world as is the animist belief.

[8:6:20] The Astronist approach to the concept of the soul whether in abstract or real and physical terms is to apply the concept of The Cosmos to it; the Cosmic Soul concept is that which we have described in all the insentensations about The Cosmos thus far and hereafter.

[8:6:21] When we speak of cosmical orderity and the cosmical system, we understand these as part of the Cosmic Soul; the soul of The Cosmos that is inextricable from The Cosmos and makes it the wondermentful entity that we know and feel it to be.

[8:6:22] The Astronist Tradition does not see the soul as a separate and distinct entity from that of the physicality, yet understands them to be one; the soul is considered to be a combination of one's physicality and one's inordinance; one's intellectuality, emotionality, and mentality.

[8:6:23] The concept within incorporeology known as the Soul of Existence; this argues that there exists a soul for all things that exist, no matter whether they exist in animation, or inanimation; the fact that they exist at all means they have a soul; a Soul of Existence.

[8:6:24] The Astronist Tradition is resoundingly procosmotant in its address to the Soul of Existence; meaning it sides with the idea that The Cosmos itself is the Soul of Existence and all that exist within it are bound to the Cosmic Soul; the forces of movement, positioning, system, and order that structure our existence within The Cosmos.

[8:6:25] The Cosmic Soul is the one soul that all else within The Cosmos must abide by if it is to exist within The Cosmos and all that does not abide by this is considered to be part of The Chaos; that which is unknown, unordered, and disabiding.

[8:6:26] But in the proper assurance of the Philosophical Spirit, we must also construct an oppositism to the procosmotance, and let this henceforth be known as incosmotance; the belief that The Cosmos is not the Soul of Existence, which usually either means one believes in The Universe, or The Divine are the Soul of Existence, or a disbelief in the Soul of Existence entirely.

[8:6:27] Incosmotant thinking is not cosmocentric in character and neither does it allow for further discussions in relation to the raised importance of The Cosmos, yet its presence is still necessary in accordance with the Philosophical Spirit.

[8:6:28] Procoshmotancy and incoshmotancy structure the overall approach of the Astronist Tradition to the understanding of the Cosmic Soul and it is believed that all the elements of The Cosmos including the progeny, the movements, the orderities, and the positionings, as well as the diversity of the celestials, is also cumulated in order to form the Cosmic Soul.

[8:6:29] Divinotance is the belief that the Soul of Existence is The Divine and that all existences are connected to The Divine, and therefore, each and every soul is in some way, divinical and Divinely connected.

[8:6:30] Divinotant thinking is therefore intrinsically theistic in its outlook and is characteristic of a cosmicistic orientation due to the fact that divinotance generally does not support the ideas of naturalism, which is most usually non-theistic.

[8:6:31] In the Astronist approach to the soul, there does not exist a hierarchy of soul such as humans harbouring a greater soul than that of animals and other living organisms.

[8:6:32] This thoughtpath has existed in the majority of other religious and philosophical traditions since their foundings; such a hierarchy, especially one that places humans atop, is considered to be merely a fabrication of the human mind in order to inflate the ego of humanity.

[8:6:33] Instead, the Astronist view of the soul is one of absolute unicity for all existing entities, even if such are part of the same species, or are similar in their characteristics; because it is held that each and every existing entity has a unique soul, there can exist no comparisons between souls, and certainly no formation of a hierarchy for it is only the Cosmic Soul that encompasses all other of the existing entities within it.

[8:6:34] Indivinotance is the belief that The Divine is not the Soul of Existence, usually in favour for either The Cosmos, or The Universe as the Soul of Existence, and is usually prescribed to either by atheists, or non-theists.

[8:6:35] Indivinotant thoughtpaths are characterised by a disregard for The Divine and the features and purposes commonly associated with that which is Divine in its nature, but could be said to be highly cosmicistic because by lowering The Divine, one may raise either The Cosmos or The Universe in their beliefs in order to replace The Divine.

[8:6:36] Essentially, indivinotance involves the disbelief that all souls are in some way connected to The Divine, or hold divinical substances while divinotance is the oppositism to this.

[8:6:37] To provide a definition of clarity, the Astronist Tradition considers the soul to be an all-pervading, yet unique and equal element of every entity of existence cumulated by every part of the existing entity to form a totally distinctive combination of elements thus creating the unicity of all souls, and thus there exists no hierarchy of souls.

[8:6:38] The Astronist Tradition holds the belief that ebates about what souls are ultimately drawn to, associated with, or commanded by involve the different intances.

[8:6:39] The attempt of the Astronist Tradition is to remove all human constructions away from the concept of the soul in order to purify its meaning and redefine itself without also losing the essence of its purpose.

[8:6:40] Similar to the dichotomy of other instances, univertance and inunivertance consist of the beliefs that The Universe is the Soul of Existence, and that The Universe is not respectively.

[8:6:41] Such ideas are majoratively cosmicistic in their orientations because they follow the Astronist cosmological structure of The Cosmos and The Universe, with the latter existing in a state of infinity.

[8:6:42] Another aspect of incorporeological study is the concept of the cosmoreality which holds the stance that the greater exploration of The Cosmos that is conducted, the greater understanding of the soul, including its purpose, nature, and truth, we will ultimately obtain.

[8:6:43] Cosmorealists understand The Cosmos to be the one and only source of knowledge about the nature of the concept of the soul and usually coincides with the cosmotant views about the Soul of Existence.

[8:6:44] The Astronist Tradition entirely supports the concept and philosophical orientation of the cosmoreality for it places The Cosmos where indeed the Astronist Tradition believes The Cosmos to belong; central to corporeal existence and the key element with which to use as the framework for a greater understanding of the concept of the soul.

[8:6:45] Cosmorealities exist within us for they describe a way of thinking about The Cosmos; they point to a considerance of The Cosmos that places The Cosmos at the centre of thought, action, and wider human existence, not simply just the discussion of incorporeality, although for the case of this discourse, that is the purpose of the cosmoreality here.

[8:6:46] The concept of the Incorporeal Orderity involves the idea that the soul, whatever its journey, capacity, or nature would be, is in alignment with the orderity of The Cosmos, especially if it is believed that the Cosmic Soul is central and superior to all souls, and to which all souls are connected.

[8:6:47] Oppositistically, Incorporeal Disorderity involves the idea that the soul isn't ultimately in alignment with the orderity of The Cosmos, particularly due to the divinical naturity of the soul, if such is believed, and this associated with a distinct incentrality to The Cosmos.

[8:6:48] Whether one believes in the orderity, or disorderity of the soul, both of these two concepts are supportive of the centrality of The Cosmos, as well as the idea of the Cosmic

Soul, of which Celestial Souls exist as the microcosm to and those are which accumulate to form the Cosmic Soul.

[8:6:49] The essential essence and elements of an entity are those which form the soul, as opposed to the soul being some separate and distinct entity as is held in other traditions, the soul in the Astronist Tradition, is considered to be a formation of the physicality, the mentality, the emotionality, and the intellectuality (which includes imagination and knowledge), all of which are in equal measure to one another.

[8:6:50] Essentially, the true Astronist approach to the naturity, purposivity, and intrinsicity of the soul is certainly expected to be cosmocentric for that exists as the ultimate purpose of the entire Astronist philosophical tradition.

[8:6:51] But it is also perhaps the most obvious demonstration of the yearning of the Astronist Tradition to flip the table, as is known in Astronist philosophical terminology, in order to revolutionise thought on a particular topic, especially when a brand new perspective on a particular topic is presented.

[8:6:52] The Cosmos is considered to be the truest essence of the Soul of Existence from the philosophical investigation conducted into the different aspects of The Cosmos aforesaid and latterdiscoursed throughout The Omnidoxy.

[8:6:53] For it is after these investigations have been conducted that The Cosmos is formed as a whole distinct entity made of composite parts and it is around that idea which The Philosophy of Astronism orbits, just as The Earth orbits The Sun, forever bound, and forever ordered.

[8:6:54] Returning to our contemplations of naturalism and cosmicism, there exists two distinct forms of naturalism when it is applied to the naturity of the soul.

[8:6:55] The first of which is henceforth known as negative naturalism which adamantly holds that the soul is entirely non-existent; a figment of human desires and the human fear of death and the unknown.

[8:6:56] The second version of naturalism is henceforth known as positive naturalism which entails the soul to be existent but becomes part of nature (as the microcosm of The Cosmos) through the processes of death and decomposition thereafter, but does not believe that the soul transmigrates into the stars upon death, as is a preferred believed in cosmicistic thought.

[8:6:57] Cosmic Transmigration, also known as cosmotransmigration or astrotransmigration, is an integral part of cosmicism and its beliefs about the Soul's Journey, and is the main counterance to pre-Astronist traditional views in relation to heaven, salvation, and the afterlife.

[8:6:58] Cosmic Transmigration is also split into two main branches, including Metaphorical Cosmic Transmigration and Actual Cosmic Transmigration; metaphoricists and actualists differ in the real presence of the soul in the stars, and the physical process that occurs during Cosmic Transmigration.

[8:6:59] Metaphoricists, as their title suggests, believe in Cosmic Transmigration only as a metaphoric occurrence, as is the context for the mainstream and pre-Astronist saying that when we die, we go up to the stars, which is often told to children.

[8:6:60] Metaphoricists still remain affirmed in the importance of this belief, however, and do believe in the connection between our souls and The Cosmos, but do not hold that Cosmic Transmigration is a physical process of the soul floating up to the stars.

[8:6:61] Oppositistically, actualists, as their title also suggests, believe in the literal understanding of Cosmic Transmigration and understand the soul to depart from the body when dead and to physically ascend to join the stars, or The Cosmos.

[8:6:62] Whether one is an actualist, or a metaphoricist, the essential point to make is that Cosmic Transmigration is placing The Cosmos at the central of the eschatology by proclaiming that it is The Cosmos to which we go, or to which we are connected in some way through our souls when we have passed from this life.

[8:6:63] To begin with concluding statements on the topic, in Astronist Philosophy, especially so from the cosmicist perspective, the soul is considered to be undoubtedly connected to The Cosmos in a way that is unique from all other religious and philosophical traditions that precede the Astronist Tradition.

[8:6:64] Further so, the soul is considered to be in existence, but in a unique way to the Astronist Tradition for the soul is much less of an ethereal entity, but more of an inextricable part of our mortal selves.

[8:6:65] As has been affirmed, the cosmicist tradition of thought holds that souls become part of The Cosmos in the stars after one's passing which supports the pre-Astronist notion that stars hold the souls of humanity, whether one considers this metaphorically, or actually.

[8:6:66] In addition, the Astronist Tradition considers the soul to be eternally linked to the Philosophical Spirit due to the belief that one's philosophical understanding, perception, and knowledge are features of the soul itself, although the Philosophical Spirit and the soul are affirmed as two separate entities despite their interconnected.

[8:6:67] Philosophy, in the Astronist Tradition, and its proper practice, is considered absolutely essential to the development of one's soul for this is one of the major importances in relation to incorporeology and the Astronist Tradition; the soul is something that is considered to go grow.

[8:6:68] In the Astronist Tradition, the soul is not an entity of stagnancy for it is not believed that our soul is fully formed at birth, but instead, is something that develops as our bodies develop.

[8:6:69] In the Astronist philosophical tradition, the term for the belief in the developmental growth of the soul is henceforth known as transvention.

[8:6:70] The term for the idea relating to the intertwinement between the soul and the body during their simultaneous development is henceforth known as syncomitance.

[8:6:71] As has been affirmed, the Astronist Tradition purposefully does not espouse a full theory of eschatology, despite the many differing viewpoints existent within the Astronist eschatological tradition.

[8:6:72] The cosmicist perspective can be wholeheartedly considered a metaphorical approach to the existence and journey of the soul and therefore should not be considered a fully formed eschatology due to the realm of whole eschatologies associated with religious traditions.

[8:6:73] One of the final beliefs to be considered in this discourse is the belief that upon death, we infuse with a particular cosmical element, or progeny which can be considered an extension to either a metaphoricistic or actualistic approach to the idea of transmigration.

[8:6:74] Whatever the approach may be, the idea that our souls infuse with a particular cosmical entity rather than just The Cosmos as a whole is henceforth known as astricism; the belief that we choose the entity we infuse with is henceforth known as conscious astricism, and the belief that we do not choose is henceforth known as inconciated astricism.

[8:6:75] Inconciation is the idea, in Astronist Eschatology, that some force greater than ourselves presides over the path towards which our afterlife heads; essentially, the idea that humanity is not in control of its own existence after death; whether such decisions are predetermined is another point of debate.

[8:6:76] The concept of the Salvation of the Soul is a staple idea through many of the religious traditions, as inspired by the preceding philosophical traditions, but in the Astronist Tradition, the idea of salvation plays less of a central role which is especially due to the fact that there is no eschatological framework that incorporates sin and the consequences of sin for there to require the importance of salvation in the context of a soul that needs saving.

[8:6:77] The concept of the Soul's Journey, certainly pre-Astronist, and pervading throughout the entirety of eschatological religious and philosophical traditions, holds a

varied response from the Astronist Tradition depending on the orientation of the individual asked.

[8:6:78] Despite the diversity of the opinions on the Soul's Journey and its incorporation into the Astronist eschatological ideas, there is a general consensus that the soul, if it indeed exists, does follow some peregrination from the moment of one's birth, of that we can hold in certainty.

—

[8:6:79] Because of the proximity of God to The Cosmos, its progeny, and its phenomena in the Astronist cosmology, God is temporal, mutable, and passible due to the divinity of celestials and our interactivity with them (this is known as Astronic panentheism).

[8:6:80] Yet, God also transcends the celestials and The Cosmos itself as God is simultaneously non-temporal, immutable, and impassible (this is known as Astronic transtheism), hence we see how the main two forms of Astronistic theism can be coreside with one another in a systemised theology, thus further undermining the supposed Panentheism-Transtheism Dichotomy within Astronism.

[8:6:81] In Astronic eschatology, the notions of the world to come, or age to come are pivoted around the idea that the Humanic Exploration of The Cosmos shall herald not a singular new world for humanity, but a countless supply of new worlds to explore, hence relating to the importance of humanity's understanding and achievement of transcension.

[8:6:82] The age to come for Astronists and the age around which the entire Astronist religion is pivoted is the era of cosmic exploration that humanity will soon embark upon which is considered to be an unending era and a new state of reality for all humans to accustom themselves to.

[8:6:83] The belief of transcensionism states that the cosmic age to come in which mass exploration and discovery will occur is the most important of all eras for humanity transhistorically.

[8:6:84] This suggests that the Astronist belief regarding the notion of a new world or new age to come is not pivoted around a proposed spiritual realm or the notion of heaven, but is instead cosmically-centred with the transcensionist orientation of Astronism coming through strongly by the notion that cosmic exploration is considered to be the sole endeavour by which humanity will reach a brand new form of existence for itself on a plane higher than its present circumstance.

[8:6:85] This belief is uniquely cosmocentric and therefore remains unlike other philosophical and religious traditions on this issue which prioritise such notions of heaven and spiritual dimension.

The Purpose of Life (Dysteleology)

[8:7:1] The final branch of Astronist Eschatology discussed within this disquisition, dysteleology is a pre-Astronist philosophical doctrine holding that there exists no final cause, or purpose to life, nature, and by extension, The Cosmos.

[8:7:2] All that exists must have a purpose; this simple statement summarises the Astronist approach to such a topic and insists that for something to exist, it must, first, have been created either by something, or must come from something, and secondly, it must hold some purpose to its own existence, even if the created entity itself never truly comprehends its own purpose.

[8:7:3] For this reason, the Astronist Tradition is fundamentally opposed to the philosophical doctrine of dysteleology for the simple reason of the nature of existence and due to the Astronist beliefs about the nature of The Cosmos, the purpose of The Cosmos, and the destiny of humanity.

[8:7:4] By all accounts, the Astronist Tradition is perhaps the most non-dysteleological philosophy to exist; however, the Astronist Tradition, in alignment with the principles of the Philosophical Spirit, does commend the development of dysteleology and encourages discussion on the topic in order to further explore how the Astronist approach could further interact, and perhaps even align, with the dysteleological view of existence.

[8:7:5] Essentially, the Astronist Tradition supports the purpose for life in whichever form it may truly take, but it insists that there is a purpose nonetheless for The Cosmos and The Universe would not exist without some purpose to their presence.

[8:7:6] Some more extreme anti-dysteleological views from the Astronist perspective may be that when dysteleology is applied to Astronist and Cosmic Philosophy, it is an attempt to reduce the importance of The Cosmos and The Universe, and even The Divine.

[8:7:7] It is an attempt to undermine the Cosmical Hierarchy and further to this, the entire Astronist Cosmology by extension; for this reason, it is easy to understand the extent of distaste towards dysteleological ideas, but their presence is absolutely necessary in order to demonstrate oppositism, as is required by the Philosophical Spirit.

[8:7:8] Dysteleology, although it is very much opposed by the Astronist Tradition due to its undermining towards the Astronist approach to existence, cosmology, and being, it remains an important aspect of Astronist Eschatology as it represents something greater; an attempt to challenge established doctrines of judgement, destiny, and a higher purpose beyond one's physical, or incorporeal existence which can only be commended by the Philosophical Spirit, to which the Astronist Tradition is ultimately bound.

The Advancement of Humanity

[8:8:1] We must do all we can to add to society in our own unique ways, and to those whom do not add to society, should be told so of their lacking in contribution.

[8:8:2] Although we do speak of The Advancement of Humanity in the context of The Philosophy of Astronism, the practical circumstances surrounding The Advancement of Humanity are inextricably linked to the political and social branch of The Philosophy of Astronism, known as Astronarianism.

[8:8:3] And so, the words of The Advancement of Humanity should be taken in the context of Astronarianism, and herein applied to this philosophical branch of The Philosophy of Astronism in order to ensure the proper applications of the Astronist approaches to the topic of advancement.

[8:8:4] From the perspective of Astronarianism, the process of globalisation is considered to be a precursor to Astronarianism with ambitions for a multi-state world of continental states, humanity flag, earth flag, non-nationalism, originism, identity of thought, philosophical ascension, and the centrality of The Cosmos, astronomy, philosophy, and cosmology in the lives of humanity.

[8:8:5] Astronarianism is in support of the principles of globalisation for the spread of ideas, the consolidation of humanity, and the democratisation of the world are all principles which Astronarianism holds to be for the betterment of all the peoples of humanity and their futures.

[8:8:6] With the spread of ideas through the process of globalisation also must proceed the acceptance of ideas both new and old philosophies by the dominant religions and philosophies of nations; globalisation must remain that which is henceforth known in the Astronist Tradition as cooperationalistic if it is going to succeed.

[8:8:7] Cooperationalism upholds the principle that if one religious or philosophical tradition wishes for its precepts and ideas to be freely accepted and embraced by the peoples, then the peoples must also have the freedom to accept and embrace other religious and philosophical traditions, even if such traditions oppose the dominant.

[8:8:8] It is only through cooperationalism that globalisation can survive for we cannot have the principle of acceptance for the spread of ideas with preference and favouritism for certain traditions.

[8:8:9] The dominance of religions and philosophies will inevitably remain for that is their nature, however, the censorship of new ideas, or the opposition to the reintroduction of the old cannot be conducted if globalisation is wished to continue.

[8:8:10] Despite Astronarianism's rounded support for globalisation there does remain a number of elements of globalisation that are not supported by Astronarianism which can be called The Divergences of Astronarianism.

[8:8:11] It is the concept henceforth known as The Consistencies of Astronarian Society that explores the two oppositions that Astronarianism has with the generally held principles of globalisation.

[8:8:12] The first of these is the Astronist opposition to mass multiculturalism; if a society is bombarded with a number of different cultures through the spread of ideas from globalisation, it becomes almost impossible for a society to form its own cultural identity.

[8:8:13] To the Astronist perspective, this is the worst possible scenario, for a lack of identity marks the beginning of the end for the entire society and with rampant multiculturalism becomes deep disassociation between the society and the peoples that live within it.

[8:8:14] Astronarianism upholds the principle of dominationism which involves the idea that there must always be a dominant culture at the centre of any society with minorities at the periphery, but whose freedom must also be preserved.

[8:8:15] Astronarianism sees the dominationist structure as the only successful approach to ensure societal function and the achievement and sustainment of cultural identity; the perfect balance must be struck between the introduction of new ideas, the acceptance of these, and keeping the dominant culture established, unless the majority of the people of the society vote otherwise.

[8:8:16] One may argue that always fighting to keep the balance leads to an unstable society, but in reality, the opposite is true for societies are in constant motion and forever changing, and although there always has to be a dominant identity, this identity won't exist dominant forever as new ideas and systems will inevitably and eventually arise to take its place which doesn't obstruct the principles of dominationism and this is where Astronarianism stands.

[8:8:17] However, the potential application of globalisation for multiculturalism is destructive to this order of affairs and societal structure as it proclaims that a society can exist without a dominant identity which supports ideas of pluralism.

[8:8:18] This demonstrates much greater instability than the idea that Astronarianism supports for in a culture of pluralism, it is only the nature of the larger groups to have ambitions for domination, thus identifying the inevitability of dominationism.

[8:8:19] Pluralism in a society can simply be considered as a bridge in time between the transition of a society from one cultural dominance to another, but it is held that pluralism cannot sustain itself in longevity due to its own naturity.

[8:8:20] Those whom fight for the ironic dominance of pluralism neither understand the nature of society, nor the nature of humanity for humans will always wish to dominate one another, and they shall always continue to construct religious, philosophical, and ideological traditions with which to use as weapons to achieve such goals of domination.

[8:8:21] In essence, the cultural identity of society is a never-ending continuum of changes to the dominance of the society, influenced by politics, wealth, art, knowledge, faith, and of course, and most importantly, philosophy.

[8:8:22] The pluralists attempt to defy this principle, yet they never will achieve their goals to the extent they wish for they proceed against the nature of the people of which their societies are made up of.

[8:8:23] The Astronist Tradition, in alignment with the Philosophical Spirit, is open to ideas across the entirety of the spectrum, as is evident by the disposition of all the writings of The Omnidoxy, and this is why we have discussed the pluralisation of societal cultural identity despite itself opposition to the Astronist approach.

[8:8:24] However, the Astronist Tradition will not align itself with a set of ideas that stand in direct opposition with its principles, and pluralism is just that.

[8:8:25] A certain extent of multiculturalism should be allowed due to its integrality to the principles of globalisation, but the extent to which it is allowed should be heavily controlled, and any shifts of imbalance should always be spotted by good philosophers in far advance.

[8:8:26] In addition to the opposition to mass multiculturalism, and as an extension of this argument, the Astronist approach to globalisation also disagrees with the notion of parallel societies, which is considered a severe consequence of the prolonged application of multiculturalism.

[8:8:27] Only if the societal leaders and philosophers wish to send the society towards disenfranchisement, violent dissent, and divisiveness will they attempt to prolongingly apply multiculturalist and pluralist ideals to the society.

[8:8:28] Although their intentions may be the opposition of divisiveness through employing the entrenchment of diversity, the leaders and philosophers of such a society will be forever plagued with societal breakdown due to a lack of understanding about the cultural identity.

[8:8:29] Politics and economics may be the cogs of society, but culture is the chain that links them together; there exists much greater need to manage the culture than the management of any of part of the society.

—

[8:8:30] It is the progression of the collective through knowledge and understanding that will push forward civilisation to levels never yet accomplished.

[8:8:31] Encourage minds must, to wonder, wish and work out ways in which to advance one for all.

[8:8:32] It is the importance of constructing the externalities of human existence, that will lead to the advancement of humans overall.

[8:8:33] It is the intelligence of externalities, for the betterment of peoples, that does construct a continuity of the most efficient progression possible presently, thus the continued rise in the intelligence of externalities, encouraged must.

[8:8:34] Think not of the limits of one's means, but of the possibilities of one's future.

[8:8:35] Think not of the limits of the present moment's means, but of the possibilities of future moments.

[8:8:36] The continued infinite advancement of humanity is of highest priority for if not advance and expand, then the purpose is what?

[8:8:37] Gain knowledge, we must, in order to advance.

[8:8:38] Construct artificialities, we must, in order to advance.

[8:8:39] Yet master keep, we must, in order to retain advancement and expansion of humanity.

[8:8:40] It be not the externalities that we be our downfall, it be the within of ourselves that be the greatest threat, yet we must not let that defy our principles, for we know advancement is the highest purpose and in order to achieve ascension, we must know, construct and master for humanity to stay as the dominant force.

[8:8:41] In the accordance of civilisation expansion and advancement of all humanities, we must understand our destiny.

[8:8:42] On this Earth we have been, yet to expand, off-Earth we must go.

[8:8:43] Go beyond that of our ancestors, yet in such the same mentality for with advancement, too, always comes change and chance and challenge and so, with the difficulties of off-Earth clear in all's minds, change we must in order to advance and if advancement is the highest purpose, then change we must, can and will.

[8:8:44] With our minds of collected knowledge of all peoples, transform shall we to the next level of existence.

[8:8:45] Humanity, we must retain, especially the intension, for if not, doom ourselves will we.

[8:8:46] Yet, transform we will to the changing and challenging existence of The World Beyond, and with the principles in formation and the intension right and the peoples cheers and the wonderment of the missions in The World Beyond, do it, we shall, for transformation of, is key to becoming.

[8:8:47] If advancement be not said to have highest purpose for humanity, then what future is this for all peoples?

[8:8:48] Does the betterment of peoples lay in stagnancy?

[8:8:49] No, it truly does not, for if that was so, then discovered half Earth we would not and explored the depth we would not and gained knowledge of the wonderments of The World Beyond, we would not.

[8:8:50] Too, if we are to stay on this one world, and not discover what is beyond and not know with whom we share this universe, and not explore and know of greater knowledge and not understand the true reasons of existence, then we are just as doomed.

[8:8:51] If on one world we stand, and one world is destroyed by cosmic change or celestial happenings or divine intension, then are we to be lost in the chasm of universal history?

[8:8:52] Not the end of a peoples so grand, is that.

[8:8:53] And to the people of knowledge of our time, it is proof of divine intension that the knowledge gifted is to take us to beyond one world and the very ideas of humanity are telling of divine destiny.

[8:8:54] Despite all else, knowledge be and always be, the purest and most powersome key of advancement, for if knowledge not we have of the technologies to secure advancement, then what chance is before us to achieve advancement?

[8:8:55] The root of the tree of this matter of advancement, is the placement of knowledge to the centre of society and the ignorance and negativism from those of supposed sound existence, should be quickly extinguished.

[8:8:56] If knowledge is given this place, then zoom through The World Beyond, shall we, with technologies greater than in all history and begin to see and feel and know of wonderments of The World Beyond, shall we, for taught ourselves, will we, the hypers and the warps and the ways of transport in The World Beyond.

[8:8:57] Not just the advancement into The World Beyond is advancement, no, advancement, a much wider spectrum of understanding, it has.

[8:8:58] It is the advancement of ourselves that be of another dimension to advancement and its principles.

[8:8:59] It is the procreation between ourselves that be of advancement.

[8:8:60] If declining, are we, in number of minds, then what and how and when are we to achieve advancement and retain mastery of artificialities?

[8:8:61] Despite the anti-humanities of this world saying so, never enough of peoples anybody, is there, for more minds, means more knowledge and more labour and more possibilities of understanding, there be.

[8:8:62] Do not waste time for all we can know of the sins of death and destruction and murder and pillage, for faith and morality in accordance with society, do set the foundations of those primitivities.

[8:8:63] The words of this work, do not be of that, for beyond that are we now, and so faith will do its work to make of those what it will.

[8:8:64] If to advance, are we, we must understand the importance of knowledge, yes, as the greatest key, yet too, communication as a valuable map to the advancement of peoples, for the betterment of peoples.

[8:8:65] Communication is an entity already well mastered within many peoples and places of the world, yet of advanced communications, we must seek, for the advancement of humanity to direct toward humanity's peak.

[8:8:66] With this, holograms of the physical and the mental mind, we must create in order to understand advancement and infinitely their span must reach in order to be utilised in the ever-expanding existence of humanity.

[8:8:67] To the negativisms, we do come again, for one and many do say of unsuitability to humans, here mistaken are they, yet again.

[8:8:68] The Worlds Beyond our world do seem so very tough, yet that is because our world is so special and the homeland of the human hand.

[8:8:69] But if one looks at The Worlds Beyond our own, with the principles of advancement, and all others in mind, then one will see surely the potentialities of The Worlds Beyond our own.

[8:8:70] Potential, they are not alone, yet with the knowledge of humanity and the strength of industries and changes and the overcoming of challenges, it be quick to understand that change, we will, these worlds of pure wonderment and form societies of uniqueness, never seen before.

[8:8:71] Think, think, think, my dear friend of humanity, think for the possibilities with your right mentality, nothing be not and the terras of The World Beyond, will be humanity's, they will, if of principle and growing knowledge are you.

[8:8:72] For the betterment of peoples, make those worlds our own.

[8:8:73] For the betterment of peoples, establishment of states beyond our states.

[8:8:74] Most of all else, for the betterment of peoples, never forget to think, for your Divine gave you a mind, use it as destined so.

[8:8:75] Standing for All, as All, yet be only One.

[8:8:76] Beyond, beyond, beyond, we look and the beyond is where we must go, yet do not forget The Sustainer of the world in which humanity's homeland be.

[8:8:77] It be easy to forget about the star we are so close to, yet never forget for without that star, all would be nothing and life would be none.

[8:8:78] Yet, worship The Grand Sustainers, too, in all other places so.

[8:8:79] Look up at the night before dawn and you shall see all before your eyes.

[8:8:80] They are The Sustainers, the retainers of life and the worshipment of them is true.

[8:8:81] True to be a wondrous belief, for the belief in life you choose.

[8:8:82] Let that belief be called Solarism and never let it wane, for The Divine did place these majestic lights to support all life for all days.

[8:8:83] And another wondrous love to have, perhaps beyond all others, is the love of The Cosmos and all its wonderments, the parent of all things that be.

[8:8:84] It is The Cosmos of Wonderments that does provide with the life, love and ideas of all that makes us so, yet when one understands the wonderments of The Cosmos, one can true know, the peoples place is up there with it and that is the core of the true and principles.

[8:8:85] Let the love and belief of The Cosmos be called Cosmosism, for love it, and the galaxies so majestic and divine, all shall and must, for they feed us with the imagination of all that is beyond, yet not beyond our will.

[8:8:86] The final love of belief of The World Beyond, be that of observancy.

[8:8:87] That, within its core, be the seeking of knowledge of The Cosmos.

[8:8:88] A beautiful belief this shall be, for need it, to advance, all will.

[8:8:89] To look beyond, from the comforts of the homeland, an important part indeed, it be.

[8:8:90] To be called Astronomism this belief shall hereby be, yet it intertwines with the natures of all other beliefs it does, for its emphasises the belief of the expansion of the mind.

[8:8:91] Placed its philosophy, should be, in the centre of all societies, for its message is universal in its essence; for the betterment of peoples does the philosophy of Astronomism work, for the expansion of the knowledge of The World Beyond, and know, shall all, when its work is done, the wonderments of the All Beyond.

Introduction to Contology

[9:1:1] In Astronist Philosophy, the traditional philosophical branches of Epistemology and Ethics are discussed within The Nonodoxy of The Grand Centrality, and are subsequently considered under the same overarching newfound subject, henceforth known as Contology.

[9:1:2] Astronist Ethics and Astronist Epistemology explore moral principle and knowledge respectively, in accordance with an Astronist perspective on such topics.

[9:1:3] It is the purposity of The Nonodoxy to outline, and conduct a discourse about the newfound philosophical discipline of Contology.

[9:1:4] Contology is founded upon three distinct concepts, which are henceforth known as conelements, that also subsequently form the foundations of the Astronist approach to Ethics, as well as Astronist Epistemology.

[9:1:5] The first of the conelements is henceforth known as Contemplence; this is the principle that rash thought, coerced thought, and bribed thought are not thought at all, instead, true thought is based upon longevity, mullence, context, and purity.

[9:1:6] Essentially, contemplence holds that all our initial thoughts when faced with some decision, problem, or opinion are only the immature ideas at the front of our minds; only by mulling, contextualising, and purifying such thoughts can they become more greatly developed.

[9:1:7] Contemplence advocates for the honing of our thoughts, and for the approach to knowledge and thought, or any decision, or situation, with a mind of mullence.

[9:1:8] There are, however, situations in daily life whereby decisions have to be made in short instances with acute contexts and consequences.

[9:1:9] Contemplence approaches this circumstance by the argument that a properly developed mind of contemplence would have the ability to speed up their decision-making process by compressing their process down into its most necessary segments.

[9:1:10] Nevertheless, contemplence calls for a greater emphasis on that which is henceforth known as longthought; an approach to thought holding that only notions about a certain opinion, event, or proposed concept, that have been mulled over across a period of time suitable to the individual, can be considered valid due to the person's proper analysis consisting of longevisation, mullence, contextualisation, and purification.

[9:1:11] To break this down further, longevisation is the process by which an individual refrains from exerting their conclusive thoughts about a particular topic in the immediacy,

but instead, extends the time by which they are to conclude their thoughts, especially in order to give more time for new perspectives, ideas, opinions, informations, and contexts to make themselves known to them.

[9:1:12] Mullence is the process by which an individual either consciously, or unconsciously contemplates a particular topic that has previously been proposed to them, over the course of their daily life, and is itself a product of the process of longevisation.

[9:1:13] Contextualisation with regards to contemplence is the process by which an individual builds an abstract world around a particular event, concept, or opinion in order to place it into its own context in order to derive meaning, motive, and intention for the event, concept, or opinion in subject.

[9:1:14] Purifications with regards to contemplence is the process by which an individual extracts the most relevant, true, logical, rational, and justified elements of an event, concept, or opinion in order to arrive at a sharper, and better honed conclusion about that event, concept, or opinion in question, and acts as the postcursor to contextualisation.

[9:1:15] Contemplence, by the successful outlining of these four chronological processes, is developed as a method, or approach to thought-making, and conclusion-making, and can be utilised in any circumstance with the utiliser being able to trust the conclusions they arrive at through the knowledge that they have carried out these four processes.

[9:1:16] The second conelement that contology, and as a result Astronist Ethics and Astronist Epistemology, are structured upon is the concept of Deservence.

[9:1:17] Deservence is a principle that can be applied to all ethical scenarios, and holds that a greater emphasis should be placed upon whether a someone, something, or some place deserves to receive rather than just blindly rewarding without any consideration given to the surrounding circumstances.

[9:1:18] Deservencial approaches are perhaps best exemplified when appropriated to providence of charity; in deservencial terms, there are two types of charity.

[9:1:19] The first of which is henceforth known as Blind Charity which includes all types of charity which the giver is not communicated as to where directly their funds are being given to, so includes mass charity, as mass charity often only provides a general overview of their charitable works.

[9:1:20] The concept of Blind Charity also includes all charitable giving that is afford to those whom either do not appreciate, or do not deserve the benefits of the charitable fund provided to them.

[9:1:21] The third group of ideas within the concept of Blind Charity also includes all charity that is given without consideration of how those funds will actual assist the

receiver, which is a branch of Blind Charity that stems from the lattermentioned principle holding that mass charity will not help those whom are most vulnerable, and those whom are most in need to establish, or rebuild their lives.

[9:1:22] The second type of charity in a deservencial context is that which is henceforth known as Arrant Charity; charity that bases itself upon that which the receiver deserves, providing the receiver that which they can use by their own motivations to alleviate their predicaments, and charity that positions funding as the postcursor to the understanding of each individual's actual needs.

[9:1:23] The principle issue with just giving money to those in need is that they often will not have the means, motive, or opportunity to utilise that monetary resource; both to its full capacity, and on that which could help alleviate their circumstances.

[9:1:24] The traditional criminal investigation term of 'means, motive, and opportunity' is an important concept within this contextualisation as it identifies the three elements of action that leads to the achievement of prescribed goals.

[9:1:25] Simply exemplified, the Astronist approach to charity is also based upon the idea henceforth known as bromition in Astronist Ethics; providing the needy with the tools, by whichever form such tools take, so that they can alleviate themselves from their problems, rather than relying on and expecting others to alleviate their problems for them.

[9:1:26] Bromitional thought is a major cornerstone of Astronist Ethics, and can be derived as an undertone throughout the entirety of many Astronist ethical concepts and principles.

[9:1:27] From the earlier insentensation, the concept of tools must be further illuminated; tools, or means by which an individual can reach their desired state, can take many forms, and are certainly not limited to money alone; in fact, to confine the tools of alleviation to money alone is the mistake of an individual who must first look at their own priorities before contemplate those of others.

[9:1:28] The 'means' part of the 'means, motive, and opportunity' paradigm can manifest themselves into knowledge and information, a particular emotion, a perspective, or some physical feature.

[9:1:29] Whichever form the needed tool is destined to take for an individual, the bromitional principle maintains that the individual is better prepared for the austerities of life, if they are supported in the achievement of these tools, and then are left to carve out their own paths to achieve their goals.

[9:1:30] Take this exemplar; providing a homeless man with money and then leaving without any direction how this money will be spent, how best to utilise this resource, and how best to preserve this resource is chaining him to the same cycle that your heartfelt pity encouraged you to provide him with the money initially.

[9:1:31] Instead, approaching this same scenario bromotionally, the outcomes are much different; if, at the same time as giving the homeless man the money, we also offered it on the condition that we would show them how best to utilise it, or that instead of providing money altogether, we provided them with the opportunity of a job interview, or provided them with the motivational encouragements required to feel confident, worthy, and able to better themselves by their own means.

[9:1:32] The difference in the outcomes by this example are undeniably more beneficial for both the homeless man as the receiver, and for the giver too, as they have played a much greater role in the reconstruction of the homeless person's life than simply providing them with money.

[9:1:33] Money is an important example of means, but if neither the motive, nor the opportunity are also provided, then there is little sensicality in providing the means alone.

[9:1:34] The means, motive, and opportunity paradigm are dependent upon one another for their successful application in actual circumstances; providing one without the other is tantamount to providing a book to a person whom cannot read, and thus, cannot benefit from the wisdom of its words.

[9:1:35] It is also important to discuss the different types of obstacles in this and other kinds of circumstances of hardship; there are sometimes institutional obstacles in place that do not allow certain individuals to prosper beyond a certain stage.

[9:1:36] These such obstacles should be met with political force, an incomparable amount of bravery, and are often led by the vocation of the few that begin movements to prop up the many, with no thought to their own safety, status, or reputation; inarguably the greatest form of charity I'm sure we would all agree.

[9:1:37] Other times, there are social and cultural obstacles that do not allow for certain individuals to marry whom they wish, interact with whom they need in order to enter the circles they require to achieve that which they wish, or act the way by which they need in order to achieve their goals.

[9:1:38] Such obstacles are often much harder to change that the institutional ones, especially so if they have existed for a lengthy time and are engrained in the minds of the people, though hope shall prevail, as it always must, for there will always be those whom agree with you in your efforts as this is the nature of the human mind, and is supported by the probability of the population size.

[9:1:39] Neither of these circumstances of obstacle should deviate from the bromotional principle for even in these most extreme of circumstances, the principle wherein individuals must find the fire within themselves to act, change, and succeed still stands, if

not stronger so in these types of scenarios, as has been seen in the histories of these such circumstances.

[9:1:40] As one of the most important points of Astronist Ethics, you shall find that throughout this ontological discourse, bromitional principles will be the underpinning factor, even if the term itself is not explicitly used.

[9:1:41] The purpose of this discussion about charity and its nature must be clarified herein that neither meant to condemn those who conduct charitable works, and nor is it to condemn those who support such charitable works by donating their money to them.

[9:1:42] Instead, the purpose is to outline the problems with present day charity from an abstract and philosophical viewpoint as drawn upon by ideas of the nature of humanity, in order to construct solutions by introducing the Astronist approach to charity, as detailed by the concepts of deservence.

[9:1:43] The application of the principle of deservence is henceforth known as deservation, and its applier is henceforth known as a deservencer, but how are we to know the criterium on which we judge deservence?

[9:1:44] That which is known as the Apparatus of Deservence is henceforth devised as the official criteria upon which all deservencial applications must be compared against if they are to be considered proper usages of the deservence system.

[9:1:45] The firstmost basic fundament of the apparatus is that for someone to deserve something, they must first prove they deserve it; proving equates to action so the individual must not just talk about that which they are going to do, they must plan, and act out in order to prove.

[9:1:46] The secondmost basic fundament of the apparatus is that for someone to deserve something, they must be appreciative of that which they receive in order to be deserved of it; this means appreciating its entirety; that which went into the making of the reward; the time, the effort, and the means, motive, and opportunity of the giver that is now be afforded to the receiver.

[9:1:47] And finally, the thirdmost basic fundament of the apparatus is that for someone to deserve something, they must be priorly given the motive and the opportunity in order to utilise that which they are deserved of in the most resourceful way that it may be utilised; this links back to the previous point of the necessity of the entirety of the 'means, motive, and opportunity' paradigm.

[9:1:48] It is important that people must be shown the level at which they must reach before they are deserving of a certain reward, but whether they are shown how to get there is a decision that must be made by the operator of the deservence mechanism.

[9:1:49] It is also important that each of these fundamentals of the Apparatus of Deservence are implemented, or else deservence cannot be properly applied; deservence is relevant by just its theoretical means alone, but it also be exemplified and understood by its real world application, as is the same for all other concepts of ethics.

[9:1:50] The third and final conelement of contology is that which is henceforth known as ofference; the principle wherein a greater emphasis is placed upon that which an individual is offered, or that which an individual is offering as a necessary basis for the derivement of questions relating to society, productivity, employment, relationships, and in any other contextualisation whereby there exists two or more variables, one of which is the offerer, and the other is the offeree.

[9:1:51] It is a fairly commonly held conclusion to derive that our entire civilisation is based upon giving and taking; offering and receiving; by the concept of ofference in Contology, especially so as part of Astronist Ethics, a great amount of emphasis is positioned upon offerings.

[9:1:52] That which something, or someone is offering is something I feel that is not often enough questioned and contemplated which is why ofference has been established as a conelement.

[9:1:53] All successful relationships, transactions, and interactions must be based upon offerences; the school and the student; the employer and the employment; the society and its citizens; the husband and the wife.

[9:1:54] This does not mean to say that this is prevalent throughout all circumstances in our civilisations; in reality, there is perhaps more injustices of this principle than there are justices of it; herein, the problem arises itself without much need for in-depth contemplation.

[9:1:55] Essentially, the principle of ofference states that we must look towards that which people, groups, institutions, and philosophies are offering us in return for our attentions, interactions, time, funds, and energies.

[9:1:56] Ofference can work on three distinct levels; Coherent Ofference, that which is logically, consistently, and clearly presented with clarity of motive, purpose, and intended outcome.

[9:1:57] The second of the Levels of Ofference is that which is henceforth known as Exertional Ofference; that wherein the offer is not clearly expressed, and that requires both physical, mental, and monetary efforts and energies in order to obtain.

[9:1:58] The third of the Levels of Ofference is that which is henceforth known as Futile Ofference; that wherein the offer is neither clearly expressed, nor are the benefits

substantial enough for the high amount of physical, mental, and monetary efforts and energies required in order to obtain it.

[9:1:59] For one to be approached with a job offer, the extent to which the employee is expected to work, and the qualifications, responsibility, and experience required either must correspond to the extent to which the employer is willing to pay the employee, or must instead correspond to the extent of the proposed possibility of a bonus, a promotion, or by the extent of the inference by which the employer extends to help the individual in their overall career, such as by introducing them to the right people to help them.

[9:1:60] The entire goal of ofference is to avoid an imbalance between that which is being offered and that which is expected to be offered; any imbalance should be extinguished if the offerer wishes to retain any accepters.

[9:1:61] The three conelements of contology are essential to understanding the most basic fundamentals and introducing the philosophical discipline to new learners for the conelements are which form the foundations of the discipline.

[9:1:62] Contemplency is the extent to which a person is able to conduct proper contemplation in alignment with the principle of contemplence.

[9:1:63] Deservency is the extent to which a person is considered to be deserving of a particular reward, or benefit as in alignment with the principles within the concept of deservence.

[9:1:64] Offerency is the extent to which an offer is considered to be balanced; the less offerency, the less balanced the offer is considered to be, as in alignment with the principles within the concept of ofference.

[9:1:65] Contemplencial, deservencial, and offerencial concepts shall be contemplated and shall underpin this entire discourse; we shall return to their discussion again, as this has been a short introduction to the fundamental concepts that they each propose.

—

[9:1:66] Herein and now, that which is known as the common good, or the greater good, must be addressed and viewed upon by and from an Astronist approach.

[9:1:67] The way by which Astronarian social structure is organised provides a great centrality to the concept of the common, or greater good, but in a newfound way from traditional approaches to the concept.

[9:1:68] There are five aspects to Astronarian societal structure and perceivence; the first of which describes the individual; the second of which describes their counterparts; the third of which describes the civilisation in which they reside how it currently functions; the

fourth of which describes the idealised civilisation as constructed by the dominant ideology, or philosophical system; the fifth of which describes one's own construction of their idealised self and the role they shall play in their civilisation.

[9:1:69] These are henceforth known as The Five Rings of Civilisation in Astronist Ethics and Astronist Social Teaching, and are best visualised in a concentric shape.

[9:1:70] Rings two, three, and four constitute that which is henceforth known as the exonic good in Astronist Social Teaching, known in mainstream as the common, or greater good, as separated from that which is henceforth known as the inonic good, known in mainstream terms as the individual, the personal, or the internal.

[9:1:71] Astronist views about the common/greater good, and how an individual should both interact and react to this concept are best specifically outlined by the conelements of contology, but they should be applied to a society-wide scale.

[9:1:72] The main importance that must be clarified regarding such concepts of common/greater good from an Astronist perspective is the principle that in order to help society, the necessary precursor is that we must be the greatest versions of ourselves to do so.

[9:1:73] Furthererso, nobody can hope to positively and completely contribute to the civilisation in which they reside to the best of their own resources and abilities if they do not first become the best and the most acceptance, understanding, enknnowledged, and wise version that they can currently possibly become.

[9:1:74] However, the key overarching, and interconnected principle resides in that during the process of someone becoming the best version of themselves, they will either knowingly, or unknowingly be contributing positively and completely by just attempting to become the best version of themselves; this concept is henceforth known as contributism, and forms a newfound philosophical school of contributistic thought.

[9:1:75] In reality, the best version of oneself is merely an illusion of our innermost anxieties; truthfully, we can never reach the absolute perfect version of ourselves because there will always be something more that we can perfect.

[9:1:76] I do not wish to digress here into the philosophy of perfection, but the principle stands that in just the continual attempt to be the best version of ourselves, we contribute more to society than we perhaps even truly realise.

—

[9:1:77] The can and the will, and the cannot and the will not.

[9:1:78] The moment you believe you have earned a reward is the very moment you should know that you haven't.

[9:1:79] Never exhaust your resources for a battle you know is already lost.

[9:1:80] Never rise to a duty you know you will not fulfil.

[9:1:81] Why is it that the best of people have the worst of fates?

[9:1:82] Why is it that we often neglect the love for those whom do the most for us and whom think the most of us, and we praise those whom have done nothing for us and those whom think the least of us?

[9:1:83] Open up your heart to the world, and let the world steal it.

[9:1:84] Allow your mind to run wild with the ideas this world and the world beyond offer you.

—

[9:1:85] An important part of Astronist Ethics that must be addressed within this discourse of contology is Medical Ethics, and it is this that shall be discussed within this particular discourse which, together with all the other discourses, help to form the entire article of contology.

[9:1:86] We structure Astronarian Medical Ethics upon four different orientations; these are singularism, binatism, professionalism, and relativism-individualism, and the definitions of which are herein outlined.

[9:1:87] Singularism is henceforth known as the idea that a person can only speak of, and make decisions, about their own health issues, and so no one person can speak of another person's health issues.

[9:1:88] Binatism is henceforth known as the idea that those whom cannot speak for themselves, or make sound decisions, at total number of five external, neutral, and mutually recognised individuals, at least three of which must be medical professionals, must make their decision in isolation, and each of which has equal footing when approach in a binatistic way.

[9:1:89] Professionalism is henceforth known as the idea that the medical professionalism of doctors, nurses, and specialists ultimately surmounts any other non-professional opinion, especially in cases wherein decisions must be made in short spaces of time.

[9:1:90] Relativism and individualism are not highly regarded or referred to within Astronist Philosophy due to the fact that Astronist is not oriented towards such perspectives, however, in Astronist Medical Ethics, relativism and individualism play central roles.

[9:1:91] In this context, relativism constitutes that no one case, and its circumstances, and consequences can be absolute over another, meaning that one case cannot be compared to another in this context due to the uniqueness and complexity of each case, and the solemnity of the consequences of such decisions.

[9:1:92] As the necessary postcursor to relativism in this context, individualism constitutes that all medical ethics decisions must be taken in regard for the specific circumstances and context of their particular case, and should be considered only according to the individual consequences of any such decisions made.

[9:1:93] Astronarian Medical Ethics is founded upon four other universal presumptions that are at the basis of all other decisions regarding medical ethicality.

[9:1:94] These four presumptions are already long established concepts within Medical Ethics, and are confidentiality, informed consent, communicatory importance, and proper accreditations.

[9:1:95] Astronarian Medical Ethics takes an entirely logical and rational approach to the decisions made regarding medical treatment, and thus forsakes all religious, political, spiritual, cultural, and social appendages that considered to be distractions from the central issue of what is medically moral, the reality of the situation, and the actual consequences of medical decisions.

[9:1:96] Manoeuvration relates to the way in which particular scenarios should be handled, rather than providing a framework of understanding as is outlined by the four orientations of singularism, binatism, professionalism, and relativism-individualism.

[9:1:97] Manoeuvration consists of a systematic approach to medical decision-making and takes into account only the logic and rational aspects of the situation; as in, if a particular decision is made, the consequences will be such and such.

[9:1:98] The entire principle of Astronist Medical Ethics is to prevent as much death, and mental and physical pain as possible, as are most other medical ethics structured, but the key difference with Astronist Medical Ethics is the removal of all emotional hysterics from the situation, and the removal of all non-medical and non-logical consequences from the equation.

[9:1:99] Manoeuvration, also henceforth known as manoeuvrism, is the system of approaches towards different medical difficulties and situations from an Astronist, logical, and rational perspective, and is chronologically ordered below: Medical Issue - Decisional Range - Pain Degree - Consequential Range - Concomitance.

[9:1:100] The medical issue relates to the immediate health issue that is causing a decision to be made, and within this, the extent of severity, longevity, and affliction must be entirely considered as separate components of the same issue.

[9:1:101] It is the responsibility of the designated medical professionals to provide patients with all relevant informations regarding the medical issue, and what they are expected to experience, as well as satisfying the patient with information about severity, longevity, and affliction.

[9:1:102] At this stage of the manoeuvration process, it is important that the medical professional remains impartial and strictly adheres to their current medical knowledge on the particular health issue at hand.

[9:1:103] Decisional Range is the second step of the process of manoeuvration and relates to the set of potential decisions that now face the patient; the medical professional must describe all of these decisions impartially.

[9:1:104] Both the third and four steps of manoeuvration, henceforth known as Pain Degree and Consequential Range respectively, are the necessary postcursors to the Decisional Range, and act as part of the Decisional Range.

[9:1:105] Pain Degree is the extent to which a certain medical decision will cause pain to the patient, and the Consequential Range is the group of consequences associated with a particular medical decision.

[9:1:106] Concomitance, the fifth and final step of the manoeuvration, relates to the aftermath of a particular decision made and when one of its consequences does occur, and how this shall effect the patient, and their life afterwards.

[9:1:107] The manoeuvristic approach to such medical dilemmas is to take rational and logical steps to come to a definite, and justified conclusion that reduces harm and pain to the lowest it can possibly be reduced to.

[9:1:108] The different aforementioned orientations of singularism, binatism, professionalism, and relativism-individualism are applied to the system according to how the situation is best considered to be approached.

[9:1:109] Each of the elements of the system must be considered in their entirety if the system is going to be successfully utilised; if each of the elements is only partly considered then the conclusion that is therefore reached cannot possibly be a complete, encompassing conclusion.

[9:1:110] The practice of euthanasia from an Astronist philosophical and ethical perspective must herein and henceforth be applied to the aforementioned system with the main

unique contention in regard pointing towards the contention between the extent of pain and the inevitability of death.

[9:1:111] In this regard, an orthodoxical Astronist perspective would employ a new orientation, which can also be applied to other scenarios, and is known as naturalism.

[9:1:112] Naturalism can be found as an orientation in other parts of Astronist Philosophy, and generally places an overriding emphasis upon nature taking its course, and not interfering with natural occurrences, and in this context, it is no different.

[9:1:113] A naturalist approach to euthanasia, which is most widely accepted by Astronist Ethics and Philosophy, is to allow the natural demise of one's physical and mental self in tune with the natural functions and occurrences of one's body and mind.

[9:1:114] It is very important to make the distinction between naturalism and religious reasons for the discouragement of euthanasia; the naturalist reason allows nature to take its necessary course, but the religious reason is to allow nature to take its necessary course so as not to defy god's will.

[9:1:115] This makes the two distinctions between the two true naturalism and its religiously, or divinely infused counterpart.

[9:1:116] The tenets of naturalism are an important principle throughout the entirety of Astronist Ethics and Philosophy; by this notion, euthanasia does not comply with the principles of naturalism as it describes an unnatural form of death; one that is predetermined, planned, and administered.

[9:1:117] No matter the pain through which we endure, it is no different from the pains of people from the past, the present, and the future; no amount of pain is tantamount to death for death is finality, whereas pain is not.

[9:1:118] This does not mean that some euthanasias are conducted without any love, respect, or appreciation for the euthanised person, but no matter the emotion, the illness, or the context involved, the fact of reality remains that euthanasia is not natural death, it is orchestrated death.

[9:1:119] However, let us put euthanasia into context; will The Cosmos collapse if one enacts euthanasia? No. Will The Earth continue to orbit The Sun? Yes. Will one's family be distraught? Yes, but they will continue to live through the days, months, and years beyond your death.

[9:1:120] The message here is that one can view euthanasia as an unnatural prescription to death, and it most certainly is, but its consequences are simply, and even harshly, minimal at best; it affects the euthanised individual, it affects their family, and it may affect the civilisation in which they lived their life, but beyond this, the extent of the impact of their

euthanasia is largely one dimensional; impacting only one individual, and at most, impacting only on family.

[9:1:121] Yes, it is the conviction of Astronist Ethics to protect life in all its aspects, but there are those of us who, when they hold something in their minds that they shall do, they will go to any length to achieve it.

[9:1:122] The Astronist approach can also be viewed as departing from emotion, but the truth remains that even in the most emotional of situations, logic and rationality must prevail in the development of proper conclusions.

[9:1:123] No matter what we feel about something, the reality always remains and prevails for reality is not dictated or shaped by the emotions we feel; if the goal is to minimise death and pain, and euthanasia represents the contention between them both, then all that we can logically conduct is the prevention of death, as the ultimatum of life.

[9:1:124] Next, we turn to the medical scenario of Life Support Issues, specifically the issue of when it should be disabled, and who should physically disable it, or give the confirmation to disable it.

[9:1:125] From the Astronist orthodoxical and naturalist perspective, life support is only valid in the immediate aftermath of a serious accident, or after the failure of one of the major organs, and should not be used as a means to lengthen the natural life of a person if they would have otherwise perished.

[9:1:126] From this view, the point at which life support becomes an unethical situation is when the unconscious individual cannot function without the life support, and they would have to be on life support for months before donor was available.

[9:1:127] This is crucial to the naturalist viewpoint because those months between the diminishing of the person's health and the donor availability is time that the individual would not be able to naturally function alone, and would have naturally died, so in this sense, the life support is not supporting life, it is prolonging life.

[9:1:128] A more mainstream Astronist viewpoint is that of survivalism which, in this context, means that the individual on life support would be kept on life support for a long as there was no possibility of a donor availability, and holds onto the chance that a donor may come along.

[9:1:129] This notion is emboldened by the argument that if someone's life support was disabled, and the next day, a donor was available, for the rest of the family's lives, they would be haunted by the prospect that their relative would still have been with them, if they hadn't been so quick to judge the situation.

[9:1:130] Perhaps it is best and more Astronist to apply the principle of contemplance in this situation for the greatest amount of time and thought contemplated is a greater amount of logic, and rationality derived and concluded.

[9:1:131] A person that is not legally entrusted to do so cannot disable one's life support machine because they have not been granted that responsibility; in this event, this would fall under the guise of professionalism, and it would become the responsibility of a medical professional to make the decision when all avenues of survivalism have been covered without any reward.

[9:1:132] In Astronist Ethics of Life Support Issues, a specific differentiation is placed upon the person who confirms the disablement of the life support, and the person whom actual conducts this.

[9:1:133] If a legally authorised person, with the responsibility of confirming whether or not to disable the life support, is present and then they should be the ones to actual conduct this action.

[9:1:134] If they wish not to conduct this action, then there should be a medical professional present to conduct this action for them once the confirmation has been made absolute.

[9:1:135] In the context of Life Support Issues, the main contention from an Astronist approach is that of naturalism and that of survivalism; the first of which expresses the importance of not taking the place of nature and prolonging life beyond its course, and the second of which expresses the importance of protecting and preserving even the possibility of life and survival at all costs.

[9:1:136] Whether from a naturalist, or from a survivalist approach, they are both Astronist angled approaches, and both deserve greater in-depth analyses from Astronist Ethicists.

[9:1:137] Now moving on, it is important to denote that dignity must be the central component of all medical ethics; whether they patient able to uphold their own dignity, or not, it is important to uphold their dignity from your own perspective, whether that be as the medical professional, the relative, or the friend.

[9:1:138] Without a sense of dignity either portrayed by the patient themselves, or given to them by the people surrounding, the decision-making process becomes lopsided towards viewing the patient, the human being with feelings, ambitions, and fears, as something less than human because the dignity that all humans and sentient life deserves is taken from them.

[9:1:139] From the tone of the Astronist approach, it may be derived that emotion isn't given emphasis in Astronist Medical Ethics, but the emphasis on the importance of dignity

is the manifestation of emotion because it is the manifestation of what makes us human; a sentient species on The Earth.

[9:1:140] That is why dignity is such an important concept to follow within Astronist Medical Ethics, and wider Astronist Ethics in its entirety.

[9:1:141] Underlining all that has been said, the primary ambition of the Astronist ethical approach is to save, enrich, and appreciate life for what it is; other approaches choose death too rashly as the only option.

[9:1:142] In Astronist Ethics and medical ethics, life is chosen always because with life, there inevitably follows a whole consortium of opportunities and possibilities; as aforeaffirmed, death is our ultimate finality, of which opportunity and possibility are squandered when death occurs.

[9:1:143] In whatever case we came across, to save the life to help it survive until the next day of possibility and opportunity is at the heart of Astronist Medical Ethics, and the survival of life is something that all Astronist Ethicists, and all peoples of the world, share a common and universal love for.

[9:1:144] As aforeaffirmed in an earlier disquisition of The Grand Centrality, the topic of abortion has been condemn, and herein established are the four principles of why such practices are condemn from an Astronist perspective.

[9:1:145] In the discourse entitled as The Five Bonds of Society, the Astronist moral approach to the topic of abortion is more poetically and philosophically outlined, and it is therein that one can find the Astronist attitude towards abortion practices.

[9:1:146] The words of that discourse outline the Astronist orientation towards abortion from a logical, rational, and Astro-philosophical perspective, and should be referred back to when anyone wishes to understand the Astronist perspective on abortive practices.

[9:1:147] There are other topics relating to Medical Ethics that are not directly related to health issues, or abortive practices, and the first of which is that of homosexuality.

[9:1:148] Throughout all the world throughout all human civilisation in all the faiths and the history of states, there has been a severe contention regarding homosexual acts.

[9:1:149] One should follow their religious beliefs above The Philosophy of Astronism, as aforeaffirmed and as part of the introductorys of The Grand Centrality.

[9:1:150] The approach to this issue from an Astronist perspective is based upon prioritisation, and considers the issues of abortion, and euthanasia to be of here concerns than that of homosexuality as issues of morality.

[9:1:151] This is primarily because homosexuality is has been medically proven as caused by biological factors and is not a choice of the individual.

[9:1:152] The point of contention between homosexuality and Astronist Ethics lies in its place within culture and civilisation, and says that people, especially the young, are more susceptible to believing they are homosexual due to the environment around them and the homosexual people around them when homosexuality is more widely accepted within a culture.

[9:1:153] This does not mean to say that homosexuality is wrong, it just constitutes that those whom are most mentally vulnerable may become sexually frustrated, feel isolated, and generally confused about their own identity when they are surrounded by not only homosexuality, but many different types of sexual orientations.

[9:1:154] The damaging psychological effect on these people is inevitable, which is the only contention that Astronist Ethics has with the over-sexualisation of civilisations, and over-promotion of homosexuality.

[9:1:155] However, from the Astronist perspective, we must align with the notions of science, logic, reason, and reality, and all of these point towards the biological causes of homosexuality.

[9:1:156] Whether people are homosexual, heterosexual, or any other type of sexual orientation, as long as they are not causing death, or pain to others, then there is no reason for them to be discouraged by the Astronist ethical and philosophical perspective, unlike the issues of abortion and euthanasia which are both issues involving pain, and death.

[9:1:157] Since its inception, the social philosophy of eugenics has been criticised and condemned by numerous ethicists, politicians, and philosophers, and although the Astronist Tradition also condemns mainstream eugenics, it advocates for the establishment of its own version of eugenics henceforth known as Conscious Eugenics.

[9:1:158] This Astronist approach to Eugenics follows the idea that each and every individual is the best version of themselves when they are born, and whether they maintain this best version of themselves is based upon the decisions they make in their life to do good or bad things, productive or unproductive things, and positive or negative things.

[9:1:159] This principle constitutes that if we consciously make good decisions for a productive and positive lifestyle, then we are consciously improving the quality of our mental and physical health, our worldviews, and the extent of our ambitiousness, motivity, and in turn, will impact the extent of our contributions to the civilisation in which we reside.

[9:1:160] This does not have any genetic standing, but this is a conscious improvement of ourselves and the quality of our lives, and so, this must have some effect on the children that we conceive because if we healthy parents, then we are more likely to conceive, and bring up children who are healthy and have the same engrainments as their parents do.

[9:1:161] This is a way of establishing a type of eugenics that does not require the distortion of genetic make-ups and this approach to eugenics is in no way about race, physicality, or appearance, it is about creating the healthiest, the most productive, and the most happy populations possible.

[9:1:162] As aforeaffirmed, and herein affirmed again to clarify, Astronist Philosophy condemns all forms of sterilisation, discrimination, and genetic distortions as are promoted by mainstream eugenics, and only advocates for its own non-genetic, and wholly psychological, physical, and motivational approach, and it is of the interest of contologists, and Conscious Eugenicists to study this particular topic in much greater depth than this introduction provides.

—

[9:1:163] Before we begin to conduct discussions about anything deeper into Astronist Ethics, it must first be outlined that Astronist Ethics has a two-part structure made up of two perceivences; the first of which is henceforth known as Microethics, and the second of which is henceforth known as Macroethics.

[9:1:164] Microethics is a category which all internal, personal, individualistic, and family-related ethics falls into and studies ethics from a non-society level; from an individual level, and family sized level at its widest extent.

[9:1:165] Macroethics is a category which all external, societal, and civilisational ethics falls into and studies ethics from a national, international, and planetwide levels.

[9:1:166] It is important to understand these two main categorisations of Astronist Ethics as it can become an important tool of organising ethical issues, especially those with concepts that overlap across both categories, as concepts that are microethical can be very different from their macroethical equivalents.

—

[9:1:167] We must also address with solemnity the issue of gun control; this has become a worldwide epidemic due to the accessibility, the immunity, and the totality of disregard for the severity of these murderous objects.

[9:1:168] This really shall be a short discussion with logic and rationality prevailing over the entirety of this issue.

[9:1:169] It is only logical to notionise that that which is legalised is that which is intended to be used; that which is made accessible will be accessed; that which can be used to kill, will be used for such a purpose.

[9:1:170] A gun is no different than any other object with a function that is inevitable to its purpose; medicines are taken to remedy; drinks are consumed to quench thirst; books are read to gain knowledge.

[9:1:171] Each of these products has its own necessary function that fulfils the purpose for its existence; guns are no different in this regard, except their functionality holds much greater severity of consequences than the other products aforementioned.

[9:1:172] One could argue that a gun's purpose is there to defend, but due to the severity of the consequences of this particularity, those only with trained hands and minds can be bestowed with such responsibilities for which they are properly qualified.

[9:1:173] Due to the number of mass shootings throughout countries of civilised and established governments, there remains no validity in the argument that arms are borne for defence; too many times these weapons have fallen into the wrong hands.

[9:1:174] It is only by a simple adherence to logic that we conclude that there exists no grounds for the civilian possession of guns in a society that is prosperous, trusting, communicative, and well ordered.

[9:1:175] Further so, this is supported by the notion of variables, in this case being the accessibility and possession of guns.

[9:1:176] If the variable of this equation is removed, then the result of gun violence shall be dramatically decreased; the higher the rate of the variable, the higher the probability that guns will end up in the wrong ownership.

[9:1:177] To all responsible gun owners, one must think about the state of the society in which they live if they feel they must bear arms to feel safe, and the revelation of this more deeper rooted issue is certainly not fixed by the dissemination of more guns.

[9:1:178] Removing the variable also removes the possibility of the problems occurring; there is no more simple logic than this of all the notions discussed within The Grand Centrality.

[9:1:179] There is a cultural shift that needs to be made before the problem of gun violence is squashed for good.

[9:1:180] With the amount of severity that this topic has for the lives of people, and considering what has happened in militarised societies such as mass shootings in schools, a severe has to be retaliated in return.

[9:1:181] This means that all civilian gun ownership must be legally banned and only attainable by those persons using them for professional purposes, and not just constituted by a licence, and this must be engrained into the culture of the civilisation from the education of the youth as the future politicians.

[9:1:182] How passed the corrupted and greedy minds of the politicians would this change be passed, one could argue?

[9:1:183] As aforementioned, if young politicians are taught both the acute dangers, and the destructive consequences of society that gun ownership has, and this is engrained in their morality and philosophy, then they are more likely to be opposed to such notions of civilian gun ownership and accessibility.

[9:1:184] This is for all we can hope, that the youth of the future will see the dread that gun violence has caused, and that they will serve their society, rather than simply just serving themselves.

[9:1:185] Reasonality for gun ownership and accessibility should be prioritised, as in that people are owned allowed guns if their jobs demand such, for example, an armed policeman, or a soldier; no other individual should be allowed either accessibility or ownership of guns, and should certainly not be allowed to hold guns as part of their belongings.

[9:1:186] The total removal of guns from the sphere of people's minds and from the cultural atmosphere is the only way of remedying this epidemic; its like a disease that shall continue spread unless amputated; severe actions must be taken in severe circumstances, such as when people's lives at stake.

[9:1:187] On this, there is nothing more to say; the logical approach has been made clear with justified rationality, and shall therefore end on this statement; not until the variable is removed, is the problem ever going to be resolved.

—

[9:1:188] To end this discourse about an introduction to the philosophical discipline of contology, we shall contemplate the newfound philosophical school henceforth known as Dominationism that relates to political, cultural, civilisational, and organised philosophical contexts.

[9:1:189] Dominationist Philosophy is henceforth defined as an Astronist social philosophy, as a derivation of Astronarianism, and essentially constitutes that there must, in any established civilisation, be a dominant culture, religion, philosophy, or outlook.

[9:1:190] It is a mistake to position dominationism as the antithesis of multiculturalism; dominationism does not mean to say that cannot be a diverse range of cultural, ethnic, and religious groups in a society, but instead observes, as derived from most states in the world, that there always exists a dominant group.

[9:1:191] Even in the most plural of countries, dominant groups still exist, or are inevitable to exist with increasing and decreasing populations, one group is inevitable to have its sights set on dominating another.

[9:1:192] If religious association is not the focus, then either ethnic, cultural, or national associations will be the focus, and therefore, one of these will be the dominant groups within the society.

[9:1:193] It is the nature of one group with unique values, philosophies, and ambitions to think highly of itself, and of its own characteristics, and by the nature of human groups and associations, they wish to impose themselves and their views upon others, and to make their ideas the dominant identity of a society.

[9:1:194] Identiture, which is fully outlined as its own philosophical distinction within the lattermentioned Five Rectitudes, is an important area of within Dominationism because dominationist thought centres around the presiding identity of the civilisation in question.

[9:1:195] Even in a country that is described as the melting pot of the world, the United States of America, is still dominated by a single religion, a single ethnic group, and a single overarching cultural identity.

[9:1:196] Dominationist thought constitutes the idea that if a civilisation is to be successful, it must hold a dominant, overarching identity that is established by a dominant philosophy, and culture.

[9:1:197] Dominationism relates more closely to philosophical, religious, cultural, and national association rather than ethnic association because those of different ethnicities can hold the same mindsets; the key aspect within dominationism relates to the worldviews of those within the civilisation in question.

[9:1:198] Dominationist philosophy is therefore an important major branch of Astronarianism and is structured by the philosophical contemplation of the identity of a civilisation.

[9:1:199] Dominationism constitutes the structure of an Astronist nation and social structure, which is characterised by a dominant philosophy, and a dominant culture, with a pluralised ethnic and racial diversity with one Common Vision.

[9:1:200] That which is henceforth known as the Common Vision is an important part of overall dominationism within wider Astronarianism as it relates to the necessity of a

universal ambition for a civilisation; a future plan that a civilisation must work towards to achieve.

[9:1:201] A civilisation with a Common Vision is a civilisation that is destined to be unified, anchored, and stalwart; this is the type of civilisation that is most desired.

[9:1:202] Establishing a universally educated, propagated, and disseminated Common Vision is the centrality of a civilisation; it is the focality of the civilisation; it is what structures the present, the future, and therefore the history of the civilisation; ultimately, it is the essential factor of the formation of the civilisation's brand.

[9:1:203] It is the fundamental nature of religions, cultures, and systems to be dominant over one another and it is the fundamental nature of humans to impose upon one another their opinions, and beliefs.

[9:1:204] Dominationism is at the heart of Astronist social structure and the social philosophy and ideology of Astronarianism, and is herein categorised as part of macroethics.

[9:1:205] The unquitarian view of ethics is the foundational characteristic of the Astronist approach to ethics and broadly consists of the view that each of us are neither subordinate to the other, nor are we equal to one another, but instead, we are unique to another; all the elements that form our ontologies combine so as to form a uniqueness that has never and shall never be again.

[9:1:206] Unquitarian ethics is therefore synonymous with Astronist ethics for the latter is fundamentally predicated upon the former.

[9:1:207] The Unquitarian Reciprocation Principle upholds the notion that due to the mutually shared uniqueness of all sentient beings, one must respect one's own uniqueness as well as the intrinsic uniqueness of all other sentient beings in return.

[9:1:208] That which shall be henceforth known as fundamental unquitarianism refers to the belief orientation holding that every entity in existence within The Cosmos and all other cosmoses of The Universe in the Astronist cosmology, whether they be a sentient, non-sentient, or an inanimate entity, hold their own uniquenesses that must be protected.

[9:1:209] This goes beyond general unquitarianism which only holds that only sentient beings hold uniqueness; there is an interchangeability of how the Astronist Tradition considers its unquitarian from general unquitarianism to fundamental unquitarianism with the general orientation of the Tradition leaning towards fundamental unquitarianism.

[9:1:210] Uniquitarianism and therefore Astronist ethics are opposed to the theory of consequentialism because it notionises for the consideration of ethics after the act rather than prior to the act which is why it is considered to be rendered impractical.

[9:1:211] Uniquitarianism understands consequentialism to notionise its own dependence upon predicting what an action will result in which makes consequentialism to be poised for distortion in which individuals can use the probability of the results of an act to justify the act's righteousness.

[9:1:212] However, this fundamentally opposes the uniquitarian notion of universal unicity which states that each act, despite similar acts being repeated previously, remains unique to its own existence as distinct from the occurrence of those other similar acts.

[9:1:213] Uniquitarianism firmly notionises the distinction between the quality of similarity and the quality of unicity, of which the former is both inferior and fundamentally different from the latter and so the two should not be intertwined as they seem to have been pre-Astronistally.

[9:1:214] The judgement of an ethical act must not be made by prediction or probability due to the unicity of acts made which is the prominentmost principle of the uniquitarian approach to consequentialism and determines a fundamental difference between these two approaches to ethics.

[9:1:215] Consequentialism can only be applied after the act has been conducted, but if a wrongful act is deemed as wrongful beforehand then it should not have been enacted in the first instance.

[9:1:216] Uniquitarianism understands consequentialism to be a potential justifier for wrongful acts after they have occurred by the notion that they held no severe consequences.

[9:1:217] Essentially, preordination in the realm of ethics is itself considered an inferior form of ethicality and uniquitarianism considers there to be two applicable forms of consequentialism.

[9:1:218] The first is pre-consequentialism which involves preordination, or the prediction of the consequences of an act before it has been enacted through the use of past consequences of similar acts, or via the probability of the reoccurrence of consequences.

[9:1:219] The second is post-consequentialism which is administering the rightness or wrongness of an act after it has occurred which is considered to be without logicity according to the uniquitarian viewpoint as the prevention of wrongful acts is the entire purpose of an ethical system so an ethical system like the post-consequentialist application that allows for post-action ethical determination is considered to be both inferior and impractical.

[9:1:220] Uniquitarianism also fundamentally disagrees with utilitarianism, both in its ethical application, but also in its wider philosophical and theoretical application.

[9:1:221] This is due to the fact that uniqueness notionises that utility is inferior to substance; the elements of something that hold value are intrinsically dependent upon the substance of that which holds value, thus notionising that utility is predicated upon substance which makes the position of the former subordinate to that of the latter.

[9:1:222] In the formation of uniqueness, substance is considered to exist in preordination to that of utility for in order for a utility to be galvanised it remains dependent upon a substance.

[9:1:223] To measure something by utility alone ignores the consequences of the action upon one's and others and it also suggests that even if something is morally wrong it can be ethically right if it holds a high utility which is disagreed with fundamentally in Astronist ethics.

[9:1:224] There are many actions in this world that form high utilities for the individual or the wider society yet still remain morally wrong on a basic human-to-human level, such as the use of slave labour to galvanise an industry's profits.

[9:1:225] The utility is derived in the fact that many millions of people may benefit from that industry's services and the employees working in that industry would be able to create for themselves a good living, but a smaller group of individuals have had to work without pay or very little pay in order for that industry to provide its products and services at a price that is affordable for the masses to enjoy.

[9:1:226] The uniqueness approach to ethics partially agrees with the deontological approach to ethics by its prioritisation of rules and the judgement of an action according to rules because rules and moral codes are those which create orderity which is important for Astronist ethics due to its ambition to emulate cosmicity in whichever circumstance that it holds the opportunity to do so.

[9:1:227] Rules and codes of morality are intended to stop the occurrence of wrongful actions before they occur, but even if they do occur, rules remain essential in the application of the difference between rightness and wrongness.

[9:1:228] However, the uniqueness approach differs from the deontological approach by the notion that rules are not absolute for rules must change with the circumstances of the society.

[9:1:229] We have seen this in history wherein the segregation of races was once considered a case of good morality and social normality and conduct, but of course, the present times have changed this.

[9:1:230] Furthermore, unquitarianism upholds that each and every scenario is unique according to its circumstances of time, location, people, and every other possible different element of context.

[9:1:231] This does not render the application of rules useless, but instead adds a dimension to rules that suggests that not every case holds the same circumstances.

[9:1:232] Essentially, the notion of the universality of rules is not applicable to the unquitarian understanding of the nature of all existent entities and their own universal unquities.

[9:1:233] On the question of moral absolutism, the unquitarian viewpoint is oriented towards the notion that there does exist certain acts that are absolutely wrong, with abortion being the primary example that is focused on in this discourse, but that there exists no acts that are absolutely right due to unquitarian and Astronist denial of the existence of true altruism.

[9:1:234] Graded absolutism is also opposed to by the Astronist and unquitarian ethical tradition by the notion that a wrongful act is unique to another wrongful act and so the comparison of wrongful acts through grading is not accepted by unquitarianism.

[9:1:235] Pragmatic ethics is supported by the Astronist and unquitarian tradition of ethics because it supports the notion of humanity's progression morally, physically, and intellectually through scientific inquiry and to add to this, from the Astronist perspective specifically, the exploration of The Cosmos, the transcension of humanity, and the reascension of philosophy will also lead to a society with a more refined ethical stance that is in constant improvement.

[9:1:236] This strikes at the heart of one of the most important elements of unquitarian and Astronist ethics because ethics and morality in humans are considered to be motional rather than stagnant because as circumstances in our civilisations change so do the ethical and moral codes we live by; we have seen this in the wider acceptance now of homosexuality, but we have also see this occur negatively in the normalisation of abortion.

[9:1:237] Ethical unquitarianism supports the notion for the progression and motionality of human morality throughout the periods of change in humanity, the next major movement and period of which is predicted herein to be the Cosmic Movement as propelled by the founding of Astronism within the Astronist philosophical tradition.

[9:1:238] Virtue ethics, which places emphasis on the nature of the acquisition and refinement of different virtues as demonstrators of moral character, is supported by unquitarianism as the arrangement, study, cultivation, and mastery of virtues is considered to be the superior form of the instillation of ethical values into unique

individuals, notably as holding a greater superiority to that of rules and principles set out in sacred texts.

[9:1:239] However, virtues have been largely undermined by religious connotations and their purely Ancient Greek philosophical orientations have been all but lost, thence they must be recultivated herein as part of the reascensionist agenda.

[9:1:240] Derived from the Socratic and Aristotelian systems of ethics, virtue ethics, or the cultivation of virtues, is considered to be best suited to complement the development of a unquitarian approach to ethics because virtues are not rules, but are instead attributes that we can choose to emulate or not depending upon our own unquities.

[9:1:241] Introduced herein so as to provide structure for Astronists in their quest for ethicality is that which is to be known and appellated as Virtuous Combination which is the unique combination of virtues that a person applies to oneself during their quest for greater ethicality as a reflection of their own fundamentally unique nature.

[9:1:242] By this notion, therefore, the unquitarian view of ethics can be considered Aristotelian in its orientation, but it is stressed herein that Aristotle not speak of the unquity of peoples and so his theory has never yet been applied to the context of unique masses due to the introduction of this concept of unquity arising within the Astronist ethical tradition as manifested in the belief orientation of unquitarianism.

[9:1:243] For this reason, the convergence of unquitarian and Aristotelian ethics is herein considered to be a reapplication, or a neoapplication because Aristotelian ethics is herein applied to unquitarianism that was founded longer after the founding of the ideas of virtue held by Aristotle because this ancient ethical system is herein interpreted and applied by an ethical tradition that far proceeded its own founding.

[9:1:244] Eudaimonism refers to the measurement of happiness in relation to morality and so equates a moral act with the extent to which happiness is a consequence is a consequence of that act; the greater extent of derived happiness from an action determines the extent of the rightness of the act with greater happiness equating to greater rightness of an act.

[9:1:245] Eudaimonism can be considered hedonistic in its orientation as happiness supersedes the true righteousness of an act; an act may be morally wrong according to rules outlined in deontological ethics, but it may provided one with happiness, even if that happiness does not last for an extensive period of time.

[9:1:246] Unquitarianism and Astronist ethics is therefore opposed to eudaimonism as happiness is not provided with superseding abilities in the Astronist tradition of ethics which puts Astronist ethics and eudaimonism in fundamental disagreement with one another because in Astronist ethics, morality is not measured according to happiness.

[9:1:247] In addition to this, the unquitarian understanding of eudaimonism considers every sentient individual's ability to experience happiness to hold unquity in the happiness trigger, the happiness manifestation, the happiness frequency and the happiness consequence.

[9:1:248] Ethical egoism is considered, by the Astronist tradition of ethics, to be demonstrative of the reality of the human psyche for Astronist ethics denies the existence of true altruism in the context of a human making a decision for all decisions are considered to be made according to intent and so intent is considered to be a deviation from altruism because whichever way intent is packaged, it is also considered to relate to oneself or those whom we care deeply about, or whose changing circumstances would impact our own negatively.

[9:1:249] Whichever derivation it may be, intent is considered to be the core of all humanic decision-making and therefore humanic altruism in our present mental and emotional capacities, especially so by the world in which we now reside, is considered to be impossible.

[9:1:250] Ethical egoism is morally opposed to by the Astronist tradition of ethics on the grounds that pure self-interest does not reflect good morality, nor does self-interest present intelligence, responsibility, and overall characteristics attributed to one being virtuous.

[9:1:251] Despite this opposition to ethical egoism according to principle, the Astronist tradition does acknowledge the fact that ethical egoism is occurring rampantly throughout our society due to the pursuit of the masses to become everything they dream and to possess everything they desire in such a way that supersedes the interests and needs of others; perhaps this is the greatest fault in our society that we are all, including myself, so immersed in our endeavours to become all we have been inspired to become that we often forget of the needs of those around us.

[9:1:252] I am no divine being; I can openly admit to enacting in this myself for I am human and my morality, like all of our moralities, shall forever be checkered, though uniquely so according to the unquitarian approach; the specifically and purely unquitarian view of ethical egoism is encompassed by the notion that each of our ideas of what self-interest is and the forms and intents it takes are unique which means that one's understanding of self-interest holds a unquity from the self-interest of every other person and therefore, every case of self-interest should be considered according to this Unquity Principle so as to derive the unique elements that make up that particular form of self-interest.

[9:1:253] As we now move on to some poignant and controversial societal topics from addressing about ethical theories, abortion is absolutely opposed to due to it being considered the act of killing unquity; the unquitarian approach to abortion is considered to be, as directed by Astronist ethics, an act of murder, but also an act of depotentialisation which essentially notionises that killing an unborn baby is the primary way to destroy

potentiality for a new person to enter the world and contribute to the world by their own uniqueness.

[9:1:254] It is the killing of the potential of that child that Astronist approach is particularly opposed to due to that child's uniqueness which pertains to why abortion is referred to as the killing of uniqueness.

[9:1:255] Alcohol consumption in the Astronist approach to ethics and therefore uniqueness upholds that alcohol can be consumed for leisure, but practice moderationism as inspired from the Christian originative term which notionises that self-discipline and restraint from drinking more than is necessary to enjoy the effects of alcohol is the superior practice and so Astronist ethics stresses the importance of practicing moderationism.

[9:1:256] Unlike in other approaches to ethics, divorce and adultery are not provided with a central position of discussion in the Astronist and uniqueness traditions largely due to its irrelevance in the ethical principles of the latter.

[9:1:257] However, divorce is still considered to be a wrongful act in the sense that it does not promote a culture of loyalty for young generations to look up to and doesn't demonstrate commitment to another to be something worthy of our attention.

[9:1:258] On the general principle of divorce, and especially adultery, the Astronist approach to ethics is opposed due to their generally deconstructive natures in the building of a strong family unity which then transpires into the building of a strong society, of which family is a central element so strong families are essential to a strong society.

[9:1:259] Celibacy is not considered to be a practice that makes a person ethically or morally superior to a person that has enacted in marriage and sexual intercourse, therefore demonstrating how the Astronist approach to ethics diverges from many pre-Astronist entrenched ideas about sexual intercourse as an act that delegitimises one's morality.

[9:1:260] Sexual intercourse and marriage are instead provided with the highest demonstration of morality in Astronist ethics as committed practice of monogamy is considered to be a demonstration of one's intelligence, determination, and one's overall good moral character.

[9:1:261] Homosexuality is not considered to be an immoral act within the Astronist ethical tradition as the orientation known as prosolationism, or prosolation, which can be applied to many different ethical scenarios and states that the rightness or wrongness of an act should be measured according to the extent to which it negatively impacts upon others.

[9:1:262] Generally speaking, homosexual acts that are enacted between two individuals in the privacy of their own home are not detrimental to anybody else intrinsically and generally.

[9:1:263] Prosolationism is herein classified as a branch or derivation of consequentialism, but it remains distinct from consequentialism by the fact that prosolationism focuses on the consequences of acts generally rather than acts specifically and therefore no predictions are made by prosolationism as it speaks of acts only generally so that it is still able to keep in alignment with the wider Astronist and unquitarian ethical tradition.

[9:1:264] In further argumentation against homosexuality, some are expected to notionise that homosexuality does have a detrimental effect on others as it demonstrates to people that there is no need for the societal normality of husband and wife or the traditional family unit, but of course this is further counterargued by the practice of allowing homosexual couples to conceive offspring.

[9:1:265] Essentially, the Astronist and unquitarian ethical tradition do not consider homosexuality to be an immoral act, one's sexual orientation is something that is unique to every person in alignment with the Uniquity Principle, and that homosexual acts in the privacy of one's home are not considered to intrinsically hurt others unlike acts of violence, abortion, and adultery and through the comparison between homosexuality and these other acts, the difference between the former and the latter is clearly defined.

[9:1:266] Whether slavery does exist in this supposedly modern humanity, it must be sought out and swiftly extinguished for slavery belongs nowhere in the future and destiny of humanity for under the Uniquity Principle, we all hold a uniqueness that is to be cherished.

[9:1:267] Within this definition of slavery is also included paying poor populations pittance for the work they do which is still widely practiced throughout many poor countries by industries that service wealthier countries.

[9:1:268] All forms of violence in the Astronist and unquitarian ethical tradition are opposed to, especially the organisation of violence, primarily through the militaristic means. In the spirit of pacifism, the unquitarian approach to ethics considers the killing of another entity to be the simultaneously destruction of its uniqueness.

[9:1:269] Biocentrism in the context of ethics pertains to the extension of an ethical view that provides value to all living things; biocentrism is considered to be a major characteristic of what ethical unquitarianism and Astronist ethics are, both in their separated and combined forms.

[9:1:270] The unquitarian approach to ethics can be considered highly biocentric by its nature as it fundamentally postulates that there exists a uniqueness in all sentient entities in the general sense and a uniqueness in all entities in existence in its fundamental sense.

[9:1:271] It is notionised that this unicity must be preserved and protected which presents an inherent value to not only all living things, but all inanimate things as well which makes unicityarianism highly biocentric by its core nature.

[9:1:272] Furthermore, the entire character of Astronist ethics itself as a separated entity from unicityarian ethics demonstrates core biocentric values with cosmocentricity, or cosmocentrism as it may also be called, easily categorisable as a branch of biocentrism, or biocentricity.

[9:1:273] This is justifiably categorised as such due to the fact that cosmocentrism supports the notion that there exists inherent value in all that is cosmic, both by its existentiality, but also by its utility to humans, and other sentient beings, largely in a philosophical sense, but also in an economic, cultural, social, and mental sense.

[9:1:274] With the notion that biocentrism is nature-based rather than human-based, it is easily understandable how cosmocentrism can be considered a major new derivation of biocentric thought for cosmocentricity is cosmic-based which itself can be considered a branch of nature-based thought.

[9:1:275] As aforeaffirmed, the tradition of Astronist ethics denies the realistic occurrence of true altruism in the present world due to the current psychology of the majority of humanity; altruism seems to have been mythologised as an element of ancient times in now far outdated religions, as they are considered.

[9:1:276] Of course, Astronist ethics agrees with the altruist dictum that all actions that are conducted truly selflessly with one's only thought being for the welfare of others and the consequences of one's actions upon others are the ultimate forms of moral virtue and in which the greatest amounts of moral value can be found.

[9:1:277] However, the reality of the occurrence of true altruism is considered by the Astronist tradition of ethics to be so low in frequency and so tainted by distortion and the inherent requirement for human intent that true altruism wherever it does reside is outshone by that which is to be henceforth known as pseudoaltruism.

[9:1:278] Pseudoaltruism occurs when an act is seemingly altruistic by its nature, but it is in fact still ultimately done for the benefit of oneself even though that benefit may be in conjunction with another person's benefit; true altruism, or pure altruism, is considered to be when a person conducts an act that they do not benefit from in any way.

[9:1:279] That which is to be known as hyperaltruism involves a person's conduct of acts that not only do benefit others rather than oneself, but actually hurts or damages oneself in some way; the hyperaltruistic element here arises when one conducts an act for the benefit of others that they knowingly understand will damage them in some way rather than just the fact that they will not benefit from the act which is the case in regular altruism.

[9:1:280] Pseudoaltruism supports the notion that shall be known as mutual beneficiary which states that an act is righteous if it mutually benefits both the person conducting the act as well as another person, or group of people external from the enactor.

[9:1:281] The notion of a universal code of conduct is agreed to by the Astronist tradition of ethics to be a powerful widespread source of strong morality and ethical conduct for a society to be founded upon or guided by as is the case for the history of the civilisations that have already occurred upon The Earth.

[9:1:282] However, by unquitarian principles, the Astronist tradition of ethics provides a greater importance for the autoprescription of virtues rather than the assignment of deontological rules from an omnipotent creator which does not work in the context of Astronist philosophy due to the fact that it does not remain based upon religious notions of divine providence and authority and in any case, why must the world listen to me for it need not.

[9:1:283] The way I view this is that the world has strayed from the commandments sent down by the world's creator so why would the world to me if it will not listen to its creator? It would be foolish and highly illogical for me to assume that the world will listen when the likelihood is that the world will continue on according to its immoral path.

[9:1:284] For this reason, I herein stress the importance of dimenia, virtue, and unquity rather than the worldwide prescription of a set of rules for rules have been greatly undermined by the concept of rebellion and the notion that rules are made to be broken.

[9:1:285] Despite this, I understand there to be three undeniably universal wrongs that can be applied to all cultures, languages, secular beliefs, atheistic beliefs, religious traditions, and worldviews that are universally relatable, and these are to be collectively appellated as The Three Universalities.

[9:1:286] The first of these is the universality that murder in any form is wrong with two variations, the first of which is known as sentient-to-sentient murder which is considered to be universally wrong, and the second of which is to be known as sentient-to-insentient murder which is considered to be locally wrong.

[9:1:287] To be universally wrong is to be wrong in all applicabilities while to be locally wrong is not to be wrong only in a particular set of applicabilities, usually guided by context, culture, and /or belief.

[9:1:288] The second of The Three Universalities is the universality that stealing in any form is wrong which holds only this one variation unlike the previous universality and the third of The Three Universalities is that which is to be referred to as the universality that adultery is wrong, but this notably does not say that divorce is not wrong for there are instances in which divorce should be permitted, such as in the case of domestic abuse, despite the fact that the end result of divorce is not a preferred idealistic outcome.

[9:1:289] I, as Cometan, herein argue that all sentient beings, especially all human beings, possess within themselves a distinct essence which may be pre-Astronistally referred to as our conscious, but herein, it is henceforth referred to as our dimenia.

[9:1:290] Our dimenias are all considered to be unique in their essence, though similar in their substance; this essentially means that each and every sentient being's dimenia is unique to the context of itself, but remains similar when applied to the reality of the world due to its worldly application relativising and equalising dimenias.

[9:1:291] Therefore, this demonstrates that dimenias are unique to ourselves until they are applied to the context of our surroundings, at which point we still see some unique elements, but many more commonalities and similarities between them arise due to the equalising and relativising nature of worldly application.

[9:1:292] For the final segment of this discourse, I shall propose the development of the Astronist-uniquitarian understanding of virtue and the applicability and importance of different virtues in the present time by reminding what each virtue means, how it can be manifested, and how the practice of that particular virtue can improve one's own moral character.

[9:1:293] As aforementioned, virtue ethics is reapplied in the context of Astronist ethics to the context of the uniquitarian view of ethics for although the definitions, examples, and manifestations of these virtues are general and universalistic by their natures, they do remain uniquely applicable according to one's own uniqueness.

[9:1:294] There is a particular importance attached to the virtue of acceptance in Astronist ethics, especially over toleration for toleration/tolerance is not considered to be a virtue from the Astronist view of ethics for the tolerance is not considered to hold the same purity of application that acceptance does hold.

[9:1:295] Assertiveness is provided with virtue status from the Astronist ethical perspective, especially due to the fact that assertion of values is essential to their realisation and subsequent manifestation, hence the importance of holding confidence in one's ideas and principles and the exposition of those abstracts in a commanding way.

[9:1:296] Authenticity is a prominent virtue that is particularly important in our present world that is largely becoming consumed by unauthentic ideas, material possessions that hold not real value beyond their monetary capacities, and the desire of many to become the most powerful or highest in rank in whichever field they do commit themselves to without thinking about others, without considering the existence within which they reside, and without giving thought to the consequences of their actions on those around them for inauthenticity is the greatest demonstration of self-centredness.

[9:1:297] Beauty has turned into something that it should never be; something from which monetary value is derived; something which has been presented in such a way that ignites jealousy rather than envy; something that has been used against those without beauty; something that has been used to present superiority for those who attain beauty.

[9:1:298] The study of beauty and what constitutes beauty is primarily predicated on the cultural context in which one resides, but in the Astronist unquitarian perspective, each and every individual entity within The Cosmos, including The Cosmos itself as a whole entity, holds its own unique beauty that remains incomparable to all other forms and manifestations of beauty.

[9:1:299] Beauty is indeed categorised a virtue, but in the Astronist ethical tradition, we focus with much greater particularity on the beauty of the mind rather than the beauty of one's physical appearance, the former of which is considered to be much rarer, more valuable, and ultimately superior to the latter; defining and discovering beauty in the mind is the ultimate goal of all Astronist aestheticists; this is considered to be the ultimate purpose of the development of Astronist aesthetics and this process of definition and discovery is to be henceforth known as the aesthetication and is encompassed by the associated belief orientation of aestheticationism.

[9:1:300] Caring is a valued virtue within Astronist ethics that is manifested in many different ways with obviously the most primary of these being human care which is caring for another human being while there also exists sentient care which is caring for a non-human sentient being and non-sentient care which is caring for a non-sentient being like an animal.

[9:1:301] However, within the Astronist ethical tradition, especially so in relation to cosm stewardship, there is a particular focus on the fourth form of care which is inanimate care which is caring for entities in The Cosmos that are not biologically alive including cosmical progeny and phenomena which have been left out of the equation in pre-Astronist times and this also includes The Cosmos in its wholeness too.

[9:1:302] Cleanliness is also provided with virtue status in the context of the Astronist ethical tradition for cleanliness demonstrates respect for oneself and for those around oneself both in terms of one's own personal hygiene as well as the way in which one presents oneself and the way they take care of their living quarters, their work spaces, and the virtue of cleanliness also transcends physicality and relates to the cleanliness, organisation, and categorisation of one's mind and thoughts.

[9:1:303] Commitment is affirmatively provided with virtue status, especially so in the context of Cometanic love, neomascularity, and within the study of love and maleology as the study of masculinity and what it means to be male presently and in the future.

[9:1:304] The commitment of a man is considered to be one of the primary hallmarks of maturity, self-assuredness, self-security, and strength in one's understanding and

identification of themselves which pertains to the reasons for it being provided with virtue status in the Astronist ethical tradition.

[9:1:305] Not only does the virtue of commitment demonstrates these qualities of masculinity, but it also crossrelates to that of femininity for females without commitment are also considered insecure, without strength in their identity, and without understanding of the emotions of their partner.

[9:1:306] Commitment is considered to be faltering in its fashionability in these frivolous present times which demonstrates a great need for the re-emergence of commitment as one of the primary values for all of us to fundamentally follow, but also to look up to when it is practiced by other people that we know of.

[9:1:307] Compassion and consideration are two more qualities that are provided with virtue status within the Astronist ethical tradition, but they are paired together into one in this instance.

[9:1:308] The virtue of confidence is encapsulated in the previously introduced virtue of assertiveness and therefore confidence isn't provided with its own entry into this list.

[9:1:309] Contentment is not provided with a status of virtue in the Astronist ethical tradition because contentment is considered to be a hallmark of stagnation and inambition; we cannot ever be content because the moment we are is the moment we become stagnant in our progressions.

[9:1:310] Cooperation is another quality that is herein provided with virtue status for there exists a lack of cooperation in the world today for the majority of individuals feel that they cannot help others due to their limitations in time so they feel that if they are to spend their time helping others that they will have to sacrifice their own ambitions, but we must remember that through cooperation and by supporting others, we are in turn enhancing ourselves; every experience we endure, whether it be good or bad, improves our ability to perceive, to judge, and to know; in the most optimistic of outlooks, by this notion, we are continually enhancing.

[9:1:311] To be cosmocentric as a quality is also herein provided with virtue status largely due to the integrality of being cosmocentric in Astronism; by this notion, we see for the first time the equation between being cosmocentric in belief orientation and outlook and being a good person of high ethicality; this equationality is expected to continue with fluctuations in popularity throughout the history of Astronism.

[9:1:312] Both courage and creativity are also considered imperative virtues to vehemently uphold, especially that of the latter of the two for creativity is all there for our purposes to be best manifested and it is all we are; whether we are literarily creative, artistically creative, or that the only form of creation we participate in is procreation; we are created beings and so we do ourselves create.

[9:1:313] Detachment is classified as a partial virtue rather than a full virtue within the Astronist ethical tradition due to the fact that emotional detachment is considered non-virtuous, especially in relation to neomasculine values, however, intellectual detachment is considered not only a virtue, but it is also considered a skill that is to be mastered.

[9:1:314] Determination is provided with virtue status in the Astronist ethical tradition and is considered to be one of the most important elements of creativity; a creative that chooses to master their craft must incorporate a determined attitude if they are to become what they desire, but obviously this determination should be sought by proper means rather than by underhand tactics, or by disgracing one's own dignity for the

[9:1:315] The virtue of dignity is provided with particular importance due to the fact that it seems to have been undermined by the desires presented before us; some people will do anything they can to attain their dreams or to become the person they desire to become, or to have beside them which includes disgracing their dignity, but we must remember that nothing is worth disgracing ourselves for; we must have a greater respect for our own beingness than to sacrifice our own honour and respect for material possessions or lustful desires; dignity is only considered to be an attainable virtue rather than a practicable one, therefore, once it has been lost it is extremely difficult to regain; one does not practice dignity like one may be practice detachment or determination; instead, one attains dignity through the practising of the other virtues outlined herein.

[9:1:316] The quality of encouraging others is considered to be a major hallmark of virtuousness by the Astronist ethical tradition because those whom discourage are considered to let their own ambitions and intentions overtake their ability to allow for others to achieve their goals; we must encourage rather than discourage for the former will always lead to progression and eventual transcension while the latter shall always lead to stagnation and in the worst of cases, regression.

[9:1:317] Enthusiasm is provided with virtue status within the Astronist ethical tradition due to the belief that it is the inspired among us that hold within them a quality and a power that remains so precious and further enhances their uniqueness beyond that of all others.

[9:1:318] To be ethical in this world of unethicity is considered to be a great virtue; this is mainly derived from the previously introduced virtue of consideration which is fundamental in the practice of the virtue of being ethical; it is our considerations for others and the environments in which we reside that are the most important elements in the development of ethicalities.

[9:1:319] Excellence is not provided with virtue status in the context of the Astronist ethical tradition due to the fact that it speaks of too great a broad quality and excelling is not generally considered to be reflective of a virtuous individual, hence its non-classification as a virtue herein.

[9:1:320] Fairness is, however, provided with virtue status according to the Astronist understanding for to be fair in one's approach to all elements of life is to be demonstrative of one's appreciation for justice and order and loyalty to those whom deserve which links directly to the Astronist ethical concept of deservence which resides as a core tenet of Astronist ethics.

[9:1:321] Faith is considered a virtue due to the fact that faith in the society in which I presently hold residence seems to have been lost amongst the majority of people with whom I find myself in contact with; faith has become something so very precious in my eyes and for this reason, it is provided with the status of being a virtue for the faithless do not share that same dimensionality to those with faith; there is a depth to those with faith that is not present within those without faith.

[9:1:322] The quality of being flexible is not itself provided with virtue status for it is instead considered to be included within the lattermentioned virtue of graciousness.

[9:1:323] Forgiveness has been prominently spoken of throughout all the ethical traditions and so the Astronist tradition of ethics is no different; forgiveness is provided with virtue status, but the Astronist tradition herein diverges from others on this topic of forgiveness when it herein states that forgiveness should not be used as a tool by the offender to think that they will hold the chance of getting away with the immoral act they have committed which is often how forgiveness has come to be interpreted and subsequently practiced; the practice of forgiveness should not forgo punishment for if we do practice forgiveness in that what then the offender shall understand that the repetition of their acts will go without long-lasting consequences; as is latteraffirmed, we should stand by the principles of understanding, but we must not allow ourselves to be blinded by our own virtues for this reverses our virtuous ways despite the fact that we still remain virtuous in our heart and intentions.

[9:1:324] Friendliness is perhaps one of the greatest ways in which we can spread our virtuous ways to people in a way that requires so little effort on our part; the ease of being friendly should always win over the hardships and difficulties of being cruel; friendliness is perhaps the most simple of our the virtues, but nonetheless one of the most important to practice in our daily lives without even being conscious of it.

[9:1:325] Generosity is provided with that which is to be known as supervirtue status within the Astronist ethical tradition which is a title that is extended only to four other virtues including honesty, imaginative, purposefulness, visionary, and wonderment so as to demonstrate the fact that these virtues are both superior in importance, but also hold an internality to their natures meaning that they cannot be derived from external forces or entities; they must come from within and they are often linked with notions of destiny within Astronist philosophical writings due to their intrinsic and internal natures.

[9:1:326] Gentleness is a virtue that many of us need to emulate in our daily lives; the world is presently so harsh and cruel and unkind and we seem to be copying this in our own personalities, but we do not benefit from such an emulation; to be gentle in speech, in action, in thought, and in manner is a signifier of a deep adherence to the attainment of one's virtuous self.

[9:1:327] Graciousness is another virtue that is most often forgotten and despite the nature of its original meaning which states to be pleasant, kind, and courteous to those of lower status and possession than oneself, this is considered to work both ways from the Astronist ethical perspective for the original definition of this virtue is considered to be very one-dimensional; we whom have less in status and materiality are to also be courteous, pleasant, and kind to those with more for they are not necessarily better off than ourselves; they are often worse off in the spiritual, emotional, and familial aspects of their lives; for this reason, we must be gracious towards them.

[9:1:328] To do for another takes thought, motivation, and effort and in a world that is so pressured by time and circumstance, we must extend our gratitude to all that is done for us no matter how little that something may be, whether it is overdue, or whether it is inferior to what another has done for us in the past; practicing gratitude, like the majority of all the other virtues, not only improves the lives of others, but it also teaches us how to think, speak, act, and generally be better; I have frequently spoken of betterment and our goal to achieve it for ourselves and all peoples and it is through the virtues address herein that we reach a form of betterment for which we can be confident in stating that it is deserved and righteous.

[9:1:329] Harmoniousness is an excellent virtue to express but its expression is one of difficulty in this world filled with hardships, heartaches, rivalry, and general discordance, hence the preciousness of the moments in which it does occur.

[9:1:330] The Astronist ethical tradition considers helpfulness which is considered a virtue, and the previously addressed virtue of gratitude to formulate a dichotomy of two virtues that remain distinct yet dependent upon one another; for gratitude to occur, helpfulness must precede it, but for helpfulness to gracefully reoccur, gratitude must proceed it; one cannot exist without the other in an ideal world which of course we do not reside within so often they do exist in separation from one another, but it is our duty as followers of the Astronist ethical tradition to return helpfulness and gratitude to one another and ensure that whenever the former does occur, the latter is closely followed after which the former can reoccur so as to form a virtuous cycle.

[9:1:331] Honesty is herein provided with supervirtue status for honesty is something that is considered to reside from within oneself as a distinct essence of their spirit as manifested through their personality; despite the fact that pure honesty holds many invirtuous consequences, such as the damaging of another person's feelings, in one's honesty, one is considered to be true to reality rather than pandering to the wills of others or the intentions of oneself; honesty is equated with purity in the Astronist ethical

tradition despite the fact that the purity of the circumstances is not always what we wish to know or hear.

[9:1:332] Honour is also provided with virtue status in the Astronist ethical tradition due to the fact that honour represents our ticket to progression in this world of hierarchies, reputation, and societal ladderclimbing; our honour is all we true have; we are all blessed with it in differentiated measures, yet all with a standard baseline; it remains our choice whether to preserve it, degrade it, or to destruct another's honour.

[9:1:333] Hope is the centrality of our destiny; without hope, we forsake our future; we hope more often than we may realise; hope is provided with virtue status due to the notion that everything we do, say, hear, think, trust, and believe holds an element of hope somewhere within it; to master being hopeful is to simultaneously master our cosmic existence; we hope for that which may occur and in doing so, we hope for that which seems most ideal to us, despite the fact that it may not manifest itself as such in reality; the hopers of us are often those with the greatest visionary minds for they see that which is beyond the present and they know that which something can become.

[9:1:334] To speak of oneself in high regard is to not know of oneself wholly for we must always remember that whatever we do achieve and however much we are adored, we are simply a drop in the cosmic ocean and no amount of powerful, wealth, or fame can change this element of our significance; for this reason, humility is provided with virtue status for to speak of oneself in modest terms is to understand that one can become something to billions beyond that of one's physical self, but that to retain our authenticity, we must always understand that we are merely functions and substances of a grandness far outreaching our ability to create.

[9:1:335] Idealism, or to be idealistic may be perceived by others to resemble a person that remains out of touch with the reality around them, but in the Astronist ethical tradition, a far greater importance is provided to that of idealism rather than realism in relation to the way we think and believe for the former is considered entirely superior to the almost in every way; to think and believe without ideality is to not think or believe at all; we are supposed to learn from our history, but if there is only one thing that we do take from our retrospect then let it be it has always been and therefore it shall logically always be the idealists that have driven the progression of humanity; without the idealists to formulate the ultimate ideal future, the realists would not be able to construct the practical methods to help achieve the future envisioned.

[9:1:336] Integrity is provided with virtue status in the Astronist ethical tradition due to the fact that integrity is a proponent component of the previously designated virtues of honour and honesty; without integrity, we cannot be respectful to ourselves and therefore we also cannot be respectful to others; we must understand that humility, honour, and honesty are all predicated on our ability to uphold our own integrity; our integrity for ourselves is directly connected to our respect for others and their own integrities.

[9:1:337] To be imaginative is to be henceforth classified as being a supervirtue according to the Astronist ethical tradition due to the notion that imagination is considered to be *the* centrality of sentience, *the* centrality of humanity's existence and residence within The Cosmos, and *the* centrality of all that we individually and collectively are, as well as what we are as the inherent essences of our beingness; from the Astronist understanding, our imagination holds an integrality with our actual ontologies as individuals rather than just being a portion of our personality; from the Astronist understanding, our imaginations are the central driving forces of our actions, thoughts, and beliefs, and so too are our imaginations the pillars of our beingnesses; they are what we are and they are indivisible from our beingness.

[9:1:338] To exhibit joyfulness in this world of sorrow and suffering is considered to be a virtue from the perspective of the Astronist ethical tradition for there is considered to be no greater positive influencer than that of being joyful in spirit, in action, in thought, and in belief; without the injection of joy from those around us, the world can seem so dark a place; the most interesting element of the nature of joy is its infectious nature; the exhibition of joyfulness quickly holds the ability to invigorate joy in others and to do this for others is equated with many other dutiful acts.

[9:1:339] The achievement and preservation of justice is essential, not only to the integrity of ourselves as individuals, but also collectively as part of the integrity of our entire society; injustice is equated with tragedy and so those whom work towards not only the achievement of justice, but also the maintenance of justice are considered to be conducting virtuous works; a society in which injustice prevails is a society in which no other virtue can be truly considered to reside for an unjust society is a warped society without virtuous foundations and so any seemingly virtuous act is without credibility.

[9:1:340] Kindness is something that is pure in virtuousness and despite the fact that it is not provided with supervirtue status herein, it can be said that if an extra virtue was to be provided with such a title, kindness would be that virtue; kindness costs nothing, but impacts everything that one does and everything that one is.

[9:1:341] I spoke extensively on the topic of love in the formation of Cometanic love, but I have not yet spoken of love as a virtue; love resembles the centrality of the majority of the other virtues within this discourse and is provided with virtue status due to the fact that to be loving is to know of the true power of love; to be unloving is not to know the ability of love is transcend any circumstance and repair all damages; love is propounded through Astronism, whether it be love for one another, or most importantly, love for The Cosmos, there is a centrality on love in new cosmically-themed demonstrations of the virtue which also highlight its incredibly diverse naturity.

[9:1:342] Loyalty precedes all ability to progress; without loyalty, human civilisation is not able to move ahead to reach its ideals which is why loyalty is provided with virtue status within the Astronist ethical tradition for loyalty demonstrates an ability to see beyond the present circumstances of one's own desires and to be considerate of the desires of others

and of wider humanity which is why loyalty is considered to be a micro form of transcension; a personal demonstration of transcension, hence one's mastery of loyalty is considered to be one step closer to one's personal mastery of transcension, also known as personal transcension, or endotranscension.

[9:1:343] Moderation is herein provided with virtue status for a person that practices moderation in the majority of the facets of their life is a person that is considered to hold the ability to see beyond present desires to indulge in gross amounts of either an internality or externality by understanding that their overindulgence of such shall not only damage themselves in the future, but will also damage those around them so moderation is also a demonstrator of consideration for others and the effects of one's overindulgence on others.

[9:1:344] Modesty as a term is not itself provided with the status of a virtue within the Astronist ethical tradition for the term humility is considered to encompass the concept of modesty as well as a wider perception of self and so is therefore considered to hold a greater efficiency in its definition than that of modesty alone.

[9:1:345] Optimism is also not itself as a term provided with the status of being a virtue within the Astronist ethical tradition for optimism is equated with idealism which has itself already been designated a virtue.

[9:1:346] Due to the primary character of The Cosmos comprising that of orderity, the quality of orderliness within oneself is provided with virtue status because those with orderly behaviour demonstrate their understanding of well-functioning systems of The Cosmos and our own dependence upon such cosmical orderities for our own existence, however, this must not be confused with the characteristic of being ordinary for there is considered to be no greater shame in the Astronist ethical tradition than being an ordinary person without consideration for one's own uniqueness despite the fact that others may see it and speak of it; to be ordinary is to be without self-consciousness, self-understanding, and partially without self-worth.

[9:1:347] Passionate has traditionally be considered invirtuous for it has been associated with the sin of lust in pre-Astronist traditions, but from the Astronist perspective, passion is provided with virtue status due to the notion that to be passionate is equated with being alive within our sentient human spirit; to be without passion is considered to be without imagination for these two virtues, one of which is of course designated a supervirtue, are considered to be in a state of symbioticity with one another for there exists no passion without imagination and imagination without passion lacks the enthusiasm and drive for that which has been imagined to ever manifest itself in reality.

[9:1:348] Patience is a virtue and nothing can dispute this, but in the Astronist ethical tradition, the impatience of the naive young which, when years have passed, understands that their impatience was not rewarded duly is the greatest lesson any person can learn for their own integrity; therefore, it is held that for patience to be learned and mastered,

impatience must precede it for patience is not considered to be something that is innate within us, but is instead something that must be learnt from our experiences.

[9:1:349] Peace is not provided with virtue status in the Astronist ethical tradition and this is due to the fact that peace is considered to be an externality to the self; that which is termed inner peace is not considered to be part of human nature from the Astronist understanding of human nature which is in constant motionality for new desires and progressions; however, the attainability of peace must be prioritised for us collectively as humanity and between each other rather than us personally; inner peace is considered to be realistically unattainable for the human heart, mind, and spirit for our innateness is directed towards ambition, progression, rivalry, and triumphancy despite the ideal of inner peace being a centrality in non-Astronist and pre-Astronist traditions of philosophy, specifically in that of Buddhism.

[9:1:350] Additionally, perseverance is also provided with virtue status according to the Astronist ethical tradition for I, as Cometan, during the creation of The Omnidoxy itself herein and subsequently founding Astronism have greatly understood the absolute necessity for perseverance in one's artistic/creative journey; one who lacks perseverance is one whom lacks the ability or has lost their vision of the end goal; perseverance is essentially the mastery of not allowing one's eye to be distracted from the original ambition, or ideal state; to fall before perseverance is to have lost this ability by the distractions, distortions, and struggles of the surrounding world and the people residing within it and their own intentions for you.

[9:1:351] Preparedness is designated as a virtue according to the Astronist perspective of ethics because without being prepared in the present, one cannot possibly or logically be neither prepared for their future, nor the wider of humanity; one could logically notionise that The Omnidoxy and Astronism themselves are demonstrations of the philosophical, cultural, and mental preparedness for the initiation of the Humanic Exploration of The Cosmos has which is omninferred throughout The Omnidoxy herein.

[9:1:352] Another real supervirtue is that of purposefulness which is classified as such due to both its dual nature of transcendence and integrality for humans individually, both externally and internally, as well as humans collectively; despite the diversity of the manifestations of purposefulness, the Astronist tradition, due to my own Cometanic understanding purposefulness that have experienced, understands purposefulness to be intrinsically internal to the human mind, heart, and spirit; there exists no greater connection between the singular beingness of a human and the transcendence of The Divine than the purpose ascribed to that human that ultimately resides within them; I, as Cometan, have felt this purpose and I have described it in a multitude of ways, as a spark within myself motivating me to write and create, as well as through the act of personal inspiration which itself can be considered a driving force of my knowledge, experience, and creativity.

[9:1:353] Reliability is categorised with the status of a virtue herein due to its close relationship with loyalty, honour, and honesty, yet demonstrates a unique dimension to these three other virtues which allows it to be granted as a virtue in its own right.

[9:1:354] The virtue of respect is also considered to be a virtue by the Astronist ethical tradition due to its centrality and integrality to the majority of the virtues herein categorised as well as its intrinsicity as a wider Astronist value.

[9:1:355] Responsibility is itself as a term not provided with the status of being a virtue due to the fact that it is considered to be embodied more efficiently within other virtues, such as that of loyalty, kindness, humility, preparedness, and others which makes its own designation as a virtue without efficiency as it is more accurately and applicatively embodied in other virtues introduced herein.

[9:1:356] To hold reverence is to appreciate that which resides beyond the boundaries of oneself and one's own body and mind which is considered a virtue according to the Astronist ethical tradition for adore beyond oneself, or beyond that which may benefit oneself is considered to be another example of a endotranscension, also known as microtranscension.

[9:1:357] Self-discipline is also provided with virtue status within the Astronist ethical tradition for self-discipline is considered a centrality to the development of many of the other virtues herein ascribed which automatically provides itself with a status of virtuosity, but also self-discipline is itself synonymous with an understanding of modesty which holds a symbiotic relationship with the quality to discipline oneself.

[9:1:358] Service has also been pre-Astronistically designated as a virtue, but in the Astronist ethical tradition, it is not provided with such a designation due to its inspecificity regarding actual actions and qualities which is what the Astronist tradition prefers to focus upon.

[9:1:359] Sincerity is provided with a status of virtuosity within the Astronist ethical tradition due to the notion that the maintenance of one's integrity is essential to a person's virtuosity because to be pretentious, hypocritical, and deceitful, or all that a sincere person is not, is to be without a virtuous mind, heart, and spirit; essentially, to be a virtuous person one must always be sincere for they cannot be counted as holding virtuosity.

[9:1:360] Additionally, the quality of tact is also provided with virtue status in the Astronist ethical tradition because of the fact that being able to deal with difficult or generally unpleasant circumstances calmly, without judgement, and maturely is considered with a great deal of importance for there is considered to be no greater demonstration of one's unintelligence and immaturity than a person that isn't able to conduct their actions in difficult and humiliating scenarios with sensitivity, understanding, grace, delicacy, and swiftness.

[9:1:361] To display a quality of temperateness is not itself as a term provided with virtue status due to the fact that the previously designated virtues of self-discipline, modesty, and honour encompass the quality of being temperate which renders the separate use of the term pointless in the eyes of the Astronist tradition.

[9:1:362] Tenaciousness is provided as a status of virtuosity according to the Astronist ethical tradition because of the positive attributes associated with tenaciousness, such as other introduced virtues of perseverance, hope, ambition, imagination and faith; however, tenaciousness is only provided with this status on the condition that it also encompasses the quality of being paratenacious; the Astronist Tradition herein introduce that which shall be known as paratenaciousness which is the quality of standing by one's principles in addition to also being understanding and open to people's principles which may simply be different or even stand in opposition to one's own; additionally, a person that is paratenacious would also be open to altering their values and principles as long as the alternative which they are changing to is logical and rationally justified by exemplification of its superior to one's previously held principles.

[9:1:363] Thankfulness is provided with a high consideration within the Astronist ethical tradition for it is considered to encompass a wider breadth than that of even politeness due to the fact that thankfulness is not saying regarding our giving thanks to another person for a deed they have enacted for us, but it also involves giving thanks to ourselves for what we have achieved, it involves giving thanks to The Divine and The Cosmos in which we reside for the talents, ideas, and ambitions we do possess, and it also encompasses the important quality of being appreciative which is not itself provided with a status of virtuosity due to the fact that it is considered to be encompassed by thankfulness.

[9:1:364] Trust is another of the virtues that is intertwined with almost all the other virtues herein designated which is why it is also provided with the virtue status for trust is something that decide to provide to something external to ourselves in most cases; we must decide whether we wish to provide it or whether we cannot extend such a gift of trust to something beyond oneself; trusting oneself and trusting the world around oneself are two elements of ourselves that some of us never manage to master for the world is cruel and full of pain despite the fact that it is truly beautiful, but upon receiving such pain from the world, the extent of the trust we are willing to extend seems to diminish the older we become; perhaps this demonstrates why the trust of elders is worth three times as much as the trust of the youth for the former have been dealt their fair share of misdeeds from the world and they know when they see a liar and a thief.

[9:1:365] Truthfulness as a term itself is not provided with virtue status due to the singular fact that it is encompassed by the other designated virtues of integrity, honour, and above all, honesty which is synonymous with truthfulness, hence the fact that this term is not required to be designated as a virtue.

[9:1:366] Understanding is itself not provided with the virtue status due to the fact that it has already been encompassed by the virtue of sincerity which conducts an efficient encapsulation of what it means to be understanding.

[9:1:367] For a person to spread messages of unity in times of division is one of the most important actions for a person to conduct if they hold a voice to the masses; for this reason, unity is provided with virtue status, particularly the spreading of messages of unity for a common cause that shall help the betterment of all humanity rather than the betterment of the few; the Astronist tradition considers unity to be ultimately logically superior to that of division for to be divisible is also perceived as an act of immaturity, unintelligence, and regression when compared to the mature, intelligent, and progressive act of spreading unity amongst people who are vulnerable to division according to whatever parameter it may be.

[9:1:368] The penultimate supervirtue considered herein as part of the Astronist ethical tradition's stances regarding virtues is to be a visionary; to hold vision is considered to be distinct from the virtues of imagination and ambition for again, there is a mystical and transcendent nature of visionariness that begins from within and is considered to have been present within oneself since before the moment of their conception and is of course, closely intertwined with notions of destiny; due to this internally emanating nature of visionariness, it is provided with the status of supervirtuity which is only presently and omnidoxically afforded to five other virtues in the Astronist ethical tradition.

[9:1:369] Wisdom is provided with virtue status according to the Astronist ethical tradition primarily due to the notion that wisdom is considered to be the culmination of our ability to enknowledge ourselves throughout our lives; our knowledge is therefore defined from the term of wisdom for the former is considered to represent that which we know in the present moment of its saying while the latter is considered to be the totality of such knowledge throughout our lives which is why wisdom is only present in the eldest of us and even in such people it may still be lacking; this does not mean that a young person cannot hold wisdom for they most certainly can; they do this by listening and understanding those whom possess wisdom and emulate the practices and principles they have been told during their daily life; wisdom is the totality of not only our knowledge, but also our experience for the latter is considered to contribute majorly to the former; wisdom is often essential to the proper conduct of many of the virtues herein ascribed, hence the importance of its designation as a virtue within the Astronist ethical tradition.

[9:1:370] Finally, the ultimate form of supervirtuity is that which is to be known as wonderment which is the ability of a person to see, know, feel, understand, and believe in The Cosmos in a way that is purely cosmocentric and Astronist in character, attitude, and form; to hold this quality considered to be a supervirtue for it is considered to hold residence from within ourselves and that is may be triggered by an externality, typically one's introduction to Astronism, or their witnessing of an astronomical phenomena, or their study of a cosmical progeny; wonderment demonstrates the practical and emotional essence of Astronism and is considered to encompass one's Astronic philosophicality,

one's faith, one's ability to perceive, one's ability to enknowledge, and one's capacity to understand that which exists in a greater beingness beyond themselves and to accept their inferior to such a cosmical grandness.

Astronist Social Teaching

The Five Rectitudes

[9:2:1] Astronist Social Teaching is the system of values, concepts, and orientations relating to the way in which society should be structured from an Astronist worldview standpoint, and the way in which people should ideally act in society, or have certain outlooks in such societies.

[9:2:2] Astronist Social Teaching is a major branch of Astronist Ethics and Astronist Philosophy, but also important to the foundations of the social and political philosophy of Astronarianism.

[9:2:3] The Five Rectitudes encompass the foundations of Astronist Social Teaching, which are structured in such a way that they could be implemented on both a personal and a state level, and could be implemented in any type of governmental organisation, whether it be secular, theological, or otherwise.

[9:2:4] The Five Rectitudes primarily address the role of both science and philosophy in a civilisation, the importance of the unity of diversity in a civilisation, the major importance of holding cosmospectivity, the clarity of the identity of the civilisation, or society, and also addresses the continuing struggles facing humanity and the future necessities that have to be fulfilled from an Astronist opinion.

[9:2:5] We now introduce The Five Rectitudes as the five foundations of Astronist Social Teaching by contemplating and exploring each of them philosophically.

Science & Philosophy

[9:2:6] Since the grandest discoveries were made in the scientific world, a notion, from which origin I am not acquainted to know, has emerged that religion and science are merely two sides of the same coin and can not only live in harmony with one another, but are working towards the same goal.

[9:2:7] It is herein and henceforth made clear that from the Astronist perspective, this relationship between science and religion is not accepted, but instead, the same nature of relations between science and philosophy is championed.

[9:2:8] This is not in the effort to deny religion and its many positive accompaniments, but instead, offers a better partner for science in her struggles and by this, we introduce philosophy and all its many grandities into the formula.

[9:2:9] From the Astronist standpoint, it is believed that both science and philosophy must be equally active in the state, and must be contemplated as such, as both separate entities, and as necessarily infused parts of the same thoughtpath.

[9:2:10] To make the Astronist distinction between the two we understand that philosophy encompasses all ideas and imagination, of which they form the most basic parts of scientific experiment and discovery.

[9:2:11] Essentially, philosophy is the idea and science is the experimentation of that idea to prove its legitimacy in truth and reality, but as aforementioned, whether an idea is proven to be legitimate or not, that does not diminish its value, or its utility.

[9:2:12] Both science and philosophy are considered the centralmost aspects of the Astronist social structure and organisation, for they act in a cyclic and symbiotic way with philosophy as the precursor to science, and when scientific theories are applied and either proven or disproven, we return to philosophy to imagine new theories, or to return to those previously disproven.

[9:2:13] Science and philosophy are also the central aspects of Astronist Culture and Literature, and this is demonstrated in all Astronist creativities and arts.

[9:2:14] In Astronarianism, it is henceforth considered to be righteous, progressive, and moral behaviour to place both science and philosophy at the centre of one's life; one does this by appreciating knowledge, logic, rationality, and contemplance and by applying these one's daily life.

[9:2:15] It is also important to place science and philosophy, and the immense amount of possibilities, potentialities, and discoveries to be found within these subjects, into the deepest parts of our personal ambitions, but also, as part of the Common Vision for the civilisation, and for wider humanity as a whole.

[9:2:16] Herein, it is said that both science and philosophy must be further infused and engrained into the culture of an Astronist structured civilisation; they should be the two cornerstones of that civilisation, and they should be given central positions of study in alignment with the Astronist education system.

[9:2:17] As the first of The Five Rectitudes, it has been made imperatively clear that both science and philosophy, and their further and deeper integration into the identity of a society and a civilisation as a central character of Astronarianism.

Union of Diversity

[9:2:18] In all the societies and civilisations of the world, both past and present, we have witnessed that diversity in thought, appearance, and traditions has been a staple characteristic of all successful societies.

[9:2:19] Astronarianism, and specifically the second of The Five Rectitudes, the Union of Diversity, attempts to unify the diversities of a state under one umbrella philosophy, also known in Astronist terms as a Common Vision.

[9:2:20] As aforementioned, no one idea is absolute; the Common Vision is not just one idea; it is a multitude of ideas that are interconnected, and striving towards a common goal with a shared ambition.

[9:2:21] Neither one person, one tradition, nor one book is able to completely lead an entire civilisation that seeks a higher level of success and achievement, especially in uncharted territories.

[9:2:22] Herein, we introduce the plurality of Astronism; that it isn't just one idea, but several, as formed by the many philosophical school, and the many, often different oriented, philosophies within a philosophy.

[9:2:23] The Common Vision is a set of ideas that in turn form the plurality; a Common Vision is structured by a central ambition, a central conviction to reach a level of societal functionality that is largely idealistic, but nonetheless, achievable.

[9:2:24] The Union of Diversity is the coming together of different ideas, cultures, peoples, and traditions to form a newfound civilisation that is lead by a Common Vision.

[9:2:25] One without much Astro-philosophical experience would categorise dominationist thought as an opposition to the concept of the Union of Diversity, but this is simply not the case.

[9:2:26] Dominationist principles stipulate that there must always be a dominant group, ideology, or worldview in a civilisation; this does not mean to say there cannot be a diverse range of smaller groups as minorities, but even in the most plural of societies, a dominant mindset must always exists if the civilisation is to succeed.

[9:2:27] Some studiers may also consider domination with negative connotations of control, or oppression of the minority, but in the dominationist context, it simply derives that there must always be a majority of one group, or one culture, or one philosophy that structures the Common Vision, and the drives the civilisation towards its goals.

[9:2:28] In the Astronist societal and civilisational structure, a majoritarian philosophy must be the central aspect, which does not conflict with the Union of Diversity, and if any other consequence, actually supports this unification of diverse ideas, peoples, and cultures, under a universally recognised Umbrella Philosophy.

[9:2:29] Union of Diversity can be interpreted in many ways; union deriving the joining together of two more previously separate peoples, and diversity emphasises that these peoples coming together are varied in appearance, culture, and worldview.

[9:2:30] The process of union, in an Astronist philosophical sense, is a long-winded occurrence wherein peoples are not overtaken by other peoples, but instead, each group contributes somewhat to the overall Common Vision.

[9:2:31] It remains inevitable that the concept of the Common Vision will be interpreted and implemented in a variety of ways throughout this world, and all the others, by different peoples, the implementation of which could be so widely varied that each version of the Common Vision and its application, may not be recognisable, or comparable to other.

[9:2:32] It is important to say that the union, also formally known as the process of unionation, involves the contribution of different and diverse peoples to form a Common Vision, which is thereafter the dominant philosophy, or worldview of their civilisation.

[9:2:33] Perhaps the greatest exemplar of this in current times and recent history is the United States of America; peoples converging from all corners of the world to a place that they are to contribute to in order to construct as a strong civilisation, all the peoples in which understand the Common Vision, and hold similar philosophies, values, and worldviews.

Cosmospectivity

[9:2:34] The perspective we have of ourselves, of each other, and of the world in which we reside has been the predominant perspective since the inception of our sentient species.

[9:2:35] Throughout the history of humanity, there have been the few minds of great people that have not suered this perspective for they have been enlightened to a larger view and understanding of existence.

[9:2:36] This includes both the perspective and the perception of The Cosmos, and involves understanding, knowing, and exploring The Cosmos actively, and wholly, with always the knowledge that we cannot ever truly know the entirety of The Cosmos.

[9:2:37] This perspective and perception of The Cosmos is henceforth known as Cosmospectivity, and forms the basis for the entirety of Cosmic Philosophy, and the entirety of the Astronist philosophical tradition.

[9:2:38] At the fundament of Astronist Philosophy exists the general belief in the centrality of The Cosmos in both our daily lives, in our ambitions, careers, and futures, and to hold The Cosmos in this regard is to be cosmospective.

[9:2:39] To be cosmospective, one is to hold The Cosmos at the centre, or at least as an important factor, of their life, whether this is expressed through wonderment, adoration, laudation, or through cosmic philosophical study, the centrality of The Cosmos must be clear.

[9:2:40] It is also a mindset that an individual follows that places the greatest emphasis and importance on The Cosmos; cosmospectivity can be an emphasis on The Cosmos in its entirety, or it can be an emphasis on just one aspect of it, especially so in a wondermentational, adorational, or laudational context.

[9:2:41] Cosmospectivity can be described as a branch of the wider concept that is also well known throughout Astronist Philosophy, and that is the concept of cosmocentricity.

[9:2:42] Cosmospectivity is the mental and perceptual branch of cosmocentricity, and stands at the foundations of that which is known as Integrated Cosmic Philosophy; Cosmic Philosophy that one chooses to implement and integrate into their lives, rather than just studied, or admire.

[9:2:43] Essentially, cosmospectivity is structured by some main points: a trajectory towards a spacial future, an orientation towards Cosmic and Astronist philosophical worldviews, and the widespread education of astronomy, cosmology, astronautics, philosophy, and other spacially and philosophically related subjects.

[9:2:44] Personally, cosmospectivity means to view all that is beyond The Earth and beyond humanity as sacrosanct, both to the existence of humanity itself, and holding some higher existence, purpose, reality, and vitality than all that is not directly cosmical.

[9:2:45] Let us just, for a moment, digress onto the topic of the Cosmical Paradox, because although in the traditional Astronist philosophical viewpoint, all that is beyond The Earth and beyond humanity is all that is cosmical, is not strictly the case.

[9:2:46] Everything within The Cosmos is cosmical, and even further than this, that which we described as The Cosmos and that which is cosmical, so the planets, systems, stars, and galaxies beyond that which is our own, we too are categorised as cosmical in scenario that other civilisations are peering up at their night sky, and they are wondermenting on what could be beyond their own planet; essentially, that which we considered to be others is that which we are ourselves in the Cosmical Paradox.

[9:2:47] To view The Cosmos in a higher, more directly Divine, and more central and emphasised light in regards to ourselves, our lives, our destinies, our futures, and our ambitions, is to correctly grasp what it means to hold cosmospectivity, and with carrying this throughout one's life, there are no doubts in my mind that humanity will one day be living amongst the stars across all the planets of the galaxy.

Clarity of Identiture

[9:2:48] The concept of identiture was first aforementioned in the short discourse on dominationism, and is described as the entirety of something's characteristics, functionalities, purposities, reputation, and its overall reality, but these five aspects of identiture are established herein and henceforth from two different viewpoints always.

[9:2:49] Firstly, identiture is structured by these five aspects from our own perspectives; the perspective of the individual, the organisation, or the civilisation in question, but inanimate objects, of course, do not hold this ability of perspective.

[9:2:50] Secondly, identiture is structured by these same five aspects but from the perspectives of everyone, and everything other than ourselves, other than that which is in subject.

[9:2:51] Both of these sides of identiture are equally as important as each other and form the foundation to the Astronist approach to the entirety of perception and perspective.

[9:2:52] It is the game of life to figure out whom we are and whom we wish to be and to pursue this identity until our last breath; this statement can be applied to individuals, to groups, and to entire civilisations.

[9:2:53] It is essential that we know whom we are and whom we wish to be if we are to achieve our innermost ambitions for these ambitions shall always be deeply interconnected to both whom we are and whom we wish to be.

[9:2:54] From the Astronist viewpoint, a civilisation must know who it is, what it stands for, and what its future goals are if it is going to be a successful civilisation; if it is going to work hard to achieve these goals, and if it is unified, logical, imaginative, creative, and diverse; again, this can also be applied to ourselves as individuals

[9:2:55] We must now turn to an emphasis on clarity; in this context, this means to make explicit identity that are and that you seek; propagate this identity to the worlds of peoples; hold pride in this values, the beliefs, and the ambitions that form the Common Vision; be open the identiture, and how it shall be centre to and enshaping of one's future.

[9:2:56] The Five Rectitudes in Astronist Ethics are both about action and thought, and it is the Clarity of Identiture that forms the basis for these actions and thoughts, yet you shall notice the vaguity of the concept of identiture.

[9:2:57] If The Grand Centrality is going to mean something to all types of peoples, and is going to be applicative to all types of peoples, then the concepts that is expounds must also be open to harbouring a multitude of applications; one knows the Astronist identiture by the themes of The Grand Centrality, but ultimately, it comes down to whom you are and whom you wish to be in the world of identities.

[9:2:58] The concept of identity in Astronist Philosophy shall be further so explored on the discourse entitled as The Philosophy of Identity.

The Troubles of Humanity

[9:2:59] The last of The Five Rectitudes focuses on pure morality in action as is traditional when studying ethics, and covers all aspects of human misdeed, immorality, and evility in order to demonstrate ways by which one can overcome, defeat, and reassemble oneself for the inevitable return of such malice.

[9:2:60] To demonstrate the worst of mankind is to best prepare ourselves to over the wickedness when it rears its iniquitous self one more and if we are blind to its masks, trickeries, and mirages, then it shall gain even greater ground than any of its predecessors.

[9:2:61] General Temptation can be applied to any indulgent product, or action that we know is against our beliefs, is directly in opposition to the achievement of our ambitions, or is simply a distraction from the work and efforts that will lead to the Common Vision of the civilisation in which we reside.

[9:2:62] The most efficient way of combatting temptation is to never allow one's mind to fall into the grasp of the temptation; place further distractions in front of the distractions first encountered.

[9:2:63] When one feels the inkling of the temptative grasp, one must distract their mind further and do something completely different; one must ask oneself what indulging in such a temptation will afford their highest of ambitions? Mostly likely, the answer is none; this alone should be the most effective of deterrents.

[9:2:64] Temptation is strong, but we must be stronger than itself, and better for the future shall we be by this notion; that is why the faiths since thought began have warned of temptations both near and distant; the latter of which can be just as dangerous as the former as that which is distant can easily be distorted, masked, and cloaked in the pretence of something that, in truth, it is the opposite of.

[9:2:65] If one struggles to identify temptation, or to accept that something is temptative by its nature, one only needs to apply its functions, and consequences to the points aforementioned, and if any are fulfilled, then one can be sure of the temptative nature of that which they do question.

[9:2:66] Sexual vulgarities surrounding all aspects of culture in our world; whether by cultural, religious, or some personal belief, one must hold strong in the face of these perversions of reality and truth.

[9:2:67] Just like any temptation, one must distract one's mind from these sexualisations, and turn one's mind towards subjects of a different nature; in this realm, religious social teachings must prevail, and if one does not associate oneself with a particular religion, then one must use their own natural consciousness to determine that which they know is truth and right, and that which they know is false and wrong.

[9:2:68] No matter how much we coat these vulgarities with trues of oppositisms, their actual identities must always be identified, and can easily be done so as their masks can quite quickly be exposed for what they are.

[9:2:69] Many of the vulgarities, the failures, and the incidences of the human systems and governments and societies can be found to be originating from the Failure of Education.

[9:2:70] The next of the Troubles of Humanity, the Failure of Education, is centralmost to many societal problems, primarily the lack of vision, ambition, and imagination encouraged in the children to achieve their life's dreams, the lack of emphasis on the vices of the world and how to avoid them.

[9:2:71] Finally, the Failure of Education lies in the teaching of subjects and the teaching styles of the educators; this is why The People's Constitutional Company of Jesse Millette is dedicated to the established phrontisteries worldwide for the proper educations of the peoples of this world, both young and old.

[9:2:72] The lack of focality in the disciplines of astronomy, cosmology, and philosophy is also another area of educatory structure that is sorely lacking which does not align with the futurity and the destiny of humanity.

[9:2:73] Without knowing and acting upon the way by which we wish to go, we cannot hope to ever achieve our highest of ambitions, and the first means of doing so is the establishment of an educatory structure that reflects what the civilisation requires from its population.

[9:2:74] The Narrowness of Thought is an issue that is inevitable to forever plague a portion of the populous, and even parts of those people whom consider themselves to be of openthought experience Narrowness of Thought, as it is part of the naturity of humankind to be somewhat narrow in some facet of existence.

[9:2:75] It is also important for a portion of the population to be of narrow thought as there must always be sheep whom follow the shepherd.

[9:2:76] However, narrowness seems to have pervaded throughfold in many of the minds of the peoples of the societies of this world; the balance between narrowness and openness has become distorted, and the peoples now seems to have favoured the narrowness of minds, perhaps because of its ease.

[9:2:77] As aforementioned, the majority of the population is expected to be narrow-minded, but let them be narrow-minded in at least the right direction for narrowness in the wrong direction is a completely disutility.

[9:2:78] The right and the wrong in this context is dependent upon the approach taken by the philosophy applied; from the Astronist perspective, all trajectories pointed towards the centrality of The Cosmos are positive contributories to civilisation, either narrow, or open versions of these.

[9:2:79] It is the general overall goal of the Astronist philosophical tradition to rebalance the narrowness and the openness of thoughts of peoples, and to do so in alignment with the naturity of the human mind for if the philosophy is going to be attractive to the minds of humanity, then it must not work opposition to them.

[9:2:80] Only the rarest of minds are open in all aspects, but the more common greatest of minds are open in some aspects, and narrow in others; it is the duty of phrontisterial education to jump upon these aspects of potential openness, in order to establish a future for the educatee in this particularity.

[9:2:81] One of the main principles in Astronist social organisation is the following; the open minds shall lead, and the narrow minds shall follow, but it is only when the narrow minds lead, and the open minds are forced to follow that we see the destruction of societal achievement, progression, and improvement.

[9:2:82] The narrow minds of the nation work along their tapered path happily without discontent for they shall not be worried of the larger problems of the world and they shall not be posed with questions of greater capacity than their own minds can possess.

[9:2:83] This does not mean to disparage the narrow minds; in fact, it is to celebrate that they are the bulk of the peoples of this world, and that they are responsible for the actualisation of the ideas of the most openminded of peoples; by this single notion, we comprehend the way by which narrowness and openness work together, and are interdependent upon one another.

[9:2:84] Similar to Narrowness of Thought, but an offshoot in its own right, the Narrowness of Perception is way by which people perceived, as a direct product of the way by which they think.

[9:2:85] Simply, in Astronist terms, all perceptions that are not either majoratively, or partly cosmospective by their nature, or by their future goals are considered either irrelevant, or unprogressive.

[9:2:86] Perhaps this may be viewed upon as an extreme opinion, but without drawing this line of identiture, how can one distinguish between the Astronist viewpoint, and any other.

[9:2:87] This has been the failing of many philosophies, ideologies, faiths, and systems; they have not managed to find their niche identity, and as a direct result, they have faltered in their identity, and have become either overcast by stronger identities, or have been integrated into other systems, but have not succeeded in establishing itself as its own system.

[9:2:88] To return from digression, narrow perception is a disparity in one's perception of the Common Vision that does not align with the majority, or with the founder's Common Vision, also known as the intended Common Vision.

[9:2:89] In all cases, the Narrowness of Perception is the narrowness of potential, the narrowness of resource, and as a result of thought, the narrowness of knowledge; this is how narrowness pervades into all aspects of whom we are; into our thoughts, minds, actions, and ambitions, and this is projected into the world by our own demand.

[9:2:90] In some ways, the Narrowness of Perception can be considered to actually precede that of the Narrowness of Thought because when something is perceived, it is after which then thought about, and it is those processes of thought occur after the initial perceivance.

[9:2:91] That is then a psychological debate, but the principle still stands true that the Narrowness of Perception is a Failure of Humanity that perhaps will always exist, but the goal stands in suppressing this narrowness in times when it only halts progression.

[9:2:92] Blind Dogma is prevalent throughout the world, and acts as an important framework for the majority of people to lean upon in their lives as an important cornerstone of their existence that they can depend upon.

[9:2:93] Dogma and Blind Dogma are vastly different entities with contrasting circumstances; the former is structuring, important for the fragile humankind, and the latter is regressive, and is nothing but a Narrowness of Thought; furthermore, Blind Dogma is the actualisation, the manifestation of the Narrowness of Thought.

[9:2:94] We must see dogma in the context that it was produced if we are to perceive it correctly; if we are not prepared to do this, we indulge in Blind Dogma, also known as literalism, which fuels fundamentalism.

[9:2:95] If one attaches oneself to a particular dogma and wishes not to see the faults, the contexts, and the possibility of that dogma being illogical, or simply incorrect, then that is one's own idiosyncrasy, but issues arise when one wishes to impose their narrowness upon others, to stop them of thinking of any possibilities beyond the dogma and its words.

[9:2:96] There are many benefits to dogmatics; they provide structure, basis of thought, authority, and cornerstones for those most vulnerable in thought, and weak in spirit, but their dangers most often outweigh these benefits; the Narrowness of Thought, the

inconceivability that other ideas may hold truth, the regression of society, and the extremism of literalist interpretations.

[9:2:97] If the betterment and progression of humanity is the ultimate goal, and if one strives towards achieving cosmopectivity, then Blind Dogma and its adherences is neither the course towards we should proceed, nor the solution upon which we should place our hopes.

[9:2:98] There are certain indulgences in this world both pertaining to mentality, and physicality, with neither one superior over the other, but that of physicality is perhaps become eversomere prevalent in present times, especially so by the means of money and materiality.

[9:2:99] Both money and materiality are not entirely failures of humanity, unlike the other exemplars of this discourse, but they move back and forth between failures and successes, thus demonstrating their ability to move along the spectrum of this bipolarity.

[9:2:100] Many have said previous to this writing that money is not the answer to all our worries, fears, and sufferings, and this would be true, but it does provide us with many things with the right combination of its utilities and presuming the good state of the wealth-bearer.

[9:2:101] Security, stability, freedom, power, and the sense of achievement amongst other elements that money provides, and although we will most certainly need money to achieve our goals, we must always remember that money itself should not be the goal for this is the greatest exemplar of a means to no end.

[9:2:102] We shall speak further on the issue of money in the lattermentioned discourse entitled a The Philosophy of Money, but herein we must speak of its role in the failures to humanity, alongside materialism too.

[9:2:103] There is no truer utterance to claim that money is the greatest causality of conflict, suffering, and crime throughout every human civilisation.

[9:2:104] Whether the crime is amounted by robbery, murder, assault, or extortion, money is the on commonality that is present in all crimes in some form, or context; this demonstrations two things, one about the committers and another about the nature of money and its intrinsic impacts upon the minds of humankind, which shall be addressed in the discourse about the philosophy of money.

[9:2:105] The lines between human failure and success are very much clear, but its money and materiality that jump from one side to the other without any real loyalty to either side.

[9:2:106] To those whom say that materials do not matter, they are wrong to a certain extent; yes, they do matter in the context of this life on this world and the quality of life we

wish to lead in the civilisation, but so equally no, they do not matter in the broader questions of a philosophical nature such as those of an existential, moral, divinical, and cosmical origin.

[9:2:107] The major annoyance by this particular notion is that if people can think so broadly and openly in this context of money insignificance, then why not can they think so broadly and so openly in other contexts, such as in regards to The Cosmos, sentience beyond The Earth, the grandity of worlds, the vastity of The Cosmos in The Universe, and the subsequent centrality of The Cosmos!

[9:2:108] In the context of humanity's exploration of The Cosmos, there exists an intrinsic essentiality of money and materials for this to be able to actually occur because of the technologies, suits, and mechanics involved in this expeditional initiative.

[9:2:109] There is no logic in attempting to exist without something that has been made to become so intrinsic to the way in which our civilisation functions; even the most humble and ascetic of us engage in some in the handling of either money, or materialisms for none of us can go through life without interacting somewhat with these most intrinsic of elements to life.

[9:2:110] It is not inclusive of the Astronist approach to attempt to forsake, or forgo such elements of life that are intrinsic to structured living, and so the forsakement and the forgoment of such things is not the answer to address money and materialism, instead is their utility and the principle of keeping them at distance so as not to overcome oneself.

[9:2:111] The next of the Failures of Humanity that is so intrinsically linked to money and materialism, or so the lack of, is that of Gang Culture.

[9:2:112] Gang Culture thrives in the environment of squalor, poverty, and a certain discontent with the quality of one's life as caused by the lack of monetary means and material distractions.

[9:2:113] Gang Culture and its anarchic and violent criminalisms is the greatest antithesis to the Astronist philosophical tradition by its very core nature and purpose.

[9:2:114] Gang Culture preys upon the most vulnerable of minds, oftenmost the young, and feeds upon their mistreats and their discontentment with the way their futures look, and attracts them with promises of freedom, wealth, and brotherhood, but instead, they receive entrapment by the gang itself, blackened money, and a brotherhood who would soon turn their backs on you if you did not fall in line with their own wants.

[9:2:115] In the present times, we are witnessing the rise of many different Gang Cultures throughout the world, and even now in some of the most prosperous of nation states; this may be equated to the centrality of money and materialism in these states, but we mustn't forget the importance of emotion in all humanity, especially so in this context.

[9:2:116] One is much more likely to be submerged by the Gang Culture if they have no ambition, no direction, no focus, or feel no point, or higher purpose to their lives so as to form their general vulnerability.

[9:2:117] By such notions, faith and religion have failed these people, and all they feel they can turn to for happiness and contentment is money and materialism, and they shall conduct any action in order to achieve such, which explains their entrance into Gang Culture.

[9:2:118] It is also considered a great injustice and irresponsibility of certain medias to document and almost promote Gang Culture, or any similarity that rebels against the values of the Common Vision, the principles of the state, and the philosophies it holds tightly to its foundations, and such medias should be called upon to stop this promotion and explain their irresponsibilities in these such cases.

[9:2:119] It is the ambition of The Philosophy of Astronism to provide such vulnerable peoples with a sense of purpose in this life, to provide them with something that they can work towards, and contribute to, and to provide them with better circumstances in making their lives better for themselves.

[9:2:120] I want the peoples from all the countries of the world who feel this way to look up at the stars tonight and thinks of all the possibilities of the world beyond this world, and know that the purposivity and naturity of The Philosophy of Astronism is to be believe in such, but it is also to discovery, explore, and embrace such cosmical ideas both in the mentality and the physicality.

[9:2:121] Herein, I shall let the people of the world know that no matter what the others with whom you share this world steal from you, you will always have the stars to look up to at night, and no matter if your faith has faded, your friends have deserted, or your family does not understand, always know that with the stars and with philosophy, you are never alone for they are all one needs to make their mark in this world, just as I shall do in writing this book for the world.

[9:2:122] And now we move onto the next Failure of Humanity henceforth known as inambition; there are many peoples of this world who wish not to dream, for they are scared of the consequences of such, and the work that will need to be carried out in order to achieve such dreams.

[9:2:123] We should understand herein and now that the Astronist philosophical tradition, and even the entirety of Astronist Culture is based upon ambition; striving forth to achieve that which one desires, especially so in the hope of bettering the world, and humanity in some way.

[9:2:124] Ambition is a principle centrality within contology and Astronist Ethics, and so, that is why inambition, the antithesis to ambition, is considered a Failure of Humanity in this context.

[9:2:125] Inambition, however, is perhaps still a rare quality in humanity due to most people holding some sort of dream, or desire to achieve something in their life, but inambition can also mean ambition directed towards a non-Astronist trajectory in this context.

[9:2:126] Inambition can be any ambition that is considered regressional from an Astronist viewpoint, such as the ambition for humanity never to venture beyond The Earth in discovering and exploring The Cosmos; this is an ambition by general terms, but it is considered an inambition from the Astronist perspective because it is anti-cosmos.

[9:2:127] Inambition, more broadly, is the inability of an individual to both perceive and conduct ambition; the former, as has was aforementioned, is largely rare as it does not coincide with the human nature to not have any hopes or dreams, but the latter of which, the conducting part, is much more prevalent amongst humanity.

[9:2:128] This is perhaps more prevalent because it is the nature of the human mind to have hopes and dreams, but to never dedicate themselves properly to the achievement of these dreams, whether this be caused by laziness, distraction, or by some other external or internal means.

[9:2:129] Whichever type of inambition, and by whichever means it occurs, the Astronist philosophical approach considers such as a current Failure of Humanity, so as to distinguish between ambitions that hold cosmocentricity and ambitions that hold anti-cosmical natures.

[9:2:130] Hedonism, especially in recent modern history, has played a ginormous role in the devolution of morality, the dissolution of the role of authorities within civilisations, and has generally stood in opposition to traditional values in the name of achieving personal happiness and contentment.

[9:2:131] Hedonist Selfishness is considered a Failure of Humanity in this discourse because of its utilisation in many instances in the world; hedonism is used as a means to justify certain traditionally immoral acts, and to justify certain illogical, irrational, and anti-philosophical thoughtpaths.

[9:2:132] Hedonism itself is not considered a Failure of Humanity, and nor is it condemned within the Astronist Tradition, but the centrality of happiness is not positioned, and certainly neither is the pursuit of pleasure, self-indulgence, or happiness considered the proper aim of human life.

[9:2:133] Hedonist Selfishness is the embodiment of hedonism in an even more extreme selfishness than that which simple hedonism itself expresses, and is characterised by any individual who places their happiness, their contentment, their reduction of suffering, and the achievement of their ambitions above another person's, or above the entirety of the group, or that of humanity.

[9:2:134] Hedonist Selfishness is another antithesis of the Astronist philosophical and ethical tradition, in that, in the Astronist Tradition, depending upon the context, one is encouraged to put humanity and its progressions before oneself, or to at least align, or connect one's ambitions to that of wider humanity, or to have ambitions that are a product of the overall Common Vision, as structured by the most basic concepts of Astronarianism.

[9:2:135] There remains no condemnation in striving towards one's happiness and contentment for this is all that we humans do from the moment we are born to the moment we die, but to place one's happiness above someone else's, or to reduce someone's happiness in order to boost one's own are actions of contention from any logical ethical viewpoint, let alone the Astronist viewpoint.

[9:2:136] Throughout our lives, we shall come across, or at least be subject to people of power, and witnessing the exercising of power in any of its forms, or contexts, is anyone's attraction to the next of the Failures of Humanity identified in this discourse, which is henceforth known as the Seekence of Power.

[9:2:137] The Seekence of Power is one's overall infatuation with inanimate entity of power, its uses, and the consequences of holding it; in any civilisational system, there must be authority and power held by some organisation, or group, and this is acknowledged by Astronarianism.

[9:2:138] However, the main difference in Astronarianism is that power is intrinsically emphasised by the responsibility required to both acquire it, to maintain it, and to oversee its carriage towards new ownership.

[9:2:139] It is not illogical to notionise that our attractions to money are in truth, attractions to power at their basis for money is one of the major embodiments of power in this civilisation of our own establishment.

[9:2:140] And so, through whichever outlet one is attracted to power, power remains at the centre of human temptation; power in marriage, power in politics, power in thought, whichever power it is, they are all the same; they embody domination of one over another, and it is what all our civilisations have been structured upon without any doubt.

[9:2:141] Seeking power is no immorality from an Astronist perspective in general terms, only if that individual is aware that the abuse of power, or the irresponsibility when power is bestowed, are heavily condemned by the Astronist ethical tradition.

[9:2:142] The responsibility of holding power is forevermore important than the power itself and this must always be observed; if we have people in power whom do not conform to this, then we are damning ourselves to years of tyranny from an irresponsible and abusive leadership.

[9:2:143] Although the Seekence of Power is considered a Failure of Humanity, especially so when it is abused, it is also an inevitability of humankind; power is both fragile and precious and is and shall continue to be the central driver of ambition, conflict, and progression in all human civilisation, and to stay in alignment for more fundamental Astronist ethical principles, there stands no logic in attempting to exterminate something so fundamental to human existence.

[9:2:144] There is what is henceforth known in the Astronist ethical tradition as the Natural Inequality; this encompasses the idea that there are those of us whom are naturally and environmentally positioned to do better and be better than others.

[9:2:145] This is by no means discriminatory, nor is to directed towards any particular individual according to their faith, or lack of, their nationality, race, or ethnicity; instead, this focuses on the differences in people's personalities and their natural talents and skills.

[9:2:146] There are those of us who succeed in different areas because of our natural abilities and talents, such as those of us with a musical skill, or having a green thumb; all of us have talents, but the key element of life is to discover such talents and build upon them, and some of us will inevitably achieve mastery within them.

[9:2:147] Interest and enthusiasm can also drive talent that wasn't naturally accessible, but our interests can grow from the environment in which we live, and from those whom influence us, and those whom we surround ourselves with.

[9:2:148] Natural Inequality is considered a Failure of Humanity because it demonstrates the achievement of total equality between all peoples as an illusion, as a myth of humankind that will never be achieved due to our own naturities.

[9:2:149] The Ignorance of Logic has been prevalent throughout the history of humanity, though in current times, even after the trailblazings of the greatest of astronomical minds, the prevalence of logic seems to have become eversomere emanated.

[9:2:150] If we ignore logic then we ignore that which has lead us to our current position of civilisation and our current position of cosmical understanding.

[9:2:151] Perhaps it is easier for the majority of the population to turn away from logic and surround themselves with the cushions and comforts of that which is totally imaginary, and this is true for all of us as we have all indulged in escapism, but in the most serious of

circumstances, we must not build our arguments, opinions, and beliefs upon illogicalities for if we do so, we are on a trajectory pointing to nowhere.

[9:2:152] Many have argued that the religions of the world have inhibited logic from assuming its position at the forefront of human progression, but in fact, it is the religious traditions that have sparked greater understandings of logic, but now we live in a time whereby logic has developed into something in its own right, and this must not be overshadowed by the faiths of the world now, and it shall not if philosophy prevails.

[9:2:153] Illogicality is in constant opposition to logicity and this is a battle that has been raging since the inception of human thought and philosophy, and shall continue to rage on until the end of thought.

[9:2:154] Illogicality will always exist if logicity is to exist as its antithesis, but as philosophers, we must always protect logicity from its menacing foe, illogicality.

[9:2:155] It is perhaps humanity's greatest of failures to be so susceptible to illogicality, but we fear not, for logicity has always existed and shall always exist, no matter how prevalent illogicality becomes, and as we herald the philosophical revolution, we so to herald a global cultural return to logicity as a result.

[9:2:156] I do not wish to entertain the thought about how many children there are in this world whom are being taught illogicality; however, the worst of illogicalities is that which is masked as logicity; that which disguises itself and claims to be logic, but is in fact the oppositism to logic.

[9:2:157] I feel it is my personal vocation to not rid the world of illogicality, but to reascend philosophy so as to return logicity to its rightful primary position in life, in education, in thought, and in culture.

[9:2:158] You interpret that which you wish about that which you interpret, or deem to be illogical and that which you deem to be logical, but the principle remains that there only exists one overall reality, one overall logic, and one overall truth.

[9:2:159] The final of the Failures of Humanity to be discussed in this discourse is that which is herein entitled and henceforth known as discosmospectivity.

[9:2:160] The most solemn and severe of the Failures of Humanity is that of discosmospectivity, especially so from an Astronist perspective because anything that fails to perceive The Cosmos, fails to centralise The Cosmos, or fails to comprehend and raise The Cosmos to the position that it is considered to deserve, is not only anti-cosmos, but it is also anti-Astronist by nature.

[9:2:161] A discosmospective view either fails to make The Cosmos the centrality of thought, system, and life, or fails to view, or raise the significance of The Cosmos in any way at all.

[9:2:162] Discosmospectivity is currently predominant in the world and it is from this epidemic that The Philosophy of Astronism, and the wider Astronist philosophical tradition, is forged because a civilisation with a discosmospectivity is a civilisation that is destined for a future without any greater understanding from where which they came and to where which they are heading.

[9:2:163] Firmly, it is instilled herein and shall continue to remain the purposivity of The Philosophy of Astronism, and all other Astronist philosophical derivations, that discosmospectivity in all its forms in every part of every world is eradicated for it serves no purpose to the current, or any of the future generations, except one of pure negativity.

[9:2:164] With no doubt it is discosmospectivity that remains the singlemost oppositism to the entirety of the Astronist philosophical tradition, culture, and worldview for there is no way that aligns with any of the principles of Astronist Thought.

[9:2:165] Discosmospectivity may be prevalent in the world in these current times of this writing, but this shall not remain the state in which the affairs exist for there is a revolution of reascension in occurrence by the writing of this single book, and with its words, cosmospectivity shall be birthed, and retake its position in all the civilisations of the world.

[9:2:166] From that moment on, all whom are lost, afraid, or wish to just take a moment away from the noise of this world, they can peer up at the starry night sky and imagine the occurrences and possibilities of other worlds beyond our own, and it is in this most simple of ambitions that the Astronist philosophical tradition is born, as manifested by The Philosophy of Astronism against the gravest of the Failures of Humanity.

—

[9:2:167] To conclude this discourse, it is important to discuss the interactivity between Astronarian Social Teaching as a derivation of Astronarianism, and other forms of social structure and organisation, of which we shall discuss consecutively in clarity.

[9:2:168] Almost all of the theories, philosophies, and ideologies listed below have their own Astronistised (also known as Astronised, sophised, or kosmised) versions, and are part of wider Astronarianism in that sense, but herein we discuss these concepts in their pure, non-Astronistised versions.

[9:2:169] Those of a philosophical mind that live both during and way after my own existence shall base their studies and theories of any of the following political orientations and philosophies below in order to further develop their interpretations of the Astronist

viewpoint towards these particular social and philosophical organisational systems, and herein, I provide the basis for the Astronist position.

[9:2:170] The political and social philosophies below are comparative and relative to the Astronarian social and political philosophy of Astronarianism rather than The Philosophy of Astronism itself.

[9:2:171] Since the beginning of modern human civilisation, the rural society has been the most important part of the civilisation due to its providence of natural resources and materials, but in today's modern era, we have experienced rapid urbanisation.

[9:2:172] Astronarianism considers that both rurality and urbanity are necessary for human civilisation with the balance between the two subsiding either way according to the circumstances of the civilisation; its size, its age, and its topography being the main three contributors.

[9:2:173] On The Earth, Astronarianism praises the urban metropolises that are spread across the globe and attempts to continuously develop, improve, and advance these cities for better human interaction, business, and cohesion.

[9:2:174] However, we still require a portion of the population to stay in rural societies for production of resources, farming, and other materials which demonstrates the rurality's most important contributions to the overall civilisation.

[9:2:175] Rural life, for this reason alone, is highly valued in Astronarianism and is often represented in Astronarian Culture and Arts, but in the context of The Earth, Astronarianism would suggest rural life is superior to urban life, and so, for this reason, Astronarianism does not correspond to Agrarianism.

[9:2:176] On other worlds, however, wherein the civilisations are young and the lands are diverse and the populations are smaller, then Astronarianism is a strong advocator for Agrarianism for it was the farmers looking for new lands that forced the populations to move out of their original territories and this is what we need for our disseminations on new worlds.

[9:2:177] The agrarian social structure is essential for the early development of a civilisation and it is for this reason that Astronarianism holds the social philosophy of Agrarianism in a special regard for its essentiality in the development and civilisation of new worlds beyond The Earth as part of the Humanic Exploration of The Cosmos.

[9:2:178] Anarchism holds no place in either Astronarian social or political philosophy; Astronarianism maintains that there must always be an authority over the people if one wishes to live in an ordered, structured, and prosperous civilisation.

[9:2:179] There is no truer statement than to say that there exists only a fine line between anarchy and freedom; some of the most prosperous governments of today seem to be crossing this line more and more as the principle of freedom becomes more valued than that of authority.

[9:2:180] In Astronarianism, there must not occur; the value and principle of an authority is forevermore important than that of freedom for without authority we have no freedom.

[9:2:181] Those whom place anarchy and freedom amongst the same category are mistaken in doing so for there exists little freedom in an anarchic civilisation as it is run through fear, violence, and force.

[9:2:182] It remains important, however, to always respect anarchism for what it is; a danger to social structure and political organisation that threatens to topple the institutions of the civilisation, and the morals, the philosophies, and the established culture of any civilisation that it preys upon.

[9:2:183] Anarchic supporters define anarchism as a civilisation run by the people for the people, but instead, anarchism is a breeding ground for violent uprising, Gang Culture, and disenfranchised peoples taking their chances in causing harm, lawlessness, and disorder.

[9:2:184] Anarchism is the epitome of disorderity in a human political and social context, and just as the disorderities of The Cosmos are mistrusted, so should we be of any other disorderity, especially one that shall impact upon the quality of our lives and our civilisation.

[9:2:185] It holds no economic benefits either, for the economy is best run by the business owners, the economists and the institutions for which they work; without an authority to establish these institutions, the economy would collapse, and so thereafter the civilisation shall too.

[9:2:186] As aforementioned, like one book cannot answer all questions, one person cannot hold all power, and so the Astronist social and political view on the topic of autocracy is not a preferred way of governance in most circumstances.

[9:2:187] The only way that autocracy can be considered passable from an Astronist viewpoint is when it takes place in a nation state that is tiny, or concentrated, or federalised, two exemplars of which are the current Holy See and the United Arab Emirates.

[9:2:188] Only in these most rare and obscure of circumstance could autocracy, in the form of an absolute monarchy, exist in a modernised, industrialised, and civilised state.

[9:2:189] The reason why autocracy cannot exist outside these most rare of circumstances according to an Astronist political and social perspective is because it is part of the human nature to feel the temptation of greed, and to enjoy the fruits of power.

[9:2:190] Autocracy could be permitted, but only if we knew for certainty that the person with the absolute authority would give up their power without armed struggle if that's what their constituents desired, but we can never be sure of this, and in fact, it is more probable that the individual would not give up their power, or do as their constituents voted due to their infatuation with the power that has been bestowed upon them.

[9:2:191] This is the principal problem with autocracy; it does not align with the nature of the human mind of desire, temptation, and greed, and therefore, unless in such rare cases as aforementioned, it is a doomed ideology of both social and political organisation and governance.

[9:2:192] Throughout recent history, we have witnessed many greatest minds commence onslaughts on the topic of capitalism; they have ripped the ideology apart and put it back together according to their own worldviews.

[9:2:193] One would perhaps expect Astronarianism to do the same, but in fact, the opposite is true for Astronarianism is traditionally a great supporter and advocator for the principal tenets of capitalism for it is solely responsible for the development of most of the major civilisations of The Earth today.

[9:2:194] Astronarianism does not attempt to reignite the ideological war between capitalism and its oppositisms, but instead infuses both capitalism and its antitheses with a Astronarian worldview, though this is different from dissecting the ideologies apart and reordering them according to a Astronarian worldview; that which is made reference herein is henceforth known as the process of pervadation.

[9:2:195] Pervadation involves the infusing of a Astronarian social organisation and political structure with a capitalist, or any other economic system, especially regarding the businesses of that capitalist nations following in some part with a Astronarian business operational structure.

[9:2:196] Astronarianism is not itself an economic ideology, like those of capitalism, communism, and socialism, but a social, political, and cultural ideological philosophy that can be applied to any of the economic philosophies.

[9:2:197] Nations under an Astronarian social and political organisation can still be considered secular due to them not being connected or lead according to religious or spiritual authorities, for instead philosophy and education is placed as the centrality.

[9:2:198] Astronarianism herein supports and advocates for capitalism due to the successes that capitalism has brought to the nations and peoples of the world whom have not been plagued by corruptions and wars.

[9:2:199] Furthererso, in the context of the Humanic Exploration of The Cosmos, we shall need the capitalist system if we are going to create economies beyond The Earth, and fulfil our destines and the possibilities in The Cosmos, and so, this is why Astronarianism is inextricably linked to capitalist principles, especially so in context of the development and establishment of Spacial Economics.

[9:2:200] The greatest aspect of capitalism is that it allows people to always have hope that they could make something of themselves one day in according to the extent to which they work; the greatest exemplar of this is the American Dream.

[9:2:201] We must always provide people with the possibility and the hope that in some future time, if they work hard enough, they will be able to achieve their ambitions, especially so if these ambitions relate to wealth.

[9:2:202] The largest gripe that Astronarianism has with capitalism is not with capitalism as a system in and of itself, but with the consequences of capitalism.

[9:2:203] It is an inevitability that in a capitalist system, there will be those whom fall through the gaps of the ordered society and economy, and will not benefit from the fruits of the capitalist system; it is a fundament of capitalism that there exist those whom benefit, and those whom do not.

[9:2:204] With this essentiality of capitalism ever-present, we understand that the main struggle within capitalism, especially those whom are leading a capitalist nations, is that a balance must be found between those whom have wealth and those whom have none.

[9:2:205] There can be those who exist with huge wealth in the minority, those whom exist with moderate wealth so that they can have enjoyable lives, and then there are those whom have very little, and struggle to afford the most basic aspects of domestic life.

[9:2:206] In the capitalist system, it is essential that those whom are in the leadership, make sure that the wealthy do not accumulate too much wealth so that the poorest end up with nothing, because it is the greed of the wealthy themselves that will herald the downfall of capitalism.

[9:2:207] True socialism attempts to have everything equally shared amongst all peoples, but this does not take into consideration the extent and the depth to which someone has worked; the wealth people in the capitalist system may well have worked harder for the wealth they have accumulated.

[9:2:208] Ultimately, this struggle of perfect balance is the greatest endeavour within capitalism, and it is the responsibility of the leaders of the capitalist nation to ensure this balance is maintained so that wealth is spread amongst those whom work hard for it, and less is spread across those whom do not work hard for it, but not so much that they cannot afford a moderate life.

[9:2:209] Other consequences of capitalism that Astronarianism is dedicated to fixing as it finds them undesirable is the centrality of materiality, the mass fixations on wealth, the replacement of philosophy and religion with money and materialisms, the disenfranchisement of peoples without money, and the problems of crime, drugs, homelessness, and cultural disunity that many examples of capitalist nations are suffering from.

[9:2:210] In conclusion, it is capitalism that remains the singlemost important and successful economic system though its social, political, and cultural consequences are those which Astronarianism attempts to fix, rather than any of the fundamental economic principles of capitalism.

[9:2:211] Due to the nature of Astronarianism and its ability to be implemented into any type of economic system, it could be classified as a derivation of centrism, though the official Astronarian position does not categorise it as such.

[9:2:212] Neither staunchly left, nor right, though implementing both left and right policies on an equal footing, whether Astronarianism is, in its purest form, classed as a centrist social and political philosophy or not, Astronarianism considers itself to be beyond the left-right political spectrum.

[9:2:213] Externally, however, it would not take an economist, or politician to see that Astronarian policies fall in both left and right sides of the spectrum, so as to derive it centrist position, though Astronarianism's ability to be able to be placed in either end of the political and economic spectrum demonstrates its internal perspective that it defies the traditional paradigm of being either left or right.

[9:2:214] Depending upon how Astronarianism is implemented and depending upon how it is perceived in such an implementation, Astronarianism can be considered left, right, and centrist across different examples of its application.

[9:2:215] Due to the nature of Astronarianism, it can either be economically left, wherein welfare, no social hierarchy, wealth equality, state intervention and state ideology are the centralmost aspects of the philosophy.

[9:2:216] However, it can also be economically right, wherein private ownership, low welfare, social hierarchy, wealth inequality, and state non-intervention are the centralmost aspects of the philosophy.

[9:2:217] Astronarianism can be implemented in so many different ways that the only way that we can distinguish its true left-right paradigm spectrum position is by studying its founding theoretical document, which is henceforth known as The Astronist Methodology.

[9:2:218] Pure, also known as Theoretical Astronarianism, is naturally distanced from the ideas of communism in an economic and political sense, and this can be derived from the very fundamentals of Astronarianism.

[9:2:219] However, where the two ideological philosophies to align is in the cultural sphere; it is by no mistake that Astronarianism takes some cultural inspiration from communism and its implementations in several different nation states throughout its dominant rise in the 20th century.

[9:2:220] Astronarianism outrightly agrees with the establishment of a national and international culture of Astronarian nations through cultural unity, monument building, Astronarian propaganda, art as inspired by the socialist realism, known as Astronarian Realism, and of course advocates for the establishment of that which is known as a National Philosophy.

[9:2:221] However, there are many parts of communist, especially Soviet culture, that Astronarianism also outrightly opposed to and that which it condemns, including the repression of alternative cultures other than the state culture, as well as the censorship of music, films, literature, and art that do not conform to the official state, or national culture.

[9:2:222] It remains an Astronarian principle that if a government has to suppress the cultural arts to preserve its own culture, then the culture that it is attempting to preserve is not strong enough to stand on its own two feet.

[9:2:223] Astronarian views on the role of the family in society is also largely traditional and conservative, and heralds back to the days of the 1950's suburban families in the United Kingdom and the United States of America, which seems to have been lost in today's current societies of broken homes, estranged families, and disenfranchised children and relatives.

[9:2:224] However, one must not take this as an attempt to return to such times of the past, but instead, to inspire that which shall be henceforth known as a newfound Family Culture that seems to have been devastated in recent times, and that Astronarianism wishes to return to.

[9:2:225] From the words herein, already we can derive that the true distinction between Astronarianism and other ideologies is the cultural characteristics and distinctions that it holds most centrally to its implementation into whichever economic, or political circumstance.

[9:2:226] It must herein also be addressed that perhaps the greatest contention between Astronarianism and many of the philosophies and ideologies mentioned herein is that Astronarianism is often non-military by its nature, and whether a nation is far left or far right, the one aspect they do have in common is the strength of the military and the militarised state.

[9:2:227] Communitarianism, as aforeaffirmed in the writings about the Family Culture of Astronarianism, holds a strong influence within the cultural implementations of Astronarianism, and is therefore aligned with the Astronist social and political structure and organisation.

[9:2:228] Conservatism is also widely experienced throughout Astronarianism in both its economic, political, and cultural contexts and definitions, depending upon specific implementations of Astronarianism of course.

[9:2:229] Conservatism, in the cultural sense, can be found in the Astronarian discouragement of abortion, the embracement of the family unit, the desexualisation and the opposition to the sensationalising of rebellious cultures.

[9:2:230] By these cultural examples alone, we can affirm that conservatism, especially so in the cultural sense, is present in Astronarianism, mainly due to it being an overarching, and largely all-encompassing philosophy.

[9:2:231] Astronarianism describes one economic, cultural, and political system that must try and overarch itself to encompass many different pre-existing systems, but it must also attempt to encompass many societal shifts, which explains the silence or neutrality of Astronarianism on some issues, and its vehement opposition to others.

[9:2:232] Astronarianism can be described as conservative in the sense that prostitution is absolutely illegal, but not conservative in the sense that it allows people to be whom they wish as long as this does not damage the integrity, the psychology, the spirit, or the identity of others around them with whom they share the society.

[9:2:233] There is no dubiety within Astronarianism and its social, political, and economic branches that the governmental and political structure and organisation of a democracy is the superior form of civilisational governance.

[9:2:234] Democracy must be fought for to be preserved as it remains forever fragile and in need of maintaining in order for it to continue to operate; by this nature, we can derive the trueness and the propriety of the democratic system because other systems, such as those of an autocratic, oligarchic, theocratic, and anarchic, are all functioned and governed, or partly functioned and governed through force, violence, threat, or through divine supremacy.

[9:2:235] Let us not bore readers with the benefits of democracy for we all agree that to have the ability to vote for that which we want is the greatest freedom to ever be granted for the people.

[9:2:236] However, as is lattermentioned when addressing the forms of oligarchy, Astronarianism also advocates for the system of technocracy that is defined by a system of governance wherein only the individuals that hold expertise in relevant areas are those whom are elected and entrusted to operate government of a civilisation.

[9:2:237] Astronarianism takes an advocatory position in relation to technocracy as it is believed that those individuals with the best expertise, experience, and those with a sense of responsibility are the best individuals to lead and govern the civilisation, rather than politicians.

[9:2:238] Technocracies are power of the few, but there is a greater and stronger sense of entrustment between the technocrats and the public which vote for particular technocrats to be in governing roles.

[9:2:239] In a wider sense, a technocracy is also an advocator for the emphasis of merit in education and demonstrates to the peoples of a civilisation that the acquisition of knowledge is an integral part of leadership, and so, should support educentrism as a direct result.

[9:2:240] Pure Astronarianism bases its political and governmental structure, organisation, and system upon the technocratic model.

[9:2:241] A technocracy works in strong alignment to the functioning of a democracy as it is uniquely positioned to work in short-term bursts when a problem arises in a nation wherein expert knowledge is required for the government to survive the issue.

[9:2:242] However, it is also important for technocrats to understand the current political, social, and cultural landscape of nation state if they wish to become political personalities, liked by the public, and if they wish to be reelected for a second term after the problem, or crisis for which they were voted to solve has been resolved.

[9:2:243] In Astronist terms, technocrats are limited to having scientific knowledge, but any kind of expertise in any relevant field, especially so from an accredited phrontistery, in the Astronist education system.

[9:2:244] It is the goal of Astronarianism to further advance and more deeply develop the ideological governing system of technocracy which still largely exist in its infancy when compared to the other well-developed, practiced, and utilised ideologies.

[9:2:245] In The Astronist Methodology, a full elucidation is given regarding Technocratic Astronarianism, but herein it must be stressed that technocracy is a major contributor to overall Astronarianism.

[9:2:246] Closely linked with the principles of technocracy, and so also a large part of Astronarianism is that which is known as a meritocratic system.

[9:2:247] That into which we vest our time, talent, and agency, is that from which we gain, and so too does the civilisation in which we reside.

[9:2:248] That single statement forms the foundation of Meritocratic Astronarianism, and forms the Astronarian approach to studying, implementing, and aligning with the principles of a meritocracy.

[9:2:249] It only seems both logical and fair that for that which one dedicates their time to is for that which one receives advancement in society, career, and the general civilisation for.

[9:2:250] Those whom have not spent their time wisely and dedicated themselves to something which they can use to contribute to the civilisation should not receive the same treatment as those whom have spent their time wisely and whom have dedicated their time, resources, and energy to a vocation that they adore.

[9:2:251] In the meritocratic system, the Astronarian education system must be structured in such a way that it locates the vocations of each and every individual who wishes to find it, and from there, that is what they shall dedicate themselves to achieving, and so in this system, dedication to vocation equates to the extent to which one benefits from the fruits, welfares, and luxuries that the civilisation can bring.

[9:2:252] In Astronarianism, the technocratic system and the meritocratic system are combined into one for they are perfectly suited to work together in unity as the meritocracy works in order to develop the technocracy thereafter.

[9:2:253] Whichever version of Astronarianism is interpreted or applied, the technocratic and the meritocratic tones should not be mistaken, or understated for they both play an equal integral part in the entirety of Astronarianism as a social, political, and economic philosophy.

[9:2:254] Environmentalism is hugely revered within Astronarianism, unlike in many of the other major philosophies mentioned during this analysis.

[9:2:255] The environment of The Earth is considered just as much part of The Cosmos in Astronist Philosophy as the stars, the galaxies, and the most distant of planets, and so, must therefore be preserved.

[9:2:256] Therefore, Astronarianism, as influenced by the wider Astronist philosophical tradition, is very solemn about the importance of the environment at the civilisational level as is portrayed and propagandised through artworks, music, literature, film, and journalism.

[9:2:257] There is no more reviled and no more revulsive ideology than that of fascism, and although it may adopt nationalism as an ideological ally, of which Astronarianism also does so in some contexts, the use of this could be no more distant.

[9:2:258] The ultimate antithesis and oppositism to Astronarianism, and wider Astronist social and political philosophy, fascism is the furthest from the principles of Astronarianism that any mind could conjure, though if Astronarianism is ever, in any way, connected with fascism, then the most abominable perversion of the philosophy has been made and one should always identify and eliminate such a falsification; that is all that should be said about the nightmare that is fascism.

[9:2:259] Federalism, or federacy, is another form of political governance that is heralded by Astronarianism for the nature of its structure; essentially, the formation of a governing entirety by the accumulation of governing substates.

[9:2:260] Federalism is praised because it allows individual groups and states to manage their local and internal affairs autonomously without interference and bureaucracy, but also allows an overarching state to manage the national, international, and external affairs of the group of states as a unified whole on the global stage.

[9:2:261] As the ideal system for a internal and external affairs management, federalism is incorporated into Astronarianism as the philosophy's primary methodology of political structure and is therefore widely supported by Astronist political and economic policy and ideology.

[9:2:262] Feminism is heavily affirmed within Astronarianism, and in wider Astronist Culture and Philosophy as an integral part of Astronist Literature and all other artistic and cultural expressions.

[9:2:263] The three primary representatives for women within Astronist Culture and Philosophy are the Astronist characters of Ellena, Zara, and Harriet whom play a dynamic role in shaping the Astronist approach to women's issues, and towards feminist philosophy.

[9:2:264] I wish not to discuss herein the Astronist literary alignments and disalignments with the principles of feminist philosophy, for that shall be saved for later works dedicated to the literary analysis and critique of Astronist Literature.

[9:2:265] Instead, that which should be affirmed steadfastly amongst the topics of feminism and Astronism is the construction of that which is henceforth known as

Astronist Feminism, a distinct portrayal of women in an Astronist way, as coupled with the newfound approaches to feminist philosophy from an Astronist perspective.

[9:2:266] Isolationism is not considered a desirable foreign policy under Astronarianism, especially so in an economic and trading sense, however, due to the non-military characteristic of Astronarianism, there exists a hint of isolationism in that Astronarianism does not advocate for the involvement of a country in the internal conflicts of other nations for their own country's gain.

[9:2:267] This, therefore, pins isolationism with regards to Astronarianism as a policy implemented solely depending upon the circumstances with economic isolationism discouraged, and with conflict isolationism encouraged.

[9:2:268] It is one of the centralmost principles of Astronarianism that all people can be whom they are, and this freedom must be protected at all costs if we are to preserve our own identities, but only when being oneself does not negatively impact upon another person.

[9:2:269] Freedom is the cornerstone of democracy and it is in freedom that we all choose to live our lives, and to be whom we wish and to be accepted by those around us for it.

[9:2:270] Homosexual, bisexual, and transexual movements should always be respected for the gravity of their message, but the only concern about LGBT social movements and subsequent ideologies is that they may negatively impact upon the most vulnerable in a society, especially so prevalently in the youth of the civilisation.

[9:2:271] Being attacked verbally or physically for portraying stereotypically homosexual, bisexual, or transexual behaviour, when the person is not any of these things in truth, is very psychologically damaging on the receiver of these assaults.

[9:2:272] Words have a greater longevity than that of punches, and even when the bruises have healed, the individual may begin to wonder whether they are homosexual, bisexual, or transexual, when beforehand, they never would have done so.

[9:2:273] Actions may speak louder than words in the context of a moment, but one tends to forget more easily the actions done unto them and even years later after words are spoken, one can still hear those words exactly how they were said with their solemn conviction which pertains to the power of words for physical wounds heal quicker than those of the mind which words have the greatest power over.

[9:2:274] The words of one can direct the decisions of another throughout their lives; one could counterintention that words only hold power if they are listened to, but in reality, we all hold a natural instinct to hear all the words that are spoken of us for the majority of us are not strong enough to not want to listen, or at least they do not have the ability to escape from listening.

[9:2:275] The Astronist Tradition maintains that words remain more powerful than actions for the words of others are harder to extract from one's mind than the healing of wounds from punches thrown; there is a lesson here to be learnt, both for the speaker and the listener; once one has heard something, they cannot unhear it, and to forget words is considered to be a distraction from the words said rather than a solution.

[9:2:276] The speaker holds a responsibility to not only hear their own words, but to know and understand them for in knowing the words that one speaks is understanding their impacts on those towards which the words are directed and the subsequent consequences on the listener.

[9:2:277] The listener too holds a responsibility to see through the words of another and to understand the origins of such harmful words which is best found in the eyes of the speaker for their eyes remain to expose all their insecurities as our eyes are the apertures to our hearts, minds, and souls.

[9:2:278] The listener must see the eyes of the speaker and know their inner vulnerabilities to understand why the speaker has expressed their feelings through the catapulting of harmful words towards the listener; in the Astronist Tradition, to master the seeing of the eyes of another is considered to be the greatest of all forms of wisdom, but it is to know the difference between eyes and what eyes may say to you that is the skill to master for it is the superior skill of all skills.

[9:2:279] Returning from our short digression, this is an example of how the environment in which we live and the people whom we are surrounded by can make us think of different ways, and change our thoughtpaths towards trajectories and topics that we had never yet imagined that we could possibly be part of, and that may not be the true identity of the individual.

[9:2:280] This type of scenario is prevalent in the youth groups of current times, and breeds confusion, isolation, desexualisation, and a general discontent with one's own personal identity, and is the most dangerous consequence identified by Astronarianism to sprout from the publicising of LGBT social movements.

[9:2:281] However, from a stance of logic, morality, and rationality, the only way to curb this type of derogatory language, hatred, and psychological anguish is to make homosexuality, bisexuality, and transsexuality such a normality in a civilisation that people using them as insults, or for derogatory use become pointless.

[9:2:282] Astronarianism can be considered liberal by nature in many senses as it advocates for the freedom of speech and the press, the freedom of religion, free markets, civil rights, the democratic system, gender equality, secularism, and international cooperation, but in other cases, such as those of a familial, economic, and cultural sense, Astronarianism can be considered to hold more conservative principles at heart.

[9:2:283] In the familial sense, Astronarianism advocates for the family unit, the nuclear family, the discouragement of abortion, and a generally conservative familial outlook.

[9:2:284] In the economic sense, Astronarianism generally sides with ideas against mass benefits, and the welfare state, and in the cultural sense, can be largely sided with ideas about cultural unity and conformity, the dissemination of propaganda, and the establishment of a national philosophy, which may not be outrightly non-liberal, but could be interpreted and applied as such.

[9:2:285] Libertarianism and Astronarianism are largely distant from one another in their orientations mainly due to the fact that libertarianism opposes state intervention in almost all circumstances, while Astronarianism generally advocates for the role of the state in people's lives, though not necessarily intervening in people's choices, just simply holding an important role in a person's life.

[9:2:286] However, in total contrast, in spacial terms, Astronarianism turns extremely libertarian by the principle that when humanity leaves The Earth and begins to spread out across the planets and to explore new worlds, the role of earth-based states as we know them now will be minimised so much that they need not to play any role in people's lives, so as to embrace extreme political freedom, autonomy, and ideas of non-statehood.

[9:2:287] Astronarianism maintains, however, that this, although it is an inevitability, is not the current structure of human civilisation, and so, is not the current orientation of Astronarianism, but still advocates for the inevitability of that which is henceforth known as the concept of New State.

[9:2:288] Astronarianism and Libertarianism can also be considered the most basic theoretical and philosophical sense as similar in their upholding of the value of liberty, which has been made evident through discussions of Astronarian views on relevant topics in this discourse.

[9:2:289] Having just written about Astronarianism in spacial terms triggers a wider discussion about the chronological structure of Astronarianism; it is based upon two time periods, that which is henceforth known as on-earth, and that which is henceforth known as off-earth.

[9:2:290] The former describes the current humanity civilisation that populates The Earth and is founded by that which is known as Traditional Astronarianism, Classical Astronarianism, Original Astronarianism, or Conventional Astronarianism.

[9:2:291] The latter describes the future human civilisation according to the expressions of Astronism, which is believed to spread beyond The Earth and to populate countless other worlds, and so this is founded by a separate, and almost completely different identity of

Astronarianism, that is henceforth known as New Astronarianism, Neo-Astronarianism, Cosmic Astronarianism, or Spacial Astronarianism.

[9:2:292] These two periods of on-earth, and off-earth describe a huge divide within Astronarianism embodied as a struggle to establish a social structure for the current times of humanity civilisation, whilst also prophesying and preparing for future times of humanity civilisation.

[9:2:293] This shall be discussed in much further detail and in greater context during the writings of *The Astronist Methodology*, but this basic structure to Astronarianism, I felt, had to be introduced herein, in order not to lessen its imperativity and centrality to the foundations of what Astronarianism is now and that which it is intended to be.

[9:2:294] Masculism in Astronism and Astronarianism is primarily spearheaded by the Astronist characters of Jesse, Oliver, and Phoenix, whom each are represented and portrayed in different aspects of masculinity according to the preference of the author, or artist.

[9:2:295] Discussions of masculinity from an Astronist perspective are reserved for another discourse within this disquisition, but the most important particularity is that Astronarianism is a key pillar for the construction and establishment of a distinct Astronist Masculism which can be found portrayed in all forms of the Astronist Arts.

[9:2:296] Nationalism is considered a key resource for Astronarianism to use to its own advantage especially so in Classical Astronarianism, but nationalism, by its definition, holds a much more positive connotation in Astronist terms than by its mainstream equivalent.

[9:2:297] By the principles of the Union of Diversity, nationalism is used as an important tool for the unification of a people, especially a people whom are diverse in faith, race, and ethnicity.

[9:2:298] Nationalism is used as a way for the peoples to rally under one Common Vision, and one Common Identity, typically under that which is known as a National Philosophy.

[9:2:299] It must be clarified that nationalism is not completely necessary for the establishment of Astronarianism, for other resources can be used to achieve the Union of Diversity, but it is an efficient way of doing so; the key part to grasp is that Astronarianism does not require nationalism for itself to function, but instead may use nationalism if that is the only way that a population can be unified.

[9:2:300] Nationalism, in Astronist terms, refers to a way by which a people can be united as one, especially so under a National Philosophy, rather than relating to concepts of mainstream nationalism such as self-governance, and sovereignty, and certainly does not oppose the ideas of globalism.

[9:2:301] Instead, nationalism, which can be used as a unifier for a single nation, a group of nations, or an entire continent, does not oppose globalism in an Astronist context because it advocates for the grouping together of diverse peoples under one unified identity, which in fact, falls in alignment with the gradual globalisation of the world; a world wherein every group of people and every government works for the economic and political cooperation of the entire world.

[9:2:302] Astronarianism considers its newfound perspective and definition of nationalism to be a broadened version that encompasses nationalism in its more positive, and inclusive type, rather than alt-right versions of the philosophy.

[9:2:303] Within Astronarianism, nationalism is essentially viewed as an important resource, as well as a social and political philosophy that is necessary for the unification of a people, if they are not unified by anything else, such as religion, philosophy, ideology, or some other unificatory force.

[9:2:304] But even in these other unificatory forces, nationalism can still be found; more generally regarding nationalism, Astronarianism encourages a wider view of what nationalism really means, and understands it to not only relate to a particular nation, but to any group of people as a unificatory technique whether that be nationwide, continentwide, or planetwide.

[9:2:305] By whichever kind of version that nationalism is applied in with regards to an Astronist context, the fact remains that nationalism will always be an important unifier in any political, social, and cultural setting, and it is one that Astronarianism uses frequently, but only in nationalism's positive connotational Astronist definition so as to distance Astronist Nationalism from its pejorative mainstream version.

[9:2:306] There are various forms of oligarchy and in relation to Astronarianism, some of its derivations are accepted and aligned with and often integrated into a democratic system in unique ways, but then some of them are not, and we shall distinguish these herein.

[9:2:307] But first, let us address the concept of oligarchy as an entirety; the concept that the power of few is held over the masses.

[9:2:308] By this notion, in the most basic idea of oligarchy, Astronarianism opposes this due to the democratic system that Astronarianism advocates for, but Astronarianism does support the integration of certain derivations of an oligarchical system into a wider democracy.

[9:2:309] The most prominent of which have been aforementioned in this discourse, and they are technocracy and meritocracy; these two derivations of an oligarchical system are

often integrated into a democracy by only electing people for political leadership if they have expertise in a particular area that is currently in crisis.

[9:2:310] In fact, the concepts of technocracy and meritocracy are perhaps the most vehemently defended and aligned concepts of government by Astronarianism.

[9:2:311] Astronarianism does not outrightly oppose the creation of an aristocracy because the very nature of aristocracy fits well with the Astronist concept of descendation, but in an Astronist Aristocracy, anyone should be able to work their way up to becoming an aristocrat if they wish, but only if they work hard enough, and with a descendational philosophy in mind.

[9:2:312] A plutocracy is a form of oligarchy that is not supported by Astronarianism as it places the power and authority of a society with those whom have the most wealth, which is considered a major inevitable failure of the capitalist system from an Astronist perspective due to the majority of capitalist societies being largely controlled by those with the most amount of money, while those with little money, or qualities in other areas, although they may get a vote, are often not given any chance for political activity, or leadership.

[9:2:313] Kratocracies, stratocracies, and timocracies are also all condemned by Astronarianism because they either leave power to the chance of whom has the greatest coercive tactics, such as in a kratocracy, or they give power to those with a military career, such as a stratocracy, or those with the greatest amount of property ownership, such as in a timocracy.

[9:2:314] However, Astronarianism does support another derivation of oligarchy that is known as geniocracy which values problem-solving, creative intelligence, and compassion as the main attributes for an elected official who, in an Astronist Geniocracy, must pass a series of tests to determine these three criteria before they can be admitted in elected office.

[9:2:315] The geniocratic system can be seen as a security measure put in place by the people of a nation and prescribed by an entrusted institution to ensure that every member of the higher echelons of the government align with the criteria required by the people of the state and the current crises occurring in the state, and serves as a precautionary system to protect a technocracy.

[9:2:316] Essentially, geniocracy is the filtering of certain elected officials according to the criteria chosen by the people of state, and this carried out by examinations or by a strict set of rules that the elected official must abide by whilst in office, and these are restricted from being changed by the official when they are in official in order to protect the geniocracy itself.

[9:2:317] Astronarianism, due to its emphasis on humankind as a whole rather than any specific people group, race, ethnicity, or religious group, could be considered noocratic by its very core nature.

[9:2:318] This is not disputed by Astronarianism itself, but instead herein, considers the concept of a noocracy as a governmental system still in its infancy and still with great amounts of vaguity that must first be clarified in order to create it as a functioning and practical system.

[9:2:319] Therefore, by this notion, Astronarianism shall attempt to further develop the idea and system of a noocracy before it can be considered as part of Astronarianism, like the other systems of democracy, geniocracy, technocracy, and meritocracy.

[9:2:320] Both the systems of a kritocracy and a particracy are also considered to be in their scholarly infancy, and in order for them to be considered as part of an Astronarian system, or a Millettocracy, they must first be further developed, and tailored towards an Astronist worldview, as is demonstrated in The Astronist Methodology.

[9:2:321] There are hints of an ergatocratic undertone in some forms of Astronarianism, and Astronarianism itself does not rule out this concept, the concept of a civilisation being ruled by the working class, or a cultural emphasis on the solidarity of the labour force.

[9:2:322] However, Astronarianism wishes to distance its own version of an ergatocracy from that of the communist version of an ergatocracy.

[9:2:323] Astronarianism does not advocate for the establishment, or even the integration of a netocracy, but does show considerable amounts of scholarly writings about the netocratic structure that seems to be dominating many of the current states of the world, and this discussion can be found in The Astronist Methodology which includes a discussion of the consumtariat, a technological power advantage, and a global upper-class.

[9:2:324] From the brief overviews of each of these derivations of oligarchy, it can be clearly derived that Astronarianism supports certain forms of oligarchy, but others, it certainly does not, but to underpin the entirety of this discussion about oligarchical systems, it must be said that each of those systems that Astronarianism is intended to support, it must be said herein that each of those systems must be tailored to an Astronist version of themselves before they can be considered as supported by Astronarianism.

[9:2:325] In their pure forms, very few of them would be advocated by Astronarianism, but in their tailored, or Astronised forms, they certainly would be; this distinction between the pure forms of these systems, and their Astronised counterparts is important, as some major changes to these systems occurs during their Astronisation.

[9:2:326] One should also have noticed that this process of tailoring political and social systems and philosophies is not restricted to just oligarchical systems, but is prevalent

throughout all Astronarian interactions with other political and social philosophies, especially so to distinguish between Astronist versions of philosophies, and their pure versions.

[9:2:327] Progressivism and its principle of the total emphasis on advancements in science, technology, economy, and social organisation lies at the central aspect of Astronarianism and in wider Astronist society, especially so when astronomy, cosmology, and philosophy advancements are included within progressivism, so as to foundate Astronarian Progressivism.

[9:2:328] Progressivism is perhaps the greatest exemplar of how a political and social philosophy is to be tailored towards an Astronist perspective, and it is important for Astronarianism to remain a committed advocator for progressivism, which should be implemented in all genuine Astronarian systems.

[9:2:329] The economic aspects of Astronarianism heavily condemn the ideas of protectionism due to Astronist Economics championing the non-restriction of economic goods, such as stopping tariffs on imported goods, non-restrictive policies, and minimal economic regulation.

[9:2:330] Astronarianism supports a free market and the liberalisation of the economy which is direct opposition to the conservative principles of protectionism.

[9:2:331] New Astronarianism does not consider protectionism as holding any viable role in the future of humanic economics, especially so in terms of Spacial Economics, and therefore views the economies of space to require liberal, specifically Astronist policies, in order for it to flourish to the fullest extent of its potentiality.

[9:2:332] Astronarianism can be described as an exemplar of a philosophy as part of that which is known as reformism; the doctrine that advocates for the reform of an existing system rather than its abolition.

[9:2:333] Whether Astronarianism is classed as part of reformism is really dependent upon the situation by which it is applied; in some possibility applications, Astronarianism can be used to improve, make fundamental structural changes to, and reinvigorate a previously existing system.

[9:2:334] However, in other instances, it can be applied to replace and abolish the entirety of the previously existing system, thus leaving very little trace of that previous system once Astronarianism has been fully established.

[9:2:335] Like in the socialist movement, Astronarianism supports the idea that through the gradual change of the culture of institutions, there can occur fundamental structural change without the need for radical movements, or revolutions with replacement and abolition as the primary goals.

[9:2:336] Reformism, in terms of Astronarianism, describes a way by which Astronarianism could possibly be implemented, with other ways being radicalism, syncretism, and reactionary, all of which can be possibly applicative means of Astronarianism.

[9:2:337] The very core of Astronarianism can be described as the antithesis of separatism because it is the ambition of Astronarianism, through the principles of the Union of Diversity, to unify a group of diverse peoples under one Common Vision and Common Identity.

[9:2:338] It is important that this Common Vision and this Common Identity, however, also takes into consideration the various different diverse identities and traditions of the unified group so as not to compromise the identities of these peoples.

[9:2:339] Separatism is perhaps the greatest threat to the political and social philosophy and values of Astronarianism as its goals are to segregate peoples according to their cultural, religious, racial, ethnic, and political beliefs and heritages, which is the oppositism to Astronarianism, which seeks only to unite such diverse groups.

[9:2:340] However, the presence of separatism and its study by Astronarians is extremely important if the Astronarian system is to survive so as not to treat the different groups in a certain way that makes them feel isolated, or unfairly treated when in comparison to other groups in the state.

[9:2:341] The hope of Astronarianism is that people under its political and social system and organisation will eventually, over time, associate themselves closer to the philosophy that has structured the state in which they reside, as well as with the newfound principles and values, and with the people with whom they share their nation, rather than those of whom they originated from or previously associated themselves with, such as their tribal, ethnic, and racial background.

[9:2:342] This does not mean to undermine the background and heritage of these peoples, but instead, wishes to form a new, inclusive, and cooperative identity and heritage, that the peoples of the state feel greater association with, especially so with regards to the future ambitions of the identity.

[9:2:343] Separatism is an important oppositism to Astronarianism and should always be taken into account when studying or establishing Astronarianism because if not, then one puts the entirety of the Astronarian system into potential jeopardy by not understanding, respecting, and studying the forces that could potentially disunite the peoples of the state.

[9:2:344] Astronarianism can be argued to support certain aspects of that which is known as cultural socialism, or cultural communism, which is arguably essential to the establishment of Astronarianism's goal of a National Philosophy, Common Vision, and a Common Identity, under the values of the Union of Diversity.

[9:2:345] However, the economic side of socialism is largely distanced from that of Astronarianism due to Astronarianism largely conforming to a system of capitalism, but even with that system, Astronarianism expresses its disfavour, especially so with the consequences of the capitalist system, rather than with the actual system of capitalism itself.

[9:2:346] In essence, Astronarianism can be described as culturally socialist, but economically capitalist.

[9:2:347] Theocracy is a system of governance that Astronarianism neither opposes, though nor does it advocate for as Astronarianism holds considerable issues with the power of religion over the affairs of the state and the diversity of the peoples within that state in the scenario of a theocracy.

[9:2:348] Unlike that of a National Philosophy from Astronarianism, towards which there exists no formal obligation to ascribe, in many theocracies across The Earth, the ascription of oneself to the religion in subject is mandatory.

[9:2:349] With the growing religious diversity of even present day societies and civilisations, and this set to continue on in the future, from the Astronist perspective, it is held that there exists little utility or purpose to the system of a theocracy.

[9:2:350] Astronarianism further distances itself from the theocratic system when the notion that a theocratic system is, by its very core, naturally opposed or inemphasistic of the role of philosophy in a state.

[9:2:351] This anti-philosophical, or even the less extreme, non-philosophical structure of a state is the antithesis to the Astronist approach to the structure of the state, which is philosophically emphasised at its foundation, and this is how Astronarianism so widely differs from the most basic ideas of a theocracy.

[9:2:352] That which is known as a Unitary State is not entirely opposed to the political structure of Astronarianism, even though Astronarianism is traditionally more slanted towards supporting federations and confederations.

[9:2:353] Astronarianism supports the Unitary State model in certain departments and scenarios that effect the entirety of the state as a whole rather than aspects that can be considered to be delegated to lower authorities in regions of the state.

[9:2:354] If not full federations or confederations, an Astronist state may usually be constituted as a Federative Unitary State, and although this may seem contradictory at the initial definitional stage, this is usually established by certain departments and aspects of state functionality being controlled at the central government, and other departments and aspects of state functionality being controlled at the regional, provincial, or county level.

[9:2:355] The detailed structure of the Astronist Federative Unitary State, and all other types of Astronist political and governmental structure are provided in the writings of The Astronist Methodology, but herein provided are some of the main areas of central governmental control and some of the main areas of regional governmental control.

[9:2:356] The best exemplar of the former is that of education in the Astronist state which is completely governed and controlled by the central authority, as well as the overall economic management, taxation, funding management and how these funds are delegated to different regions according to population, their needs, and their productivity.

[9:2:357] Other exemplars of the former are that of the cultural aspect of the state which includes all propaganda, the management of the National Philosophy, the Common Vision, the Common Identity, and all other philosophical and ideological aspects of life in the state.

[9:2:358] The best exemplar of the latter is that of the management of the funding of healthcare, employment, corporate law, transportation amongst many other aspects; these are generally given to the regional and local levels rather than the federal level because they pertain to the specificisms of that region's general topography, industrial structure, and population size and demographics.

[9:2:359] Astronarianism considers there to be no philosophical or ideological issues with the concept of zionism in its theoretical and pure form; zionism's application, however, is much more broadly executed and cannot be wholly supported by aspects of Astronarianism, but the principle remains true that a people whose religious, cultural, ethnic, and national heritage are located in a particular land, then it is only fair and logical to provide them with this land out of respect for history, if nothing else.

[9:2:360] A full discourse about the Astronarian approach to the ideology of Zionism can be found detailed in The Astronist Methodology, so as not to further unjustly simplify such a convoluted narrative that must be wholly explained and understand before the Astronarian approach is presented.

[9:2:361] Globalism is a highly revered concept within Astronarianism and is one that Astronarianism advocates for due to the fact that globalism is considered to be on the trajectory towards our understanding of Spacial Economics, and other planetary world economies and how we are to approach and structure the economies of other worlds.

[9:2:362] Globalism is considered to be heading towards a cosmocentric and spaciocentric perspective about economy, politics, and wider human civilisation than its opponents of mainstream, or traditional nationalism, isolationism, and protectionism, and therefore, for this reason based on its ideological trajectory, globalism is a highly supported concept within Astronarianism.

[9:2:363] Both Platonism and the individual of its founding, are both highly revered within Astronarianism as being the principal architects of the foundations of philosophy, and for this, Plato is heavily adored and lauded within Astronist Philosophy and Culture.

[9:2:364] Platonism's influence within Astronarianism and wider Astronist Philosophy is largely unmeasurable due to Plato's philosophy forming the foundations of philosophy itself, however, it is the continual penchant of Astronist Philosophy to always attempt to define and distinguish itself as separate from all the other major philosophical traditions.

[9:2:365] As one of the most prominent theories of platonism, the concept of the Philosopher King is heavily revered within Astronarianism as it too emphasises the important practice of philosophising, especially for a person who is to assume a leadership role.

[9:2:366] The Philosopher King concept is incorporated into Astronarianism by the idea that any leader of an Astronist state must also be a philosopher in equal measure to being a leader because without the wisdom of philosophy, one is unable to see so far as to where the state is envisioned to head towards.

[9:2:367] Distancing the concept away from the connotations and criticisms that it has developed, such as those of social engineering, and totalitarianism, Astronarianism attempts to purify the concept of the Philosopher King, and reinterpret it for an Astronist usage.

[9:2:368] The Astronised version of the concept of the Philosopher King, and subsequent ideas derived from philosophology, are the primary contributors to the Astronist perspective on what a philosopher's role should be in both an Astronist civilisation, and any other general society.

[9:2:369] The Astronised version of the Philosopher King is best depicted in art and propaganda and is generally formed by either a young man, or young woman, who would be the equivalent Philosopher Queen, whom have a love for knowledge, especially so of The Cosmos, as well as intelligence, imagination, and science.

[9:2:370] Though they do not eschew materialism, the Philosopher King or Queen understands the nature of materiality and its insignificance when in relation to The Cosmos and the mysteries of The Universe and The Divine, whilst still understanding the relative important of materiality in the functioning of human civilisation and economy.

[9:2:371] The Philosopher King and The Philosopher Queen must also fulfil the qualities of Pure Reliability, Pure Willingness, and Pure Sacrifice; essentially, being there for the peoples at all times, upholding an endless readiness to serve the peoples, and being continually aware of the fact that the life of the Philosopher King or Queen is always subordinate to the lives of the peoples.

[9:2:372] If any one of these qualities is not matched, or is somewhat broken during office, then the individual cannot be considered a Philosopher King and Queen, and may only be classified as such posthumously, when they can no longer jeopardise these qualities with their deeds.

[9:2:373] The Philosopher King and The Philosopher Queen can only be in office once at time for a King, nor a Queen, can be in office simultaneously.

[9:2:374] Other qualities of a Philosopher King or Queen are virtuousness, and selflessness, though the Astronist version differs from that of the platonic version by the principle that neither Philosopher Kings, nor Philosopher Queens should live simply or live as the common people live.

[9:2:375] The Astronarian version maintains that Philosopher Kings and Queens must always be looked up upon by the peoples of the state, and their lives should always emulate that which is known as an Attainable Luxury, as part of the concept of Attainability.

[9:2:376] This difference in the Astronarian version is derived from the scenario that if the Philosopher Kings and Queens live exactly like the common people, then they are considered to be on the same level of knowledge, understanding, and philosophisation as every other person in the state which should not be the case.

[9:2:377] Attainability relates to the possibility of a person to have the means and opportunity to attain the rank of the Philosopher King, or Queen, but not so much that the attainability is too easy to achieve, thus a perfect balance must be struck in order to fulfil the idealised concept of the Philosopher King, or the Philosopher Queen, which places the concept of attainability in a central position with regards to the Philosopher King-Queen theory.

[9:2:378] The Philosopher King and its counterpart concept, The Philosopher Queen are both integral parts pertaining to the leadership of a Astronarian-structured state.

[9:2:379] By its very core nature, purpose, and process of establishment, Astronarianism can be classified as holding populist ideas for its own unificatory ambitions, but whether Astronarian and Populism totally align is a statement of much greater gravity and proportion.

[9:2:380] The essential principle of populism positions a privileged elite exploiting the underdog, the struggling masses, not unlike the communistic position, though populism is not necessarily used for the change of the economic system, but instead, a change of who is in charge of the state, usually geared back towards the masses by taking it away from a purported privileged elite.

[9:2:381] Rather than a full political system in and of itself, populism can be used as a tool for rallying the masses to the cause of an individual vying for office, typically an individual also perceived to be an underdog, and not part of that which is known as The Establishment, or the political elite.

[9:2:382] In many ways, Astronarianism can be said to use certain aspects of populist thought and notion to further the establishment of the Astronarian political system in a nation, but is most commonly found culturally and ideologically in Astronarian Propaganda, used as a technique for unifying the masses, as is upheld by the principles within the Union of Diversity.

The Awakening of Occhiolism

[9:3:1] The little known emotion of occhiolism is defined as the awareness of the smallness and narrowness of one's own perspective, and in Astronist terms, this is especially so related to humanity's current perspective of the entities known as The Cosmos in The Universe.

[9:3:2] By this definition alone, we can soon derive an intrinsic undertone of occhiolistic thought in the entirety of Astronist Philosophy for in countless instances throughout the writings herein as part of The Grand Centrality, it has been said that one's perspective, or even the entire perspective of humanity is still so small and narrow, which is especially so exemplified by some of the narrowmost perspectives of the peoples of this world.

[9:3:3] This short discourse is entitled as such because Astronism should be considered an occhiolic philosophy and with the establishment of The Philosophy of Astronism, and the wider Astronist philosophical tradition, we shall see in direct simultaneity, the awakening of occhiolism as people begin to understand the small and narrow perspective that they do truly have.

[9:3:4] To think occhiolistically is not the easiest of ways to think because it often plays us at the bottom of the thoughtchain, but humans, by our very nature, relish in thinking of ourselves as being at the foremost of thought and perspective, when only the exact oppositism is actually true.

[9:3:5] The ways of all the worlds of The Cosmos are such that they are so diverse and due to its incomprehensible substantiality, all we can hope to accomplish is even just a partial understanding of it, which would itself be so vastly wondrous.

[9:3:6] To think occhiolistically is to perceive one's own perception humbly and to both accept and understand one's own narrowness of thought when in comparison to the vastity of The Cosmos in The Universe.

[9:3:7] Occhiolity is a quality that some of the faiths of the world could do better to observe for they are and always have considered themselves to be the comprehenders of all creation, when in fact, the opposite is true.

[9:3:8] Occhiolist Thought is essential to the proper application and understanding of the knowledge of The Cosmos because with this approach, we cannot hope to wonderment, adore, or laud to the proper extent that The Cosmos and all its grandities deserve.

[9:3:9] Occhiolistical approaches are inclusive of Astronist approaches to most subjects, especially so through cosmological subjects that require ourselves to see The Cosmos in The Universe as it is to the extent that we can possibly currently perceive and comprehend it, and the reality of that is there exists no greater truth that humanity's current perception of The Cosmos is so incomparably narrow.

[9:3:10] Occhiolism Thought is often categorised as anti-human, or in constant assault against the successes that humanity has achieved, but this is exactly the antithesis of occhiolism within Astronism.

[9:3:11] In actuality, occhiolism is pro-humanity and humanity's achievements, but maintains the perceptivity of reality; in essence, occhiolism encourages the proper understand of human perception, rather than the false understand of humanity's perception that has been inflated by the ego of man.

[9:3:12] Occhiolism Thought is therefore a key component to the entirety of Astronist Thought, and is an integral element to how to think in an Astronist way.

A Short Discourse on Subsidiarity

[9:4:1] It is proper and true to speak of subsidiarity and its accompaniments at some part of a philosophy for it has been readily discussed prior and shall be so beyond time's present.

[9:4:2] From a purely Astronist viewpoint, which is retrospective when discussing views of others and prospective when discussing views of its own standing, the faiths seemed to contradicted themselves on this topic when viewed upon from a cosmical perspective.

[9:4:3] To say that it is wrong to take away from God that which God may only conduct and then to manifest God in human form for the convenience of humanity is logically contradictory of the initial point.

[9:4:4] By this notion, one removes from God the mystery that makes God beyond our own nature; the very fact that we have been presented with a comprehension of God is lowering God to our own level of understanding; by this action, those whom encourage this are defying the principle of subsidiarity.

[9:4:5] Ending this short discourse here with a single question, how can we expect to comprehend the Creator of The Universe when, at present, we cannot comprehend The Universe itself; there seems nothing more illogical than this.

The Psychology of Identity

[9:5:1] We all have reputations and identities that we portray to the world and all the peoples of this world, and these people form identities of ourselves in their minds, and these identities are what form their interactions with us throughout our lives.

[9:5:2] From the moment we meet a person, or from the moment they first see, or know us then they begin to build an image of us, and this is done majoratively unconsciously.

[9:5:3] The identity that is formed us in other people's mind is the singlemost important factor of how they treat us, whether they like, or dislike us, and whether they wish to spend more, or less time with us, or to pay more, or less attention to us, especially in the context of public figures.

[9:5:4] This concept of identity is heavily linked with that of reputation; one's reputation describes the way in which a person, or group of people view the identity of the individual in question, and is built up across multiple interactions between the individual and the judging person, or group.

[9:5:5] By this notion, the concepts of identity and reputation are both intertwined with one another, and are structured so that one's reputation is a reflection of their overall identity, with the latter generally relating to something larger, something more entire, than that of the latter in Astronist Philosophy and Ethics.

[9:5:6] Reputation is extremely precious; that which we say, that which we do, that which we believe, and most importantly, that which is spoken about us, are all contributors to the overall reputation of a person, whether positively, or negatively.

[9:5:7] Reputation can be uplifted so swiftly, and very much tarnished in the same rapid amount of time, and often, with twice as much effort to rebuild as it was first to build it.

[9:5:8] This is why in Astronist Ethics, and in wider Astronist Philosophy, the concept of identity, and reputation are emphasised both herein, and throughout the ethics-related portions of The Grand Centrality due to the major impact that identity and reputation have on a person's quality of life, and whether they achieve that which they wish to.

[9:5:9] An opinion made is an opinion that persists, especially so when in the context of identity, and reputation, for the opinions made on these subjects are the most stubborn, and the most to dispel of all.

[9:5:10] We must protect whom we are from the ravenous jealousies, greeds, and evilities of the minds of humanity; it is the one duty that we have to ourselves to be whom we are in our lives, and to build the best reputation for ourselves, and to create an identity that is best reflective of our true selves, and whom we have always wished to be.

A Short Discourse on Racism

[9:6:1] Perhaps the world expected this to be a discourse of longevity, combing through the history of humanity existence on this planet, attempting to identify the causality of racism, but herein, I say no.

[9:6:2] This discourse is short in length, yes, but shall hopefully stick in the minds of the old and the young, especially the young, for future times in this world, and all the rest.

[9:6:3] Since the history of ourselves began, we have squandered opportunities of understanding one another by allowing the different colours of our skin to blind our visions to the heart, the mind, and the spirit that all exist underneath.

[9:6:4] For too long, we have argued and fought over the territories of the black and the territories of the white, and the territories of all the other spectrums of race; for too long, we have made this argument the focus of whom we are, but in doing so, we reveal how shallow and unworthy we truly are of perceiving the largest questions and answers of The Cosmos in The Universe; by this, we have continuously revealed the narrowness of our minds.

[9:6:5] The Astronist Philosophy is centred on that which exists above us all, no matter whom we are, no matter what faith we possess, or don't, and certainly no matter the colour of skin.

[9:6:6] Up there, amongst the stars, is a world so harsh, dangerous, and so grandly arranged that it would take only a faction of time to crush our spirits if we enter it with such narrow minds, and yet, it is too so beauteous, wondrous, and absolute.

[9:6:7] If we ever wish to stand the hope of becoming creative enough, enknowledgeed enough, and brave enough to enter such truly unknown territories, then we must forget the pettiness of our ancestors, break free of the narrowness that caused them to progress so minimally, and to understand that ultimately.

[9:6:8] When viewed upon from a cosmical perspective, to judge an individual according to the colour of their skin, from whichever source or side it does originate, is truly the greatest identifier of ignorance, an inability to comprehend, and a narrowness that only holds us back from contemplating the greatest questions of existence.

[9:6:9] We must look at existence in its real perspective and we must look towards our futures, and if not your own personal future, then the future of your children and grandchildren; no one can honestly, logically, and rationally say that racism holds any progression for us.

[9:6:10] It holds absolutely nothing for us, and as the budding philosophers and astronomers of the world stare up at the stars, as I did and still do, we do so knowing that

all we are to forge in The Cosmos is for the entirety of humanity in all its beautiful diversity, and when the next child wishes for an equal future, we should be proud to provide that for them.

The Principle of Repetism

[9:7:1] The Principle of Repetism is an introspective principle relating and applied to The Philosophy of Astronism, especially so The Grand Centrality itself.

[9:7:2] Repetism founds the Astronist principle of not repeating concepts or moralities that were previously established by other philosophies, faiths, and ideologies, before Astronist Philosophy was founded.

[9:7:3] There is no logic and there is no elegance in philosophising about elements that have already been widely philosophised upon; this only weakens the pace of The Grand Centrality, and further de-emphasises the most important aspects of The Grand Centrality that make it so distinguished, thus we must trim the most irrelevant parts in order to refine, and it is from this that the principles of repetism have formed.

[9:7:4] I wish not for The Grand Centrality to imitate the grand books of the past; I wish for it to define itself by its own means and for the words that exist within it, and the concepts abound.

[9:7:5] Like the penchant of Astronist Philosophy, it is also the will of The Grand Centrality to distinguish itself from all that has been said before it; the only way by which this can be achieved is through the majorative purification of its words from the concepts, principles, and philosophies of previous existence.

[9:7:6] This does not mean to say that if something so basic in ethics, or logic, such as that one should not steal, or one should not murder, is any way condoned by Astronism due to its dismention in The Grand Centrality, but instead, points to its intrinsicity in ethics, logic, and existence so as not to be repeated by the already established philosophies and systems of the world that define such actions as entirely wrong.

[9:7:7] From this principle of repetism, we can orientate The Philosophy of Astronism towards prioritising its most prominent and distinguishing concepts, rather than focusing on previously proclaimed concepts.

[9:7:8] From this notion, we understand that repetism plays an important principal role in the emphasis placed upon newfound moral questions, newfound concepts, and futuristic theories, concerns, and issues, rather than those of that have been of predominant discussion since time immemorial.

[9:7:9] Repetistic approaches to Astronarianism, Astronism, and even wider derivations of Astronist Philosophy are encapsulated by the idea that Astronist Philosophy must not continuously repeat the words of past philosophisations, but instead, continue to define its own philosophisations in the effort of securing its own distinctions.

[9:7:10] In every aspect of Astronist philosophical construction, we must always remember and consider the repetistic principles for they stand at the core of how Astronist Philosophy may preserve its identity, and further define its uniqueness.

The General Principles of Space Ethics

[9:8:1] Following from repetistic thoughts, we must address a topic within contology that encompasses the ethics of space, and the activity of humanity in space, of which the general principles of the henceforth known topic of Space Ethics shall be described herein for later referral.

Life in Space: The Astronist Approach

[9:8:2] It is a prominent characteristic of Astronist Thought with regards to that which exists beyond The Earth that there is no doubt, due to the vastity, complexity, and grandity of The Cosmos, that there exists life beyond The Earth as there exists life upon The Earth, and places ourselves as rare, but not totally unique; essentially, sentience is believed, and is a central component that is to be wondermented, adored, and lauded upon.

[9:8:3] Just as life is so precious upon The Earth, it is evenmoreso beyond The Earth for the life that exists beyond The Earth, from our perspective as products of life upon The Earth, is the most marvelling of all.

[9:8:4] The centralmost general principles when taking an Astronist approach to Space Ethics is that life is in existence beyond The Earth, and must be treated with the highest of respects if it is going to be conserved and be interactive with ourselves.

[9:8:5] Many faithful institutions in present and past times have denied the existence of life beyond The Earth; the faithful institutions have had little faith in The Divine's ability to create more than one planet with life upon it.

[9:8:6] To fill this discourse with such contentions between crumbling faithless institutions, and their treacherous deeds towards the progression of humanity does not foretell the state of the future, and so, that is of no concern to The Grand Centrality, or The Philosophy of Astronism.

[9:8:7] Instead, we look towards the future and the many treasures it holds; we see the opportunity for the discovery of The Cosmos, and we invigorate our hearts, faiths, and minds towards the proving of life beyond The Earth.

[9:8:8] We shall not allow the regressive faithless institutions to place obstacles in our way for we shall overcome them all and reach for much higher goals of faith; a faith that places its centrality to the stars, the planets, and the galaxies within which they all exist; a faith that attempts to realise the ability of the creator to create, and to never be limited by the restrictions positioned due to our own egos as humans.

[9:8:9] For too long, the faithless institutions of the world have not spoken of the immense faith that is required to believe and know that there exists life beyond the means of this one planet of a possibly infinite amount in The Cosmos and in The Universe beyond that.

[9:8:10] Simply, it is the Astronist approach to always believe in life in space in the planets beyond The Earth, and it is also the principle that life, in whichever form, appearance, or rank of sentience it holds, must be treated with a level of divinity for it is believed that such life is existent due to the intercession of some indistinct aspect of divinity.

[9:8:11] There will be sentient life that does not look like us, does not speak like us, does not think like us, and does not have the same evolutionary, historical, or even biological structure as us, but even with these most fundamental and intrinsic of differences, we do share one similarity and that is the spark of divinity that exists within every form of life, and it is this spark that must be preserved.

[9:8:12] The Astronist approach to life beyond The Earth is clear in both faithful terms and in ethical terms; discriminatory, anti-sentience, and anthropocentrism with regards to treating all non-human life beyond The Earth in a negative way is absolutely and unequivocally condemned by all Astronist approaches.

[9:8:13] Even the notion that there exists no life beyond The Earth is so very much non-Astronist that it is considered anti-life, anti-Astronist, and anti-god to hold such views upon the possibility of life, and furtherso sentient life, beyond The Earth.

Planetary Colonies & New Civilisations

[9:8:14] With the Humanic Exploration of The Cosmos being a central aspect to both Cosmic Philosophy and the Astronist philosophical tradition, the journey upon which it embarks is inevitably inclusive of the construction and establishment of colonies and new civilisations beyond The Earth.

[9:8:15] To create such colonies, to construct such structures, and to establish such new systems for civilisations is the ultimate goal of the Astronist approach to the Humanic Exploration of The Cosmos.

[9:8:16] If we are to disseminate humanity throughout The Cosmos and to build civilisations, economic systems, governments, trade routes, technologies, and newfound structure that are beyond our current comprehensions, then we are to rely upon the establishment of colonies as the precursor to such greatnesses.

[9:8:17] In any scenarios of unknownness, those of us whom take the first step are the bravest of all, and in return, they shall be remembered in the highest halls of fame and contribution to the Humanic Exploration of The Cosmos.

[9:8:18] This will be those whom take the first step aboard rockets bound for new planets upon no other human life has ever stepped before; this will be those whom dare to challenge the regressive institutions of the world whom seek only to place obstacles in the way of our struggle for human cosmic exploration.

[9:8:19] And this shall most ultimately come in the form of those whom are willing to risk their lives for the furtherance of the wider struggle; those of whom will be the ones to live in the most primitive of conditions before we construct the civilisations that shall follow; those whom will be the ones to overcome the most basic challenges that we take for granted in every aspect of our lives on The Earth; these will be the people known, in Astronist terms, as The Progenitors.

[9:8:20] The Progenitors are those whom shall lead the mission, they shall stand at the forefront of the struggle for the Humanic Exploration of The Cosmos; they shall be the ones to sacrifice themselves; they shall be the ones whom know that the fruits of their endeavours will not be enjoyed by themselves, but by the billions whom shall descend from them; they are the ones whom shed no doubt in the vocation they know they must fulfil; not for themselves, but for the betterment of the peoples that succeed them.

[9:8:21] From the smallest of beginnings comes the largest of events, just like the smallest of seeds sprouts the largest trees, and the most infinitely small of points births The Cosmos as we know it now, so vast, so complex, and so grand.

[9:8:22] From the most primitive of colonies on perhaps the most desolate of planets, I can foresee the construction and establishment of the largest of cities and civilisations that would make our largest of cities look like villages.

[9:8:23] The belief in life in The Cosmos does not only pertain to the discovery of new life, it is also pertaining to the development of human civilisations beyond more than one planet of The Cosmos; we are the life in The Cosmos, and it is part of the overall struggle, that we are to become the very life that we now seek beyond The Earth.

[9:8:24] It is the nature of the human mind to yearn to explore; not one civilisation has existed upon The Earth that never expanded, or progressed towards new lands unknown; now, we must do the same before the new lands towards which we are trajected, are lands that perhaps no other life like ours has ever stepped upon before.

[9:8:25] As ignorant humanity, we expect everything in front of us to adapt itself to our own needs; perhaps this is the greatest contention between the human ego and The Cosmos; The Cosmos will never change for us, only for itself by its own means and destiny, and it is our place to adapt with The Cosmos, never the other way around.

[9:8:26] Just think for a moment beyond the initial struggles of The Progenitors, whom shall be forever adored and lauded upon in the Astronist Tradition, and let us imagine the possibilities of humanity upon the newfound worlds that we step.

[9:8:27] The possibility of the colonies that we shall initially construct, and with the works, efforts, and triumphs of the colony inhabitants, the colonies grow into civilisations, and

from there, more cities and towns shall sprout from humanity's yearning to explore and expand.

[9:8:28] There will then become a world of civilisations just like The Earth, and from there, the second generation of progenitors shall leave to explore new worlds the technologies and machineries that they have produced, and the economies, governments, and civilities of these worlds and their civilisations shall begin to develop, and over thousands and hundreds of thousands of years, long after these words have faded from the minds of most, the Astronist envisionment of the most grand, vast, and complex system of civilisations across the galaxies shall be forged, and by this time, we will have achieved the totality of our destinies within The Milky Way.

[9:8:29] This constant expansion is considered an ethical principle of Spacial Ethics because it is the only principle that shall lead us to the fulfilment the mission before us, and it is the central pillar of what it means to be explorative by nature, and to want to explore, discover, and witness The Cosmos to the largest possible extent that we possibly can; to fulfil the duty, the mission and the vocation that has been placed before us, and that we are destined to complete.

[9:8:30] It is henceforth known as the Expansion Principle, and it is only by this principle that humanity shall eliminate the regressions of its past in the name of forging a future that perhaps is so difficult for the ignorant peoples to comprehend, but with the expansion of our civilisations, so shall the expansion of our minds come in perfect simultaneity.

Technology in Space

[9:8:31] It has been aforementioned about the importance of the usage of technology in space, especially so in the achievement of the Humanic Exploration of The Cosmos, and so, the use of technology in space therefore becomes one of the general principles of Spacial Ethics.

[9:8:32] We must use technology for our advantage in the expansion of our civilisations, in the improvement of our lives beyond The Earth as we do use it now upon The Earth, and we should utilise technology to resource from worlds that which we can use further to construct our civilisations.

[9:8:33] However, we must never use technology that will knowingly result in the devolvement, the destruction, or the endangerment of any life for if we do so, we condemn the entirety of our expansive journey and we stain its the purity of intentions with the most disastrous and indivine of actions.

[9:8:34] This branch of contemplation within Spacial Ethics is henceforth known as Spacial Resource Ethics and such specialised ethicists attempt to derive Astronist ethical ways of forming systems for conducting the utilisation of spacial resources.

[9:8:35] The basis of the Astronist approach to ethics, and due to the founding of Spacial Ethics, the Astronist Tradition commands there to always be a government of the law and order in the setting of space.

[9:8:36] In whichever system prevails in such a Space Governance, which is another branch of Spacial Ethics, Expology, and Astronarianism, is not of concern at the present moment, but philosophers, politicians, and ethicists of the Astronist Tradition should all heed the words herein that demand vigorous contemplations, discussions, and writings about the subject in order to produce new systems of spacial governance.

[9:8:37] The Sovereignty Beyond The Earth is another topic within Spacial Ethics that discusses the nature of sovereignty of all types of cosmic and celestial entities beyond The Earth towards certain institutions and how such institutions are permitted to demonstrate such sovereignty.

[9:8:38] The developments in Spacial Law will need to be confederationally enforced to ensure that different groups of peoples enforce their sovereignty on cosmic entities that they can prove their sovereignty over.

[9:8:39] Current principles of primitive Spacial Law hold the tendency to lead towards a non-sovereignty scenario whereby space and other worlds are universally off limits to nations institutions, or confederation holding sovereignty over them.

[9:8:40] However, the Astronist Tradition, largely due to reasons of practicality, does not share this; the Astronist Tradition holds that the only practical way for the further development of the Humanic Exploration of The Cosmos is through the allowance of sovereignty to take place.

[9:8:41] Therefore, the Astronist Tradition does not consider sovereignty over cosmical entities as a violation of Spacial Ethics as it considers other cosmic entities to be in the same category as The Earth which has been subject to human sovereignty since human civilisation developed.

[9:8:42] Therefore, the Astronist Tradition considers the sovereignisation of space as an inevitability of human nature and sees no rationality in attempting to delay such an inevitable occurrence, especially due to the fact that space's sovereignty will only lead to its further development for human colonisation .

[9:8:43] However, the Astronist Tradition much more stringent on the interactions between human civilisations and the natural phenomena of space; the Astronist Tradition shall always remain staunch in its principles of the conservatism of The Cosmos.

[9:8:44] Despite the Astronist Tradition's support for terraforming, the Tradition is clear on its foundational principles on which types of terraforming are permissible and which are certainly not.

[9:8:45] The protection of spacial phenomena and the conservation of The Cosmos in general, and for the latter in both physical and mental senses, are the foundations of the Astronist approach to the interactions between humanity in space and the natural phenomena beyond The Earth.

[9:8:46] Conservationism in this particular branch of Spacial Ethics is henceforth known as Cosmic Conservationism as it relates to The Cosmos as a wholly ordered entity and system, as well as all of its composite parts of natural phenomena, and can also be considered as a branch of Cosmic Environmentalism.

[9:8:47] That which is henceforth known in Astronist approach to Spacial Ethics in relation to the concept of sustainability are the Points of Sustainability; these seven items structure the foundations of the Astronist approach to sustainability.

[9:8:48] The Sustainability of Colony is the next of the Points of Sustainability; distinct from the Sustainability of Civilisation in the way that a civilisation is much larger than a colony; while a civilisation resembles a normally functioning infrastructure of villages, towns, cities, and metropolises, a colony is defined as purely a grouping of a small number of individuals with the purpose of research and science; in addition, colonies are the first phase of human society on new worlds, or moons.

[9:8:49] When considering the Sustainability of Colony and the Sustainability of Civilisation, we must always base our considerations on the final intentions of our establishment of such societies; this is for either two identified reasons; for purposes of scientific research, or for purposes of civilisational development and growth.

[9:8:50] Both of these types of sustainabilities are pivoted on the fact of population; despite their variation in scale, the reality remains true that each must be able to support its residents sustainably.

[9:8:51] By this particular notion, sustainability is best understood by the fact that it resides in proper function without considerable detriment to surrounding factors; in this context, sustainability is considered in terms of detriment.

[9:8:52] Detrimental effects therefore dictate that which is sustainable, therefore later determining the methods and systems prescribed in order to treat such detriminations.

[9:8:53] Essentially, these two types of sustainability must follow their purposes; Sustainability of Colony is either existent to serve as the basis for a future civilisation, or as a scientific research facility with no intention due expand the through building the population, usually due to the hostilities of the world.

[9:8:54] Further along the chronology, we come to the Sustainability of Civilisation with its purpose to expand the society of humanity in a way similar to that which has occurred on The Earth.

[9:8:55] We must be honest about these purposes if we are to understand the type of methods of sustainability needed to be applied to them; although we have discussed these two types of sustainability in unison, we must always remember their differences.

[9:8:56] These two sustainabilities require radically different approaches to their sustainability methodology with the primary reason for which being their difference in size, as well as their differences in chronology, investment, knowledge, and technology.

[9:8:57] Essentially, although these two sustainabilities are certainly entirely different, they do represent two sides of the same coin for they represent the manifestation of humanity exploration and development just at different stages of such development, and for aforeaffirmed different purposes.

[9:8:58] The next of the Points of Sustainability is that which is henceforth known as Sustainability of Resource; the entirety of the Humanic Exploration of The Cosmos is based upon the resources we hold now for utility, the resources available that are extractible, and the resources that are available but remains inextricable, due to either humanity's burden of primitive technology, or the inability of humanity to reach such resources.

[9:8:59] The abundance of resource is obvious beyond The Earth on the countless worlds of The Cosmos, but humanity's reaching of those resources, and further so, humanity's utilisation of those resources in the most efficient and sustainable way is a much different scenario than the identification of the existence of such resources.

[9:8:60] Resources lay at the heart of all decision in relation to Cosmic Exploration, as well as expological contemplations, but too, the availability or unavailability of resources is also a major branch of the determination of that which can be considered as sustainable.

[9:8:61] The detrimentation of resources either points to the careless utility of such resources, the age of the civilisation is great, or an insufficient quantity of resources in the first instance.

[9:8:62] The supplementation of resources either points to the results of vigorous extraction, the timid usage of such resources, or the vast quantity of resources in the first instance.

[9:8:63] These two determiners of resource of detrimentation and supplementation are powerful tools for application, and neither has the previous two insentensations done

justice for the extent to which these two aspects of resource can be implemented, especially so in relation to sustainability.

[9:8:64] The Sustainability of Environment is perhaps stands as the most famous of connections for sustainability as it is often the environment that sustainability intends to protect from detrimentation.

[9:8:65] As our technologies do advance, we must utilise them to reach our goals of a greater sustained existence, especially so through the use of renewable technologies for it is the ultimate goal, in alignment with the fundamental principles of the Astronist Tradition, that humanity creates those which are to be henceforth known as eco-civilisations.

[9:8:66] If humanity is to successfully embark upon its exploration of The Cosmos, then one of the most important aspects of sustainability, and the next Point of Sustainability, is that which is henceforth known as Sustainability of Mind.

[9:8:67] If we do not think in a way that is sustainable to ourselves and the surrounding world, then how can we expect to succeed in our endeavours?

[9:8:68] At the present instance, humanity's Collective Mind struggles to consider anything in balanced way or in a way of certainty of the rate and level of that which it considers; we must understand the Astronist Tradition's remedy to this issue, to achieve the Sustainability of Mind, and remedy is philosophy.

[9:8:69] It is only through philosophy that the Sustainability of Mind can be achieved for philosophy allows the Collective Mind of humanity to continuously expand itself; philosophy is naturally positioned to stand for progress, reason, logic, and mental satisfaction which are the four fundamental factors to the sustainment of the mind.

[9:8:70] It is easy to see in today's world at the time of this writing how there exists a giant chasm in the mental satisfaction of humanity; that is why we have seen rampant increases in murder, drug-taking, drug-reliance, suicide, materialism, sexualisation, and a distinct disassociation with greater means of thought.

[9:8:71] These aspects of the current world point to the dissatisfaction of mental state of humanity at present, and although it seems now that such horridities will never vacate, the Astronist Tradition understands philosophy to be the one shining light towards the Sustainability of Mind.

[9:8:72] It is argued in the Astronist Tradition that due to the fact that the majority of the world is now used to the idea of continued economic growth, the only way to progress is to work on ideas about the sustainability of this growth, known as one of the Points of Sustainability; Sustainability of Growth.

[9:8:73] The only way to secure the Sustainability of Growth is to work towards continued stable growth of the economy, of society, of culture, of technology, and of the population, without compromising the principles of the civilisation itself.

[9:8:74] We must stay in alignment with this principle during our struggles to attain the level of sustainability required for our space colonies and civilisations; we shall do this by forming new industries with much greater potentiality and scope for expansive growth than any industry imaginable here on The Earth.

[9:8:75] The Astronist Tradition considers the point of the Sustainability of Growth to be the most important of all the Points of Sustainability within Spacial Ethics.

[9:8:76] The Astronist Tradition, due to its allegiance with the school of thought of populationism, considers that an increase in population should not be curtailed, rather the development of sustainable systems should be accelerated in order to deal with the population increase.

[9:8:77] Essentially, population growth is considered to be the beating heart of human society which human civilisation cannot live without population growth in order to sustain other forms of growth; cultural, political, economic, and social.

[9:8:78] The advocacy for depopulation is not considered to be the answer to sustainable development according to the Astronist Tradition; instead, fostering and investing in new ideas for systems established are considered to be the ways of securing long term sustainability.

[9:8:79] Neither does the Astronist Tradition consider overconsumption to be the obstacle to sustainability, for this single-handedly drives economic growth, thus the Sustainability of Growth.

[9:8:80] Further to this, the final entry of the Points of Sustainability, the Sustainability of Humanity, is an overarching sustainability that is determined by the results of the Points of Sustainability that precede it.

[9:8:81] The Astronist Tradition holds that the ultimate goal of sustainability is the Sustainability of Humanity for it is considered that if we cannot sustain ourselves then we cannot sustain the environment, and the wider Cosmos.

[9:8:82] That which is henceforth known as Spacial Environmentalism is a branch of Spacial Ethics that incorporates all areas of general environmentalism and applies all concepts, stances, and movements within environmentalism to The Cosmos.

[9:8:83] In Spacial Environmentalism, to environmentalise is to actively seek the protection of The Cosmos and its progeny.

[9:8:84] Theoretically, Spacial Environmentalism understands The Cosmos to be the primary influence on humanity as a whole and on each and every individual that resides within The Cosmic Environment.

[9:8:85] That which is henceforth known as Sentience Ethics, or the Ethics of Sentience, is also a branch of study within the discipline of sentientology, but principally resides within contology.

[9:8:86] Sentience Ethics deals with all concepts and theories involving the interactions between humanity and all other forms of sentience, as defined by their different categories of sentience.

[9:8:87] Sentience Ethics presides over all stances and concepts in relation to how sentient entities should be treated, the responsibility of humanity in relation to other sentient beings, as well as relating to the nature of sentience within an ethical context.

[9:8:88] As the centrepiece of the Astronist Tradition, space exploration henceforth always considered that which is to be known as a Cultural Mission first and foremostly, not just a scientific, technological, or physical mission.

[9:8:89] Space Exploration as a Cultural Mission involves the notion that the exploration of space should become part of human culture as the most prominent manifestation of human intellectuality, expression, purpose, progression, and advancement.

[9:8:90] This relates to the philosophy of astronomy and the branch of study of astronomy; the notion of the exploration of space as a Cultural Mission is part of the deep integration of cosmocentricity into human thought, action, ambition, and society.

[9:8:91] Space Technology Utility is a concept within Spacial Ethics that relates to the belief that the utilisation of new and advanced technologies will lead to greater progress in space exploration, and further improvements in the Sustainability of Humanity; a closely related term of Astronist origination is known as technocentricity.

[9:8:92] Spacial Constructions collectively relates to any human-made structures on cosmic entities and within the context of Spacial Ethics, we must consider the ethicality of the construction of such structures.

[9:8:93] Taken into account must be the effects on the environment after such structures are constructed, as well as the sustainability of those structures in terms of their maintenance for whichever purpose they do exist.

[9:8:94] Private Ownership in Space is something that the Astronist Tradition does stand in support of as it private ownership is seen as the fundamental factor to the development of economic growth.

[9:8:95] Without private ownership, the ability of humanity to civilise worlds beyond The Earth is hindered due to the inability of business functionality and industrialisation; these two aspects of human civilisation must be allowed to exist freely if humanity's exploration of The Cosmos is to be practically executed.

[9:8:96] The Astronist Tradition wholly supports the idea of private ownership in space and shall do so henceforth from this moment; whether this is as part of capitalism, or some other newfound system of economic organisation, the Astronist Tradition maintains the importance of allowing private ownership.

The Centrality of Adoration

[9:9:1] To adore greatly and rarely is to know of true beauty when one sees it.

[9:9:2] To feel adoration for The Cosmos will lead one to grasping a great sense of wonderment.

[9:9:3] One cannot adore beauty, before one has seen the ugliest parts of the world.

[9:9:4] One of the greatest contemplations for any leader of any kind is whether to be adored, or feared.

[9:9:5] When one can adore The Cosmos for the wonderment it expounds, one can know true Divinely connected greatness, beyond all the matters and means of man.

[9:9:6] One wishes to adore The Divine for the wonderments of The Cosmos created.

[9:9:7] It is not adoration to see greatness in that which is great, it is to see greatness in that which has not yet reached its true potential.

[9:9:8] The young adore the elders for their wisdoms, their truths, and their experiences.

[9:9:9] The elders adore the young for their naivety, innocence, and sense of limitlessness.

[9:9:10] One adores when one sees the grandity in the developing soul.

[9:9:11] The adoration of the self is the forerunner to the adoration of the world, and the world's adorations to you.

[9:9:12] Before the adorations of the world, first must come the adorations of The Divine; The Creator of The Cosmos.

[9:9:13] Adoration of The Cosmos begins at the moment of one's inception.

The Centrality of Anguish

[9:10:1] To feel the severities and excruciations of the world is to feel the realities and the truths intended.

[9:10:2] One must suffer for one to know of the true delights of life.

[9:10:3] Suffering is the leading cause for learning.

[9:10:4] We must suffer for it is in our nature, in our very cores, to suffer; to suffer the deaths, the disappointments, and the hardships of our lives.

[9:10:5] The suffering of one is the revelling of another.

[9:10:6] One whom had suffered not, is one whom had never lived.

[9:10:7] Beyond the normal kind of knowledge is that gained through anguish.

[9:10:8] The anguish of the mind is the anguish most heartily endured.

[9:10:9] To suffer in body may be to suffer in mind as a consequence.

[9:10:10] The sufferings of the body may be easier to diagnose, but the sufferings of the mind so much greater to heal.

[9:10:11] Not envy should you feel towards those whom have suffered not, but pity them must you, for they know not of the realities and greater wisdoms that suffering gifts.

[9:10:12] If not by suffering, then what can bring oneself to a greater level of knowledge, experience, and wisdom.

[9:10:13] Feeling anguish, one is closer to their initiator, despite their feelings matching only a fraction of those suffered by their initiator.

[9:10:14] To imitate the greatest of us is to suffer as they did, both mentally and physically.

[9:10:15] We must suffer to live; there is no life without suffering, but the extent to which we suffering, and the circumstances differ greatly between people.

[9:10:16] It is not those whom speak of their suffering as it occurs whom suffer most, it is those whom stay silent, and only speak of it later.

The Centrality of Anxiety

[9:11:1] We see, feel, and know the world around us all our lives and the world we see, feel, and get to know is one of danger, discovery, and demons of all kinds.

[9:11:2] Not a thing can ever be certain unless by Divine decree.

[9:11:3] The Cosmos, to fulfil its created purpose, wills our lives the ways in which it sees fit, and it seems the unknown is all we can hope for.

[9:11:4] With our minds of speculations, we wish to see beyond that which we cannot by natural cause, and nothing but a fool's errand is this.

[9:11:5] We dream of what is to come by our mind's vision, and perhaps by Cosmical intervention, but again, how can we possibly know the truth.

[9:11:6] The truth is what we all seek, what we all have ever sought, but there does come a time to understand, that truth is the greatest paradox, and all that is true is so to us, and all that is true to The Cosmos, and The Divine by subsequent, is Divinely true.

[9:11:7] Truth by humanity; Truth by Divinity; we must choose with which to side.

[9:11:8] We must be anxious to seek the unknown, for that is the very nature of us, but to know the unknown is not our nature, and so one may seek it, but one may not know it.

[9:11:9] We can seek The Cosmos, but we cannot know it.

[9:11:10] By Divine will, our visions were clouded to the total spectrum, and until Divine will decrees it, that is how it must stay.

[9:11:11] We fear for the unknown, but instead, we must learn to embrace it's open arms, though to do is no small task.

[9:11:12] A fortunate time in which we live for to know is to know better now, and such a wondrous gift that be.

[9:11:13] An unknown world is a world of non-comprehension to us as we are now, both before, and after now.

[9:11:14] Speculate we all have, can, and will continue to do, but know, we will never know.

[9:11:15] In faith, we have trusted, and now, in knowing, we must now trust.

[9:11:16] What we know, and what we do not is not a reflection of our weaknesses, it is a reflection of how gifted we are to have been granted the permission to know all we do.

[9:11:17] Throughout our being here, we must stay close to the edge; the key is surviving before you fall.

[9:11:18] We must stay close to the edge of life throughout, in order to catch the greatest of gifts from the beyond.

[9:11:19] The unknown is from which we all learn for it feeds what we know.

[9:11:20] To worry is to be alive, though worry not and be still on the architectures beyond your own singular fixation.

[9:11:21] If not for The Unknown it would be a world of chaos; we owe all we have, and all we are to The Unknown for it keeps us in line by its eternally looming presence.

[9:11:22] The Known and The Unknown; what we have and what we do so hope for.

[9:11:23] Is The Unknown an agent of The Chaos? A great many answers may this question bring, but in the end, all will steer towards the same conclusion; The Divine created All.

[9:11:24] Do worry hard and worry often, for those whom worry are those whom have been gifted the keen vision for the changes to be made next to the world and beyond by a force greater than all else.

[9:11:25] Those whom worry have been given the great gift of seeing clearly what has not yet occurred, as well as the duty to see it through.

[9:11:26] To say one knows of The Unknown is to know of nothing.

[9:11:27] One may side with faith to combat The Unknown, but its very nature does not allow for this, for the nature of The Unknown is to stay as so until decreed otherwise; to know and to believe are so close yet oh so far away.

The Centrality of Ardour

[9:12:1] Passion is the driving force of all change; good and bad; without passion we suffer losing our very humanity, and the future of our very selves.

[9:12:2] Passion is intrinsically connected to ambition and ambition intrinsically connected to imagination; the most important quality of all.

[9:12:3] Opportunity in time makes the heartache of passion worth all its tribulations.

[9:12:4] An aptitude for passion is an aptitude for knowledge, ambition, and wonderment.

[9:12:5] It is when we lose our enthusiasm that we lose who we are, and all we hope to achieve.

[9:12:6] To burn the energy gifted to you through the learning, wondering, and experiencing of the world and The Cosmos is the greatest of all achievements.

[9:12:7] Passion must be controlled by morality for it not to fuel anger, and hatred.

[9:12:8] The enthusiasm of the self is the enthusiasm one can press upon the world for betterment.

[9:12:9] In doubt, we depend on our passion for it is put to the test by the cruelties and realities of the world.

[9:12:10] Passion fuels our strength, and the stronger we become, the greater passion we possess; it would do one no harm to learn of this relationship.

[9:12:11] The rumination of the mind and spirit is often the birthplace of ardour.

[9:12:12] In its infancy, ardour is chaotic, and unorganised; in its maturity, ardour is grand, and directive, and the greatest of all allies.

[9:12:13] Ardour is as we all know it to be; dependent upon its host, for if that person chooses to ignore their passion then it will be lost forever.

[9:12:14] One thing can be known about passion; it is unique to the person within whom it resides; the key is to know this so as to use one's gift of ardour for the betterment of themselves, and for the betterment of the people.

The Centrality of Betterment

[9:13:1] For the betterment of peoples is for the betterment of those whom perhaps cannot better themselves alone.

[9:13:2] If what you do is not conducted for the eventual greater good of the people, then too narrow is the spectrum of your ambitions.

[9:13:3] All one is, is that of others; if not for others what you do, not at all.

[9:13:4] If all one does is for oneself, and not for the betterment of the society in which one lives, all one can hope for is for their achievements to be lost when one passes on.

[9:13:5] Everything one does now may be for the good of oneself, but the ripples of one's deeds should, in essence, better the lives of others.

[9:13:6] A company must be founded on the betterment of the society it serves; this is the same for any individual.

[9:13:7] Decide, must one, whether they wish to serve the society, or only take from it.

[9:13:8] It is one avenue to think for oneself, but it is another to think only about oneself.

[9:13:9] As The Centrality of Progression teaches, it is the natural good of humanity to want to progress towards a humanity of betterment; if one is not bettering, then one is not progressing.

[9:13:10] It is for the betterment of the world that we do naturally seek.

[9:13:11] Dependence on anything other than oneself is the seal of downfall.

[9:13:12] If one does not control one's vision, it will enslave them to an existence beyond repair.

[9:13:13] Feeling better, and knowing better are deceptively dissimilar; with the first your pain will return, with the second it will never again.

[9:13:14] If not for the betterment of others, then why? For in this way you limit your vision to yourself, and you do not let it become what it is meant to be by enslaving it to serving you and only you; a cruel way to respond to a great gift.

The Centrality of Calm

[9:14:1] One must never harm oneself, and those whom express anger towards a thing beyond their control, do just that; they do not resolve the initiator of their anger; they further fuel it by harming themselves for its disgraces.

[9:14:2] Be within oneself as without, by taking an approach of time as the greatest repairer of all problems that do arise.

[9:14:3] One must move slowly for one to see clearly ahead; this is true for both in life, and in thought.

[9:14:4] To feel calm, and to know when to feel calm are two different things.

[9:14:5] One must not mistake the facets of calm to reflect those of emotionlessness.

[9:14:6] Frenzy, panic, and impatience are agents of The Chaos, and whose qualities should not be exhibited by any well-standing person.

[9:14:7] Accompany your knowledge with a dash of calm, and the perfect recipe for wading through life you will receive.

[9:14:8] Collect one's thoughts and drown one's feelings for to achieve calm, a quiet must be held strong.

[9:14:9] No matter the moment; no matter the circumstance; no matter the individual; a calm within and without can always be achieved.

[9:14:10] In our lives, a multitude of worries and possibilities arise; we must use our calm to sieve through the falsities and locate where in which our destiny lies.

[9:14:11] Why do you wish to improve yourself at anything if all you seek is glory and power to yourself; think calmly on this and whether everything you do is for a reason beyond just you; if so, change your ways and live for more than just yourself.

[9:14:12] The greatest of all calms is that experienced when the world has gone dark and quiet, and one can appreciate the wonderments of The Cosmos in The Universe, and see truly all that the bright and loud world had once blinded; to know this and to share this practice is the greatest of all gifts The Divine could have given to you.

The Centrality of Compassion

[9:15:1] To feel the emotions we feel is to be human.

[9:15:2] To those whom wish not to express these feelings to those around you, that is not wrong for to feel compassion, one does not need to show the world their feelings.

[9:15:3] Those of most compassion are those whom feel alone, for those whom they do not know, and never will ever know, but feel their sorrows as though they too experienced the same misfortunes on an equal portion.

[9:15:4] There are two levels to the emotion of compassion.

[9:15:5] The first is Compassionate Thought; the feelings, ideas, and thoughts one surmises from the circumstance, and creates from their imagination in the process of forming compassion.

[9:15:6] This is almost always a compassion of fleeting strength, yet is one that may be felt multiple times throughout one's year, though no actions are taken to amend the misfortune; the initiator of one's compassionate state.

[9:15:7] To be critical of this lower level of compassion is easy for those whom do not see the innocence and goodwill of such loving, yet ultimately pointless, feelings.

[9:15:8] Compassionate Thought is harmless, yet it is also useless, and depending on the person you are, or wish to be, you may feel dissatisfied with the inaction of this level of compassion.

[9:15:9] Compassionate Thought is the necessary precursor to the second level of compassion; Compassionate Action.

[9:15:10] Compassionate Action; the ambitions, endeavours, and intended outcomes of feelings, ideas, and thoughts.

[9:15:11] This higher level of compassion perhaps is not so harmless as its precursor counterpart, but its uses are many, and from it, solutions to the misfortunes may grow.

[9:15:12] Depending on the person you are, and the person you wish to be, Compassionate Action may serve you well, but to the detriment of your foresight, it should not be, and so, use it sparingly, for in doing so, you will preserve its grandities for causes of stronger passion to you.

[9:15:13] Not now, and not ever, will one of true compassion ever detriment themselves to resolve the misfortunes they witness, for compassion, even in its strongest form is not

sacrifice, and to know the difference is to know of the nature of what makes a human unique.

[9:15:14] Compassionate Thought is easy; it does not require one to endure tribulations for the benefit of another; it can be done in privacy and silence; but it is the originator all compassion, and so that is where one finds the importance of this level.

[9:15:15] Compassionate Action is difficult; it does require one to endure tribulations in the hope that another will see, take, and appreciate the benefits granted to them by your own struggles; it cannot be done in privacy, or silence; but this is the only way to change the misfortunes of the world.

[9:15:16] To feel compassion for action is to feel the need for change in the world.

[9:15:17] But there is one aspect that still remains unspoken of, and that is the misfortunes of the self.

[9:15:18] As aforementioned, Compassionate Thought is easy, and many follow its guidance, and do not venture beyond it.

[9:15:19] What one must ask oneself is; how many would go beyond Compassionate Thought for you?

[9:15:20] Not one person can know of this answer truly, wholly, and repeatedly.

[9:15:21] All we have of the world is ourselves; our minds, our feelings, and our actions.

[9:15:22] *You* can only know if *you* are compassionate enough for yourself to resolve your own misfortunes for your own good sake.

[9:15:23] You must endure the tribulations for yourself, and you dare not put to chance that another will step up to take your place, for of themselves, they will think of foremost, and of you, then will think of second to the fact.

[9:15:24] To feel compassion of any kind for others one must first feel compassion for oneself.

The Centrality of Disappointment

[9:16:1] There are the misfortunes of this life that make it so difficult to see a better future; the best of us will never let their own futureview be clouded by the problems, and their problems of the present time.

[9:16:2] Opulence all around leads to disappointment all within.

[9:16:3] If it is to be, then no amount of distress will change it; a lesson in patience and foresight perhaps needs to be had.

[9:16:4] If it is not to be, then our's will be another path for press on we must towards the progression of humanity.

[9:16:5] One can demand of the world all one likes, but the world owes nothing to you; only the ambition, motivation, and knowledge one has been gifted will lead to the conquering of one's futureview.

[9:16:6] Best not to waste one's existence with the trivialities of the present time, as opposed to the proper use of time on those of things which will add to the world with a greater purpose.

[9:16:7] If one has lived their life with the grapple of disappointment, then one has lived a most rare, but not truly a proper life at all for in the most interesting of lives, we learn of their most greatest disappointments, perhaps even more so than their greatest successes.

[9:16:8] I've found that to force disappointment upon oneself is to train one's mind and heart not to falter when the dagger of true disappointment pierces the skin.

[9:16:9] If we are to begin the most brilliant of lives, then we are to brace ourselves the most brilliant of disappointments.

[9:16:10] In this life, there are small disappointments, and then there are those of the larger variety; we must train ourselves to stand strong against these wickedities so as not fall before the achievement of our dreams.

[9:16:11] From where which, or from who which disappointment originates is a wider debate not to be conducted here, but simply, we understand that although we hate disappointment, we mustn't fear it.

[9:16:12] If we fear it then it has fulfilled its mission in demoralising us from the goal towards which we strive; it is so easy to forget that disappointment is not some external entity that is forcing itself upon us; instead, no, it is part of whom we are; it is an emotion that, ultimately, we can learn to control the severity of.

[9:16:13] One may be wondering as to why disappointment is a centrality if it is so wicked towards the human mind, heart, and soul; the principle remains true that that which is most dangerous is that which we must learn the most about, so as to be aware of its trickeries, in order to defend ourselves from its deceptions.

The Centrality of Desire

[9:17:1] The most important, yet too, the most dangerous of the human emotions is that of desire for that single emotion has caused just as much creation in the history of humanity, as it has destruction.

[9:17:2] Despite the apparent contradiction, desire holds a persistent duality that is ever-present throughout its many forms and expressions into the human mind, and the subsequent consequences.

[9:17:3] We all desire certain objects, some of which are animate, or some of which are not, but there is a key difference between the two sides of desire; the first side, known as Just Desire, is a form of desire wherein that which one desires does not hurt another person's own desire.

[9:17:4] The second side of which is known as Unjust Desire, and is characterised by the individual's desires being intentionally hurtful to the desires of others.

[9:17:5] There are many scenarios and circumstances in occurrence now, then, and thereafter that perhaps defy, or obscure these two principles; the most prominent of which is when an Unjust Desire is confronted with a Just Desire to end that Unjust Desire.

[9:17:6] That which is equitably considered to be the desire that is intentioned to prescribe harm upon another is the desire that must be stopped; in this scenario, the Just Desire becomes a Necessary Desire to destroy the Unjust Desire.

[9:17:7] Furthermore, and more biased towards the Astronist approach, any desire that is illogical, regressive, or anti-Astronist is considered an Devolved Desire; a desire that directly targets a particular entity and wishes to cause that entity harm, especially so if the values of that entity are considered oppositistic to the values of the devolved desirer.

[9:17:8] A desire to do is a desire also not to do; we must think about what our desires will do to ourselves and our own progressions, and then we must think about their real-world consequences upon those you know and those whom you do not know.

[9:17:9] Like disappointments, some desires are small and others are as large as they possibly can be; essentially, the difference between Just Desire and Unjust Desire is the intentions with which you hold when you formed that desire.

[9:17:10] From the Astronist perspective, unlike other philosophical traditions that speak of eradicating all desire from one's thoughts, desire is considered an inextricable part of the human consciousness, and instead of being eradicated, it should be nurtured in such a way that the desires of ourselves are all Just Desires, rather than those of the unjust variety.

The Centrality of Duty & Obligation

[9:18:1] A discussion of the concepts of duty and obligation in an Astronist contextualisation forms one's introduction to the branch of Astronist Ethics known as Astronist Deontology.

[9:18:2] The words duty and obligation are used throughout The Grand Centrality in a variety of different contexts, but the most prominently discussed of which is humanity's duty and obligation to fulfil its destiny with regards to The Cosmos and its discovery, exploration, and civility.

[9:18:3] In the Astronist philosophical tradition, there exists an intrinsic and unaltered centrality on the nature of duty and obligation for it is believed that both of these qualities structure one's life, and provide the motivation and dedication needed in life for one to achieve one's ambitions.

[9:18:4] If one lives without concern for the true nature of duty, then one shall live a life without many achievements for if one wishes to go beyond average, one will see that a sense of duty and obligation is required in order to go beyond, to reach a higher level of achievement.

[9:18:5] We have a duty to ourselves, to our creator, and to our descendants through the principle of descendance, to explore The Cosmos, conserve The Earth and all other planets, and to wonderment, adore, and laud The Cosmos for the grandness that it manifests.

[9:18:6] Essentially, Astronist Deontology is structured upon three main aspects; one's duty and obligation to oneself, one's duty and obligation to humanity, and one's duty and obligation to The Cosmos as a manifestation of some Divine creation.

[9:18:7] Let these three aspects of Astronist Deontology be discussed and criticised henceforth by the deontologists whom dedicate their thoughts to the study of the nature of duty and obligation, and let them come to their own conclusions about how these three aspects should be interpreted and applied.

[9:18:8] Let duty and obligation become the central elements of proper Astronist lifestyle, and let their integration into one's life become so deeply engrained that one does not act without first consulting whether the act falls in alignment with the duties and obligations that one holds to oneself, or that one holds to humanity, or that one holds to The Cosmos as the most direct manifestation of The Divine that we can currently perceive.

The Centralities of Emotional Intelligence & Empathy

[9:19:1] It seems to be the penchant of humanity in the current age to ignore that which they can most greatly benefit from, so much so that such elements are buried beneath the problems that it may be best suited to solve.

[9:19:2] An example of this is Emotional Intelligence, of which many of ourselves have failed to understand and apply to our lives that we are missing its most greatest benefits.

[9:19:3] This discourse is not to define or describe, or work through the cognitive reasons, and functions for the existence, or non-existence of emotional intelligence; instead, herein, we are to discuss the Astronist approach of how to apply emotional intelligence in such a way that we can solve some of the issues both aforementioned and lattermentioned in The Grand Centrality.

[9:19:4] To be able to first identify the emotions of a person, to secondly understand why these emotions are present, and to thirdly accept these emotions of the person in all their illogicality, and irrationality is the most efficient way of comprehending the human mind and our subsequent actions.

[9:19:5] If we are to understand why people do things, why people say things, and why people think things, then we must understand the emotions that are existent within the individual and to which they turn towards in order to gain the motivations and reasoning behind what they do, say, and think.

[9:19:6] Humans are contradictory by nature so the initial identifier of an emotion must always be to invert the action to its oppositism; if someone is overtly joyful, then they are perhaps masking a deep sorrow; if someone is extremely violent or rude, then are perhaps burying a yearning for help; if someone is derogatory towards another without previous instigation, then they are perhaps attempting to hide their own demons and hurt by placing the emphasis upon another.

[9:19:7] Understanding the emotions of another entails being able to explain in your own words why the individual is feeling such a way, and why they are acting, speaking, and thinking like they are.

[9:19:8] Finally, accepting is both the toughest and the easiest of the three elements; acceptance is often mistaken to mean agreeing with the reasons for a particular action, but the Astronist approach to acceptance is that accepting something is acknowledging its truth, or fact for that individual in a particular moment.

[9:19:9] The awareness, the control, and the expression of one's emotions is emotional intelligence, but the Astronist approach to emotional intelligence is to show that it can be applied in almost all circumstances, especially so in one's interactions with others.

[9:19:10] If we hold the ability of emotional intelligence, we step upon the trajectory of becoming greater philosophers, creators, and generally, better people, who hold the capacity to identify, understand, and acceptance the most personal and inner parts of what it means to be human.

[9:19:11] By holding one's emotional intelligence just as one holds onto one's talents, knowledges, and experiences, one, by direct consequence, becomes a much greater empathiser and empathy is a key centrality in building greater relationships with our friends, our families, our employers, and all other people with whom we interact in our lives.

[9:19:12] It is the lack of empathy in the nature of the human heart, mind, and soul that has lead to the majority of conflicts, deaths, and destructions in the history of our species, based largely upon a misunderstanding of each other's feelings towards one another.

[9:19:13] It is herein defined to be the Astronist approach that the understanding and sharing of feelings is the most precious and distinguishing part about whom we are as humans; emotion drives all action, especially so the creative and imaginative kind.

[9:19:14] It may be the attempts of some philosophies to eradicate emotion altogether seeing that emotion is the cause of desire, greed, jealous, temptation, and all the other perceived evilsities, but instead, from the Astronist perspective, it is believed that we must embrace emotion in all its incompleteness, illogicality, and somewhat evility because by this very notion, a parallel is drawn between being human and the rest of The Cosmos itself.

[9:19:15] The Earth and all the natural disasters that have occurred, and The Cosmos and all the destructions that it have occurred within it hold no apparent consciousness for life; the tsunamis, the hurricanes, and the typhoons are all natural; they hold no ability to control themselves from destroying homes and lives.

[9:19:16] The unemotionality of nature, The Earth, and even The Cosmos has always been a point of interest to myself, and it shall therefore become an important concept within the Astronist philosophical tradition.

[9:19:17] Humanity, although we have a conscience, which is something constructed by the history of our faiths, laws, and institutions for the establishment of an orderly society, our conscience is not inherently natural, or else we would not have to be taught that which is wrong and that which is right.

[9:19:18] And it is in this very notion that we see the divinity of humanity because to be divine is to neither be restricted by the emotions, nor is it to be tied to the physical, lawful, and moral constraints of reality; instead, divinity holds no conscience; whether divinity works upon random order, or by some other means, I do not know, but all I can write of is that which I see around me.

[9:19:19] And I see that there is an inherent unconcern, indifference, and apathy from nature, The Earth, and The Cosmos about the deaths, sufferings, and tribulations of human emotion, and to some extent, we share this unemotionality.

[9:19:20] If it were not for the institutions, laws, and faiths that have structured our consciences, which are necessary for societal order, then there would be no difference between that which is right and that which is wrong.

[9:19:21] One may also make the mistake when thinking about this concept to therefore label nature, The Earth, and The Cosmos as evil; but by this very notion, we ignore what being divine means; the volcanoes are not evil because they erupted and killed; the meteor that hit The Earth and killed the dinosaurs and all other life isn't evil because it did that; and neither is it evil for The Earth, the stars, and The Cosmos to still continue on in their functions, even after the most tragic of events has occurred in our society.

[9:19:22] Indifference is not evility from an Astronist perspective when spoken of in this context about this concept; the murderers, the thieves, and the extortionists are also evil humans, which is not and would never be denied, but the fact remains that we all are born without a conscience for what is right and wrong, and by this, we see the parallel of divinity between ourselves, and nature.

[9:19:23] Conscience is simply a human construction to bring order to our civilisation, but murder occurs in nature; destruction occurs in The Cosmos; there is a detachment between nature and the human conscience because the human conscience isn't natural.

[9:19:24] This does not make the human conscience unworthy of the importance it deserves, because all human civility requires it, but the fact remains that it is not natural; perhaps we can call nature, The Earth, and The Cosmos cruel, but we must accept that the cruelty to which we label them is merely a manifestation of our own likeness to them.

[9:19:25] It is perhaps the most controversial statement to make that that which we refer to as The Divine is emotionless; in some ways this is true and in others it isn't.

[9:19:26] Firstly, The Divine is emotion because, from a theistic perspective, The Divine created emotion; however, from the Astronist approach to what it means to be divine, there exists a detachment between the restriction of emotionality and morality from The Divine itself.

[9:19:27] If The Cosmos had a conscience and it were not to destroy anything that it had created, then I would not be here trying to contemplate these issues, and nobody else would be here trying to contemplate my approach to these issues because The Cosmos would not exist.

[9:19:28] From the very moment of the Inception Epoch, The Cosmos has depended upon the creation and the destruction of its progeny to develop, and to expand; this is the same with the animals of The Earth, the nature of The Earth, and The Earth itself, which was made by the destruction of other celestial entities that preceded it.

[9:19:29] In essence, the concept herein aforementioned is henceforth known as Unemotionality, or the Nature of Divinity, and is one that contologists will surely spend many years of their lives contemplating due to the immense complexity and controversiality of the nature of the concept.

The Centrality of Enthralment

[9:20:1] The Centrality of Enthralment, like the majority of other concepts in an Astronist contextualisation, mostly relates to the duty, vocation, and destiny that humankind is said to have about its own exploration of The Cosmos.

[9:20:2] One's enthralment into the study of The Cosmos is so highly encouraged in the Astronist philosophical tradition that it can be derived from almost every branch of Astronist Philosophy.

[9:20:3] Similar to the concept of wonderment, though lacking wonderment's official philosophical status within Astronism, the action of enthralment is to allow one's attention to be captured and fascinated, especially so when relating to The Cosmos, or any of its progeny.

[9:20:4] From the Astronist perspective, The Cosmos and all its progeny are the most important entities of physical existence to be enthralled upon due to their immensity, grandity, and their magnificence.

[9:20:5] One should also be enthralled by the journey upon which humanity is trajected; the possibilities that humanity is to seek; the worlds it is to discover; the very fact that The Cosmos is there to be explored is perhaps the easiest fact to be enthral oneself upon.

[9:20:6] As a less official version of wonderment with no greater devotional or philosophical meaning, enthralment is an important concept that allows for the wider concept of wonderment to be established upon it.

[9:20:7] If we lose the fascination of The Cosmos and its progeny that many of the greatest minds and peoples in history held so deeply to their hearts, minds, and lives, then we must ask ourselves what we are living for.

[9:20:8] If not for the exploration of The Cosmos as the next frontier beyond The Earth, then what for? To stay stagnant upon The Earth not expand any more than we already have? A bleak existence is herein predicted if that is to be the case.

[9:20:9] No, the Astronist approach maintains that humanity's fascination with the stars shall never die and although it may be dormant at times as our limited concentrations are distracted by the materialities of our civilisation and its wealths, there will come a day soon, when philosophy has reascended by the writings of this book, that the peoples of the world's fascination with The Cosmos shall re-emerge stronger than it ever has been before.

[9:20:10] This is the enthralment upon which many of us wait; this is the fascination that many of us wish to feel, and that many of us hope to feel about other material objects, but they are always left disappointed.

[9:20:11] To try and understand The Cosmos is to be completely enthralled by its grand mysteries.

The Centrality of Envy

[9:21:1] You desire that which another possesses, but not so much that you wish them harm, or so much that you compromise your own morality to achieve that which they hold; you feel envy.

[9:21:2] There are those of us whom succeed in our ambitions and those of us whom do not; some have suggested that the difference between these two kinds of people is that the former worked hard, and the latter did not work hard enough.

[9:21:3] This stance on the matter is the greatest to hold because the possibility is always existent for them to succeed, and the hope remains no matter with which it may take to achieve that which you wish.

[9:21:4] The hope in this concept is the most important aspect to cling onto because without such, we condemn our ambition to the chance, without any dedication to make that which you desire occur, no matter the circumstances.

[9:21:5] Envy is an immoral emotion as is traditionally understood because it fuels jealousy, greed, selfishness, and suffering, but one may question as to why it is therefore considered a centrality.

[9:21:6] The answer is because that which is known as Innocent Envy is identified as part of almost every human action and desire that there is; Innocent Envy is the feeling of desire for that which another possesses, but one uses this desire to motivate themselves to achieve the same as that which they had first desired.

[9:21:7] Innocent Envy drives human civilisation; we see it in business, in culture, in employment, and in family, and all other aspects of life, we can derive this type of envy and so, it is a type of envy that we cannot steer away from because it is part of whom we are as humans.

[9:21:8] The desires we hold, the jealousies we share, and the greed we feel are that which drives productivity; there are those of us whom do what they do in complete purity without any desire, jealousy, greed, or envy, but I maintain that even those whom proclaim this will still have felt some sort of Innocent Envy at some part.

[9:21:9] Innocent Envy is so widespread because it is a product of contrast; it originates from the comparisons we charge between ourselves and others; as long as Innocent Envy is only used for the betterment of oneself and those around oneself through fuelling the motivations and dedications of oneself then I see no cause for moral, or ethical concern about realising this type of envy.

[9:21:10] Just because an emotion is initially morally bad, that does not mean to say that it cannot be used for a greater moral sense; envy is an example of this type of morally bad

emotion that can be used, if one wishes it so, in a way that is positive, and that does not harm others for the satisfaction of one's own feelings.

The Centrality of Failure

[9:22:1] To achieve and to have the potential to achieve; it is clear that these two very similar concepts are so distant in their conclusive forms.

[9:22:2] When we embark upon a journey of ambition, then we must prepare ourselves for its failure, just as well as its success.

[9:22:3] Failure is only when it is constituted as such; if one does not acknowledge or proclaim something as a failure then the world will never know it is as a failure, but by this, we do not face the reality; we mask the truth with a false narrative.

[9:22:4] There exists a potential inevitability of failure in all excursions and embarkations; to reduce this potentiality of failure is the goal of each embarker, but the potentiality of failure may be so high in some embarkations that even attempting to reduce it bears no difference in the chances of its occurrence.

[9:22:5] It may seem strange in terms of logical thought to centralise and emphasise the importance of failure, but if we are to understand its benefits to us in almost everything we do in our lives, we place ourselves upon a trajectory for a better, happier, and an ironically more successful existence.

[9:22:6] Behind every successful journey exists an amassment of failures that have inevitably occurred in different potencies throughout the journey.

[9:22:7] One may be driven by either one's fear of failure, or one's desire for success; by whichever motivation one is propelled, one should know that each of them is a means to an end of the other; a fear of failure drives a desire for success; a desire for success drives a fear of failure.

[9:22:8] A failure is a beacon of hope; it is a guiding light to understanding the mistakes we have made, and the way by which we can improve ourselves to overcome such failures.

[9:22:9] In essence, failure is a signal of opportunity; an opportunity to better one's circumstances from the debris of failure; a means for which one can base their determination upon for the continuance along one's journey.

[9:22:10] We must also remember that those whom desire success are often caused to emphasise any hint of failure, as though it is an infectious disease from which they shall never recover.

[9:22:11] From a similar notion, by the idiosyncratic nature of human thought, we either allow ourselves to constitute our own sense of irrational failure, or we allow the world constitute the criteria of failure.

[9:22:12] In truth, it is often more common that one's idea of failure may be another's idea of success, as has been philosophised many times before this writing, but this isn't the entirety, or the conclusion of this issue.

[9:22:13] The fact that another person may consider one's failure a success does not make their failure any less painful, or disappointing; this is only a matter of perception, but like many other similar concepts, what other people think does not matter to one's own inner emotions, and this is no different.

[9:22:14] The pretence of one's own success is merely a failure to oneself and one's own dignity; if one is every to value their own happiness, and is ever to truly appreciate the fire of ambition that burns within them, well then they must stop any pretence about the reality that one has found oneself in the midst of.

[9:22:15] The greatest ally of failure is narrow-mindedness as it is very easy for one to consider a single failure as a failure with as much gravity as the celestials of The Cosmos, but if we perceive the wider spectrum that is life, then we understand very quickly that any one single failure doesn't ever constitute the failure of one's life; one thing never constitutes the entirety, and in the context of failure, we understand this most clearly.

The Centrality of Fear & Love

[9:23:1] If we are to understand the nature of familial relationships, then we must focus our attention on the two aspects of these genealogical ties that are essential to their existence; these are fear and love, equally, purely, and wholly.

[9:23:2] For those of whom we have raised, we both fear for them and we love them dearly so; the former because of the cruelties, evils, and sufferings of the world and those whom shall so quickly and unthinkingly afflict pain you, and the latter because of the biological, familial, and personal affection one has for the individual.

[9:23:3] The emotions of fear and love that we feel for our relatives and friends are not consciously initiated; we do not intentionally hold these feelings, but instead, they either develop gradually, or instantly, especially so with regards to our own offspring, of which we hold absolutely instead love and fear for.

[9:23:4] We love them for their very being, and that alone, whether they follow the ambitions that we have envisioned for them, or whether they treat us, and speak to us in denigratory terms, we still love them for their own beingness.

[9:23:5] We fear for them as we so very much hope that they do not become distorted and stray along the wrong path that will only lead to their inevitable struggling and suffering through life.

[9:23:6] All any parent wishes for their offspring is their happiness and prosperity, and to know better to make avoidance when they are confronted with the wrongdoings and the immoralities of life.

[9:23:7] Parents have dealt with this in either one of the following two ways; they have cushioned and isolated their children from the world, so much so that their children don't know the reality of the world into which they were born, and the greater shock they receive later when they are exposed to its harsh truths, often when they are the most lonely and vulnerable.

[9:23:8] The second of the two ways is that they have exposed their children so openly and without any care or attention for that they their children are being exposed to and the affects that this has upon the child, that the child grows older and believes that the harsh realities with which they are now well-acquainted is how the world and life must be, or if it was just their misfortune that they were born into such an existence.

[9:23:9] Nobody can go through life without feeling both of these emotions in some way; either in relation to ourselves, or in relation to those around ourselves, or even in relation to those whom we do not know personally.

The Centrality of Gratitude

[9:24:1] For that which we express our readiness to thank is that which we understand the gravity of in relation to that which was enacted in order for it to be materialised.

[9:24:2] Without the gratitude present in our expressions, we show that we do not understand, or hold the ability to appreciate that which went into the realisation of something, including the time, the effort, and the knowledge that has been attributed to the realisation of something.

[9:24:3] The appreciation of that which others do for us demonstrates our ability to have emotional intelligence and without our appreciation, we only expose our own inaptitude for that which is done for us, or for that which is in occurrence around us, or for that which we are granted, especially so by luck, reward, and fortune.

[9:24:4] We must also uphold gratitude for our opportunity in relation to our exploration of The Cosmos, which is an aspect of our existence that we have lost almost all our appreciation and thankfulness for.

[9:24:5] The wonderments and devotions to The Cosmos are largely about paying gratitude to its beauty, its magnificence, and its immensity in all aspects, and it is this that all civilisations across the world are currently lacking because they do not appreciate The Cosmos for the role it plays in human civilisation and the central role it plays in general existence, and this has occurred because before the Astronist philosophical tradition, there existed very little developed philosophy about The Cosmos.

[9:24:6] From the Astronist perspective, it is most important to make gratitude of our families, friends, and fellow peoples and the civilisations we have created as a species, but it is also even more greatly emphasised that one's gratitude for The Cosmos and all that is beyond The Earth, especially so in an occhiolistic approach.

[9:24:7] It is held that the occhiolistic approach to the human perception of The Cosmos is the only approach to The Cosmos that holds genuine gratitude at its heart, because it places a centrality on the fact that our own perspective of The Cosmos is so narrow and inferior to the reality of the size, scale, and scope of The Cosmos itself.

[9:24:8] As is similar to many other aspects of the Astronist philosophical tradition, the centrality of the act of gratitude is the act of gratitude towards a cosmical, or celestial phenomena, or towards The Cosmos itself as a distinct entity.

The Centrality of Guilt

[9:25:1] If, in the deepest parts of yourself, you feel even a hint of guilt for an act you have witnessed, or committed, then you know that act to be wrong not by the constructed rules and laws of the world, but by your own laws, by your own very nature.

[9:25:2] For that which we feel guilt is that which we know to be wrong in absolute; for that which we are told is wrong is that which another has formed their opinion upon, and is thus, not absolute.

[9:25:3] These are the two most efficient ways of defining guilt; that which we feel and that which we are told to feel; the former is known as Absolute Guilt, and the latter is known as Interpretive Guilt.

[9:25:4] From the type of system of the society in which we reside and were brought up in, we know that which constitutes guilt, and that which does not, that which may even constitute reward.

[9:25:5] Excluding those whom are mentally ill, the best way to decipher one's guilt is by taking an introspective look at oneself, and to be perhaps the most honest with oneself that we have ever been, and reach deep within ourselves and feel whether we have done wrong, or not; by this simple introspection, we can derive the extent of our own emotional intelligence, the morality and the ethicality of oneself, and the type of ideological system in which we reside.

[9:25:6] In the Astronist approach, a rarely relativistic approach, as well as a naturalistic approach is taken by the act of wrongdoing; one is asked to ask oneself, entirely and truthfully, whether they feel any guilt whatsoever.

[9:25:7] By this, we allow the natural soul and empathy of the individual to be emphasised, and if they still feel no guilt for their actions, or if they do feel guilt for their actions, then that reflects one's own natural morality towards the action relativistically, as another may see such an action as the most immoral and guilt-ridden act of all acts to follow.

[9:25:8] However, the systems of law that are in place in the civilisation in which one resides supersede our own relativistic individual moral compasses, and impose upon us a set of universal natural laws that shall be enforced when necessary.

[9:25:9] It is, however, when the laws of such a civilisations do not correspond with the universal natural law of life and freedom then we have identified a floor in the system under which we are currently living, and it is up to the current and future generations to reform the system to reflect these universal natural laws that prioritise life rather than the prioritisation of dogma, or of human egotism.

The Centrality of Insecurity

[9:26:1] We must first feel insecure if we are to benefit from the fruits of security; with not the former, may the latter come for if not, how can we truly know that we do not live with security now, if we have not yet felt the vulnerabilities of insecurity.

[9:26:2] Security and insecurity are both constructs of our own psychologies; they are illusory products of the extent to which our fears are either defeating us, or are defeated by us.

[9:26:3] The emotion of insecurity and its causalities are largely unique to each and every individual, but there are some commonalities of causal affect on insecure feelings; lack of money (Financial Insecurity), lack of relationships (Social Insecurity), lack of attractiveness (Appearance Insecurity), and lack of accomplishments (Achievement Insecurity), and there exists many more types of insecurity, but these are the four major kinds that are identified, and many of the smaller kinds derivate from one of these four.

[9:26:4] Insecurity is closely associated with concepts of abundance, as seen with the repetition of lack of, pertaining to one's fear of inadequacy in some area; to analogise, the more locks we have on our doors, the safer we feel; the more friends and family we have, the more loved we feel; the more money, knowledge, experience, and fame we have, the more accomplished we feel.

[9:26:5] Insecurity is generally a lack of fulfilment in a particular area of life that is being expressed in a way that describes a fear of inadequacy, or a fear that something drastically bad will happen because our stock of something isn't as high as we had hoped.

[9:26:6] Insecurities stem from the social constructs that surround us and tell us that which we should have much of in our lives, and that which we needn't worry about if we have little of.

[9:26:7] Although they are originative from social constructs, our insecurities are only our insecurities because we have allowed them to consume our thoughts and actions, so much so that we spend our lives attempt to debunk them, though we do not understand that they are only constructs of society that we have allowed to invade our psychologies to the point at which they control our feelings.

[9:26:8] A lesson we all must learn is that insecurities are an inevitability of humankind, which is why they are considered a centrality in the Astronist Tradition, and therefore, they must understood if they are to be dealt with.

[9:26:9] Insecurities are inevitable, but this should not reduce the solemnity and severity of the damage they are able to cause for they can cause the most vulnerable of us to want to remove ourselves from all situations wherein we may be forced to face our insecurities; by this notion, we allow insecurity to overcome our own dignity.

[9:26:10] Beware of the growing insecurities within oneself right at this moment, and do not allow them to take hold of any territory of the heart, mind, or soul for if we do allow this, we condemn our lives to a most unfortunate series of miseries, and the consequences of which is that we shall therefore live so cautiously so as to avoid our insecurities that we may as well not have lived at all.

The Centrality of Isolation & Reclusion

[9:27:1] For as much as I love the world, the world and I must keep somewhat distant from one another in order to allow each of ourselves the space to understand one another, and to contemplate the trajectory towards which our relationship shall continue to proceed upon.

[9:27:2] When one removes oneself from the cloisters of the open world, then one sees how the world of which we share and in which we all reside, is claustrophobic for those with minds that venture further than this one world can hold within its capacity.

[9:27:3] Isolatory actions are often viewed as negative by those whom enjoy the noise of the world, but isolation can in fact be the greatest of all healing processes for an individual before they flourish in the open world.

[9:27:4] However, to spend time alone is to know oneself, but to spend too much time alone is to not know the self that one could become because ultimately, despite the mental and physical benefits that temporary isolation can grant, those with whom we surround ourselves and the world surrounds ourselves with, they shape whom we are and they show us sides of ourselves that we would never have known if we had made our isolation permanent.

[9:27:5] Temporary isolation is important for the quieting of our minds to the emotions that have been building up throughout our time in the world outside; temporary isolation is sometimes necessary for certain people to be able to function and become the people they dream to be, but in this context, we only speak of the centrality of isolation in the context of how it can be beneficial to some people's personal mentality for a short period.

[9:27:6] One has to be strong in the wide world of evility, cruelty, and diversity, but also, one has to be even stronger when they are alone, and isolated from the world, because in those moments, our greatest demons can get the better of us before we realise their claws have sunk in.

[9:27:7] Isolation is beneficial, but only in small doses for most of us; there are those of us whom can experience isolation, and perhaps even embrace isolation for lengthy periods, and no harm shall come to them, but then there are those of us whom can experience a fraction of isolation, and begin to spiral down a path of insecurity, fear, worry, and depression.

[9:27:8] If any of us are going to dabble in the process of isolation, then we must know whom we are before we embark upon such a personal processes, because it is for the fear of losing oneself, that we must always stress to people that they must know whom they are, where they want to be, and for which reasons they are isolating themselves before they actually conduct such actions.

[9:27:9] One may query the difference between reclusion and isolation; isolation is segregating oneself from the entity that is the wider world, which does not necessarily mean all other human contact, for a short period of time for reasons of tiredness and for personal growth.

[9:27:10] However, reclusion is a conscious effort on one's part to segregate themselves from all other contact for a particular purpose, typically one relating to their career, a devotion they hold, a vocation they feel they must fulfil and the only way by which they can find peace to conduct their vocation is through separating themselves from all other contact with other people.

[9:27:11] Reclusion is an action that should only be undertaken by those with extremely headstrong vocations and only for a set amount of time, usually until they feel they are ready to share their vocation with the people and the world around them, and is very important for only writers, philosophers, and other creatives that are able to conclude reclusion without falling into the mental and physical and emotional pitfalls that are so easily fallen into when one makes themselves a recluse.

The Centrality of Laudation

[9:28:1] As one of the three devotions of the Astronist philosophical tradition, laudation is therefore tricentral and it is the devotion of laudation that deals with the praise and commendation of The Cosmos, its progeny, and those of us whom dedicate our lives to its discovery, study, and exploration.

[9:28:2] When compared to its counterparts of wonderment and adoration, laudation relates more to physical action rather than internal or vocal admiration of The Cosmos and all that is related to it and its knowledge and exploration.

[9:28:3] Laudation involves the buying of a cosmical ornament to express one's wonderment; it involves the naming of one's offspring after the most vehement of explorers and studiers of The Cosmos; it involves the general praise and commendation, in whichever way it may come, that is afforded through one's initial wonderment and adoration of either The Cosmos itself, any one of the cosmical progenies, or a son or daughter of humanity who has either dedicated themselves, or sacrificed themselves for the cause of the Humanic Exploration of The Cosmos and its study.

[9:28:4] We all have the ability to laud that which we wish, though choose that which you praise and commend for unless their efforts are conducted for the progression of humanity, then they do not deserve such devotion.

[9:28:5] That onto which we bestow our laudation is that which must deserve such devotion, and it is the purpose of this book to provide the world with all the possible recipients.

[9:28:6] The greatest, most fulfilling, and most enlightening act is to express one's wonderment and adoration for The Cosmos through its laudation to the world.

[9:28:7] I love The Cosmos and all its grand progenies; I love them for their immensities, and their direct divinity, and it is for this reason that I write The Grand Centrality; The Grand Centrality itself is my own laudation of my wonderment and adoration of The Cosmos; into which expression shall you place their wonderment and adoration of The Cosmos?

[9:28:8] The greatest problem of the current times is that so few express their fascination with The Cosmos and so few prioritise the devotion, exploration, and study of The Cosmos in all civilisations.

[9:28:9] But with the publication of these works, I do so hope herein, that henceforth there shall be a change to the world for the betterment of the peoples, towards a cosmocentric future, for that is the only trajectory towards which we can possibly strive.

[9:28:10] If we continue to only make devotions to ourselves and our own achievements, then how else can we hope to press on, beyond that which we are capable of; towards a greater, grander, and much wider future?

The Centrality of Melancholy

[9:29:1] To those whom have experienced the feeling of melancholy either just one, or in regular episodes, I am someone who has also experienced this emotion, and I feel it to hold a very important place in the development of the human psychology.

[9:29:2] Under the guise of hedonism, many peoples are fixated on making themselves happy, and I am not advocating to purposefully make oneself sad, but I must stress the importance of unhappiness in the carving of one's identity.

[9:29:3] Melancholy is essentially a longing for something that is not present before oneself, but the notion that melancholy has no cause is false because I feel there exists many causes for experiencing a melancholic episode.

[9:29:4] Most often, melancholy occurs due to one's longing for something that they have yet to reach; such as a particular lifestyle, or a particular career, or some other distant existence that they see exemplified in another person's life.

[9:29:5] We must always emphasise the importance of melancholy whenever it occurs because we can use the pensivity that it exhumes from within us to motivate us furtherso, towards the goal that we so desperately seek, so much so that we were melancholy initially because of that desire.

[9:29:6] If you experience a melancholic episode, it is always productive to engage in some creative activity during this time, whether that be writing, drawing, or composing; whichever creative expression you choose, the raw, and deep emotions that boil to the surface during your melancholic episode will burst into your artistic expressions, making them all the more infused with genuine emotion.

[9:29:7] In essence, melancholy is a centrality because it is an essential type of emotional expression, typically by those whom bottle up their emotions and hide them from the world; it is always healthier and more relieving to channel such emotions through creativity, which positions melancholy as a principal way for raw emotional expression.

The Centrality of Optimism

[9:30:1] The benefits of optimism are self-explanatory by optimism's own very nature, but the contention that the Astronist worldview has with current institutions and their subsequent influences on the minds of those whom live under them is that some institutions teach to be optimistic of wealth, materialism, and pride, but to think so little of that which exists beyond The Earth that such subjects are never discussed in their widest contexts.

[9:30:2] The problem with our current civilisation is that the truth of The Cosmos is distorted to serve the theologies of the present day faiths; a seemingly endless abundance of optimism is granted such faiths, but when suggestions are made about the possibilities and realities of The Cosmos, an instantaneous pessimism invades the discussion and halts all ideas that there could exist more in The Cosmos than we current can comprehend, or that the institutions of our civilisation have told us.

[9:30:3] From the Astronist perspective and worldview, The Cosmos and its many progeny are the easiest and most wonderful entities of existence to be optimistic about; it is held that if we do not hold optimism about The Cosmos and its exploration, then we condemn humanity's future and our own future descendants to lives of inexploration and indiscovery.

[9:30:4] It is the mission of the Astronist philosophical tradition to banish all pessimistic thought directed towards The Cosmos, its progeny, or humanity's exploration, study, and interaction with The Cosmos as such pessimisms are considered to be the largest sources of regression that exists in the human world.

[9:30:5] The Philosophy of Astronism, and the entirety of the Astronist philosophical tradition and its institutions are well prepared and ready for a battle against this type of pessimism with two goals at the heart of this struggle; the first is for the betterment of peoples, and the second is for the ensurement of humanity's exploration, study, and open-mindedness of The Cosmos and all the possibilities that exist within and beyond it.

[9:30:6] More generally, optimism is an admirable trait for it most often stands between the beginning of the execution of an idea and the discarding of an idea; except those that are geared to harm others, all ideas are worthy of consideration and execution, but it is the pessimistic tradition of thought that attempts to inhibit most new ideas and makes excuses for their inactuality.

[9:30:7] Pessimism often steals the role of The Divine in that pessimistic thought attempts to foretell the outcome of something before it has actually occurred, or even before it has shown any sign of resulting in such consequences; what greater illogicality, irrationality, and immorality could be found other than that?

[9:30:8] Essentially, it is only optimistic thought that shall forge the trajectory that we all wish to proceed upon; that which shall lead to our advancement, our enlightenment, and our expansion as a species.

[9:30:9] Optimism offers us all the possibilities of The Cosmos in The Universe; pessimism offers us all that could not happen in The Cosmos in The Universe; no great deal of logic is require to pick the option that will lead to our greater prosperity.

[9:30:10] Let those whom wish to side with pessimism side with it for we must uphold our principles of freedom, but let us, those whom side with optimism ride upon it and reap the rewards of the thought system that we have chosen to follow.

The Centrality of Regret

[9:31:1] When we feel regret, we realise that something we have done, or something that has happened that we could have stopped, we could have, and should have, appreciated that more than we did at the time.

[9:31:2] Regret is perhaps one of the worst of all emotions because it is based upon reflection; regret succeeds all other emotions because it occurs only after the fact, and at that moment, we cannot change what happened.

[9:31:3] Regret is a centrality because we must teach herein that the only way to curb regret is to prepare oneself for it; to foresight its occurrence, and the only way by which we can do this is by always appreciating every opportunity that comes one's way, or always appreciating a person, an object, or whatever the subject may be.

[9:31:4] Once we feel regret, it is too late to change it, so we must understand the actions and circumstances that lead to ourselves feeling regret; if the majority of one's regrets centre around not being appreciative enough, then one needs to be more appreciative of all things, so that they don't force the emotion of regret upon themselves later on.

[9:31:5] There does exist one other way to deal with regret, and this occurs once one has felt regret; it involves one promising themselves that they will no longer conduct actions that they know will lead to their own regret.

[9:31:6] It is the paradoxical trap of the human mind to cause the majority of our own pain from our own repeated actions; often, we punish ourselves because of some internal dissatisfaction with the way our lives have become, but this only results in one's life not changing, but our motivation, emotional intelligence, and our self-confidence and happiness being diminished.

[9:31:7] If one feels the daggers of regret, then one knows what they did to come to feeling the regret that they feel; the second way to deal with regret is to never allow oneself to put oneself in such a position again that will result in their regret once more.

[9:31:8] It is perhaps easier to deal with regret when one has felt the damage it can cause so as never to allow oneself to feel that way again, one never conducts the actions that lead to them feeling that way.

[9:31:9] Regret is a centrality because it should act as a deterrent for unappreciation in our lives as we will understand that if we do not appreciate that which is around us when it is, then we will only feel regret in not appreciating it, especially so when it has gone.

The Centrality of Reputation

[9:32:1] The most important of all of the centralities outline during this disquisition is that of reputation, and it is a technique that is so often forgotten in life, and one that, if used correctly to one's advantage, is the greatest of allies for us all, and will most certainly guide oneself to where one wishes to be.

[9:32:2] Each individual is assigned with a reputation from the moment they are born; this reputation extends from one's childbirth to one's waning hours, and is therefore the single aspect of oneself that will stay throughout one's life.

[9:32:3] To analogise, every person's reputation begins as though it were a white linen sheet; freshly cleaned, pristine, and unstained; the type of life the individual leads reflects the extent to which they linen sheet is stained.

[9:32:4] Imagine every time you do something immoral, unpleasant, or may be perceived to be disagreeable, a mud ball is thrown at your white linen sheet; the size of the ball depends upon the gravity of the action undertaken.

[9:32:5] And each time you do something of this nature, your sheet becomes more and more stained, until you have a linen sheet that no longer resembles the sheet you began with; this is how reputation works, but there is one most poignant aspect of reputation that needs to be thoroughly understood.

[9:32:6] Reputation and the extent of the stains on one's linen sheet are wholly dependent upon the perceptions of others for that is what reputation exactly is; it is an amalgamation of the perceptions the world has of oneself.

[9:32:7] By this notion, to continue the analogy, every person has multiple white linen sheets for every group they encounter; often, it is the less a group knows about us that the whiter our linen sheet to them stays, however, this only causes the group to become suspicious of oneself, and in turn, that white linen sheet turns not brown or black, but grey, to reflect the lack of knowledge a group holds about oneself.

[9:32:8] It is the game of life to manage our reputations to different groups of people; there will be groups with whom our reputations hold little importance, but so equally, there will be groups with our reputation is the most important part about ourselves.

[9:32:9] And in essence, to every other person other than ourself, the reputation we hold is who we are; it forms our identity in the world, no matter whether it truly reflects our own understanding of ourselves.

[9:32:10] The most crushing part about reputation, however, is the gruelling process of attempting to change the minds of people and their true perceptions about oneself for it

remains one of the most difficult endeavours to change the perceptions of others towards oneself.

[9:32:11] Now, the philosophy of indifference has since emerged, wherein we are encouraged not to care about what others think of us, but the Astronist approach challenges this well-engrained stance.

[9:32:12] This is because people's perceptions of us may very well reflect the extent of our success in the world and if we have a discoloured reputation, then we condemn ourselves to a tougher struggle to make people think of us in a certain way.

[9:32:13] Some have attempted to be so opposite to their true selves that no one would ever believe that they could be their opposite, but the reality of oneself remains, and although the world may not know it, you know it.

[9:32:14] That is why the crafting of the identity of oneself is the most essential precursor to crafting one's identity to the world for we must first know whom we truly are, and be comfortable and accepting of that, before we can present our identity to the world.

[9:32:15] It is surprising, and perhaps even terrifying and distressing, that a person's first impression of us can stick to us for the rest of the time they interact with us; no matter what we say, no matter what we do, and no matter what others say or do, that person, depending upon their personality, will never possess the ability to alter their first impression of us.

[9:32:16] To those people, we cannot work upon, and should not waste our time in that such endeavour, however, there are those whom are not so stubborn, and whose perceptions of us are much more likely to change with the things we say, do, and the things others say about us.

[9:32:17] The majority of people wish to succeed in life in whichever industry, or arena that wish, and it is our reputations in such arenas that will forge the extent of our own success and achievement.

[9:32:18] The most key element of the construction of a reputation is consistency; without a consistent message and identity, the world's perception of us will be clouded by our mixed actions and sayings.

[9:32:19] If we wish to build a solid reputation, we must conduct consistency from the moment we set out on such an endeavour to the moment we end it; it is only when the world isn't watching, that we can become our raw selves, still hopefully ourselves in majority, but without the adornments that we have placed upon ourselves for the world to view us the way the world does.

[9:32:20] Reputation is something that must be conserved for once it is stained, it is extremely difficult to reverse, especially so in a public sense; if the public view you in a certain way, and this has become engrained in their minds, it is almost impossible to return to the status of being unstained.

[9:32:21] However, in a public sense, one must always be aware that there will always be other people whom haven't garnered such a stained reputation of you, and from your positive reputation with them, you will be able to succeed.

[9:32:22] Not only is the crafting and preservation of reputation important in a public, business, and employment context, it is also relevant in the context of family and friendship; continued immorality, inaction, or ill-behaviour can force friends and family away, and even though they will still love you, the identity that you have crafted supersedes their ability to be around you.

[9:32:23] In conclusion, we all must craft our reputations in each sector of our lives, especially so in order to get to where we want to be and the type of life we dream of having; some people have chosen to forsake their reputations, yet have still succeeded in enticing a certain proportion of the population.

[9:32:24] There is no shame in this, but they should always know their reputations will always be stained from the perspective of the population that do not favour them.

[9:32:25] This notion relates to the final point to make about reputation; in a public sense, there will always be those whom do not favour you no matter what you do for it is a fool's errand to please every person of the world, as doing so means that you say nothing, and do nothing that may offend that you mean nothing to nobody.

[9:32:26] One must make the decision, if they are desiring a public life, whether to please all people, and represent nothing, or whether to please only a portion of people, but to represent something to that population, and to the wider world; from the my personal perspective, I choose the latter, for I know that which I am to represent is a cause that is fair, true, and right.

[9:32:27] It is the penchant of some to take a stance of neutrality when faced with the contentions between different groups, and although this may afford you an unstained reputation, it may result in the allies you have, not being as loyal and strong as you had hoped.

[9:32:28] In the context of conflict, neutrality affords you with the luxury of not being defeated, but it also comes with the price of a lack of loyal allies for in joining a side, neither side is indebted to help you when you are in need.

The Centrality of Sentimentality

[9:33:1] Those of a sentimental nature are often disheartened by those of us whom prefer not to keep material objects, and prefer to regularly purify our surroundings from our belongings, often to grasp an internal feeling of newness and reinvigoration.

[9:33:2] However, sentimentality is always considered an important centrality in the Astronist philosophical and ethical traditions, especially so for internal and personal self-confidence and reflection.

[9:33:3] There are two types of sentimentality identified herein; those are Organised Sentimentality, and Unorganised Sentimentality.

[9:33:4] The sentimentality that is encouraged herein is the former, as that advocates for the collection of the most relevant of items and memories, and their organisation in one's residence, whether displayed, or stored away where such sentimental elements will not interrupt the practicality of the everyday running of the home.

[9:33:5] The latter, which is discouraged due to its largely negative effects on the individual internally, and those surrounding, involves keeping items that hold no relevance, or significance, and they are kept in a way that isn't categorised by the time period of their relevance, or the nature of the item, but are instead positioned in such a way that they cause interruption in the practicalities of the home; this is classified as hoarding.

[9:33:6] Organised Sentimentality is beneficial for most people both mentally, emotionally, physically, and is a very natural process and desire to want to keep certain items that provide us with a warm happiness of fond memories whenever we see them.

[9:33:7] In fact, anybody who is overly opposed to any form of sentimentality, even the most organised of sentimentalities, and retains very little of the items and memories of their past, then there may be a deeper issue therein revealed; perhaps one is running away from one's past, and any object, or memory they possess is only a reminder of the pain they experienced.

[9:33:8] Organised Sentimentality is also very important for those whom wish to share their lives with the world in the public sphere; if the world asks you about your life, and you have kept so little, either in the form of objects, or memories, then how can the world get to know you and your journey; all you will have are the ideas of your current thought, which is why the action of instantiation is one of the most important processes for capturing and preserving memories, emotions, and experiences in our lives.

[9:33:9] In Astronist Philosophy, the action of instantiation holds a slightly different definition to its mainstream counterpart for in the Astronist philosophical tradition, instantiation is the process by which an individual captures their raw emotions about any subject during the height of its potency, rather than reflecting upon it at some later date.

[9:33:10] The reason for this is so that the individual can accept the emotions they felt during that time because it is the trap of reflection, that all the emotions we reflect upon are distorted by the passing of time; such emotions in that moment are therefore lost in the majority of cases, and therefore, the true and the reality of that time and the emotions one felt are not able to be shown to the world.

[9:33:11] Instantiation can be conducted through the form of written diaries, which are still interpretational, but the most genuine way of instantiation is through recorded diaries, whether these be voice recordings, or video recordings; this remains the only way to capture and preserve one's true emotions during that particular time.

The Centrality of Strength

[9:34:1] Helping people blindly (altruistic without thinking) makes them weaker.

[9:34:2] Giving people that which they have not earned is setting them up for a life of dependence on others and continued misery.

[9:34:3] They become targets for those whom wish to exploit them and they concede because they have been made weaker.

[9:34:4] To help a person is different from making them stronger; the first expires shortly, but the second lasts for much longer.

[9:34:5] Seeing another elevated by goodwill, brings the eyes of others whom suffer, and it is often they whom commit atrocities in desperation for the relief that they seek.

[9:34:6] The receiver of the goodwill has not been taught strength in both mind and body, and so, falls to the desperate act of the sufferer.

[9:34:7] In the end, it seems all your blind charity has done is cause more suffering.

[9:34:8] We must teach those whom do not know; not simply give to them the treasures and expect them to know their value and how they can use them effectively.

[9:34:9] To feel anger or to simply ignore those whom seek charity is equally as wrong.

[9:34:10] Why feel anger towards such a small matter, for one's feelings would be better used elsewhere.

[9:34:11] Equally, why ignore the sufferers and those whom seek charity, for doing so neither makes you stronger, nor them.

[9:34:12] One must show the sufferer the way to their relief by their own means, for then, if ever they find themselves in the same position, they will know the way to get out of it on their own.

[9:34:13] And too, if ever they come across another whom suffers, they will spread the knowledge of the way in which the sufferer can reach their relief.

[9:34:14] In this, you become stronger for your knowledge is shared, and too, the sufferer becomes stronger because they have received the knowledge and applied it to themselves.

[9:34:15] Money dwindles much faster than knowledge so share that which will last.

[9:34:16] If one suffers, it is the nature of them to spread such suffering for they know nothing else.

[9:34:17] The spread of suffering is the work of evil, and progresses nothing.

[9:34:18] Cruelty leads to suffering.

[9:34:19] This suffering builds in one's mind until it is all they can hear, see and think.

[9:34:20] This always results in an act of desperation, and further suffering.

[9:34:21] This is particularly true when a kindness is offered, for often it is the sufferer who treats such an alien with punishment for they do not know of such an act, and thus, a greater darkness is served.

[9:34:22] Do not mistake strength for power for in doing so, you do strength a great injustice.

[9:34:23] One can be both strong, and powerless in parallel.

[9:34:24] Power refers to that which one can make others do, either through fear or love.

[9:34:25] Strength refers to that which one can make oneself do, especially when one knows that what they must do will lead to progression, but that the world may not see it that way, or that the consequences may not be pleasant.

[9:34:26] To sacrifice oneself to save the world, does not require power, it requires only strength.

[9:34:27] The greatest of strengths is to know when to walk away from a strength which is not one's own.

The Centrality of Stress

[9:35:1] For most people, especially so in the particular society in which I now reside, are consumed by stress; the pressures of the world around them form in their hearts and minds as stress; a gradual build up of tension in the mind and body that leads to one feeling overwhelmed by their lives.

[9:35:2] Like many other unpleasant emotions that are centralised in the Astronist Tradition, stress must first be understood and accepted for what it is before we can make preparations to deal with it when it inevitably arrives.

[9:35:3] The way by which we can deal with stress is dependent upon from where it originates; most sources of stress can be located from our own constructs, or the world's constructs of what we must doing at a certain time in a certain place.

[9:35:4] If we are to truly release ourselves from the bounds of stress, we must first understand that the majority of stress in our lives is derived from the constructs of the world, and these constructs, no matter how imperative they seem in the moment, are simply not important, especially not more important than the health of oneself.

[9:35:5] We must understand that which world constructs must be perceived for what they are; people telling other people what they must do in order to reap a certain reward; if you are to relieve yourself from stress, then you must first release yourself from these constructs; don't allow what the world has formed to effect your internality.

[9:35:6] By this notion, we understand that we are the only controller of our own stress, which does make logical sense, but when experiencing such emotions, it is often difficult to face the logical reality.

[9:35:7] Stress is made a centrality for two more reasons other than our own personal conquering of it; the first of these is that our stresses form whom we are, and the greater stress we have, often, the greater achiever we become for the victory; however, it is often these achievers whom have first understood and contextualised stress, so that it does not overtake them.

[9:35:8] The second of these additional reasons for the centrality of stress is that we need it to survive as a civilisation; stress is caused by many moving parts, and has formed everything we see around us for everything that exists, some person has had to exert themselves in some way to actualise it, and this exertion is the formation of stress.

[9:35:9] Therefore, stress is central to human life, and those whom steer away from stress are typically those whom, when you look back through their lives, have also avoided responsibility, vocation, and focus, and in turn, they have achieved little, learnt little, and experienced little, when compared to those whom have embraced responsibility, vocation, and focus.

[9:35:10] To live without stress is to live so feebly that one may as well not have lived at all for that which you achieve without stress is so insignificant that you may as well have not embarked upon its materialisation.

[9:35:11] Stress is an unavoidable part of life, and it is part of the human psychology to experience stress in some form whether this be from our own doing, or by the doing of another that has caused us stress.

[9:35:12] In conclusion, stress is unavoidable, as aforeaffirmed, but this notion should not invoke panic, for if we control and manage our stress, and if we make the most important step of contextualising our stress, then we are all the better for it, as we shall achieve all that we wish, without fear of stress overcoming ourselves.

The Centrality & The Philosophy of The Saviour

[9:36:1] Since the dawn of human civilisation, every individual has looked for their saviour in whichever form it may come; in a person, in an object, in an idea, or in an ethereal spirit, or entity, that remains beyond one's comprehension.

[9:36:2] In the Astronist philosophical tradition, the concept of The Saviour is herein and henceforth established in relation to an individual, whether real or metaphorical, that saves people, especially the masses, from either tyranny, difficulty, danger, or some other unpleasantry.

[9:36:3] The Saviour, in the Astronist Tradition, is often ascribed to the Astronist character of Jesse, or one of the other four Astronist characters, but may also be ascribed to a real individual, especially someone involved in the progression of the Humanic Exploration of The Cosmos, or in the furtherance of another Astronist goal, such as the reascension of philosophy, or engraination of cosmocentricity in human civilisation.

[9:36:4] In its Astronist context, The Saviour is prepared to sacrifice themselves for the betterment of peoples, or for the enlightenment, and advancement of humanity, and the world as a whole.

[9:36:5] The Saviour may be often depicted in Astronist Propaganda, as the leader of the people, or as the emancipator of the people from slavery, social injustice, or political oppression.

[9:36:6] Let all know forevermore that The Saviour is whomever each person wishes them to be.

The Centrality of The Cosmic Devotions

[9:37:1] As omnimentioned throughout the entirety of The Grand Centrality, the devotions we enact to The Cosmos, and any of its progeny, lay at the heart of The Philosophy of Astronism, and in wider Astronist Philosophy, as the most prominent practices within the entire philosophy.

[9:37:2] Wonderment, as the emotion, and wondermentation, as the official term for the act itself, is simply looking up at the stars and being genuinely amazed and awed by them, and The Cosmos; many peoples of the world will have enacted wondermentation without even knowing it.

[9:37:3] It is a feeling of sincere wonder about The Cosmos and its progeny, and is the most simple, and most common, yet too the most important of the devotions because it acts as a necessary precursor to the devotions of adoration, and later, that of laudation.

[9:37:4] Feeling wonderment is the initiation of one's connection to The Cosmos; it is one's initial realisation that The Cosmos is more, and holds more, than one had perhaps previously perceived.

[9:37:5] The most beautiful part about wonderment, as shall be latteraffirmed, is its universality; anybody with any type of education, knowledge, wealth, or any other categorisation that we have formed in our society, the emotion of wonderment and the enactment of wondermentation can be conducted by any person, anywhere, and under any circumstance, no matter whom they are, what they believe, or what those around them believe; this is the truest part of the Cosmic Devotion of wonderment; its total universality.

[9:37:6] It is important to note that the Cosmic Devotions are conducted in chronology; one cannot adore before they have wondermented, and neither can one laud before they have adored; the structure of Cosmic Devotions follows a hierarchy whereby, as one continues with their devotions, they are able to enact the third tiers of wonderment, adoration, and finally, laudation.

[9:37:7] One may be wondering the difference between wonderment and adoration; the key difference is both authentic love and respect of The Cosmos; wonderment is awe, whereas adoration is one projecting one's deep love and respect for that which they now understand The Cosmos to be, as they have enacted wondermentation and now comprehend its place; by this notion, we see the importance of the chronological structure of the Cosmic Devotions.

[9:37:8] Finally, we behold the third of the Cosmic Devotions known as laudation; the difference between this and the first two devotions is that laudation is physical and active, rather than emotional and abstract; the devotion of laudation involves one practical, physically, and creatively expressing to others their wonderment and adoration of The

Cosmos, as well as organising and attending events of observation, education, and discussion of The Cosmos and its progeny.

[9:37:9] The three Cosmic Devotions of wonderment, adoration, and laudation form the backbone of all Astronist philosophical practices and traditions, and it is the primary purpose of all Astronist philosophical buildings to supplement and accompany one's devotional journey by providing the impartation of knowledge, a public location for observation, education, and discussion in order to fulfil the devotion of laudation, as well as the buildings themselves being physical and architectural manifestations of the three devotions of The Cosmos.

[9:37:10] As an introductory measure, a list of the fundamental and commonmost recipiencies of the three Cosmic Devotions is conveyed below, and it is a list to which many more recipients will be added in the future by The Institution of The Philosophy of Astronism, but herein described are the The Fundamental Recipiencies of Cosmic Devotion.

[9:37:11] The Most Grand Cosmos: the centralmost of all recipiencies of Cosmic Devotion, The Most Grand Cosmos is one's devotion of the entirety of that which is known as The Cosmos in The Universe according to the Astronist Tradition, and is considered the centralmost, but also, the most basic of all devotions due to the lack of speciality needs to devote to it. It is a devotion that is entirely attributed to The Cosmos alone.

[9:37:12] The Most Majestic Cosmos: a devotion typically reserved for more experienced devotees, The Most Majestic Cosmos is one's devotion specifically to the colouration of The Cosmos, as depicted in art pieces and other creative expressions of The Cosmos, especially so in digital form. It is a devotion attributed to colour in The Cosmos, astrophotography, and the disciplines of cosmology, and asteroseismology.

[9:37:13] The Cosmos within The Universe: a devotion dedicated to one's understanding of the way in which The Cosmos exists within the infinity that is The Universe, and is perhaps best depicted in visual expressions. It is a devotion attributed to The Universe, infinity, the cosmic periphery, and cosmic reality.

[9:37:14] The Devotions to Classical Planets: a group of devotions relating to one's wonderment, adoration, or laudation to any of the Classical Planets of the Astronist Tradition which includes Mercury, Venus, The Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. It is a devotion attributed to extraterrestrial life, historical astronomy, and the cosmic neighbourhood.

[9:37:15] Lunar Devotions: a group of devotions directed towards any lunar phenomena, the most predominant of which is The Moon itself. It is a devotion attributed to all moons, cosmic discovery, orbitality, and all astronauts.

[9:37:16] The Grand Galaxy: a central devotion directed towards the entirety of a galaxy, in whichever shape, size, and colouration it takes. It is a devotion directed towards the characteristics of any galaxy, as well as all the different types of galaxies.

[9:37:17] The Most High Cosmos: a prominent devotion directed towards the concept of The Cosmos and its largest, oldest, and most integral progeny, and is usually depicted in art and digital imagery with the features of nebulae, galaxies, quasars, and other extragalactic structure. It is a devotion attributed to the cosmic progeny of nebulae, galaxies, and quasars.

[9:37:18] Interstellarism: a devotion that is directed towards cosmical phenomena and progeny that exists between star systems, and is a devotion attributed to all space and phenomena between stars.

[9:37:19] Extragalactic Emanation: a devotion that is directed towards all that exists beyond The Milky Way, though includes devotions to The Milky Way itself, and is usually depicted in art with The Milky Way in the background. It is a devotion attributed to the extragalaxy, The Milky Way, and to all cosmic phenomena beyond The Milky Way.

[9:37:20] Galactic Centrality: a devotion that is directed towards the cores of galaxies and is a devotion attributed to cosmic centrality, luminosity, and cosmic structure.

[9:37:21] The Most Majestic Comet: a devotion that is directed towards the comets of The Cosmos, either observed from The Earth, or those that exist beyond in interstellar space. It is a devotion attributed to cosmic phenomena in general as a representative of all cosmic phenomena, as well as the instruments of study.

[9:37:22] The Vastity of Worlds: a devotion that is directed towards the idea that there exists quintillions of planets in The Cosmos, and that beyond The Cosmos, there could exist an infinite number in The Universe. It is a devotion attributed to cosmic vastness, incomprehensibility, and cosmic diversity.

[9:37:23] The Simplicity of The Night Sky: a devotion that is directed towards the night sky of The Earth and its observations, either depicted in art, visual imagery, or by physical observation of the night sky. It is a devotion attributed to astronomers, and civilian observation.

[9:37:24] The Most Rare of Shooting Stars: a devotion that is directed towards the appearance of shooting stars, and is the devotion most commonly attributed to children, and the young.

[9:37:25] Cosmic Dwarfism: a devotion that is directed towards dwarf planets, the most common recipient of which is the former planet, Pluto, and is a devotion attributed to Pluto, and all types of non-planetary, non-stellar, and non-galactic phenomena of The Cosmos, such as that of asteroids, comets, and meteors.

[9:37:26] The Most Grand Star: a devotion directed towards The Sun and is attributed to light, heat, life, vision, and hope.

[9:37:27] Stars of The Cosmos: a devotion that is directed towards all stars of The Cosmos generally, and is attributed to the Humanic Exploration of The Cosmos, elderly people, optimism, and imagination.

[9:37:28] Metagalactism: a devotion that is directed towards all structure of The Cosmos that are larger than any one galaxy and is attributed to galactic clusters, the Laniakea Supercluster, and all other metagalactic structures.

[9:37:29] Destructive Creation: a devotion that is directed towards all novae, supernovae, and hypernovae in occurrence in The Cosmos, and is attributed to oxymorons, explosion, cosmic creation, cosmic destruction, and paradoxes.

[9:37:30] Oblivionism: a devotion that is directed towards all types of black hole phenomena in The Cosmos and is attributed to unknownness, nothingness, multi-dimensions, ultimacy, fear, and the eternal entrapment in time.

[9:37:31] The Unknown Cosmos: a devotion that is directed towards all that isn't yet known about The Cosmos itself, or any one of its progeny and is attributed to occhiolism, human knowledge, The Chaos, and cosmic possibility.

[9:37:32] Chaotic Devotions: a wide-ranging collectivity of devotions that are all directed towards chaotic phenomena within The Cosmos and are attributed to disorderity, mystery, unfamiliarity, and necessity.

[9:37:33] The Highmost Nebulae: a devotion that is directed towards nebulas throughout The Cosmos, especially directed towards their functionalities and their iconic and beautiful colours captured in pictures, art pieces, and in digital imageries and are attributed to starbirth, star development, furtherance, betterment, cosmocentricity, and babies.

[9:37:34] Interconnectivity of Constellations: a devotion that is directed towards all constellations, and is attributed to the ancient and historical human observation of the stars, as well as human civilisations, and cosmic understanding. However, this notably does not include the practices of astrology and the divination of stars, and neither is an emphasis based on the zodiac names for the constellations, which are considered to be non-Astronomist.

[9:37:35] The Grand Clusters: a devotion that is directed towards either star clusters, or galactic clusters, or any other possible type of cluster in The Cosmos, and is attributed to cosmic proximity, attractivity, the force of gravity, and cosmic magnetism.

[9:37:36] The Most Grand Stellar Streams: a devotion that is directed towards the most beautiful associations of stars that are often formed, and depicted as contours, lines, curvatures, and tails of thousands of stars that have broken away from the main galaxy, or another star formation, such as a globular cluster. This type of devotion is attributed to cosmic eccentricity, stellar alignment and stellar arrangement.

[9:37:37] Galactic Spiral Awe: a devotion that is directed specifically towards the galaxy that has a spiral shape, and is attributed to cosmic patterns, cosmic shapes, The Milky Way, galactic formation, and galactic structure.

[9:37:38] Quasarism: a devotion that is directed towards all types of quasars, and is attributed to cosmic distance, cosmic brightness, stardust, lightjets, beautiful cosmic violence, and cosmic particles in general, an example of which is gases and dusts.

[9:37:39] Pulsarism: a devotion that is directed towards all types of pulsars, and is attributed to cosmic elegance, electromagnetism, radiation, cosmic speed, and the evolution of stars.

[9:37:40] The Most Hallowed Phenomena of Galactic Formation: a devotion that is directed towards the entire process of a galactic birth, development, formation, evolution, migration, morphology, and all other possible movements and processes related to galaxies.

[9:37:41] Void Nihilism: a devotion that is directed towards the voids of The Cosmos, especially the supervoids, and is attributed to emptiness, cosmic wisps, cosmic structure, cosmic reality, and interstellarity.

[9:37:42] Stellar Luminosity: a devotion that is directed towards the light that stars produce and is attributed to all related stellar processes like scintillation, lightspeed, and oscillation.

[9:37:43] The Most Grand Protoplanets: a devotion that is directed towards a disk that forms around young stars during their developments and formations and is attributed to extreme cosmic illumination, young stars, stellar beauty, and all types of disks to be found with cosmic phenomena.

[9:37:44] The Most High Gravity: a devotion that is directed towards the force of gravity and is attributed to all cosmic evolution, cosmic essentiality, as well as time, space, matter, and the cosmic entirety.

[9:37:45] Vastness, Complexity, & Grandness: a devotion that is directed towards the general vastness, complexity, and grandness of The Cosmos and its progeny, either collectively, or individually, and is attributed to cosmic sciences, cosmic connection, and education of The Cosmos.

[9:37:46] Rotational & Orbital Magnificence: a devotion that is directed towards the orbits and rotations of planets, stars, and galaxies, and any other cosmical phenomena that is structured upon these two processes and is attributed to celestial movements, celestial alignments, and general celestial processes.

[9:37:47] Highmost Starburst: a devotion that is directed towards the period of intense activity in a galaxy caused by the formation of stars, and is attributed to cosmic intensity, cosmic epochs, the evolutions of stars, and any other intense periods of activity caused by cosmical progeny and phenomena.

[9:37:48] Hypergiant Solarity: a devotion that is directed towards the largest class size of stars, known as hypergiants, and is attributed to cosmic irregularity in size, cosmic extremity, cosmic bipolarity, and cosmic immensity.

[9:37:49] Kilonova Mergence: a devotion that is directed towards the astronomical event of a kilonova, and is attributed to cosmic binarity, binary systems, neutron stars, and all types of cosmical merges.

[9:37:50] Magnetarism: a devotion that is directed towards the existence of magnetars in The Cosmos and is attributed to cosmic strength, abnormality, and cosmic magnetics.

[9:37:51] The Human Cosmos: a wide-ranging collectivity of devotions directed towards all human activity beyond The Earth and includes all devotions to all depictions of humans beyond The Earth, especially The Five Astronist Characters, even if such depictions are directed towards other devotions. Its primary attribution is human interaction with The Cosmos, human civilisation, human likeness, humanity in general, and also sentience.

[9:37:52] Inspired Child: a devotion dedicated to the children of every world in The Cosmos that they may be afforded the gift of cosmic inspiration and may be enknnowledged about The Cosmos so that they may follow Kosma.

[9:37:53] In the context of the study of devotology, the term that is to be known as enstra is in relation to cosmic devotion and prayer, when the night sky is clear so that these practices of devotion and veneration, collectively referred to and categorised as forms of astrolatry, can be conducted.

[9:37:54] The dichotomic term to that of enstra is that of destra which stands in contrast by pertaining to the instance of when the night sky is clouded or otherwise obscured, then the practices of cosmic devotion cannot be sufficiently conducted.

[9:37:55] There is expected to be a considerable debate about the presence and prevalence of the practices of astrolatry within the philosophy of Astronism with the belief orientation herein established and known as astrolatrism encompassing the belief that astrolatry is the

correct form of worship largely based on modern astronomical discoveries about the role of stars in the biology of humankind.

[9:37:56] Alternatively, that which is to be known as anti-astrolatry, or inastrolatrimism pertains to opposition to the practicing of astrolatric acts by followers of the philosophy of Astronism.

[9:37:57] One of the earliest religious conceptions is the perception of The Cosmos as a living organism, any instances and beliefs of which in the Astronic tradition is to be known as cosmogonism which is the belief that The Cosmos is a living organism and when referred to as astrogonism, this pertains to specific celestials as living organisms.

[9:37:58] Finally, that which is to be known as cosmic intercession, or astral intercession shall henceforth pertain to the belief that cosmical progeny and phenomena hold the ability to intercede with the creator God of The Cosmos and The Universe.

[9:37:59] This belief of the intercessory powers of the cosmical progeny is therefore incorporated into some cosmic devotional and venerational practices prayers and opens up the potential for wider discussions to be conducted involving the relationship between cosmic progeny and phenomena with The Divine.

[9:37:60] This area of contemplation and Astronic practices is expected to ignite a new plethora of belief orientations which are to be debated and introduced as part of New Concept Development which is to take place post-omnidoxically.

The Centrality of Vice & Virtue

[9:38:1] All emotion, and action can be split into two extremes in the most basic; these are vice and virtue; the former is characterised with intentions of malice, and the latter is characterised with intentions of nurture; the intention by which an action is conducted determines the nature of the act itself and the category into which it is placed.

[9:38:2] It is a mistake, however, to leave the discussion of vice and virtue at such a point, without considering the individual circumstances that may lead to this most basic of categorisation being distorted.

[9:38:3] The simplest way to convey this is that a person may conduct an action that is traditionally categorised as vice, but is conducted with intentions of virtue, and the same could be said for an opposite scenario.

[9:38:4] Intention can be used as an initial framework for action categorisation, but due to action regularly having the opposite affect than the intention had perceived, we cannot always use intention as a universal footing to categorise actions as either virtuous, or vice.

[9:38:5] Virtuity and vicivity are classified as such according to intention, action, and consequence, with the majority of the gravity leaning on the element of consequence, for that which is the result is that which must be lived with thereafter, and although the intention may have been virtuous of an action, the consequence determines the reality of the entire sequence, and therefore, supersedes each of the other two elements.

[9:38:6] Virtuity is characterised by four main elements; positive intention, positive action, upholding one's convictions, and positive consequence; in the Astronist Tradition, the philosophical study of virtue is known as Aretics.

[9:38:7] Vicivity is also characterised by four main elements; negative intention, negative action, not upholding one's convictions, and as a result, a negative consequence occurs; in the Astronist Tradition, the philosophical study of vice is henceforth known as Arnonics.

[9:38:8] To be of true virtuity, may mean one has to let the individual in subject be hurt in order for them to learn how and why what they do hurts them; in this scenario, it may be more vice to allow the individual in subject to be cushioned, rather than to let me be hurt; being hurt is often negative initially, but may also have positive consequences.

[9:38:9] One can love another person very dearly, so much so that they become blind to the needs and desires of that person, and instead, they result in dealing that individual with disservice, but not allowing them to become that which they feel they are vocated to become; by this notion, we relate to virtuity and vicivity in parenthood and guardianship.

[9:38:10] Despite the circumstances and scenarios that defy the the principal categorisations of both vice and virtue, it still remains true that the world of human action, and interaction is split along virtuous and vicive lines and although one can soon morph into the other, their most basic characteristics of positivity and negativity remain the reality.

The Centrality of Wonderment

[9:39:1] The most common and most highly revered of the three devotions is that of wonderment, also known as wondermentation; this involves one's awed admiration and respect towards The Cosmos, especially so as a personal relationship or veneration between oneself and The Cosmos.

[9:39:2] To wonderment is to see The Cosmos in such way that realises its centrality to human life and a higher and more divine way of existence; wondermenting The Cosmos infuses into one's perception of The Cosmos, that The Cosmos holds a certain centrality in higher human knowledge about existence, time, space, and reality.

[9:39:3] Having the ability to wonderment The Cosmos is having the ability to perceive The Cosmos in the central position that it is believed to deserve by the Astronist Tradition.

[9:39:4] Wondermentation includes one's personal relationship with the entity that is known in the Astronist philosophical tradition as The Cosmos; less commonly, and more related to adoration and laudation, the two other types of devotion, wondermentation may be conducted as a shared admiration for The Cosmos by conducting any type of cosmical observation, or some other custom.

[9:39:5] The greatest part about wonderment is that all peoples, of all ages, all races, all ethnicities, all faiths, all nationalities, all personalities, all ideologies, and all worldviews can all, without exception, conduct in its practices; whether they be wealthy, or poor, famous, or unknown, happy, or sad; there is no human, or worldly categorisation that can be excluded from The Cosmos because despite all the differences of this world, the only uniting factor of reality that all of us must accept is that we all live, and are subordinate to the mighty power and grandity of The Cosmos and all its progeny.

[9:39:6] By this notion, we comprehend the truest beauty of wondermentation; its unique ability to transcend all human segregation, unlike that which the faiths, the ideologies, and the politics can accomplish, and unites all people under one common reality; the reality that The Cosmos is always, and has always been there for us to wonderment upon, and the reality that, no matter what we say, do, or think, the stars will always shine bright above, and the sooner every person of every civilisation understands that, and begins to wonderment, adore, and laud The Cosmos, the sooner we will reach a greater understanding from where which we can and the destination towards which we proceed.

[9:39:7] For this reason, the emotion of wonderment and the practice of wondermentation is considered one of the greatest of centralities in the Astronist Tradition; forever shall wonderment and wondermentation play a central role in the expression of one's devotion, understanding, and exploration of The Cosmos and The Philosophy of Astronism.

The Centrality of Worldview

[9:40:1] The worldview is defined by five independent elements and is the way in which one believes, understands, knows, accepts, and perceives the world in which they reside, and the life in which they live.

[9:40:2] The way by which one perceives the world around them is integral to the nature of the decisions they make, the factors they take into consideration when making such decisions, and the consequences of such decisions thereafter.

[9:40:3] In current times, the majority of people view the way according to themselves, their families, friends, and perhaps, in the widest sense, their nation, but beyond this, very few people perceive as humanity itself, or as a planet amongst countless in The Cosmos, or as one of many sentient species that could exist in The Cosmos.

[9:40:4] Those which are henceforth known as The Six Fundamentals of the Worldview form the Astronist approach to the concept of worldview, and are characterised by six distinct questions:

[9:40:5] An explanation of the world, the cosmos and the universe, answering the question “wherein do we exist?”

[9:40:6] A distinct futurology, answering the question “to where are we heading?”

[9:40:7] A grounding of values, answering the question “in which way should we act?”

[9:40:8] A construction of a methodology, answering the question “how are we to achieve these goals?”

[9:40:9] An establishment of a theory of knowledge, reality, and existence, answering the question “what is true, false, and real?”

[9:40:10] An aetiological premise, answering the question “from where, from what, and why was this worldview founded?”

[9:40:11] The Astronist Worldview is characterised by cosmocentricity, and places all emphasis on the way in which humanity is to progress, advance, and enlighten itself with regards to The Cosmos, and all that exists beyond The Earth itself.

[9:40:12] Many peoples of this world perhaps do not even hold any particular worldview; in the Astronist philosophical tradition, a worldview is characterised by opinions and perceptions on whom we are now as a species, or as a civilisation, or as a planet, and to where we are headed towards; without being able to answer these ideas, a worldview cannot be formed.

[9:40:13] Herein, we shall take an Astronist approach to our own concept, the Six Fundamentals of the Worldview, by answering each of the questions that the fundamentals hold so that the world can understand exactly what the Astronist Worldview is.

[9:40:14] Fundamental One: we exist as a sentient species within a civilisation that is slowly becoming united upon a single planet, known as The Earth, and beyond The Earth, there exists The Cosmos, an unimaginably vast space wherein countless planets, star systems, galaxies, and other cosmical phenomena reside, and beyond The Cosmos, exists The Universe, an inconceivable existence if perceived from outside of it, and it is infinite by its very nature, and within The Universe, and all else that exists now, before, and beyond, The Divine exists for The Divine is something that created existence, and if not that, then The Divine is existence itself.

[9:40:15] Fundamental Two: the entirety of humankind is heading towards The Cosmos; its exploration, study, discovery, and civility because that is the only way to accomplish our progressions and our destiny as a sentient species, which is to populate, explore, and attempt to comprehend The Cosmos in which we all reside; all future is beyond the one planet on which we now reside, but The Earth shall always be considered to be the origination point from which humanity ventured out into the wider Cosmos.

[9:40:16] Fundamental Three: we are to act in a way that is inclusive of all humanity, in unity with all whom we share this planet with, so that we engrain it into our cultures that we are to also unite with those whom we share The Cosmos with. Our intentions should always be to betterment ourselves and those surrounding us, and those whom we shall never not ever meet, but may so have the largest impact upon. Ultimately, we should think cosmocentrically, act cosmocentrically, and say cosmocentrically for that is the vocation of the Astronist philosophical tradition; to ignite the advancement, betterment, and discoverment of humanity.

[9:40:17] Fundamental Four: we are to achieve all the goals and destinies as prescribed by Astronist Philosophy by the implementation of a system by which supports such ambitions, and this would be the Astronist Methodology; a methodology that supports a newfound way of perceiving the world around us, and the world beyond moreso. Such systems can and will vary throughout their range of implementations, but the requirement of a system remains and the Astronist Worldview requires a system of thought that places our knowledge, study, and exploration of The Cosmos at the forefront of culture.

[9:40:18] Fundamental Five: truth, falsity, and reality are considered the three cornerstones of existence in the Astronist Tradition.

[9:40:19] The first of which involves the state of being right, but rightness does not always constitute reality for rightness is a matter of perception and opinion.

[9:40:20] The second of which involves the state of being wrong, which is also a matter of perception and opinion, as well as human constructs so as that which is wrong cannot ever actually be known to be wrong, unless it is so by some higher decree, and herein we come to contemplate reality.

[9:40:21] The third of which is reality and this involves those which are known as the Absolute Truths of existence; they are not based upon opinion or perception; they are not politicised, religionised, enculturated, or otherwise distorted by human constructs, and they are the facts of existence; they are not restricted by human knowledge, understanding, or cognition.

[9:40:22] Fundament Six: the final fundament addresses the overall purposivity, and origination of the worldview described herein; the Astronist Worldview emerged from my mind as I imagined the characteristics of the Astronist Philosophy forming all around; the Astronist Worldview has emerged because of the current state of the world, and the lives of the peoples within it, and incessant inability to perceive on a wider, grander, and most cosmic scale. The Astronist Worldview has manifested itself in my mind because of the anthropocentricity of our civilisation, and our culture, and all our institutions of politics, faith, and education. The Astronist Worldview forms a newfound perception of the world, especially so towards the world beyond our own; The Cosmos in The Universe.

[9:40:23] The words of The Grand Centrality as the physical manifestations of The Philosophy of Astronism, and of wider Astronist Philosophy, answers these six questions to the fullest degree, and it is with these six questions, that one can categorise The Philosophy of Astronism, in six distinct areas of answer, and above, six brief overviews of each answer have been given in order to provide all readers with a concise version of the answers.

The Centrality of Worry

[9:41:1] To worry is to care, and to care not is to condemn oneself to a life without any purpose to it, and such a life would be a prison of one's own creation; worry is love, and it is those whom worry about us that we must surround ourselves with; it is those whom do not worry for us that we must avoid, or at least distance ourselves from because they do not love us enough to worry about who we are, where we are heading, and how we are.

[9:41:2] From the criterium of worry, we can distinguish the types of people with whom one surrounds oneself with, and those whom you may not think worry about you, shall surprise you when you realise that they do.

[9:41:3] If one wishes to split the world into those whom worry about you, and those whom do not, then one has devised an efficient way of deciphering those whom care most about us, and those whom do not.

[9:41:4] Those whom are found not to worry, however, should not be cast aside and never spoken to again; instead, we should understand that there are those people whom naturally worry more about others, and those whom do not; distancing oneself from those whom do not worry is important, but to go to the extreme measure of avoiding them completely, is unnecessary, and is actually self-hurting more than anything else.

[9:41:5] Instead, the most important element is that one knows whom worries about them and those whom do not; those whom do worry, keep them close; those whom do not, keep them at a distance, but do not abandon them; those whom do not worry, are often those whom need be worried about and shall seek this from you.

[9:41:6] The aspect of worry that we must now address is one's worry for others and this is perhaps even more important than the initial aspect of worry that we have spoken of herein.

[9:41:7] For those whom we worry are those whom we love the most; whether it is that we worry about their mind, their body, or their quality of life; we worry for them, and that is the most precious feeling because it shouldn't be prompted; it should be raw, and naturally given, so that we know whom we feel the most true love for.

[9:41:8] Perhaps the largest problem of the world and perhaps the largest problem people have in their lives is that we do not express enough how much we worry about each other; those whom speak of their worry for those should know how to delivery such news, and those whom we worry about should equally know how to receive such news.

[9:41:9] Perhaps it is the greatest plight of a parent to worry about their child's happiness; the moment a parent stops worrying about their child is the moment you know the bond between them has been broken; whether that shall ever be regained a matter of time and reconstruction, rather than inevitability; worry is the most precious of emotions, and is

often considered something of negativity, when in fact, it translates to the most opposite of emotions; love.

[9:41:10] For whom we worry is not those for whom we fear for; those for whom we feel fear is not feel so out of love, but out of desperation for their betterment; there is no love in fear; there may be good intentions in fear, but there is no love.

[9:41:11] Perhaps the familial conflicts, and the broken homes, and the estranged families would be less prevalent if people made a point of how much their worry for each, an expression of their love for that person.

[9:41:12] We don't just worry for those whom worry for us; to understand what worry is, we must understand that we do not decide those for whom we worry; worry is an uncontrollable and unconscious emotion that we develop without even our knowledge in the majority of cases.

[9:41:13] The extent to which we worry reflects the extent of our own emotional intelligences; worry is fulfils our ability to be aware, to control, and express our emotions towards others.

The Incentrality of Anger

[9:42:1] As the fueler for violence, anger is the first incentrality that we shall discuss in this disquisition; anger is considered as such in the Astronist Tradition because it is viewed upon as a weakness of mind; those whom express themselves in anger are those whom aren't in control of their thoughts, and their emotions.

[9:42:2] Thus, they have lost the ability to recognise other's perceptions of them, and they have forgotten the importance of capitalising upon the misdeeds of others towards for our own advantage.

[9:42:3] More generally, anger is too expressive of an emotion; it leaves one vulnerable to the vultures who will most certainly arrive ready to pick apart your angry outburst.

[9:42:4] The most significant aspect of anger that makes it such an incentrality is its irreversible damage on one's reputation; anger is the total conveyance of one's thoughts and emotions, and although such an expression is commendable, and perhaps even worthy of sympathy, it isn't smart as it demonstrates to the world one's inability to control themselves, and there is no weaker trait than that.

[9:42:5] Do not allow oneself to be degraded to the level at which anger is one's only outlet for showing their emotions for the sake of one's reputation, and for the sake of one's dignity.

The Incentrality of Contentment

[9:43:1] The moment we feel content is the moment we must flip the table that is our life to entirely rearrange it for contentment is perhaps the greatest of all in life.

[9:43:2] Total happiness and total satisfaction combined forms contentment which, in their raw selves, are not negative emotions to feel by any measure, but to hold contentment as a goal is extremely unhealthy for the human mind.

[9:43:3] The human psyche demands constant change, progression, and dynamics, or else it begins to deteriorate due to the impacts of its inactivity.

[9:43:4] The best type of contentment to feel is a contentment to know whom we are, and where we dream to be mixed with the discontentment of trying to become whom we are and trying to get to where we want to be.

[9:43:5] Contentment is the greatest sign of an ageing mind; contentment breeds inactivity, disinterest, and unenthusiasm to try new items, and to go to new places.

[9:43:6] It is the paradox of the human mind to gravitate towards being unhappy so that is why contentment is so dangerous to the human mind because it embodies total happiness.

The Incentrality of Cynicism

[9:44:1] All things that originate from a human mind, or from some worldly context are motivated by some self-interest, whether that be control, power, wealth, fame, beauty, or any other desire that a human could possibly feel.

[9:44:2] However, the world seems not able to identify the difference between that of human origination, and that of some higher, more directly Divine origination that shares not these self-interest motivations; we need not be a cynic to be able to define the difference between these two types of entities.

[9:44:3] The reason for cynicism's incentrality is that I have seen cynicism been directed towards the topics of The Cosmos, astronomy, cosmology, philosophy, and all the possibilities that The Cosmos holds for humanity, and I must herein make the distinction between these things, and the entities of human creation.

[9:44:4] The Cosmos just is; it was created in some time in some place, and in Cosmic Philosophy, and science, the greatest of minds attempt to explore that, but herein, we must distinguish the difference between institutions and constructs of humanity and The Cosmos and its progeny.

[9:44:5] Whenever there is speculation towards The Cosmos and its possibilities, a dagger is wrenched through my heart because I see the way by which the human institutions of faith, state, and society have tainted the mind of yet another individual who has been fooled into thinking that The Cosmos is not what it is; the entirety of all things in our reality.

[9:44:6] Instead, herein and henceforth, a mission shall be lead to redirect such cynicisms towards the institutions and the societal constructs of humanity to expose their motives of self-interest, power, wealth, control, and all other vices of the humanity.

[9:44:7] I do not herein propose a boycott of all speculation about The Cosmos; in fact, contemplations about The Cosmos and its mysteries are at the heart of the Astronist philosophical tradition, but premeditated attacks against The Cosmos, cosmocentricity, philosophy, astronomy, and the future of humanity in The Cosmos are not tolerated within Astronist Philosophy and neither in the Astronist cultural structure.

[9:44:8] Cynicism is an incentrality because it holds no place with regards to The Cosmos; cynicism is only relevant and justified when its speculation is directed towards the institutions of humanity, that no matter their divine origination, are still originative from human constructs, especially so in their developments as institutions of politics, faith, and social structure.

[9:44:9] All the cynics of the world who point their speculations towards philosophy and The Cosmos are herein encouraged to read The Grand Centrality to enlighten their minds.

The Incentrality of Ecstasy

[9:45:1] The vice of the current world that seems to be so prevalently induced is that of ecstasy in whichever form it takes whether in drug, in drink, in smoke, or in sex; there are many lost minds whose only purpose in life is to please themselves no matter the costs to the world and the others around them.

[9:45:2] You do not need this text to tell you of the dangers of these vices and the most disgusting evils and heartbreaks that they always cause, but perhaps you need to be reminded of the circumstances of why people tend to fall into this well known trap.

[9:45:3] The civilisation in which we have created is run by hedonism, power, and money; making people happy, making people powerful, and making people rich; we can learn a very important lesson from those whom cut themselves out of this cycle of life with a disinterest and dissatisfaction for it.

[9:45:4] Those whom fall in the trap of ecstasy are those whom are initially troubled by that which our society is run by; the pleasures of happiness, power, and wealth, and the ways by which one has to embark upon to achieve them is not appealing to these types of people.

[9:45:5] Instead, with lack of motivation, vision, and focus, they fall into the trap of wanting pleasure from other, more easier sources, and so, they begin to pleasure themselves with bursts of extreme happiness, followed by extreme depression; they become the manifestation of human bipolarity.

[9:45:6] The most paradoxically true part of any type of drug is that it is easy to take in the beginning, but after that initiality, every time it becomes harder and harder, but the poisons becomes stronger and stronger until you are no longer yourself, you are the drug; you are under its control, and that is a control that is excruciatingly difficult to break.

[9:45:7] Without much need to explain, ecstasy is an incentrality because of the pain, evility, and suffering that it and its allies continue to spread throughout the world, in the homes of children, in the doorways of city streets, and even in the largest of mansions; nobody is exempt from its poisonous dart.

[9:45:8] Notice I mentioned those without motivation, vision, and focus are more likely to fall into the trap; this is true because such people do not possess the ability to see beyond the initial take; they either cannot see, or they don't wish to see because the attractiveness of the extreme ecstasy that the drug will bring, overcomes all other desires.

[9:45:9] It is the duty of all peoples to stay focused, envisioned, and motivated, and to encourage others, especially those of vulnerability to do the same, and to help them find these most brilliant of gifts, that I am sure that if I did not possess, I would have been

extremely vulnerable to the temptations of ecstasy because of my dissatisfaction with the vices of this world that run our civilisation.

The Incentrality of Happiness

[9:46:1] It seems as though hedonism rules the world at present; that which makes us happy is that which we prioritise in our lives, even so, in some cases, beyond the happinesses of those around us, and of those whom we love.

[9:46:2] Controversially so, it shall herein be said that those people whom only wish to make themselves happy are people without depth; they wish not for the trials and tribulations of life, and all they focus on is their own selfish pleasures; they are weak people whom should be exposed for what they are; they hold no vigour, and they possess no integrity.

[9:46:3] According to the Astronist Tradition; there exists only three long-lasting ways of attaining happiness: a life's vocation, or mission, the bearing of children, and one's devotions to some higher entity, whether that be The Cosmos, The Divine, or some other entity; each of these forms the foundations of Astronist mesology; the philosophical study of the attainment of happiness according to Astronist philosophy.

[9:46:4] The reason for the incentrality of happiness is the belief that happiness should only be a product of some other occurrence, and the pursuit of happiness alone, or the pursuit of happiness from perceived moral vices, or sources of short-lasting happiness, demonstrates the inability of a person to act in strength.

[9:46:5] One's pursuit of happiness as the centrality, and not as a product from some other source, is considered a demonstration of one's weak mind rather than any other positive trait; ultimately, in the Astronist Tradition, tragedy, struggle, and heartbreak are considered the truest and centralmost aspects of life and any attempt to hide away from these inevitabilities is considered cowardice and a demonstration of one's weakness, especially so as strength is considered the most important aspect of oneself to uphold in all scenarios.

[9:46:6] Jouissancy, as originated from an Astronist philosophical terminological context, refers to the extent to which some perceive happiness to be important to them.

The Incentrality of Jealousy

[9:47:1] Now we must briefly address the most evil, yet most saddening of emotions; that of jealousy, and learn how there exists no weaker emotion than jealousy.

[9:47:2] Considered different from envy in the Astronist Tradition, jealousy infers bad intention, and inevitable immoral action upon the back of the envy one feels; that is what separates jealousy from envy; the intention and the inevitable action, whereas envy is strictly just the feeling, though it is easy for envy to morph into jealousy.

[9:47:3] Jealousy is the cause of most human pain, but the paradox of this is that it is often self-inflicted suffering that no other can fix, only the individual themselves by fixing their own internal struggles.

[9:47:4] Conflict is based always in jealousy though jealousy remains an inevitability of humanity.

The Incentrality of Panic

[9:48:1] Similar to the emotion of anger, panic infers weakness and is neither palleted by logic, nor any manoeuvrable advantage, and therefore, is considered an incentrality for panic only births disorderity in mind, and chaos in emotion, and these two elements combined make not a fine couple.

[9:48:2] Panic provides one with nothing; the only circumstance in which panic can be used to one's advantage is for the purpose of distraction; if not in this circumstance, then panic cannot provide one with any beneficial means.

[9:48:3] Panic is characterised by wild, uncontrollable, and often totally irrational thoughts, often followed by actions of a similar nature, and in one's attempt to conduct, or complete a certain mission, these such characteristics will not serve you as you wish.

[9:48:4] Panic is such an incentrality from the Astronist perspective because of its promotion of unthinkingness; without proper, logical consideration, any form of action thereafter cannot be validly upheld.

[9:48:5] Herein does not describe one's uncontrollable disorder of anxiety, but simply, one's intentional enactment of panic which is considered to be distinguished from the former by its intentionality.

[9:48:6] Those who indulge in panic are those who cannot contain their emotions for the means of vision; they cannot see beyond the present moment, but it is this that we must always do.

The Incentrality of Passion

[9:49:1] In many ways, passion is considered positive; it is an essential driver of emotion; it is from passion that all human expressions and creations are formed; to write, to draw, to play, to dance, to speak, and to do anything else that requires creative expression is always enhanced when conducted passionately; with passion in this regard, our creative expressions lack force, strength, meaning, and lose their sense of purpose.

[9:49:2] Therefore, to explain the categorisation of passion as an incentrality, in the Astronist Tradition, there exists two forms of passion; Controlled Passion, and Uncontrolled Passion.

[9:49:3] The former is that which we discussed in the initial paragraph of this discourse, and the latter is considered the form of passion that is most easily fallen into, and consists of anger, outburst, irrationality, panic, paranoia, and desperation.

[9:49:4] These are traits that we must refrain from indulging in order to keep in alignment with our logical selves for we must never stray from the path that is the central aspect of whom we are, and is the central reason for where we hope to be, and how we are to reach such a place.

[9:49:5] If one feels confident that they would sustain their will to refrain from such regressions, then let passion consume the crevices of your every part, but if you know you are not so in control of your emotions, and neither do you hold the confidence enough to say that you would be able to sustain your will so as to refrain from such emotional releases, then with all passion, you must be always be wary.

[9:49:6] By these notions, we understand how passion can be so very illustrious in its works to help us become whom we are, and to assist us in our most creative of endeavours, but also, we see its dual nature, in its ability to overtake itself, and eventually feed upon the most vulnerable aspects of our emotitures.

[9:49:7] It is for this reason, that we must be careful of passion, and it is for this reason that it remains an incentrality, as a great deal of us do not hold the ability to keep our emotions from falling into these passionate errors of logic.

The Incentrality of Pity

[9:50:1] It is pity that we accord with the weakest of us; those of whom cannot control their own emotional intelligences; those of whom cannot hold strength by their own means, and have allowed their reputations to devolve into a state in which they offer no respect to themselves.

[9:50:2] To feel pity is not an incentrality, but to receive the sorrows of other for our sufferences and misfortunes is to encourage one's perspective of their own martyrdom; their own sorrows felt for themselves, and not without the convictions of their own delvences directed towards themselves.

[9:50:3] On pity, we speak no more for to feel pity is neither helpful to one's own circumstances, and is largely conducted out of pleasantries, and is certainly not helpful to the circumstances of the recipient.

The Incentrality of Pleasure

[9:51:1] We now live in a world in which pleasure is the driving force of motivation, as fuelled by the hedonist philosophy; it is pleasure that forces the conflicts and the concurrences of the world.

[9:51:2] It is the central human ambition to attain pleasure in whatever we do, but to hope to see pleasure in its context, is the greatest of perceivences, for by doing so, we understand that pleasure is simply a means to entrap us, no different than anger, jealousy, resentment, or any other sufference.

[9:51:3] By trying to seek one's pleasure from all things, one reduces all things to that which receives them pleasure, but by this course, one entraps oneself within the bounds of their own pleasure, and by this, we see how pleasure can soon turn into a very restrictive, and regressive emotion.

[9:51:4] For this reason, pleasure is considered an incentrality in our lives; humans shall always do what they do with pleasure in their mind by unconscious desire, and this is how herein we are advised to leave pleasure; it is best left as an unthinking rarity within the Astronist Tradition, for it is only when we concentrate ourselves upon pleasure, that we regress ourselves to pleasure's undesired consequences.

[9:51:5] The less we consider pleasure, the less pleasure has a hold over us, and the less something has a hold over one's mind, the strong we are for the victory of ourselves; a wider lesson can be learned from pleasure, and that is to say that even this most seemingly harmless of emotional elements, can so soon turn to one of the most poisonous for the most fragile of minds.

The Incentrality of Pride

[9:52:1] On the surface of ourselves, and by the moralities of past and current systems, pride has so often been deemed unscrupulous, and even though the Astronist Tradition joins with the mainstream morality systems in this conclusion, and thus, deems pride as an incentrality, there remains one aspect of pride that is considered useful and not too damaging when utilised correctly.

[9:52:2] The element of pride of which I speak is the pride that is not presented to the world, is not spoken to other of, and is kept hidden within the bounds of one's own mind, and never released, even to those of whom we have entrusted most with our deepest of feelings.

[9:52:3] This pride is used in whichever circumstance, is made known only to the individual that utilises it, and is used to bolster our own internal self-esteem without the world realising, or judging us for this apparent immorality.

[9:52:4] Even the strongest of human minds are still so weak that they cannot venture through the depressions of the reality of life without some internal boosting of pride; to think well of oneself, and one's own achievements is not immoral; it is the shameless broadcasting of this fact to the people of the world that is immoral, for the boasting of one's successes is only a deterrent of true greatness.

[9:52:5] Those of us whom are quiet and modest of their successes until the moment is genuine, true, and right are those whom shall reap the greatest of fulfilment from the praise they receive.

[9:52:6] Without this internal pride of which I have spoken, we are not able to reflect upon where we have come, and to where we are headed; we require pride not only to boost our internal fragilities, but also, as a marker of our own achievements which lay in the shadow of all the achievements yet to be accomplished.

The Incentrality of Rejection

[9:53:1] Rejection is the epitome of human interaction; we reject on the daily matters of life, and perhaps we do not even know it; whether it be the rejection of an idea, an opinion, or some other suggestion, rejection is central to normal human existence, so why, all should ask, is rejection considered an incentrality according to the Astronist Tradition?

[9:53:2] The more we reject is the less we accept; the more we accept, the greater knowledge and understanding we gain of that which we would have rejected.

[9:53:3] Rejection implies disenknowledge; one's refusal to try to enknowledge themselves of the elements of something; this refusal of further knowledge, or understanding is the reason for the conclusion of rejection as an incentrality.

[9:53:4] That which we reject is that which we may never again come across; such a waste of our efforts is this, if we do not ever attempt to contemplate things as they; it remains not the way of the philosopher to reject in the first instance.

[9:53:5] Rejection is only permitted once one has accepted that in question for what it is at its most basic; a suggestion, an opinion, an idea; not the rejection of something at its most initiality; one who ventures through life by these means is one who shall never learn for they have made a rejection of all that which they did not immediately agree with, understand, or further contemplate, and of this, there is not greater unphilosophicality.

The Incentrality of Resentment

[9:54:1] It is now that we reach the most sorrowful, the most pitiful of emotions, and one that is so heavily discouraged, and considered an incentrality, even above all others for its long-lasting damaging effects on the individual who is consumed by its shadow.

[9:54:2] For those whom feel resentment, a great deal of sorrow is reciprocated due to their entrapment in both the past, and within their own minds; the cycle of resentment is perhaps the hardest of chains to break for the emotions it bears are often deeply set, and are as hard to shake as they were first to endure.

[9:54:3] A mind controlled largely by resentment is a mind that is most often alone in such restraints, is misunderstood, and is majoratively irrational by the initial convincements of its own resentment.

[9:54:4] Resentment is something from which all logical minds must depart if they are to continue along their logical thoughtpath; resentment is inextricably tied to one's personal experiences, and how one has dealt with those experiences, and is perhaps a manifestation of the deepest of all emotions; it is the most personal of all emotions by this very notion.

[9:54:5] Resentment is caused by the inability of one to accept events and the actions of others, or perhaps even the actions of ourselves; it is fuelled by self-pity, insecurity, and a unique bitterness that is rare to find in any other emotion.

[9:54:6] There is no greater halter of progression than the entrapment of resentment for it is the result of one failing to see the opportunities before them, a failure to accept what has happened, and a failure to understand the context of other's actions, or the actions of themselves.

[9:54:7] If any emotion you are to avoid to hold strength at heart, it is would resentment for there exists no more damaging an emotion than resentment; the greatest of sufferences is resentment for its procedure of occurrence is long, complex, and marred by a web of self-induced distortions, falsities, and corruptions.

[9:54:8] The greatest way to halt resentment is to always accept that which has happened, whether it be by the fault of another, or by oneself; the acceptance of all things for what they, whether you like, or dislike, whether you agree, or disagree, whether it be fair, or not, is the only way to stop resentment from digging its claws into oneself.

[9:54:9] And finally, resentment festers like a cancer of the mind; it feeds upon exaggerated conclusions, and causes great distress to the entrappee, as well as the decay of relationships.

The Incentrality of Weakness

[9:55:1] Weaknesses is a concept that has been mentioned throughout these discourses, both in relation to centralities and incentralities, and herein this discourse, I shall discuss the nature of weakness, how it manifests itself in the human mind, and the subsequent human action, and how the consequences of its presence effects everything about whom we are as people, according to the Astronist approach to the concept of weakness.

[9:55:2] The first measure to make is that weakness is not singular; it is existent in many different variations depending upon the individual within which it exists, and the circumstances therefore surrounding.

[9:55:3] However, we can identify some of its most common of manifestations herein: first, we identify that weakness is the inability of one to conduct themselves in a particular way; note that this does not relate, or correspond to some external set of rules, but by one's own internal nature.

[9:55:4] Conducting oneself in a way that one knows is below their own ability, is weakness therein defined by one's own action, but by this notion, we also identify that weakness is a natural phenomena that is part of the idiosyncratic core of the human mind and soul; no non-divine entity is exempt from weakness.

[9:55:5] Weakness and strength are the two elements of reality that form The Cosmos in which we reside now, for without such, there would be no progression, for one is always inevitably going to triumph above the other; either strength triumphs weakness, or weakness strength; the battle is endlessly in reoccurrence, and forms the cosmic reality; the human mind of emotions is simply a microcosm of this larger battle.

[9:55:6] From the perspective of the Astronist Tradition, the manifestation of weakness with respect to the human mind of decisions is consist of three major elements; inability, insecurity, and emotional instability, and these three elements form the basis of the emotions that are expressed as weaknesses.

[9:55:7] These emotions are countless, and without end due to their applicative natures to each and every individual scenario, but the main five are fear, laziness, jealousy, greed, and disenvisionment; it is no coincidence that we have all witnessed these five emotions deemed as the main culprits in such similar scenarios previously, way before this text.

[9:55:8] However, that which I wish to add in this text to these previously deemed emotions is the Astronist approach to the concept of weakness; for weakness to become not so, one must embrace that very same weakness so as to understand and accept from where which it came, so as to build up it for one's betterment.

[9:55:9] There exists mental weakness, physical weakness, and spiritual weakness, and it is the course of every human life, from this perspective, in the need to reduce their weaknesses.

The Philosophy of Attitude

[9:56:1] Attitude is the way in which one presents oneself to those around them, and to the wider world and is combined by what they say, what they do, and how they think; a bad attitude is given certain characteristics according to the system with which you apply, and this is the same for describing a good attitude.

[9:56:2] Herein, I shall describe the characteristics that only form a good attitude, not a bad attitude, so that the characteristics of a bad attitude are formed as the direct antitheses of those aspects of oneself that are deemed to be in alignment with a good attitude.

[9:56:3] In the Astronist Tradition, a good attitude is formed by the way in which one sees the world; it is a product of their own worldview, and it is centrally characterised by a progression towards the Humanic Exploration, Civilisation, Enknowledge, and Devotion of The Cosmos.

[9:56:4] To hold a good attitude is to understand the way in which humanity is heading, and is to do all one can to contribute to this vision; to contribute to the Humanic Exploration, Civilisation, Enknowledge, and Devotion of The Cosmos.

[9:56:5] To understand the details of that which entails this exploration, civilisation, enknowledge, and devotion, read and follow the words of this text, The Grand Centrality of Astronist Philosophy, as the sole worldview that places these four elements at the centre of its understanding and its envisionment of humanity.

[9:56:6] The other major defining aspect of a good attitude, according to the Astronist Tradition, is the practice of acceptance; in today's world, at every chance we get, we make excuses for the occurrences of our lives and the world around us; many of us have gotten into the habit of either denying the truth, shying away from the reality, or distorting the facts of circumstance; these are examples of a bad attitude.

[9:56:7] However, the practice of acceptance teaches to receive that which ever happens to oneself, to others around them, or to the wider world, or civilisation, and acknowledge this fact of reality, understand why it occurred, and if one wishes for that not to reoccur, then one must not allow the circumstances of its occurrence to reemerge.

[9:56:8] Acceptance is the singlemost important attribute of a good attitude for it demonstrates three main abilities of an individual; the ability of foreseeing the wider context, the bravery to acknowledge reality no matter the consequences of doing so, or whether one agrees with the reality or not, and finally, the ability to seek some positivity from the situation.

[9:56:9] By this, we do not advocate for the allowance of injustices, unfairness, or any other morally wrong act either committed by ourselves, or others, but instead, it is an acknowledgement that such has happened, and that such cannot be rewound in an

attempt to change already occurred events in order to suit one's own circumstances, or opinions.

[9:56:10] An understanding of attitude is an understanding of how certain acts result in certain consequences, and is inextricably linked to the aforementioned concept of reputation.

[9:56:11] Attitude is entirely based upon perception; whether one is determined to hold a good, or bad attitude is concluded as such by those surrounding; their perceptions of us are what form the nature of our attitude; this is only by the paths of logic that this is discovered for it is not ourselves whom tells ourselves that we have a bad, or good attitude; it is by the opinion of another who makes this decision.

[9:56:12] A good attitude is always more useful than a bad one, as a good attitude can be used to manipulate the situation into gain benefits for one's own cause; the larger amount of people whom believe one has a good attitude is a larger amount of people who will be willing to support you in your endeavours; bad attitude presents only self-created obstacles in the way of one's already laborious struggle.

[9:56:13] One who follows in the Astronist approach will not give others an reason to make such decisions, by never allowing them to see any aspect of the distasteful sides of our attitude, which are inevitable by the imperfect nature of every human; however, when we choose to release these imperfections is an element of ourselves that we can control, and whether we do this effectively, or not, often greatly affects the extent of how others perceive us.

[9:56:14] The attitude that we present is the necessary precursor to another's perception of our reputations; not without this understanding can be ever hope to address the status of our own reputation, for the attitude we portray is the always either damaging, or enhancing of our personal reputations.

[9:56:15] The final distinctive point to make about the Astronist approach to attitude is the utility of attitude, so as not to conduct any repetistic notions as defined by the moral laws of nature and The Cosmos, and neither the previously established systems and their addressments to attitude.

[9:56:16] Like many aspects of Astronist approaches to moral, emotional, and ethical dilemmas, the utility of these problems often instantly transforms them into beneficial issues for the individual involved, and even those surrounding.

[9:56:17] If one is well acquainted with logic, then one shall know that it is only logical for one to perceive a problem in relation to the way in which they can transform it into an advantage; with regards to attitude, we can apply this in utility for we can the dilemma of attitude and its constant requirement for attention and refinement into a means and opportunity to improve the way in which we are perceived by those around us, thus

enhancing our reputation and it is for this reason, that the utilisation of attitude as a means to further one's endeavours is the most advantageous way of approaching the concept of attitude.

The Problem of Moral Knowledge

[9:57:1] Since the beginning of the sentient era of The Earth, humans have devised systems upon their civilisations have been built and structured and raised and prospered, and it is upon these systems of morality that faith, philosophy, and all subjects else have been inspired.

[9:57:2] However, the Astronist Tradition identified a key issues with that which is known as Moral Knowledge: the proclamation of a moral systems, as devised by the knowledge one holds.

[9:57:3] Whether by god, government, or by some other means of authority, all moral knowledges have been derived from some entity, whether it be a person, a group, or an organisation, and in fact, the origins of some moral knowledges are, to this day, largely unknown.

[9:57:4] Moral Knowledge supports the notion that morality can be taught and learned by some human created system, and this would be true in general terms, as all human societies of civility require some sort of moral code, or system of laws that structure that which is accepted, and that which is not, with the Astronist system itself being a partial structure of morality and law.

[9:57:5] However, the Astronist Tradition involves a second understanding and interpretation of moral knowledge, which comes in the form of the origins of moral knowledge.

[9:57:6] Unlike other systems, the Astronist Tradition upholds that the most superior of all systems of morality is that which is natural and cosmical; it is held that the most superior of all authorities is The Cosmos in The Universe; its morality is the most widespread, the most pure, and the most directly divine.

[9:57:7] There are no greater, higher, or more prevalent acts than those made by the cosmical phenomena, and this is how we can identify the most fundamental difference between Astronist thought as a Cosmocentric Tradition, and the majority of all other predecessor systems, which are part of the Anthropocentric Tradition.

[9:57:8] Humans are naturally obligated to dependent upon human authority; the teachers, the writers, the politicians, the monarchs, the presidents, and the religious leaders; each of these and more are exemplars of human authorities cast upon human minds, and it is by this hierarchy, that human civilisation functions as we know it.

[9:57:9] However, by the Astronist Cosmocentric Tradition, despite the need for humanity to be ruled by the systems of their own creation, it is maintained that the overall universal law is that of The Cosmos for its principles dictate reality, being, and existence, as well as the fundamental nature of how things act, think, and the consequences thereafter.

[9:57:10] The cosmic laws of morality, reality, and existentiality are universal, absolute, perfect, and directly divine, of which each constitute oppositisms to the self-created laws of humanity.

[9:57:11] To that end, the laws and systems of humanity that have structured human moral knowledge are ultimately staggered by the problem that they are not, and shall never be pure; they are riddled with the same corruptions that we as humans face each and everyday; the only system of morality that can be called truly pure and divine is that of The Cosmos; it is only the laws of The Cosmos that encompass the entirety of known reality; no other system can compare, especially not a system of anthropic origin.

[9:57:12] The ontological approach to moral knowledge is to categorise it under theological authority, anthropic authority, or natural authority; the Astronist Tradition, or the Astronist ontological approach links cosmic authority to all three, especially so to the natural authority, but ultimately considered cosmic authority to be both its own category, or considers it to be a transcend authority that rises above, with the natural authority of The Earth being just one microcosm of the entirety of the cosmic authority.

[9:57:13] Essentially, it is the penchant of the Astronist Tradition to align itself with this herein and henceforth known cosmic authority, for the basis of all higher moral knowledge, and existential authority, as the Astronist Tradition is inextricably part of the wider Cosmocentric Tradition, and only classifies itself as part of the Anthropocentric Tradition in certain terrestrial circumstances.

The Problem with the Elimination of Suffering

[9:58:1] Since the development of the human mind, we have been prone to what is henceforth known in the Astronist philosophical and ethics tradition, as sufference.

[9:58:2] Buddhist approaches to sufference are centred on its existentiality, and either its reduction, or in more extreme cases, its elimination.

[9:58:3] Sufference is the philosophical approach to the extent at which one suffers, the naturity of suffering, the perceptions of suffering, and the accelerants and decelerations of suffering.

[9:58:4] Non-Astronist approaches attempt to conquest suffering; to either reduce, or eliminate suffering in all its aspects.

[9:58:5] However, from the Astronist approach, the reduction, and certainly the elimination is opposed due to the naturity of humankind being intertwined with suffering.

[9:58:6] It is the nature of humanity for some of us to consider ourselves as suffering whether this be caused by homelessness, or poverty, but also the richest person in the world in the largest of mansions can also feel just as much suffering, if not more than that initial sufferer.

[9:58:7] Let not money mistake you into thinking that it solves the issue of suffering for yes, it does solve some circumstances of suffering, but in turn, it creates new circumstances of suffering, some of which are even harder to overcome.

[9:58:8] Again, the Astronist approach insists that there is no logic in attempting to eradicate something that is intrinsic to ourselves; we are made to suffer and even when there is nothing for us to suffer for, it is our nature to make suffering, or for someone else to approach and spread suffering by their own misdeeds, leading to such things as tragedy.

[9:58:9] To break this cycle of suffering is to tear humanity away from what makes us human; whether by our own decisions and means, or by the actions of others, we are bound to experience suffering in some parts of our lives, and there is nothing more certainly in the entirety of human existence than this.

[9:58:10] Instead of attempting to eradicate suffering, the Astronist approach embraces that which is henceforth known as sufference; this concept involves the acknowledgement, and the acceptance of suffering in life, suffering that is deserved, and suffering from which we can learn to better ourselves, and to enknowledge ourselves.

[9:58:11] The acceptance of suffering is the first step in dealing with suffering; acknowledging, understanding, and accepting the situation of suffering is integral to the eventual its overcoming.

[9:58:12] Accepting suffering is the precursor to understanding one's deservence of certain sufferences; one may say that no suffering is deserved, but this is contrary to logical thought.

[9:58:13] If one has made certain decisions and mistakes and these have lead to undesired circumstances, then the decision-maker is considered to deserve the suffering according to the decisions they have made.

[9:58:14] If one is suffering from the decisions of others, then this is henceforth known as undeserved sufference and must therefore exist as a dark spot in the conscience of the sufferencer; a term for a person who has caused the suffering of others.

[9:58:15] However, if the case is that one is the cause for their own suffering, then one must first accept this as fact, and secondly, learn from the suffering that has occurred in order to both enknowledge themselves and better themselves, so as to make the same mistakes twice, and to therefore continue the Cycle of Sufference.

[9:58:16] If we do not enknowledge ourselves, or generally better ourselves from our sufferences, then we have nothing to gain from one of the most potentially prolonging aspects of life, and to this end, we should not strive to this in logical thought for to gain nothing from something, is both wasted time, means, and opportunity.

[9:58:17] The Astronist approach to most issues resides in what we can gain from such problems; problems can soon be turned into that which is henceforth known as a solutance, an advantageous situation.

[9:58:18] Solutancy is measured by the extent to which a problem can be replaced with positivity, or that benefits can be derived from such a problem.

[9:58:19] It is the goal of all Astronist approaches to difficulties whether these be pertaining to morality, conceptual issues, or some other attribution, that the achievement of solutance is positioned centrally.

[9:58:20] It is essentially held in Astronist Ethics that suffering is necessary to proper human experience and it is actually considered as an irresponsibility to attempt to eliminate suffering from life; a diversion from that which can help us learn about ourselves, to become our better selves.

[9:58:21] The concept henceforth known as descendation is an efficient way of curbing sufference and its cyclical nature; descendation involves the idea that one who prolongs their own sufference and does not learn from it, will only cause further sufference in their

descendants and so, one has a moral obligation to one's descendants to not allow this occurrence.

[9:58:22] If one does not attempt to rid themselves of their current sufferings, not meaning to eradicate suffering altogether, but to rid oneself of one's current sufferential situation, is to better oneself, which will lead to the bettering of the circumstances of one's descendants as a result.

[9:58:23] One should want the betterment of those whom shall succeed them, especially so their children, grandchildren, and their thereafter; the extent of the suffering that they will have to endure may very well be dependent upon the decisions that one makes now.

[9:58:24] Descendational thought is structured upon a moral ability to perceive and sympathise with those that will after oneself; the inability to equate one's mind to this concept is the inability to think of the sufferences of others and the general futurity, thus revealing one's narrowness of mind.

[9:58:25] If one is not willing to break this Cycle of Sufference, then one is condemning oneself and one's descendants and surroundings to further suffering; by this notion, we understand the importance of trying to reduce suffering, for there exists no logic in any attempt to exacerbate sufference.

[9:58:26] If the means, motivity, and opportunity arise whereby sufference may be reduced then there is no reasonality to not suggest the reduction of sufference.

[9:58:27] By whichever means one deals with their sufference, it should be clear by the notions expressed in this discourse that the experience of suffering is the centrality to a higher enknowledgement, a higher understanding, and a greater philosophical experience.

[9:58:28] We cannot remove something so integral to a system, or cycle, and still hope that cycle to function; this is the same for suffering in relation to the system of life.

[9:58:29] It stands true in times present, past, and future that if one understands the concept of sufference then one has the key to the naturity of life and one's human capacity within it.

[9:58:30] Commendation must be given to the other philosophical traditions and their attempts to achieve total removal of suffering, but during this process, if they can only achieve this by forsaking all potentiators of suffering, and living in such narrowness so as not to actually live at all.

[9:58:31] The sufferencee and the sufferencer are integral to the proper functions of life; we must always remember that with sufference, contextualisation is key for there exists an almost infinite amount of circumstances wherein sufference occurs.

[9:58:32] Suffering is the epitome of that which forms the greatest of peoples; suffering is often the seed from which creative expressions stem; we should preserve the way by which suffering is utilised for betterment as the main approach by the Astronist Tradition towards the issue of suffering.

A Short Discourse on Constantiation & Inconstantiation

[9:59:1] In closing this disquisition and to conclude the discourse of the philosophical subject of contology in this regard, we shall address the definitions about the concepts of constantiation, and inconstantiation, as derived from the states of constantiance, and inconstantiance respectively.

[9:59:2] It is an inevitability that a writer, or any thought-bearer, should be influenced by their environment surrounding, and their supplanaries throughout history, and the embracement of their thoughts and philosophies is largely admirable, but in the context of one's attempt to forge something new for the world, one should hold greater caution in the embracement of previous concepts.

[9:59:3] If one wishes to be a true progenitor of a thought tradition and system then one must incorporate their own concepts and philosophies so as not to become an duplicator of previous thoughts; to allow other philosophies, systems, and concepts to encroach upon one's own newfound developing system is the cause of one's own actions.

[9:59:4] Constantiation relates to the principle that other philosophies, systems, and concepts should not only be allowed to influence one's newfound philosophy, but also should be intertwined into this new philosophy, and in an Astronist context specifically, holds the principle that other writer's ideas should influence an Astronist philosophical, or literary work.

[9:59:5] Inconstantiation relates to the principle that other philosophies, systems, and concepts should not be allowed to influence an Astronist written work, and acts as a purifier of sorts due to its systematic removal of as many external and non-Astronist originative influences as possible in order to make the work as distinctly Astronist and newfound as possible.

[9:59:6] In the context of The Grand Centrality, it has been written with an authorship whose reading of other philosophical works is intentional limited in order to structure The Grand Centrality upon an inconstantiation principle so as not to form a doxographical text.

[9:59:7] It is the prerogative of The Philosophy of Astronism to be established newly, structured by distinct characteristics, and concepts, and to subsequently stay this way to stand the test of time.

[9:59:8] If a philosophy, a concept, or any other creation is going to weather the dissonances, the fulminations, and the criticisms of the world, then one's ideas must be largely pure and original by their own fundamental natures.

[9:59:9] I never wished to repeat the words of great mind's past, but to forge new words that express the concepts and philosophies that my mind has envisioned; due to this fact

alone, henceforth The Philosophy of Astronism, and the Astronist philosophical tradition, shall be forever pure and unique in their originations as The Grand Centrality stands under the guise of the principle of inconstitiation.

[9:59:10] As a short addition to the words of this disquisition, greater lengths of specifism regarding the practical application and manifestation of Astronist Ethics into ordered systems can be found within the official documentation known as The Astronist Methodology which outlines that which is to be henceforth known as the Astronist System.

Introduction to Durantology

[10:1:1] For this discourse on durantology, the philosophical study and contemplation of space and time, the perspective of humanity, especially in relation to insentations regarding the topic of time, must always be reminded of due to the inability of time to be a trustworthy element of study due to the very fact of its own omniperceptive nature; in Astronism, we must always trust and relieve our discussions from being bounded by the rigid and minuscule perceptions of humanity.

[10:1:2] Astronist approach to the philosophy of time is futurism which holds that the past does not exist and neither do the entities and events that reside within the past, that the present does not exist and that it should not be given the same connotation as the temporal categories of past and future, and that only the future exists and that the future must be superiorised.

[10:1:3] Horology is, of course, both the study and measurement of time meanwhile durantology can be considered the manifestation of the territorialisation of time to the context of philosophy due to the fact that durantology is a philosophical discipline rather than being tied to any other subjects.

[10:1:4] The nature of time in the context of Astronism is held as time being non-existent for time is just a measurement or conceptual utility and therefore it cannot be said to truly exist; this is the belief known as detemporalism; in addition to this, time is considered to be the most subjective of all things; there exists no two common conceptions of time for every moment means something different for everyone of us.

[10:1:5] Time is ultimately a human construction and will likely be a construction of other sentient beings upon our discovery of them due to the fact that time is our great governor; it not only establishes when, but also how, what and why we do things and it provides context and structure where, in reality, there does not exist any temporal structure; the stars, to the planets, and to the galaxies, time does not exist, only their physicalities exists; time is neither real and nor can it be trusted; it is simply a mode of measurement; time should never be placed on the same level as if it is something that is real.

[10:1:6] Time's inexistence is the most prominent decadocally-originating postulation made and forms the Astronist understanding of the role of time; time exists only as a concept formed by different sentient beings who hold the capacity to conceive of the notion of time; time exists conceptually, but it is not a driving force of The Cosmos; The Cosmos is the driving force of itself due to the processes involved within it such as gravity and other true forces; the mistrust that Astronism attributes to time comes from time's deep subjectivity; that no two perceptions of time are the same; furthermore, due to the principle of Cosmic Limitation, time is only existent within cosmoses because of the fact that cosmoses exist within limitations and only something that is limited can be measured temporally or others; therefore, time finds no existence beyond The Cosmos or any other

cosmos and hence, it does not exist in The Universe due to the infinite nature of The Universe.

[10:1:7] Pastness pertains to the events of The Cosmos that are no longer existent due to the transient and limited nature of everything within The Cosmos; another prominent postulation of Astronism is that neither the past nor present exist and it is only the future that exists; by the notion that light travels from the most distant of celestials proving the existence of the past, this is not held so for light is not a true reflection of the current existence of that which it resembles; essentially, the past is conceptually existent in the sense that we are able to enknowledge ourselves about the past and form conceptualisations about the past, but the past itself does not itself exist due to the transient nature of The Cosmos.

[10:1:8] Presentness supposedly pertains to the events of The Cosmos that are in existence in the current moment; however, as postulated in the prior insentensation, the present does not exist due to the fact that the moment we state that the present is, that moment is now no longer existent; it cannot be retrieved and it cannot be exactly relived; it can only be capture by an instrument such as a camera, but again, this does not mean that the present or the past exist just because they can be captured for future observation.

[10:1:9] Futureness is the supreme in Astronism; only the future as a categorisation of the temporal is considered to be truly existent; futureness is all be have to consider anything by for the future is the only dimension of temporality that is considered to be in existence by Astronism, hence, futureness as a quality or state of being is considered with the most superiority; this view of Astronism that only the future exists is to be known as futurism, or profuturism; of course, with Astronism's postulation that only the future exists comes the notion of whether the future itself is destined (known as the belief in fatalism) or remains unplanned (known as the belief of decogitism as derived from the word herein introduced as decogitation).

[10:1:10] Eternity is the notion of an infinite temporality; with the Cosmic Limitation Principle of The Cosmos, of course, the notion of the existence of eternity for anything cosmic in its origination or nature is completely opposite to the view of Astronism and obviously involves notions such as eternal life, and the sempiternity of the soul; there is nothing eternal about ourselves nor is there anything eternal about The Cosmos itself or anything residing or holding its origins within it.

[10:1:11] Chronology is considered to be the only existential manifestation of time due to its function as the arrangement of events according to the time in which they occurred.

[10:1:12] Futurology is not only the forecasting of events in the future through the utility of trends in the now-future, but it is also the territorialised discipline of study for the contemplation of the future philosophically with major considerations including the nature, function, purpose, and beingness of the future.

[10:1:13] Presentism refers to an inability of some people to hold empathy regarding the contexts of past beliefs, postulations, and events due to their applications of attitudes in what is termed as the now-future to the circumstances of the past and in some cases, this may also be applied to the context of the future as well.

[10:1:14] That which is termed as the now-future in Astronism refers to present time through the paradigm of the future due to the postulation that the present does not exist due to its extreme transience; something that is as transient as the present cannot be considered to exist in the postulation of Astronism; however, when we considered the present in a wider period, especially in relation to the distant past or far future, or in relation to the present being more metaphorical than literal, the time that is to be used for Astronists is the now-future.

[10:1:15] Eventism and eternalism are both rejected forms of temporal ontology in the context of Astronism in favour for the postulation of futuralism or profuturism which states the beingness of time is so transient that the superior realm is the future alone and that only the future is considered real, knowable, and existential reality due to the fatalist viewpoint taken by Astronism.

[10:1:16] That which is to be known as chronouniquitarianism or temporal uniquitarianism shall pertain to the ontological view of time that all instances of time, perceptions of time, applications of time, and realms of time are unique or hold unicity; essentially, temporal uniquitarianism is the application of all the theories and beliefs within the ontology of uniquitarianism stating the prioritisation of unicity to the context of time.

[10:1:17] The end times in Astronism is studied as part of Astronic eschatology which is not to be confused with Astronic thanatology which deals with the philosophical study of death and the subsequences of our passing or lack thereof; due to the transient nature of The Cosmos in addition to its perceived linearity by Astronism, there is considered to be a definite end time for The Cosmos, however, this exact end time remains unknowable to anything within The Cosmos or that which holds a cosmic nature; the end times in Astronism are therefore fundamentally influenced by Astronism's adherence to fatalism.

[10:1:18] The notion of immortality is fundamentally rejected by Astronism due to both the limited nature of the entire Cosmos and the clearly transient nature of ourselves; immortality is of course the eternality of time applied to the context of our lives, but in Astronism, immortality is considered to be something fabricated by the fears of humanity about the transience of ourselves; the notion of our immortalities or the notion that we can somehow achieve immortality through acting in a certain way is clearly fuelled by a concoction of human emotions and a philosophy of rejection towards that which we really are which is a transient being born as part of nature no matter how civilised we become and that we will die and return to nature no matter what we achieve, who we become to others, or what we accumulate throughout our lives.

[10:1:19] Of course, the way in which our passing occurs and the subsequences of our corporeal passing, whether there is any supernatural elements involved or not, have formed the foundations of different schools of thought on the subject of immortality and our deaths; however, the essential premise in Astronism remains the same that to notionise of even the potentiality of our immortality is a denial of our very existential purpose and the reality of beingness.

[10:1:20] Space is considered to be the centrality while time is denied as holding any significance over space or in any type of equality to space, hence the conjoinment of spacetime in Astronism is denied due to the untrustworthiness that is projected from Astronism towards the conceptuality of the temporal.

[10:1:21] Time in The Cosmos just like The Cosmos itself is fundamentally limited as time has to be due to its own nature as it is a form of measurement; The Cosmos and potentially all the other cosmoses within The Universe are the only realms in which time can truly reside as a conceptualisation because time has to be compared and contrasted with fixed events to pertain to the time in which those events occurred; therefore, The Cosmos is the most appropriate and only realm in which time can be applied due to the limited nature of The Cosmos.

[10:1:22] Time in The Universe of the Astronic cosmology does not exist because any realm of existence that is infinite cannot be applied to the context of time as time is a cosmic conceptuality, not a universal conceptuality; if something is both temporally infinite and spacial infinite like The Universe then it cannot be applied to the context of time because it has always existed and so there is no beginning and there is no end, hence there is no way to measure in The Universe with the subsequence of this being that all measurements, whether they be temporal or spacial, cannot be applied.

[10:1:23] Time in relation to The Divine is also inapplicable due to the transcendency of The Divine beyond any form of measurement similar to The Universe in that nature; however, beyond The Universe, The Divine is the one sustainer and so without the interpenetrative nature of The Divine, time would not be sustained and it would not exist due to time being dependence on the coherency of events from which it can be measured.

[10:1:24] Cosmic time is therefore fundamentally limited by the limited and transient nature of The Cosmos.

[10:1:25] Universal time can be considered unlimited and therefore non-existent due to the need for time to be applied objectively to events that have occurred so that it may be measured.

[10:1:26] Divine time can be considered eternal or independent time due to the totally independent and all-sustaining nature of The Divine and therefore Divine time is considered also non-existent due to the inability of time to be measured in relation to The Divine.

[10:1:27] Time is The Cosmos and The Cosmos is time; the very fact that the conceptuality of time is able to exist within The Cosmos reaffirms the limited and transient nature of The Cosmos.

[10:1:28] The Cosmos can be considered as the controller of time within its boundaries; this notion raises the equally interesting question of whether we can control our own timeframes for each of us can be considered to hold our own times, known in Astronism as unquial time or personal time, which has resulted from the application of unquitarianism to the context of time; could it perhaps be true that anything which exists can control its own version of time, such as the ending of our time through suicide being one example; the notion that entities can control time or at least the perception of time is to be known as prepotenism.

[10:1:29] Due to the principle of the limitation of The Cosmos, the nature of time is therefore limited rather than unlimited (universal time) or eternal (divine time); we will only learn more about Cosmic Time as we explore The Cosmos; this is because all our perception of time are bound by our minds and our location on The Earth and we must consider the differences in time on different worlds in The Cosmos; this notion of temporal limitation due to our trapped residency upon The Earth can be integrally linked to the beliefs and notions held within transcensionism.

[10:1:30] As an important part of this durantological discourse will now be the application of a variety of instruments of study to the notion of time in an effort to explore its nature on a deeper philosophical level through the use of instruments of study which remain the conceptual vehicles for which we are able to conduct deeper and more structured philosophical investigations.

[10:1:31] The abundance of time can be seen all around us and it makes for a such a complexity of time due to the unquity of time that it commands its own philosophical discipline of study for contemplation.

[10:1:31a] Due to the unquity of time, its abundance is unencapsulable due to the every different being who is able to perceive time having a different perception or version of time, then we have the standard versions of time or what may be referred to as authoritative time which are categorised by instruments such as the clock or a calendar, and then there's the differences in the perception of time depending on where you are in The Cosmos.

[10:1:31b] Like in all facets of Astronism, we consider the world around us cosmocentrically and time should be no different in this respect and with that, we should remember that on each planet, time is highly distorted from how time is experienced on The Earth which is how our minds are programmed or conditioned to understand, perceive and experience time.

[10:1:31c] This difference in time on different planets according to where such planets are in relation to the star around which they orbit is to be known as experiential time and it is this form of time which holds the most significance for our cosmocentric worldview as time is experienced entirely differently from world to world which makes experiential time and its contributions to the overall abundance of time incalculable.

[10:1:32] The binarity of time can be argued as to exist in the form of time's dependence upon the events of the beginning and the events of the end, especially the former of which time is dependent upon due to the need for time to hold objectivity in relation to a beginning in order for it to exist; therefore, the beginning and the end of time, upon which time is dependent due to its categorisation as a form of measurement, make up time's nature of binarity.

[10:1:33] The bipolarity of time can again be derived from its linearity in terms of the beginning and end dichotomy which constitute two oppositisms on either side of a temporal extremity; notions of time's cyclicity may also be derived from different philosophical systems and although these should be contemplated too as part of durantological study, in Astronism, time is affirmably considered to be limited and linear in conjunction with the nature of The Cosmos rather than unlimited/eternal and cyclical.

[10:1:34] Calendarity applied to time constitutes time itself for time is considered to be merely be a construction of perception of a sentient being rather than something that exists independently from perception; for example, to the stars and galaxies, time does not exist either conceptually or physically; all that we can really consider of time is its indirect existentiality, or its effectual existence as it may be known.

[10:1:35] The centricity of time can be considered as perception; time is fundamentally predicated upon perception; this is because time is a function or instrument of measurement which is entirely based upon the perception of something for it be measured; additionally, this constitutes an issue with knowledge in relation to time and further solidifies the untrustworthiness of time due to the fact that knowledge can dramatically shift our understanding of time according to what we know about the subject that is being temporally measured; we believe The Cosmos to have begun almost fourteen billion years ago and it is upon this that we predicate many other contemplations regarding time in The Cosmos, but if our knowledge at some point in the future is found to be incomplete, then our perception of time and the time period in which we thought we existed would all have to be rearranged; it is, therefore, knowledge and humanity's lack of knowledge about The Cosmos are the most prominent proliferators of the Astronist distrust of time.

[10:1:36] Cosmicality applied to time measures the extent to which time exists in alignment with cosmic nature or the cosmical orderity; from the Astronist perspective, time is considered to be the pinnacle of cosmicality as it is entirely dependent upon the limited means of measurement; measurement is entirely predicated upon limitation for only that

which is limited is able to be measured, therefore, time, as a limited conceptual, is cosmic by its nature and in full alignment with the cosmical orderity.

[10:1:37] With the application of the instrument of study of criticality to time, we come to the question of the public reaction towards Astronism's view of time, and especially the belief in detemporalism; the belief that time only exists conceptually as a construction of human perception of cosmic existence.

[10:1:38] Dyadicity and its application to time pertains to the contemplation of two elements of time and their interaction, examples of which include beginning and end, time in relation to space, and the effects of the passage of time on different entities and the comparisons of such effects.

[10:1:39] Dynamicity in relation to time pertains to the effects on the change, the activity, and the progressions made in The Cosmos through the passage of time, especially so in how activities of cosmical progeny and phenomena occur over time, how the progress made by humanity during space exploration will occur during the passage of time, and the comparison of changes between cosmical progeny over time to formulate an overall understanding of time's role in the dynamics of The Cosmos.

[10:1:40] The application of the instrument of study of eternity to the context of time pertains to a version of time applied to unlimitedness; eternity is time with an unlimited nature meanwhile immortality is the application of eternity to the context of sentient beings; of course, due to the Cosmic Limitation Principle, eternity is considered to be non-existent in context of The Cosmos due to it representing temporal infiniteness while The Cosmos and all within it must abide to temporal and physical finiteness.

[10:1:41] The extrinsicity of time identifies the Astronist understanding of time because time is considered a non-essential element to the structure or fundamentality of The Cosmos and is instead considered something of a sentient construction, hence it is provided with an extrinsic nature.

[10:1:42] With the application of the instrument of finity comes an understanding of the core nature of time itself, especially as all time is considered to be finite due to its categorisation as a form of measurement; contemplations of the finite nature of time come with notions surrounding the inability of time to exist outside of The Cosmos or any other cosmos.

[10:1:43] The extent of the focality attributed to time in Astronism is small to medium in scale due to time being considered as merely a human construction and dependent upon perception and this is also influenced by the cosmocentric worldview that is held within Astronism; the diversity of time perceptions, or experiential time means that it cannot be entirely trusted and cannot ultimately be considered focal.

[10:1:44] Formity refers to contemplations regarding how different versions of time are constructed and how perceptions of time will change over the passage of time itself; formity also concerns itself with the development of calendars and other forms of time organisation and categorisation.

[10:1:45] The fundamentality of time to the functionality of The Cosmos is denied by Astronism due to the disbelief that time holds any particular function in the context of The Cosmos due to the fact that time remains a construction of human origin.

[10:1:46] With the application of the instrument of functionality to the context of time brings with it notions about the functional role of time and its effects in The Cosmos; despite the fact that time is not considered to be existential in The Cosmos, time's effects are considered to be existential; The Cosmos is considered to be on a linear course and although is not progressed by time due to time itself only being a form of measurement, time can be considered as a functionality of The Cosmos through its effects on the progeny, phenomena, and functions of The Cosmos itself.

[10:1:47] Futurity is an essential instrument applied in the context of Astronism in relation to time as Astronism takes the approach of futurism whereby the future is considered the only existential and the most superior form of time.

[10:1:48] When time is applied to the instrument of graduality, it produces the notion that time in application to progeny, phenomena, and other functions of The Cosmos, can be perceived as either slow or fast or as organised according to different degrees, but again, this organisation and perception of time is merely just another human construction of time rather than time existing as a natural and unconstructed part of The Cosmos.

[10:1:49] Motionality as an instrument of study applied to the context of time pertains to the functionalities and orderities of cosmical progeny and phenomena through the temporal dimension such as how long it takes for progeny to complete a function, such as a rotation or an orbit, or the duration of a phenomena from beginning to end; motionality is particularly concerned with contemplating the movements of cosmical progeny and phenomena in relation to the durations of such movements.

[10:1:50] There exists a great deal of mystery that can be derived from the application of the instrument of the same name to the context of time; this is largely due to the unknown of experiential time and how we will experience time on different worlds, this effects that this will have on us physically and psychologically, as well as how time can be distorted by different cosmical progeny and phenomena, especially how the effects of such distortion largely remain unknown to us; the exploration of The Cosmos through and by its application to time and the temporal dimension is a pertinent topic for durantologists to contemplate but of course this can only occur after the initiation and advancement of the Humanic Exploration of The Cosmos.

[10:1:51] The application of naturity to time specifically explores the nature of time which is considered to be in alignment with the nature of The Cosmos, therefore time, classified as a measurement, is considered to hold a limited or finite nature; therefore, the nature of time is limited just as is The Cosmos for time can only exist within a cosmos according to the Astronic cosmology, but also, that the functionality or utility of time is measurement as it is a instrument or tool of measurement.

[10:1:52] With the application of the instrument of orbitality to time presents an opportunity to discuss time in relation to the orbital movements of celestial entities/progeny; the orbits of celestials can be considered according to the durations their orbits or their revolutions around that which they orbit; each planet has a unique orbit according to its duration which presents another example of the uniuqial nature of planets.

[10:1:53] Orderity, when applied to the subject of time, refers to the contemplation of the structures and patterns by which the effects of time can be seen to operate in relation to cosmic progeny and phenomena.

[10:1:54] Primarity is considered to be inapplicable to the context of time because this particular instrument of study focuses on emphasise one subject's importance over another, but because time is a construction of sentience, it is not provided with enough importance to hold significance over another similar subject such as space.

[10:1:55] The application of purposivity to time results in the notion that the purpose of time is to categorise the events of The Cosmos according to a chronology as well as to measure the durations of cosmical phenomena and the lifespans of cosmic progeny; the purposivity of time is essentially to measure for the utility of a sentient race, but because time holds no existence beyond this utility, it is not considered to hold a purpose in relation to The Cosmos, its progeny, and its phenomena alone.

—

[10:1:56] That which is to be termed as a discourse extension shall refer to a discourse that is written by Cometan post-omnidoxically that is intended to be an extension or an additional piece of writing to add to an existing omnidoxical discourse and is thus granted by The Institution the ability to become considered as part of the Omnidoxy, albeit it only certain reorganised or updated editions of the Omnidoxy.

[10:1:57] Essentially, this is a way for Cometan to continue to add to the Omnidoxy post-omnidoxically and but importantly, all beliefs, theories, notions and other conceptuls introduced in an discourse extension will always be considered to be post-omnidoxical in their origins, thus hold post-omnidoxicality rather than omnidoxicality despite the fact that they be published within reorganised or updated editions of the Omnidoxy.

The Contemplation of Space (Tractology)

[10:2:1] That which is herein introduced as the second discourse of this tenth disquisition of the Omnidoxy shall focus on the discipline of study of philosophical territorialisation that is to be known as tractology which is to involve the study and contemplation and subsequent discourse of the nature, functions, and applications of space, that is space as defined from the term space meaning to encompass cosmic progeny and phenomena and often used as a synonym for The Cosmos; instead, tractology deals with the study of the distances between entities; essentially, tractology is the study of that which is known in the Astronic cosmology as The Betwixity.

[10:2:2] The notion of cosmic space refers to the distances, expanses or vacant areas between entities within The Cosmos which, due to the Cosmic Limitation Principle, is of course considered to be fundamentally limited or to hold a transient nature, meaning that such areas/space/expanses will not exist forever due to the eventuality of The Cosmos's destruction; the space that ourselves on the planet of The Earth that we reside upon is ultimately limited by the principle of limitation of The Cosmos from Astronist Cosmology.

[10:2:3] Alternatively, that which is to be known as Universal space refers to forms of betwixity that are unlimited; expanses that are without end; of course, the primary example of which in the Astronic cosmology is that of The Universe itself in which an infinite amount of cosmoses reside; as distinct the limitedness of cosmic space, Universal space is infinite in its physicality, in its capacity, and in its temporality; in Universal space all things may reside in all forms and in all dimensions due to its infinite nature; time is infinite hence time does not exist and space is infinite hence it is able to encompass all that is was, is and will ever be.

[10:2:4] In the Astronic cosmology, extensive debates are expected to occur regarding the physicality of The Divine, specifically so as part of divinological study and contemplation, the study of The Divine from the Astronic cosmology; this area of study for divinologists will be known as divine physicality and there are expected to be a number of schools to develop as directly influenced from the writings of the Omnidoxy herein and this debate will also be influenced by discussions regarding that which is to be known as Divine space.

[10:2:5] The nature of Divine space corresponds to the nature of The Divine itself which is itself conceptualised as total independence; unlike cosmic space and Universal space which are characterised by their dependency from the former to the latter, Divine space is independent of all other spaces, but also it exists uniquely from the other two types of space; Divine space, according to the Astronist Tradition which adheres to a divinological school to be named as inphysicalism (opposed to prophysicalism), holds no physicality and instead sustains The Universe and interpenetrates every cosmos within The Universe

through which it is able to manifest its beingness as both the sustainer and the interpenetrator.

[10:2:6] That which is to be henceforth referred to as dimensionality refers to the study and notion that with space there exists different levels of physicality within The Cosmos beyond the cosmic physicality in which we reside and function; the belief in the existence of multiple dimensions that still remain within the laws, orders, and boundaries of The Cosmos is to be known as dimensionalism (belief in two or more of these dimensions is to be known either as multidimensionalism or polydimensionalism); additionally, a belief in the ability to either communicate or transverse different dimensions within The Cosmos is to be henceforth referred to as transdimensionalism or cisdimensionalism.

[10:2:7] Another branch of tractology is to be henceforth referred to as distortionalism which shall refer to the distortion of space (a principal examples of which wormholes) can occur, but not infinitely or unlimitedly due to the limited nature of The Cosmos; distortionalism explores all of the instances of space distortion or change from the normal physicality of The Betwixity in The Cosmos and especially explores consequences of this from a cosmic philosophical perspective, but also the utility of distortion by sentient beings.

[10:2:8] We will only learn more about cosmic space as we explore The Cosmos further; cosmic philosophy's expansion is dependent upon the progressions and advancements made in the Humanic Exploration of The Cosmos like much else as part of Astronist belief due to the core adherence to transcensionism.

[10:2:9] All our perceptions of space are bound by our minds and our location on The Earth, hence we are presently mentally unable to conceive of the expanses of The Cosmos, or The Betwixity as it is to be appellated.

[10:2:10] Space will only become known to us in truth upon our exploration of us; therefore, the more we physically explore space, the more we will be able to intellectually understand and conceive of space and its wonders; however, this also demonstrates a long and bright future for cosmic philosophy and Astronism as a whole as a branch of philosophy and an organised philosophy respectively; this is because the more of The Cosmos that humanity explores, the further the expansion of cosmic philosophy and Astronism will be able to achieve therefore demonstrate our prosperous intellectual future in these two most beloved of fields.

[10:2:11] As part of tractological study and contemplation comes the importance of conducting an instrumentation directed towards the topic of space and the first of the instruments of study to be applied is abundancy; just like time, there is an almost unlimited abundance of spacial experience because from every different point in The Cosmos, the perspective or the experience of space and the surrounding cosmic realm is different and what greater frequency of something is there than space itself both

cosmically and universally and lastly, divinely so as to encompass, sustain, and interpenetrate them all.

[10:2:12] Binariness, in application to the subject of space, is in fact considered inapplicable due to the fact that from our perspective of residing within a cosmic space, there is a wholeness to space which pertains to the notion of the wholeness of The Cosmos residing as one of the fundamental understandings of Astronism towards the nature and structure of The Cosmos; therefore, we can understand space or expanse or area or whichever term wished to be applied that it nevertheless aligns itself with a monistic structure and nature due to the oneness of space; this is why The Cosmos is considered as a wholeness in form and its progeny and phenomena are collectively considered as the cosmic compositeness which ultimately pertains to the belief within Astronism that all composite entities within The Cosmos will eventually unite or physically rejoin The Cosmos proceeding their destructions or decompositions which is of course known as the process of cosmogenesis.

[10:2:13] When bipolarity is applied to context of space it results in the notion that there either exists space or non-space; non-space pertains to and can be considered synonymous with non-existence; there is no existence if there is no space to exist within, hence we can logically postulate that space precedes existence or that existence is dependent upon the availability of space for existence to exist; this ushers in a problem of metaphysics in which stated is that space must first exist for something to exist within it or that for something to exist it must exist within something or as part of something, that is space to reside within or as part of; this is to be known as the Space Precedence Problem.

[10:2:14] Calendarity applied to space refers to the interesting notion that calendaration or the organisation of time cannot be universally applied due to experiential time and the vast differences in time's experience, especially between different planets, hence calendarity is only applicable to minuscule areas of space due to the distortions in time experience in different regions of space; therefore, we can consider the application of calendarity to space as a form of microcosmic instrumentation due to the fact that calendarity or the organisation can only be successfully conducted in microcosmic spaces.

[10:2:15] Centricity can be applied to space through the notion that space is able to be organised according to different centricities; different centres that command revolving parts; centricities provide order, pattern and structure to an otherwise empty, meaningless, structureless, and unorganised expanse with no function, order or ability other than the subsistence of its own existence without wonder, pattern, and form.

[10:2:16] The cosmicality of space is undeniable for without space there would exist no cosmos; space must exist for there to exist a cosmos as the ordered and functioning wholeness of space and the composite entities residing within the space for that is fundamentally what a cosmos is.

[10:2:17] Criticality applied to space will focus on the notions of the Astronist understanding of what space is as well as the potentiality that space holds as a threat to the cosmic orderity as well as the immediacy of such a threat if it does indeed exist.

[10:2:18] Dyadicity remains inapplicable to the context of space just as the similar instrument of binarity was earlier in this instrumentation; this is due to the monistic nature of space.

[10:2:19] The dynamicity of space is also immeasurable due to dynamicity being predicated upon changes, activities, and progressions made in The Cosmos, but there exists an unknowability regarding the interaction of space itself with these three elements of dynamics; I traditionally thought that it was only the composite entities of The Cosmos that drove forward the dynamics of The Cosmos, but perhaps it is space itself which holds a function here? Does space hold a real, physical and effectual functionality beyond it allow for the residence of entities?

[10:2:20] The eternality of space pertains to the notion of the infiniteness of space and therefore primarily contemplates universal space, but I must post the question herein that if space is infinite can it really be considered space? If the space for which entities or realms are to reside within is infinite, could that not be something else rather than space itself for space is what we often relate to a limited existence or an expanse with capacity while infinite capacity perhaps cannot be described as space; as a final thought regarding the application of eternality to space is that the infiniteness of space automatically assumes the infiniteness of time in relation to space and vice versa; if time is infinite then so must the space in which that time exists be infinite; this is to be henceforth referred to as infinite proportionality.

[10:2:21] Extrinsicity cannot be applied to space because there exists no more intrinsic element to existence than space itself as has been aforeaffirmed as part of this instrumentation; therefore, only the application of intrinsicity to the topic of space be successfully conducted due to the necessitation of space for the existence of existence.

[10:2:22] The finity of space is considered fundamental to the nature of space according to the Astronist perspective with the existences of infinite space, such as Universal space, questioned as whether they are to be described as space at all.

[10:2:23] The focality of space, especially so over time, cannot be understated for in Astronism, space is granted with the appellation of the Predecessor of Existence due to the metaphysical notion that for existence to exist, there must first exist space for existence to exist within.

[10:2:24] The formity of space of course scientifically resides in the theory of The Big Bang to which Astronism is aligned, but also the notion of how and to what extent space has played a role the formation of the composite entities in The Cosmos, particularly focusing

upon the influence of space on the orderity, naturity, and motionality of different cosmic progeny and phenomena.

[10:2:25] The fundamentality of space to the nature of cosmic existence is undeniable due to the precedence of space over the existence of anything; the Space Precedence Problem, also to be known as the Predecessor Paradox, continues to be a major issue in the topic of tractology.

[10:2:26] The true functionality of space has already been intimated to as part of this instrumentation on space, but I find that the application of the instrument of functionality to space difficult due to the notion that space is without clear functionality beyond that which its name clearly defines; is space, therefore, without any functionality other than being space for other entities of true existence to hold functionalities within? But also due to this, does that therefore mean that all functionality is dependent upon space? The answer is yes due to the fundamentality of space, but the question of whether space itself directly holds functionality beyond its own existentiality remains a question in further need of tractological contemplation.

[10:2:27] The futurity of space can be considered as synonymous with the predicted or unpredicted future events of The Cosmos and ultimately, the end of The Cosmos; however, in a wider sense, the futurity of space is space's persistency to existence no matter what occurs due to its existence infinitely as The Universe as Universal space; therefore, the futurity of space has to be considered either according to cosmic space which holds a limited future and Universal space, whose existence cannot truly be said to hold any future at all due to infinite temporality in which Universal space exists.

[10:2:28] Yet again, we come to the problem of infinity which has also been found in other parts of this instrumentation and is something I like to call the Defiance of Infinity due to the notion that any form of infinite existence denies many of the objectivities, measurements, and formations of comparison that we rely upon to formulate different types of conceptals; in this case, we have applied futurity to space which works in the context of cosmic space, but when it is applied to Universal space or infinite space, the futurity of space can be considered questionable if time is infinite, how can there be any past, present, or future due to the inchronology of time in The Universe outside of all the cosmoses.

[10:2:29] The imperativity of space can be considered high due to the immediacy of space all around us and our reality or existence's total dependence upon the existence of space itself for existence itself to exist; again, this pertains to the Predecessor Paradox.

[10:2:30] The motionality of space is also a pertinent topic for tractologists to consider as the movability of space is questionable; take the accelerating expansion of The Cosmos as an example, due to its expansion, the space within it must be expanding for The Cosmos's expansion to be successful, or is something else moving rather than the space itself; we of course know that progeny and phenomena are motional, but is space truly motional? Does

space actual hold the function to move, and if it does, then does that resolve the issues raised as part of the application of the instrument of functionality to space previously during this instrumentation?

[10:2:31] The naturity of space can be considered fundamentally limited within The Cosmos and oppositely fundamentally unlimited within The Universe outside of all cosmoses; perhaps it is only space that is able to transverse between a given cosmos and The Universe if space truly is motioning for the expansion of The Cosmos; ultimately, the nature of space, its role in our existence, the functions it holds, its abilities, and its destiny are all unknown to us hence the great importance of tractological study and contemplation to explore such pertinent issues with regards to the philosophical and subsequently the metaphysical and ontological understanding of what space is, whether space can be said to exist, whether space holds functions as part of The Cosmos, and whether space is the only transverser across cosmic peripheries.

[10:2:32] The role of space in the orderity of The Cosmos can, again, not be assumed for is it space that is truly functioning as the orderer of The Cosmos and its progeny and phenomena and what is the relationship between space and the perceived true orderer of The Cosmos, gravity, in this instance?

[10:2:33] Proportionality and disproportionality pertains to correspondences or irregularities in sizes and amounts within portions of space and it is due to the limitations of cosmic space that we are able to identify and measures subjects as either proportionate or disproportionate in structure, size, temporality or amount.

[10:2:34] The purposivity of space is essentially positing the question of the purpose of The Cosmos which ultimately leads on to the purpose of existence itself; however, minimally, the purposivity of space can be considered as the ability for entities to exist within something for entities require space to capacitate their residence; the purpose of space can therefore be considered as the conveyance of existence.

[10:2:35] The vastity of space can be considered the true definition of space; something that is not entirely visibly conceivable due to its vastness but not reaching the extremity of infiniteness; this is perhaps the difference between vastness of space and infiniteness of space; both cannot visually encapsulated, but the former holds a capacity while the latter does not.

Cosmological, Astronomical & Astronic Philosophical Convergence

[10:3:1] The purpose of this discourse is to collectivise the vast theories within astronomy, cosmology, and their many branches of study, to apply such theories to philosophisations made as inspired by our compendological disquisition, and to convey these many theories in a way that remains understandable for the majority of people to understand and to relate to in the spirit of astronocentricity.

[10:3:2] This discourse also addresses the process that is to be known and appellated as the Philosophicalisation of Astronomy which relates to the process in which astronomy also becomes a branch of philosophy in addition to remaining an scientific field, academic discipline, and hobby.

[10:3:3] What will happen as part of this discourse is that all the branches of astronomy, cosmology, and astrophysics will be outlined and so will all the most prominent theories within those disciplines and in a post-omnidoxical piece of literature, the philosophicalisation of these theories will then occur having been directly inspired and guided by the definitions found herein; therefore, this is to henceforth referred to a connected discourse wherein a discourse of the Omnidoxy is directly connected to a post-omnidoxical piece of literature that of course did not make it into the Omnidoxy, especially so one that was either directly referred to or at least inferred to within the Omnidoxy itself such as the example herein and now.

[10:3:4] The process of the Philosophicalisation of Astronomy is considered to have been initiated by the first disquisition of The Omnidoxy, The Monodoxy, within which compendology outlined cosmic philosophy thus bringing together these two most ancient of disciplines.

[10:3:5] Astrobiology studies the advent and evolution of biological systems in the universe.

[10:3:6] Astrophysics is the branch of astronomy that deals with the physics of the universe, including the physical properties of celestial objects, as well as their interactions and behavior; among the objects studied are galaxies, stars, planets, exoplanets, the interstellar medium and the cosmic microwave background; and the properties examined include luminosity, density, temperature, and chemical composition.

[10:3:7] There exists many subdisciplines of theoretical astrophysics, the first of which is known as asteroseismology which is the study of the oscillations in stars.

[10:3:8] Compact objects; this subdiscipline studies very dense matter in white dwarfs and neutron stars and their effects on environments including accretion.

[10:3:9] Physical cosmology focuses on the origin and evolution of the universe as a whole; the study of cosmology is theoretical astrophysics at its largest scale.

[10:3:10] Computational astrophysics or computational astronomy is the study of astrophysics and/or astronomy using computational methods and tools to develop computational models.

[10:3:11] Galactic astronomy deals with the structure and components of our galaxy and of other galaxies.

[10:3:12] High energy astrophysics studies phenomena occurring at high energies including active galactic nuclei, supernovae, gamma-ray bursts, quasars, and shocks.

[10:3:13] Interstellar astrophysics pertains to the study of the interstellar medium, intergalactic medium and dust.

[10:3:14] Extragalactic astronomy pertains to the study of objects (mainly galaxies) outside our galaxy, including Galaxy formation and evolution.

[10:3:15] Stellar astronomy is concerned with star formation, physical properties, main sequence life span, variability, stellar evolution and extinction.

[10:3:16] Plasma astrophysics studies properties of plasma in outer space.

[10:3:17] Relativistic astrophysics studies the effects of special relativity and general relativity in astrophysical contexts including gravitational waves, gravitational lensing and black holes.

[10:3:18] Solar physics refers to the study of The Sun and its interaction with the remainder of the Solar System and interstellar space.

[10:3:19] Planetary science is the study of planets, moons, and planetary systems.

[10:3:20] Atmospheric science is the study of atmospheres and weather.

[10:3:21] Exoplanetology refers to the study of various planets outside of the Solar System.

[10:3:22] Planetary formation refers to the study of the formation of planets and moons in the context of the formation and evolution of the Solar System.

[10:3:23] Planetary rings refers to the study of dynamics, stability, and composition of planetary rings.

[10:3:24] Magnetospheres refers to the study of the magnetic fields of planets and moons.

[10:3:25] Planetary surfaces pertains to the study of the surface geology of planets and moons.

[10:3:26] Planetary interiors refers to the study of interior composition of planets and moons.

[10:3:27] Small solar system bodies relates to the study of smallest gravitationally bound bodies, including asteroids, comets, and Kuiper belt objects.

[10:3:28] The study of astronomy can be divided by general technique used for astronomical research:

[10:3:29] Astrometry is the study of the position of objects in the sky and their changes of position. Defines the system of coordinates used and the kinematics of objects in our galaxy.

[10:3:30] Observational astronomy refers to the practice of observing celestial objects by using telescopes and other astronomical apparatus; it is primarily concerned with recording data.

[10:3:31] The subdisciplines of observational astronomy are generally made by the specifications of the detectors includes the following: radio astronomy (above 300 μm), submillimetre astronomy (200 μm to 1 mm), infrared astronomy (0.7–350 μm), optical astronomy (380–750 nm), ultraviolet astronomy (10–320 nm), x-ray astronomy (0.01–10 nm), gamma-ray astronomy (below 0.01 nm), cosmic ray astronomy (osmic rays, including plasma), neutrino astronomy, and gravitational wave astronomy (gravitons).

[10:3:32] Cultural astronomy which itself includes ethnoastronomy, historical astronomy, history of astronomy, and historical astrology.

[10:3:33] Photometry is the study of how bright celestial objects are when passed through different filters.

[10:3:34] Astrogeology examines rocks, terrain and material in space.

[10:3:35] Helioseismology is the study of how the interior structure and dynamics of stars are composed by observing waves from its surface.

[10:3:36] Heliophysics is the study of how the sun's constant and dynamic radiation affects its surroundings in space.

[10:3:37] Exogeology is the study of how geology relates to celestial bodies like moons, asteroids, meteorites and comets.

[10:3:38] Exobiology refers to the study of how likely and where life is in space.

[10:3:39] Spectroscopy pertains to the study of the spectra of astronomical objects.

[10:3:40] Meteorology refers to the branch of atmospheric sciences which includes atmospheric chemistry and atmospheric physics, with a major focus on weather forecasting.

[10:3:41] Other disciplines that may be considered part of astronomy include the following:

[10:3:42] Archaeoastronomy is the investigation of the astronomical knowledge of prehistoric cultures.

[10:3:43] Astrochemistry refers to the study of molecules and ions occurring in stars and interstellar space.

[10:3:44] Astrostatistics refers to the discipline which spans astrophysics, statistical analysis and data mining.

[10:3:45] Forensic astronomy refers to the use of astronomy, the scientific study of celestial objects, to determine the appearance of the sky at specific times in the past.

—

[10:3:46] Pre-Astronist cosmological belief orientations and theories are herein and now introduced which are to be explored philosophically, or philosophicalised post-omnidoxically.

[10:3:47] Cosmism is a 19th-century theory about cosmic evolution, developed from contemporary science, that regards the cosmos as self-existent and self-acting; the related noun being cosmist.

[10:3:48] Cosmogony is a theory about the origin and the evolution of the universe; the branch of astrophysics that studies the origin and evolution of specific astronomical systems and the universe as a whole.

[10:3:49] Cosmography is the branch of astronomy that maps and describes the main features of the universe; a description or representation of the main features of the universe; related terms include cosmographer, cosmographic and cosmographical.

[10:3:50] Cosmology; the branch of astronomy that studies the overall structure of the physical universe; the branch of philosophy that studies the origin, structure, and evolution of the universe, especially such characteristics as space, time, causality, and freedom.

[10:3:51] Cosmotheism; the concept that the universe and God are identical; pantheism.

[10:3:52] Cosmozoism; the concept of the cosmos as alive.

[10:3:53] Creationism; the belief concerning the creation by a transcendent God of the universe, matter, and living organisms out of nothing.

[10:3:54] Geocentrism; the concept that the Earth is the centre of the universe.

[10:3:55] Heliocentrism; the concept that the Sun is the centre of the universe; the measurements or observations that are relative to the centre of the sun.

[10:3:56] Pancosmism; the theory that the totality of existence comprises only the physical universe in time and space; related terms include pancosmic.

[10:3:57] Panpsychism; the belief that everything materially natural has an essence or some degree of individual consciousness.

[10:3:58] Spencerianism; the philosophical theory of Herbert Spencer that cosmic evolution is cyclic, controlled by mechanical forces which tend toward equilibrium and relative complexity until a peak is reached, after which dissolution occurs, the universe reverts to a simple state, and the cycle begins again.

[10:3:59] Teleologism; the belief that purpose and design control the development of the universe and are apparent through natural phenomena.

[10:3:60] Universology; the science of the universe; related terms include universologist and universological.

—

[10:3:61] Just before I define some hypotheses and controversies currently relevant within astronomy for their post-omnidoxical philosophicalisations and discussions, there are a few more subdisciplines of astronomy that need to be added.

[10:3:62] Celestial mechanics refers to the branch of theoretical astronomy that deals with the calculation of the motions of celestial objects such as planets.

[10:3:63] Geodetic astronomy, or astrogeodesy, is the application of astronomical methods into networks and technical projects of geodesy.

[10:3:64] Historical astronomy is the science of analysing historic astronomical data as well as the study of the history of astronomy.

[10:3:65] Multi-messenger astronomy is astronomy based on the coordinated observation and interpretation of disparate "messenger" signals; interplanetary probes can visit objects within the Solar System, but beyond that, information must rely on "extrasolar messengers".

—

[10:3:66] The first of the astronomical hypotheses to philosophicalise post-omnidoxically is anthropic principle which states that observations of the universe must be compatible with the conscious and sapient life that observes it; some proponents of the anthropic principle reason that it explains why this universe has the age and the fundamental physical constants necessary to accommodate conscious life.

[10:3:67] As a result, they believe it is unremarkable that this universe has fundamental constants that happen to fall within the narrow range thought to be compatible with life.

[10:3:68] Brane cosmology is that the visible, three-dimensional universe is restricted to a brane inside a higher-dimensional space, called the bulk.

[10:3:69] Carbon chauvinism is a neologism meant to disparage the assumption that the chemical processes of hypothetical extraterrestrial life must be constructed primarily from carbon (organic compounds) because carbon's chemical and thermodynamic properties render it far superior to all other elements.

[10:3:70] Circumstellar habitable zone is the range of orbits around a star within which a planetary surface can support liquid water given sufficient atmospheric pressure; the bounds of the CHZ are based on Earth's position in the Solar System and the amount of radiant energy it receives from the Sun.

[10:3:71] Clockwork universe compares the universe to a mechanical clock; it continues ticking along, as a perfect machine, with its gears governed by the laws of physics, making every aspect of the machine predictable.

[10:3:72] The cosmological constant - the energy density of space, or vacuum energy, that arises in Albert Einstein's field equations of general relativity; it is closely associated to the concepts of dark energy and quintessence.

[10:3:73] The Drake equation is a probabilistic argument used to estimate the number of active, communicative extraterrestrial civilisations in the Milky Way galaxy.

[10:3:74] Fine-tuned Universe is the proposition that the conditions that allow life in the Universe can occur only when certain universal dimensionless physical constants lie within a very narrow range of values, so that if any of several fundamental constants were only slightly different, the Universe would be unlikely to be conducive to the

establishment and development of matter, astronomical structures, elemental diversity, or life as it is understood.

[10:3:75] Gaia hypothesis proposes that living organisms interact with their inorganic surroundings on Earth to form a synergistic and self-regulating, complex system that helps to maintain and perpetuate the conditions for life on the planet.

[10:3:76] The Goldilocks principle refers to the habitable zone around a star.

[10:3:77] Grand tack hypothesis proposes that after its formation at 3.5 AU, Jupiter migrated inward to 1.5 AU, before reversing course due to capturing Saturn in an orbital resonance, eventually halting near its current orbit at 5.2 AU.

[10:3:78] Hawking radiation is black-body radiation that is predicted to be released by black holes, due to quantum effects near the event horizon; Hawking radiation reduces the mass and energy of black holes and is therefore also known as black hole evaporation.

[10:3:79] Hills cloud is a vast theoretical circumstellar disc, interior to the Oort cloud, whose outer border would be located at around 20,000 to 30,000 astronomical units (AU) from the Sun, and whose inner border, less well-defined, is hypothetically located at 250–1500 AU, well beyond planetary and Kuiper Belt object orbits but distances might be much greater; if it exists, the Hills cloud contains roughly 5 times as many comets as the Oort cloud.

[10:3:80] The lost cosmonauts are subjects of a conspiracy theory alleging that Soviet cosmonauts went to outer space before Yuri Gagarin, but their existence has never been publicly acknowledged by either the Soviet or Russian space authorities.

[10:3:81] Modified Newtonian dynamics is a theory that proposes a modification of Newton's laws to account for observed properties of galaxies. It is an alternative to the theory of dark matter in terms of explaining why galaxies do not appear to obey the currently understood laws of physics.

[10:3:82] The multiverse, the omniverse, or the meta-universe is a hypothetical group of multiple universes; together, these universes comprise everything that exists: the entirety of space, time, matter, energy, and the physical laws and constants that describe them.

[10:3:83] Neocatastrophism is the hypothesis that life-exterminating events such as gamma-ray bursts have acted as a galactic regulation mechanism in the Milky Way upon the emergence of complex life in its habitable zone; it is proposed as an explanation of Fermi's paradox since it provides a mechanism which would have delayed the otherwise expected advent of intelligent beings in the local galaxy nearby to Earth; this is an avenue to explain why none so far have been detected by humans.

[10:3:84] Oort cloud is a theoretical cloud of predominantly icy planetesimals proposed to surround the Sun at distances ranging from 2,000 to 200,000 AU (0.03 to 3.2 light-years).

[10:3:85] Particle chauvinism is the term used by Martin Rees to describe the assumption that what we think of as normal matter – atoms, quarks, electrons, etc. – is the basis of matter in the universe, rather than a rare phenomenon.

[10:3:86] Rare Earth hypothesis argues that the origin of life and the evolution of biological complexity such as sexually reproducing, multicellular organisms on Earth (and, subsequently, human intelligence) required an improbable combination of astrophysical and geological events and circumstances.

[10:3:87] Shadow life or shadow biosphere hypothesis suggests that if life has evolved on Earth more than once, microorganisms may exist on Earth which have no evolutionary connection with any other known form of life; he thinks that if scientists discover an alternate form of microbial life on Earth, the odds are good that life is also common elsewhere in the universe.

[10:3:88] A thalassogen denotes a substance capable of forming a planetary ocean; thalassogens are not necessarily life sustaining, although most interest has been in the context of extraterrestrial life.

[10:3:89] Titius-Bode law is a hypothesis that the bodies in some orbital systems, including the Sun's, orbit at semi-major axes in a function of planetary sequence; the formula suggests that, extending outward, each planet would be approximately twice as far from the Sun as the one before.

[10:3:90] A wormhole is a speculative structure linking disparate points in spacetime, and is based on a special solution of the Einstein field equations solved using a Jacobian matrix and determinant; a wormhole can be visualised as a tunnel with two ends, each at separate points in spacetime; a wormhole could connect extremely long distances such as a billion light years or more, short distances such as a few meters, different universes, or different points in time.

[10:3:91] Diseases from Space refers to the theory that many of the most common diseases which afflict humanity, such as influenza, the common cold and whooping cough, have their origins in extraterrestrial sources.

[10:3:92] Extraterrestrial life refers to life occurring outside of Earth which did not originate on Earth. Such hypothetical life might range from simple prokaryotes (or comparable life forms) to beings with civilisations far more advanced than humanity.

[10:3:93] The Galileo affair was a sequence of events, beginning around 1610, culminating with the trial and condemnation of Galileo Galilei by the Roman Catholic Inquisition in 1633 for his support of heliocentrism.

[10:3:94] Life on Mars is a subject of significant interest to astrobiology due to its proximity and similarities to Earth.

[10:3:95] A non-standard cosmology is any physical cosmological model of the universe that was, or still is, proposed as an alternative to the then-current standard model of cosmology.

[10:3:96] Tyche is a hypothetical gas giant located in the Solar System's Oort cloud.

The Role of The Five Astronist Characters

[10:4:1] As that which is to be henceforth categorised as an appendant discourse is a type of discourse within The Omnidoxy that holds no connection to the disquisition within which it resides.

[10:4:2] This typically exists at the end of a disquisition, but it has been placed within that disquisition due to the necessity for all discourses to reside within disquisitions as an omnidoxical rule.

[10:4:3] The Five Astronist Characters are categorised and described henceforth as effigies when in relation to Astronism which means that their entire inclusion within The Cosmic Era of Astronist Mystology which is placed at the very end of The Omnidoxy are in the form of an effigy.

[10:4:4] In this context, the term effigy pertains to a “a perfect ethereal embodiment of a concept manifested into a persona or character,” and in this particular case, the concept of which I speak is Astronism in its entirety.

[10:4:5] Cometan, as the persona of Brandon Taylorian, is also considered to be an effigy because Cometan as the persona is a perfect manifestation of Astronism as its founder.

[10:4:6] The Five Astronist Characters therefore hold a particular role within Astronism; this role is not one of worship and it isn't one of devotion; instead, it is one of representation and reflection of the ideas and beliefs of Astronism.

[10:4:7] The Five Astronist Characters can be considered as effigies of Astronism as they constitute echoes and resemblances of Astronist beliefs and ideas depending upon how they are depicted.

[10:4:8] The same kind of role is herein omnidoxically attributed to the personage of Cometan; Cometan's role within Astronism considered tridimensional by its nature, or triadic, which is why the term triadism may also be ascribed to this, but typically if it is ascribed, then it would be called cometanic triadism to specify the type of triadism.

[10:4:9] Operationally, the role of Cometan is the founder; philosophically, the role of Cometan is the creator; representationally, the role of Cometan is the effigy.

[10:4:10] It is for this reason that effigies play an important role within Astronic depictions and representations for they determine their own unique category, one that is neither devotional, nor worshipful, but one that is instead reflective and manifestational of belief yet still so profound; this is the unique role of The Five Astronist Characters and Cometan within the context of Astronism and this is to be accepted and respected forever as herein authoritative ascribed within the Omnidoxy.

The Astronic Journal

[10:5:1] That which is herein introduced and shall be henceforth appellated as the Astronic Journal pertains to the very first academic or scholarly journal dedicated to publication of content regarding the philosophy of Astronism and all the concepts that reside within it and is the first academic journal to consist of subjournals.

[10:5:2] The Subjournals of the Astronic Journal founded omnidoxically shall consist of the following:

[10:5:2a] The Journal of Compendology; the subjournal focusing on cosmic aesthetics, cosmic philosophy, and all else which is addressed within the first disquisition of the Omnidoxy.

[10:5:2b] The Journal of Sanitology; the subjournal focusing on logic, rationality, Institutional operations, and all the other vast area of topics addressed within the second disquisition of the Omnidoxy.

[10:5:2c] The Journal of Abettology; the subjournal principally focusing on the philosophical writings dealing with the topics of aid and stewardship and related subjects addressed within the third disquisition of the Omnidoxy.

[10:5:2d] The Journal of Equitology; the subjournal focusing receiving entries focusing on the Astronic approaches to the topics of justice and patience and all else that is addressed within the fourth disquisition of the Omnidoxy.

[10:5:2e] The Journal of Xentology; the subjournal focusing on the topics of ambition and enlightenment and related philosophical writings as well as addressing any topic also addressed within the fifth disquisition of the Omnidoxy.

[10:5:2f] The Journal of Ghenology; the subjournal focusing on the topics of Astronist or Astronic ontology and the philosophy of perception in addition to topics also discussed as part of the sixth disquisition of the Omnidoxy.

[10:5:2g] The Journal of Expology; the subjournal focusing on the topics of cosmic exploration, the Astronist understanding of the future of space exploration, as well as all related philosophical writings to space exploration, the future of humanity in space, and all other topics addressed within the seventh disquisition of the Omnidoxy.

[10:5:2h] The Journal of Rhemnology; the subjournal encompassing all entries focusing on or related to the topics of advancement and Astronic or Astronist approaches to eschatology and related theological and philosophical disciplines, as well as including all other topics addressed and discussed as part of the eighth disquisition of the Omnidoxy.

[10:5:2i] The Journal of Contology; the subjournal encompassing all entries focusing on the topics of Astronic and Astronist understandings regarding epistemology and ethics as well as all other topics discussed within the ninth disquisition of the Omnidoxy.

[10:5:2j] The Journal of Durantology; the subjournal encompassing all articles focusing on philosophical approach to understanding and discussing the topics of space and time as well as all articles talking about the Astronic Journal itself due to the introduction of the journal having taken place herein as part of the tenth disquisition of the Omnidoxy.

[10:5:2k] The Journal of Quillitology; the subjournal focusing on the topics of peace and acceptance purely from an Astronist or wider Astronic viewpoint as part of the eleventh and shortest discourse of the Omnidoxy.

[10:5:2l] The Journal of Prerology; the subjournal, also termed as the Ulimation journal due to the colloquial title for the twelfth disquisition of the Omnidoxy, which will focus on the topics of imagination and freedom from an Astronist or Astronic philosophical and theological perspective, as well as encompassing the vast array of other topics also discussed as part of the Dodecadoxy.

[10:5:3] What is the journal's purpose? The propose of the Astronic Journal is collectivise academically-written materials regarding all aspects of Astronism as well as wider Astronic philosophy.

[10:5:4] What unique niche will it fill? Other than the Astronic Journal, there will exist no other Institutionally-recognised or omnidoxically-originating journal that covers in detail the beliefs, ideas, and theories of Astronism, wider Astronic philosophy, and the contributions as both Astronist and neutral philosophers.

[10:5:5] What is the administrative structure of the journal? The administrative structure of the Astronic Journal will consist of a public-facing advisory board which advises academics and potential contributors (the Astronic Journal will be open to public contributions as well as academics) about their submissions to the journal.

[10:5:6] What standards will you use to judge articles for inclusion? Once the advisory board has accepted the submission, this will be submitted to the inward-facing editorial board which the public cannot contact who will conduct a more in-depth inspection of the submission; importantly, a person whose work has been accepted in the journal prior will automatically get their submissions to bypass the advisory board to go straight to the editorial board; the editorial board also acts as the representative of The Institution during this process.

[10:5:7] Who will do copy editing and proofreading? This task will be undertaken by the editorial board as the advisory board focuses more on filtering the subject of the submission rather than specific elements of the article; the advisory board's role is to understanding whether the subject of the submission commands enough interest, fills a

gap in the literature, and whether the subject and nature of the way in which the submission is written fits in with the principles upheld by The Institution; another important responsibility for the advisory board is to decide which subjournal the entry submitted is most suitable for.

[10:5:8] What is the format of the journal? The Astronic Journal will be available both in print and on digital platforms making use of a wide range of channels to get the journal as accessible as possible for as wide an audience as possible which also means that each submission in the journal will also be translated into multiple languages.

[10:5:9] Is the journal going to be Open Access, available only by subscription, or a combination? The Astronic Journal will be a combination of Open Access and subscription only and this be split on the basis of the author each journal entry; if the entry is written by a verified academic then it will be automatically inaccessible without subscription meanwhile an entry provided by an non-academic writer will be automatically submitted into the Open Access arena.

[10:5:10] Where is the journal going to be hosted/printed? The journal's headquarters will reside within the offices of The Institution of The Philosophy of Astronism.

[10:5:11] Is there a Memorandum of Agreement (or Memorandum of Understanding) that spells out expectations for the journal and the host/printer? Yes, however, this will be written post-omnidoxically and during the establishment of the Astronic Journal after its founding herein.

[10:5:12] Who will obtain the journal's ISSN from the Library of Congress' ISSN website? This operation will be conducted by the editorial board in conjunction with corresponding departments from directly within The Institution itself.

[10:5:13] How will the journal be funded initially? The Astronic Journal will initially be funded by The Institution during its initial set up and establishment, but it will later be encouraged to devise its own income streams with The Institution then taking a smaller though still existent role in the journal's funding with it remaining the only journal to be Institutionally funded.

[10:5:14] How will funding for the journal be sustained? The Astronic Journal will receive funding from a variety of sources, namely from potential contributors who are required to pay a set administrative fee every time they submit a journal entry; other sources of income will be developed post-omnidoxically as part of the journal's founding and establishment; the faculty of the journal will also be encouraged to hold regular meetings to pose ideas for the development of new income streams or for the expansion of existing ones.

[10:5:15] How will you recruit peer reviewers? Advertisements will be made within university institutions for peer reviewers searching for academics either with an interest in

Astronism or with formal academic qualifications in Astronic studies or related fields that are not necessarily directly Astronic, such as general philosophy or theology.

[10:5:16] How will you solicit content? The Astronic Journal will be advertised through the auspices of the advertising department of The Institution and the name of The Institution will be used to encourage potential contributors to submit their pieces of writing.

[10:5:17] How will you advertise your journal? The journal will be advertised across social media through galvanisation of online communities and interest groups as well as in more traditional mainstream media positioned in such a way that offers accepted contributors the chance to boost their profiles as writers.

—

[10:5:18] The rationalisation of Astronism is something that has been intimated to through the Omnidoxy, however, this area of study, contemplation, and discussion shall extensively take place in a post-omnidoxical setting.

[10:5:19] The first contribution to the rationalisation of Astronism that is to be made is to be known as exoexistentialism which pertains to the rationalisation for the Astronist cosmology stating that it is only rational that for the nature of something to allow entities to exist within it that part of its nature means for entities to exist outside of it.

Institutional Policymaking

[10:6:1] Budgetary policy in the context of Institutional policymaking shall focus on the changes in Institutional spending year on year according to the available budgets; this shall be managed and published entirely by the monetary and policymaking departments in conjunction with the higher echelons of The Institution, namely the padron and his associated councils and departments.

[10:6:2] Monetary policy will focus on changes in the money supply generated by The Institution year on year; essentially, the monetary policy will detail the financial performance or annual income of The Institution which will subsequently inform the budgetary policymakers what budget they have at their disposal.

[10:6:3] Supply-side policymaking will involve increasing the productive capacity of The Institution through the supplication of products into the marketplace, increased marketing, increased investments internally such as the development of new managerial positions and departments, and other ways to increase the capacity of The Institution to maintain maximised efficiency.

[10:6:4] Expansionary policy in the context of The Institution will be a subdepartment of the wider monetary and fiscal department created with the intension of stimulating the expansions of The Institution through the increase of followership in order to subsequent increase demand for its products and services; this is not achieved through the use of monetary resources.

[10:6:5] Expansionary monetary policy will be the counterpart subdepartment to the one introduced in the previous insentensation and will involve intentionally increasing the budget of The Institution through the reduction of costs in order to place more investments in marketing and advertising in order to increase followership, consumption, and demand.

[10:6:6] Contractionary policy in the context of The Institution will involve the reduction of both costs and investment, especially so in a particular country or region due to increase hostilities or continued resistance against the operations and presence of The Institution from the public or from governmental forces.

[10:6:7] Contractionary policy is the opposite of expansionary policy, in that it involves reducing Institutional spending, reducing costs, and reducing the overall visible presence of The Institution which is why it may sometimes be applied to regions hostile to The Institution or where extensive persecution is taking place.

Introduction to Quillitology

[11:1:1] Peace, the goal is, for peace is that which love, acceptance and progression sprouts.

[11:1:2] Peace, to love, is.

[11:1:3] Peace, to accept, is.

[11:1:4] Yet peace, the reward, is not, for peace is the final step toward that which all of divinity not.

[11:1:5] For The Divine, peace does not exist, for peace is of human creation as for there to be peace there must also be war.

[11:1:6] For The Divine, peace is normality; not a novelty.

[11:1:7] For humanity, peace is the goal for peace is the only way for the non-divine to become closer to that of divinity.

[11:1:8] Peace is all that which has been written in The Grand Centrality up to this point.

[11:1:9] Thinking and doing these acts in accordance to the will of divinity, your faith and your morality will lead thee to peace.

[11:1:10] However, peace is, in the sinful human world of individual thought, idea and action, a constant status of instability for takes one only to distort and ruin the peace.

[11:1:11] Peace is possible, though morality and its nature of individuality will also keep those of authority wary of ruination yet it is the crucial job of peacekeepers to maintain the fragile state of peace for as long as they can.

[11:1:12] Peace, distorted often is, by those of authority as for creating peace through fear is a peace of falseness.

[11:1:13] It is up to those who love true peace to work for the true, honest and honourable peace they know is genuine and it is their actions that will lead to the betterment of peoples, the furtherance of peoples and the progression of all through the actions of few.

[11:1:14] A stand, take, against those of false peace.

[11:1:15] A stand, take, against those of oppressiveness.

[11:1:16] A stand, take, against those clouding true peace.

[11:1:17] To live in false peace is to live without divinity within.

[11:1:18] It is your morality and faith that will show thee the way of true peace if thou are not familiar with its teachings:

[11:1:18a] Peace is domination not, it is integration.

[11:1:18b] Peace is refusal not, it is acceptance.

[11:1:18c] Peace is to oppress not, it is to free.

[11:1:18d] Peace is aggression not, it is serenity.

[11:1:18e] Peace is to fear not, it is to love.

[11:1:18f] And peace is falsehood not, it is honesty.

[11:1:19] Be one of peace and divinity will grow from within.

[11:1:20] Be one of peace and the betterment and progression of peoples will come.

[11:1:21] Be one of peace, and freedom, ultimate and true, will arise from that which all things created are; divinity.

[11:1:22] The one of divinity is the only deciding, creating and all-knowing one.

[11:1:23] No other is of same level to make such claims.

[11:1:24] The one of divinity is the creator of all that has, is and will exist and so, it is the creator only, who may judge the creator's creations.

[11:1:25] To ourselves, we are all there is for the picture we see is nothing but a pinprick of the divine one's sight.

[11:1:26] To the universe, we are nothing; a dot within a dot on a black canvas of dots transcending beyond our combined comprehension.

[11:1:27] To not accept those around thee is the greatest defiance of the divine, for one who does not accept is judging and that is the work of the creator only.

[11:1:28] You are of significance not, until the divine one tells the universe otherwise.

[11:1:29] It thou place not to tell others of your refusal to accept their existence for not accepting their existence is not accepting the will and plan of the divine one and for one of insignificance to do such an act is the greatest immorality of all.

[11:1:30] Your faith, so-called, may tell you to judge.

[11:1:31] If so, rethink you should your belief, for doing so is the only way to repair that which your distorted faith has broken; your morality.

[11:1:32] Take on the work of The Divine do not for your will receive no cheer, but only condemnation from the one of creation.

[11:1:33] If it is the will of The Divine to give life to ideas, beings and worlds not of your acceptance, then thou art straying from the path and plan of divinity for the divine would not have created such entities unless they were of the divine one's plan.

[11:1:34] Of all-seeing, all-knowing and all-creating The Divine One is, yet the divine does not control your thoughts and decisions for you, as the crossroads of morality then appear before one and one must choose the path of good deed or the path of bad deed.

[11:1:35] Devil there is, but in human only and the choice of goodness or badness; to be all-loving, all-welcoming and all-accepting is of human nature not yet try to be of such character for such action will lead thee closer to your creator and all that is good.

[11:1:36] To not accept one is to not accept thyself and your creator for the one you accept not is of same source as you.

[11:1:37] One must accept for progression to take place for if one does not accept, stagnancy resumes, yet only for one; not for all.

[11:1:38] To accept, though neither condone nor agree, those of bad deed is of commendable character yet it is of individual morality to sense which is of good deed or bad.

[11:1:39] Faith will help with this distinction yet do not rely solely on that which others have spouted.

[11:1:40] Rely, instead, on thyself and your own instincts of good and evil as that is what you will be judged for on the true day of judgement and on this world, take place, it will not.

[11:1:41] To accept is to love; a great gift from The Divine that all humans share, yet do not let those who surround thee distort what it is to be accepted and what is not, for accepting is the duty of humanity and judgement is the duty of The Divine.

The Philosophisation of Acceptance (Endrology)

[11:2:1] That which is herein introduced as endrology shall refer to the contemplation of acceptance in the form of a philosophical discipline of study which will systematically consider all the different aspects and applications of acceptance, as well as explore the nature, form, and purpose of acceptance in addition to the benefits of practicing acceptance.

[11:2:2] Central to endrological study and contemplation is that which is herein introduced as the state of quillity which pertains to the principle and concept of holding acceptance to be the central essence to human progression, both physically, mentally, and philosophically.

[11:2:3] The principle and philosophy of acceptance is that acceptance is the greatest healer of emotional disputes and upsets, that one's ability to practice acceptance demonstrates their capacity for empathy, hypercognition, and a respect for the principles of freedom, in addition to the notion that acceptance is a complement to enknowledge for the more we accept, the greater breadth of understanding we will uphold, the subsequence of which is our higher ability to receive and capacitate the world around us.

[11:2:4] Acceptance is considered to be the ascension to reality for unacceptance or disacceptance is an ignorance and an avoidance of what is real and what is occurring which is no more logical than saying that the stars don't exist; they are there in front of you in the night sky so why would anyone discount what is there in front of them in relation to anything else?

[11:2:5] The ability to accept the reality demonstrates a greater moral compass than simply ignoring and avoiding; being able to understand and discuss what is occurring in the reality as a subsequence of accepting the reality is paramount to becoming a good philosopher and by subsequence, a good Astronist.

[11:2:6] Recognition of the circumstances and consequences is the essence of acceptance.

[11:2:7] However, we must importantly note that acceptance does not suggest agreement; just because you accept something does not mean that you are automatically agreeing with it, but it does demonstrate your greater capacity to understand what is happening in the reality and to understand that you can acceptance the realistic existence of something without agreeing with what it stands for; acceptance is about accepting the existentiality of something and understanding what it is rather than forcing an agreement which would be aphilosophical and not in alignment with intellectual freedoms propounded by the Philosophical Spirit.

[11:2:8] An appreciation for the situation and the reasons why certain decisions were made is also an integral element of what it means to practice acceptance; the opposite of acceptance is always affirmed as ignorance or avoidance.

[11:2:9] The practice of acceptance is positivist in leaning as it looks towards the benefits that the acceptance will bring rather than the negative aspects; acceptance is considered to be the embodiment and the manifestation and demonstration of a learned mind.

[11:2:10] Acceptance is considered to be freeing of the human mind, heart, and soul from rigidities, narrow societal rules, and the stereotypes that are attached to us throughout our lives by both ourselves and others; the true communion with freedom is acceptance.

[11:2:11] Acceptance is the acknowledgement of those factors that remain outside of one's own control and understanding that the destiny of others is out of one's control for a reason and that it will always be this way; attempting to control what others do through force is likened to playing the role of God for our creator is the only one who may or may not hold the power to conduct such an act.

[11:2:12] The acceptance of a decision leads to greater happiness for the individual even if the decision was not their most desired scenario; to know that a decision has been made and accepted for what it stands to be in the world provides a satisfaction that cannot be replicated.

[11:2:13] Furthermore, it is postulated herein that acceptance leads to a distinct internal satisfaction which is why acceptance is considered to be ultimately superior over disacceptance or rejection; with acceptance there exists a way to resolve a scenario and progress beyond it while with rejection, there does not exist such a possibility; as a general principle of Astronism, possibility or potentiality is also preferred beyond that of impossibility or depotentialising actions and thoughts; therefore, this results in a supporting argument for acceptance due to the notion that with the practice of acceptance comes greater potentiality and possibility.

[11:2:14] Acceptance of an emotional situation leads to one being able to progress beyond it rather than let it stagnate their lives further; the goal of every scenario or potentially problematic circumstance is not to make it a problem, to accept it and to progress beyond it.

[11:2:15] Acceptance demonstrates strength in character and openness in mind; to be accepting is to demonstrate one's intelligence and to demonstrate one's logical justification for their agreement or disagreement proceeding their acceptance demonstrates the capacity of their philosophicality.

[11:2:16] An inability to accept demonstrates weakness in character and narrow in mind; to be disaccepting is to demonstrate one's lack of intelligence, knowledge and experience,

especially so if their disacceptance is not even coupled with a logical justification for their disagreement with that which they also disaccept.

[11:2:17] With acceptance, new seeds of opportunity are sown and it is this principle that drives forward the importance of acceptance in the context of Astronism.

[11:2:18] Acceptance is in alignment with the Philosophical Spirit and this notion should be explored post-omnidoxically through contemplations about the philosophical nature of acceptance and its superiority of disacceptance or rejection.

[11:2:19] Acceptance is considered to majorly positively influence one's wellbeing, and their overall mental state with disacceptance causing considerable damage to these; justified agreement or disagreement after acceptance of the reality of the situation is the essence of what I am expounding herein.

[11:2:20] Disacceptance is the oppositism to acceptance and is not in alignment with the Philosophical Spirit due to the notion that the Philosophical Spirit is predicated upon the notion of the acceptance of the reality rather than ignorance to the reality; there is nothing philosophical about being ignorant to the reality of the circumstances simply to suit one's own mental rigidity regarding what can or cannot exist according to a set up unchanging principles.

[11:2:21] The study of endrology is of course about acceptance, however, this represents just one half of the discipline's total encompassed study; all of the points regarding the study and contemplation of acceptance should also be applied to the context of disacceptance; essentially, this involves reversing all contemplations in order to redirect them towards the study of the nature of disacceptance.

[11:2:22] Astronist approaches to pre-Astronist forms of acceptance are also to be explored as part of endrological study, namely the contemplation of self-acceptance, social acceptance, conditional acceptance, expressed acceptance, and implied acceptance.

[11:2:23] As part of endrological study is the categorisation and organisation of acceptance as a broad concept with many other concepts, notions, and beliefs being encompassed by that as well as being related it; as part of this categorisation comes the introduction and definition of new forms of acceptance.

[11:2:24] The first one of which is to be known as internal acceptance which shall refer to acceptance that is decided only according to internal means such as through our thoughts and feelings rather than through our actions; often, excessively internal acceptance makes others feel that such a person does not accept the circumstances due to their inability or uncomfotability with expressing their acceptance.

[11:2:25] That which is herein introduced as predetermined acceptance shall refer to the form of acceptance involving acceptance of all things no matter the particular

circumstances tied to the scenario; if a person practices predetermined acceptance, this means that they will accept all circumstances without regard for the particulars as they will consider these particulars when they do arise.

[11:2:26] The third new form of acceptance is to be known as philosophical acceptance which remains particularly important to the context of Astronism and involves the notion that our acceptance should come directly from our practice of philosophy and from our personality as being designated philosophical in character; philosophical acceptance notionises that as we continue to practice philosophy and centralises it in our lives, our ability and capacity to accept will be improve.

[11:2:27] Finally, logical acceptance pertains to the notion that logic should be the basis of our acceptance of something and that unlike predetermined acceptance which accepts all scenarios both logical and illogical, it only accepts logical scenarios and circumstances hence relying on an understanding of logicity to determine what should be accepted and that which should not.

[11:2:28] The differences between acceptance and embracement which are considered as two distinct entities within Astronist Philosophy are also to be studied and explored as part of amnological study.

[11:2:29] Embracement is considered to be the next step beyond acceptance as embracement is associated with agreement; embracement is not what I am advocating for when I say acceptance; only embrace the subject of your acceptance if you truly do agree with what you are embracing; you must always stay true to yourself and that means accepting something, but not necessarily agreeing with it because a forced acceptance is just another form of ignorance and avoidance of reality therefore can see how balance of acceptance is the most important thing because too much of anything is not productive and neither is it ethically correct.

[11:2:30] The instrumentation of acceptance shall take place post-omnidoxically and will involve the following instruments of study which I find most relevant to the philosophical consideration and contemplation of acceptance: abundancy, bipolarity, centricity, composity, criticality, dyadicity, dynamicity, eternality, extrinsicity, finity, focality, fundamentality, functionality, futurity, imperativity, motivity, naturity, primarity, progressivity, proportionality and disproportionality, purposivity, rationality, sensicality, symbioticity, synchronicity and vastity.

The Study of Peace

(Serenology)

[11:3:1] Herein I introduce that which is to be known as serenology, also called irenology, will henceforth involve the study and philosophical contemplation of peace, its nature, its manifestations, and all its different types, patterns, and approaches to its understanding.

[11:3:2] Hostility is considered inevitable only by the forces of human nature due to the differences in opinion found throughout life between ourselves which themselves do force the rise of conflict and disunity hence leading to the achievement of peace as an idealistic scenario and not a realistic occurrence yet perhaps transient and short-lived at best.

[11:3:3] Conflict is a staple feature of The Cosmos; all things conflict whether it be for possession, superiority, division over differences, or as a natural force of progression; conflict is often what initiates change, hence the obliteration of conflict is not what we should strive for because it is unnatural to do so for in doing so we ignore and disaccept our nature to conflict.

[11:3:4] Peace is often only achieved by restraint from one of two or more conflicting parties; restraint is therefore the most important aspect in curbing conflict as it calls for de-escalation.

[11:3:5] The discussion of weapons is also an important theoretical but also a significant societal and cultural topic for serenological contemplation; the Astronist opinion on weapons is that the first step towards reaching global harmony is to rid the world of the weapons it possesses that only work towards the inevitability of conflict.

[11:3:6] Peace is also achieved by that which is known as a Plateau of Commonality; a equal field upon which similarities between parties can be drawn in order to stop conflict escalation; the Plateau of Commonality is considered to be a significant contribution to the de-escalation of conflict in order to achieve peace and is applicable to a number of different scenarios both theoretically and practically.

[11:3:7] In serenological study, there are two unique instruments of study known as escality and descality which measure the effect of escalation or de-escalation according to the introduction of a variable, or a set of circumstances which makes serenological study of particular significance due to its introduction of these unique instruments of study.

[11:3:8] In Astronist Philosophy, External Peace, or peace beyond the bounds of one individual, in The Cosmos is not considered to be completely attainable due to the fact that conflict is the nature of The Cosmos, and therefore, it remains to be the nature of humanity to always pursue conflict.

[11:3:9] Therefore, the role of peacekeepers, from the perspective of Astronist Philosophy, is considered to be one of great fortitude due to the difficulties involved in fulfilling their vocation.

[11:3:10] However, that which is known as Internal Peace is considered to be attainable due to the individual scale upon which Internal Peace is pivoted; due to the larger scale of External Peace, that is why it is not able to be completely attained; the larger the scale, the less chance peace is able to be attained due to the greater frequency of discord.

[11:3:11] Unlike many religious traditions, the Astronist philosophical tradition does not associate peace with Divinity due to peace merely existing as a bipolarity of conflict in the context of the human mind and therefore, should not be associated with an divinical existence.

[11:3:12] Neither is peace associated with The Universe for the naturity of The Universe, although different from The Cosmos in that it remains unlimited, is also a continuation of the naturity of The Cosmos as it is formed by an infinite amount of other cosmoses and therefore, is also natured by conflict.

[11:3:13] Despite the Astronist philosophical tradition's stance on the inevitability of conflict in The Cosmos, the Astronist Tradition still advocates for pacifism in a political context; the idea of still advocating for something that is considered to be not completely attainable is henceforth known in the Astronist Tradition as persistentialism or the persistential approach.

[11:3:14] Just because the Astronist Tradition sees the reality of human nature to not only be prone to conflict, but to actually seek conflict in many ways does not mean that the Astronist Tradition is an advocate of conflict; in fact, the opposite it true.

[11:3:15] Instead, the Astronist Tradition prides itself on the honesty it expounds with regards to the nature of humanity and its tendencies towards conflict; understanding humanity and accepting humanity in this way allows for a conjucation (like a discussion, but better due to a truer premise) of peace.

[11:3:16] The instrumentation for the topic of peace shall also be conducted in a post-omnidoxical setting and will include the following relevant instruments of study: abundancy, bipolarity, centricity, composity, criticality, dyadicity, dynamicity, eternality, extrinsicity, finity, focality, fundamentality, functionality, futurity, imperativity, motivity, naturity, primarity, progressivity, proportionality and disproportionality, purposivity, rationality, sensicality, symbioticity, synchronicity and vastity.

The Venatic & The Eulearic

[11:4:1] The dichotomy of good and evil has existed in folklore and cultural traditions in a variety of forms throughout the history of humanity and so if the Astronic culture is to become a fully established cultural tradition in its own right then it must too develop its own conceptual approach to understanding goodness and evilness which will themselves be interpreted, dissected and discussed by Astronists and non-Astronists for a long time to come as we continue to philosophise about this most fundamental of subjects.

[11:4:2] Firstly, I must introduce the term that is to be henceforth known as venatarat, or The Venatarat, the former of which pertains to the concept of evil while the second with the use of the and capitalisation pertains to the physical manifestations of evil.

[11:4:3] In Astronist Philosophy, the appellation for the collectivity of actions, emotions, and beliefs that are an embodiment of that which is considered and perceived to be sentient evil, namely that which causes the ill-feeling, damage, or death of a sentient or non-sentient entity, either physically, conceptually, or hypothetically.

[11:4:4] Venatarat forms the embodiment and collectivisation of evil and is therefore opposed to Euleara which is the embodiment and collectivisation of goodness in order to form the Astronist version of a good-evil dichotomy.

[11:4:5] To be described as venatic, in Astronist Philosophy, shall henceforth relate to characteristics of evil that are conductible only by sentient beings; derivatives of this term shall include the following: venatical, venatically, and to be in a state or condition of venaticity.

[11:4:6] To orientise this concept, I hereby introduce that which shall be known as venatism which, in Astronist Philosophy, shall forevermore refer to the belief orientation holding that Venatarat, or venatic characteristics, are fundamental to the nature and identity of all sentient beings and are therefore natural due to the limited cosmic nature of all sentients rather than being considered distortions or malfunctions of sentient nature; followers of this belief orientation are to be known as venatists, or to hold views that are venatistic or venatistical.

[11:4:7] Venatism is contrasted with the latterintroduced orientation associated with Euleara or eulearic ideas; it is part of a venatologists role to explore the meanings, interpretations, and consequences of belief in venatism.

[11:4:8] That which is herein introduced and shall be henceforth termed as venatology, in Astronist Philosophy, is to pertain to a discipline of study within the inclusive discipline of contology dealing with the study of the identity, nature, role, and function of Venatarat, the Astronist version of the embodiment of sentient evil, or evility.

[11:4:9] Venatology is not to be confused with ponerology which deals with the broader philosophical study and contemplation of what it means for something to be evil and so venatology can be considered an Astronist branch of ponerology; derivative terms of venatology shall include the following: venatologist, venatological, venatologically, and venatologic

[11:4:10] Eulea-, in Astronist Philosophy, is the combining form relating to Euleara, or the embodiment of sentient goodness.

[11:4:11] The Euleara, in Astronist Philosophy, is the appellation for the collectivity of actions, emotions, and beliefs that are an embodiment of that which is considered and perceived to be sentient goodness, namely that which causes the happiness, enhancement, and repair or rebirth of a sentient or non-sentient entity, either physically, conceptually, or hypothetically.

[11:4:12] Euleara forms the embodiment and collectivisation of goodness and is therefore opposed to Venatarat which is the embodiment and collectivisation of evility in order to form the Astronist version of a good-evil dichotomy.

[11:4:13] To be eulearic, in Astronist Philosophy, relating to characteristics of goodness that are conductible only by sentient beings; eulearical, eulearically, eulearicality, eulearicly, and eulearicity are all derivative terms in relation to Euleara.

[11:4:14] The Euleara is orientised through that which will be referred to as eulearism in Astronist Philosophy, which pertains to the belief orientation holding that Euleara, or eulearic characteristics, are fundamental to the nature and identity of all sentient beings despite the influence that venatic characteristics hold over the actions, emotions, and thoughts of the majority of sentient beings, either consequentially or without consequence; a person that follows this orientation is to be known as a eulearist or a person that holds eulearistic or eulearistical views and beliefs.

[11:4:15] The discipline of study that shall be known as eulearology, in Astronist Philosophy, within the inclusive discipline of contology, will specifically deal with the study of the identity, nature, role, and function of Euleara, the Astronist version of the embodiment of sentient goodness, or upstanding morality.

[11:4:16] Eulearology is not to be confused with agathology which deals with the broader philosophical study and contemplation of what it means for something to be good and so eulearology can be considered an Astronist branch of agathology; related terms and derivatives of eulearology shall include eulearology, eulearological, eulearologically, and eulearologic.

[11:4:17] All contemplated across both eulearological and venatological studies as interpreted different by each of such disciplines is that which is to be known as structural evil which pertains to the study and contemplation of evil in human societies such as that

of slavery, rape, and domestic abuse; this cross-disciplinary study should also considered what can be classified as evil in the context of a society in addition to contemplating the subjective nature of what can be constituted as good and that which can be constituted as evil.

Further Contributions to Astronic Thanatology & Astronic Supernaturalism

[11:5:1] Astrincarnation, as defined from transtellation, due to the fact that transtellation is not considered to be a form of reincarnation, instead astrincarnation is the belief that upon our deaths, we reincarnate into some kind of cosmic progeny or phenomena.

[11:5:2] That which is to be known as sideroport, or sideroportation, shall refer to transporting or being transported across expanses of The Cosmos or spacetime instantly or at a highly reduced travel duration, an example of which is transportation through a wormhole.

[11:5:3] The belief that when we die we reincarnate to a different planet is to be henceforth known as replanetation.

[11:5:4] That which is to be known as planetation shall refer to the state or fact of being born, subsequently residing on, and affiliating oneself with a particular planet.

[11:5:5] That which is to be known as an astra refers to the notion that every progeny and phenomena holds an energy field or spiritual sphere which varies from object to object.

[11:5:6] Cosmolocation refers to the alleged psychic or miraculous ability wherein an individual or object is located on two different cosmic progeny simultaneously.

[11:5:7] Astronism on the topic of UFOs and ufology postulates a general rejection of notions of witnesses of UFOs and the study of which is also opposed due to the belief that the study of which undermines the search for true sentience in The Cosmos.

[11:5:8] To astruct, or to conduct that which is to be known as astruction refers to the alleged ability that an astructor can summon an astronomical progeny or cause a cosmic phenomena to occur.

[11:5:9] Another important branch of Astronic eschatology and thanatology to herein introduce juvenile thanatology which explores the beliefs of children regarding death and the afterlife; directly inspired by this are those which are to be known as child philosophy or child religion (also known as juvenile philosophy or juvenile religion respectively) which refer to the beliefs held by children regarding different religious and philosophical topics as well as the nature of a child's adherence to beliefs in addition to the study of the general philosophicality and religiosity of children.

[11:5:10] That which is herein introduced as the term of astrition shall refer to the ability of being able to accurately foretell the occurrence of astronomical progeny observation and phenomena, especially by non-scientific means.

[11:5:11] Psychocosmosis refers to a person's alleged ability to influence astronomical progeny and phenomena without physical interaction.

[11:5:12] Precosmosis, as practiced by astricians, refers to a person's heightened perceptual ability to discern a person's likelihood of corporeal cosmosis.

[11:5:13] That which is to be henceforth known as astrasis or astrostasis, or also known as cosmstasis, shall refer to the belief and practice of associating a particular star (astrasis/astrostasis) or any other cosmic progeny or phenomena (cosmstasis) with a person, especially conduct at their birth according to the star that was most prominent in the sky the night they were born; also colloquially referred to as star affiliation, the star or other progeny or phenomena to which one is associated at birth or by choice later in one's life is believed to provide them with luck whenever it appears prominently in the night sky; this particular star is to be known as a guiding star.

[11:5:14] Legacy theology or legacy philosophy refers to the notion that the contributions we make to human transcension through the legacies we achieve and subsequently leave behind after our corporeal deaths is the central purpose and meaning of our lives and it is this that rests at the centre of transcensionist beliefs.

[11:5:15] That which is to be known as juvenile vision refers to the notion and belief that children hold a greater ability to achieve cosmosis than adults due to their pure and untainted minds.

[11:5:16] That which is to be known as deathbed cosmosis refers to the notion and belief that those people who are dying are more likely to achieve corporeal cosmosis than those whom are well or those who are young.

[11:5:17] The eschatological question of the fate of the unlearned, known in Astronism as the destination of the unastronised, finds itself answered in relation to the notion that all the unastronised shall automatically be considered to have died and have not experienced corporeal cosmosis.

[11:5:18] What Astronism ultimately theologically and philosophically opposed to is that which is known as anthropathism which involves the attribution of human emotions with non-human entities, such as deities; it is this practice that is considered to demonstrate the height of egotism expounding from human thought and is totally opposed to by the belief within Astronism.

[11:5:19] The pre-Astronist notion of the existence of an astral projection or astral travel which assumes the existence of a soul or consciousness called an "astral body" that is separate from the physical body and capable of travelling outside it throughout the universe is to herein be classified as part of Astronic supernaturalism due to the astronomical theme of the belief and concept.

[11:5:20] In transcensionism, due to its tendency to side with the Astronic naturalist school of eschatology, whether there exists life or not after death is irrelevant due to its focus on the transcension of humanity as paramount hence its focus on contributionism and legacy philosophy.

[11:5:21] There is another extant branch of Astronic eschatology and thanatology that is to be introduced here which is to be known as the transhumanist school as directly inspired and derived from the movement and body of beliefs and ideas known as transhumanism.

[11:5:22] The transhumanist school of Astronic eschatology and thanatology is principally concerned with the prevention of death due to its acceptance of the naturalist view of the eternal oblivion, however, the transhumanist school does not agree with the notion that we should agree to our ultimate fate as eternal oblivion, but instead believe that we have been provided with sentience in order to extend our lives to the furthest extent possible.

[11:5:23] It is important to note that transhumanists don't believe in immortality due to the incompatibility of immortality with our cosmic nature and the nature of The Cosmos itself, but instead advocate for significant life extension and death prevention through the development of technologies to achieve such feats.

[11:5:24] The first of the branches of this school is to be known as cryogenicism or cryogenism which shall henceforth refer to the death prevention technique of freezing bodies at extremely low temperatures to halt the cell evolutions in their bodies until cures and life extensions are developed to a greater extent, after which they will be revived to benefit from such advancements in medicine.

[11:5:25] Other contributions to the transhumanist school of eschatology and thanatology will be explored post-omnidoxically and shall include solipsist eschatology, reproductionism and oneirism.

Meteorological Devotion (Atmosphericism)

[11:6:1] That which is to be henceforth known as meteorological devotion, or colloquially referred to as weather devotion, and oriented through the set of beliefs encompassed by the term atmosphericism shall refer to a branch of nature devotion or nature worship alongside cosmic devotion, but is instead focused on devotions directed towards meteorological progeny and phenomena.

[11:6:2] The purpose of this short discourse is to introduce all the different types of weather devotions that are recognised as part of Astronist devotional practices.

[11:6:3] But before I conduct that list, it is important for me to explore and define the term of atmosphericism itself first; atmosphericism, despite deriving from the word atmosphere, in the context of Astronism, relates to all forms of nature or weather devotion that is not cosmic by categorisation but can instead be categorised as terrestrial devotions; hence, in Astronism, there exists the cosmic devotion category and the terrestrial devotions category.

[11:6:4] With terrestrial devotion, similar in structure to cosmic devotion, there exists the subcategories of progeny and phenomena which pertain to physical objects and natural events respectively.

[11:6:5] The first form of devotion within the progenial subcategory as part of atmosphericism uses a term that has already been used in various different instances throughout the Omnidoxy and the introduction of Astronism and that is nepholism including in particular nacreous clouds, lenticular clouds, morning glory clouds in Australia, mammatus clouds, asperatus clouds, and fallstreak holes, but may also include fog and mist.

[11:6:6] That which is herein introduced as nivalism shall henceforth pertain to devotions to all forms of snow including falling snow, settled snow, but also includes icicles too.

[11:6:7] Precipitationism is the third form of terrestrial devotion within the progenial subcategory and shall henceforth pertain to all forms of devotion directed towards rain including hail and is often combined with some phenomenal forms of terrestrial devotion.

[11:6:8] Waves are herein classified as a progeny in and of themselves so they are categorised as part of terrestrial progenial devotion, however, with the devotion of waves comes closely associated with phenomenal devotions including tsunami, tidal wave, and all other types of events caused by waves, all of which is to be collectively referred to as surfism.

[11:6:9] Devotions attributed to phenomena is the second subcategory within terrestrial devotion and atmosphericism just as it is the same for cosmic devotion with its two halves of progenial and phenomenal devotion.

[11:6:10] That which is herein introduced as tempestism refers to the collective term involving devotions of all types of storm phenomena including cyclones, typhoons, hurricanes, dust storms, monsoons, thunderstorms, lightning and thundersnow.

[11:6:11] Devotion to tornados, which also includes devotion towards landspouts, waterspouts, dust devils, and fire whirls, is provided with its own devotional section due to the magnificence and importance that is provided to tornadoes and different forms of vortexes as part of atmosphericist beliefs and devotions.

[11:6:12] Devotion to winter storms is also provided with its own devotion section and also includes different forms of phenomena involving snow including blizzards and avalanches; this devotional section is to be henceforth known as hibernalism.

[11:6:13] The next devotional section to introduce involves devotion towards whirlpools and shall be henceforth referred to as maelstromism.

[11:6:14] Cloudbursts are provided with their own devotional section as part of terrestrial phenomenal devotion and devotion to such is to be henceforth known as hypernepholism.

[11:6:15] The practice of storm chasing is considered to be an important practice as part of terrestrial devotion and as a result, remains important to the beliefs within atmosphericism; it remains one of my own personal ambitions to one day go storm chasing despite the dangers in order to witness the power of the atmospheric as some kind of connection to or miniscule microcosm of the power that is held by cosmic progeny and phenomena.

[11:6:16] Other closely related forms of meteorological devotion include seismological devotion which is devotion to earthquakes, orogenism which is devotion to mountains, volcanism which is devotion to volcanic phenomena (including volcanic lightning and blue lava), geysers, rainbows, moon bows, haze, and midnight sun.

[11:6:17] Wherein meteorological devotion and cosmic devotion come together is in the devotion of space weather or spaciometeorology as it is to be termed within Astronism and the most important phenomena as part of this being solar winds, but also including geomagnetic storms, substorms, auroras, scintillation, coronal clouds, and shockwaves. Spaciometeorological devotion is considered to be most closely associated with the aforeintroduced phenomena category of cosmic devotion.

[11:6:18] As the final important element of terrestrial devotion to introduce herein is that which is to be known as spectacle devotion which involves going to specific landmarks

featuring significant terrestrial phenomena, some of which are listed below, however, this is not the full list, but it shall be extended post-omnidoxically.

[11:6:18a] Gateway to Hell, Turkmenistan

[11:6:18b] Steam Eruptions, Iceland

[11:6:18c] Calcifying Lakes, Tanzania

[11:6:18d] Light pillars, Russia

[11:6:18e] Turquoise ice, Lake Baikal

[11:6:18f] Great Blue Hole, Belize, Bahamas, Egypt, Australia, and Guam.

[11:6:18g] Pororoqa, Amazon River

[11:6:18h] The Eye of the Sahara

[11:6:18i] Salt lakes, Bolivia

[11:6:18j] Forest of knives, Madagascar

[11:6:18k] Green Flash Sunset

Astronomical Commemoration (Avicinology)

[11:7:1] That which shall be titled as astronomical commemoration is to pertain to the series of social events, both of a public and private nature, which are held in commemoration of different occurrences and landmark phenomena in the history of astronomy, space exploration, or in Astronic history.

[11:7:2] The first and most common of these is to be known as an astroparty which shall pertain to an organised celebration either privately or publicly for the commemoration of a phenomenal event or an exploratory event.

[11:7:3] In the context of astronomical commemoration, a phenomenal event refers to a type of astronomical commemoration that is held in the name of the occurrence of a particular astronomical phenomena while an exploratory event is a type of commemoration focused on an occurrence or landmark milestone in space exploration, human engineering, discovery or anything involving human progressions in space exploration knowledge and advancements.

[11:7:4] Staple examples of events and activities in either of these categories that are of a public nature include attending a service at a sopharium, wearing an astronomically-themed pertaining to the particular event of commemoration, a countdown to the specific moment of commemoration, and a visitation to a historic location related to the commemorated event.

[11:7:5] Other activities include a general visitation to a sopharium, sharing of stories regarding the event such as those which are known as Where I Was stories, creative activities such as drawing, baking, or making any item in relation to the commemorated event, theming lessons/education in schools in the day or week around the event, purchasing products related to that era, going stargazing, looking up interesting facts about the event, watching films or reading articles/books related to the event, writing down memories in relation to the commemorated event along with many other different ways to acknowledge and participate in astronomical commemorations.

[11:7:6] Astronomical commemorations can be in relation to both past and presently occurring events which are to be anticipated and prepared for as they are categorised as future astronomical events, or determined astronomical events that we know will occur at an approximate time.

[11:7:7] Future astronomical commemorations are extremely important to Astronism theologically and philosophically, but they are also important to festology, or Astronic heortology especially due to the fact that future events in Astronism are preferred over the commemoration of past events.

[11:7:8] Astronomical commemorations directed towards future solar eclipses and future lunar eclipses will make up a significant amount of future astronomical commemorations observed by Astronists, some of the most prominent ones of which are listed as part of the next set of insentensations.

[11:7:9] 2061 July 28 Halley's Comet reaches perihelion as it returns to the inner Solar System.

[11:7:10] 2065 Venus occults Jupiter.

[11:7:11] 2067 Mercury occults Neptune.

[11:7:12] 2076 – The planetoid 90377; Sedna reaches perihelion.

[11:7:13] 2100 March 24 Polaris appears furthest North. Polaris's maximum apparent declination (taking account of nutation and aberration) will be 0.45260 from the celestial north pole.

[11:7:14] 2113 August – The first time Pluto reaches aphelion since its discovery.

[11:7:15] 2114 – Sedna overtakes Eris as the farthest known planet-like object orbiting the Sun.

[11:7:16] 2123 June 9 – Long-duration lunar eclipse of approximately 106.1 minutes.

[11:7:17] 2123 September 14 – At 15:28 UTC, Venus eclipses Jupiter.

[11:7:18] 2134 – Halley's Comet returns to the inner Solar System

[11:7:19] 2150 June 25 – Long-duration (7 min 14 s) total solar eclipse, Solar Saros 139.

[11:7:20] The first "long" (> 7 min.) total solar eclipse since June 30, 1973.

[11:7:21] 2168 July 5 – Long (7 min 26 s) total solar eclipse, saros 139.

[11:7:22] 2174 – The second full orbit of Neptune around the sun since its discovery in 1846.

[11:7:23] 2177 – "First Plutonian anniversary" of the dwarf planet's discovery, given that Pluto's orbit is just under 248 Earth years.

[11:7:24] 2186 July 16 – The longest total solar eclipse of the century. Lasting 7 min 29 s, it is very close to the theoretical maximum, and is predicted to be the longest eclipse during the current 10,000 year period, from 4000 BC to AD 6000 (eclipse predictions by Fred Espenak, NASA/GSFC.DEPP).

- [11:7:25] 2197 September 2 – Venus occults Spica (the first time since November 10, 1783).
- [11:7:26] 2197 December 24 – The Moon occults Neptune.
- [11:7:27] 2209 – Return of Halley's Comet
- [11:7:28] 2253 August 1 – Mercury occults Regulus (for the first time since August 13, 364 BC).
- [11:7:29] 2265 – Return to perihelion by the Great Comet of 1861.
- [11:7:30] 2281-82 – Grand Trine of Uranus, Neptune, and Pluto. This last occurred in 1769 and 1770.
- [11:7:31] 2309 June 9 – The longest total solar eclipse of the century, at 6 min. 30 s.
- [11:7:32] 2365 – Perihelion of Comet Halley
- [11:7:33] 2391 May 11 – Partial transit of Mercury
- [11:7:34] 2400 November 17 – Venus occults Antares (for the first time since September 17, 525 BC).
- [11:7:35] 2426 – Pluto's second orbit, since its discovery.
- [11:7:36] 2492 May 6 – Belgian astronomer Jean Meeus asserts that the orbits of all eight planets and Pluto will be within the same 90° arc of the Solar System; the last time this is believed to have occurred was on February 1, 949.
- [11:7:37] 2504 June 14 – Long (7 min. 10 s.) total solar eclipse, of saros 145.
- [11:7:38] 2540 July 5 – Long (7 min. 4 s.) total Solar eclipse.
- [11:7:39] 2562 – The dwarf planet Eris completes one orbit of the Sun, since its discovery in 2005.
- [11:7:40] 2600 May 5 – First total solar eclipse visible from London since 2151; the width of its path is predicted to be exceptionally wide at its maximum point.
- [11:7:41] 2608 May 13 – Grazing transit of Mercury
- [11:7:42] 2650 September 3 – The distance between Mars and the Earth will arrive at a new remarkable minimum, at 55,651,582.118 km.

[11:7:43] It will be the closer encounter of perihelitic opposition slightly shorter (of next 37,000 km) than the previous one of the August 28, 2287.

[11:7:44] 2699-2700 – 3 triple conjunctions occur within a 2-year time, between Mars-Jupiter, Mars-Neptune and Jupiter-Neptune.

[11:7:45] 2729 September 8 – The distance between Mars and the Earth will arrive at a new remarkable minimum, at 55,651,033.122 km; It will be the closer encounter of perihelitic opposition slightly shorter (of 549 km) than the previous one of the September 3, 2650.

[11:7:46] 2800-99 – The remnants of Comet Ikeya-Seki are expected to return to the inner solar system. It was last seen from Earth in 1965-1966, and broke into three pieces as it approached the Sun.

[11:7:47] 2880 March 16 – Predicted possible impact date for asteroid (29075) 1950 DA, the near-Earth object with the highest known probability of crashing into Earth.

[11:7:48] 3000 – Due to the precession of the equinoxes, Gamma Cephei becomes the North star.

[11:7:49] 3089 December 18 – First transit of Venus which is not part of a pair since November 23, 1396.

[11:7:50] 3412 – Expected return of Comet McNaught-Russell.

[11:7:51] 3711-12 – Multi-triple conjunction between Jupiter, Saturn, Uranus and Neptune.

[11:7:52] 3973 July 13 – At 18:54:49 UTC a long (7 min 12s) total solar eclipse.

[11:7:53] 3991 July 25 – At 02:29:22 UTC a long (7 min 18s) total solar eclipse.

[11:7:54] 4000-4999 – The expected return of Comet Donati.

[11:7:55] 4009 August 4 – At 10:00:56 UTC a long (7 min 12s) total solar eclipse.

[11:7:56] 4385 – Comet Hale-Bopp is expected to return to the inner solar system. It last dominated the skies of Earth in 1996-97.

[11:7:57] 4520 – Hale-Bopp reaches its closest to the sun since 1997.

[11:7:58] c. 4876 – The Great Comet of 1811 is expected to return to the inner solar system. According to calculations made at the time, the comet should return around the year 4876.

[11:7:59] 4903 June 29 – At 8:55:01 UTC a long (7 min 0s) total solar eclipse.

[11:7:60] 4921 August 8 – At 16:28:39 UTC a long (7 min 3s) total solar eclipse.

[11:7:61] c. 5200 – Iota Cephei becomes the North star.

[11:7:62] 5366 August 27 – Venus occults Aldebaran (the first occultation of Aldebaran by a planet since July 15, 18,980 BC).

[11:7:63] 6727 August 25 – Mars occults Regulus (for the first time since June 28, 17,619 BC).

[11:7:64] 6757 July 5 – There is anticipated to be a simultaneous solar eclipse and transit of Mercury, the first such simultaneous eclipse and planetary transit in recorded history.

[11:7:65] 7541 February 14 – Jupiter occults Saturn (the first time since prehistoric times, and the first of a double row in a year, the only occurrence of this for perhaps at least a million years).

[11:7:66] c. 7800 – Plutoid 90377 Sedna passes its aphelion in the decades around the year 7800 AD.

—

[11:7:67] In addition to the study of astronomical commemorations, avicinology is also the discipline of study that deals with and philosophically contemplates the far future and can be considered either as a branch of eschatology or a related branch of philosophy and theology to eschatology.

[11:7:68] The discussion of the far future is expected to be one of the most interest for Astronists due to the core beliefs of Astronism and our entire worldview; it is perhaps in this discussion that we will see the most divergence of the Astronist worldview from other worldviews which will play an instrumental role in distinguishing and clearly defining Astronist stances and beliefs; any discussion of the far future must be had on four different levels in Astronism.

[11:7:68a] The first of these levels is the far future in relation to The Cosmos, how The Cosmos will end, what will happen after The Cosmos ends, what sequence of events will occur as part of this cosmic ending.

[11:7:69] In close association with the discipline of omnology, the Ultimate fate of The Cosmos is also considered to be philosophised and discussed as part of avicinology including all the various beliefs and theories that are either Astronist or pre-Astronist in origin and are considered more in-depth as part of omnological study.

[11:7:70] The New Earth is a concept originating in Christianity, but similar to many other instances within the Omnidoxy, we can apply pre-Astronist/pre-Astronic ideas and beliefs

to the context of Astronism as an important method of distinguishing Astronist beliefs regarding specific subjects from those of other faiths; Astronism affirms belief in a New Earth, but significantly not in the same way as this is interpreted in Christianity; Astronism postulates that Other Earths exist throughout The Cosmos wherein sentient beings as part of civilisations of all developmental stages have evolved differently from ourselves, but nevertheless exist; the redemption of humanity in Astronism is considered to be achievable through our transcension as attained by space exploration and through our completed discovery of Other Earths; a transcended humanity in Astronism is equated with a redeemed humanity in the context of Christianity; the New Earth of Astronism, or the Other Earth concept is to be further explored post-omnidoxically and is considered to hold significant contributions to Astronic eschatology.

[11:7:71] Not only are astronomical events considered as part of avicinological study and Astronist commemoration, but so are predictable events rendered as significant to the future of humanity also observed.

[11:7:72] 10,000 – Most probable estimated lifespan of technological civilisation, according to Frank Drake's original formulation of the Drake equation.

[11:7:73] 10,000 – If globalisation trends lead to panmixia, human genetic variation will no longer be regionalised, as the effective population size will equal the actual population size.

[11:7:74] 10,000 – Humanity has a 95% probability of being extinct by this date, according to Brandon Carter's formulation of the controversial Doomsday argument, which argues that half of the humans who will ever have lived have probably already been born.

[11:7:75] 20,000 – According to the glottochronology linguistic model of Morris Swadesh, future languages should retain just 1 out of 100 "core vocabulary" words on their Swadesh list compared to that of their current progenitors.

[11:7:76] 100,000+ – Time required to terraform Mars with an oxygen-rich breathable atmosphere, using only plants with solar efficiency comparable to the biosphere currently found on Earth.

[11:7:77] 1 million – Estimated shortest time by which humanity could colonise our Milky Way galaxy and become capable of harnessing all the energy of the galaxy, assuming a velocity of 10% the speed of light.

[11:7:78] 2 million – Vertebrate species separated for this long will generally undergo allopatric speciation. Evolutionary biologist James W. Valentine predicted that if humanity has been dispersed among genetically isolated space colonies over this time, the galaxy will host an evolutionary radiation of multiple human species with a "diversity of form and adaptation that would astound us". This would be a natural process of isolated populations, unrelated to potential deliberate genetic enhancement technologies.

[11:7:79] 7.8 million – Humanity has a 95% probability of being extinct by this date, according to J. Richard Gott's formulation of the controversial Doomsday argument, which argues that we have probably already lived through half the duration of human history.

[11:7:80] 100 million – Maximal estimated lifespan of technological civilisation, according to Frank Drake's original formulation of the Drake equation.

[11:7:81] 1 billion – Estimated time for an astroengineering project to alter the Earth's orbit, compensating for the Sun's rising brightness and outward migration of the habitable zone, accomplished by repeated asteroid gravity assists.

[11:7:82] The next segment of astronomical commemorations to introduce and consider are those predictable events which are considered to be significant in the development of spacecraft and spacecraft technology as well as important to wider space exploration.

[11:7:83] 10,000 – Pioneer 10 passes within 3.8 light-years of Barnard's Star.

[11:7:84] 25,000 – The Arecibo message, a collection of radio data transmitted on 16 November 1974, reaches the distance of its destination, the globular cluster Messier 13. This is the only interstellar radio message sent to such a distant region of the galaxy. There will be a 24-light-year shift in the cluster's position in the galaxy during the time it takes the message to reach it, but as the cluster is 168 light-years in diameter, the message will still reach its destination; any reply will take at least another 25,000 years from the time of its transmission.

[11:7:85] 32,000 – Pioneer 10 passes within 3 light-years of Ross 248.

[11:7:86] 40,000 – Voyager 1 passes within 1.6 light-years of AC+79 3888, a star in the constellation Camelopardalis also known as Gliese 445.

[11:7:87] 50,000 – The KEO space time capsule, if it is launched, will reenter Earth's atmosphere.

[11:7:88] 296,000 – Voyager 2 passes within 4.3 light-years of Sirius, the brightest star in the night sky.

[11:7:89] 800,000–8 million – Low estimate of Pioneer 10 plaque lifespan, before the etching is destroyed by poorly-understood interstellar erosion processes.

[11:7:90] 2 million – Pioneer 10 passes near the bright star Aldebaran.

[11:7:91] 4 million – Pioneer 11 passes near one of the stars in the constellation Aquila.

[11:7:92] 8 million – The LAGEOS satellites' orbits will decay, and they will re-enter Earth's atmosphere, carrying with them a message to any far future descendants of humanity, and a map of the continents as they are expected to appear then.

[11:7:93] 1 billion – Estimated lifespan of the two Voyager Golden Records, before the information stored on them is rendered unrecoverable.

Introduction to Prerology

[12:1:1] Imagination is all there was, is and will be, for imagination is the sole reason why thee and those surrounding, are where they are, for imagination is all that has driven humanity to its current position.

[12:1:2] Imagination is the greatest of all gifts that the one of divinity can give for imagination allows one to be oneself, allows one to show others themselves and allows one to progress all.

[12:1:3] One must realise that imagination is all we humans have to distinguish ourselves from other beings, for our imagination acts as the driving force of all ideas and without such, humans would never have evolved from our primates.

[12:1:4] The most powerful entity imagination is, for imagination is the practice of idea and creation of such and it is the divine one's way of reaching those of great worthiness to do what must be done in the divine one's grand plan.

[12:1:5] To create is to first imagine for the necessary predication of creativity is imagination.

[12:1:6] With good deed as goal, faith and morality, one must use their greatest gift given to progress all for future progression may hang on the imagination of one.

[12:1:7] It is one's decision of how to use their greatest gift given that defines their morality and faith, yet the divine knows all and knows you through and through and so if thy never imagine and create, the divine one must have other plans for thee.

[12:1:8] Do not fret nor worry though if this turns out to be you for the divine one has plan for all the divine one's creations and without those without, there could not be those with.

[12:1:9] What you must do is assist those with and aid those without for aiding those without will warrant your good deed and the one of divinity will honour you with happiness and joy.

[12:1:10] Assisting those with, will show your selflessness and lack of jealousy which too will warrant of good deed and moral; satisfy you this will for you will know that thou hast fulfilled all that was planned for you.

[12:1:11] It is, with earnest, that imagination should always be spoken and written of, for the gift of imagining that which does not yet physical exist is of greatness, yet it is a responsibility known to twist those of good nature.

[12:1:12] It is part of your journey of imagination that these tempts and distortions will arise, for these such devils are that which make your imagination stronger.

[12:1:13] Prepare and share your imaginations with the world around you and what you have imagined may well come true if that is the will of the divine one.

[12:1:14] Remember, oh dear soul, to not lose your faith, morality and the universal goal of the betterment of peoples for these are the pillars upon which thy imaginations stands.

[12:1:15] The Principles of Imagination, unlike others of its kind, directly delves to the deepest and divinest of what makes one become one and what makes one become one of all.

[12:1:16] It is, from imagination, that all else thrives and grows and so cherish the greatest gift you have been gifted yet do not forget the purpose of your gift.

[12:1:17] Never, you must, ever lose sight of that which first called you to tread the path on which you now walk, for if that is so, all that has been done is meaningless nothingness.

[12:1:18] The one of divinity created all things; time, movement and space between space.

[12:1:19] The Divine, also, created something for all yet all cannot reach such a place or status as they are for this such place and status is for those who think by their faith, by their morality and by their creator.

[12:1:20] This place, this status, is that of Freedom.

[12:1:21] The reward Freedom is for all those whose goal is peace for the goal of peace is the only way of reaching Freedom.

[12:1:22] Away go and think of all thou hast morally wrong done and all that thou hast defied for you are not of perfection; you are of imperfection for that is how the divine one plans for you to be and stay.

[12:1:23] It is, however, the act of honesty with the goal of peace in heart that will lead you to a place of purity, sanctity and foreverness yet do not let this image be your motivation for the divine will sense your ill-reasoning and send you back before you may enter.

[12:1:24] It is your faith that teaches such things to you and it is your morality that decides of your worthiness and readiness to enter that of eternity.

[12:1:25] The fact of Freedom is that you are not of all-knowing, all-seeing and all-deciding, but you are of all-ignorance, all-blindness and all with one; your creator.

[12:1:26] Your creator is all you see for all that you have experienced in your shortness is wiped away from your spectrum.

[12:1:27] It is The Divine one that cares and loves and cherishes for all those you have met and loved and missed will too come to the point at which you now stand.

[12:1:28] The point of loving only one.

[12:1:29] The point of seeing only one.

[12:1:30] The point of knowing only one.

[12:1:31] The one that which created you.

[12:1:32] The one that which waited for you.

[12:1:33] The one that which judged thee worthy.

[12:1:34] Nothing at all matters else for the one that all judgement truly surrounds has accepted you and has forgiven you and, good deed, moral and faith willing, will do the same to those that which you have loved and cared and missed.

[12:1:35] A state you are now in; one of nothingness yet one of entirety; one of feelings not, yet one of love; one of worship yet one of equality.

[12:1:36] This state you are now in is the state of eternal Freedom; this is to be known as and referred to henceforth divinosis, or union with The Divine.

[12:1:37] Life there is not; death there is not for all that you know is now nothing and all that pained you is now nothing for you are now one with The Divine.

[12:1:38] Face the one of divinity that created you and all things, and smile, oh eternal smile so, for you now are with all and one, one and all and that is of greatest achievement to be with the one who loves you most.

[12:1:39] Then, look out, and nothing but calmness nothing you feel as you watch over the cosmoses of The Universe of The Divine's singular creation and sustainment and see what The Divine sees and feel what The Divine feels and know, what The Divine knows for you are as one.

[12:1:40] Then, as the great demiurgic light stands beside you, look across and see all those you stewarded and aided, judged and accepted.

[12:1:41] Then, look back within yourself and know of the ambition, enlightenment, patience and imagination within.

[12:1:42] You now are of true peace; see and know, you do, that of freedom for you float within it, beside the creator of one as one, the creator of all as whole.

The Study of Imagination (Initiology)

[12:2:1] That which is herein introduced as initiology shall henceforth refer to the major discipline of study within prerology dealing with the nature, psychology, utility, and philosophy of imagination and its connections to behaviour, devotional practices, personality, the role of humanity in The Cosmos, and the future of the human condition more generally.

[12:2:2] Prerology ultimately maintains that the essential goal of every person is to achieve freedom; this means either freedom from themselves, from others, from desire, from pain, from the way they feel, and from what they want.

[12:2:3] It is the task of prerologists to attempt to discover how to achieve freedom from such things with one of its main contemplations centring on whether happiness is correspondent to freedom; it also contemplates the true meaning of freedom.

[12:2:4] Initiological study or to study initiologically, as is conducted by those whom are to be known as initiologists, is predicated upon the emphasise and prioritisation, but also the preuration of imaginativity applied to all subjects but of a philosophical and non-philosophical nature; to consider something initiologically is to fundamentally understand and perceive something according to the notion that its existentiality is based on imagination as the precursory or underlying or fundamental notion.

[12:2:5] Also, as part of initiological study is that which is to be termed as philosophicity which pertains to the extent to which a person, an object, or a concept can be described as philosophical according to its nature, the way it was formed, the way it acts/behaviours, the way it perceives and thinks (if applicable), and the way it interacts with others, either physically or intellectually; essentially, initiological study, in addition to exploring the nature of imagination, it is also herein assigned with being the study of what denotes the extent of something's approximation to being philosophical in its nature, character, theme, and form which also makes initiology a metaphilosophical discipline of study too.

[12:2:6] Imagination in the context of philosophy is also a prominent area of contemplation and study within the boundary of initiology, especially focusing on the nature and relevance of the role of imagination for the context of philosophical disciplines across the spectrum; this branch of initiological study should also consider the role of imagination in the development of philosophical traditions and all types of conceptals.

[12:2:7] That which is to be known as the initiological principle shall pertain to the notion that from all things must first come imagination and that all things of human existence such as civilisation, belief, knowledge, and all else that makes us sentient is predicated upon the functions and the essential existence of imagination; the initiological principle postulates that imagination is paramount to advancement of the human condition, is

essential to sentience, and is also intrinsic to the success of the Humanic Exploration of The Cosmos, the achievement of transcension, and the realisation of both individual and collective cosmosis.

[12:2:8] That which is to be herein introduced and appellated as Cosmic Imagination, which may also be termed as the cosmic initiological principle, shall pertain to the notion that cosmic exploration and humanity's discovery and greater enknowledgement and understanding of The Cosmos, its workings as a whole, in addition to the functions of its progeny and phenomena is all predicated on the extent of our imaginations, both individually (known as personal imagination) and collectively (known as common imagination).

[12:2:9] This is also closely related to the topic of contributionism as part of transcensionism as imaginative contributions are considered to be the most significant driving forces for the eventual achievement of transcension according to the initiological view; as an extension to the Cosmic Imagination notion, The Cosmos is considered to be the source of all imagination, or at least the superior or most important origination point of imagination hence advocating for the proliferation of the branch of philosophy pivotally introduced alongside Astronism known as cosmic philosophy.

[12:2:10] Imagination is considered to be the focal point of philosophy from the perspective taken of the initiological principle; there is considered to be no greater important conceptualiser than imagination as the starting point for all thought; therefore, epistemologically, from the initiological perspective, imagination is also perceived to be the initialiser of knowledge, the conveyer of knowledge, and the precursor to knowledge.

[12:2:11] The Centrality of The Cosmos in relation to imagination is to be closely related to cosmocentricity; the relationship between imagination and The Cosmos is The Centrality of the beliefs of cosmocentrism; it is considered that without the centralisation of imagination, one's understanding of the concept and belief of cosmocentricity cannot be achieved and neither can cosmosis be achieved.

[12:2:12] Imagination as another dimension is another concept within initiological study that is to be considered as part of the study; the notion that imagination is considered as another spacial, psychological, and intellectual dimension may be considered achievable as part of the beliefs of Astronism and initiological study and contemplation.

[12:2:13] Imagination as a form of reality rather than just a function of the human mind is also part of Astronist beliefs and initiological study and contemplation in relation to the nature, form, and structure of imagination.

[12:2:14] Imagination is bound by three things: knowledge, perception, and experience, the latter of one of which includes memory; therefore, we can conclude that the nature of imagination is three dimensional, or based upon tridimensionality.

[12:2:15] The Astronist distinctions between imagination, belief, and knowledge are to be made post-omnidoxically as part of the study of initiology due to the need to draw distinguishments between these three forms of understanding, the principal one of which is imagination and it is from which the other two originate and are dependent upon.

[12:2:16] Imagination is considered to be sacred by the Astronist Tradition as an intrinsic part of the beliefs of Astronism; the sacredness of imagination is to be valued forevermore; note the rare use of the word sacred due to its religious context, which raises imagination to an even higher status within Astronist Philosophy and provides a solemnity regarding the sacredness of something that is seldom seen elsewhere within Astronism.

[12:2:17] The conduct of an instrumentation in application to the subject of our ability to imagine is the final element of initiological study to explore as part of this discourse; the immense importance of instrumentations should not be understated as part of Astronist philosophical discourse as the conduct of instrumentations allows for our deeper understanding of topics through use of a range of relevant instruments of study; this particular instrumentation conducted on imagination will take place in a post-omnidoxical discourse extension.

[12:2:18] However, the instruments of study that are considered to be relevant to the topic of imagination and which will be applied in the post-omnidoxical discourse extension will include bipolarity, centricity, composity, criticality, dynamicity, eternality, extrinsicity , focality, fundamentality, functionality, graduality, imperativity, motivity, mysteriousity (relating to the mysteries associated with imagination), naturity, primarity, progressivity, proportionality and disproportionality, purposivity, rationality, sensicality, symbioticity, synchronocity, and vastity.

[12:2:19] The majority of imaginations stem from fictional stories and this is what has inspired the development of human imagination.

[12:2:20] However, the Astronist Tradition considers The Cosmos to be the new encompassing source of human imagination, but the crucial difference is that The Cosmos is real.

[12:2:21] The Cosmos is considered to be the greatest source of imagination; a vastly abundant and seemingly never-ending resource of imaginative origination that is to be territorialised religiously by Astronism and is to be territorialised philosophically by cosmic philosophy.

The Ancient Philosophers

[12:3:1] In Astronist philosophy, we take inspiration from the philosophers of the past in order to formulate the philosophers of the present and the future and in the formulation of the entirety of the Astronist philosophical tradition itself.

[12:3:2] Prerology also addresses what can be considered the best life according to sentient standards and considers the views of different mononymous philosophers, the first of which is of course myself as Cometan as I consider the best life to be a life close to all that is cosmical.

[12:3:3] Meanwhile, the mononymous philosopher, Plato, considers the best life to be a life that remains consistently close to god in one's mentality and also Socrates considers the best life to be a life of virtuousness above all forms of pleasure for he notionised that to suffer wrong is superior to conducting wrongness.

[12:3:4] Furthermore, the mononymous philosopher, Epicurus, considered the best life to be the attainment of a full happiness on The Earth and in addition, the mononymous philosopher, Aristotle, notionised that the best life is a life of full engagement and embracement into one's society.

[12:3:5] The consideration of the best life is concerned within prerology due to the fact that the attainment of one's best life is a liberation and therefore a form of the achievement of freedom, therefore prerologists are expected to be in continuous debate of what makes the best life with different schools of thought both within Astronist philosophy and outside of it, both pre-Astronist and post-Astronist, are expected to also contribute to this interesting debate of what makes the best life for different groups of people.

[12:3:6] Some are expected to take the individualistic approach notionising that the best life for one may or may not be the best life for another while others will take the unquitarian approach notionising that one's best life is unique to oneself due to each of our unquities and finally, some may take the mass approach in which one form of best life is applicable to a huge population of people, or to the entirety of humanity.

[12:3:7] The approach taken in the context of Cometanism is a mixture between the unquitarian and the mass approach with my view holding that all humanity can hold their best life to be a life close to and concerned with all that is cosmical and astronomical in the mass sense, but that this best life can be unquited to each individual which involves its incorporation into each person's unquity as an amalgamation or fusion of their own ideals and goals with the principle of the best life held in Cometanism hence achieving a combination of the unquitarian and the mass approach.

[12:3:8] Prerology also deals with the study of Ancient Greek philosophers, especially from the perspective of the Astronist philosophical tradition and draws comparisons between

the views of different Ancient Greek philosophers as well as the viability and applicability to the issues of the current world.

[12:3:9] Prerologists are also encouraged to make those which are to be known as conjections between the philosophies of the Ancient Greeks and The Philosophy of Astronism which involves incorporating elements of Ancient Greek philosophies into Astronism in order to form new branches, schools of thought, and belief orientations to further expand the Astronist philosophical tradition in order to reutilise those ancient philosophical ideas and apply them to a modern Astronist and cosmical context.

[12:3:10] The 2nd century peripatetic philosopher, Adrastus of Aphrodisias, was the author of a treatise on the arrangement of Aristotle's writings and his system of philosophy, but in an Astronist context, this type of commentary writing towards The Grand Centrality, The Omnidoxy itself, but especially on Astronism as a whole are to be henceforth known as exotaries when addressed in the plural sense.

[12:3:11] Aedesia (5th century: Neoplatonic: wife of Hermias, and mother of Ammonius and Heliodorus)

[12:3:12] Aedesius (3rd / 4th century: Neoplatonic: studied under Iamblichus before founding his own school in Pergamum)

[12:3:13] Aeneas of Gaza (5th / 6th century: Neoplatonic : a Christian convert who studied under Hierocles)

[12:3:14] Aenesidemus (1st century BC: Pyrrhonist: wrote a book called Pyrrhonist Discourses which became a central text for the skeptics)

[12:3:15] Aesara (5th / 4th century BC: Pythagorean)

[12:3:16] Aeschines of Neapolis (2nd / 1st century BC: Academic skeptic)

[12:3:17] Aeschines of Sphettus (5th / 4th century BC: Socratic: part of Socrates' circle and likely present at his death)

[12:3:18] Aetius (4th century AD: Peripatetic: Antiochean convert to Christianity who studied in Alexandria)

[12:3:19] Agapius (5th / 6th century AD: Neoplatonic: studied under Marinus of Neapolis. known for his learning)

[12:3:20] Agathobulus (1st / 2nd century AD: Cynicism: known for his severe asceticism and teacher of Demonax)

- [12:3:21] Agrippa the Skeptic (1st / 2nd century AD: Pyrrhonist: thought to be the creator of the "five grounds of doubt")
- [12:3:22] Alcmaeon of Croton (5th / 5th century BC: Pythagorean: interested in medicine)
- [12:3:23] Alexamenus of Teos (5th century BC: Socratic: may have been the first to write philosophical dialogues)
- [12:3:24] Alexander of Aegae (1st century AD: Peripatetic school: tutored the emperor Nero)
- [12:3:25] Alexander of Aphrodisias (2nd / 3rd century AD: Peripatetic school: influential commentator on the Corpus Aristotelicum)
- [12:3:26] Alexicrates (1st / 2nd century AD: Pythagorean)
- [12:3:27] Alexinus (4th / 3rd century BC: Megarian: founded his own school which did not fare well)
- [12:3:28] Amelius (3rd century AD: Neoplatonic: student of Plotinus who wrote voluminously)
- [12:3:29] Ammonius Hermiae (5th / 6th century AD: Neoplatonic)
- [12:3:30] Ammonius of Athens (1st century AD: Middle Platonist: teacher of Plutarch)
- [12:3:31] Ammonius Saccas (2nd / 3rd century AD: Neoplatonic: Plotinus' teacher)
- [12:3:32] Anaxagoras (5th century BC: Pluralist)
- [12:3:33] Anaxarchus (4th century BC: Atomist)
- [12:3:34] Anaxilaus (1st century BC / 1st century AD: Pythagorean)
- [12:3:35] Anaximander (7th / 6th century BC: Milesian)
- [12:3:36] Anaximenes of Miletus (6th century BC: Milesian)
- [12:3:37] Androcydes (2nd century BC: Pythagorean)
- [12:3:38] Andronicus of Rhodes (1st century BC: Peripatetic)
- [12:3:39] Anniceris (4th / 3rd century BC: Cyrenaic)
- [12:3:40] Antiochus of Ascalon (2nd / 1st century BC: Middle Platonist)

- [12:3:41] Antipater of Cyrene (4th century BC: Cyrenaic)
- [12:3:42] Antipater of Tarsus (2nd century BC: Stoic)
- [12:3:43] Antipater of Tyre (1st century BC: Stoic)
- [12:3:44] Antisthenes (5th / 4th century BC: Cynic)
- [12:3:45] Antoninus (4th century AD: Neoplatonic)
- [12:3:46] Apollodorus of Athens (2nd century BC: Stoic)
- [12:3:47] Apollodorus of Seleucia (2nd century BC: Stoic)
- [12:3:48] Apollodorus the Epicurean (2nd century BC: Epicurean)
- [12:3:49] Apollonius Cronus (4th century BC: Megarian)
- [12:3:50] Apollonius of Tyana (1st century AD: Neopythagorean)
- [12:3:51] Apollonius of Tyre (1st century BC: Stoic)
- [12:3:52] Arcesilaus (4th / 3rd century BC: Academic skeptic)
- [12:3:53] Archedemus of Tarsus (2nd century BC: Stoic)
- [12:3:54] Archelaus (5th century BC: Pluralist)
- [12:3:55] Archytas (5th / 4th century BC: Pythagorean)
- [12:3:56] Arete of Cyrene (4th century BC: Cyrenaic)
- [12:3:57] Arignote (6th / 5th century BC: Pythagorean)
- [12:3:58] Aristarchus of Samos (4th / 3rd century BC: Academic skeptic: presented the first known model that placed the Sun at the center of the known universe with the Earth revolving around it.)
- [12:3:59] Aristippus (5th / 4th century BC: Cyrenaic)
- [12:3:60] Aristippus the Younger (4th century BC: Cyrenaic)
- [12:3:61] Aristoclea (6th century BC)

- [12:3:62] Aristocles of Messene (1st century AD: Peripatetic)
- [12:3:63] Aristocreon (3rd / 2nd century BC: Stoic)
- [12:3:64] Aristo of Alexandria (2nd / 1st century BC: Peripatetic)
- [12:3:65] Aristo of Ceos (3rd / 2nd century BC: Peripatetic)
- [12:3:66] Aristo of Chios (4th / 3rd century BC: Stoic)
- [12:3:67] Aristotle (4th century BC: Peripatetic: founder of Peripatetic school)
- [12:3:68] Aristotle of Cyrene (4th / 3rd century BC: Cyrenaic)
- [12:3:69] Aristotle of Mytilene (2nd century AD: Peripatetic)
- [12:3:70] Aristoxenus (4th century BC: Peripatetic)
- [12:3:71] Arius Didymus (1st century BC: Stoic)
- [12:3:72] Asclepiades of Phlius (4th / 3rd century BC: Eretrian)
- [12:3:73] Asclepiades the Cynic (4th century AD: Cynicism)
- [12:3:74] Asclepigenia (5th / 6th century AD: Neoplatonic)
- [12:3:75] Asclepiodotus (1st century BC)
- [12:3:76] Asclepiodotus of Alexandria (5th century AD: Neoplatonic)
- [12:3:77] Aspasius (2nd century AD: Peripatetic)
- [12:3:78] Athenaeus of Seleucia (1st century BC: Peripatetic)
- [12:3:79] Athenodoros Cananites (1st century BC: Stoic)
- [12:3:80] Athenodoros Cordylion (2nd / 1st century BC: Stoic)
- [12:3:81] Athenodorus of Soli (3rd century BC: Stoic)
- [12:3:82] Attalus (1st century BC / 1st century AD: Stoic)
- [12:3:83] Atticus (2nd century AD: Middle Platonist)
- [12:3:84] Basilides (2nd century BC: Stoic: Denied the existence of incorporeal entities)

- [12:3:85] Basilides the Epicurean (3rd / 2nd century BC: Epicurean: Succeeded Dionysius of Lamprai as the head of the Epicurean school at Athens)
- [12:3:86] Batis of Lampsacus (3rd century BC: Epicurean)
- [12:3:87] Bion of Borysthenes (4th / 3rd century BC: Cynic: Once was a slave, later to be released)
- [12:3:88] Boethus of Sidon (1st century BC: Peripatetic)
- [12:3:89] Boethus of Sidon (2nd century BC: Stoic)
- [12:3:90] Bolus of Mendes (3rd century BC: Pythagorean)
- [12:3:91] Brontinus (6th century BC: Pythagorean)
- [12:3:92] Bryson of Achaea (330 BC: Megarian)
- [12:3:93] Callicles (5th century BCE: Sophist)
- [12:3:94] Calliphon (2nd century BC: Peripatetic)
- [12:3:95] Calliphon of Croton (6th century BC: Pythagorean)
- [12:3:96] Callistratus (3rd century AD: Sophist)
- [12:3:97] Carneades (c. 214 BC – 129/8 BC: Academic skeptic)
- [12:3:98] Carneiscus (c. 300 BC: Epicurean)
- [12:3:99] Cassius Longinus (c. 213–273 AD: Middle Platonist)
- [12:3:100] Cebes (c. 430–350 BC: Pythagorean)
- [12:3:101] Celsus (2nd century)
- [12:3:102] Cercidas (3rd century BC: Cynic)
- [12:3:103] Cercops (Pythagorean)
- [12:3:104] Chaerephon (Socratic)
- [12:3:105] Chamaeleon (Peripatetic)

[12:3:106] Charmadas (164 BC - c. 95 BC: Academic skeptic)

[12:3:107] Chrysanthius (4th century: Neoplatonic)

[12:3:108] Chrysippus (Stoic)

[12:3:109] Cleanthes (Stoic)

[12:3:110] Clearchus of Soli (Peripatetic)

[12:3:111] Cleinias of Tarentum (Pythagorean)

[12:3:112] Cleomedes (Stoic)

[12:3:113] Cleomenes (Cynic)

[12:3:114] Clinomachus (Megarian)

[12:3:115] Clitomachus (187 BC - 109 BC: Academic skeptic)

[12:3:116] Colotes (Epicurean)

[12:3:117] Crantor (born c. 350 BC: Academic Platonist)

[12:3:118] Crates of Athens (died 268-265 BC: Academic Platonist)

[12:3:119] Crates of Mallus (Stoic)

[12:3:120] Crates of Thebes (Cynic)

[12:3:121] Cratippus of Pergamon (Peripatetic)

[12:3:122] Cratylus (Ephesian)

[12:3:123] Crescens the Cynic (Cynic)

[12:3:124] Crinis (Stoic)

[12:3:125] Critolaus (Peripatetic)

[12:3:126] Cronius (Neopythagorean)

[12:3:127] Damascius (born c. 458, died after 538: Neoplatonic)

[12:3:128] Damis (Neopythagorean)

- [12:3:129] Damo (Pythagorean)
- [12:3:130] Dardanus of Athens (Stoic)
- [12:3:131] Demetrius Lacon (Epicurean)
- [12:3:132] Demetrius Phalereus (Peripatetic)
- [12:3:133] Demetrius of Amphipolis (4th century BC: Academic Platonist)
- [12:3:134] Demetrius the Cynic (Cynic)
- [12:3:135] Democrates (Pythagorean)
- [12:3:136] Democritus (Presocratic, Atomist)
- [12:3:137] Demonax (Cynic)
- [12:3:138] Dexippus (350 AD: Neoplatonic)
- [12:3:139] Diagoras of Melos (Sophist)
- [12:3:140] Dicaearchus (Peripatetic)
- [12:3:141] Dio Chrysostom (Sophist)
- [12:3:142] Diocles of Cnidus (3rd or 2nd century BC: Academic Platonist)
- [12:3:143] Diodorus Cronus (Megarian)
- [12:3:144] Diodorus of Adramyttium (1st century BC: Academic skeptic)
- [12:3:145] Diodorus of Aspendus (Pythagorean)
- [12:3:146] Diodorus of Tyre (Peripatetic)
- [12:3:147] Diodotus (Stoic)
- [12:3:148] Diogenes of Apollonia (Presocratic)
- [12:3:149] Diogenes of Babylon (Stoic)
- [12:3:150] Diogenes of Oenoanda (Epicurean)

- [12:3:151] Diogenes of Seleucia (Epicurean)
- [12:3:152] Diogenes of Sinope (Cynic)
- [12:3:153] Diogenes of Tarsus (Epicurean)
- [12:3:154] Dionysius of Chalcedon (Megarian)
- [12:3:155] Dionysius of Cyrene (Stoic)
- [12:3:156] Dionysius of Lamptraï (Epicurean)
- [12:3:157] Dionysius the Renegade (Stoic)
- [12:3:158] Dio of Alexandria (1st century BC: Academic skeptic)
- [12:3:159] Diotima of Mantinea
- [12:3:160] Diotimus (Stoic)
- [12:3:161] Domninus of Larissa (c. 420 - c. 480: Neoplatonic)
- [12:3:162] Echebrates (Pythagorean)
- [12:3:163] Ecphantus (Pythagorean)
- [12:3:164] Empedocles (Presocratic, Pluralist)
- [12:3:165] Epicharmus of Kos (Pythagorean)
- [12:3:166] Epictetus (Stoic: wrote *The Enchiridion*, a handbook of Stoic ethical advice)
- [12:3:167] Epicurus (Epicurean: said that the purpose of philosophy was to attain tranquility characterized by ataraxia)
- [12:3:168] Eubulides (Megarian)
- [12:3:169] Euclid of Megara (Megarian)
- [12:3:170] Eudemus of Rhodes (Peripatetic)
- [12:3:171] Eudorus of Alexandria (Peripatetic)
- [12:3:172] Eudoxus of Cnidus (410/408 BC – 355/347 BC: Academic Platonist)

- [12:3:173] Euenus (Sophist)
- [12:3:174] Euphantus (Megarian)
- [12:3:175] Euphrates (Stoic)
- [12:3:176] Eurytus (Pythagorean)
- [12:3:177] Eusebius of Myndus (4th century: Neoplatonic)
- [12:3:178] Eustathius of Cappadocia (c. 400: Neoplatonic)
- [12:3:179] Evander (c. 215 - c. 205: Academic skeptic)
- [12:3:180] Favorinus (Academic skeptic)
- [12:3:181] Gaius the Platonist (2nd century: Middle Platonist)
- [12:3:182] Geminus (Stoic)
- [12:3:183] Gorgias (Sophist)
- [12:3:184] Hagnon of Tarsus (2nd century BC: Academic skeptic)
- [12:3:185] Hecataeus of Abdera (Pyrrhonist)
- [12:3:186] Hecato of Rhodes (Stoic)
- [12:3:187] Hegesias of Cyrene (Cyrenaic)
- [12:3:188] Hegesinus of Pergamon (c. 160 BC: Academic skeptic)
- [12:3:189] Hegias (c. 500: Neoplatonic)
- [12:3:190] Heliodorus of Alexandria (5th century: Neoplatonic)
- [12:3:191] Heraclides Lembus
- [12:3:192] Heraclides Ponticus (387 BC - 312 BC: Academic Platonist)
- [12:3:193] Heraclitus (Presocratic, Ephesian: claimed that "You cannot step in the same river twice" and "All is fire.")
- [12:3:194] Heraclius (Cynic)

- [12:3:195] Herillus of Carthage (Stoic)
- [12:3:196] Hermagoras of Amphipolis (Stoic)
- [12:3:197] Hermarchus (Epicurean)
- [12:3:198] Hermias (born c. 410 - died c. 450: Neoplatonic)
- [12:3:199] Herminus (Peripatetic)
- [12:3:200] Hermippus of Smyrna (Peripatetic)
- [12:3:201] Hermotimus of Clazomenae
- [12:3:202] Hicetas (Pythagorean)
- [12:3:203] Hierius (c. 500: Neoplatonic)
- [12:3:204] Hierocles of Alexandria (c. 430: Neoplatonic)
- [12:3:205] Hierocles (Stoic)
- [12:3:206] Hieronymus of Rhodes (Peripatetic)
- [12:3:207] Himerius (Sophist)
- [12:3:208] Hipparchia of Maroneia (Cynic)
- [12:3:209] Hippasus (Pythagorean)
- [12:3:210] Hippias (Sophist)
- [12:3:211] Hippo (Presocratic)
- [12:3:212] Horus (Cynic)
- [12:3:213] Hypatia of Alexandria (born 350-370 – 415: Neoplatonic)
- [12:3:214] Iamblichus (c. 245 - 325: Neoplatonic)
- [12:3:215] Ichthyas (Megarian)
- [12:3:216] Idomeneus of Lampsacus (Epicurean)
- [12:3:217] Ion of Chios (Pythagorean)

- [12:3:218] Isidore of Alexandria (c. 475: Neoplatonic)
- [12:3:219] Jason of Nysa (Stoic)
- [12:3:220] Lacydes of Cyrene (before 241 - c. 205 BC: Academic skeptic)
- [12:3:221] Leonteus of Lampsacus (Epicurean)
- [12:3:222] Leontion (Epicurean)
- [12:3:223] Leucippus (Presocratic, Atomist)
- [12:3:224] Lyco of Iasos (Pythagorean)
- [12:3:225] Lyco of Troas (Peripatetic)
- [12:3:226] Lycophron (Sophist)
- [12:3:227] Lysis of Taras (Pythagorean)
- [12:3:228] Marinus of Neapolis (born c. 450: Neoplatonic)
- [12:3:229] Maximus of Ephesus (died 372 AD: Neoplatonic)
- [12:3:230] Maximus of Tyre (2nd century: Middle Platonist)
- [12:3:231] Meleager of Gadara (Cynic)
- [12:3:232] Melissus of Samos (Presocratic, Eleatic)
- [12:3:233] Menedemus (Eretrian)
- [12:3:234] Menedemus of Pyrrha (c. 350 BC: Academic Platonist)
- [12:3:235] Menedemus the Cynic (Cynic)
- [12:3:236] Menippus (Cynic)
- [12:3:237] Metrocles (Cynic)
- [12:3:238] Metrodorus of Athens
- [12:3:239] Metrodorus of Chios (Atomist)

[12:3:240] Metrodorus of Cos (Pythagorean)

[12:3:241] Metrodorus of Lampsacus (the elder) (Presocratic)

[12:3:242] Metrodorus of Lampsacus (the younger) (Epicurean)

[12:3:243] Metrodorus of Stratonicea (2nd century BC: Academic skeptic)

[12:3:244] Mnesarchus of Athens (Stoic)

[12:3:245] Moderatus of Gades (Neopythagorean)

[12:3:246] Monimus (Cynic)

[12:3:247] Myia (Pythagorean)

[12:3:248] Nausiphanes (Atomist)

[12:3:249] Nicarete of Megara (Megarian)

[12:3:250] Nicolaus of Damascus

[12:3:251] Nicomachus (Neopythagorean)

[12:3:252] Nicomachus (son of Aristotle) (Peripatetic)

[12:3:253] Numenius of Apamea (c. 275: Neopythagorean)

[12:3:254] Nymphidianus of Smyrna (c. 360: Neoplatonic)

[12:3:255] Ocellus Lucanus (Pythagorean)

[12:3:256] Oenomaus of Gadara (Cynic)

[12:3:257] Olympiodorus the Elder (Peripatetic)

[12:3:258] Olympiodorus the Younger (c. 495-570: Neoplatonic)

[12:3:259] Onasander (1st century: Middle Platonist)

[12:3:260] Onatas (Pythagorean)

[12:3:261] Origen the Pagan (c. 250: Middle Platonist)

[12:3:262] Panaetius (Stoic)

- [12:3:263] Pancrates of Athens (Cynicism)
- [12:3:264] Panthoides (Megarian)
- [12:3:265] Parmenides of Elea (Presocratic, Eleatic: held that the only thing that exists is being itself; teacher of Zeno of Elea)
- [12:3:266] Pasicles of Thebes (Megarian)
- [12:3:267] Patro the Epicurean (Epicurean)
- [12:3:268] Peregrinus Proteus (Cynicism)
- [12:3:269] Persaeus (Stoic)
- [12:3:270] Phaedo of Elis (Socratic, School of Elis)
- [12:3:271] Phaedrus (Epicurean)
- [12:3:272] Phantias of Eresus (Peripatetic)
- [12:3:273] Phanto of Phlius (Pythagorean)
- [12:3:274] Philip of Opus (4th century BC: Academic)
- [12:3:275] Philiscus of Aegina (Cynicism)
- [12:3:276] Philiscus of Thessaly (Sophist)
- [12:3:277] Philo (20 BC - 50 AD: Middle Platonist)
- [12:3:278] Philo of Larissa (159/158 BC – 84/83 BC: Academic skeptic)
- [12:3:279] Philo the Dialectician (Megarian)
- [12:3:280] Philodemus (Epicurean)
- [12:3:281] Philolaus (Pythagorean)
- [12:3:282] Philonides of Laodicea (Epicurean)
- [12:3:283] Philostratus (Sophist)
- [12:3:284] Phintys (Pythagorean)

[12:3:285] Plato (428/427 BC - 348/347 BC: Academic: student of Socrates and teacher of Aristotle; famous for the Theory of Forms)

[12:3:285a] On Plato's notion that the ultimacy is ideas and that all the material world is simply a copy of ideas, hence denoting the ultimate origination point of all things being ideas is for me, as Cometan, a demonstration of Plato's distinct humanness in the way he thought, but instead, I propose that we should think cosmically rather than humanly.

[12:3:285b] The origination of the material world is not from ideas for ideas are a product of the function of the human mind and by Plato's postulation of this, Plato is demonstrating an anthropocentric worldview that does not well coincide with the cosmocentric worldview that I do advocate for.

[12:3:285c] To suggest that ideas are the ultimacy is essentially to suggest that humans are the ultimacy for it is from humans that ideas are originated; humans cannot be the ultimacy for they are products of terrestrial nature which is itself a product of cosmic nature hence the only ultimacy is that of The Cosmos, or cosmic ultimacy.

[12:3:286] Plotinus (c. 204 – 270: Neoplatonic)

[12:3:287] Plutarch (c. 46 – 120: Middle Platonist)

[12:3:288] Plutarch of Athens (c. 350 – 430: Neoplatonic)

[12:3:289] Polemarchus

[12:3:290] Polemon of Athens (Stoic)

[12:3:291] Polemon of Laodicea (Sophist)

[12:3:292] Polemon (before 314 BC - 270/269 BC: Academic)

[12:3:293] Polus

[12:3:294] Polyaeus of Lampsacus (Epicurean)

[12:3:295] Polystratus (Epicurean)

[12:3:296] Porphyry (234 – c. 305: Neoplatonic: taught by Plotinus: wrote the Isagoge, an introduction to Aristotle's "Categories")

[12:3:297] Posidonius (Stoic)

[12:3:298] Potamo of Alexandria (Eclecticism)

- [12:3:299] Praxiphanes (Peripatetic)
- [12:3:300] Priscian of Lydia (c. 550 AD: Neoplatonic)
- [12:3:301] Priscus of Epirus (c. 305-c. 395 AD: Neoplatonic)
- [12:3:302] Proclus (412 – 485 AD: Neoplatonic)
- [12:3:303] Proclus of Laodicea
- [12:3:304] Proclus Mallotes (Stoic)
- [12:3:305] Prodicus (Sophist)
- [12:3:306] Protagoras (Sophist)
- [12:3:307] Ptolemy-el-Garib (Peripatetic)
- [12:3:308] Pyrrho (Pyrrhonist: credited as being the first skeptic philosopher)
- [12:3:309] Pythagoras (Pythagorean)
- [12:3:310] Sallustius (Neoplatonic)
- [12:3:311] Sallustius of Emesa (Cynicism)
- [12:3:312] Satyrus (Peripatetic)
- [12:3:313] Secundus the Silent (Cynicism)
- [12:3:314] Sextus of Chaeronea
- [12:3:315] Sextus Empiricus (Pyrrhonist)
- [12:3:316] Simmias of Thebes (Pythagorean)
- [12:3:317] Simon the Shoemaker (Socratic)
- [12:3:318] Simplicius of Cilicia (c. 490 - c. 560: Neoplatonic)
- [12:3:319] Siro (Epicurean)
- [12:3:320] Socrates (Socratic)

- [12:3:321] Sopater of Apamea (died before 337: Neoplatonic)
- [12:3:322] Sosigenes (Peripatetic)
- [12:3:323] Sosipatra (c. 325: Neoplatonic)
- [12:3:324] Sotion (Neopythagorean)
- [12:3:325] Speusippus (c. 407 BC – 339 BC: Academic)
- [12:3:326] Sphaerus (Stoic)
- [12:3:327] Stilpo (Megarian)
- [12:3:328] Strato of Lampsacus (Peripatetic)
- [12:3:329] Syrianus (died c. 437: Neoplatonic)
- [12:3:330] Telauges (Pythagorean)
- [12:3:331] Telecles of Phocis (died 167/166 BC: Academic skeptic)
- [12:3:332] Teles the Cynic (Cynicism)
- [12:3:333] Thales (Presocratic, Milesian: the first philosopher; held that the first principle (arche) is water; one of the Seven Sages of Greece)
- [12:3:334] Theagenes of Patras (Cynicism)
- [12:3:335] Theano (Pythagorean)
- [12:3:336] Themista of Lampsacus (Epicurean)
- [12:3:337] Themistius (Neoplatonic)
- [12:3:338] Theodorus of Asine (3rd century: Neoplatonic)
- [12:3:339] Theodorus the Atheist (Cyrenaic)
- [12:3:340] Theon of Smyrna (Neopythagorean)
- [12:3:341] Theophrastus (Peripatetic)
- [12:3:342] Thrasymachus (Sophist)

[12:3:343] Thrasymachus of Corinth (Megarian)

[12:3:344] Timaeus of Locri (Pythagorean)

[12:3:345] Timaeus the Sophist (between 1st and 4th centuries: Middle Platonist)

[12:3:346] Timon (Pyrrhonist)

[12:3:347] Timycha (Pythagorean)

[12:3:348] Tisias (Sophist)

[12:3:349] Xenarchus of Seleucia (Peripatetic)

[12:3:350] Xenocrates (Pyrrhonist)

[12:3:351] Xenocrates (c. 396 BC – 314 BC: Academic)

[12:3:352] Xenophanes of Colophon (Presocratic, Eleatic: claimed that, if oxen were able to imagine gods, those gods would be in the image of oxen)

[12:3:353] Xenophilus (Pythagorean: friend and teacher of Aristoxenus)

[12:3:354] Xenophon

[12:3:355] Zenobius (Sophist)

[12:3:356] Zenodotus (c. 475 Neoplatonic: described as "the darling of Proclus")

[12:3:357] Zeno of Citium (Stoic: founder of the Stoic school of philosophy)

[12:3:358] Zeno of Elea (Presocratic, Eleatic: famous creator of Zeno's paradoxes)

[12:3:359] Zeno of Sidon (Epicurean: sometimes termed the "leading Epicurean")

[12:3:360] Zeno of Tarsus

[12:3:361] The exploration of the lives, ideas, and formed philosophies of each of these individuals and their contributions to the history of philosophy is considered to be one of the prominent responsibilities of all prerologists to undertake in different extents because when I speak of reascension as a core tenet of Astronism, I speak of philosophy retaking its place of societal centrality that it held in the time of these individuals listed herein, hence the importance of respecting, understanding, and promoting education about these individuals.

[12:3:362] It is herein maintained as a core element of reascensionism that if we do not educate ourselves about the history of philosophy, how do we expect the notion of the reascension of philosophy to flow widespread through societies and the whole human civilisation?

[12:3:363] Education of philosophy and philosophers must take place in simultaneity with the process of reascension for it to succeed as a multinational sociocultural movement.

The Integrands of Astronism

[12:4:1] That which is known as an integrand in the context of the philosophy of Astronism refers to a function within the components of Astronism that serve a particular function for understanding The Philosophy.

[12:4:2] This discourse is dedicated to the introduction of those which are classed as different integrands, but this singular discourse does not and cannot encompass the entirety of the integrands that hold a presence within the philosophy of Astronism.

[12:4:3] This is due to the fact that the definition ascribed to the term of integrand in the context of Astronist Philosophy is purposefully vague so as to spark another series of debates regard the nature of integrands within Astronism and how they work so as to formulate function within The Philosophy.

[12:4:4] Essentially, integrands are the integrated functions that allow Astronism to operate the way it does; perhaps one of the best analogies to describe this instance is the mechanism of a car and the different component parts which remain integral to the functioning of that car and the same principle can be applied to the context of the functioning of a philosophy, specifically the philosophy of Astronism in this particular case.

[12:4:5] The designation of integrands is herein not a responsibility afforded to The Institution of the philosophy of Astronism, but is instead vested in as a responsibility of the individual, denomination, or the school of thought of which one is a part to designated because different groups are expected to prioritise different integrands over others essentially when they hold different priorities in the disciplines of study of Astronist Philosophy that they are studying or the particular concepts, belief orientations and notions of Astronism that they are interested in learning more about or are more firmly adhered to.

[12:4:6] The first of the integrands of The Philosophy of Astronism that is introduced herein is that of Elevationism which is codesignated as school of thought in addition to being an integrand.

[12:4:7] Elevationism as an Astronist school of thought focuses on the exploration of how the beliefs and practices of Astrony could elevate one's life in all the possible different ways.

[12:4:8] Elevationism is herein designated as an integrand because it poses the question of how belief and practice in a particular method and setting correlate to how one is able to improve their own personal individual lives.

[12:4:9] Elevationists are dedicated to understanding in understanding how belief and practices within The Philosophy of Astronism directly convert to real, physical, and

practical elevations in one's personal existence which points to how they are focused on the functioning of Astronism and how our personal lives are enhanced by the functions of Astronism.

[12:4:10] For this reason, elevationism as a school of thought is codesignated as an integrand herein and is considered to be an important school of thought due to its unique focus on the practical elements derived from belief and practice of Astronism.

[12:4:11] Also herein categorised as integrands of The Philosophy of Astronism are the metonyms for Astronism, which are there are five that herein omnidoxically ascribed including vendox, Omnidoxy, astral, philosophy, and cosmic which are all considered to be functions within Astronism that allow for it to be correctly identified so in this way, identification is considered to be a function and this context, they are collectively appellationed as the Metonyms of Astronism.

[12:4:12] That which is to be henceforth termed as interexonymity, or to be interexonymous in the context of Astronist Philosophy points to an important consideration about the nature of Astronism itself.

[12:4:13] This points to the fact that there are many different names to refer to Astronism according to the place in which one is residing and is also designated as the instance in how populations are naturally expected to relate more to the translated appellations for The Philosophy of Astronism rather than multifarious official and top-level appellation designated for Astronism, including Kosma, Astronism, Sophism, Cosmism, Astronism itself, and others.

[12:4:14] The interexonymity of Astronism is structured by the many different endonyms for Astronism which are all its different translated appellations, such as Hanazavaism or Prabodhanism, and many others, that are not designated as The Philosophy's primary or official appellations which, as aforementioned, include Astronism itself, The Philosophy of Astronism, Kosma, Astronism etc.

[12:4:15] The exonyms of Astronism are collectivised under this heading and relates to the primary and official names for The Philosophy, including Astronism, The Philosophy of Astronism, formerly Millettism etc. as those appellations are often used by those who hold a neutral outlook of Astronism and do not therefore not ascribe to any particular endonym.

[12:4:16] These exonyms of Astronism are to be used in official or promulgative circumstances for any places in which English is not the primary language for advertising and officialities while in English-speaking regions, or in regions in which English is the language of business and officiality, these exonyms are to be used as appellations of colloquiality and mass use beyond that of just promulgation and officiality.

[12:4:17] In scholarly, academic, and Institutional writings, the exonyms of The Philosophy of Astronism are to always be used universally with non-obligatory interchangeabilities between them, although it is herein omnidoxically stated that it is to be correct common practice to refer to The Philosophy as Astronism in all scholarly, academic, and Institutional texts rather than any of the other exonyms.

[12:4:18] From these different insentensations, we understand that from an omnidoxical perspective, the integrands of Astronism are largely concerned with the different ways in which The Philosophy is identified as the primary contingent of its function for it is herein held that without clarity of identification omnidoxically, there cannot be formed clarity of function post-omnidoxically.

[12:4:19] Another important integrand to mention herein is that which is to be henceforth known as philosophical inclusivism, or simply just inclusivism which upholds the notion that one's system of thought cannot be the true system of thought because there is always more knowledge and ideas to be contributed and so is inclusive to other systems of thought and this remains one of the central predications for the Astronist philosophical tradition.

[12:4:20] The final collectivity that shall form a singular integrand that is to be introduced within this discourse is that which is to be appellated as the Scale of Astrony which pertains to how a population is able to be clustered according to their beliefs as followers and practitioners of Astrony and is considered to be an important element within the study of philosophical demographics.

[12:4:21] The Scale of Astrony is made up of different classifiers including tapered, median, and outspread which rise in their extensiveness respectively which means that those beliefs placed in tapered classify a smaller group of individuals that may consider themselves as

[12:4:22] Essentially, the Scale of Astrony is a way of identifying how different portions of the population whom call themselves followers of The Philosophy of Astronism, or one of its other appellations, or endonyms, are categorised according to their beliefs and how the populations are expected to vary in size according to the different levels of requirement for designation.

[12:4:23] The Scale of Astrony is created in order to explore the nature of what it means to be a follower of The Philosophy of Astronism and how and whether different individuals, societies, denominations, and schools of thought may consider others to be followers or not according to the beliefs they hold and it is the tapered, median, or outspread scale that

[12:4:24] The reason why this is an interesting area of study and is also classified as an integrand is because, as is stated in The Twenty-Five Refoundations of Philosophy, no follower of a true philosophy, according to the Astronist Tradition, should need to declare that they believe in all of the ideas within the philosophy to which they are adhered.

[12:4:25] Therefore, there is expected to be a huge variety and diversity in the combinations of beliefs, concepts, and schools of thought that individuals and societies associate themselves with which is itself also expected to learn to the tradition of practising that which is to be known as intrascription.

[12:4:26] Intrascription is the practice expected to emerge post-omnidoxically in which individuals, organised groups and societies or even entire governments that adhere to, or sponsor The Philosophy of Astronism in some way, publicly declare their beliefs often by listing them.

[12:4:27] This is done for the purposes of clarity on how such groups consider themselves designated as followers of The Philosophy and may or may not infer to how those whom wish to also be designated as followers of The Philosophy should act and what they should believe for their designation to be accepted.

[12:4:28] The first element of intrascription that has been introduced herein is acceptable to the Astronist Tradition and the Philosophical Spirit, however, the second element is considered to be exclusivist by its nature and to not accept how another person designates themselves to be followers of The Philosophy seems dangerously close to be in violation of the Philosophical Spirit which upholds The Twenty-Five Refoundations of Philosophy and

[12:4:29] The three types of classified that are considered herein as part of the Scale of Astrony include tapered, median, and outspread with tapered classification including personal devotion, cosmic devotion, and personal inspiration as well as a person that believes in the words and teachings of Cometan as an individual in separation from Astronist Philosophy itself with such included elements being the most personal and specific qualifiers for the classification of Astronists, hence their inclusion in the tapered category.

[12:4:30] The second and most commonly applied classifier is that known as the median which involves a person that believes in intelligent life beyond The Earth and them being classified as Astronists for such a belief with second inclusion to the median classifier is that which is to be known as Census Accordance.

[12:4:31] Census Accordance refers to the principle of the identification of populations as being Astronic/Astronist/Sophistic/Kosman/Cosmistic only through official censuses as being an acceptable identification method.

[12:4:32] The third and final classifier, outspread, is the classifier into which the most amount of people are expected to fit as being classified as adherents of Astronism and generally includes a person that believes in the importance of space exploration as an Astronist, but may also include other beliefs that are not strictly philosophical or theological in their nature, but do hold a cosmical theme or a cosmocentricity to their

nature without necessarily being officially associated with the concept and tenet of cosmocentricity as part of Astronism.

[12:4:33] As aforeaffirmed at the beginning of this discourse, this singular written piece on integrands has been constructed in order to introduce particular examples of integrands as functions of Astronism, but the discussion of the nature of integrands and the expansion of the list of integrands for individuals, denominations, and schools of thought should be explored post-omnidoxically.

[12:4:34] As is similar with many other discourses within The Omnidoxy, this discourse holds the purpose of laying the inspirational foundations for later discussions and additions to Astronist Philosophy with the expansion of the number of integrands being one of these post-omnidoxical tasks.

The Astronist Soteriology

[12:5:1] Despite the existence of soteriology strictly as a religious territory, the Astronist philosophical tradition is going to break the rule of its own territorialisation by introducing an Astronist approach to understanding the nature of salvation and the Astronist view of reaching salvation which is considered to be encapsulated via the notion of deliverance and the belief orientation of transcensionism.

[12:5:2] Transcension and transcensionism obviously plays an integral role in the Astronist soteriology for they make up a central element to the soteriology of The Philosophy of Astronism.

[12:5:3] The Astronist soteriology is considered to be the preservation or deliverance of individuals and wider humanity from harm, ruin, or loss.

[12:5:4] This discourse shall herein introduce The Astronic Soteriological System which is wholly considered to be a system of polyistic/polyism in its orientation due to the fact that it does remain pivoted around the masses rather than individuals as is the case for other soteriological systems.

[12:5:5] Deliverance is a central concept within the Astronist soteriology and pertains to the notion that through cosmic thought, cosmic enknowledge, and cosmic exploration, humanity as a whole will be delivered to their destiny by the expansion of their civilisation to new worlds as well as the deepening of their knowledge about The Cosmos in which they reside.

[12:5:6] Cosmic thought and exploration reside at the heart of the Astronist soteriological version of deliverance for to do and focus on anything other than these is considered to be potent of stagnancy.

[12:5:7] The Cosmos is considered to be the determiner of humanity's salvation as a whole which is to be henceforth known as the concept and belief orientation as cosmotism.

[12:5:8] Individual salvation is known as haplosotism meanwhile mass salvation is to be henceforth known as polysotism and of course, the latter of which is focused on in the Astronist soteriological system as aforeaffirmed.

[12:5:9] In the Astronist soteriological system, there is little to no individual salvation like in other systems, but it is more of a mass salvation to which individuals must contribute to work towards, but they themselves as individuals are not likely to benefit from the salvation because it is for humanity as an entirety than for persons as individuals.

[12:5:10] This points to the naturalistic orientation of Astronism and the disbelief of the Astronist Tradition of the afterlife and its linkages with salvation as is held in many religious traditions.

[12:5:11] There is no connection between sin and salvation in the Astronic soteriological system because the way to achieve polysotistic salvation, or astronic salvation, is through the following Five Avenues of Cosmic Interaction including exploration, discovery, enknowledge, expansion, and civilisation, all of which remain integral to the achievement of The Ultimatum in Astronism which is transcension.

[12:5:12] In the Astronist soteriological system, there is no such thing as individual reward, which is to be henceforth referred to as non-perquisitism, such as the promise of immortality while other traditions are perquisitist in their orientations such as the religious traditions of Christianity and Islam that are both adhered to perquisitism.

[12:5:13] Instead, there is the reward for humanity in general if cosmic exploration and enknowledge is maintained and continued to be achieved which is considered to be a diluted perquisite and so the Astronist soteriological system is therefore non-perquisitist in its orientation.

[12:5:14] As an alternative to perquisite-focused soteriologies, in the Astronist soteriology, there instead is mass or diluted reward which is to be henceforth known as polyperquisity that is characterised by one's appreciation and contentment with the progression of humanity towards the goal of greater cosmic exploration and expansion.

[12:5:15] This is in addition to the furtherance of our knowledge about The Cosmos in which we reside, of which we still currently know and truly understand so little which is why the transcension of humanity is considered to be absolutely necessary.

[12:5:16] Soteriology asks the question of what are we freeing ourselves from and the Astronist answer to this question is that humanity is to be freed from cosmic ineptitude, cosmic ignorance, and planetary seclusion, the only method of alleviation from which is the achievement of transcension which, in its general definition, is the process of a simultaneous rise both physically (in the sense of cosmic expansion) and mentally/culturally/philosophically (in the sense of philosophical reascension and enknowledge).

[12:5:17] Now we must consider Comparological Soteriology which involves the comparison of different soteriologies, both of a religious and philosophical nature.

[12:5:18] The Astronist approach to soteriology is that salvation is to think cosmically through philosophy because religion is not considered to be the way through which we can think cosmically because religion does not allow us to explore ideas in the same open way that philosophy allows us to.

[12:5:19] Cosmic thinking through philosophy is considered to achieve one's freedom because one is thinking and being beyond oneself which is to be henceforth known as to transautise which is essential to the overall achievement of transcension.

[12:5:20] One is transcending themselves by focusing on wider humanity rather than their individual ability to achieve salvation and so to transautise is to achieve salvation through self-transcendence through salvation via wider humanity.

[12:5:21] Self-transcendence, or to transautise, or autotranscend which is to also be known as autotranism, is the central element of the Astronist soteriological system.

[12:5:22] This pertains to the achievement of a person's mental, emotional, philosophical, spiritual, and physical freedom by thinking and being and acting beyond themselves, but this does not necessarily mean in a charitable sense, but instead in the sense of "mutual endeavour" for a "unified vision" of the future.

[12:5:23] This mutual endeavour and unified vision is encapsulated by human civilisation that has expanded into space and is exploring the worlds of The Cosmos in search of greater amounts of knowledge and the discovery of currently unknown worlds.

[12:5:24] To be trapped, to be encapsulated, and to be without freedom is to think only of oneself and to think in such a way that does not allow other opposing viewpoints and does not allow for the development of new ideas which is encompassed by aphilosophical thinking which is of course the oppositism to philosophical thinking.

[12:5:25] It is not the postulation herein that Christians and other religious individuals that follow a similar worldview are selfish or self-centred because it would be incorrect and unfair to generalise in such a way.

[12:5:26] However, when one makes the argument that Christians are selfless because of their focus on charitable works, that is a misunderstanding of the primary reason for their charity.

[12:5:27] The reason why they are giving to charity or helping others is immediately to help others, but in the longevity, which actually strikes at the heart of the reason for their charity, it is to make themselves look (this doesn't mean to say that this becomes immoral) and become a better person.

[12:5:28] Why? For their own salvation of course.

[12:5:29] This is herein termed the Good Deeds Cycle which demonstrates that people who do good deeds are doing those deeds to help the person in need, but that they are always conducting such deeds for the betterment of their own person, for their own salvation; to do good deeds for others allows all to benefit, but this not truly altruistic.

[12:5:30] That which is to be henceforth known as the Explorative Cycle is dealt with within the inclusive discipline of expology, but it is important to also mention herein

because it pertains to the idea that sentient beings will never stop with the exploration of The Cosmos.

[12:5:31] Furthermore, it also upholds that it is humanity's ultimate purpose to explore, to enknowledge ourselves, and to progress our civilisations and it is that is central to the entirety of Astronism and is to be henceforth encapsulated within the automatic belief orientation of Astronism that is to be referred to as peregrinism, or alternatively as peregrinationism.

[12:5:32] The Astronist soteriological system is also predicated on the notion of transmatism, or to be transmatic, or to transmatise involves how a person offers all of their resources they can to further the mutual endeavour and achieve the unified vision in order to progress human transcension.

[12:5:33] This notionises that through the Astronist soteriology, people can be truly altruistic for they can provide their time, their energy, and all other resources they have to offer in order to initiate and continue the mutual endeavour herein introduced as well as achieve the unified vision that is also herein introduced.

[12:5:34] This action, which is to be henceforth known as to transmatise, is considered to be truly altruistic because those whom conduct such acts are not conducting them for their own individual ultimate salvation, but they are instead conducting them for the ultimate goal is transcension which is polysotistic in its nature.

[12:5:35] Polysotism states mass salvation rather than individual salvation so a person that transmatises understands that there is a greater purpose themselves and through this understanding, they achieve altruism because they become willing to provide their available resources to the achievement of the unified vision even though they may not necessarily directly benefit from it for they will instead only benefit knowing that they have contributed to the achievement of transcension.

[12:5:36] This is considered to be altruistic by its nature because unlike other systems of soteriology, the Astronist approach removes the notion of directly individual benefit which is haplosotism and replaces that with polysotism which is mass benefit and indirectly individual benefit of contribution to that mass benefit; it is in this singular notion that one of the deepest differences in orientation is found between the Astronist philosophical tradition and all others, either those of a philosophical and religious nature.

[12:5:37] Furthermore, that which is to be henceforth known as astrovatism, or to be astrovatic, or to astrovatise is an extension of the aforeintroduced element of transmatism, and pertains to the belief, description, and action respectively of committing the entirety of one's resources to the mutual endeavour and unified vision encapsulated within the notion of transcension and is considered to be a lifelong commitment to the cause of transcension.

[12:5:38] By this definition, astrovatism can be considered an immoderate that goes beyond that transmatism and is considered to be reserved for only those whom are most committed to the cause of transcension and are willing to dedicated all or parts of their lives to the belief and is therefore not something for the masses to ever consider, nor would they ever be expected.

[12:5:39] To further ornament the Astronist soteriological system are herein introduced five different belief orientations that provide greater depth and more opportunity for continued soteriological discussion of the Astronist approach.

[12:5:40] The first of these orientations is to be henceforth known as peregrinism which encompasses the notion that The Cosmos exists to be explored (exporiginism) and that humanity holds the potential intelligence and ability to explore it so therefore we hold the responsibility to do so.

[12:5:41] Secondly, we come to the aforementioned belief orientation of exporiginism which is encompassed by the notion that something exists in order for it to be explored, namely the explorative nature of The Cosmos from the perspective of humanity which is a belief that is wholly supported by the Astronist Tradition.

[12:5:42] The third of the belief orientations to introduce herein is that which shall be known as divinoriginism which involves the notion that something exists by the creative role and ability of The Divine and that no greater reason for its existence is required beyond this; this belief is held by the Astronist Tradition in parallel to both that of peregrinism and exporiginism as part of the soteriological triad of the Astronist approach with divinoriginism held by followers of Astronism depending upon their own personal theological perspective.

[12:5:43] In such a case of an atheistic follower of Astronism, the soteriological system of Astronism would be reduced to a soteriological dyad.

[12:5:44] Two more additional belief orientations that also underpin all Astronist soteriological discussion are to be known as internalism and externalism.

[12:5:45] Soteriological internalism notionises that salvation is achievable from within oneself rather than the external world meanwhile and oppositely, soteriological externalism pertains to the notion that salvation is achievable via the external world rather than from within oneself.

[12:5:46] All the different versions and definitions of salvation are all considered, by the Astronist understanding of salvation, to be underpinned by the notion that salvation is freedom, but also notionised is that these different systems of thought have different ways of achieving said freedom which is why different soteriologies must be formed for both religions and philosophies if they concern themselves with the nature, attainment, and maintenance of freedom.

[12:5:47] The Astronist approach to soteriology holds that salvation is self-transcendence, which is also known as to transautise, which is attained through thinking cosmically and philosophically and working towards the purpose of cosmic exploration and enknowledgement.

[12:5:48] This is considered to be achievable through transmatism in order to realise transcension for all humanity rather than oneself individually because transcension is considered to be ultimate freedom in the Astronist soteriological understanding.

[12:5:49] This can be done by oneself for the purpose of wider humanity for the unified or common vision, as it is known, which means that the Astronist soteriological system remains internalistic in its orientation.

[12:5:50] This is considered to be internalistic because thinking cosmically/philosophically is initiated from within oneself and predicates the enknowledgement and exploration of The Cosmos which is considered to lead to salvation through humanwide transcension.

[12:5:51] Meanwhile, a comparological soteriological fashion, Christianity is externalistic because faith in Jesus Christ (an external being to oneself) predicates a good morality for the achievement of immortality which is hence considered, in that tradition, to be the ultimate precursory element to one's individual achievement of salvation.

[12:5:52] One could say that thought, particularly cosmic thought, is the way to salvation through self-transcendence, or transmatism, according to the Astronist soteriology which further supports the notion that it is internalistic in its orientation.

[12:5:53] The Christian approach to soteriology is ultimately focused on the notion that salvation is immortality as manifested by the notion that salvation is achieved through the person and the actions of the person of Jesus Christ.

[12:5:54] Of course, this is because Christians have been told that immortality is firstly real, that is secondly achievable, and that it is thirdly achievable as such through a particular system and set of acts and adherences which ultimately concludes that Christianity is externalistic in its soteriological orientation due to its ultimate predication for salvation resting in the person of Jesus Christ.

[12:5:55] Perhaps one whom has not read or listened well to the words of this discourse would argue that Astronism is also externalistic due to its focus on The Cosmos as its primary theme, but although this argument is commended in the alignment with the Philosophical Spirit, it is considered incorrect by the Astronist Tradition.

[12:5:56] This is countered by the notion that salvation (which is interchangeably used with the term transcension in an Astronist context) is achieved, according to the Astronist soteriology, by one's internal personal decision to transautise (to think cosmically) which

then causes one to transmatise (to act towards transcension) and then to ultimately achieve transcension as salvation.

[12:5:57] Therefore, the very initial part of the achievement of salvation in Astronism is an internal and personal decision rather than an external persuasion or conversion.

[12:5:58] The Islamic approach to soteriology is somewhat similar to that of the Christian approach from that of the Astronist perspective with some distinct differences, the first being that in Islam, salvation is submission which is the achievement of salvation through repentance for one's sins and one's disbelief in or doubt of the message of the one God.

[12:5:59] This firmly places Islam's soteriology as externalistic in its orientation because it is wholly predicated on the message of its founder (which is external to oneself) and the notion of the one God which is itself external to one's own being.

[12:5:60] Meanwhile, the Buddhist approach to soteriology pertains to the notion that salvation is alleviation from suffering, ignorance and contaminated rebirth through the emulation of the practices of the Buddha.

[12:5:61] It is important not to confuse Astronism's notion of autotranscendence with alleviation because autotranscendence is not about alleviation from suffering or redemption from immoral deeds, but is instead focused on encouraging a person's actions and ideas to be both formed for and holding a purpose to wider humanity and the struggle for cosmic exploration and enknowledgement.

[12:5:62] Importantly, Astronism does believe that suffering is a natural and necessary element to cosmic life due to the limitations of cosmic nature and therefore fundamentally departs from Buddhist thought on this central topic.

[12:5:63] This is because suffering is actually considered to be an enhancing element for one's morality, maturity, wisdom, and overall philosophicality from the Astronist perspective and therefore, Buddhism conclusively remains internalistic in its orientation.

[12:5:64] The soteriological systems of Hinduism and Jainism hold similarity in both their foundings and orientations; the Hindu soteriological system holds that salvation is freedom from samsara meanwhile the Jain soteriological system believes that salvation involves the conquering impediments.

[12:5:65] Therefore, we ultimately notionise that Hinduism and Jainism hold soteriologies that are both internalistic by their natures because they are predicated on the notion of internal thought and action in order to be released from the cycle of samara with which are natures are intertwined.

[12:5:66] The Sikh approach to soteriology is predicated on the notion that salvation is Godly unity which is again externalistic by its orientation because it dependent upon the existence of God as an external entity from ourselves.

[125:67] Despite the fact that we may make moral decisions internally, the reason for which one does in this in Sikhism and other similarly predicated traditions is because of the notion of the existence of God as an external being or force distinct from ourselves for the purpose of some form of afterlife in which we become one with God or reside beside God of which there exists no more confirmed notion of externalism than this.

[12:5:68] Finally, the Jewish soteriology is predicated on the notion that salvation is redemption from exile which therefore notionises that Judaism remains internalistic in its orientation as it stresses that salvation cannot be obtained through anyone else or by invoking a deity or believing in any outside power or influence.

[12:5:69] The distinction between soteriological externalism and soteriological internalism is that the latter notionises that salvation is achieved from within oneself, or ourselves with regards to polysotism, meanwhile the former of which is salvation initially and primarily achieved via some external source from oneself, either physically or metaphorically.

[12:5:70] It is important to note that although omnidoxically, it is notionised that Astronism's soteriology is internalistic, the discussion of the notion that the Astronist soteriology is externalistic is not only encouraged, but is absolutely necessary by alignment to the Philosophical Spirit.

[12:5:71] The Omnidoxo is not dogmatic; it was never intended to be and it should never be interpreted in such a way that it is presented as so; therefore, the soteriological externalism of Astronism can and should always be freely notionised, justified, and argued despite the Astronist Tradition's adherence to the notion that Astronism is internalistic by its nature.

[12:5:72] Furthermore, it is also imperative to state that neither internal nor externalism is superior in any way to the other and so to notionise such is to remove the potential for the discussion and argument for both; they must remain equal to one another though justified in such a way that confers to their identification in a system of thought rather than their superiority over one another.

[12:5:73] The topic of salvation also incorporates the notion of purpose because one's idea of what freedom is remains fundamentally linked to the idea of what one's purpose is in life and so these different systems of thought also have various answers as to the purpose our lives.

[12:5:73a] Astronic: the purpose of life is cosmic enknowledge and exploration.

[12:5:73b] Christian: the purpose of life is one's the achievement of virtue for immortality.

[12:5:73c] Islamic: the purpose of life is submission to God through repentance for one's misdeeds.

[12:5:73d] Buddhist: the purpose of life is to achieve enlightenment to escape samsara.

[12:5:73e] Hindu: the purpose of life is to achieve dharma, artha and kama to escape samsara.

[12:5:73f] Jain: the purpose of life is to achieve moksha (liberation for infinite bliss, knowledge, and perception).

[12:5:73g] Jewish: the purpose of life is to be redeemed by God through the abidance of the Torah

[12:5:73h] Sikh: the purpose of life is to attain union with God.

The Achievement of Cometanhood (Cometanology)

[12:6:1] I am Cometan and I am the founder of The Philosophy of Astronism and I have been infused with personal inspiration for the creation, development, and refinement of The Omnidoxy as the founding treatise of Astronism.

[12:6:2] What is to be Cometic is to be philosophical, is to be open with one's ideas yet forward with one's opinions, to enjoy the justification of one's beliefs, to stand in confidence of one's faith, to be loyal, to be opposed to non-thinking, to be in constant exploration of oneself, to do and be for the future, to be ambitious without end, to utilise one's talents for the furtherance of one's identity, and finally, but most importantly, to understand one's own uniqueness.

[12:6:3] Autodidacticism is also at the heart of what it means to be Cometic in relation to knowledge; the Cometic way is not to be taught, but is to teach oneself as Cometicism is predicated upon proactivity rather than reactivity; one must do the will rather than listen to the wills of others; the Cometic way is the autodidactic way; better always to teach oneself than to be taught by others for you know what you have taught yourself, but you cannot know what you have been taught by others.

[12:6:4] The post-omnidoxicality of Cometic philosophical exploration in non-cometic texts due to the inappropriateness of extensively contemplating on oneself and one's own identity; others must speak of me to form the notions of cometic philosophy.

[12:6:5] Cometicism can be considered the interpretation or filtration of Astronism through the lens of the personage of Cometan as manifested by the personal views of Cometan on the subjects addressed in Astronism.

[12:6:6] The majority of these align with the Astronist Tradition due the fact that Cometan is the founder of the Astronist Tradition, however, Cometicism can be considered an even more specified version of Astronism is strictly only considered according to a characteristically Cometic perspective.

[12:6:7] In Astronism, Cometicness refers to the condition or rank of a cometan, or "cosmic one" and it is this status or rank that a person who follows Astronism may intend to achieve, although there exists no obligation within Astronism to achieve or to want to achieve Cometicness and it is in this discourse that I, as Cometan, the first of the many cometans to come, shall describe what it means to be Cometic and how one may go about achieving Cometicness.

[12:6:8] The personhood of Cometan is both distinct and ontologically detached from that of the personhood of Brandon Taylorian and this is the belief which is held by the Astronist Tradition on the nature of Cometan.

[12:6:9] This principle is to be henceforth known as the disentonomy/a disentonomous condition meanwhile two personhoods that remain distinct from one another, yet are not ontologically detached in this way is to be henceforth referred to as a state of entonomy/an entonomous condition.

[12:6:10] The Astronist Tradition, as supported herein by omnidoxical authentication, state that the nature and ontology of Cometan is dyogenous, or in association with that which is to be henceforth known as the ontological state of dyogeny.

[12:6:11] Dyogeny, or to be dyogenous, is to hold two ontologies in one beingness and this is manifested in Cometan as the cometanic personhood and the cometanic persona.

[12:6:12] Therefore, the Astronist Tradition adheres to dyogenism which notionises that Cometan holds two ontologically distinct yet existentially unified natures.

[12:6:13] Dyogenism may be alternatively referred to as simply dyonism.

[12:6:14] By extension to the Astronist Tradition's adherence to dyogenism, that which is to be known as dyadism holds that Cometan, due to his dyonic, or dyogenous nature, holds two separate wills, one that is associated with his personhood and the other which is associated with his persona

[12:6:15] Meanwhile, miodism notionises that there exists only one will to Cometan's nature due to the one nature of Cometan that is upheld by miogenism which is latterintroduced.

[12:6:16] The personhood of Cometan pertains to the real physical person of Brandon Taylorian; his experiences, emotions, physical attributes, life events, and his failures, achievements, and human moral mistakes.

[12:6:17] Meanwhile, the persona of Cometan pertains to the supraexistential elements of the personhood of Brandon Taylorian which includes his mind, his imagination, his creativity, his identity as the founder of Astronism, his identity as the sole author of The Omnidoxy, the personal inspiration that is said to have destinically driven him to create The Omnidoxy, and finally, the way in which all other people outside of Taylorian himself perceive him as Cometan.

[12:6:18] This makes the persona of Cometan far transcendent beyond the physical personhood of Brandon Taylorian for the perceptions of the world of Brandon Taylorian as Cometan also pertain to the individual and mass meanings that are attributed to him in different societies and cultures.

[12:6:19] The two-pronged nature of Cometan is of central importance to the way in which the Astronist Tradition considers the identity, ability, and destiny of Cometan for he is

considered, by the dyogenous understanding, to hold a distinct binarity to his nature, both aspects of which are intrinsically and inherently human, but remain distinguished in both their manifestation, functionality, purpose, and perception.

[12:6:20] Cometanology, also known as Cometanics, or cometanic studies, is the major discipline of study within the inclusive discipline of prerology dealing with the nature of the ontology, personhood, life events, and quotes of Cometan as well as the nature of Cometanhood and the methods directed towards its achievement.

[12:6:21] The personhood of Cometan is herein distinguished from the state or condition of Cometanhood as the former pertains to the individual ontology of the person of Cometan meanwhile the latter pertains to the condition, state, or rank of cometan and the processes and methods involved in the achievement of this state.

[12:6:22] It is expected that some individuals, denominations, and offshoots will see the purpose of Astronism to achieve the condition of Cometanhood which is to be henceforth known as the belief orientation of Cometanocentrism.

[12:6:23] However, this is not provided with omnidoxical authority and is not considered to be a universality through the entire philosophy.

[12:6:24] Cometanocentricity, or to be Cometanocentric in orientation, refers to believing that Cometan, as the founder of Astronism, should be the central orientation for the philosophical concepts, beliefs, theories, and denominations of Astronism.

[12:6:25] Essentially, the belief that all other beliefs in Astronism should somehow incorporate or be oriented around the person of Cometan.

[12:6:26] The Astronist Tradition does not generally take the stance of Cometanocentrism in reference to Astronism as a whole and its philosophical foundations, but is not outward opposing of the idea either which makes the Tradition's stance on this topic non-Cometanocentric.

[12:6:27] Alternatively, that which is to be henceforth known as anticometanocentrism refers to the belief that the figure of Cometan should not hold any centrality in the orientations of the concepts, beliefs, theories, and denominational foundations within Astronism.

[12:6:28] From the anti-Cometanocentric perspective, it is believed that Cometan the figure should play no role in the philosophical concepts and theories and should therefore only exist as the founder of those concepts and theories.

[12:6:29] There are expected to be a plethora of belief orientations in relation to Cometanhood that are to be further developed denominationally post-omnidoxically.

[12:6:30] Meanwhile, the methods granted towards the achievement of Cometanhood are herein omnidoxically authorised, yet The Ten Integrals of Cometanhood, as these methods shall be collectively appellated, do not represent the entirety of the positive methods for the achievement of Cometanhood.

[12:6:31] The Ten Integrals of Cometanhood demonstrate ten different routes by which a person or a group may achieve the condition of Cometanhood with an individual person in the process of achieving Cometanhood to be henceforth known as a cometanist/cometaner/cometer while a group in the process of achieving Cometanhood is to be known as a cometad.

[12:6:32] Strictly speaking, a person that achieves Cometanhood through only one route is to be known as monocometan, but may still generally be referred to as achieving the rank of cometan with the nine other forms of Cometanhood achievement including:

[12:6:32a] Duocometan refers to a person who seeks the achievement of Cometanhood through two routes.

[12:6:32b] Triocometan refers to a person who seeks the achievement of Cometanhood through three routes.

[12:6:32c] Tetracometan refers to a person who seeks the achievement of Cometanhood through four routes.

[12:6:32d] Pentacometan refers to a person who seeks the achievement of Cometanhood through five routes.

[12:6:32e] Hexacometan refers to a person who seeks the achievement of Cometanhood through six routes.

[12:6:32f] Heptacometan refers to a person who seeks the achievement of Cometanhood through seven routes.

[12:6:32g] Octocometan refers to a person who seeks the achievement of Cometanhood through eight routes.

[12:6:32h] Nonocometan refers to a person who seeks the achievement of Cometanhood through nine routes.

[12:6:32i] Decacometan refers to a person who seeks the achievement of Cometanhood through all ten routes.

[12:6:33] The most superior form of Cometanhood is that which shall henceforth be known as a supracometan which is a person that achieves Cometanhood through all ten of the omnidoxical routes introduced.

[12:6:34] When Cometanhood is considered in the way of how many routes a person has taken to achieve their Cometanhood is to be henceforth known as Cometanic Levels which is in contrast to Pure Cometanhood.

[12:6:35] Pure Cometanhood does not consider there to exist degrees within Cometanhood and that a person who has taken one route is not inferior to a person that has achieved Cometanhood through all ten omnidoxically introduced routes.

[12:6:36] That which is to be henceforth termed as cometanry pertains to process of the achievement of Cometanhood as something that shall be mastered rather than simply just achieved.

[12:6:37] Even upon achieving Cometanhood, a person can lose this condition through neglect over time of any aspect of Cometanhood which is why cometanry is essential because it involves not only the mastery of being cometanic, but the maintenance and consistency in maintaining one's cometanic characteristics and therefore also retaining one's path to Cometanhood.

[12:6:38] In the prerological disquisition in the discourse on Cometanic philosophy, when a person transforms into a new identity by way of belief orientation, mentality, and physicality, this is known as metaformation.

[12:6:39] Metaformation is transformation of the self inside oneself and it is this process that I herein term that I have undergone as Brandon into the personhood of Cometan.

[12:6:40] Metaformation is considered to be a major area of study that originated as a systematic form of study within Cometanic philosophy, but also as part of this study, metaformational instances that have occurred in contexts of other religious and philosophic traditions throughout history are also considered.

—

[12:6:41] That which is to be known as subversionism is my response to Buddha's Middle Way as I instead propose that which will be henceforth referred to as the Unique Way, or Cometan's Unique Way as an alternative the long-established Middle Way.

[12:6:42] Buddha's Middle Way is characterised by moderation between the extremes of indulgence and asceticism, but instead the Unique Way suggests that unicity should be applied to these two extremes; a unique combination of indulgence, moderation, and asceticism will be sought after and implemented by every single individual due to their uniqueness.

[12:6:43] As inspired by the beliefs of unquitarianism, there will not be any two persons that share the same needs or wants due to the unicity of each and every person's

lifepath; therefore, general principles that are propagated for millions to follow are often dissatisfying due to their incompatibility with our unique lives.

[12:6:44] The Unique Way essentially holds that each of us require a unique amount of both indulgence, moderation, and asceticism throughout our lives according to our wants, needs, and destinal lifepaths; there is no general set amount of anything or any one all-encompassing principle that can help every person due to the uniqueness of our thoughts, feelings, and ambitions.

[12:6:45] Therefore, the Unique Way emphasises to acknowledge our own uniqueness and that we each require our own unique set of indulgences and moderations to achieve liberation from ourselves, also known as self-liberation, or autoliberation and for the liberation of those around us and wider humanity through what we achieve for humanity as part of the beliefs of creativism and the necessity of contribution.

[12:6:46] The Unique Way therefore states that due to our unique destinies and our unique beingnesses, we each hold unique combinations of different elements of emotion, achievement, possession, intellectuality, and spirituality to achieve our liberations and become the selves that humanity needs us to be to achieve transcension.

[12:4:47] Therefore, in the Unique Way, there exists no set of rules or principles to follow to achieve liberation bar a single notion which is the following and shall be known as the Liberative Notion; to liberate oneself for the liberation of humanity is to locate our uniqueness, pursue it consistently, and share to whom our uniqueness is relevant what our contributions to progression have been.

—

[12:6:48] On the topic of the cycle of birth, death, and rebirth, known as the cycle of samsara within the Dharmic faiths, Astronism upholds the notion that existence is a cyclic turning wheel always turning in a linear direction.

[12:6:49] This encompasses the seemingly opposing notions of existing in which all elements of terrestrial and cosmic nature hold a cyclicity in their beingness, however, The Cosmos itself is organised temporally so that it is structured upon a linear course of events.

[12:6:50] Astronists are to imagine that the functionalities of The Cosmos act cyclically and that The Cosmos itself acts linearly.

[12:6:51] On the topic of the cycle of birth, death, and rebirth, due to Astronism's rejection of the doctrine of reincarnation, the Astronist view is that this cycle is purely based in lineage meaning that rebirth does occur, though not of ourselves, but instead we are reborn through our offspring.

[12:6:52] This is the rebirth that is spoken of in the cycle of birth, death, and rebirth; this is to be henceforth known in the context of Astronist belief as genealogical rebirth; this is the belief that we whom have offspring are the only ones to be reborn and it is through our children that we experience this rebirth of ourselves.

[12:6:53] Therefore, Astronism rejects traditionally held notions about the nature of reincarnation which does focus on the reincarnation of the self upon one's corporeal death while in Astronism, we speak of the reincarnation of the self prior to one's death through one's own offspring.

[12:6:54] Thereafter, generally a naturalistic perspective is applied which states that there is no afterlife, that there may or may not be a creator depending upon a person's perspective theological orientation, and that upon our corporeal deaths, we become one with The Cosmos and cease to exist; this forms and completes the structure of Astronist beliefs about eschatology.

[12:6:55] However, the essential belief here is to be known as genealogical rebirth because that is the only rebirth of ourselves into another separate entity that we can, prove, and rationally say exists.

—

[12:6:56] The Ten Integrals of Cometanhood are the ten routes that a person may follow to achieve Cometanhood, each of which demonstrates an integral element to what it means to be Cometanic, but only one of which is necessarily required to achieve the status of Cometanhood.

[12:6:57] Knowledge, practiced through gnostition, is the achievement of a level of knowledge (the recitation of facts) about The Cosmos that far exceeds the average individual.

[12:6:58] Realisation, practiced through effectuation, refers to the ability to know, feel, and see the cosmical system, orderity, and reality as it is and to unblock one's mind from distortions by weaving around the obstructions of the material world.

[12:6:59] Understanding, practiced through deciphation, as distinct from knowledge, refers to the achievement of a coherence to perceive something in all its possible facets demonstrated by one's able to clearly explain the subject to another and for the other to truly know what has been said so that they make first gain knowledge and later, understanding.

[12:6:60] Transcensionist imagination, as practiced through hyperfunction, involves the development of one's ability to imagine possibilities beyond the self and beyond the material world directed towards the cosmic world; this also involves the ability to inspire as well as to be inspired by The Cosmos as one's sole inspirer.

[12:6:61] Achievement of ambitions, as practiced through reification, is the achievement of one's ambitions according to one's interests, yet remaining open to the notion that there should always exist ambitions for they are sentient lifeblood, whether they be microdesires or macrodesires.

[12:6:62] Vaticination, as practiced through auspication, refers to the ability to foretell the future according to one's knowledge of the past and the present, as well as one's ability to realise their ambitions for the future so to authenticate their foresights.

[12:6:63] Exploration, practiced through peregrination, the physical form of which is to be known as somaperegrination which is either experiencing for oneself, or supporting the physical exploration of The Cosmos, and the mental form of which is to be known as phrenoperegrination and involves the exploration of The Cosmos mentally through the expansion of one's capacity through the combination of knowledge and understanding of The Cosmos.

[12:6:64] Emotional maturity, as practiced through emotication, pertains to the ability of a person to approach dilemmas by practising rationality and an emotionality that holds a measured, encompassed, and consequential temperament for the achievement of solutions; the opposite of rashness and the consideration of something without a careful and clear approach.

[12:6:65] Emancipation refers to the realisation that freedom is the ultimate goal of all sentient beings and the manifestation of oneself as the embodiment of liberation; a cometan must be free to themselves in all ways, they must be free from all external dependencies (objects, materialism, consumerism), and they must be capable of freeing others in all ways, whether it be through knowledge, understanding, external independency, emotionally, mentally, or in some other possible way.

[12:6:66] Education of others, as practiced through inculcation, pertains to the tenth and final integrand of Cometanhood pertains to the responsibility of all cometans to advise, motivate, and educate others that have not yet achieved Cometanhood, as well as those which have achieved Cometanhood pertaining to the discussion side of this integrand as this is the final duty of cometans to impart their learnings, either through vocality or through literary means.

—

[12:6:67] Also considered with Cometanology, Cometanics, or Cometanic studies, is the etymology of the mononym of Cometan and title of cometan as well as the condition or state of Cometanhood.

[12:6:68] Derived from the astronomical object of a comet and formed by the suffix of -an in order to mean that the title pertains to a cosmic individual, or a person of The Cosmos.

[12:6:69] In the Spanish-speaking world where this spelling of the name Kometan is expected to be the most popularly used, pertains to a person that commits; a committer to a cause and for Cometan himself, this is related to his commitment to the establishment and development of Astronism.

[12:6:70] The explanation of the title and condition of being a cometan, or achieving Cometanhood, is of crucial importance within cometanology as well as the chronology of the term and the differences in its meaning across time periods and geographies.

[12:6:71] Cometanhood is the condition or rank of achieving the title of cometan as distinct from the name of the founder of Astronism and the author of The Omnidoxy and Cometanhood involves a higher consciousness of The Cosmos physically, mentally, spiritually, intellectually, and philosophically.

[12:6:72] A person that has achieved Cometanhood is someone that understands The Cosmos in a similar fashion to Cometan himself as the founder of Astronism.

[12:6:73] This means being able to understand and accept that the exploration of The Cosmos is the primary responsibility of humanity, both morally and existentially, and that The Cosmos is the source from which all knowledge, philosophicality, and spiritual development is derived and shall take place within and in relation to.

[12:6:74] Essentially, a cometan is a person that has a perception of The Cosmos in which The Cosmos is the centre of their life, their ideas, and their beliefs, of course, the first of such to hold the title of cometan is myself, Cometan, as the author of The Omnidoxy and founder of Astronism.

[12:6:75] A follower of Astronism is not automatically considered to be on the path to Cometanhood; the journey to Cometanhood must be officially chosen to be embarked upon rather than automatically embarked upon once one becomes a follower of Astronism.

[12:6:76] There are no set rules or timelines for achieving Cometanhood and due to the unquitarian orientation of the entirety of The Philosophy, each and every person's path to the achievement of Cometanhood is considered to hold unquity despite the fact that the method(s) utilised to achieve their Cometanhood will be similar to others.

[12:6:77] All traditions and denominations within Astronism are expected to hold differing views on the nature of Cometan and Cometanhood, but there are some omnidoxically authorised elements of Cometanity and Cometanhood regarding the nature and ontology of Cometan that hold authority and are therefore adhered to by the Astronist Tradition.

[12:6:78] That which is known as Cometanic ontology is a subdiscipline within cometanology dealing with the ontology of Cometan which is essentially the nature of the being and beingness of Cometan.

[12:6:79] It is held in the Astronist Tradition that Cometan holds two fundamental ontologies; the first of which is a personhood which refers to the physical person of Brandon Taylorian who assumed the title of Cometan and remains the founder of Astronism and the author of The Omnidoxy.

[12:6:80] The second ontological element of Cometan is resembled as his persona which pertains to the extra-existential perception of Cometan, as perceived by the world and as distinct from the physical person of Brandon Taylorian.

[12:6:81] Essentially, the persona of Cometan is what the figure of Cometan means to each of us individually and is therefore extra-existential by its nature because it stretches far beyond the physical personhood of Cometan as manifested in Brandon Taylorian.

[12:6:82] The personhood of Cometan can be described as a universality because it pertains to the manifestation of Cometan in a physical person, however, the persona of Cometan can be described as unquitarian because it pertains to the unique perceptions that we all do have of the personhood of Cometan and what that personhood means to each individual.

[12:6:83] As distinct from the ontology of Cometan, the nature of Cometan is concerned with the physical, mental, spiritual, intellectual, and philosophical characteristics of Cometan, of which there are ten which are to be appellated as the Ten Correspondences for they exist in correspondence to Ten Integrals of Cometanhood.

[12:6:83a] The one whom can know cosmically.

[12:6:83b] The one whom can see cosmically.

[12:6:83c] The one whom can educate cosmically.

[12:6:83d] The one whom is inspired and can inspire cosmically.

[12:6:83e] The one whom aspire cosmically.

[12:6:83f] The one whom can foretell cosmically by means of past and present knowledge.

[12:6:83g] The one whom can explore cosmically in both mental and physical capacities.

[12:6:83h] The one whom can think cosmically by means of rational and emotional balance.

[12:6:83i] The one whom remains free from all externalities.

[12:6:83j] The one whom can guide others to achieve their Cometanhood.

[12:6:84] The denominality/denominationality of Cometanhood refers to the differences in the approaches in achieving Cometanhood and the beliefs regarding Cometanhood according to different denominations of the philosophy of Astronism that remain distinct, slightly altered, or additional versions of The Ten Integrals of Cometanhood.

[12:6:85] The humanity of Cometan is essential to the development of the philosophy of Astronism and herein within The Omnidoxy, there is never one instance in which divine revelation is ever linked to anything that is ever said which totally removes divinity from the equation in the development of Astronism.

[12:6:86] This is due to the humanness of Cometan and my fundamental nature as imperfect, troubled, subordinate below that of higher cosmicality, and most importantly, entirely mortal and so subject to the finality of death without promise of living beyond that in some proposed afterlife.

[12:6:87] The discussion of the humanity of Cometan is expected to be one of great interest to those whom study cometanology, but furthermore, so is the relationship between myself, as Cometan, and The Omnidoxy for I have written this treatise by sole authorship and personal inspiration.

[12:6:88] It is the second of these elements of the relationship that is of particular interest herein for the personal inspiration by which The Omnidoxy has been written does propose some destinal component to the manifestation of The Omnidoxy, albeit this remaining vague, and the link to divinity also remaining undefined entirely.

[12:6:89] However, it is stated herein from my perspective, as Cometan, and this remains something that I have contemplated for years now, that why should and how should I have been able to create The Omnidoxy at such a year age of seventeen.

[12:6:90] From where have all the ideas that have founded Astronism come? If by my imagination, what did trigger should a flood of notions, theories, concepts, and beliefs to form an entire philosophical tradition and philosophies within that tradition?

[12:6:91] Due to what purpose has The Omnidoxy been created? What exactly is the spark that I feel within myself that has powered my motivations to create The Omnidoxy? Is the creation of The Omnidoxy at such a young age natural or in some way supramundane?

[12:6:92] These are all questions that are essential to the consideration of the relationship between The Omnidoxy and myself as Cometan so as to develop an understanding of the story and chronology of the development of The Omnidoxy.

[12:6:93] Those whom consider the creation of The Omnidoxy to have ignited by pure coincidence are to be henceforth known as followers of the belief orientation of co-occurrencialism and those whom consider the creation of The Omnidoxy to hold destinical origins and motivations are to be henceforth known as followers of the belief orientation of prodestinism.

[12:6:94] It is held by the Astronist Tradition that The Omnidoxy was solely created by Cometan through his imagination which was driven by personal inspiration that remains directly intertwined with destinical forces that guide that which is to be known as The Cosmic Narrative.

[12:6:95] The Cosmic Narrative encompasses the notion that the entirety of the events that have occurred within The Cosmos thus far and hereafter are created in accordance to a narrative that has either been divinical set out (which pertains to the theistic perspective), are set out by the whims and wills of those which reside within The Cosmos or The Cosmos itself rather than any divinical entity (which pertains to the atheistic perspective), or that this narrative occurs by coincidence without any higher divinical or cosmical force guiding the way that it occurs (which pertains to the non-theistic perspective).

[12:6:96] It is the penchant of the Astronist Tradition to take the theistic perspective by notionising that The Divine has set out a narrative for all that shall occur within The Cosmos and all the other cosmoses of The Universe as well as The Universal Narrative itself.

[12:6:97] The creation of The Omnidoxy is therefore considered to be part of The Cosmic Narrative as is every other event that has occurred within The Cosmos which incorporates both a divinical and a destinical element to the nature of the development of The Omnidoxy.

[12:6:98] Personal inspiration is a combination of divinical and destinical elements that come into place to create an inspiration that is manifested through one's imagination and it is this personal inspiration that is the driving force within us, or the spark, as I refer to it personally, that motivates us to achieve what we do wish to achieve.

[12:6:99] Personal inspiration is, of course, an Astronistally-origivative term, but personal inspiration itself is not something that is exclusive to the creation and development of The Omnidoxy; the Astronist Tradition upholds that personal inspiration is taking place throughout The Cosmos by all sentient beings whom hold imaginations and is therefore occurring throughout The Earth in human societies in both micro and macro occurrences.

[12:6:100] Despite this supposed universality of personal inspiration, the personal inspiration that has lead to the creation of The Omnidoxy is herein provided with the hyperinspiration because it is considered to be beyond even a macro occurrence of personal inspiration due to the intensity and uniqueness of the circumstances of the creation of The Omnidoxy.

[12:6:101] Essentially, there is no supernatural element attributed to the creation and development of The Omnidoxy, but instead a destinical element that notionises that the creation and development of The Omnidoxy by Cometan has occurred during this time for a particular reason, as part of The Cosmic Narrative, perhaps by divinical guidance, but ultimately, due to the fact that fate is considered real and omnipresent throughout The Cosmos as the manifestation of The Cosmic Narrative and therefore, The Omnidoxy is placed as part of this omnipresent fate.

[12:6:102] I, as Cometan, continue not to know, nor able to comprehend, that which has provided me with the personal inspiration that has motivated by creation and development of The Omnidoxy at an age so young and at this particular time, but I do feel that the spark that exists within myself that I know and interact with everyday, has occurred in alignment with my personal destiny as well as the destiny of the world.

[12:6:103] The extent to which my personal destiny holds an effect on the destiny of the world is dependent upon the strength of the spark within me to speak of what has been created as part of The Omnidoxy and to spread it to all peoples on this planet and beyond; the ability of my mission is therefore integral to the realisation of the entire destiny of which The Omnidoxy is an integral part.

[12:6:104] Do I believe that I, as Cometan, have assumed this mononymous name and have been provided with a gift to inspire such a treatise as The Omnidoxy with no greater purpose than beyond my imagination itself? No, I do not.

[12:6:105] I know and feel that that which has guided me through the creation and development of The Omnidoxy shall continue to do their work after the completion of this treatise in the mission to disseminate its words to the ears and minds of all peoples.

[12:6:106] In conclusion, the Astronist Tradition insists that The Omnidoxy has been created according to a destinical nature and that the series of occurrences that have formed The Omnidoxy were granted by destinical means, whether divinely or non-divinely, depending upon the orientation of the individual, and that Cometan experienced personal inspiration as classified into hyperinspiration during the development of The Omnidoxy and thereafter throughout his existence.

[12:6:107] There are a multitude of other facets and elements to the study of cometanology which are to be introduced herein and explored post-omnidoxically:

[12:6:108] Cometanic denialism is herein defined as the belief orientation holding that Cometan, neither in his personhood, or his persona, ever existed and is considered to be a form of anti-Astronism.

[12:6:109] Cometanohumanism is the belief orientation holding that the nature of the personhood and persona of Cometan was unequivocally mortal human which is firmly upheld by the Astronist Tradition and is vehemently and repeated propounded herein.

[12:6:110] Cometanodivinitism is the belief orientation holding that the nature of Cometan is ultimately divinical rather than humanic which is vehemently opposed by the Astronist Tradition and holds no omnidoxically authentication.

[12:6:111] That which shall henceforth be referred to as prophetism involves the belief orientation holding that Cometan is, was and shall remain classified and identified as a prophet for his creation of The Omnidoxy and for his founding of the Astronist philosophical tradition, and particularly the philosophy of Astronism.

[12:6:112] This would place Cometan in the rank of prophet alongside other considered prophets, including the Buddha, Jesus, Muhammad, Confucius, Lao Tzu, and other religious and philosophical founders.

[12:6:113] The Astronist Tradition, synonymous with the term of Institutional Astronism, shall never itself utilise the term of prophet in reference to Cometan as it is considered to hold religious connotations of personal contact in divine revelation.

[12:6:114] However, it is of course believed that Cometan held greater insight due to his personal inspiration as manifested in the creation of The Omnidoxy herein, but this is as far as the Astronist Tradition treads on this topic, as I must have been in some way chosen to write the Omnidoxy and establish Astronism as part of my destinal lifepath.

[12:6:115] Additionally, there exists no authentication herein that Cometan is referred to as a prophet except within the bounds of prophetism and so this belief orientation is considered to be one that is held personally, but also extraAstronistally, meaning that other institutions, philosophies, organisations, and religions may designate Cometan as a prophet, but that this does not mean that those following Astronism and the Astronist Tradition have to consider Cometan as a prophet.

[12:6:116] That which shall be referred to as convergence relates to the times in which the personhood of Cometan intersected with the life events of the personhood of Brandon Taylorian, most prominently displayed in the Annual Life Periods of Brandon Taylorian, particularly that of The Year of The Gift as it is appellated.

[12:6:117] Any instance in which something Cometanically related occurred to Brandon Taylorian is henceforth to be classified as a convergence.

[12:6:118] Cometanic depiction refers to a branch of Cometanology dealing with the various forms of the depiction of the person of Cometan.

[12:6:119] Forms of Cometanic Depiction are split into two different forms including major and minor; forms of Cometanic depiction are expected to be categorised as part of Astronic/Astronist/Astronist art due to the centrality of the personage of Cometan to what it means to be Astronic and Astronist for Cometan remains the founder of this cultural sphere.

[12:6:120] The major depictional forms of Cometan are the most popularly used and are therefore are also the most commercially disseminated; there are three of these major depictions which ultimately formulate the basis of what can be termed as Cometanic art, a subset of Astronic/Astronist art.

[12:6:120a] Predominant Cometan is the most common cometanic depiction featuring Cometan standing up and in a stance with his arms partly outstretched featuring a pair of cosmic rings transversing his torso; it is this depiction that is to be featured in that which is to be referred to as the effigy logo for Cometan which is to be used across advertising and marketing; the effigial logo is one of two logos that are to represent Cometan and his authorship, the other being the signatural logo; one of the most interesting and unique feature of this cometanic depiction is that Cometan is depicted with skin colour resembling cosmical colours of nebulae, stars, and other cosmical progeny which is rarely seen for other cometanic depictions.

[12:6:120b] Observant Cometan is a cometanic depiction and arguably the second most common depiction of Cometan featuring him observing through a telescope similar to the Jesse Millette sigil but also with one of his arms raised upright supposedly pointing to the stars.

[12:6:120c] Contemplant Cometan is a cometanic depiction is the third most common depiction of Cometan in which the figure is featured as sitting down with knee raised upon which his fist is rested and upon which his head rests in a contemplative motion.

[12:6:121] There are expected to be dozens of minor depictional forms representing Cometan which will all emerge at different stages depending upon available funds to manufacture and distribute them post-omnidoxically, however, all of which denote some philosophical significance, symbology and meaning, the majority of which will always be developed post-omnidoxically, however, the different names and their descriptions will indeed be introduced herein as part of this discourse.

[12:6:121a] Dormant Cometan is a cometanic depiction featuring Cometan as asleep either lying down or more commonly depicted as sitting down with one leg upright with the other crossed underneath and with him lying on his knee sleeping; this figurine is perhaps be placed beside one's bed to encourage a good night's sleep.

[12:6:121b] Repellant Cometan is a cometanic depiction featuring Cometan standing upright with his two hands outstretched and his hands open and vertical so as to represent his ability to repel bad luck or evil forces.

[12:6:121c] Preponderant Cometan is a cometanic depiction similar to the aforeintroduced Predominant Cometan but is largely distinguished with the fact that this Cometan is depicting as having normal human coloured skin and in any variety of different standing positions or arm positions than the Predominant form.

[12:6:121d] Equilibrant Cometan is a cometanic depiction featuring Cometan standing upright with his hands raised upwards with his hands horizontally flat to signify equilibrium of scales.

[12:6:121e] Defendant Cometan is a cometanic depiction featuring Cometan standing with his two arms partly outstretched with his fingers spread apart in a gesture to signify Cometan's aural defence through his speeches and debatations.

[12:6:121f] Protectant Cometan is a cometanic depiction similar to Repellant Cometan but is distinguished by Cometan's clenched fists.

[12:6:121g] Conservant Cometan is a cometanic depiction featuring Cometan standing or sitting with his hands cupped usually around a star or another cosmic progeny.

[12:6:121h] Supplicant Cometan is a cometanic depiction featuring Cometan in various combinations of begging or pleading actions and gestures.

[12:6:121i] Discussant Cometan is a cometanic depiction featuring Cometan in conversation with related gestures and expressions.

[12:6:121j] Illuminant Cometan is a cometanic depiction featuring Cometan either standing or sitting with legs crossed with five star symbols arched on top of him, the largest one of which resides directly overhead.

[12:6:121k] Ministrant Cometan is a cometanic depiction featuring Cometan conducting a caring gesture or gesture of assistance to another (who usually isn't actually depicted).

[12:6:121l] Anticipant Cometan is a cometanic depiction featuring Cometan either standing or sitting with his index figure and thumb perched under his chin.

[12:6:121m] Jessant Cometan is one of the rare cometanic depiction featuring Cometan smiling and also with his arms partially outstretched, his hands open flat, and pointed almost horizontally.

[12:6:121n] Cosmic Touching Cometan is a cometanic depiction featuring Cometan standing or sitting with one raise arm with a single finger outstretched touching some depicted cosmic progeny, typically a star or galaxy; this may also be another rare depiction of Cometan smiling.

[12:6:121o] Ascendant Cometan is a cometanic depiction featuring Cometan stepping up into thin air, but this depiction is considered rare as it is one of only a few which features Cometan holding a cosmic orb.

[12:6:121p] Celebrant Cometan is a cometanic depiction featuring Cometan either standing or sitting and usually smiling with his hands partially crossed and pressed against his chest.

[12:6:121q] Coruscant Cometan is a cometanic depiction featuring Cometan with his arms down his sides outstretched slightly with his hands open flat; the main feature of this depiction is Cometan's glittering and sparkling clothing which is not seen in any other depiction.

[12:6:121r] Declarant Cometan is a cometanic depiction featuring Cometan standing upright in the middle of speech handing up a piece of paper.

[12:6:121s] Remontant Cometan is a cometanic depiction featuring Cometan either standing or sitting with his hands gently pressed against his head with the hint of a smile in order to depict Cometan's experience of an indrucus or personal inspiration.

[12:6:121t] Valiant Cometan is a cometanic depiction featuring Cometan standing with one leg raised up as though about to jump with his left arm raised and his fist clenched.

[12:6:121u] Predicant Cometan is a cometanic depiction featuring Cometan conducting various different gesture types all involving him preaching or speaking to large crowds who more or may not be depicted.

[12:6:121v] Aspirant Cometan is a cometanic depiction featuring Cometan with his arms and hands upraised vertically and his head tilted back looking upwards also along with various cosmical progeny depicting floating around him.

[12:6:121w] Devotant Cometan is a cometanic depiction featuring Cometan in a praying or in a devotional position and stance.

[12:6:121x] Rutilant Cometan is a cometanic depiction featuring Cometan either standing upright or sitting down in various positions with the distinguishing featuring being the red and golden glow of Cometan's clothing and especially his golden glowing eyes.

[12:6:121y] Osculant Cometan is a cometanic depiction featuring Cometan gesturing a kiss, possibly an air kiss, but he may also be depicted as kiss a cosmic progeny that he is holding in his hands.

[12:6:121z] It is important to note that each and every form of cometanic depiction introduced just now herein will have different variations throughout the history of Astronism and cometanic depiction, especially so with differences in manufacturer with

some depictions being markedly more chimericalistic and exaggerated than others especially with the differences in the depiction of Cometan with supernatural abilities which is something that is to be discouraged by The Institution going forward.

[12:6:122] Those which are to be known as significances in the context of Cometanic depiction will pertain to features in cometanic depictions which may be the depiction unique or rare; essentially, significances are talking points for cometanic depictions and are usually provided with appellations and are closely associated with symbolical discussions.

[12:6:123] The head positions in Cometanic depictions are also considered to hold different symbolic importances depending on the angle of Cometan's hand in the depiction as well as his facial expressions; these symbolic differences will be explored and outlined as part of Cometanic symbology post-omnidoxically.

[12:6:124] The arm positions in Cometanic depiction, similar to the head positions, also hold consequence to the symbolism of the entire depiction depending upon the way in which the arms are gestured which again will be developed and explored post-omnidoxically through the branch of Astronist/Astronic symbology known as Cometanic symbology.

[12:6:125] That which is to be referred to as celestuality in the context of cometanic depiction shall refer to the various different positions of cosmic progeny and phenomena in cometanic depictions, each of which hold differing symbolical significances depending on the colours used, the types of progeny used, where they are positioned in relation to Cometan, and how they are angled.

[12:6:126] The Annual Life Periods of Cometan taking place between 2013 and stretching to the year of 2021, the majority of which will be outlined herein whilst the final two of such periods will only be appellationally introduced; further annual life periods will be appellationed and authorised by The Institution post-omnidoxically.

[12:6:126a] The Year of The Gift pertains to the year of 2013 CE and was the affirmed year in which the founding of Astronism occurred by then-named Brandon Reece Taylor, who would later come to be known as Brandon Taylorian, who would then later decide on his authorship as Cometan; the creation of the fictional mystery detective named Jesse Millette also took place this year which necessarily preceded Cometan's undertaking of deeper topics for contemplation, including philosophy, theology, and politics.

[12:6:126b] The Year of Ignorance pertains to the year of 2014 CE and was the year proceeding the year in which Astronism was founded by Cometan, whom was still then named Brandon Reece Taylor; this year is named as such due to the relatively unproductive time that this demonstrated for Cometan, largely due to his immaturity as well as his concentration on developing his works of fiction involving The Five Astronist Characters rather than focusing on the philosophy of Astronism, which was then still in a prototypic stage of development; despite this year being titled as one of ignorance, there is

considerable literature written, and even by Cometan himself, that this year of literary development was a necessary precursor to that which proceeded it; the argument stands that if Cometan had not gained some experience with writing extensive literary works, this ability to create what would later be titled as the Omnidoxy would have been undermined.

[12:6:126c] The Year of Enlightenment refers to the year of 2015 CE which was the year in which then-named Brandon Reece Taylor began writing the founding treatise of the philosophy of Astronism; during this time, Cometan referred to what would later be renamed as the Omnidoxy to The Grand Centrality of The Philosophy of Astronism, which obviously is still a title used presently as it pertains to the document which encompasses the Omnidoxy, The Astronist Methodology, and other founding works, essays, and short pieces of writing; from studying The Year of Enlightenment, we can see the development of the Omnidoxy itself, and it is from this year that the disciplines of omnidoxicology, omnimeneutics, and omnidoxical studies receive their origins; also, it was during this time that Cometan's personal inspirations are confirmed to have started, albeit them remaining infrequent and largely undeveloped to the later years when he understood their significance and could expand them from singular ideas into a multitude of concepts and theories with different dimensions.

[12:6:126d] The Year of Expansion refers to the year of 2016 CE, that Cometan's personal inspirations began to expand rapidly, hence the title for this year in the chronology; some of the most formative ideas of Astronism were created during this time, particularly those regarding the ethical traditions of the philosophy, some of the foundations to Astronic logic were made, and a large body of new terms began to form during this time.

[12:6:126e] The Year of Consolidation corresponds to the year of 2017 CE, refers to the year in which Cometan's personal inspirations mainly favoured non-philosophy topics that formed the basis of Astronist culture which now currently surrounds and informs the identity of the philosophy of Astronism itself; furthermore, it has been argued that Cometan's slight venture away from strictly philosophical disciplines during this time was necessary in order to formulate the idea of creating a wider culture for his philosophy to reside within; the developments that took place during this year later informed the cosmical theme of Astronism that would subsequently follow to form the identity of the philosophy as a whole; newfound structured topics such as Astronist literature, Astronist symbology, Cosmic art, Cosmic philosophy and Astronist ornamentation amongst others made their introductions during this year; however, towards the end of The Year of Consolidation, Cometan's attention strictly returned to the fields and disciplines of philosophy which would then dominate thereafter.

[12:6:126f] The Year of Prolifics refers to the year of 2018 CE and it is during this year that Cometan experienced the most intensive phases of personal inspiration out of all the years of The Founding of Astronism period in Cometanic chronology; the personal inspirations received and attained by Cometan during this time were mostly in relation to topics concerning the philosophy of Astronism specifically rather than wider Astronist culture

which distinguishes this year from the one prior; furthermore, and hence its title, it was during this year that Cometan's writing of the Omnidoxy became so intense and prolific that the then nineteen to twenty year old philosopher was able to write approximately half a million words to form a significant portion of the entire Omnidoxy; over ten thousand terms were either newly created or redefined into an Astronist context during this year and it was also during this year that the identity of Astronism became clear to Cometan; in addition, it was during the summer months of The Year of Prolifics that Cometan was inspired to uptake his mononymous and historical name which further defined and distinguished his philosophership and is wider authorial and public identity.

[12:6:126g] The Year of Completion is the name for the year in Cometanic chronology which relates to 2019 CE and it was during this year that the Omnidoxy's first draft was completed, hence the chosen title for this annual period; despite the prolificity of personal inspirations slowing down somewhat during this year compared to the previous, it was during this time that many of the ideas first developed by Cometan in the year prior were returned to and developed further to create a more coherent philosophy, theology, eschatology, and soteriology for Astronism; as another dimension to the founding of Astronism that occurred during this year was how Cometan gained greater conviction in speaking about Astronism to others and openly publishing articles to inform the public of Astronism's existence and its key tenets.

[12:6:126h] By the time of the completion of the Omnidoxy, two more annual period appellations have been designated, the first of which is The Year of Manifestation pertaining to 2020CE and The Year of Predissemination denoting 2021CE which is the first year in The Establishment of Astronism era.

[12:6:127] The historical Cometan, or the historicity of Cometan, refers to the physical personhood of Cometan as manifested in Brandon Taylorian as distinct from the persona of Cometan as manifested in The Omnidoxy and as the founding figure of Astronism.

[12:6:128] The study of the historicity of Cometanic personage and the events that occurred throughout his life is herein considered to be an immensely important element of cometanology in the effort to organise the historical elements of Cometan's life and those elements which remain in requirement to be made distinct from that of the personhood of Brandon Taylorian.

[12:6:129] Mionism, miogenism, miogeny, or to be miogenous, in Cometantology, refers to the belief orientation holding that Cometan holds just one nature to his ontology rather than two, usually in favour to the personhood of Cometan over the personhood of Brandon Taylorian, therefore denying the ontology of Brandon Taylorian altogether.

[12:6:130] This belief therefore denies the existence of the persona of Cometan as an existentially separate nature to ontology of Brandon Taylorian, meanwhile the opposite view is held by the Astronist Tradition, and so mionism is rejected by the Astronist Tradition and is also not provided with omnidoxical authenticity herein.

[12:6:131] Neonism, neogenism, neogeny, or to believe neogenously, in the context of cometanology, is the belief orientation holding a belief about what is upheld by the Astronist Tradition, which is herein omnidoxically authenticated, about Cometan's dyogenous nature and ontology.

[12:6:132] It is the belief upheld that in turn formulates a new nature that is reserved for Cometan alone as neonist ideas postulate that every other person than Cometan holds only one ontological nature rather than two, hence Cometan is ontologically different from every other person.

[12:6:133] Neonism is considered to form the basis of what it means to reach Cometanhood in some traditions for it is considered that to reach Cometanhood, is to hold a dyogenous ontology rather than a miogenous ontology as is held by all those whom do not reach Cometanhood.

[12:6:134] Ectocometan are the external attributes of the personhood of Cometan rather than the internal, as manifested by his words, actions, and physicality.

[12:6:135] Oppositely, intracometan are the internal attributes of the personhood of Cometan rather than the external, as manifested by his thoughts, his ideas, his personal inspiration, his cognition and his ambitions.

[12:6:136] Antidevotionism, in Cometanology, refers to the belief orientation holding that no devotion should ever be directed towards the figure of Cometan beyond that of corporeal admiration and aspiration which is a belief that is vehemently supported by the Astronist Tradition and is herein also omnidoxically authenticated.

[12:6:137] Alternatively, that which is to be henceforth known as devotionism refers to the belief orientation holding that devotion to Cometan beyond that of corporeal admiration and aspiration should be encouraged, but on the grounds that this defies Cometan and formulates a religious element to his existence.

[12:6:138] Both the Astronist Tradition and The Omnidoxy vehemently oppose this belief orientation in favour of antidevotionism which retains Cometan humanity and removes all possible religious elements from his character.

[12:6:139] Cometanosophia, also appellatively referred to the Wisdom of Cometan, pertains to the combined knowledge and experience that Cometan held throughout his life in his disentonomous state wherein his personhood and his persona are unified yet remain existentially distinct from one another.

[12:6:140] Cometanic genii relates to the notion that Cometan was undoubtedly a genius; a person with exceptional intellectual and creative capacity as was first manifested in his

sole creation of The Omnidoxy which is considered by the Astronist Tradition to have affirmed his genii status.

[12:6:141] That which is to be termed as cocatabasis, to be cocatabatic, or the belief of cocatabatism involves the practice of providing Cometan with attributes that are Traditionally considered to be lower in significance than his accepted self and ontology as omnidoxically authorised, an example of which would be to deny that Cometan held some higher purpose or knowledge which he used to form The Omnidoxy herein and which was used to establish Astronism.

[12:6:142] Oppositely, that which is to be known as coanabasis, to be coanabatic, or the belief of coanabatism refers to the practice of providing Cometan with attributes that are Traditionally considered to be higher than his accepted self and ontology as omnidoxically authorised, an example of which is the deification of Cometan through devotionism.

[12:6:143] That which is to be known as protheism refers to the belief orientation holding that from cometanological study, one is able to justifiably argued for the existence of God, primarily due to the notion of personal inspiration which is considered to be destinically formed and divinely guided which pertains to the existence of The Divine, and therefore God, for which The Divine is an alternative appellation.

[12:6:144] In a wider sense, protheism is the utilisation of any conceptual within Astronism to justify the existence of God.

—

[12:6:145] A transpatronym, transpatronymy, to be transpatronymous, or to be named transpatronymously refers to the practice first introduced by Brandon Taylorian (Cometan) in which he changed his surname so as to combine it with the surname of his true love, Liana Tiratsuyan, or Tiratsuian.

[12:6:146] The changing of one's surname in this way is considered to be a popular occurrence henceforth in the Astronist onomatological system in any case in which there exists surnames in the system.

[12:6:147] The practice is considered to demonstrate commit to one another, a true and long-lasting union, and is also considered to demonstrate the couple as upholding internationalist values which remain important to the development of both Taylorianism and Cometan as two distinct interpretations and philosophies from that of Astronsim.

[12:6:148] Cryptonism is to be henceforth known as a Form of Astronism, also known as Underground Astronism, or may also be referred to as Home Astronism, in which followers of Astronism face persecution in a society which means that they must only conduct their practices and speak of their beliefs in secret rather than in public.

[12:6:149] Due to the vast amounts of occurrences of persecution by belief in the history of humanity, cryptonism is unfortunately expected to be in rife occurrence in certain societies in which new or divergent ideas are not welcomed by the majority of inhabitants, or by the governing bodies of such societies.

—

[12:6:150] Astronic Federations shall be established in every country of The Earth and in future settlements and civilisations beyond The Earth which will each encompass all forms of religious communities, followers of organised philosophies, and organisations and enterprises alike which identify as Astronic or Astronist in their orientations.

[12:6:151] Therefore, each Astronic Federation encompasses a wider and a subsequent a more diverse community than that which is represented by The Institution of The Philosophy of Astronism.

Apocalypse in Astronism & Elements of Philosophy

[12:7:1] Astronist Philosophy rejects notions of apocalypticism and does not generally acknowledge any form of apocalypse unless in the sense of a comet or asteroid hitting The Earth.

[12:7:2] Further to this, in order to retain its non-proclamational stance, Astronism does not ever proclaim apocalypticism due to the fact that the belief orientation is largely associated with religious territory and remains majoratively distant from the ideas within Astronism.

[12:7:3] Obviously, the notion of apocalypse is closely related to eschatology and so we must also understand the Astronist eschatology if we are to understand how and why apocalypses do not hold a central role in the Astronist tradition.

[12:7:4] The notion of an impending apocalypse is completely foreign to the beliefs and ideas held within The Philosophy of Astronism, however, within an expological context, the notion that an impending manmade or natural apocalypse is proposed as one of the reasons that humanity must explore The Cosmos in order to reach New Earth.

[12:7:5] Neotism which encompasses the New Earth idea involves the proposition of a new planet that almost exactly resembles that of The Earth wherein humanity can settle and civilise with large populations without much disturbance or difference from the majority of people's lives on The Earth.

[12:7:6] Neotists utilise the prophecy of an impending apocalypse, either derive solely from an Astronist philosophical concept, or as part of a religious or ideological tradition, or another philosophy, in order to justify their proposal for the mass migration of humanity from The Earth to the New Earth.

[12:7:7] Despite the minute role that apocalypse play in the central philosophical elements of The Philosophy of Astronism, there still does reside a couple of instances in which apocalyptic ideas have infiltrated the ideas propounded within The Omnidoxy herein, another example of which is in ultimatology and finality in which a universal, or cosmic apocalypse in the form of a Big Crunch or Big Freeze.

[12:7:8] By this notion, the idea of an apocalypse gains greater legitimacy and traction, but only within certain disciplines of study that are somewhat forced to consider the possibility of a humanwide, cosmicwide, or universewide apocalypse that is either orchestrated by The Divine or not.

[12:7:9] Essentially, the nature of the role and identity of apocalypses in The Philosophy of Astronism fundamentally different to all other instances in which apocalypses hold roles in other systems of thought due to the apocalypses in Astronism resulting from scientific theories and holding largely cosmical themes rather than theological or divinical themes.

[12:7:10] That which shall henceforth be termed as dogmatic philosophy, which is itself as a term considered to be oxymoronic by the Astronist Tradition, relates to the subdiscipline of prerology dealing with the relationship between philosophy and truth in the sense that any proposition of truth is dogmatic by its nature while correct philosophicality is in a constant attempt to avoid notions that involve truth.

[12:7:11] There have been many instances in The Omnidoxy in which the conveyance of truth has been condemned in the context of philosophy, especially so as a violation of the principles upheld by the Philosophical Spirit.

[12:7:12] Therefore, the discussion of the relationship between truth and philosophy is expected to be one of vigorous debate post-omnidoxically due to its nature of cross-disciplinarity.

[12:7:13] That which is to be henceforth known as philosophy proper pertains to the subdiscipline within prerology dealing specifically with the feelings, attributes, and works of humanity as a whole and individually in their vocations to attain transcension through creative, philosophical, technological, and scientific works of all kinds via the acts of transautisation, transmatism, or astrovatism.

[12:7:14] Philosophy proper essentially studies the practical ways in which humanity as a whole or humans as individuals are planning to or are actually achieving transcension both in their own personal contvituvtive ways for individuals as well as in wider scale projects and movements for humanity as a whole, or subcategories of humanity.

[12:7:15] That which shall henceforth be termed as reconstructive philosophy refers to the subdiscipline of study focusing on the process, nature, elements and consequences of the reascension of philosophy on a variety of different intraphilosophical, interphilosophical, and exophilosophical components.

[12:7:16] Cosmic filiation, as it shall henceforth be termed, involves the notion that through the ideas held within productism and the Astronist cosmology, that humanity is descended from The Cosmos and therefore holds a duty to respect The Cosmos as one of its descendants as well as respect its codescendants which includes nature as a whole and other sentient as well as non-sentient animate lifeforms.

[12:7:17] The concept of apocatastasis in Astronism involves and refers to the notion that humanity should be reconstituted, restituted, restored, and redirected towards the original purpose of its existence which, according to Astronism, is the exploration and enknowledgement of The Cosmos for the accessibility of humanity through transcension.

[12:7:18] Additionally, that which is known as phyletism in Astronism refers to the principle and role of nationalities in the philosophical development of Astronism as well as in the parenological and padronical elements of The Philosophy.

[12:7:19] Furthermore, nationalities play a small and perhaps even non-existent role in the development of The Philosophy of Astronism due to the cosmic theme of its foundations and the humanwide principles that it has been founded by.

[12:7:20] Finally, the scope of Astronism stretches far beyond that of the trivialities presented by nationality though The Institution herein also acknowledges the importance of nationality to personal heritage which should be encouraged, but not to the extent at which one's wider view of existence and the beauty of the diversity of humanity is clouded.

The Role of Mercy in Astronism

[12:8:1] Philosophical mercy: mercy of one's body, mind, spirit, and of one's ability to free both oneself and others through one's practice of mercy.

[12:8:2] Philosophy of mercy: the study of the nature of mercy in the context of philosophy according to the Astronist Tradition considered to pertain to freedom primarily, as well as the various different ways in which mercy can be applied and practised.

[12:8:3] Astronist definition of mercy: Astronist Philosophy considers mercy to be ultimately a form of freedom which solves the reason for its inclusion within the discipline of prerology and therefore considers its descriptors of forgiveness, benevolence, and compassion to be secondary to its descriptor of freedom.

[12:8:4] Mercy is considered to be the greatest manifestation of the essence of the Philosophical Spirit, thus pertaining to its central place within Astronist Philosophy.

[12:8:5] Benevology refers to the study of mercy and is defined from the philosophy of mercy as this remains a discipline of study within Astronist Philosophy while the philosophy of mercy exists outside of the Astronist philosophical context.

[12:8:6] The act of mercy can be split into two forms depending upon the receiver of mercy (known as receivism) and the subsidiser of mercy (known as subsidism).

[12:8:7] Astronist Philosophy considers the purpose of mercy to achieve freedom for both the receiver and the subsidiser in different ways; the former achieves freedom through mercy by being released from the grip of the subsidiser either physically, mentally, or emotionally while the latter achieves freedom through mercy by releasing all those whom they hold ruthlessness, anger, heartlessness or vengeance; both forms of mercy are equally beneficial to freedom.

[12:8:8] For both the receiver and the subsidiser, merical freedom is granted through release from the respective perspectives.

[12:8:9] Astronist philosophical tradition does not specify mercy according to acts as many of the religious traditions have done over their developments, but does instead leave mercy to the truly philosophical and theoretical realm with contemplations of its nature being central.

[12:8:10] Mercy is considered the necessary precursor to all forms of freedom.

[12:8:11] Cosmic Mercy is appellated as a type of mercy that doesn't directly originate from a person, but originates from an unknown source which is typically designated to be The Cosmos.

[12:8:12] Cosmic Mercy is provided to a person as the receiver and The Cosmos as the subsidiser.

[12:8:13] Cosmic Mercy can come in many forms but encapsulates all good acts directed towards a person and is exemplified by one's recovery from an illness, or thinking of an idea which are all considered promonitions of mercy from The Cosmos.

[12:8:14] Coincidentalism is the belief orientation characterised by the notion that mercy is only applicable to people, or only applied by people rather than by The Cosmos and so rejects the notion of Cosmic Mercy.

[12:8:15] Primacies of Mercy: Freedom, Compassion, Benevolence, Forgiveness, Clemency, and Thoughtfulness.

[12:8:16] Missionism, as followed by missionists, in the context of benevolence, shall henceforth refer to the notion that practices of mercy are only conductible in pre-planned and organised missions rather than flippant or individual acts.

[12:8:17] It must be stressed that the essential and initial contributions of Astronist Philosophy to mercy are its redefinition, the philosophical and theoretical expansion and exploration of mercy, as well as the various instances of its application rather than concerning the acts of mercy themselves and defining what such acts are.

[12:8:18] Prerological approaches to mercy focus on the position of mercy within the concept of freedom and the achievement of freedom in all its many forms as outlined by prerologists.

The Role of Meaningfulness in Astronism & Religious Sponsorship of Enterprise

[12:9:1] The subject of meaningfulness and its contemplation are organised in the context of Astronist philosophy by the discipline of study of semantology; semantological study is therefore concerned with meaning, meaningfulness, and the application to purpose compared to meaning.

[12:9:2] There are a variety of definitions for what can be considered meaningful, the principal one of which pertains to something which is serious, important, or worthwhile.

[12:9:3] Communicating something that is not directly expressed pertains to meaningfulness in the context of Astronism.

[12:9:4] Implied or explicit significance is also important to the role of meaningfulness in Astronism, especially so in relation to the writings of the Omnidoxy itself.

[12:9:5] What is meant by a word, text, concept, or action in the context of Astronism is also to be extensively studied and philosophically contemplated as part of the semantological discipline.

[12:9:6] Focuses on exploring how Astronism focuses on making the often distant entities of space, celestial entities, and the study of astronomy and cosmology a meaningful set of subjects to the everyday lives of people and how this can be further conducted as part of the future of Astronism; the positioning and structuring of something, either a physical entity or a concept, is also to be vigorously explored as part of semantology.

[12:9:7] Meaningful towards astronomical topics to human beings is developed through various notions including the creation of The Cosmos, cosmic devotion, a cosmocentric philosophical system, and others which essentially forms metaphilosophical notions and stems from the aforesquisitioned distinction between philosophical astronomy and scientific astronomy.

[12:9:8] It is philosophical astronomy that seeks to bring an everyday spiritual, intellectual, religious, philosophical, psychological, social, cultural and existential relevance to all elements pertaining to astronomy.

[12:9:9] What is meaningfulness? Meaningfulness in the context of Astronism ultimately pertains to connection between Astronist beliefs and the masses; the exploration of meaningfulness in semantological study concerns itself with the perceptions held by the masses and different segments of the society towards Astronism and its expounded beliefs.

[12:9:10] Methods and technique must be created and understood in order to explore how this meaningfulness has developed over the history of Astronism as well as how wider astronomical significance has been developed in all the ways previously outlined in a society either in direct association with the efforts of The Institution and Astronism or how this has developed separately.

[12:9:11] How can meaningfulness become tangible? Can meaningfulness be quantified? These are questions that will also need to be explored

—

[12:9:12] Modern religions and organised philosophies should sponsor the following enterprises and forms of entertainment: water parks, theme parks, amusement parks, amusements, miniature park, marine mammal park, safari park, cinemas, arenas, auditoriums, circuses, discos, funfairs, galleries, leisure centres, museums, nightclubs, stadiums, waxworks, and zoos.

[12:9:13] One of the main Astronic examples of a religious sponsorship of enterprise, as it shall be henceforth known, is that which is to be known as an astrozoo, or an astronarium, the latter term of which is best preferred

[12:9:14] An astronarium is a type of theme park, or amusement park, or may be as small as a single building which features different areas or facilities used for the education and entertainment of entrants centred on a theme of outer space, education about cosmical progeny and phenomena, and about humanity's exploration and humanity's wider interactions with outer space in both the past, present, and the future.

[12:9:15] It is important that as part of the amassment of Astronism and its subsequent commercialisation for the suitability of the masses that it is provided with a slogan as are the majority of other organised entities.

[12:9:16] The slogan of Astronism shall henceforth be known as the following; a cosmic religion with astronomical ambitions.

[12:9:17] The following categorisations formulate the structure of an entertainment and educational facility or enterable park for tourists to enter according to the different types of astronomical objects, astronomical events, and anthropological interactions with space.

[12:9:18] Phenomonics, progenics, and anthropics are the three main categories and it is these that upon which the layout of an astronarium, or an astrozoo would be structured; astronariums may also be branded as astroparks, starparks, or as astroland, or starland.

[12:9:19] The first of these phenomonics pertains to a categorisation synonymous with astronomical and cosmical phenomena which is to be used as a major categorisation

during the development of an astronarium and houses all facilities centred on cosmical phenomena.

[12:9:20] The first of which is a novarium which includes dwarf novae, novae, supernovae and hypernovae and is a facility featuring interactivities, shows, and other forms of education and entertainment about these different types of novae.

[12:9:21] The second segment of phenomonics is to be known as an eclipsium which is a facility featuring interactivities, shows, and other forms of education and entertainment about all the different types of eclipses that may occur involving different cosmical progeny.

[12:9:22] That which is to be known as an occultarium is a facility featuring interactivities, shows, and other forms of education and entertainment about astronomical transits, occultations, conjunctions, appulses and syzygies.

[12:9:23] The fourth segment of phenomonics is to be known as an equinoxium which is to focus on equinoxes and is to be manifested in a facility featuring interactivities, shows, and other forms of education and entertainment regarding the different types of equinoxes and when they do occur.

[12:9:24] A solsticium is focus on solstices and is to be physicalised as a facility featuring interactivities, shows, and other forms of education and entertainment regarding the different types of solstices and when they do occur.

[12:9:25] That which is to be henceforth known as an impactorium is the sixth segment of phenomonics and pertains to a facility featuring interactivities, shows, and other forms of education and entertainment regarding galactic mergers, stellar collisions, neutron star mergers, and asteroidal impact.

[12:9:26] The segment of phenomonics is to be known hereafter as a radarium which is a facility as part of a wider astronarium featuring interactivities, shows, and other forms of education and entertainment regarding the radio emissions of astronomical objects and phenomena including megamasers, radio galaxies, radio stars, astrophysical masers, the cosmic microwave background, cosmic noise, and microquasars.

[12:9:27] Finally, that which is to be known as phasarium is the last segment of phenomonics to be introduced herein and shall focus its facilities of entertainment and education as part of a wider astronarium on the phases of The Moon and other moons from the perspective of other host planets; host planets are planets around which moons orbit.

[12:9:28] The second of the three major segments of astronariums is that which is to be henceforth known as progenics which focuses on astronomical and cosmical progeny in all of its facilities.

[12:9:29] The first of the facilities of progenics is that which is to be known as an oblivarium which will focus on interactivities for education and entertainment which pertain to oblivions/black holes.

[12:9:30] That which is to be known as nebularium is a facility of progenics which focuses on displays, interactivities, shows, and other forms of entertainment and education centred on nebulae.

[12:9:31] A stellarium, in the context of Astronist philosophy and astronariums, is a facility of central importance to all astronariums as it focuses on interactivities, shows, and other forms of education and entertainment regarding stars and star clusters which are arguably the most important all the progeny.

[12:9:32] The fourth segment of progenics is that which is to be known as a pulsarium which is a facility focused on the education and entertainment of entrants regarding the nature of pulsars.

[12:9:33] A quasarium is a categorisation with progenics that is manifested as a facility featuring interactivities, shows, and other forms of education and entertainment regarding quasars.

[12:9:34] A galaxarium is a type of facility within the segment of progenics as part of a wider astronarium, or astropark which features interactivities, shows, and other forms of education and entertainment centred on galaxies, their different types and formations, and emphasises the importance of galaxies to the structure of The Cosmos.

[12:9:35] That which is to be known as a filamentarium is a type of facility as part of the progenics segment of an astronarium in which interactivities, shows, and other forms of education and entertainment are displayed with a particular centrality on galactic filaments.

[12:9:36] Planets and planetary systems are to be informed and educated to the masses through those which are known as planetarium which, in the context of astronariums are different from naological planetariums for those which are present within astronariums are neutral on the topic of religious and philosophical astronomy and therefore are not to dispense Astronist beliefs alongside astronomical education.

[12:9:37] Those which are to be henceforth referred to as cometariums are facilities within astronariums which will focus on the displaying, educating, and entertaining of entrants on the topic of comets, their natures, their functions, and their significances to the wider universe.

[12:9:38] Meteors, meteoroids and bolides will all be educated and entertained to the public through those which shall henceforth be known as meteoriums which are facilities categorised within progenics as part of astronariums.

[12:9:39] Asteroids in all of their forms are to be focused on by asteroidariums which are part of progenics in astronariums; these asteroidariums are to feature interactivities, shows, and other forms of education and entertainment are displayed with an emphasis on asteroids.

[12:9:40] Those which are to be known as lunariums as part of the segment of progenics within astronariums, are facilities which will feature interactivities, shows, and other forms of education and entertainment which will focus on The Moon itself as well as moons through all planetary systems.

[12:9:41] That which is to be henceforth referred to as a voidarium is a prominent segment of progenics within astronariums which will feature interactive displays, shows, and other forms of education and entertainment to centre on the topic of voids in deep space.

[12:9:42] Spheres and clouds, examples of which are the heliosphere, atmosphere, and Oort cloud, in the context of astronariums, will be educated and entertained to the public through nephoriums as part of the progenics categorisation.

[12:9:43] The third and final segment of a standard astronarium will be that which is known as anthropics; anthropics as a segment of an astronarium will focus on human interactivity with outer space, the relations between human civilisation and the stars, as well as the future of humanity in the context of outer space.

[12:9:44] Constellations and asterisms will be educated and entertained through segments of anthropics in astronariums which are to be known as constellariums and will focus on the history of constellations and the future of their usage and belief through interactive displays, shows, and other forms of education and entertainment.

[12:9:45] Religious and philosophical beliefs in the context of astronariums will be categorised as part of anthropics and will be displayed and educated in entertaining and interactive ways through facilities which will be henceforth known as cosmonariums.

[12:9:46] Telescopariums are the segments of astronariums which are to focus on the topic of telescopes and wider astronomical observation of all types and forms utilising different instruments and tools for accuracy; telescopariums will focus on the history of telescopes, the types of telescopes, and will display all information for educational and entertainment purposes combined.

[12:9:47] Rocketariums are the segments of astronariums within anthropics which will focus on the subjects of rocketry, spacecraft, rovers, and all other forms of extraplanetary and spacial vehicular transportation; rocketariums will focus on the history and future of

these vehicles, their significances to the exploration of The Cosmos, and will be displayed to the public in ways that are both educational and entertaining simultaneously.

[12:9:48] Those which are to be henceforth referred to as missionariums as part of anthropics in astronariums are facilities which will centre on the topics of exploratory missions, governmental agencies, and barons of the space industry through interactive displays, shows, and other forms of education and entertainment.

[12:9:49] The visual display and education of the lives and works of astronauts, astronomers, scientists, engineers and cosmologists in the context of astronariums will all take place within the auspices of that which shall henceforth be referred to as a prosoparium; these will feature interactive displays detailing the lives of the most important contributors to space knowledge and exploration for mass public engagement.

[12:9:50] Civilariums, as they are to be henceforth referred, are facilities within the anthropics sections of astronariums which will focus on the education of the public to the future of civilisations and settlements on planets other than The Earth and in space itself.

[12:9:51] Finally, that which is herein introduced as a forium shall constitute a major part of the anthropics segment of astronariums which will focus on displaying shows and interactivities focused on the topic of the future of humanity in space and the importance of space exploration to the future progressions of humanity.

—

[12:9:52] The term that is to be known as co-religious refers to two different religions or religious denominations working together to some end and the term co-philosophical refers to different philosophies or philosophical denominations working together towards to some event or result.

[12:9:53] That which is to be henceforth referred to as a co-Institutional organisation is a place of enterprise that is sponsored by The Institution of The Philosophy of Astronism specifically.

[12:9:54] Meanwhile, that which is to be referred to as co-Institutional relates to The Institution of The Philosophy of Astronism and another organisation that may or may not to be religiously associated, but are nevertheless operationally cooperative.

—

[12:9:55] The verb to religionise, or the process of religionisation, both of which are introduced herein, are to relate to the instance in which a subject of previously little to no religious or philosophical interaction which is then reoriented to become subject to a religion; of course, the main example of this process for the context of the Omnidoxy is Astronisation, although Astronisation is not synonymous with religionisation.

[12:9:56] The specific form of religionisation which is associated with Astronism is to be referred to as the religionisation of astronomy, the product and result of which is Astronism for Astronism is a proponent of astronomical religionisation.

[12:9:57] That which is to be henceforth known as auroral devotion, or auroralism, is the form of cosmic devotion that is directed to auroras of all kinds, the most famous one of which are the Northern Lights, and so auroras of all kinds in whichever atmosphere of any planet are to be devoted towards in the Astronist tradition.

[12:9:58] That which is to be termed as High Earth refers to a segment of cosmic devotionals which, instead of focusing on cosmic progeny and phenomena, focus on atmospheric phenomena, the most prominent example of which is known as auroralism.

The Eleuonicon

(Annology)

[12:10:1] The Eleuonicon is one of the few discourses of the Omnidoxy whose rubral features the -nomicon suffix which demonstrates the immense importance of this discourse.

[12:10:2] The original version of the Eleuonicon was expected to be much longer in length, however, due to my exhaustion from the initiation drafting of the Omnidoxy, I was not mentally able to complete the Eleuonicon to its fullest intended extensivity.

[12:10:3] However, in a post-omnidoxical setting, I intend to preside over an extension discourse extension of this discourse and especially of all the other nomiconic discourses as part of the Omnidoxy in order to further solidify and demonstrate their raised importance.

[12:10:4] The Eleuonicon will deal with the study of the nature, form, relevancy, implications, mental structures, and societal structure of freedom in order to formulate Astronist approach to the philosophy of freedom; the nature of the Eleuonicon itself is that it is what shall be known as a rolling discourse, as is similar for all the other nomiconic discourses, which is a type of discourse or published work that continues to be added to over the duration of an author's active years through different published editions of the nomicon.

—

[12:10:5] It is presently so assumed that the accumulation of the material and immaterial is equated with being closer to forging one's path to freedom for the greater the accumulations we possess, the greater power, experience, wealth, and knowledge we possess.

[12:10:6] I have spoken extensively throughout the Omnidoxy about the accumulation of knowledge, and the accumulation of ambitions for their subsequent achievement, but now as I contemplate on my own teachings and consider them closely, I wonder whether accumulation truly is the right path to the securement of freedom.

[12:10:7] This present world is pivoted around accumulation, principally the accumulation of money, but also the accumulation of notoriety, knowledge, possessions, and experiences.

[12:10:8] However, I have myself come to understand through my own implementation of such a philosophy that accumulation of things in this way neither makes me happy, but nor does it make me content or satisfied, and in fact, it also neither secures my freedom for I live in fear of that which I have worked so hard to accumulate that it will be stolen by

another, or I will somehow lose it which means that I live in the opposite of freedom for I am in actuality damned to serve that which I have accumulated to ensure that my stock does not thin.

[12:10:9] That which I term as the accumulation culture has been thrust upon us through commercialisation of all elements of society and the unending greed for money that consistently permeates each and every society.

[12:10:10] It is the philosophy of accumulation in which it is believed that the accumulation of either the material or the immaterial is the superior path to freedom which I shall herein ascribe the term accumulationism.

[12:10:11] It is the philosophy of dissipation that I provide with the term dissipationism herein which relates to an alternative from accumulationism and states that the superior way to the securement of freedom is through the disappearance of our material and immaterial accumulations, or through our total unconcern for what we have accumulated.

[12:10:12] According to dissipationism, the superior way to freedom is to rid ourselves of what we have accumulated in the physical world around us and in our minds in order to become totally free of all entrapments, although this should not be confused as being as extreme as the practice of asceticism.

[12:10:13] Alternatively, and in favour of accumulationism, it may be argued that in order to achieve a greater freedom, one must first be trapped in the service of their accumulated material or immaterial possessions so as to utilise those possessions in the world to secure freedoms that would nonetheless be achievable if a dissipationist approach is undertaken.

[12:10:14] But then again, my entire life has been structured upon my ability and obsession to contribute to the world with the Omnidoxy as the principal physical manifestation of such a belief.

[12:10:15] Is it so wrong to hold an obsession with the accumulation of things if we are understand and are able to deal with the actuality that upon our accumulation to a milestone, another milestone will be set upon us either by ourselves or others, after which we will feel obliged to work towards that milestone?

[12:10:16] Is it wrong to want to accumulate materials or immaterials as long as we are willing to work towards their continued maintenance of accumulation?

[12:10:17] Are not the entrapments from which we seek freedom just constructions void of all entrapping capability?

[12:10:18] What is the true severity of freedom and is freedom, possibly as a form of infiniteness, an achievable possibility in the limitedness of The Cosmos?

—

[12:10:19] That which is to be known as amnology shall henceforth refer to the philosophical study of freedom which is considered to be one of the most important disciplines of study within Astronist philosophy; our contemplation of freedom is central to Astronism, the expansion of what we know and understand about freedom must be further explored philosophically, and this is the reason why amnology is a paramount discipline of study for Astronists to consider.

[12:10:20] In amnological study, contemplations focus on the questions of what freedom is, the who, what, where, when, why, and how of freedom, in addition to the types of freedom.

[12:10:21] Can Astronism become a form of freedom? This is considered to be a highly important subject to deeply consider post-omnidoxically.

[12:10:22] Is humanity's cosmic transcension the next principal form of freedom? Of course, in the context of Astronism, this is affirmably believed and adhered to as an essential part of Astronist beliefs and this is to be further explored and contemplated post-omnidoxically.

[12:10:23] Freedom is considered to be acting and changing without constraints, this is especially so the definition that is to be applied in the human and cosmic context of freedom.

[12:10:24] The Cosmos is free to the point of its own limitation, hence The Cosmos is limitedly free; The Cosmos is cosmically free, but it is not infinitely free or Universal free.

[12:10:25] Self-determination is another concept which will need to be extensively philosophised about post-omnidoxically in the context of various amnological discussions due it being a concept that can be applied to a multitude of circumstances such as issues regarding sentient self-determination, Cosmic self-determination, societal self-determination etc.

[12:10:26] Cosmic freedom, essentially freedom to explore The Cosmos, is a crucial notion to the beliefs of Astronism and one that goes without saying to be a hallmark of Astronist belief; humanity should not only hold the right to explore The Cosmos, but also it is our duty and responsibility to explore The Cosmos; this is the belief of Astronism.

[12:10:27] The Universe is unlimitedly free or infinitely free as distinguished from cosmic freedom which is limitedly free or finitely free which pertains to the overall distinction between the two natures of The Cosmos and The Universe.

[12:10:28] The Divine is eternally free or transcendently free as distinguished from both cosmic freedom and Universal freedom which again pertains to the difference between the nature of The Divine and the natures of both The Cosmos and The Universe.

[12:10:29] Philosophical freedom pertains to the type of freedom that is attained through one's practice of philosophy and one's conduct of philosophisation.

[12:10:30] Physical freedom pertains to the type of freedom that is achieved through physical action but also relates to how we are to feel freedom through our physicality.

[12:10:31] Mental or psychological freedom relates to the type of freedom that is achieved through mental stimulations and practices, including intellectual freedom which involves enlightenment.

[12:10:32] Emotional freedom pertains to the type of freedom notionising that emotions are developers of freedom, but are also our greatest encapsulators representing entrapment; being released from our emotions is one of the most important types of freedom to establish as our emotions can inhibit many of the other aspects of our life and subsequently, our ability to achieve other types of freedom in our lives.

[12:10:33] Freedom of identity pertains to another relevant branch of anthropological study and contemplation due to the fact that identity and identity are integral elements to the nature of freedom and our subsequent achievement and realisation of freedom due to the fact that freedom attainment is a personal and individual process that is intertwined with who we are, who we believe we are, who we are to others, who we were and who we intend to be, all of which are elements of identity.

[12:10:34] The nature of autonomy will also be another principal topic of discussion especially in relation to the differences in autonomy of cosmic entities which will remain a significant element to the discussions and contemplations propounded within cosmic philosophy.

[12:10:35] That which is to be henceforth known as surpassion refers to being able to think beyond oneself, to think beyond the current time and to think beyond the present circumstances; essentially, the ability to think beyond presentness and to think solely according to futureness.

[12:10:36] To surpass, to be a surpasser, and to conduct surpassion is to put oneself along the path or to be on the journey of achieving surpassion; that which is to be known as surpassism refers to the belief that one's ambitions to achieve surpassion should be placed at the forefront of one's intellectual, psychological, philosophical, religious, and spiritual lives.

[12:10:37] Surpassism is also characterised by its belief that surpassion is the superior form to the achievement of cosmosis; that which is to be known as surpasscognition or

hypercognition is considered to be a result of a person's achievement or realisation of surpassion; to supracognate or hypercognate is to be able to think consistently through surpassion and to apply surpassion to every problem and scenario that arises.

[12:10:38] It is important to note that chronology of The Omnidoxy in relation to the study of amnology pertains to the notion that freedom, of which amnology is the discipline of study for, is the ultimatum of Astronism itself.

[12:10:39] In the purpose of freedom and due to the alignment of the Philosophical Spirit by Astronist Philosophy and in order to reaffirm its designation as a philosophy, there is no requirement for apostasy from other traditions or thought systems for philosophy does not recognise disaffiliation as apostasy due to apostasy not even being recognised as a philosophical term.

[12:10:40] Philosophy is freedom for it allows us to believe that which we wish to believe on the singular condition that we justify that which we choose to believe.

[12:10:41] There also exists no notions of excommunication in Astronism or in wider Astronist philosophy due to the fact that other similar notions such as heresy also do not exist due to the fact that Astronism is an organised philosophy and aligns itself with the Philosophical Spirit, hence there is no incorrect viewpoint that can be posed in Astronism due to our encouragement of philosophisation and debate of opposing opinions just as long as they remain justified.

[12:10:42] To be freed of desire pertains to the notion that freedom of desire comes with the achievement of desire; that the advocacy for the removal of desire from our lives as some traditions teach dehumanises us, is not considered to be natural or realistic to our own identity, and is not considered to be the correct way of achieving freedom from desire; the belief which is upheld by Astronism regarding the notion that freedom from desire is attained through our achievements is to be henceforth known as effectuationism as the Astronist perspective on desires is to control them through achieving them as and when they arise because our desires are not considered to be negative, but are instead fixtures of our identities.

[12:10:43] The various types of freedom which are to be collectivised and appellated as the Forms of Freedom shall be explored as part of amnological study as well as philosophically debated; the Forms of Freedom can be considered in multiple dimensions including mental, physical, identitural, religious, intellectual, and philosophical.

[12:10:44] That which shall be known as liberleutheria is to pertain to freedom from freedom itself, hence advocating for the notion that freedom is not uplifting, healthy, or the superior form of personal development or societal structure.

[12:10:45] That which is known as monoleutheria shall be in pertination to the notion of freedom from oneself; essentially, freedom from one's own identity, especially so if one is not comfortable or secure in one's specification.

[12:10:46] Freedom from possessions is to be henceforth termed as teneleutheria such as being released from materialism, consumerism, and one's belongings as things that are not the most important in life.

[12:10:47] That which is to pertain to freedom from money as another Form of Freedom is to be known as peceleutheria and shall pertain to one's mental / psychological release from the trappings of either having money or having no money.

[12:10:48] The term that is to henceforth relate to freedom from others is to be known as pleutheria and is to be formed on the notion that many of the problems in our lives are caused the actions and words of others so pleutheria is our release and escape from such influences both psychologically and physically as a Form of Freedom.

[12:10:49] That which is to be henceforth known as hierleutheria shall be used in relation to the notion of freedom from hierarchy such as our release from societal hierarchies, social class hierarchies, monetary hierarchies, cultural hierarchies, and all other forms of hierarchy.

[12:10:50] Freedom from time is classified as another Form of Freedom and pertains to the notion that due to the fact that our lives are ruled by time and our incessant need to adhere to time structures and boundaries; this Form of Freedom is to be known as chronoleutheria.

[12:10:51] Freedom from addiction refers to one's escape from the trappings, both mental and physical, of our obsessions (specifically known as fixaleutheria), our dependencies, and our enslavement to anything whether it be a mental addiction or physical addiction, either eternal or internal; this Form of Freedom is to be known as depeleutheria.

[12:10:52] Fixaleutheria pertains to freedom from obsession and is considered to be closely related to depeleutheria, but fixaleutheria is considered as a less severe version of freedom from addiction.

[12:10:53] The beliefs and ideas collectivised and appellated as the Ways to Freedom pertains exactly to that; the different routes to achieving freedom according to the beliefs of Astronism, of which there exist five primary elements.

[12:10:54] Cosmocentricity is considered to be the principal Way to Freedom according to Astronism in all dimensions, both physically and mentally, but also religiously, philosophically, intellectually, and spiritually; there is considered no greater Way to Freedom than cosmocentricity in Astronism for all emphasis is placed on the central importance of The Cosmos and also involves the belief that our adherence to

cosmocentrism/cosmocentricity will inevitably lead to a superior experience of both cosmosis and astrosis which are considered to be the most valued consequence of freedom.

[12:10:55] Surpassion is considered to be the second principal Way to Freedom according to Astronism due to the notion that thinking in futureness and achieving the ability to hypercognate is a prominent intellectual freedom that requires significant mastery and will need to be galvanised over the course of years through consistent surpation to achieve the state distinguished through the term surpassion.

[12:10:56] Transcension is considered to be the third principal Way to Freedom according to Astronism and is considered as such due to the central importance of the action of transcension to the beliefs of Astronism regarding the future and the role and destiny of humanity through the belief orientation of transcensionism; transcension is both an individual/personal and a collective Way to Freedom which makes it distinct from the other outlined routes to achieving freedom according to Astronism.

[12:10:57] Contrination is considered the fourth principal Way to Freedom according to Astronism and essentially advocates for the notion that there exists a future for humanity in which new and diversified forms of belief, action, thought, knowledge, and adherence will arise which will inevitably fade out pre-existing forms within these categories; contrination is pertinent as a Way to Freedom as it suggests that we as individuals and we as a society must prepare ourselves for these diversifications and that we ought to take notice of how contrination is already being effectuated in our society at present with the huge changes taking place, cultural shifts, and new forms of all categories arising to prominence.

[12:10:58] Philosophicality is herein designated as the fifth principal Way to Freedom in the Astronist tradition which of course remains centrally aligned to the nature of philosophy through the Philosophical Spirit and stands in direct and close association with the belief that the philosophicalisation of human societies will allow us to approximate freedom through encouraging freedom of thought, freedom of expression, freedom of belief or disbelief, freedom of diversity, freedom of logic, freedom of academia as well as many other freedoms of which philosophicality advocates and stands as one of the primary symbolisers of.

[12:10:59] That which is fundamentally opposed to the identity of Astronism is that which shall be henceforth referred to as submissionism, or submissionist theology.

[12:10:60] This refers to when a religion or philosophy advocates for mental, spiritual, and intellectual submission, manifestations of which are dogma, authority, and commandments.

[12:10:61] This is instead of advocacy for mental, spiritual, or intellectual freedom, manifestations of which are the Philosophical Spirit, a focus on an up-lifting or releasing theology, and ideas that are characteristic of endurance rather than surrendation.

[12:10:62] Meanwhile, that which is characteristic of Astronic theology is to be henceforthly termed as manumissionism, or manumissionist theology.

[12:10:63] This refers to when a religion or philosophy advocates for mental, spiritual, and intellectual freedom, the most principal example of which is of course Astronism, but this also includes some of the Indian religions of Buddhism, Jainism, and Sikhism.

[12:10:64] The Submissionist-Manumissionist Dichotomy pertains to the dichotomy holding that a system of thought is either predicated upon authority, capitulation, monism and surrender to a higher conceptual than oneself (submissionist) or a system of thought is predicated upon freedom, diversity, pluralism, and transcendence (manumissionist).

[12:10:65] Manumissionism plays an integral role in the theology, eschatology, destinology, and existentiality that is expounded by Astronism in relation to humanity and is closely intertwined with the many of the fundamental beliefs and practices taking a central residence within The Philosophy.

[12:10:66] Manumissionism opposes any type of religious system that advocates for submission to something and considers release, freedom, and being set free in all instances to be ultimately superior to submitting to something, or to be under the authority or heal of something, either something that is physical (such as an icon) or something that is conceptual (such as the concept of God).

[12:10:67] Furthermore, one of the major arguments of the manumissionist notion for the superiority of its views is that it is part of human nature to desire freedom as it argues that the majority of humans are in a constant lifelong search for freedom and manumissionism postulates that its beliefs are committed to fulfilling the human nature through its advocacy for freedom.

[12:10:68] It also remains extremely important to state that a religion or a philosophy may be manumissionist in theory whilst in practice it quickly transform into being submissionist, therefore contradicting its own manumissionist theoretical foundations.

[12:10:69] The religion of Islam is provided with the appellation of being the Epitome of Submission herein by myself as Cometan due to the fact that its etymology and subsequently its theology is based upon the notion of submission or surrender to Allah.

[12:10:70] Islam is the furthest religious tradition away from Astronism in terms of its theological differences for Islam upholds the ultimate submissionist philosophy/theology whilst Astronism of course upholds the ultimate manumissionist philosophy/theology.

[12:10:71] The following list demonstrates the Astronic approach to understanding the designations of other religious and philosophical traditions as either being submissionist and manumissionist in orientation:

[12:10:71a] Confucianism is considered to be submissionist in its orientation due to its beliefs about society, social hierarchy, ritual, and other non-theistic ways that are tied to submission.

[12:10:71b] Taoism is considered to constitute a blend of submissionist and manumissionist thought as it maintains a philosophical element which prioritises freedom of debate and its philosophical beliefs are markedly based on allowing for our personal union with nature, but it also maintains a religious element that emphasises rituals which are considered in Astronism to be signs of submissionist ideology.

[12:10:71c] Buddhism is considered to be manumissionist in its orientation due to the fact that it prioritises the achievement of nirvana, a type of freedom, as an integral part of its philosophy.

[12:10:71d] Hinduism is another religious tradition that is considered to be submissionist in its orientation due to the overwhelming emphasis on the roles of different Gods; Hinduism, due to its polytheistic orientation, can be considered intensely submissionist because it focuses on the beliefs of adherence to many different Gods and their individual functions as representatives of different ideas and concepts.

[12:10:71e] Jainism, like Buddhism, emphasises the conquering of one's as a form of Freedom which makes Jainism firmly manumissionist in its orientation.

[12:10:71f] Sikhism is about a person's union with God, but due to the emphasis of the concept of God in Sikhism, it is difficult to pinpoint whether it is truly manumissionist or submissionist in its ideological position; Sikhism's designation, in addition to the designations of all the other religious and philosophical systems, should be made a priority in amnological study and contemplation.

[12:10:71g] Christianity, Judaism and Islam are all considered to be firmly submissionist in their orientation and furthermore, they are considered to be the epitomes of submissionist ideology due to their theological orientations.

[12:10:72] Manumissionism essentially states that release from one's own inhibitions, reticences and feelings and thoughts of inadequacy.

[12:10:73] Manumissionism, rather than existing of its own ideas about how to achieve such freedom that it advocates for, it is instead simply an orientation towards focusing on freedom and release rather than submission, authority, and spiritual/mental tyranny.

[12:10:74] The manumissionist orientation is therefore distinguished from the submissionist orientation; technically, describing manumissionism as a full theology is inaccurate for it may more accurately be described as a theological, eschatological, philosophical, or destinological orientation; the manumissionist orientation is the orientation of Astronism.

[12:10:75] The Astronist theology is not monodimensional meaning that it does not simply consist of a singular element like many other theologies, but that is instead multifaceted, or polydimensional with a collection of interconnected motional elements including transcensionism, the latterintroduced contrinationism, endurationism, manumissionism, cosmocentrism, triadism, amongst others.

[12:10:76] Surrendation, and orientised via the belief orientation of surrendationism, refers to the notion that submissionsit theology advocates for surrendering to some higher power, whether this to be physical or conceptual.

[12:10:77] Alternatively, that which is to be know as enduration, also orientised through the belief orientation of endurationism, pertains to the notion that some theologies are based upon enduring issues with externalities and internalities and opposes any form of surrendering, examples of which include Buddhism and Jainism due to their advocacy for enduring to achieve nirvana and the achievement of salvation through conquering oneself respectively.

[12:10:78] Dualism, or the dualistic cosmology, pertains to how chaos and cosmos demonstrates a dualism in the cosmology of Astronism, but Astronism is in fact triadistic in its orientation which is a categorised as a form of pluralism that particularly focuses on the existence of three contrasting and distinct elements.

[12:10:79] Triadism, or the triadist understanding, pertains to The Cosmos, The Chaos, and the sentience; the triadist view of our cosmic existence is also fundamental to some beliefs regarding cosmological functionality; the term triadism has multiple definitions and application in the context of Astronism.

[12:10:80] Exploring the relationship between these three entities is essential to understanding the Astronic cosmology; the notion that The Cosmos and The Chaos are interpretees while the sentience is the interpreter.

[12:10:81] Contrination, organised according to the belief of contrinationism or contrinism, is the fifth and final major element of the theology of Astronism inspired by the fourth major element known as triadism stating that throughout the history of humanity, extremities have been chosen, sides in battles have been taken, and dichotomies have been formed; related terms include contrine, contrining, and contrined.

[12:10:82] But that the future of human and wider sentient civility is characterised by the amalgamation of extremities and sides taken into new and diverse forms of belief, action,

behaviour, and thought; the primary example of which is combining the most famous of all dichotomies; good and evil as astronomically conceptualised and orientised through euleara and venatarat respectively.

[12:10:83] Contrination, its achievement, and its nature remains still one of the most mysterious conceptual facets of the philosophy of Astronism largely due to the ambiguity of its presence within the Astronist text of the Omnidoxy herein as well as the unknownness surrounding its physical, metaphorical, spiritual, and intellectual attainment.

[12:10:84] Eleutherism pertains to the underlying amnological belief orientation holding that freedom is the ultimatum of all human search for satisfaction, security, and also that freedom is the greater unifier, the concept that we are all working to achieve, and involves the notion that freedom is the superior desire of all humanity; that freedom is the greatest sustainer of human belief and knowledge.

[12:10:85] That which is herein introduced as semileutheria, or the state of semileutherity pertains to the achievement of partial freedom of some elements, but not of all elements.

[12:10:86] Holeutheria, or the state of holeutherity, is in reference to achieving freedom entirely in all the possible ways that freedom can be achieved in one's life.

[12:10:87] A semileutherian pertains to a person that has achieved freedom though only partially.

[12:10:88] Meanwhile, a preleutherian relates to a person that has yet to achieve freedom entirely.

[12:10:89] A holeutherian, or eleutherian, is to henceforth refer to a person that has achieved freedom.

[12:10:90] Of course, the pre-Astronist word of eleutheria collectively relates to freedom in all of its forms.

[12:10:91] I will now herein continue the dominantly definitionalist nature of this discourse by introducing and defining a series of ideas and terms, the first of which is to be known as Human Captivity which a central undercurrent of the beliefs of transcensionism and pertains to the postulation that humanity is currently captive on The Earth due to our lack of cosmic exploration.

[12:10:92] Cosmic Liberty, as another important element to transcensionist beliefs, refers to the idea that the greater humanity's advances in space exploration, the greater level of freedom humanity will achieve.

[12:10:93] Knowledge Accumulation relates to the idea that the greater humanity's enknowledgement of The Cosmos, the greater level of freedom humanity will achieve as a direct consequence.

[12:10:94] Institutionality pertains to the stance that institutions do not inhibit freedom, but are in fact beacons of freedom for they protect those who may be constrained for unjustified reasons, and do constrain those with justified rationality.

[12:10:95] The Three Way Paradigm pertains to freedom as considered to be achievable by the three following attributes according to the beliefs of Astronism: enknowledgement, exploration, and philosophisation.

[12:10:96] In amnology, the ultimate goal is to attain freedom whilst a person is still alive rather than in some afterlife, or in some enlightened existence; this is henceforth known as the Ultimate Freedom Theory.

[12:10:97] The instrumentation for amnology as the study of freedom shall take place post-omnidoxically in addition to a promised discourse extension to the true extent that this discourse deserves as it was originally planned for this discourse to be the longest of the Omnidoxy; this immense feat will be achieved post-omnidoxically.

[12:10:98] The instruments of study to be applied in the context of this particular instrumentation will include the following: abundancy, bipolarity, centricity, compositivity, criticality, dyadicity, dynamicity, eternality, extrinsicity, finity, focality, fundamentality, functionality, futurity, imperativity, motivity, naturity, primarity, progressivity, proportionality and disproportionality, purposivity, rationality, sensicality, symbioticity, synchronicity and vastity.

The Pollination of The Philosophy

[12:11:1] As inspired by its non-philosophical and pre-Astronist definition, the term of pollination holds an important role within tiritological and promulgative contexts.

[12:11:2] Pollination in the philosophic Astronist context refers to the process in which a natural transference of ideas from Astronism into different cultures occurs and involves the reshaping of such ideas to assimilate into such new cultures and societies, but not so much that a reformulation of such ideas occurs for their fundamental premises do remain.

[12:11:3] Pollination is distinct from tirition and promulgation and can be more closely associated with dissemination through pollination refers to the process of many different disseminations in the entirety of the history of Astronism and its introduction into different cultures rather than singularly dissemination.

[12:11:4] However, its main distinction from tirition and promulgation is that pollination occurs across hundreds of years and without any interference from The Institution and is largely outside of the control and regulation of The Institution.

[12:11:5] From this, I, as Cometan, herein established that which shall henceforth be known as the Pollinator Principle which pertains to the notion that The Institution must not interfere with the pollination of Astronism across different cultures and that its responsibilities only serve as to tirit and promulgate The Philosophy, but not to force its assimilation into a society in its own preferred way, but to allow for a natural assimilation that is controlled by its followers within the society in subject.

[12:11:6] In its Astronist sense, that which is to be henceforth known as cross-pollination refers to the process of an idea from a non-Astronist or pre-Astronist philosophy enters into the pantheon of concepts within Astronism and therefore undergoes the process of Astronisation in which the idea is not fundamentally changed, but nevertheless becomes Astronic in character and theme.

The Consideration of the Reasons for Astronism

[12:12:1] Throughout the development of The Philosophy of Astronism within The Omnidoxy herein, I have spoken of all elements of The Philosophy that have come to my mind during the time period of omnidoxyal writing, but now, as The Omnidoxy begins to come to an end ready for that which shall be henceforth appellationed as The Initial Transmission, it is important that I, as Cometan, reflect upon that which I have created and considered Astronism through my own personal vision.

[12:12:2] The Initial Transmission pertains to a period of time and a collective action that shall take place immediately following the completion of The Omnidoxy and shall be carried out by the guidance of The Institution of The Philosophy of Astronism.

[12:12:3] The Initial Transmission consists of the immediate dissemination of the ideas within The Omnidoxy directly following its publication, especially during the pre-establishment form of Astronism in the countries within which it begins to be disseminated.

[12:12:4] The Initial Transmission is herein contrasted with that which shall be henceforth appellationed as The Grand Transmission which instead of pertaining to the initial dissemination of Astronism, this appellation relates to the entirety of the dissemination of Astronism through the first hundred years of its existence and so this period shall therefore end in the year 2113 as Astronism remains officially founded in the year 2013.

[12:12:5] With this digression of distinctions aside, by the consideration of philosophical reflection, I immediately come to ponder of the question of why did I decided to form The Philosophy of Astronism?

[12:12:6] A metaphilosophical contemplation of my personal reasons for the development of Astronism is that which I am pertaining to by the consideration of this question and I feel this is a necessary contemplation to address and discuss in order to gain an introspective understanding of the present, original, and untampered reasons for the development of Astronism in its most pure of forms.

[12:12:7] It is firstly important to note that the formation of Astronism and the building of my own identity as an individual are and continue to be entirely symbiotic for it is my formation into a man that has been shaped by Astronism and it is my energetic, enthusiastic, positive, and my all-is-possible young mind that has formed the spirit of Astronism.

[12:12:8] Therefore, Astronism is imbued with the spirit of the young and I, as Cometan, am imbued with the spirit of Astronism; we are a symbiotic pair whose manifestations dependent upon one another; I am Cometan and I am Astronism and Astronism is I.

[12:12:9] From this, my personal understanding of my reasons for the development of Astronism are intrinsic to the development of myself as an individual and in this same way, I believe that Astronism, when followed, will hold the ability to help others to develop their own identities.

[12:12:10] I identify a certain personality to Astronism that makes it distinct from all other philosophies which I expect has formed due to the nature of the circumstances of the development of Astronism.

[12:12:11] Beyond this personal developmental dimension of the reasons for the formation of Astronism, there exists in equal measure the transpersonal elements for the development of Astronism which are encapsulated ultimately by transcension and transcensionism which themselves are to be latterly explored within this discourse.

[12:12:12] Transcension encapsulates the message of Astronism which is simply that humanity is a present entrapment in which money, monotony, and materialism (which are to be known as the Three M's) rule the world while philosophy, discovery, and spiritual exploration are all but disregarded by the majority of the society in which I reside for they are at least not central in society like I believe they should be.

[12:12:13] Fixing the issues of the world is the primary goal of Astronism in whichever era such issues do arise and in this present time, the issues of the domination of the accumulation of wealth, the monotony that is formed in order to achieve such wealth accumulations, and the focus on materialism.

[12:12:14] This is rather than spiritualism, philosophy, and discovery are considered to be the primary problems for humanity in its entirety beyond the issues of poverty, persecution, and other issues identified by international bodies, but these issues are more economic and political rather than philosophic in nature.

[12:12:15] Astronism has been created in order to bring philosophy to the world again through its reascension; to bring a new order of thought that is intended to be applied in order to transcend humanity to the next stage of its destiny as an entire mass.

[12:12:16] Therefore, we can deduce that the reasons for the development of Astronism are two-dimensional by their nature, the first of which are personal meaning the affairs and dilemmas of the individual, both myself and all other individual selves, and the second of which are transpersonal reasons meaning that which effects and concerns humanity as a whole.

[12:12:17] Furthermore, it is my firm belief, due to my own personal belief in the existence of a creator (so Cometan is a theist) that the flood ideas that have come to form The Philosophy of Astronism came into my mind not by chance or consequence, but by an ordered, destined, and structured capacity as granted by something greater than my singular self.

[12:12:18] This is what I speak of in the development of that which is to be known as personal inspiration and its relevance for the creation of The Omnidoxy.

[12:12:19] Personal inspiration is the creative force that resides within myself as Cometan during the ideation of Astronism and the subsequent development of all that it has become during its expansion as initially manifested within The Omnidoxy.

[12:12:20] The divinical origination of The Omnidoxy and the Astronist philosophical tradition in its entirety is expected to be a topic of omnidoxicological and metaphilosophical debate for a long time to come, but it is important to note that I, as Cometan, have never and do not believe that I will ever receive direct revelation from any type of God and this revelatory system of thought is not characteristic of philosophy in its general sense as that is reserved more for religious traditions.

[12:12:21] Therefore, I can firmly state that Astronism is not a revelatory system, but it is instead an inspirational system which is predicated upon inspiration rather than revelation.

[12:12:22] The intercession of God in my mind for the creation of Astronism and The Omnidoxy and all other parts of my creative works is a personal belief to myself and is thus not categorised to exist within the Astronist Tradition, but is instead herein designated as part of that which shall be known as Taylorianism.

[12:12:23] Cometanism is my own personal interpretation of that all is connected to my own creative works and especially my own individual and personal opinions and interpretations of The Philosophy of Astronism and The Omnidoxy.

The Downfall of Sanctity & The Nature of Omnality

[12:13:1] The sanctity of religion has caused its own downfall because it has removed itself from the conversations held in society; this is the same for both secular and highly religious societies.

[12:13:2] Of course, in a secular society, religion is largely removed from public view altogether as its central role and purpose in society is disregarded which subsequently removes the consistency of its discussion which causes it to become an incentrality in people's lives.

[12:13:3] Even in a highly religious society, religion is superiorised in such a way that it becomes both untouchable, unquestionable and, uncommunicable so even in this type of society, religion is far removed from mass discussion due to its own placement in the society as a sacrosanct entity that remains unreachable by the masses.

[12:13:4] Interestingly, ideology takes a similar characterisation in this regard as when it gains power within a nation state, it sacralises itself to become untouchable, unquestionable, unreachable, and uncommunicable which inevitably leads to its own downfall; examples of how this occurred in history are the downfalls of monarchism in many instances, as well as communism and fascism.

[12:13:5] However, I see philosophy as something entirely different in both its character and orientation for philosophy must always stay central to society after its reascension has occurred; the questionability, reachability, interactivity, and communicability of philosophy must be protected at all costs.

[12:13:6] The ability of a particular philosophy to fulfil these different characteristics is points to the determination of a philosophy's designation as a true philosophy and its maintenance as continuing to be a philosophy rather than an ideology or religion.

[12:13:7] The question of the metamorphosis of philosophy, ideology, and religion is considered to be a common process that is expected to occur as part of the core natures of these three types of thought systems.

[12:13:8] The characteristics that form philosophies, ideologies, and religions hold a fluidity and a distinct motionalilty; no designation of a system of thought is without subject to change and subsequent redesignation.

[12:13:9] A philosophy, if it becomes dogmatic or doctrinal in nature, or no longer resembles the values and foundations of what a post-Astronist philosophy is considered to resemble can so easily become an ideology or a religion and the same occurrence can also happen for both ideologies and religions by equal measure.

[12:13:10] If it is the destiny of Astronism to become a religion then how I am and who I am to stop the wheels of destiny from turning the way they have been spun?

[12:13:11] I solemnly state herein and now that Astronism's core identity is that of a philosophy, not that of a religion, but if, after my cosmic passing, I am not able to guide The Philosophy any longer and so the first padron shall hold the responsibility of directing The Philosophy in which they, and The Institution at that time, see fit.

[12:13:12] The world understands my feelings on the matter of the designation of Astronism as a philosophy and not a religion, but as we have found when we study the history of the world, words are so often not listened to, even those proclaimed and believed to be those of the almighty so why might my words be any differently received?

[12:13:13] To me, Astronism shall always remain a philosophy for there exists that which is to be known as the Philosophical Spirit which rests at the heart of what it means to be a follower of Astronism or to study Astronism.

[12:13:14] Perhaps many hundreds of years in the future after my cosmic passing, I will not recognise what The Philosophy of my creation has become; I feel that this is a more likely scenario than the notion that The Philosophy of my creation will exist exactly as I have envisioned it.

[12:13:15] Religion has failed in its ability to form diversity for humanity; religion has become monotony that philosophy is so eagerly poised to want to transcend from.

[12:13:16] The monotony of everyday life is the single largest issue that I shall face in attempting to formulate Astronism because monotonousness is the exact opposite of that which I wish Astronism to be.

[12:13:17] The new dominant religion is money; its accumulation and the survival of ourselves forced by our dependence upon it; this religion's dominion is far-reaching, engrained, and permanent across the globe.

[12:13:18] That which shall henceforth be known as omnality refers to a quality of philosophies and religions, and of some aspects of ideologies that involves, can be shared, and most importantly, is relatable or of concern to all people regardless of societal divisions, including though not limited to race, gender, sexuality, class, wealth, age, level of education, disability, religion, geography, marital status, and language.

[12:13:19] Metaphilosophically, for a philosophy to achieve the quality of omnality is considered to be a major feat in its development because by achieving omnality, a philosophy is considered to be much more primed for widespread dissemination as that which it is primarily concerned with is of concern or is relatable to all people rather than a select few or rather than a philosophy that is deeply associated with a particular ethnic group.

[12:13:20] Astronism is considered to have achieved the quality of omnality which is a statement that shall be justified herein.

[12:13:21] The analysis of the potential omnality in different religions and philosophies in order to determine the extents of the omnality of each as all do hold variety in their extent of omnality.

[12:13:22] Christianity holds a particularly strong sense of omnality when compared to other religious traditions as its primary concern is the salvation of all humanity (which is omnality/omnal by its nature) and deeply entrenches its considerations about death, through which all humans must endure (which is again omnal).

[12:13:23] Christianity promises of the afterlife which is a desire for all humans to reside in some exist for eternity (which is another omnal quality), and finally, the consequences of this promised afterlife are dependent upon the actions of oneself in the present as part of one's overall morality.

[12:13:24] However, despite this long-standing awareness of omnality and strength in this quality, the Christian model has been subverted by atheism and secularism as these have infiltrated and have counteracted every part of the omnal elements of Christianity in order to fundamentally subvert them into becoming that which is to be henceforth termed as micrality.

[12:13:25] Micrality is the opposite quality of a philosophy, religion, or ideology in which such a system of thought is without any or at least few omnal elements, but certainly not enough to achieve the quality of omnality.

[12:13:26] Micrality is characterised by specificity, niche, narrowness, exclusion rather than inclusion, ethnic association, societal subjugation, societal ostracism, as well as holding concepts that do not form a type of humanwide notions or benefit for the entirety of living beings or of humanity itself.

[12:13:27] Medality is the middle-ground between micrality and omnality meaning that the philosophy, religion, or ideology that this is labeled with holds both micral and omnal characteristics.

[12:13:28] Astronism is considered to be a champion of the state of omnality due to its transtheistic/panentheistic worldview that does not exclude theists or atheists due to the fact that atheism also holds a tradition within the philosophy.

[12:13:29] However, it is primarily omnal due to the fact of its centrality and theme of The Cosmos, the progeny and phenomena of which is observable by all people no matter their religion, race, class, sexuality, or any other societal division as well as the fact that its

ultimate purpose found in the transcension of all humanity is omnal by its very core nature.

[12:13:30] Furthermore, Astronism is omnal by its nature due to the fact that space is accessible to all people through observation for it costs not a single penny to look up to the night sky and see a shooting star, the glowing moon, or the distant galaxies.

[12:13:31] Atheism is henceforth considered to uphold the state of micrality due to the fact that it holds the absence of belief in the existence of deities which is opposed to theism which marginalises a huge portion of the human population.

[12:13:32] Additionally, Buddhism shall be henceforth considered to be in a state of medality due to the requirement of the belief in the cycle of death and rebirth/reincarnation but also holds omnality through the goal of overcoming suffering but is also non-theistic so does not marginalise theists or atheists.

[12:13:33] Omnality is considered to also be designated to the Baha'i Faith due to its central teaching of the essential worth of all religions and the unity and equality of all people.

[12:13:34] Chinese traditional religion is also considered to be in a state of micrality due to its close association with the Chinese people and their history and culture.

[12:13:35] Christianity is ultimately considered to be in a state of medality which of course means that it is partly omnal and partly micral, the first quality of which is designated due to its centrality on the notion of salvation which is desirable to all through following a simple moral code which is understandable by all and the second quality of which is designated due to its strict adherence to monotheism via trinitarianism.

[12:13:36] Confucianism is considered a micrality due to its close association with ancient Chinese customs and rituals, its purpose was to be applied to Chinese families and society.

[12:13:37] Therefore, it is considered to marginalise the rest of humanity due to its close association with the ethnic Chinese and their culture.

[12:13:38] Gnosticism is henceforth considered to be a medality; a micrality due to its requirement for belief in a creator God which marginalises atheists and an omnality because it prioritises the use of knowledge for salvation and the accumulation of knowledge is a universal principle.

[12:13:39] Hinduism is henceforth considered to be an omnality due to the vastness of this tradition, it encompasses theism, polytheism, dualism, and even atheism which makes it attain omnality.

[12:13:40] The state and quality of micrality is also granted to the religion of Islam due to its close association with the Arabic language and its strict observance of monotheism.

[12:13:41] The state and quality of medality is also bestowed to the religion of Jainism which is considered to be a micrality due to the requirement for the belief in reincarnation.

[12:13:42] However, Jainism is also considered to be an omnality due to its primary quest for victory over such reincarnation through ethical and spiritual life as primarily demonstrated through non-violence which is a universal principle and ideal.

[12:13:43] Judaism is herein considered to be a micrality due to its integration with the Jewish people, their culture, history, ethnicity, and overall identity.

[12:13:44] Neopaganism is also considered to be a micrality due to its predication for polytheism, animism, and pantheism as well as the conduct of different specific rituals dependent upon the form of pagan worship to which one belongs which makes this collection of religions to be highly micral due to the specificities required to be a member of any such included religions.

[12:13:45] The New Age movement is herein considered to be an omnality due to its employment of holism and the spiritual authority of the self which is relatable to all people due to the fact that we all have our own self-identities.

[12:13:46] Rastafarianism is considered to be a micrality due to its cultural integration and identification with the nation state of Jamaica and its association with the deceased Ethiopian emperor, Haile Salessie, which means its predication is highly micral.

[12:13:47] Scientology is also additionally considered to be a micrality due to the requirement for belief in the founder and the chairman's ultimate authority.

[12:13:48] The ethnic religious tradition of Shinto is considered to be a micrality due to its cultural integration with the nation state of Japanese and Japanese history, culture, and ethnicity.

[12:13:49] Sikhism is henceforth considered to be a medality which is a micrality due to the association of the religion with the ethnic people of the Sikhs originating from the Punjab region.

[12:13:50] Sikhism is also an omnality due to the belief in the equality of all humankind, engaging in selfless service and striving for justice for benefit and prosperity of all which are omnal principles.

[12:13:51] Spiritism is a religion that is considered to be in a state of micrality due to the fundamental requirement for belief in spirits and their intercessional abilities as understood through practice of mediumship.

[12:13:52] Taoism is considered to be in a state of omnality due to the purpose of Taoism to lead to the balance of The Tao and to live in harmony and the fact that this philosophy / religion does not remain as tied to the Chinese national and ethnic identity when compared to Confucianism.

[12:13:53] Penultimately, the religion of Wicca is considered to be a micrality due to its adherence to duotheism which is not a common theological belief orientation held in the population.

[12:13:54] Finally, the religion of Zoroastrianism is also considered to be a medality; it is a micrality due to its monotheistic orientation and it is an omnality due to its focus on a dualistic cosmology of good and evil as well as the ultimate destruction of evil.

Relational Philosophy, Transcensionists, & The Natural Theology of Astronism

[12:14:1] Relational philosophy or relational philosophisation relates to philosophising or astronising, as a specific form of philosophisation, towards the personal needs of others, primarily individuals enduring crises of a temporal nature.

[12:14:2] This may include individuals and families experiencing poverty, ill health, stigmatisation, or ostracisation from mainstream society.

[12:14:3] This is conducted in order to achieve transcension for others; to bestow upon others transcension is the greatest of all gifts that one may present to another.

[12:14:4] Relational transcension, also known as polytranscension, refers to the bestowal of transcension to another, either individually or collectively and such people that master the bestowal of transcension to other individuals or to entire societies are to be henceforth known as transcensionists.

[12:14:5] Transcensionists uphold the notion that for humanity to be released from the trappings of The Earth, the message of Astronism must be spread to all people; the sick, the poor, the rich, the young, the old, and especially the sceptics.

[12:14:6] Of course, we must not mistakenly mix together the roles of the transcensionists with that of the tiritional role bestowed upon The Institution for the former conducts its dissemination of The Philosophy through means of individuality by one person speaking to people about The Philosophy person by person until that person has grasped The Philosophy in a sure enough way that they are able to transmit The Philosophy themselves to others.

[12:14:7] Meanwhile, the latter conducts its dissemination of The Philosophy through mass means via the mediums that thousands and millions of us receive communicative messages; essentially, the transcensionist role is small scale and personal dissemination of Astronism while the Institutional role is grand scale and impersonal dissemination of The Philosophy.

[12:14:8] There are advantages and disadvantages to both and neither is superior to the other for they remain incomparable due to their great many differences though still connected due to their shared missions of philosophical dissemination.

[12:14:9] Transcensionists can best be understood as the transmitters of Astronism from person to people rather than from Institution to people.

[12:14:10] The Astronist natural theology notionises that The Cosmos is a direct product of Divinity due to its superiority of being beyond that of humanity for humanity is one of a

countless (though not infinite) amount of products of The Cosmos that form its composite nature.

[12:14:11] The Astronist natural theology rejects the matter of divine hiddenness altogether for The Divine, or God, is considered to be manifested all around us through in The Cosmos and its composite parts as it supported by the notions held within productism.

[12:14:12] The traditional form, or the omnidoxical form of the Astronist natural theology is theistic in its orientation for it notionises that the evidence for God is found in the wonderances of The Cosmos which is to be henceforth known as the Cosmic Evidence Argument.

[12:14:13] Many of the religious traditions and the practitioners of such traditions believe what they want to be true, often due to the messages expounded by the tradition they follow if they are staunch believers.

[12:14:14] Believing that which one wishes to be true in order to comfort oneself or to encourage certain positive feelings about one's future is not considered to hold any plausible argument for the existence of a creator of existence.

[12:14:15] Previously I mentioned that the Astronist natural theology is theistic, but to be more specific, it is actually transtheistic or panentheistic in its orientation.

[12:14:16] Not only this, but it is argued herein that the entirety of the Astronist philosophical tradition, especially so when considering its cosmology, is entirely engrained with a natural theology as it remains staunchly opposed to a revealed theology.

[12:14:17] This is because there remains no such element as a revelation with the entirety of Astronism and nor should there ever exist such an element due to the preservation of the designation of Astronism as a philosophy and it is herein affirmed that any post-omnidoxical proclamations of revelation hold an inherent falsity for there is no revelation and there shall be no revelation within the Astronist philosophical tradition for only inspiration exists here.

[12:14:18] Therefore, Astronist Philosophy is fundamentally predicated and structured upon a natural theology rather than a revealed theology, but what about the third form of theological foundation manifested as that known in Kant's philosophy as transcendental theology?

[12:14:19] Before that question is answered herein, it is important to preface our discussion herein by the reminder that theology in the entirety of The Omnidoxy is considered via a philosophical perspective and so there exists no sanctification of the words herein and therefore a distinct fluidity of the theology within the Astronist philosophical tradition which subsequently forms that which shall henceforth be known as a philosophical theology.

[12:14:20] A philosophical theology is predicated and therefore defined by the three following characteristics which are connected to one another for they flow into each other from one to the next.

[12:14:21] The first is the fluidity of such a theology's ideas and how they remain subject to change which leads to the lack of sanctification of the ideas which is considered to liberate them from the bonds of dogma.

[12:14:22] Finally, this flows into the characteristic that a philosophical theology, especially that of the Astronist philosophical theology, enjoys a fusion of natural, mystical, and transcendental theology without being chained to the principles within political theology as this remains the theology of a philosophy, not that of a religion.

[12:14:23] The former of these three allows for rationality and the experience of nature to hold influence over one segment of the triadic theology, the median allowing for the exploration of irrational and supernatural ideas without any necessity to conform to belief in them for benefit is derived from the consideration of such ideas to bolster our own ideas about the natural cosmic world.

[12:14:24] Finally, the latter allows for the nature, existentiality, and issue of God to remain beyond the reach of cosmic human ideation and experience whilst still allowing for the continued encouragement of theology debate despite its inconclusive nature.

[12:14:25] However, it is the inconclusivity of the nature of theological debate is considered to be the greatest element to such a debate for inconclusivity is also a hallmark of philosophical debate; the trick to not feel disheartened by this endless inconclusiveness is to hold in conviction one's beliefs and to be able to justify them whenever they may be challenged.

[12:14:26] Returning from my digression, there exists a strong tradition from here on in of transcendental theology within the Astronist philosophical tradition, particularly so for The Philosophy of Astronism itself at its own core foundations.

[12:14:27] To Astronise transcendental theology from Kant's philosophy, we shall introduce now that which shall henceforth be known as transcension theology which encapsulates the concern of God in relation to the predictions and visions that are set out in transcensionism.

[12:14:28] Due to transcension's attainment of the title of The Ultimatum of Astronism, the transcension theology segment of the aetiological triad is paramount to add and concern ourselves with for transcension is considered to be the liberated future for all humanity which certainly holds concerns for the role of God with further implications regarding human and cosmic causation and origination which, in the Astronist aetiology, is directly connected with notions concerning the purpose of humanity in its complete entirety.

[12:14:29] The role of mythical theology, as distinguished from mystical theology, in the Astronist theology is not yet known in its entirety because mythical theology is practiced by storytellers.

[12:14:30] Although I, as Cometan, am essentially the storyteller of the Astronist philosophical tradition as manifested in *The Grand Centrality* and of *The Philosophy of Astronism* as manifested in *The Omnidoxy*, the storytellers of which I speak are post-cometanic and are expected to base the stories they tell of *The Philosophy* and of myself as Cometan, the founder of *The Philosophy*, on their own interpretations of what they read herein and how they perceive *The Philosophy* and myself in a wider sense.

[12:14:31] Therefore, the true extent of the role of mythical theology in Astronism is unknown, but mystical theology's close association with divine revelations and narratives does further disproximate Astronism from being associated with mystical theology.

[12:14:32] However, their relationship is nonetheless interesting and calls into the debate some interesting questions about the nature of Astronism and the identity of *The Philosophy* both post-omnidoxically and post-cometanicly.

[12:14:33] Political theology which involves the social functions of religion of course plays no role in philosophical theology and certain no role in the Astronist theology due to Astronism firmly remaining designated as an organised philosophy as opposed to a religion as omnimentioned through this entire text.

[12:14:34] However, to notionise that there is no study that investigates the ways in which the concepts, belief orientations, and themes of philosophies relate to politics, society, and economics would be a mistaken notion.

[12:14:35] For philosophies, this study is instead manifested in political philosophy which, in this context of its meaning, relates to the study of the ways in which politics, societal constructs, culture, and economics hold interactions and relations with the ideas, beliefs, and theories held within a particular philosophy or as part of a wider philosophical tradition.

[12:14:36] Of course, this definition is not to be confused or mixed with the more general definition for political philosophy which pertains to the development of systems of thought for the organisation and governance of politics, property, justice, law, national government, and economics.

[12:14:37] In order to make a distinction between this definition for the term political philosophy specifically for the Astronist philosophical tradition, I have herein formed the discipline of study that is to be known as parenology by extending its disciplinary responsibilities.

[12:14:38] Therefore, the discipline of parenology now includes the study of ways in which the conceptual elements of The Philosophy of Astronism interact with politics, society, culture, and economics of different nations and in different time periods through the history of Astronism.

[12:14:39] Despite it sounding like an Astronistically-originating term, that which is known as cosmotheology was first utilised in the philosophical musings of Immanuel Kant who described cosmotheology as one of two forms of transcendental theology, the other of which being ontotheology.

[12:14:40] Both of these terms of cosmotheology and ontotheology, due to their Kantian origins, do not hold any role within the Astronist philosophical tradition for instead I now formulate my own term of cosmic theology which is defined from that of cosmotheology as it pertains to the notion that there exists a distinct connection between the study of The Cosmos and the study of theology, or divinology in a specifically Astronist context for the latter term.

[12:14:41] Cosmic theology notionises that The Cosmos as a whole entity with physical, metaphysical, perceptual, and mystical facets to its nature serves as an excellent source for the contemplation and study of theology especially inspired by the theme of the Astronist philosophical tradition.

[12:14:42] In addition to the development of the term cosmic theology, I shall now also introduce that which shall henceforth be termed as mystical theology which itself holds strong connections to the undercurrents of The Philosophy of Astronism which is tripartly predicated upon mystical encounterments, inspiration, and all that pertains to the transcendence of human understanding.

[12:14:43] Essentially, mystical theology exists as the connection between the development of mystology in the Astronist philosophical tradition and the systematic study of role of God in Astronism, especially in relation to human experience and the in-between place that The Cosmos holds during such an experience between humanity and divinity.

[12:14:44] That which shall henceforth be known as mystography refers to the representations of mysts in art forms and the creation, collection, and organisation of mysts according to shared themes, concepts, and depicted figures which, in the Astronist philosophical tradition, especially when considering the representations of The Five Astronist Characters, are to be henceforth known as effigies.

[12:14:45] Meanwhile, the interchangeable terms of mystopoeia and mystopoesis both refer to the process of the development of mysts in such a way that their narratives hold important connections to the philosophy, religion, or ideology to which they are aligned.

[12:14:46] Essentially, mystopoesis is the process of the alignment of a myst to a particular system of thought through the employment of certain themes, characters, beliefs, and concepts.

[12:14:47] The entirety of The Astronist Mystology is an example of the first mystopoesis, or mystopeia for it has been created and included within The Omnidoxy for the purpose of its alignment to the Astronist philosophical tradition through the creation of mysts that reflect the ideas and beliefs held and prioritised within the Astronist philosophical tradition in the stories and narratives told in such mysts.

[12:14:48] This draws us to the point of the entire purpose of the creation of mysts as an Astronistally-originaive term, genre, and form of literature.

[12:14:49] That which is to be henceforth termed as a mystheme is the generic narrative structure for different collections and traditions of mystography as inferred through the patterns in the depictions of characters, events, allegories, and themes as the formational elements of mysts, especially so in their distinction from myths.

[12:14:50] The mystopoeic tradition within the Astronist philosophical tradition is considered to enhance our rational and logical discussions about the nature of The Divine, The Universe, The Cosmos and all that resides within them and the functions and operations that make them work the way they particularly do.

[12:14:51] The Astronist natural theology holds fundamental contention with any notions of the attribution of God for in the Astronist philosophical tradition, no attributions are provided to God for it is only the products of the creation of God that are considered and inferred to determine the transcendent nature of God.

[12:14:52] The J. L. Schellenberg's argument tackling the question of divine hiddenness is fundamentally subverted by the Astronist Tradition's opposition to the first stage of the argument which posits that God is attributed with the capacity for love; it is this attribution of God that the Astronist Tradition is fundamentally opposed to, and below you can view the rest of Schellenberg's argument.

[12:14:52a] If there is a God, he is perfectly loving.

[12:14:52b] If a perfectly loving God exists, reasonable non-belief does not occur.

[12:14:52c] Reasonable non-belief occurs.

[12:14:52d] No perfectly loving God exists. (derived from points 2 and 3)

[12:14:52e] Hence, there is no God (derived from points 1 and 4)

[12:14:53] Despite the fact that the Astronist Tradition is fundamentally theologically opposed to the propositions within Schellenberg's argument regarding divine hiddenness, it is still considered to remain an interesting framework for divinologists, amnologists, and general Astronist philosophers to contemplate, hence the fact that it is granted.

[12:14:54] True divinity, or godliness is held to be far beyond the realm of cosmicity so to associated any type of humanity with God is considered to be wrong which includes the notion that God is perfectly loving, merciful, and gracious.

[12:14:55] This is not to mean that God does not hold the ability to manifest these positive elements, it is instead to notionise that God should not be associated with such elements for they are fundamentally humanly or cosmic by their nature.

[12:14:56] They are therefore below the nature of God for God's nature is Divine and transcendent beyond that of the cosmic nature and so any type of association between God and love or God and mercifulness or between God or any other humanly manifested emotion or quality is considered to be incorrect.

[12:14:57] This is considered to be a distinct undermining and misunderstanding of the nature of God; of course, the term that I am referring to here is that of anthropomorphism which is seen countless times in both philosophical, theological, and religious debates and traditions, often as an engrained part of their system of thought.

[12:14:58] Aetiology is the study of the causation or origination of something in particular as well as the nature of these two existential foundations in a general sense and this discipline of study is herein categorised to be a branch of prerology for understanding the causation and origination of something is considered to be a determiner of that something's freedom.

[12:14:59] The creation of aetiologies is our way of attempting to make sense in our human minds of the world around us as part of The Cosmos; we have spent the entirety of our history of sentience attempting to discover the causes and originations of everything we see, feel, and imagine without any real conclusivity which demonstrates the philosophical nature and foundations of the study of aetiology.

[12:14:60] Many religious traditions have formed their own creation myths in order to explain the world and The Cosmos beyond, or how and why the religious tradition holds a distinct relationship between what it teaches and predicts and its believers.

[12:14:61] Many folkloric cultures have done the same with the employment of myths also being taken up by the thought system type of ideology in order to bolster their own legitimacy during their quest for greater power.

[12:14:62] Having understood the approaches of religions, ideologies, and folkloric cultures to the discipline of aetiology and their different reasons for the creations of aetiologies, we now come to address the approach taken by philosophies and specifically, of course, the approach taken by the Astronist philosophical tradition.

[12:14:63] The addition of this dimension to the discourse makes our contemplations of aetiology also a metaphilosophical discussion which is a phenomena that has occurred

through The Omnidoxo for many different disciplines of study as metaphilosophical concepts seem to have naturally sprouted during our many discourses on a wide variety of philosophical subjects.

[12:14:64] The philosophical approach to aetiology is obviously grounded in the employment of rational, logical, and ethical methodologies in order to derive the nature of causation as well as the causes and origins of a plethora of different phenomena with the intention of being able to firstly explain such phenomena rationally, justify for such an explanation logically, and with the intention of formulating a more coherent understanding of all that exists and all the causes that have propelled such existences.

[12:14:65] This is henceforth considered to be distinct from the intentions of both religions and ideologies for it is the methodical and rational justification element that is missing from these two other types of thought systems.

[12:14:66] The Astronist philosophical tradition obviously takes inspiration from the philosophical approach to aetiology for the development of its own particular approach, but the Astronist aetiology is also founded, as is the same for its approach to theology, upon a triadic structure, only the first segment of which is characterised by rationality, logicity, and ethicality as the cornerstones of the method of philosophy itself and within this segment also includes cosmological, epistemological, as well as political and social philosophy.

[12:14:67] The second segment of this triad involves a mystical, or mystological element which incorporates a sense of supernaturality into the development of the Astronist aetiology which is considered to enhance and deepen our aetiological discussions because if supernatural elements are completely disregarded and excluded from an aetiology, there is considered to be a lack of dimension to the aetiology from the perspective of the Astronist Tradition.

[12:14:68] The final segment of the aetiological triad for the approach taken by Astronist Philosophy involves a transcendental element which encapsulates the belief orientation that is to be henceforth known as intracosmism which is predicated on the basic notion that the causations of all that resides within The Cosmos are discoverable for something that also resides within The Cosmos, but the causation of The Cosmos itself is not discoverable for anything that resides within The Cosmos.

[12:14:69] Intracosmism is influenced both the structure of the Astronist cosmology, the Cosmic Limitation Principle, as well as the consideration of the cosmic nature of humanity and anything's inability to discover the nature of anything that holds a higher transcendent nature above that which is attempting to discover it.

[12:14:70] Therefore, it can be derived from this that the Astronist aetiology is predicated upon the parameter of discoverability, especially so in relation to its third segment of the Astronist aetiological triad.

[12:14:71] Mystological creations are intended for the purpose to explain the origins of the inspiration for The Philosophy of Astronism, especially regarding the construction of its foremost theme which is that of a cosmical aesthetic and character.

[12:14:72] This is especially manifested by the creation of The Cosmic Era of Astronist Mystology which is entirely included at the end of this discourse to form the end of The Omnidoxy itself.

[12:14:73] This is done so that it can act as the clarifier of the inspiration for the cosmical theme that runs at the heart of The Philosophy of Astronism and has directly impacted upon the core concepts of cosmocentricity, sentientism, the Humanic Exploration of The Cosmos, and ultimately, transcensionism.

[12:14:74] The Cosmos is the primary manifestation for the notion of the existence of some Divinity.

[12:14:75] The Cosmos is itself the evidence for the argument of Divinity.

—

[12:14:76] As a short definitional appendage to this discourse, I shall now introduce the term of extraomnidoxical, and its associated state of extraomnidoxicality, which shall henceforth relate to writings that are penned by the authorial identity of Cometan that do not hold the same authority than those within The Grand Centrality, and especially, The Omnidoxy.

[12:14:77] The extraomnidoxicality of any text in which Cometan is proclaimed to be the author or as a contributor must be stated in order for the use of Cometan's authorial name and identity to be considered legitimate and The Institution of The Philosophy of Astronism, its subsidiaries, and its partner organisations and institutions depending upon the nature of The Institution's parenic relations with those other organisations and institutions.

[12:14:78] That which is henceforth described as pseudocometan is considered to relate to when the authorship of Cometan is used falsely, such as the incorrect or inaccurate association of Cometan with a book, any other type of written piece, or any type of creative work; the may also be generally known as authorial misrepresentation.

[12:14:79] Terrality is a term first introduced herein and now that henceforth refers to the perspective of space from the terra firma of a planet, moon, or another astronomical entity; perhaps I will always be bonded to the instance and state of terrality during the extent of my lifetime, but I do hold the belief that I shall one day step upon an astronomical entity other than The Earth.

[12:14:80] Intrality is oppositism to terrality and shall henceforth refer to the perspective of space when one is present in outer space in contrast to terrality as perspective of space from a planet, moon, or another astronomical entity.

The Ultimation of Astronism (Transcension)

[12:15:1] The penultimate discourse that I now, as Cometan, shall write is one that will fulfil the role of encapsulating all that has been written of before within this most grand of texts for it is this discourse that speaks of transcension which is itself provided with the appellation of The Ultimation.

[12:15:2] Transcension, which is also to be henceforth known as diascension, single-handedly encapsulates the entirety of Astronism for it beholds the purpose of Astronism itself and formulates a practical need for Astronism and its role in the context of humanic civility.

[12:15:3] Transcension is the ultimate solemn achievement for The Philosophy of Astronism as characterised by the revolution and redefinition of human civilisation as a whole as well as people individually to consider the exploration of The Cosmos by humanity both intellectually, philosophically, and physically to be the ultimate duty of humanity.

[12:15:4] Transcension is the ultimation of Astronism because it encompassing in the singularity of a concept the entire reason for Astronism's existence; to establish and disseminate cosmic philosophy and to apply the concepts and theories within that new branch of philosophy to the context of everyday human life as well as wider human purpose.

[12:15:5] Essentially, it could be said that transcension is the answer provided by Astronism for the question of why humanity is here?

[12:15:6] Transcension therefore plays an important metaphysical and ontological role for humanity as it provides a schema through which humanity is able to consider its true position in The Cosmos and its responsibilities within it as vested by some supernatural force, or simply by the existentiality of that which is there to be explored and nurtured as is the orientation provided by non-theists and atheists on this matter.

[12:15:7] Transcension is considered to be formulated by three primary processes including philosophisation, Astronisation, and cosmocentralisation, each of which hold cultural and social consequences.

[12:15:8] Transcension as a term means to rise beyond one's current capabilities, especially with regards to the attainment of new knowledge or the galvanisation of a new civilisation, the latter of which is of course the primary way in which this term is applied to the context of Astronist Philosophy.

[12:15:9] Distinctly, transcensionism is the belief and notion that humanity will inevitably rise beyond its current state of intelligence to become a superadvanced and multi-planetary civilisation in order to alleviate the discontentment felt by billions of individuals about the monotony of their lives and shall therefore lead to the achievement of freedom, or cosmoleutheria.

[12:15:10] Through the exploration of The Cosmos, we are ultimately liberated.

[12:15:11] That which shall henceforth be termed as a scension refers to the ethereal movement or orientation of something, either physically, metaphorically, or conceptually and can therefore be used in a wide multitude of different ways for different purposes in different circumstances.

[12:15:12] As inspired by the two scensions that play central and integral roles in the development of The Philosophy of Astronism, namely transcensionism and reascensionism, I shall now introduce a collective appellation to encompass all of the different types and forms of scension with the appellation to be known as The Scensions of Prerology.

[12:15:13] All of these forms of scension derive from that which is to be known as transcension as well as the pre-Astronist terms of ascension, descension, and reascension.

[12:15:14] The first of these is to be henceforth known as antescension, or to antescend which is to make a movement or orientation in anticipation for the occurrence of something, especially so as to avoid it.

[12:15:15] The belief orientation associated with this conceptualisation, of which all the other scensions also hold, is to be henceforth known as antescensionism.

[12:15:16] The second of the forms of scension to introduce herein is that which is to be henceforth known as duscension, or to duscend which refers to making two movements or orientations simultaneously or consecutively in whichever context that it is applicable to.

[12:15:17] Duscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:18] The next of the scensions to introduce is that which is to be henceforth known as circumscension, or to circumscend which involves making a movement or orientation around the entirety of something so as to understand or see it in its entirety.

[12:15:19] Circumscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology,

philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:20] Additionally, that which shall henceforth be known as coscension, or to coscend which means to make a movement or orientation in conjunction with another entity.

[12:15:21] Coscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:22] That which shall henceforth be termed as encension, or to encend refers to making a movement or orientation in order to cause another entity to also make a movement.

[12:15:23] Encensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:24] The term of episcension, or verb to episcend refers to making a movement or orientation that moves the entity closer to something else, especially so towards a more central position.

[12:15:25] Episcensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:26] That which is to be known as excension, or to excend means to make a movement or orientation that holds characteristics of a previous movement.

[12:15:27] Excensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:28] That which is to be henceforth known as the term of extrascension, and its associated verb to extrascend refers to a type of movement or orientation that is greater or more than in some sense of that of a previous movement.

[12:15:29] Extrascensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:30] Additionally, the term of foreshension, or to foreshend refers to when an entity is to make its initial or first movement or orientation.

[12:15:31] Foreshensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:32] That which shall be known as heteroshension, or for something to heteroshend refers to when a movement or orientation is made that is different from that the previous movement, or different from that in comparison to the movements of other entities.

[12:15:33] Heteroshensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:34] Homoshension, or to homoshend is to make a movement or orientation that is the same from that the previous movement, or the same in comparison to the movements of other entities.

[12:15:35] Homoshensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:36] To make a multitude of different movements or orientations, either synchronously or consecutively refers to the term hypershension, or the verb, hypershend.

[12:15:37] Hypershensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:38] That which shall henceforth be known as insension, or to insend refers to making a movement or orientation within a movement or orientation that has already recently occurred.

[12:15:39] Insensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:40] Infrascension, or to infrascend is to make a movement or orientation that effects the foundational elements of something.

[12:15:41] Infrascensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:42] Interscension, or to interscend is to make a movement or orientation that is in mutuality with another entity and is conducted in partnership between one or more other entities.

[12:15:43] Interscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:44] Macroscension, or to macroscend pertains to making a movement or orientation that is profound in comparison to previous movements.

[12:15:45] Macroscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:46] That which shall henceforth be known as microscension, or to microscend is to make a movement or orientation that is minuscule or minor in comparison to previous movements.

[12:15:47] Microscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:48] That which shall be known as monoscension, or to monoscend refers to making a singular movement or orientation rather than a multitude.

[12:15:49] Monoscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:50] That which is defined as nonscension, or to nonscend pertains to when something decides not to make any movement or orientation at the present time.

[12:15:51] Nonscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:52] That which pertains to omniscension, or to omniscend is to make every possible movement or orientation that is viable with the resources presently available and in the current circumstances.

[12:15:53] Omniscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:54] That which is to be henceforth known as parascension, or to parascend is to make a movement or orientation alongside another entity's decision to move or orient themselves.

[12:15:55] Parascensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:56] That which shall henceforth be known as periscension, or to periscend relates to making a movement or orientation that directs the entity away from a central position and more towards a peripheral one.

[12:15:57] Periscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:58] That which pertains to poscension, or to poscend refers to making a movement or orientation after that of another entity, especially in order to analyse the effectiveness of that other entity's movement to form a greater understanding of whether the movement at hand is the correct one.

[12:15:59] Poscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:60] Prescension, or to prescend refers to when something risks making a movement or orientation before any other entity in order to receive greater rewards for being the first

to conduct such a movement, but this may also result in the entity losing resources if the movement experienced failure.

[12:15:61] Prescensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:62] That which is to be henceforth known as proscension, or to proscend is to make a movement or orientation that results in an overall progression for the entity rather than a regression or stagnation.

[12:15:63] Proscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:64] Semiscension, or to semiscend pertains to making a partial movement or orientation that is characterised by not striding to the fullest capacity or potentiality.

[12:15:65] Semiscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:66] That which pertains to subscension, or to subscend relates to making a movement or orientation without the knowledge of other entities.

[12:15:67] Subscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:68] Superscension, or to superscend pertains to making a movement or orientation succeed through the display of its apparent success to others rather than by its actual achievement of its goals.

[12:15:69] Essentially, superscension pertains to the illusion of succeeding through the display of success rather than the actual achievement of it.

[12:15:70] Superscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

[12:15:71] To make three movements or orientations simultaneously or consecutively is to be henceforth term as the process of triscension, or to triscend.

[12:15:72] Triscensionism is the associated belief orientation with this concept and it is to be applied for descriptive purposes in any instance in which a person's beliefs, theology, philosophy, theories, or school of thought are dependent upon the idea founded in its conceptualisation herein.

—

[12:15:73] Cosmocentricity is considered to be a form of surpassion because by thinking cosmocentrically one is removing oneself, the immediate surroundings of oneself, and the immediate circumstances effecting oneself from the equation in order to focus and centralise The Cosmos.

[12:15:74] Astronism is itself a form of freedom for its essential purpose is for the struggle for freedom and its characteristics and overall nature are to encourage the occurrence of freedom to flourish.

[12:15:75] Freedom is the central driving force of the human spirit for without the desire for freedom, a human is not a human.

[12:15:76] Humanity, in its collectivity, is considered to be in a constant struggle for freedom according to Astronism as herein stated.

[12:15:77] The feeling of suffocation within one's life even though air is flowing through one's lungs is the worst form of suffocation for of which that I speak is mental suffocation.

[12:15:78] Mental suffocation, also to be henceforth known as psychosuffocation, is a hysterical emotional and mental state in which one feels as though their freedom is being taken away from them by every person or event that in fact remains innocent of such intentions.

[12:15:79] Mental suffocation is also predicated on the idea that time is running out for one's freedom to be achieved and so in this way, one is trapping oneself by convincing themselves of the notion that their freedom is gradually being stolen from them which is a form of liberleutheria, in which a person is required to free themselves from the concept of freedom.

[12:15:80] Centrally, Astronism ultimately holds that the entirety of humanity is trapped in a physical suppression due to its current inability to explore The Cosmos which pertains to the reason why imagination is provided with an ultimate role alongside freedom because it is only through our imaginations that we are presently able to explore The Cosmos.

[12:15:81] Astronism holds that only when the Humanic Exploration of The Cosmos is initiated, will we, both as individuals and as a collective species, be and feel fulfilled and that it is this non-cosmic element of present day humanity that is causing much of the anguish, discontentment, and dismay that are currently ravaging people's minds.

[12:15:82] This is to be henceforth known as transcensionism as aforedefined which refers to the collective action of humanity in which each individual learns and discovers The Cosmos both mentally, intellectually, emotionally, philosophically, and ultimately physically.

[12:15:83] Transcensionism is considered to be one of the central elements of Astronism, of which the achievement of transcensionism is predicated on the realisation and practice of the concept of cosmocentricity.

[12:15:84] To think cosmocentrically is considered to be the necessary precursor to the achievement of transcension which is itself considered to be the only way to achieve cosmoleutheria which is cosmic freedom meaning humanity's freedom to explore and discover all elements within The Cosmos beyond that of The Earth.

[12:15:85] Furthermore, Astronism considers humanity's residence on The Earth as a situation that is trapping humanity from its ultimate potential which is the development of multiplanetary and interstellar civilisations for humanity and other sentient and non-sentient species to reside within them and in cohabitation with humanity.

[12:15:86] Despite the fact that transcensionism is not itself explicitly one of The Seven Tenets of Association, it does remain intrinsic to the majority of The Seven Tenets of Association, namely cosmocentricity, the Humanic Exploration of The Cosmos, sentientism, reascensionism, and cosmic devotion.

[12:15:87] The achievement of transcension can occur both individually, which is to be henceforth known as monotranscension, or collectively as part of humanity as a whole, which shall be henceforthly termed as hypertranscension.

[12:15:88] The achievement of transcension is the ultimatum of The Philosophy of Astronism for transcension is the achievement of freedom through The Cosmos and so all acts, concepts, theories, practices, notions, disciplines of study, and instruments of study are all created in the effort to allow individuals and collectivities to achieve transcension.

[12:15:89] Transcension is itself the singularly purpose of the creation of Astronism/Western Cosmism.

[12:15:90] Transcension is an individual or collective emotional, spiritual, psychological, philosophical, financial, technological, economic, social, and cultural revolution that is considered to be essential to occur by Astronism in order for humanity to free itself from its own singularity in order to achieve plurality.

[12:15:91] But how could transcension be possibly achieved? The answer is considered to be encapsulated through Astronism, particularly The Seven Tenets of Association, and essentially cosmocentricity and reascensionism.

[12:15:92] Transcension is the alleviation of singularity in terms of the singularity of human civilisation on one planet as well as the singularity of humanity's opportunities that are currently limited to a singular planet within the vastness of The Cosmos.

[12:15:93] With the consideration of transcension in this way, we must also known introduce two forms of study, the first of which is to be henceforth known as transcension theology, or transcensionist theology while the second of which is to be henceforth known as transcension philosophy, or transcensionist philosophy.

[12:15:94] Transcension theology pertains to a branch of theology in tandem with a subdiscipline of prerology that concerns itself with the role of God, The Divine, or by whichever other title that is provided to a creator being, in relation to the concept of transcension and the belief orientation of transcensionism.

[12:15:95] Transcension theology is predicated on the notion that god, or The Divine, as it is appellated in Astronist Philosophy, has created the sentience of humanity to reside in such a way that humanity should eventually leave its homeworld and transcend from it into new worlds throughout The Cosmos, which is itself a world; a new world of worlds in which our singular world resides.

[12:15:96] The goal of transcension theology, therefore, is to formulate a transcension for humanity in which God holds a key intercessional role whilst also allow the Astronist-originative concept of transcension to be applied to non-Astronist and pre-Astronist philosophies and religious traditions which is essential to the overall development of the idea of transcension.

[12:15:97] On the other hand, transcension philosophy, which is also a branch of prerology, concerns itself with the study of transcension and transcension through the application of philosophical instruments, primarily rationality, ethics, metaphysics, logicity, ontology, axiology, epistemology, and aesthetics.

[12:15:98] Transcendology is the major branch of prerology with implications for the entirety of the Astronist philosophical tradition dealing with the study of the nature, function, role, variation, and purpose of transcension and transcensionism within The Philosophy of Astronism, within which it holds a central, fundamental, and purposeful capacity.

[12:15:99] The meaning of transcension pertains to humanity's duty, but also humanity's desire to transcend beyond its present capacity and limitation upon The Earth; a singular planet.

[12:15:100] Physical transcension occurs with humanity's exit of The Earth's atmosphere into another world; otherworldly transcension pertains to humanity's awaited and herein prophesied transcendence onto an endless multitude of new worlds.

[12:15:101] The difference between transcendence and transcension is also herein addressed for the former is considered to be monodimensional as it pertains to spiritual liberation and the achievement of a higher spiritual existence or knowledge.

[12:15:102] Meanwhile, the latter is considered to be encompassing of the former for the latter is multidimensional, or polydimensional, and some are expected to argue for its omnidimensionality for transcension is considered to be in occurrence across a multitude of mediums and via a multitude of circumstances.

[12:15:103] These circumstances themselves form a multitude of different consequences, each of which are also multifaceted, including not just spiritual transcendence, but also emotional, psychological, philosophical, financial, economic, technological, social, and cultural transcendences.

[12:15:104] Humanity is fundamentally and unfortunately limited by its residence upon a singular world; humanity's state is an unfortunate one at present; this is considered to be due to the fact that money rules the world rather than discovery and thought for the sake of discovery and thought.

[12:15:105] Due to this distinct limitation that humanity is suppressed under, the trivialities of human imagination have ravaged our society to such an extent that money and the economic capacities and potentialities of human productivity are those which have risen to define our individual intents as well as the motivations of our societies rather than how we identify ourselves and the principles for which we stand and upon which our civilisations were predicated.

[12:15:106] To achieve transcension for purposes of economic growth alone is to misunderstand, undermine, and disregard the purpose of and struggle for transcension in its entirety as a revolutionary and redefining movement for human civilisation.

[12:15:107] Transcension is advanced to occur by the purpose of Astronism in order to free humanity in a multitude of ways across different themes rather than via a singular realm of rationale.

[12:15:108] Although The Cosmos is fundamentally limited itself by its own nature, it does remain to hold a vastity in which humanity holds a duty to abound itself into and subsequently explore.

[12:15:109] The nature of transcension is fundamentally omnifaceted or omnic by its nature for it may occur individually or collectively, and it may occur across a multitude of mediums causing a multitude of consequences that themselves are omnifaceted.

[12:15:110] It is due to humanity's discontentment with the monotony of life that humanity's descension into vulgarity, triviality, materiality, and depression has occurred.

[12:15:111] To consider The Seven Tenets of Association through the scope of transcension is now essential to address in order to bring to an end The Omnidoxy as The Cosmic Era of Astronist Mystology bids my readership farewell and allows all to think in such a way that is cosmical, to imagine in such a way that is mystological, and to now hold the instruments of intellect in order to work towards one's individual achieve of transcension as well as humanity's transcension.

[12:15:112] The first of The Seven Tenets of Association as considered via transcension is the Humanic Exploration of The Cosmos which pertains to the ultimate physical transcension of humanity, of which the conceptual form of transcension is the necessary precursor, yet conceptual transcension continues to exist alongside physical transcension even after its occurrence.

[12:15:113] The entire process of the Humanic Exploration of The Cosmos is to be considered a major contributor to the entire process of transcension and central to the belief orientation of transcensionism.

[12:15:114] The Humanic Exploration of The Cosmos is the transcension that Astronism predicates itself and therefore its purpose upon which pertains to why this process is the first of The Seven Tenets of Association.

[12:15:115] The second of The Seven Tenets of Association is encapsulated as reascensionism and considered through the scope of transcension, reascensionism is considered to be another of the necessary precursors to the achievement of mass transcension.

[12:15:116] Reascensionism encompasses conceptual, cultural, psychological, and social transcension through the return of philosophy to its rightful place as the singular driving force of human civilisation.

[12:15:117] With transcension is to be achieved as part of the foundations of Astronism, I, as Cometan, asked myself, through which vessel or medium could this transcensional revolution occur?

[12:15:118] Transcension as a concept itself is entirely formulated according to the principle of open enquiry from which notions of transcension are able to be derived in order to achieve.

[12:15:119] Therefore, ideology is not designated as the correct vessel due to its applicability to politics, but also neither is religion the correct vessel due to its own predication upon dogma and doctrine and so the third and final type of thought system or cultural vessel is that of philosophy, hence the solemn designation of Astronism as a philosophy since its founding.

[12:15:120] Therefore, reascensionism is essential to the achievement of transcension for reascensionism provides us for the instrument to achieve transcension for it is considered that without the reascension of philosophy in the way herein described, the achievement of transcension would not be possible.

[12:15:121] The third of The Seven Tenets of Association is encapsulated as cosmocentricity which is the primary formulator of the cosmical theme of the entirety of the Astronist philosophical tradition.

[12:15:122] In the Astronist philosophical tradition, it is our cosmocentric view and understanding of existence and especially, humanity's place, role, and perception of such an existence, that forms the essential precursory environment within which transcension shall be able to occur.

[12:15:123] It remains absolutely necessary that cosmocentricity, or cosmocentrism as it may also be termed, become engrained into human society in the widest and deepest of senses so that humanity prepared for its transcension culturally, socially, technologically, perceptually, and of course, philosophically.

[12:15:124] By this notion, we understand that cosmocentricity is essential to The Philosophy of Astronism because it forms a preparatory role for the correct occurrence of human transcension which reveals the reason for the centrality provided to cosmocentricity throughout the entirety of the Astronist philosophical tradition.

[12:15:125] The fourth of The Seven Tenets of Association is encapsulated as the notion that The Cosmos holds the answers of existence within The Cosmos which has already been introduced as intracosmism.

[12:15:126] The application of intracosmism to the context of transcension further justifies the need for cosmocentricity in our lives personally as well as societally both interpersonally in addition to internationally.

[12:15:127] Intracosmism upholds the notion that it is only The Cosmos that holds the answers to the reasons for our existence within it and that through the exploration of The Cosmos, via the Humanic Exploration of The Cosmos, and through the enknowledgement of humanity through the reascension of philosophy and the widespread adherence to cosmocentrist ideals, all of humanity will reach transcension.

[12:15:128] The fifth of The Seven Tenets of Association is encapsulated as the belief orientation of sentientism which itself encompasses the belief of the affirmation of sentient life beyond The Earth in The Cosmos.

[12:15:129] The application of this belief orientation to the context of transcension demonstrates the need for cosmic enknowledgement due to the predication of the notion of life beyond The Earth being currently dependent upon belief, but this tenet also further determines the importance and centrality of the Humanic Exploration of The Cosmos.

[12:15:130] This is because one of the most important reasons for the initiation of this explorative endeavour remains to discover and come into contact with sentient life beyond The Earth to prove the cosmocentric worldview's place and role of humanity in the hierarchy of existence which is of course a worldview that is not only shared by Astronism, but was created herein by myself as the founder of The Philosophy.

[12:15:131] The sixth of The Seven Tenets of Association is encapsulated as both the practices and beliefs associated with the practices of cosmic devotion which, when applied to the context of transcension, formulates the personal and interpersonal way in which a person is able to interact with The Cosmos and its progeny and phenomena on a higher, more philosophical, and more mystical level than simply just observation and direct enknowledgement thereafter.

[12:15:132] Cosmic devotion is essential to Astronism because it allows for the individual to interact with all that is cosmic in a way that can be personal but also shared amongst others.

[12:15:133] This flexibility regarding the nature cosmic devotion is expected to allow its practice to skyrocket in popularity for there are no set ways prescribed omnidoxically as to how cosmic devotion is to be practiced, but instead mentioned herein and post-omnidoxically are guidelines and inspirations that can be utilised by beginners and learners.

[12:15:134] Cosmic devotion can be considered the personal, interpersonal, and sometimes societal manifestation of the cosmocentric worldview as it denotes a conscientious effort of individuals and groups to demonstrate their belief in The Cosmos so cosmic devotion can be considered a practical or physical manifestation of cosmocentricity which is of course mental, conceptual, and perceptual by its own nature.

[12:15:135] The connection between cosmic devotion and transcension is found by the notion that through cosmic devotion our individual personal feelings towards The Cosmos as a whole entity are heightened.

[12:15:136] This is expected to subsequently develop a greater connection between individuals as well as humanity as a whole with The Cosmos as an animate, mystical, and interpersonal entity and pool of knowledge and belief.

[12:15:137] This therefore bolsters the notion that transcension can only occur once the majority of humanity's understanding of The Cosmos has reached this particular depth and breadth.

[12:15:138] The seventh of The Seven Tenets of Association is encapsulated as both the principle and the subsequent practice of enknowledgement which is considered absolutely essential to the achievement of transcension.

[12:15:139] However, it is also considered as a prominent dimension of transcension for without the greater attainment of knowledge, the transcensional process cannot begin.

[12:15:140] Therefore, this points to the reason for the development of Astronism itself from which the principle and practice of enknowledgement has arisen and additionally, the reascension of philosophy beckons the prominence of the attainment of knowledge for the purposes of transforming both oneself, others and humanity as a whole.

[12:15:141] I notionise that the problem with our present society is the instance that all is measured according to monetary value rather than philosophic value; it is conceptual, or philosophic value that should be prioritised for in doing so, a true understanding and appreciation for ideas and their impacts upon society would remind all humanity of their importance rather than simply the creation of ideas for solely profitable advantage which therefore undermines conceptual/philosophic value.

[12:15:142] It is in the monotony of the lives we have created for ourselves that we see the shackles causing our own miseries.

[12:15:143] I see no greater culprit for the depressions felt in our lives than that of monotony; monotony is my greatest of enemies that I intend to conquer herein.

[12:15:144] I can only condemn actions that physical prohibit or hurt others; all else is by the free will of the individual and their own moral compass.

[12:15:145] When asking the question of the purpose of our lives here, the only answer that I see to be suitable is humanity's exploration of The Cosmos for the purpose of our existences herein cannot be dependent upon the acceleration of economies and the accumulation of wealth for in what purpose do these elements derive?

[12:15:146] In a post-omnidoxical setting, the philosophers of Astronism should apply the beliefs of transcensionism and the notion and process of transcension to every other main aspect of the philosophy beyond which those elements to which it has already been applied within the writings of the Omnidoxo; this is considered to be an imperative post-omnidoxical work.

The Cosmic Era of Astronist Mystology

[12:16:1] The Cosmic Era consists of twenty short stories featuring Jesse as well as Ellena, Zara, Harriet and Oliver set in the cosmos.

The Grand Cosmic Tale of the Boy Born in Cosmos

[12:16:2] And then, in the new beginning, from one, forms light and dark under grand accordance with divinity and so too did time, space and life thereafter.

[12:16:3] All that had existed had been broken, rewoven and unified by the will of The Immeasurable Divine.

[12:16:4] All that had existed had not been lost for The Divine knew of it all; then, now and beyond.

[12:16:5] And so, time went on as The Grand Spectrum widened and all that has happened, is happening and will happen stands in accordance with The Divine's plan of creation.

[12:16:6] Between the textures of time and space and the grand celestial entities binding all as One, a Boy, formed in synergy and became one with The Cosmos.

[12:16:7] As The Universes expanded beyond all comprehension except one's, the Boy, infused by the energies of divinity, floated within The Cosmic Cradle as light and dark and One and All charged through His being.

[12:16:8] The Boy of Divinity is He.

[12:16:9] Chosen to guide those of His kin to enlightenment.

[12:16:10] The Grand Guide He will be.

[12:16:11] The Grand Guardian He will be.

[12:16:12] The Grand One is He in accordance with The Divine.

[12:16:13] As the galaxies do form in grand spirals of gas and explosive creations and lights appear amid The Grand Darkness, He is joined by four to make The Five.

[12:16:14] As time persists, stoppable only by One, The Four grow and are infused, too, and of Their duty to Him and The Divine They are told; a lifelong mission to stand by His side as His Protectors in accordance with The Divine.

[12:16:15] Dispatched by divine rite, The Five come, as prophecies did foretell, with The Boy Born in Cosmos as their leader.

[12:16:16] To all worlds They come in forms of One and All.

[12:16:17] To one planet They did come and were born, as all are, to fulfil Their duty to The Divine; to protect, to save, to enlighten.

[12:16:18] But it is He, The Grand One, who will, at the end, stand by The Great Light and when His name is called, Jesse will fuse and transcend as One and as All for all of time; Eternally Divine.

The Grand Cosmic Tale of the Boy Named Jesse

[12:16:19] Born in this world as all are, yet named by The Divine, The Boy Born in Cosmos, is as one in this world to begin His grand journey to great light.

[12:16:20] With the blood of a human and the energies of The Cosmos flowing through Him, Jesse grows as all, yet He is as One with divine spirit within and so too, are The Four Protectors.

[12:16:21] Through the trials of this world, They protect Him.

[12:16:22] Through the good and evil of this world, They protect Him.

[12:16:23] Through the winds of destiny, They protect Him and yet know of Their mission for Him They do not yet though within Them, infused They are, with The Ultimate Divine Seal and so, the power within Them to perform Their duty is as One and All; the greatest unstoppable force it is.

[12:16:24] Sensitive and understanding, yet focused and strong, The Boy Named Jesse is as The Divine destined though it is on this world He resides and so by nature, His humanity gifts Him a mind and morality.

[12:16:25] The test this will be for Him to show His true divinity, yet the Boy must learn and grow for He is as One and not as All, yet.

[12:16:26] Learn, He must, before His Grand Journey to great light can be realised.

[12:16:27] Until then, grow He will, to become man and when time and space and cosmos are right as The Divine One instructs them so, the Boy will learn of His true origins.

[12:16:28] He will become as He was destined so.

[12:16:29] Only then will He see the light and darkness as One.

[12:16:30] Only then will He see All as One.

[12:16:31] Only then will He be as One and as All.

[12:16:32] For the people of this world, He has come, yet without knowing, He is as One in the other worlds, though The Divine sees for The Divine sees All As One as The Creator of All.

[12:16:33] When all has been taught; when all has been learned; when all has been done in this world, The Boy Named Jesse will be called from the highest height.

[12:16:34] And then, without remind, He will state His duty and the components of His divine mission whispered to Him by The Cosmos when in cradle:

[12:16:34a] He shall come to worlds,

[12:16:34b] When all need him,

[12:16:34c] When all have forgotten him,

[12:16:34d] But, by divine command,

[12:16:34e] When worlds want him,

[12:16:34f] When all is done,

[12:16:34g] He shall return unto The Divine,

[12:16:34h] And be ready, will He,

[12:16:34i] to be as One and to become as All.

The Grand Cosmic Tale of the Boy Staring at the Stars

[12:16:35] As He grows as one, Jesse's eyes look up to the starry night and wonder and wish about the world beyond that which He is as one.

[12:16:36] He looks to The Cosmos, His true, yet to Him unknown, origin for the answers of His being.

[12:16:37] He sees the world beyond not as all others do for He sees the light, the dark and the celestials as His guide to His enlightened fulfilment.

[12:16:38] The Cosmos watches over Him in this world like all others and so too, do His Protectors, The Four others born from same kin as He.

[12:16:39] From the twinkling of the brightest star to the darkest and deepest pools of space, The Boy Named Jesse's mother notices His unworldly and inhumanly connection to The Cosmos and all beyond this world.

[12:16:40] Worries His Mother does for she is ignorant of Jesse's true mission, yet The Divine gives her strength to love, care and protect The Divine's missioner.

[12:16:41] At a tender age, The Boy Named Jesse begins to receive, from The Divine, visions and precognitions and dreams of His mission.

[12:16:42] Tell no one, did He, but kept waiting for more visions to appear before He.

[12:16:43] The voice He heard told Him of the details of His divine mission and for Him to not be afraid for The Divine was with Him always and so too were his Protectors.

[12:16:44] Laying secretly on the rooftop of His mother's house, Jesse was to spend hours looking up at the night sky for guidance on His mission.

[12:16:45] Whenever cloudy, Jesse would feel lost, lonely and without light to guide Him.

[12:16:46] One night, something occurred that changed Jesse's view of The Universe.

[12:16:47] Laying He was, as usual, on the rooftop, yet this night, this so very special night, Jesse looked up and saw, in his bright blue eyes, all that could not be seen.

[12:16:48] All the stars had suddenly scintillated and connected in a web of celestial highways and all the constellations that had ever been were as one to Him in that moment for He could see All.

[12:16:49] Beyond, He could go, to the furthest reaches of the galaxies; bright lights and giant dust clouds and energies and synergies of all creation appeared to Him.

[12:16:50] So too, did the darkest abysses of space.

[12:16:51] The oblivion of the darkest oblivion and the destroyers of worlds.

[12:16:52] Yet too, did the brightest of lights come to Him in that instant.

[12:16:53] The formation of the stars; the explosions of creation and destruction; the superlights of density and pressure and then, as if to shadow all else, Jesse saw what all others but The Divine could only dream of.

[12:16:54] The Grand Creation of The Universes; The Blinding Light of Expansion.

[12:16:55] Jesse could see all as one as The Divine so could and The Grand Spectrum displayed before Him.

[12:16:56] He knew of the mysteries.

[12:16:57] He knew of the secrets.

[12:16:58] He knew what The Divine knew.

[12:16:59] Yet then, all was normal and His vision went back to that of all others, yet it was then that He knew of His Divine Mission.

The Grand Cosmic Tale of the Boy & The Grand Unknown

[12:16:60] Unknown to this world, the majority of existence is, yet for Jesse, after The Divine showed Him The Grand Spectrum of Knowledge.

[12:16:61] He had seen All become as One in an instant and the widest reaches of creation in a single vision and so, to Jesse, the unknown had become known.

[12:16:62] From this moment thereafter, Jesse would grow and so too, would His fascination with the world beyond this world on which he resided to the point at which all His thoughts centred on discovering, exploring and knowing further, The Grand Unknown.

[12:16:63] During warm summer nights and the coldest depth of winter, Jesse would tell only His Four Protectors of His ambitions towards The Grand Unknown and all His imagination feeding His motivations for knowledge.

[12:16:64] All Four would listen with large eyes and open mouths as Jesse spoke of the worlds of The Cosmos and all He believed be true.

[12:16:65] He knew now that The Grand Unknown was His future for its wonders and worlds and wideness marvelled Him on a level beyond all else in this world on which He resided.

[12:16:66] The time between Jesse The Boy and Jesse The Young Man became a torment to Him yet He was patient, enlightening Himself and beyond all else, continued to imagine all the possibilities of The Cosmos.

[12:16:67] As Jesse grew into a young man, He feared the time would never come for Him take His place in The Cosmos.

[12:16:68] He feared He would never get the chance to explore The Grand Unknown; but most of all, He feared The Divine, His Gift-giver had forgotten Him.

[12:16:69] Yet it was this that told The Divine that His dear Boy of The Cosmos was not yet ready to fully realise His divine mission.

[12:16:70] However, the time for Jesse to realise His divine mission did indeed come.

[12:16:71] A dark night it was in bleak mid-winter when all was dead, including Jesse's imagination.

[12:16:72] But it was during a cold and clear winter's night that Jesse heard the call, had The Final Vision and was told of His mission.

[12:16:73] He ran down the stairs and rushed onto the street and looked up and up and felt as though He was one with the stars; though they were all around Him, He stood with two legs planted on the ground.

[12:16:74] The short whisper of The Divine in His ear told Jesse all He needed to know and He, too, was told of The Four Protectors and that They would join Him for Divine Eternity.

[12:16:75] This was the beginning of His divine mission and marked the next chapter of The Grand Journey to great light whereby He would become as One and as All.

The Grand Cosmic Tale of the Boy in The Solar System

[12:16:76] With the force of The Divine One within, Jesse began His mission of divinity.

[12:16:77] Helping all He could in all ways possible by giving Himself to all peoples, Jesse waited and wondered and wished and wept with happiness all about His realised mission and the new worlds beyond waiting for Him.

[12:16:78] As He, with His Four alongside, left the Earth behind and looked forth towards The Grand Unknown, Jesse, leading Them as Their journey began, did not look back for He knew His divine mission was slowly being fulfilled.

[12:16:79] He, as well as the other four did, knew that this world was watching Them and the hopes and dreams of all were fused within Their spirits as They travelled into The Grand Unknown.

[12:16:80] As The Lunar World passed them by, Jesse, The Boy Born in Cosmos, felt closer and closer to the home He had never known.

[12:16:81] A long time went by as The Five travelled further into the beyond of space and yet, in one moment, Jesse caught sight of a dot in the darkness.

[12:16:82] As The Five travelled closer, the dot morphed into a red world and for the first time being as one, Jesse physically saw a world beyond that which He had been born as one.

[12:16:83] The worlds of legends came next as Earth to The Five became more and more a faint memory, yet Jesse's mission and the duty of The Four Protectors was still infused within Their souls.

[12:16:84] Giant gas worlds surrounded by moons of strange colours and atmospheres came and went as Jesse marvelled at Their enormity yet He knew, for He had seen, that these mere dots among dots on a black canvas of dots.

[12:16:85] The strangest of the neighbouring worlds appeared as space seemed to become colder and darker and deeper in the dim days of The Grand Unknown.

[12:16:86] Yet it was these approaching worlds that caught Jesse's attention most for their colours marvelled Him and their strangest of features as their coldness and voidness became a warmth to Him within the darkness.

[12:16:87] Amid the furthest reaches of this solar system, when all is quiet and cold and life seems so distant, there comes a tiny, eerie world blanketed in snow-covered mountain ranges.

[12:16:88] It is so silent here, it is as if no life at all exists, but it was Jesse and The Four Protectors who must venture on, beyond all that is known for in doing so, They will fulfil Their Divine Mission.

[12:16:89] As They passed this strange, tiny world, The Five faced a new one, beyond all human comprehension.

[12:16:90] It was dark, cold and vast.

[12:16:91] This was The World of the Interstellar.

The Grand Cosmic Tale of the Boy Interstellar

[12:16:92] On the edge of all we know, The Four Protectors and He stood in silence and looked out into the nothingness, the dark world beyond.

[12:16:93] Yet it was then that the darkness spiralled and fused in colours and the ship on which They stood, began its journey of immensity, as the fabrics twisted and funnelled

and the speed at which They went was beyond that of any before, for The Five had mastered the very structure of The Unknown World; now bending it to Their will.

[12:16:94] As the ship shot towards an endless bright light, Jesse felt Home was here, beyond...amongst The Cosmos.

[12:16:95] As They warped through space and time and all matter that was, They played games and chatted and laughed to pass on the time, but it was Jesse who, whenever looking out of the window, could see visions of a life, perhaps a past life...

[12:16:96] When all were sleeping and the ship was quiet, it was Jesse who, trapped in dreaming, saw fissions of visions come to Him and the turning tables of fate, He too saw, sliding back and forth.

[12:16:97] And then, He was there; suddenly amongst The Cosmos.

[12:16:98] Floating within its fabrics.

[12:16:99] How magnificent a sight, He thought, as He looked all around Him at the celestials so close, but two, so far away.

[12:16:100] Trillions of spirals of coiled stars clustered in the perfect positions to perform this grand celestial show of great lights.

[12:16:101] Fragmented rock belts, stringing along, forming tails, stretching further than Jesse's eyes could see.

[12:16:102] The splendid silence of the giant dust clouds, drifting through all space as graciously as one possibly could.

[12:16:103] The mothers, these are, to the lights all around, but it is their seemingly infinite size, reaching out in all directions, that grants their marvel.

[12:16:104] But it was then, when all seemed so safe, that Jesse realised that all was not, for true it was that all this time of marvelling gigantic wonderments, an incomparably colossal being was watching over Him, masked into the darkness.

[12:16:105] A being of great darkness it was; one of legend; one of horror.

[12:16:106] A being of mystery and suspicion and oblivion.

[12:16:107] A nothingness and an entirety.

[12:16:108] How could one being be such without being The Divine itself?

[12:16:109] This being was of direct Divine kin, of course, yet it was this being's murderous silence and impossible darkness that raised suspicions of its virtue.

[12:16:110] Neither good nor bad this being seemed to be, but beyond all that, there seemed to be a mesmerisation matching no other else.

[12:16:111] A force of attraction far too powerful to resist.

[12:16:112] And, as Jesse turned, from the suddenly dimmed lights of The Cosmos in the face of The Great Beast, He saw what no other had seen before and perhaps would never see again.

[12:16:113] The Ultimate Nightmare had been creeping toward Him.

[12:16:114] A malevolent darkness so great all light cannot escape.

[12:16:115] As Jesse looked directly into Oblivion, all that He was, all that He is and all that He will be was drained from existence, into a place of incomprehensible nothingness, a place beyond all else.

The Grand Cosmic Tale of the Five Voyagers

[12:16:116] The Grand Devourer before Him, overshadowing all else as though it was just It and Him in the entire Universes.

[12:16:117] As the darkness enclosed all around Him, Jesse needn't feel fear for this was His home, he felt and knew from deep within.

[12:16:118] Staring into The Ultimate Nightmare, it became clear to Him that beyond it was a new world, but to discover it, He must venture through.

[12:16:119] There was no coming back if so.

[12:16:120] But then, It showed Him what was beyond It; just a glimpse.

[12:16:121] A peek inside that world was enough for any One Mind to fathom.

[12:16:122] No, He couldn't and wouldn't leave His Protectors, those that had come with Him on The Grand Journey.

[12:16:123] As though alive, the great nothingness began to distance itself.

[12:16:124] But then the noise came; a siren so loud it burst His eardrum.

[12:16:125] As feeling began to come back, Jesse saw Himself shaking as He began to spin in spirals of spasms and the space between Him distorted and drained into deep despair.

[12:16:126] Danger had passed it seemed, for The Grand Devourer had gone, but now a placeless position was left in its wake and as the spinning space spiralled faster and the splintering sonic siren intensified to the point of excruciation, Jesse believed He would be imprisoned in this timeless, placeless, nothingness of tormentity for all eternity.

[12:16:127] He awoke to cold sweat dripping from Him and His Four Protectors there, in deathly distress.

[12:16:128] Never would He come back did They believe for His vision of oblivion had gone on endlessly They told Him, though to Him it felt such a short time.

[12:16:129] It was as though when it that state, the state of staring into such immensity, time is not, so years go by as seconds would.

[12:16:130] Within a blink of Jesse's eye, His Four Protectors went down to Three as one ventured off into another room, but then a shout They heard.

[12:16:131] Drained of energy, Jesse was helped to get to the source of the shout; Oliver, it was.

[12:16:132] On the bridge He stood looking out towards existence.

[12:16:133] His eyes marvelled in splendours of fissioned colours and celestial spiral patterns of space, gas and dust.

[12:16:134] Standing aside to let the others look, They saw that their first warping journey had come to a pause.

[12:16:135] Before them there was all; before them there was creation; before them there was light and dark and all else between.

[12:16:136] The mixtures of blinding colours swirling and the celestials dancing among the backdrop of blackness.

[12:16:137] This was what Jesse had envisioned as His Home.

[12:16:138] This was His Grand Journey, here.

[12:16:139] A place of creation and destruction, lightness and darkness, explosions and silences and most of all, overlighting all else; this was a place of the purest and most direct Divinity.

[12:16:140] Jesse knew The Divine was here, infusing itself with the dazzling cosmic creations and it is The Five witnessing this wonderment who shall to be as one with it.

The Grand Cosmic Tale of the World Between Worlds

[12:16:141] Seeing and knowing and feeling The Cosmos in the way The Five could was as if to see all creation and light and dark and existence in one moment and The Four Protectors knew that They had come closer to their final destination for Him.

[12:16:142] "We must go out," One of the Four said to Jesse.

[12:16:143] His heart, soul and mind pulsed at the thought of being amongst The Cosmos again, to feel its infusions flowing within Him, to experience its wonders with His Four Protectors was a moment of wonderment, He could not and would not deny.

[12:16:144] Within a second, as time seemed distorted to Him still, never the same after His Oblivion Encounter, Jesse and The Four were out within the wonders without any protection needed.

[12:16:145] Not afraid of the vacuum were They, not concerned with the coldness were They, not worried about the lack of gravity were They for They were, in this moment, becoming as One with The Cosmos, so They needn't have humanly limitations for this was their homecoming.

[12:16:146] With laughter and dancing of spirals and swirls, The Five enjoyed the fusions of cosmic entities surrounding and flowing throughout Them.

[12:16:147] The stardusts of destructions and creations, the steppingstones of worlds and moons and the distant stardots so small and precious within one's palm.

[12:16:148] These and more were the entities Jesse had so long missed.

[12:16:149] The way they coursed through His mind and soul for heart and body were no longer with Him.

[12:16:150] The wisps of cosmic matter were synergising with His developing divine being and at the tips of his sensations touched the pure energies of newborn cosmic creation.

[12:16:151] With His eyes closed as He floated through a bay of stardots, Jesse could feel all that *was* for He *was* in this moment.

[12:16:152] Closer to The Divine than He had ever been expect once in His living life, Jesse heard the whispers of The Divine in the silent winds of space.

[12:16:153] He opened His eyes, now a cosmically infused neon blue and golden, and saw The Four surging towards Him through the stardusts of space.

[12:16:154] Laughing and chatter and love ensued, until the time came.

[12:16:155] One of His Four Protectors, Zara, Her name, reminded of their impending journey and all yet They were destined to explore and so, as Jesse left with The Four Protectors, He felt the energies and synergies of the cosmos flowing out of Him as His body and head and heart slowly came back to feeling again.

[12:16:156] Leaving those cosmic celestials behind was difficult, yet for Jesse, His mission was far from finished.

[12:16:157] He had made it this far, yet what awaited Him, was beyond all comprehension.

The Grand Cosmic Tale of the Awakening Horizon

[12:16:158] As The Five returned to that which had allowed them to venture, Jesse felt touch again, felt the feelings of human again and could feel his beating heart as His eyes transitioned back to their normality.

[12:16:159] He felt so close yet knew He was so far from what He and The Four were destined.

[12:16:160] "We must press on," He ordered.

[12:16:161] As the venturers warped into a rippling tunnel of distortions again, Jesse and The Four rested for without the energies of The Cosmos synergising throughout them, They had forgot what it is to be as human.

[12:16:162] The tiredness, the emotions, the limitations of not being as One.

[12:16:163] Jesse did not like this form, but He knew so that this form was the form He must perform His mission in until the right moment when He would become as One.

[12:16:164] Wishing to fight the tired, afraid of falling into a years-long slumber of torturous oblivion again, Jesse went to the bridge.

[12:16:165] As He stared out at the rapid furtherance of the voyager through warped existence, Jesse wondered about all He was passing, perhaps missing beauteous cosmic creations of divinity, yet reeling Himself, He knew that in a coming moment when He becomes as One, He will be granted vision to see all Divine creations as One and beyond all beauties is that.

[12:16:166] Slicing His grand thoughts, the beep of a button on the dashboard resounded throughout the ship and before He could step toward to see what was wrong, His Four Protectors were there to assist.

[12:16:167] "Oh no," one of The Four said. Every else looked towards for a explanation of the grave remark.

[12:16:168] "Something massive is in our route. We are heading into oblivion."

[12:16:169] Before screams and shouts could resound, out of warped existence did They come and facing what Jesse had only once before.

[12:16:170] A darkness to end all darkness.

[12:16:171] A size so impossible, it was as though this superbeing of abyss was itself a universe.

[12:16:172] But Jesse knew this was not true.

[12:16:173] He knew of this kind.

[12:16:174] He had met its kin before.

[12:16:175] Of divinity, it is, but devours, it does, instead of creating.

[12:16:176] Looking out, only darkness was there.

[12:16:177] How long before They would reach the point of no return, that was uncertain to Him, yet there was a voice calling louder and louder within Him, saying He is worthy of this challenge.

[12:16:178] As the voyager itself stretched and time and space and all else silenced, The Five were swept out into the great vacuum.

[12:16:179] Without knowledge of position, Jesse did not know of which way to look, but anyway, whatever way He did, there was only darkness and the incessant and unimaginable pull of The Grand Devourer.

[12:16:180] He and The Four Protectors, separated from their voyager, sunk deeper and deeper into the legendary beast, the supermassive destroyer of worlds.

[12:16:181] Would It now destroy Them?

The Grand Cosmic Tale of the Man Trapped in Nothing

[12:16:182] Darkness; there was nothing else; feel nothing could Jesse; see nothing could Jesse.

[12:16:183] But know could Jesse for He knew of His Divine mission and it was not to end here.

[12:16:184] No sound; no direction; no light; no matter; only He and Darkness there was.

[12:16:185] Alone He was not; His Four Protectors, swallowed by the darkness too, They had been.

[12:16:186] Engulfed by its immeasurable intensity.

[12:16:187] Yet not falling was Jesse, knew that He did for sure, for there was nothing to fall into and so, still He was.

[12:16:188] Without any movement, except the workings of His mind and soul.

[12:16:189] They were all that was left of Him; in nothingness was He; neither floating nor standing; neither feeling nor breathing.

[12:16:190] To see His body, for He was still encapsulated within it, yet not be able to move it, was a sensation nonetheless.

[12:16:191] This lost moment of nothingness gave His mind and soul a position to work.

[12:16:192] Close His eyes did He for there was no difference between the two options.

[12:16:193] Within the complete silence of oblivion, did come after what seemed eternity, a whisper.

[12:16:194] It was as He had heard before.

[12:16:195] The Divine direct, it was.

[12:16:196] In a language not known to Him; in a volume not known to Him; from a place not yet known to Him, did come this.

[12:16:197] As if the raging forces of grand divinity had just pulsated throughout what was left of His mind and soul, still unmoved, Jesse opened His eyes and so too did He see His eyes.

[12:16:198] Again, infused with cosmic radiance, they illuminated neon blue and golden in the most vast expanse of darkness.

[12:16:199] And then, Jesse's unmoving self rebelled against the pressures of The Great Oblivion for His arms and legs spread as wide as possible and emitted giant streams of neon blue and golden light and His eyes burst bright with dazzling colours and a blinding light, as the darkness shifted and all laws were broken at once in this moment of Great Cosmic Eruption.

[12:16:200] With His spirit's vision, Jesse saw His Four Protectors hurtling toward Him from the shifting darkness, revolving to the light bursting from His being.

[12:16:201] In each other's grasps, They circled Jesse as He began to spin and so did They and too, did the darkness surrounding Them.

[12:16:202] With a power so grand and strong, Jesse told His Four Protectors, "We Now Go".

[12:16:203] But to Them, His voice was different; it was deeper; not of the Jesse They had known; now in a fusion with another being it seemed.

[12:16:204] But before They could wonder any longer, The Five shot upward, surrounded by an immense shuttle of bursting light and pressure.

[12:16:205] The Love of The Four, Ellena Her name, mustered energy to look above at Jesse as He lead Them away from the deep chasm of darkness, She saw His body changed; His mind developed, She could see before Her.

[12:16:206] Not The Boy any longer was He, now The Man was He, leading Them out of The Great Oblivion.

The Grand Cosmic Tale of the Wait in Darkness

[12:16:207] Without vision of the events, Ellena, The Love, awoke on the voyager and awakened the other three Protectors from their unknown slumber.

[12:16:208] To the floor, They did look next.

[12:16:209] To the body of Their Boy Protective.

[12:16:210] Yet, recognise Him instantly They did not.

[12:16:211] As Ellena looked at The Boy Love laying on the cold, metal floor, She could not mask her shock to see what He had become.

[12:16:212] "His hair," Zara called.

[12:16:213] It was luscious and lighter and longer so than it had ever been, as though it had grown so in fractions of the time.

[12:16:214] "His body," Harriet mumbled.

[12:16:215] He was twice as big and muscly and allgrown in every way from His bursting chest, to His perfect bulges, to His muscularity stretching his skin in all ways.

[12:16:216] "His face," Oliver did say.

[12:16:217] That too, most of all, had changed; perfect, it was.

[12:16:218] Not one blemish; structured and chiselled and sharp, it was.

[12:16:219] Formed from the very essences of divinity, They knew it had been.

[12:16:220] Jesse, one could still see.

[12:16:221] His face it was, yet was not.

[12:16:222] A man's face was this; not The Boy's.

[12:16:223] To move Him to conform They all did true in unison, yet lift Him, They could not for it seemed His mass was of infinity.

[12:16:224] "Perfect, is He, in every way," Zara may say.

[12:16:225] "He is not as I knew," Ellena did shout.

[12:16:226] Outlooking to The Great Darkness, She did not see where it was from which They had come.

[12:16:227] The Great Oblivion had gone.

[12:16:228] Of that, certain, She was, yet where it had gone, She knew not.

[12:16:229] Where Her Jesse had gone, She neither knew.

[12:16:230] Gone forever is He, She did fear.

[12:16:231] But yet, a mission of divinity, She had still.

[12:16:232] A mission She could not and would not spoil for The Divine Eternity was Her ultimate destination for She was the only one of The Four Protectors that could remember the ultimate wonderment of that state.

[12:16:233] Zara, watching over The Boy Turned Man, felt an increasingly overwhelming urge of intimacy toward Him.

[12:16:234] Her mind of tempt trying to ravage Her morality and soul.

[12:16:235] Desperate, was She, to complete Her Divine Mission for being in His presence received Her crippling pain and torment, of which She must mask to her companions, yet She knew The Divine knew for The Divine knew of all things past, present and beyond.

[12:16:236] "Stranded, we are until He awakes," said Oliver.

[12:16:237] The voyager, dormant it was.

[12:16:238] As though it mimicked the state of Jesse in deep slumber.

[12:16:239] "Wait in The Great Darkness, we now must, for a time eternal however long This will take."

The Grand Cosmic Tale of the Great Awakening

[12:16:240] Harriet, Her name was; related not, was She to Him.

[12:16:241] Yet matter now, that did not, for blood was human and worldly and of that, now They were not.

[12:16:242] Come so far, had She.

[12:16:243] Tormented and tortured and troubled by the thoughts of Man, She knew now Her place and position and the state in which She belonged for She had received Her Divine Message.

[12:16:244] But time, there was not, to think of Her past now.

[12:16:245] Time it was, now, to see through Her Divine Mission; to return The Boy Turned Man to His right place.

[12:16:246] Useless, Oliver had concluded, the voyager to be, for it no long ran in accordance with technology.

[12:16:247] Of that, He was expert.

[12:16:248] Yet of Divinity, He was not.

[12:16:249] Received His Divine Message, did He, like the Others, yet ignored it did He, until the moment at which it forced itself upon Him.

[12:16:250] Of expert He was not of The Divine, yet He did learn painfully, The Will of The Divine, that cannot be stopped by any force, except its Creator.

[12:16:251] Now, accepted and worthy, He did understand His duty to His Brother.

[12:16:252] Beginning to foresee, could He, the stance of His destiny, yet how to achieve it, a mystery it still was to Him.

[12:16:253] As though combined thought had fuelled, the voyager suddenly awakened.

[12:16:254] Lights lit; buttons beeped; switches started.

[12:16:255] Alive again, the voyager was, yet all eyes turned to The Once Boy to see if Their theory was indeed true.

[12:16:256] It was; moved, did He.

[12:16:257] Ellena, Her eyes widening in either horror or happiness, only The Divine would know.

[12:16:258] Climbing up from the floor was He, and so Harriet tried to help, but could not for an invisibility surrounding Him penetrated Her to stop.

[12:16:259] Coming to His feet with His eyes closed yet all else's fixed on Him, Jesse rose to beyond six feet.

[12:16:260] Formed and contoured and shaped perfect, His body did stand.

[12:16:261] Looking up and down They did all, at His immense magnificence and all He was, instantly understanding all He had been, yet accepting all He was now for This was His Final Form, the form in which He would become as One with The Divine.

[12:16:262] And then, it was His eyes that did seal this formation.

[12:16:263] Mesmerised at their opening all were, as stood tall He did, a fusion of all blues and golds exploding around the pupil, and deep within them, one is said to see, The Cosmos in The Universes and all that makes it be, and the wonderments of all creation with the dazzlements and luminous celestial entities of divinity.

[12:16:264] To unlock all the mysteries, His eyes are said to be, the key to understanding, all that was, is and will be.

[12:16:265] In a voice of greater depth, it is said that He did say, "As you know, made and bound by that which all we are was I, the life of us, the death of us and the love of us and all things, and now, I shall take thee, as my Four Protectors, to the place of my divine birth and you shall all see, where it was and how it was, that I became to be."

The Grand Cosmic Tale of The Galactic Factory

[12:16:266] Within the cosmic tunnel of warpage, all were silent in the presence of Him, Jesse, the one They had known and now knew again.

[12:16:267] It was here, from, through and within the curvature of time and space and all things, that Jesse did take His Four Protectors to the place of creation.

[12:16:268] Opening His eyes again, all could see the spiralling wonderments of gold and blue and then, before any could utter words, held out His hand did He, facing through the forward window and then, clenching His hand, the voyager exited the tunnel and the view that They did then see was one of ultimate dazzlement, dreams and divinity.

[12:16:269] The Pillars of Creation, did They then see.

[12:16:270] All Four pressed themselves against the glass to view as much of This as Their vision could take.

[12:16:271] Unworldly colours of spiralling patterns whirling and rotating in all directions here and there and now, pirouetting through the nothingness of everything.

[12:16:272] The grandest sizes of all kinds, unbelievably tall and long and wide and stretching toward the beyond of all things.

[12:16:273] "Come," said He in His new voice.

[12:16:274] "Experience This you cannot until out within it."

[12:16:275] And then, without a moment passing, did the voyager disappear and The Five were out in the nothingness of everything, looking all around, attempting to take in all that was around Them, yet They never seemed to be able to for This, it was beyond Them all.

[12:16:276] "Come," said He again as He took The Love's hand and whisked Her through toward This, The Factory of Creation.

[12:16:277] The pillars of colour, dust and gas stood taller than She could ever see.

[12:16:278] Within them, He did show Her, the explosions of stars, the vortexes of colours and wisps of light, luminous light, oh so precious yet plentiful around Them.

[12:16:279] The Cosmos flowing through Her spirit, She did know and feel, as the stardusts of light and all colour did surround and engulf Her and Him in the setting of stardots in the darkness beyond.

[12:16:280] Inside created cocoons, did They float.

[12:16:281] Create would They, She knew, for She knew of Her duty to Him and The Divine and that She would carry creation within Her spirit.

[12:16:282] Rise upward, did They, towards the tips of creation, among the luminous lights of colour and cosmic currents of synergies and energies all around Them, binding and fusing in unity.

[12:16:283] Him holding Her as They viewed This Factory of Creation and all the scintillating galaxies of The Universes beyond, Their golden eyes did both meet and there, They did create again, The Cosmic Conception as The Divine had destined it so.

[12:16:284] Floating back through the galactic factory, They did see visions of past, present and prophecies, as a whirlpool of colour formed beneath Their standing and rose around Them, encompassing in a sphere of ever-changing states, swirling a network of stardust around Them, and inside, together They would Be, within Their Kin of The Cosmos, inside The Universes, overlooked by The Divine, The Greatest Light of All.

The Grand Cosmic Tale of the Death of Light

[12:16:285] In the tunnels of distorted space again, The Four Protectors and He stand and looked out to the lightyears passing them in seconds.

[12:16:286] The Four Protectors did not know of where They were headed, but They trusted Their Boy Turned Man.

[12:16:287] He was Their leader and it was Him that would lead Them to The Divine Eternity.

[12:16:288] Suddenly, Oliver shouted as the dashboard beeped, "There is something huge in our path."

[12:16:289] "Not again," called Harriet, "I hope not The Great Oblivion."

[12:16:290] “No,” Jesse did speak as His golden eyes opened from standing meditation.

[12:16:291] “No, of light this obstacle is; A Great Light of The Destruction of Light.”

[12:16:292] As the voyager exited warp, The Four Protectors saw what Jesse had spoken of.

[12:16:293] In spirit form, Jesse did quickly take Them for if not, die They would in the presence of This.

[12:16:294] With never-ending streams of cosmic searchlights shooting out both its ends and its rotating disk of stardust colours, larger than all things, except one, The Five were facing The Destruction of Light in its most violent form.

[12:16:295] Constantly collapsing on top itself with infinite rings of matter rotating round its darkest core, the darkest of all things They had seen so far.

[12:16:296] The greatest explosion of all was This. Devouring all light did This.

[12:16:297] Once a beacon, now a black destructive force dissolving into nothingness.

[12:16:298] “Come,” Jesse did say.

[12:16:299] The voyager did then dissolve too as the pressures all around were too much for worldly entities to withstand.

[12:16:300] Yet The Five were safe for now for They had Turned, and were now not of worldly being for beyond were They that state.

[12:16:301] “Jesse, we cannot,” Zara did say as He, with cosmic force, pulled them toward The Destruction of Light.

[12:16:302] “We must if we are to prove ourselves as Five,” said He, “Do not fear for It will hear your inward cries and feed from Them; best to be strong it is when facing destruction; we must reach its core.”

[12:16:303] As The Five went closer, feel, They all could, the increasing pressures of destruction and the intensifying density of all-surrounding Them and the accumulation of all everything towards the point of Ultimate Darkness, to the point when all is nothingness.

[12:16:304] Streaming through the outer disks of grand colours, Jesse did lead as His forces pushed against the intense gravities of the matter surrounding The Five.

[12:16:305] The Four Protectors, did hear Him say, as They floated above the bottomless oblivion of The Destruction of Light, “Gather around I, and We, as Five, shall, transcend.”

The Grand Cosmic Tale of a Newfound World

[12:16:306] As the cosmic forces of light were at unimaginable intensities, the giant lightstreams coursed through The Five as They were held up above the gaping hole of darkness, only by the forces of Jesse's Divine Will.

[12:16:307] As He began to spin, so did The Four Protectors as They surrounded Him and began to rotate as the stream of starlight did too, above The Destruction of Light.

[12:16:308] The Four's eyes opened wide and too, Their's had changed to gold and blue.

[12:16:309] A sudden beam of light shot from Their eyes and absorbed into Jesse as They floated within the giant ring of intense light.

[12:16:310] As fuelled by Their light, Jesse opened His eyes and glowing brightest of whites were They as The Four Protectors knew The Divine was within Him now.

[12:16:311] With sudden movement, He did lift His head upward through the tallest tower of streaming light and did raise both His hands upward toward it, cupping Them and closer did The Four Protectors gravitate toward Him.

[12:16:312] As the forces of Light and The Cosmos with Darkness below Them, This was as The Divine had destined and to transcend, The Five would now.

[12:16:313] Ellena, first was, to see All.

[12:16:314] Remembering Her mission of divinity clearly before Her, She knew now was the moment in which She would stand by His side; The Five as One.

[12:16:315] Outstretching Her envisioned hand as the forces of all creation and destruction collided against Her being, She did reach Her naked Love and touch His envisioned body.

[12:16:316] With that, She did Then absorb to Him and stronger did the whitelight become shooting from His Divine Eyes. It was Harriet next who saw All.

[12:16:317] She did understand, then, Her moment of transcendence as One was here and now and together, bound by divinity, She would transcend into The Cradle of Divinity.

[12:16:318] To complete Her final duty, She did too, outreach Her envisioned hand and touch Him, and together with Him, She became as One and Her self, absorbed was.

[12:16:319] Zara, saw All then did She.

[12:16:320] As if the pain and suffering and temptation She had always felt had become flushed out from within Her soul, She did smile, and smile eternal She shall, for Her duty would be complete as She touched His body and felt His warmth in the coldness and kissed Him Perfect, She did, just once, and sealed, that did, Her divinity for free, She had become.

[12:16:321] As Jesse's eyes did grow strongest, still, required one more did He to complete The Five as One.

The Grand Cosmic Tale of The Great Transcendence

[12:16:322] Looking at the envisioned hand before Him, Oliver began to see All.

[12:16:323] As Jesse looked back at Him with Divine Eyes so white, Oliver's eyes did too turn and smile, He did too, for now ready and worthy was He to embark for The Divine was within Him finally and hesitant He was not.

[12:16:324] As Jesse's envisioned hand held out to Him, Oliver did look all around, at the greatest lights and the deepest darkness and the collisions of creations and the detonations of destruction.

[12:16:325] He did see The Universes as was, as is and as will be for The Cosmos, flowing through Him, it was, finally.

[12:16:326] Outreaching His hand, His fingertip did touch Jesse's.

[12:16:327] And as if by Divine Miracle, The Grandest Light of All erupted, imploded and then exploded as rewoven it was to Divine State.

[12:16:328] From it, an even larger explosion birthed and encompassed all surroundings as Oliver became as He and as The Divine had destined The Five so; to become The Five As One.

[12:16:329] With the forces as One finally, The Five As One did transcend through the tower of light, shooting upward through the cosmic searchlight, beyond all The Cosmos and The Universes toward an all-encompassing White They did beam.

[12:16:330] So grand and strong, It was; It was All and Nothing; it was Creation and Destruction.

[12:16:331] It was as was, as is and as will be for The Five As One had soared higher and higher beyond all states of law and principle, and creation and destruction.

[12:16:332] As The Four Protectors surrounded Jesse in perfect transcendence, lifting and guiding and loving Him too, They saw everything They had done, all They had seen, all They had known and as Their Spirits As One looked upward further through The Divine Body of Jesse, They did see a light brighter than light itself.

[12:16:333] Then looking away, They forced to look at such light for long was beyond all that could ever exist in Them, even now when in Divine State.

[12:16:334] But then, unconscious They became.

[12:16:335] Even Jesse, for His spirit was not of the level of that light They had glimpsed.

[12:16:336] In bodily form again They floated, The Five did see themselves from within Him, as was, as is, but not as would be for one finality stood between Them and Divine Eternity.

[12:16:337] As The Five's Mind, now linked eternally divine, wondered of what next, two swirling, infinite vortexes appeared; one above and one below The Five.

[12:16:338] Above was light and below was darkness and between the two, The Five's Mind understood Their final obstacle.

[12:16:339] The Great Fusion of Light & Dark had begun and now, it was time for The Five As One to see The Origins of The Universes.

The Grand Cosmic Tale of The Great Fusion of Light and Dark

[12:16:340] As the swirling forces of Light and Dark do whirlpool; all-encompassing, all-embracing and all-surrounding, The Five As One are infused with cosmic energies and synergies of all powers and colours and magical manifestations of was, now and beyond for The Chosen Ones are They and bring together They will, as The Divine destined it so, bring together all forces and restore, then transcend beyond all plains for Divine They are and live eternally They shall, with The Divine.

[12:16:341] As the closing whirling gases of Light and Dark do engulf, Jesse's eyes, as The Five As One, do open and within them, of all creations one can see and within them too, one can see The Five As One within One Entity.

[12:16:342] Of beautiful, swirling colours and creations, Their eyes were and illuminating and looking in all directions, The Divine Eyes of Jesse infused with divinity and all its wondrous mysteries and see All, Jesse could for of Divinity is He and They now.

[12:16:343] As the whirlpool forces of Light and Dark did meet and connect and consume and cocoon The Five As One within their rotating funnels of cosmic wonderment, Jesse did raise His hands, cupped in worshipment, to The Entity of Grand Divinity.

[12:16:344] As the stardots began to rotate around The Cocoon of Fusion, The Cosmic forces did fuse and light and darkness emitted from great explosions of energies.

[12:16:345] As the Light and Dark forces fused themselves into The Five As One, all creations, now connected, did pass through the The Cocoon of Fusion and did too, inspirit themselves and conjoin themselves with Him and Them in Divine Fusion.

[12:16:346] As the oldest tales and the ancient prophecies did foretell, Jesse then did look up and did then say, "Be as One will We, for the forces of All are within Our soul, and the creations of The Cosmos are now inspirited within and so, All that is as One will be as All and all that was, is and will be shall become as One."

[12:16:347] "We have become As One, as The Five As One, as it was destined so by, You, The Divine and so now, by Divine Quintinity, transcend, shall we, The Children of Divinity, to stand in Grand Symmetry with One and All."

[12:16:348] Then, looking upwards toward The Great Light, existing within all entities of The Universes and all-seeing, all-creating and all-knowing, Jesse as The Five As One, did begin to rise.

[12:16:349] Lightness and Darkness in perfect balance surrounding Him and Them and The Cosmic Forces of all creation too, all-encompassing, The Five As One could see of Their spirits.

[12:16:350] As rapid transcendence began toward The Ever-expanding Light, The Four Protectors, in Their greatest of spirits, did begin formation.

[12:16:351] Surrounding He in accordance with Their Divine Destined Duty and Jesse, with His hands raised in welcome, did complete His transcendence and to The Great Light, The Five did rise and there, They would then, finally, become as All.

The Grand Cosmic Tale of The Universal Spectrum

[12:16:352] When one is above all else, one can see with clarity, for one is not blinded by the rolling hands of Time, nor the obstacle of ignorance or the proximity of closeness.

[12:16:353] When one is without and looking in rather than within looking out, one can see the greatest picture for the picture they see is whole and clear and true, not tainted by worldly vices or lies of those who wish do thee wrong.

[12:16:354] To see The Universal Spectrum, as The Divine destined so, is the greatest gift for seeing, knowing and understanding all things, is to be of Divinity.

[12:16:355] Transcend, did The Five As One, fused in Lightness and Darkness and the creations of The Cosmos, and rising beyond even light itself, Jesse as The Five As One, exists in a place of knowledge and understanding.

[12:16:356] As His entity did illuminate and His eyes did glow a pure light, One of Divinity; One of Fusion; One of Beyond All.

[12:16:357] With these, His Divine Eyes, He did look down below, as spirits of The Four Proctors did exist beside He and within He, and He did see a sight not seen by any, but The Creator of It.

[12:16:358] Jesse did now there stand, as The Five As One, beyond all that did, does and will exist for He now existed beyond even The Universes in a place of Ultimate Divinity, nearing The Divine Eternity.

[12:16:359] Below He, did exist all; the spiralling lights and darks and worlds and all peoples of all worlds and the cosmic radiances of colours, stardust and explosions of destruction and creation and too, did infinite stardots populate the darkness and beyond all else, The Ever-expanding Force of Creation, Created in True Divinity by The Divine.

[12:16:360] With the forces of The Divine flowing throughout Jesse, The Five As One, see, They could, the infinitesimals and the prodigious; the powerful and the weak; the life and the death; the past, the present and the future.

[12:16:361] Yet most of all, the lightness and the darkness in all its wonderment.

[12:16:362] The widest of spectrums They could see all at once; so vast, so complex.

[12:16:363] "So Divine," Jesse, it was said, that He did say.

[12:16:364] To see all existence in One View, is of remarkable proportion yet to see and know and understand All, is not yet to be as All.

[12:16:365] As the cosmic forces and light and dark pulsed through His being, Jesse did see The Universes of The Universe and from this moment, He did pledge to guide all Here for to gift all with such a sight, a grand fulfilment that would be.

[12:16:366] Delving into His inspirited being, Jesse did know of His Four Protectors there and within Him and with Their spirit, He did know, that Time it was to become as All with The Divine.

[12:16:367] Yet, one more sight, The Divine had to shown, before The Grand Synthesis could occur and this final sight, of marvellous wonderment it was for Jesse as The Five As One was about to be shown The Edge of All There Is, Was & Will Be.

The Grand Cosmic Tale of The Edge of All There Is, Was & Will Be

[12:16:368] Rising further in a speed beyond all, Jesse as The Five As One, did see The Great Light above Him and close, He knew He was, to The Divine Eternity.

[12:16:369] Yet, The Ever-expanding Force of Creation, He had not yet witnessed and to be as both One and All, to see its sight, He must.

[12:16:370] Feeling the spirited hands of His Four Protectors guiding His being toward The Great Light above, Jesse did see, with His Divine Eyes, The Divine's Time retreating back to its origins.

[12:16:371] See, He could, all the existences and creations and destructions rewinding themselves under Divine Destiny to show He and Them the moment of The Divine Creation at The Eve of Existence.

[12:16:372] Then suddenly, in a blank void did Jesse exist, yet not float nor stand nor transcend for there existed nothing, but The Divine.

[12:16:373] Appearing beside Him, did His Four Protectors' spirits as within Him, yet He and They did not exist here either, simply observing were They the events of The Divine Creation as The Divine destined it so.

[12:16:374] Yet then, The Four Protectors did conjoin to Him again as though feel, They could, The Miracle of Existence, about to become.

[12:16:375] In the purest, most powerful and brightest light any One and All could ever witness or hope to imagine, a force was created and in The Grand Explosion, existence and light and dark were then born.

[12:16:376] The Grand Expansion did then begin and is still continuing for stop, it will not, until The Divine destines it so.

[12:16:377] Within mere moments, existence had filled the void beyond the size of worlds and then stars and then galaxies and beyond and in its wake, in accordance with The Divine Destiny, entities will form and life will appear and the complex vastness of The Cosmos is created as The Divine oversees All.

[12:16:378] As a swirl of blackness overcame Him, He just as quickly arose and saw what only The Divine could see.

[12:16:379] Beyond existence is The Void of Potentiality.

[12:16:380] Beyond the expansion is The Place of Destiny.

[12:16:381] Beyond The Force of Creation is The Nothingness and The Divine's Will to create.

[12:16:382] Travelling faster than even His Divine Eyes could comprehend, The Force of Creation did expand in all directions and dimensions in accordance to The Divine One's Will.

[12:16:383] Be stopped, it cannot except by One.

[12:16:384] Be understood, it cannot except by One.

[12:16:385] Be matched, it cannot except by One; its Creator; The Divine.

[12:16:386] Although Jesse could see it and had now witnessed its wondrous power, He could and would not ever know of its true secrets for the reason of Existence itself is an incomprehensible contemplation.

The Grand Cosmic Tale of The Grand Synthesis of Jesse & The Divine

[12:16:387] "Now," The Great Voice to silence All else in The Universes did say to The Five As One as They witnessed The Ever-expanding Force of Creation, "It is Time for The Grand Synthesis."

[12:16:388] Transcend in illuminating lights, They then did, through a vortex of what was and is and forming visions of what will be and to complete The Divine Transcendence.

[12:16:389] Jesse did then feel a part of His spirit disconnect from His being and beside Him Oliver, with His Divine Eyes, did appear.

[12:16:390] Then, three other parts of Jesse's spirit, did then too disconnect from His being and Zara, Harriet and Ellena, His Love, did appear beside Him with Their Divine Eyes and Eternal Smile did They all towards The Boy Born in Cosmos.

[12:16:391] As Jesse's two entities, Boy and Man, did then appear, not as One, but as Two, They did connect.

[12:16:392] In each other's eyes, They did see all that Jesse had witnessed and Eternal Smile, did They, knowing that Jesse's Divine Destiny, was about to be fulfilled.

[12:16:393] Merge again did the two beings into One, and become as One with himself did Jesse, yet His Triplicity was not yet complete.

[12:16:394] Boy and Man there was, yet Divine, there was not wholly and so, The Divine Transcendence would begin in The Divine's Will of Destiny.

[12:16:395] The flashing lights of The Cosmos and the explosions and implosions of creations and destructions did surround The Five Transcenders.

[12:16:396] They saw all their lives and began to see Their existence beyond now with radiances of cosmic energies and synergies flowing through Their beings.

[12:16:397] Holding hands, The Five Transcenders did feel the past, the present and the future flowing through Them.

[12:16:398] The chain reactions of love and hate, light and dark and strength and belief, did too, surge through Their beings and beyond as The Lightstream rose up to beyond all plains of existence.

[12:16:399] The Four Protectors had risen Him to this point and fulfilled Their Divine Duty, They had.

[12:16:400] By the guidance of Their hand, He was able to complete what had been destined by The Divine.

[12:16:401] Eternal smile, would They, for the completion of Their Divine Duty and now, transcend They will beside Him, The Boy Born in Cosmos; The Divine Boy; The Divine Man and, in accordance with Divine Destiny, The Divine Spirit.

[12:16:402] As the powerful forces of all pressures of lightness and darkness, do collide against The Five, They continue to transcend above all plains.

[12:16:403] Yet it was then, when through The Divine Barrier They did come, They saw All and finally, there was The Divine.

[12:16:404] It be not what They had dreamed for Their minds combined with all else was not and would not ever have been enough to compare to Their Creator.

[12:16:405] Stand, They did, on a platform, neither one of existence nor one of non-existence, just of Being.

[12:16:406] In Divine, The Five had now transformed as They stood, mesmerised by The Great Light before Them.

[12:16:407] With floating and waving hair, The Five's locks did begin to glow bright in their natural colours, but of Divinity, They were now and illuminate Their hair did as infused, They were, with The Divine's presence.

[12:16:408] Their bodies, glowing bright too, as energies of creation did pulse within Them and between Them.

[12:16:409] And finally, Their eyes, Divine Eyes, did illuminate in colours of purity and a light so powerful, resistance was impossible.

[12:16:410] The Five Transcenders did then walk toward The Great Light in The Eternal Plain.

[12:16:411] Think of all things in every existence, dimension and perspective and think of all unknown in every existence, dimension and perspective.

[12:16:412] Think of the greatest, brightest, most mesmerising radiant light and the deepest and darkest black and think of all that was, all that is and all that will be and think of creation and destruction and all-time and all-space and all-existence and all-non-existence and then, one could only begin to imagine The Great Light; The Divine, that Jesse and The Four could now see only with Their Divine Eyes.

[12:16:413] Before The Divine, Jesse beside The Four Protectors, as destined and prophesied so, did then recite:

[12:16:413a] "He shall come to worlds,

[12:16:413b] When all need him,

[12:16:413c] When all have forgotten him,

[12:16:413d] But, by Divine Destiny,

[12:16:413e] When all is done,

[12:16:413f] He shall return unto The Divine,

[12:16:413g] And be ready, He will,

[12:16:413h] To be as One and become as All with His Creator."

[12:16:414] "But, Divine Creator, why existence?" It was destined Jesse would say to His Creator.

[12:16:415] "To create and to destruct are one and the same, yet, to exist not, is not like any other, for non-existence lacks the possibilities of existence, yet to exist, is of infinite possibility and so, one does triumph over the other."

[12:16:416] "Existence will always Be and non-existence will always Be Not."

[12:16:417] Lifting Jesse with invisible force, The Four Protectors, guide The Boy Born in Cosmos to His Creator and there, when Jesse's hand did touch The Divine Light, absorbed was He and all-creation into The Greatest Light.

[12:16:418] And now, The Five will stand beside Their Creator As One & All for The Divine Eternity of Freedom.

Omnidoxical Formulation

Textual structure

Insentenced structure

- Disquisition
- Discourse
- Insentensation
- Subinsentensation
- Rubral
- Surceasion
- Indexa

Font

Font styles for different elements:

- Font for document title - Big Caslon
- Font for rubrals - Big Caslon
- Font for main body - Palatino
- Font for inclusive discipline title - Big Caslon
- Font for disquisition title - Snell Roundhand
- Font for page number - Palatino

Font sizes for different elements:

- Font size for rubrals - 18pt
- Font size for main body - 12pt
- Font size for disquisition title -
- Font size for inclusive discipline title -
- Font size for page number - 10pt

The use of italics can be found in various instances in the Omnidoxy and is typically used either for emphasis or to distinguish titles from general text similarly to the way italics is used in mainstream document formulation.

The use of bold font is mostly applied to titles and is not common in the main body of the Omnidoxy, however, in both the Preppendix and the Appendix of the Omnidoxy, the use of bold font is most common.

The use of bullet points can be found in some instances in the Omnidoxy, however, dashes are more popular.

The use of dashes are popular marks used in the Omnidoxo with two primary functions, either to mark surceasions or they can be used in the context of lists.

The use of numbers are only used in the Omnidoxo for the indexment systems with a preference for dashes and less regularly, bullet points, for the listing elements.

The use of indenting is not a common formulation in the Omnidoxo, however, for the purposes of omnidoxical exegesis it is herein permitted for use.

The use of underlining is a formulation feature that is not found in the Omnidoxo, however, it may be used in post-Cometanic editions of the Omnidoxo to the publisher's discretion.

The use of baseline adjustments (subscript and superscript) are also not regularly found in the Omnidoxo, however, they may be found in post-Cometanic editions to the publisher's discretion as long as they are provided with a particular purpose of inclusion.

Font colours - Black (#000000) is utilised throughout the Omnidoxo.

Character spacing - 1.0 is utilised throughout the Omnidoxo.

Documentation

- The unpublished original edition is A4 in size.
- The precursory original edition is 6 inches by 9 inches.
- The published original edition is also expected to be the standard 6 inches by 9. inches meanwhile also being published in a large variety of all other page sizes.
- Page orientation for The Omnidoxo always remains portrait as opposed to landscape.

Alignment

- Justified text for main body is applied throughout the Omnidoxo.
- Centralised text for rubrals, page number, and disquisition titles is also applied throughout the Omnidoxo.

The Grand Canon of Astronism

Stewardship is the duty,

Aid is the mandate,

Justice is the reality,

Ambition is the core,

Cosmic Exploration is the future,

Enlightenment is the path,

Patience is the attitude,

Advancement is the answer,

Imagination is the driving force,

Acceptance is the key,

Peace is the goal and,

Freedom is the reward.

Bibliography of the Omnidoxy

[BO:1] The Bibliography of the Omnidoxy presents a small collection of books that were verifiably read by Cometan during the creation of The Omnidoxy and the indexal abbreviation for the Bibliography of the Omnidoxy is BO.

[BO:2] The nature of the relationship between these books and the development of The Omnidoxy is and shall forever remain inspirational.

[BO:3] Inspiratory books pertains to the notion that the books within the Bibliography of the Omnidoxy were read and elements of their writings inspired Cometan resulting in the creation of new ideas through the ideas that had preceded the creation of the Omnidoxy.

[BO:4] The specificities surrounding the exact ideas that were derived from each of these books and their exact influences over the writings of the Omnidoxy remains unspecified.

[BO:5] However, The Institution of The Philosophy of Astronism firmly maintains that these books acted only as partial inspirers for Cometan during the development of the Omnidoxy meaning that their ideas held no direct influence over the Omnidoxy for they remained used only for the generation of new ideas that were to be completely Astronised/ Astronistised.

[BO:6] Therefore, there exists no instance in the Omnidoxy in which any of these books hold an influential role rather than an inspirational role.

[BO:7] It also remains important to note that the Bibliography of the Omnidoxy herein does not represent the entirety of the extent of the literary influences or otherwise of Cometan during the development of the Omnidoxy and all of the copies of the books herein referenced within the Bibliography of the Omnidoxy were bought and solely owned by Cometan at the time of the creation of the Bibliography of the Omnidoxy.

[BO:8] The Bibliography of the Omnidoxy is created by the citation style herein introduced Astronist referencing style, also known as linial referencing, with its unique layout of being able to cater to mononymous authors due to the focus on mononyms in the Astronist onomatological system; for mononymous persons, a full stop is included immediately preceding their name while those with surnames no full stop is included after their name in order to distinguish between two as a semicolon is provided instead of a full stop in the case of a surname; the title of the book, which is the only italicised part of the reference, directly proceeds the author unlike in other styles in which the publication year proceeds the author and precedes the title of the work; the publication year, page number(s) and if applicable, the indexa or indexal range (with the use of the abbreviation in.) are then found in brackets and proceed the title of the work; in the Astronist referencing style, page numbers are not required by necessity; then, unlike other referencing systems, one is expected to include up to a five word summary of the work being referenced which remains up to the referencer to create ended with a colon but it is

also important to note that non-significant words such as 'of', 'and', or 'on' are not included in this word count which only includes words that are capitalised; following this is the location of the head office or headquarters of the publisher or institution globally at the time of publication of the work ended with a colon and this remains distinguished from other referencing systems which would include the offices of the publisher in the country in which this particular edition of the work was published rather than the global headquarters; the name of the publisher is provided, or the name of the institution to which the book belongs is provided preceded by a full stop to complete the reference; please see an example of the Astronist referencing system below.

[BO:8a] Cometan. *The Omnidoxy* (2019; p. 2171-2174; in.12:3:1-12:3:10) Founding Treatise of Astronism: Preston: The Institution of The Philosophy of Astronism.

[BO:8b] Here is an example of an in-text reference under the Astronist referencing system: (Cometan: *The Omnidoxy*: 2019).

[BO:8c] As seen above, the in-text reference includes no italicisations, only colons between the three components which are the author, the title of the work, and the year of publication all of which resides within brackets; the author name is able to be used outside of the brackets within the sentence in which case only the work title and the publication would be provided within the brackets.

[BO:8d] Here is an example of an in-text reference under the Astronist referencing system that has multiple authors: (Clarke, Hardy, Houlden, & Sutherland: *The World's Religions*: 1988).

[BO:8e] As seen above, the Astronist referencing systems greatly diverges from the other referencing systems in this case with the absence of the use of et al. whilst instead opting for the inclusions of all the surnames of the authors of the work and also seen is the use of the ampersand which is used through the Astronist system in replacement of the term 'and' which is never to be used except in the work description or if the term appears in the title of the work itself.

[BO:45] As an appendage to the Bibliography of the Omnidoxy, I shall include future titles of books related to the topic of Astronism and Astronist philosophy that shall be authored and published post-omnidoxically by Cometan and are therefore herein verified as being omnidoxically authentic though they do remain extraomnidoxical by their official designations and are therefore not required to be written according to insentence; these books are distinguished below through the italicisation of their titles and currently have unknown dates for publication.

[BO:46] *Astronism: The Philosophy of The Stars* by Cometan

[BO:47] *An Exegetical Investigation of the Omnidoxy* by Cometan

[BO:48] *Manual for Cosmic Devotion* by Cometan

[BO:49] *The Astronist Tradition: An Introduction* by Cometan

[BO:50] *The Astronist Understanding of The Cosmos* by Cometan

[BO:51] *Astronism, Astronism, Kosma, Cosmism, & Sophism: An Appellatological Investigation* by Cometan

[BO:52] *The Core of Astronism: Cosmocentricity* by Cometan

[BO:53] *Transcension Philosophy* by Cometan

[BO:54] *Astronic Belief & Philosophy* by Cometan

[BO:55] *Dissection of Astronism* by Cometan

[BO:56] *The Reascension of Philosophy: An In-depth Investigation* by Cometan

[BO:57] *Extraomnidoxical Promulgation Theory* by Cometan

[BO:58] *The Original Codification of Institutional Law* by Cometan

[BO:59] The Original Encyclopedia of the Concepts, Theories, Notions & Belief Orientations of Astronism by Cometan

[BO:60] Sight Through Cosmic Eyes by Cometan

[BO:61] The Cause for Astronism by Cometan

[BO:62] Cometanic Reflections by Cometan

[BO:63] Now listed below are books which are not to be authored by Cometan himself, yet are still omnidoxically predicted and therefore herein sanctioned to be constructed post-omnidoxically under the exact titles as outlined below.

[BO:64] The Philosophy of the Stars: An Investigation

[BO:65] Astronic Theology

[BO:66] An Astronic Commentary

[BO:67] A Textbook of Astronic Philosophy

[BO:68] Faith in Astronism

Cometanic Quotes

[CQ:1] Cometan says "My faith is strongest when the night sky is clear."

[CQ:2] Cometan says "I believe my biggest fear is to live a life of normality."

[CQ:3] Cometan says "It takes only a strong One to change All."

[CQ:4] Cometan says "Your faith should prove itself to you."

[CQ:5] Cometan says "I'd rather be the fool than the wiseman. That way, I'll be underestimated and they won't see me coming."

[CQ:6] Cometan says "Take advice only from those you hope to be like."

[CQ:7] Cometan says "The greatest mistake we humans make is thinking we know all there is to know. The truth is; we know nothing."

[CQ:8] Cometan says "Your heart will get you into trouble, but your strong mind will get you out of it."

[CQ:9] Cometan says "Our greatest weapon is the mind."

[CQ:10] Cometan says "My dream is all have, and all I am."

[CQ:11] Cometan says "Think about The Cosmos, and all we do not yet know, and feel excited for all the possibilities."

[CQ:12] Cometan says "Shake the hands of those you hate, and you will thank me."

[CQ:13] Cometan says "Empathy is the greatest good of all."

[CQ:14] Cometan says "To fix internal woes, love externally."

[CQ:15] Cometan says "Do not fight, love instead. It's less hard that way."

[CQ:16] Cometan says "The love, the hate and that strange spot in-between."

[CQ:17] Cometan says "Think about the universe, and all we do not yet know, and feel excited for all the possibilities."

[CQ:18] Cometan says "The Man of All is the greatest man you can be."

[CQ:19] Cometan says "I serve all: the rich, the poor, the young, the old and the believers and non-believers."

[CQ:20] Cometan says "Believe what you wish to be the truth, but remember what you know to be fact."

[CQ:21] Cometan says "Without the tragedies of the world, no lessons would ever be learnt."

[CQ:22] Cometan says "Those who leave their learning at the classroom door, will find themselves unsuccessful."

[CQ:23] Cometan says "Chaos is my speciality."

[CQ:24] Cometan says "If not for my naivety; I never would have done all this."

[CQ:25] Cometan says "Why wait for Tomorrow when Today is holding out her hand?"

[CQ:26] Cometan says "Why is it that nothing ever seems enough?"

[CQ:27] Cometan says "I'd rather live half as long and live a full life than twice as long and live an empty line."

[CQ:28] Cometan says "If you're lonely, distressed and never satisfied, then congratulations; you are finally an artist."

[CQ:29] Cometan says "There may be open doors before me, but I'm always drawn to the one that's locked."

[CQ:30] Cometan says "I wonder, one day, when I am long gone of course, if Jesse and The Philosophy will be there when the greatest mysteries of The Cosmos are revealed. Oh, I do hope so."

[CQ:31] Cometan says "I don't like Time; it never stops to take a breather."

[CQ:32] Cometan says "I'd rather be judged for doing something interesting than not judged and be so utterly boring."

[CQ:33] Cometan says "If they judge; they're interested."

[CQ:34] Cometan says "When I love something, I can't stop thinking about it."

[CQ:35] Cometan says "Try not to let your dreams consume you; I did and it's a dark path."

[CQ:36] Cometan says "Women are not at all complicated; they just want to love and be loved."

[CQ:37] Cometan says "Your dreams will come true, but only when they're supposed to and not a moment before."

{CQ:38} Cometan says "They'll always be there beside me."

[CQ:39] Cometan says "I'm never alone as they are always there with me."

[CQ:40] Cometan says "Then came the time to let the world, into my world."

[CQ:41] Cometan says "If you have someone's trust; you have their everything."

{CQ:42} Cometan says "I loved them so much and I hoped the world would too."

[CQ:43] Cometan says "Oh, if only I knew back when it begin what was going to happen...perhaps the pressure of knowing would have been too much to bear."

[CQ:44] Cometan says "If anything, the first chapter of my first book shows how one event can change your life forever."

[CQ:45] Cometan says "It all began with a bang and it sure as hell will end with one."

[CQ:46] Cometan says "Why stand with the powerful when you can stand beside the weak?"

[CQ:47] Cometan says "Your heart will get you into trouble, but your strong mind will get you out of it."

[CQ:48] Cometan says "Your time is the most precious thing in this world."

[CQ:49] Cometan says "Jesse has to die in order for him to be immortalised as the young effigy that he is."

[CQ:50] Cometan says "He'll always be living in a timeless warp, endlessly morphing into what anyone needs him to be."

[CQ:51] Cometan says "If you think you know it all, then that means you know nothing."

[CQ:52] Cometan says "There's always work to be done for the furtherance of philosophy."

[CQ:53] Cometan says "The greatest mistake we humans make is thinking we know all there is to know. The truth is; we know nothing and we shall continue to know nothing until the end of our existence."

[CQ:54] Cometan says "It takes all sorts to make a world."

[CQ:55] Cometan says "I handed him over to the world or should I say, the wolves."

[CQ:56] Cometan says "The Omnidoxy will reveal my philosophy to the world and it shall encapsulate these ideas forevermore."

[CQ:57] Cometan says "Do what is unexpected of you."

[CQ:58] Cometan says "In our lives, people come and go, no matter how much we wish they didn't."

[CQ:59] Cometan says "Accepting and understanding difference is the key to progression."

[CQ:60] Cometan says "The way of philosophy is to disagree, justify, and to revel in such diversity."

[CQ:61] Cometan says "No matter your religion, nationality, sexuality or appearance, we are as one; human."

[CQ:62] Cometan says "We seem to have forgotten that we are one; we are human."

[CQ:63] Cometan says "It's not your lack of knowledge that bothers me, it's your impertinence to greater knowledge itself."

[CQ:64] Cometan says "The biggest mistake we humans make is thinking we rule it all, when in fact, we rule nothing."

[CQ:65] Cometan says "When you open your mind to all the possibilities of The Cosmos, you'll be surprised at how wide your mind will stretch."

{CQ:66] Cometan says "Those who have no knowledge, we enknowledge. Those who have knowledge, we encourage. Those who have knowledge yet choose to poison the world, for them, we must pray."

[CQ:70] Cometan says "Love thy god and family, distrust politicians and use every minute of your time to progress towards your goals and you just might survive our twisted, cheating and greedy human world."

[CQ:71] Cometan says "Don't tell everyone everything. Sometimes it's better to simply keep your mouth shut."

[CQ:72] Cometan says "Welcome all, befriend several, but trust only a few."

[CQ:73] Cometan says "And just when I thought it would never happen to me..."

[CQ:74] Cometan says "Some actions transcend across all borders."

[CQ:75] Cometan says "Keep your mind as wide open as the doors in front of you."

[CQ:76] Cometan says "Progressing means putting others before yourself and in turn, they'll put you before themselves."

[CQ:77] Cometan says "Think big. Then, think bigger."

[CQ:78] Cometan says "Only when we see the full pictures, can we truly understand our whole story."

[CQ:79] Cometan says "First, you must understand you are nothing. And from there, you can become something."

[CQ:80] Cometan says "And then he came into my life, consumed me completely and changed everything forever."

[CQ:81] Cometan says "I couldn't ignore him any longer, he gave a mission and I sure as hell wasn't going to fail."

[CQ:82] Cometan says "He, sent by a mysterious force, gave me my place in this world."

[CQ:83] Cometan says "For some reason I, out of billions, had been chosen for this purpose to pursue something that reaches far beyond my singular being."

[CQ:84] Cometan says "He truly was my gift from God."

[CQ:85] Cometan says "My endless works."

[CQ:86] Cometan says "World, do what you wish with him, but remember, he will always be mine."

[CQ:87] Cometan says "There's a difference between visiting a place and experiencing a place."

[CQ:88] Cometan says "I wish to never stop working on the things I love."

[CQ:89] Cometan says "I will live as long as the world needs me."

[CQ:90] Cometan says "Once my mission is completed, I will be ready to leave this existence and become whatever I am destined to transcend as."

[CQ:91] Cometan says "Those who enforce laws must also abide by them."

[CQ:92] Cometan says "To divide is to regress."

[CQ:93] Cometan says "I learned to love The Unknown."

[CQ:94] Cometan says "To make history, first you must learn history."

[CQ:95] Cometan says "To have knowledge is to have freedom."

[CQ:96] Cometan says "Those who wish to eradicate evil are those who create it."

[CQ:97] Cometan says "Does it bother me that in my lifetime I'll never get to travel to the furthest reaches of The Milky Way and beyond? Hell yes it does, although Jesse, The Philosophy, and the followers of The Philosophy will be there to see it on my behalf I hope."

[CQ:98] Cometan says "Reality always manages to make things much worse than that of which imagination can conjure."

[CQ:99] Cometan says "I, you, we create reality."

[CQ:100] Cometan says "Clouded are we to the truth for truth itself is not real."

[CQ:101] Cometan says "I am one human amongst seven billion standing on a small planet in a quiet corner of a galaxy forgotten between countless other galaxies that make up the ever-expanding cosmos that's so incomprehensibly immense that it would take me an eternity to understand its ultimate complexity."

[CQ:102] Cometan says "The widest view is the clearest."

[CQ:103] Cometan says "The moment we realise our place as insignificant, we can use our human power of the mind to build something of significance and this is what I intend to achieve; all that I wish to do is to create to contribute and to be remembered for my contribution to humanity's progression."

[CQ:104] Cometan says "Creation is the only progression there is."

[CQ:105] Cometan says "The most foolish is he who underestimates another's abilities."

[CQ:106] Cometan says "My life is a small sacrifice for the betterment of others and for the furtherance of humanity."

[CQ:107] Cometan says "I've known him so long that we are now but one and the same."

[CQ:108] Cometan says "We will change the world together."

[CQ:109] Cometan says "Allowing him to flourish is killing my chance to flower."

[CQ:110] Cometan says "We dance the dance of death with our hands tied behind our backs."

[CQ:111] Cometan says "Look in the mirror and ask yourself if you are the best version of you."

[CQ:112] Cometan says "Those closest to you can be your greatest enemies."

[CQ:113] Cometan says "My dream is all I have and all I am."

[CQ:114] Cometan says "My end will come when he is able to live without me."

[CQ:115] Cometan says "The day of my death will not be the day of his."

[CQ:116] Cometan says "Love is learning until you have learnt for so long that learning becomes your love."

[CQ:117] Cometan says "The evilness of doubt crept ever so closer to my heart."

[CQ:118] Cometan says "Many have tried and all have failed; this world will never be ruled by one."

[CQ:119] Cometan says "Only a fool will try and take over this world."

[CQ:120] Cometan says "You must explore beyond that of any other before you; you must seek new discoveries; then come ever so closer to revealing the ultimate mystery."

[CQ:121] Cometan says "We have explored this world and now is the time to explore the world in which our world resides."

[CQ:122] Cometan says "We are still yet at the very beginning of humanity's greatest journey."

[CQ:123] Cometan says "To live in a place is to live by their values."

[CQ:124] Cometan says "Only the fool forces all to believe his beliefs."

[CQ:125] Cometan says "Go and explore worlds, but just know this; you may find something that will question your very existence and all you presently know and believe."

[CQ:126] Cometan says "Hold out your hand and shake the hand of your opponents just as sincerely as your supporters."

[CQ:127] Cometan says "Can you see the task we have been set? The ultimate exploration is before us, waiting for its initiation."

[CQ:128] Cometan says "The time has come to explore beyond all we know."

[CQ:129] Cometan says "We are quite primitive still, are we not?"

[CQ:130] Cometan says "The future is all there is to work towards."

[CQ:131] Cometan says "Your ignorance will blind your vision of the future and your place within it."

[CQ:132] Cometan says "Manipulation is the most powerful and therefore is the deadliest of all weapons."

[CQ:133] Cometan says "If it can be imagined, then it must therefore exist or hold the potential to exist."

[CQ:134] Cometan says "Accepting mistakes is the best way of not making them."

[CQ:135] Cometan says "There's always a beginning, middle and end though the trick is thinking widely enough to imagine all three in any circumstance."

[CQ:136] Cometan says "Complete happiness is not present in the nature of humans."

[CQ:137] Cometan says "Nothing is as it seems for we humans often look at something as we wish to see it, not as it actually is."

[CQ:138] Cometan says "Just surviving isn't living."

[CQ:139] Cometan says "He who can relate to all is he who will go further than any other."

[CQ:140] Cometan says "To be happy is to have freedom."

[CQ:141] Cometan says "Patience, gratitude and generosity are the only three components you need to live in pure contentment."

[CQ:142] Cometan says "Drop your weapons and save your souls from an eternity of despair for spreading such evil as war and destruction."

[CQ:143] Cometan says "Division is always regression."

[CQ:144] Cometan says "Think about how another may aid you than how they may challenge you."

[CQ:145] Cometan says "The brightest of minds do not fear other bright minds."

[CQ:146] Cometan says "Creation holds in its nature an ability to destruct."

[CQ:147] Cometan says "The destruction of a creation to create isn't true creation."

[CQ:148] Cometan says "A lesson can be learnt from every person."

[CQ:149] Cometan says "Damned to continued disappointment are they who dream only of their own happiness over that of others."

[CQ:150] Cometan says "Your pain defines you. Furthermore, those who are cushioned from pain are further from their truth than any other soul."

[CQ:151] Cometan says "One can never truly know a person's every thought and action and so a person can never truly be known."

[CQ:152] Cometan says "You must first be nothing to become something."

[CQ:153] Cometan says "Ignorant is he who believes being nobody is having nothing for he who is nobody can see the full spectrum of life in a pure clarity."

[CQ:154] Cometan says "Try to destroy evil and you may find yourself become the very evil you first set out to destroy."

[CQ:155] Cometan says "Home is always the safest whoever, whatever or wherever Home may be."

[CQ:156] Cometan says "Comforting those in need of it is the duty of human beings."

[CQ:157] Cometan says "My happiest moment is at the end of the day when I'm on the brink of collapse from exhaustion knowing I did the best I could with the energy I had and the most wonderful part is, I will shall do the same tomorrow."

[CQ:158] Cometan says "If my brain isn't overloaded with information to be organised, I will be up all night twiddling my thumbs."

[CQ:159] Cometan says "Just enough is always never enough for those whose minds crave more."

[CQ:160] Cometan says "Evil is always fuelled by jealousy."

[CQ:161] Cometan says "Mystical forces are always at work around us all the time."

[CQ:162] Cometan says "Could this be a dream or the ultimate nightmare?"

[CQ:163] Cometan says "My eternal journey."

[CQ:164] Cometan says "The deepest of bonds exist between my soul and my dream."

[CQ:165] Cometan says "Though I don't yet bear a ring, I am deeply bonded with my dream."

[CQ:166] Cometan says "I had my first child when I was fourteen: I cared for it, protected it and it became my world, but when the time came to let it go out into the world...well, that was both the easiest and hardest day of my life."

[CQ:167] Cometan says "My life was completely consumed by my own creation."

[CQ:168] Cometan says "I have been given a giant paradoxical ball of chaos for which I had been chosen to unscramble, repackage, and act as its steward in this world until the time comes when I myself am to end."

[CQ:169] Cometan says "Underpinning it all was the love for the characters, creation and progression."

[CQ:170] Cometan says "If I had told them all at the wrong time they would think I was crazy which, I suppose, I am."

[CQ:171] Cometan says "All my other loves cannot compete with the one at the centre of my heart, my mind, and my destiny."

[CQ:172] Cometan says "My darkest moments were those in which his presence was blurred."

[CQ:173] Cometan says "Thank you to that entity, who gifted me, this, for you can now rest, ensured that I, will work to see this mission through."

[CQ:174] Cometan says "Could it be that this will be my greatest downfall?"

[CQ:175] Cometan says "Nobody else will ever truly understand for they cannot as they haven't been chosen for this."

[CQ:176] Cometan says "I don't know why, how or who called upon me, but this has come to me and therefore, I must see through this arduous journey."

[CQ:177] Cometan says "Trying not to lose myself within this mission was and is and always will be the most difficult of balances."

[CQ:178] Cometan says "If my ultimate sin is him then I will spend an eternity in hell."

[CQ:179] Cometan says "Understanding me, this, him isn't possible without first understanding that which created me, this and him and for that, you will need an eternity of knowledge."

[CQ:180] Cometan says "He will come to those who believe they need him least."

[CQ:181] Cometan says "Indulgence is a comfort, not a solution."

[CQ:182] Cometan says "I want people to feel they can count on him whenever, wherever and how ever they need him."

[CQ:183] Cometan says "The trust of a child to carry them from the ashes of a corrupt world to a world of transcension is the greatest duty he and I and The Philosophy could ever undertake."

[CQ:184] Cometan says "Everything matters and nothing matters."

[CQ:185] Cometan says "To become nothing is much more difficult than to become something."

[CQ:186] Cometan says "We are mere subjects of the world's decision for us."

[CQ:187] Cometan says "Padlocked we are in the limits of our minds."

[CQ:188] Cometan says "Pre-birth we are all equals; post-birth we are as we decide."

[CQ:189] Cometan says "Sometimes I wonder if The Philosophy really was more of a curse placed upon me than a gift."

[CQ:190] Cometan says "Nothing is ever simple in this world and is unlikely to be so in any other for that matter."

[CQ:191] Cometan says "If you believe something to be simple, that either means you do not have enough knowledge of it or you are ignorant to its complexity."

[CQ:192] Cometan says "The narrower your mind, the narrower your life will be."

[CQ:193] Cometan says "I want to know, all there is to know, even though I know, I cannot know, all there is to know."

[CQ:194] Cometan says "I always take a sudden dislike to those who want everything simple and easy."

[CQ:195] Cometan says "I had to go forwards in order to go back and progress."

[CQ:196] Cometan says "I would create the perfect Company in the eyes of the one who created me."

[CQ:197] Cometan says "If you plan to do something, you may as well do it to its greatest and vastest extent."

[CQ:198] Cometan says "Do get ahead of yourself in this world for our wildest aspirations are all we are."

[CQ:199] Cometan says "Despite the bright lights and brilliant diversities of the world always remember to return home every once in a while."

[CQ:200] Cometan says "I always had, have and will continue to have the future in my mind."

[CQ:201] Cometan says "I am but a single coin in a chest of billions."

[CQ:202] Cometan says "If you live averagely, then do not be surprised when you are remembered averagely."

[CQ:203] Cometan says "Is he mine or am I his? Is The Philosophy or am I belonging to The Philosophy? I'm not sure anymore."

[CQ:204] Cometan says "I was happy to let my dream own me."

[CQ:205] Cometan says "I never needed the externality to fix my internality."

[CQ:206] Cometan says "More joyful is life if you love thy enemy."

[CQ:207] Cometan says "Wait for the moment they least expect."

[CQ:208] Cometan says "I faded as he flowered and The Philosophy triumphed the world."

[CQ:209] Cometan says "Birthing my dream is a never-ending labour."

[CQ:210] Cometan says "Had I listened to the words of others, I'd have stayed nothing."

[CQ:211] Cometan says "You must first believe your brilliance before you become brilliant."

[CQ:212] Cometan says "Inexperience isn't always ignorance."

[CQ:213] Cometan says "To demotivate is to murder."

[CQ:214] Cometan says "A fool is he who begs of thee the answers to all creation."

[CQ:215] Cometan says "To be insane is to be truly alive."

[CQ:216] Cometan says "I must remind, That time, Will be kind, To thine, And mine, Only if thy, Do not defy, His hand, And the sands, For distorting such, Is very much, A regrettable act, To dispatch, Upon thine pearled, Beautiful world."

[CQ:217] Cometan says "You know of me only what I choose to tell."

[CQ:218] Cometan says "Even Time kneels before the mightiness of Perception."

[CQ:219] Cometan says "It seems to be a human instinct to never learn from our mistakes."

[CQ:220] Cometan says "The passing of Time is the greatest misconception of reparation."

[CQ:221] Cometan says "I often jumped between the worlds of idealism and realism."

[CQ:222] Cometan says "Doubt kills all potential."

[CQ:223] Cometan says "Doubt is my ultimate enemy."

[CQ:224] Cometan says "The day you close your mind to learning is the day you die."

[CQ:225] Cometan says "We must learn about difference for difference to become the normal."

[CQ:226] Cometan says "Asking about the childhood is asking for the truth."

[CQ:227] Cometan says "I cannot and I will not take money from that which I love."

[CQ:228] Cometan says "He gave me the strength to see passed all that is trivial in this world and to focus on that which matters most."

[CQ:229] Cometan says "Acceptance is always progression."

[CQ:230] Cometan says "I would rather live in a world whereby we progress through acceptance than a world of stagnancy due to those who cannot accept change."

[CQ:231] Cometan says "That rare feeling of genuine excitement when your skin tingles, heart beats so fast and stomach summer-salts."

[CQ:232] Cometan says "Wickedness is weakness."

[CQ:233] Cometan says "The insecurity of my insecurities is driving me round the bend."

[CQ:234] Cometan says "Innocence is a lack of knowledge, corruption and understanding."

[CQ:235] Cometan says "Ah, the beautiful echoing of a newborn baby's cry."

[CQ:236] Cometan says "Progress together or do not progress at all."

[CQ:237] Cometan says "Unification is always more progressive than division."

[CQ:238] Cometan says "I'm not mad; I was just made is all."

[CQ:239] Cometan says "Live like lords and ladies with their lantern-lit larders luminously illuminating life's labyrinth."

[CQ:240] Cometan says "Puzzled Peter ponders whilst prepping parsley and parsnips for people Peter poorly held preference."

[CQ:241] Cometan says "At the stroke of midnight as my childhood ended, I prayed and cried in a pool of moonlight to the listener who knows All, for my mission to actualise and thus, my eternal duty begins."

[CQ:242] Cometan says "I will make my mission clear to the world."

[CQ:243] Cometan says "My mission is all I am, will be and want to be."

[CQ:244] Cometan says "He who listens and knows all will always guide me in my passions."

[CQ:245] Cometan says "Think boundlessly. Live boundlessly. And you will be remembered boundlessly."

[CQ:246] Cometan says "In a million years, we'll be thought of as we think of cavemen now."

[CQ:247] Cometan says "From an atom to The Milky Way to The Cosmos itself, the perspectives of size is the greatest thought of immense confounding complexity."

[CQ:248] Cometan says "He who stands by thee at your lowest is he who stands by thee at your highest and he who stands by thee at thy end is he who created thee."

[CQ:249] Cometan says "As soon as we realise our primitivity, the world can progress to true greatness."

[CQ:250] Cometan says "A little patience always goes a long way."

[CQ:251] Cometan says "Jealousy is the root of all evil."

[CQ:252] Cometan says "Contentment is key to inner peace."

[CQ:253] Cometan says "If only one thing I have learnt is that to be the daydreamer is the greatest role of all."

[CQ:254] Cometan says "If you stay in the house long enough, the world becomes a stranger."

[CQ:255] Cometan says "The dreams I have of him and them and The Philosophy are more vivid to me than my family and friends."

[CQ:256] Cometan says "A gift from the Divine is a gift to be cherished forever."

[CQ:257] Cometan says "Why me? I asked myself. Then I thought, Well, why not?"

[CQ:258] Cometan says "There's something oh so terrifying about The End."

[CQ:259] Cometan says "For someone so young, I think an awful lot about mortality."

[CQ:260] Cometan says "I will be remembered and live forever through him."

[CQ:261] Cometan says "Astronism will be my eternal beacon."

[CQ:262] Cometan says "Perhaps the greatest waste of time is getting to know someone."

[CQ:263] Cometan says "The hardest thing was to let Them and The Philosophy go from my complete control."

[CQ:264] Cometan says "My next task entails me officially binding myself to my writings and my mission. I must find a suitable way in which to do so."

[CQ:265] Cometan says "My Grand writings now need to be officially recognised and certified."

[CQ:266] Cometan says "We must explore for if we do not, we are not fulfilling our purpose here."

[CQ:267] Cometan says "If not done by way of The Vision, then it not be done at all."

[CQ:268] Cometan says "My mission shielded me from one kind of trouble and threw me into another."

[CQ:269] Cometan says "Death not only takes, but gives. It makes you realise what is important."

[CQ:270] Cometan says "There's all that we are and all that we wish to be."

[CQ:271] Cometan says "When you build something of greatness, it never comes in the order in which it ends."

[CQ:272] Cometan says "I surrender to my dream."

[CQ:273] Cometan says "Do not fight that which you are."

[CQ:274] Cometan says "Doubt is not within me. It is all around me."

[CQ:275] Cometan says "Choose not what they love, but what you love."

[CQ:276] Cometan says "I need not any external to appease my internal."

[CQ:277] Cometan says "I will die when my job is done."

[CQ:278] Cometan says "When my mission can survive without me, that is when The Divine will come for me."

[CQ:279] Cometan says "My biggest fear is not getting done that which must be done before my short life ends."

[CQ:280] Cometan says "Whatever you think someone feels is most likely the exact opposite."

[CQ:281] Cometan says "My uncurtained window letting through the morning sunlight was my alarm to begin my work."

[CQ:282] Cometan says "I am one with the soil, the sea, the sky, and of course, The Cosmos."

[CQ:283] Cometan says "Intrigued I am by every dot on the big black canvas above us."

[CQ:284] Cometan says "Of same kin we and all creations are."

[CQ:285] Cometan says "Think beyond the time in which one stands."

[CQ:286] Cometan says "There is only one song I will ever write and it will be about the world I do not know."

[CQ:287] Cometan says "Disappointment be not there when one thinks by the will of The Divine."

[CQ:288] Cometan says "All that you say you are, you aren't."

[CQ:289] Cometan says "Value your lows just as highly as your highs."

[CQ:290] Cometan says "Arrogance is blindness."

[CQ:291] Cometan says "Fight not, learn instead."

[CQ:292] Cometan says "The right way and the easiest are two entirely different paths."

[CQ:293] Cometan says "Looking up at the worlds beyond our own will always be my favourite hobby."

[CQ:294] Cometan says "Do nothing and there shall be nothing."

[CQ:295] Cometan says "All but divine is finite."

[CQ:296] Cometan says "Merely a vehicle am I for the creator's creations in this world."

[CQ:297] Cometan says "I must do as I know and feel."

[CQ:298] Cometan says "With change, we must accept."

[CQ:299] Cometan says "If not exhausted at the pillow are you, then you are not doing all you can, should and must."

[CQ:300] Cometan says "I wish not to die in the world in which I was born."

[CQ:301] Cometan says "There are only five texts that I carry on my person often: The Lexicon, The Constitution, The Prince, The Astronist Methodology and The Omnidoxo."

[CQ:302] Cometan says "He and the Gift-giver are the only ones I can truly trust."

[CQ:303] Cometan says "A child be one's greatest test of all."

[CQ:304] Cometan says "Whenever I begin to believe that that must be it of all my ideas, The Divine delivers me another."

[CQ:305] Cometan says "A day without The Philosophy is a day without myself."

[CQ:306] Cometan says "Be, He will, all things to all people, yet it is my mission to show the world my Him for if that is lost in the noise, then the origins of all Him are too lost."

[CQ:307] Cometan says "There shall be no narrowness in Him or in The Philosophy."

[CQ:308] Cometan says "The nature of money is that it comes and goes; it is not a constant like you and I and for that reason, we should not worry when an inconsistent entity does not exist as we wish it to for that is not integral to its nature."

[CQ:309] Cometan says "I wish for Them, He and I to be loved, not feared."

[CQ:310] Cometan says "Do always, without thought of reward."

[CQ:311] Cometan says "To stay angry is to stay stagnant."

[CQ:312] Cometan says "It's a funny thing in this world that one's thought of failure is another's thought of success."

[CQ:313] Cometan says "True and lasting happiness can never be achieved in this world far human nature and the very nature of this life do not allow if so."

[CQ:314] Cometan says "Our only future is the world beyond."

[CQ:315] Cometan says "The expectations of oneself reflect the knowledge and imagination of oneself."

[CQ:316] Cometan says "Accept what be is what be for that's just the way of this world."

[CQ:317] Cometan says "Beyond that which we know is the place of pure answer."

[CQ:318] Cometan says "Until the day I die, I'll be here for all people's of this world and beyond."

[CQ:319] Cometan says "I come from a place of insignificance yet I think beyond with a mind of immensity."

[CQ:320] Cometan says "The gift I bear is of absolute wonderment."

[CQ:321] Cometan says "You could do nothing in life and remain safe and cushioned or you could do and see all and hurt all too and be remembered far beyond one's own singular being."

[CQ:322] Cometan says "Be one of the few who are remembered for doing something good in this wild and wicked world."

[CQ:323] Cometan says "To be jealous is to be as the devil; there is a difference between envy and jealousy."

[CQ:324] Cometan says "Meet not my creator will I for I am but a mere dot among dots within a dot on a black canvas of dots."

[CQ:325] Cometan says "We built a world so noisy that we've begun to miss true magnificence."

[CQ:326] Cometan says "We will never stop having things to know."

[CQ:327] Cometan says "Wouldn't it just be a wondrous thing if our universe within another universe...oh, how insignificant we are."

[CQ:328] Cometan says "Be, He will, what all need him be."

[CQ:329] Cometan says "All we truly have of anything are the memories we make."

[CQ:330] Cometan says "No different from others of my age am I for I feel the pressures of the age in which I live: that of attraction, wealth and popularity."

[CQ:331] Cometan says "To stay atop of these such feats is one brave and endless yet rewardless task indeed."

[CQ:332] Cometan says "Why must we all, including myself, aspire to be all we are not?"

[CQ:333] Cometan says "To not do this without conscious effort would be very hard I imagine."

[CQ:334] Cometan says "I have never felt the urge to do so as I feel defying the inevitable is a progressionless and disappointing merry-go-round of misery."

[CQ:335] Cometan says "If it is part of the human condition to give importance to that which surrounds us, understandable it is so that we do not see the true picture of clarity."

[CQ:336] Cometan says "To unlock the greatest mysteries we must accept that we are nothing and all that we do know is relative to the size of The Earth in the universes."

[CQ:337] Cometan says "Nothing is more dangerous than contentment without progression."

[CQ:338] Cometan says "He is all to all and The Philosophy is all to all."

[CQ:339] Cometan says "This world is all subjectivity."

[CQ:340] Cometan says "To have imagination, is too to have substance."

[CQ:341] Cometan says "Of our world of war, we are ignorant of our insignificance in the universes."

[CQ:342] Cometan says "Think not of those around you for as you do so, your rival takes away your lead."

[CQ:343] Cometan says "Five figurative children, I have, whom I have raised since I was the age of fifteen."

[CQ:344] Cometan says "Never, should you, reveal all the dimensions of yourself."

[CQ:345] Cometan says "When all is done, I will transcend in accordance with The Divine."

[CQ:346] Cometan says "The Philosophy is for all; faith and faithless alike."

[CQ:347] Cometan says "With Him at my side, I will transcend to meet my maker, my gift-giver, the creator of one and all, The Grand Entity of The Divine."

[CQ:348] Cometan says "In this world of division comes The Philosophy to unify all."

[CQ:349] Cometan says "I only wish there were two of me for then all these ideas in my one head could be set free quicker."

[CQ:350] Cometan says "The world needs its hero and that's exactly what Jesse will be."

[CQ:351] Cometan says "I can only say what I saw. You believing it is out of my control."

[CQ:352] Cometan says "The more I reveal, the more questions they will have."

[CQ:353] Cometan says "I will be as honest and open as one can be throughout my life. I have nothing to hide. I am who I am."

[CQ:354] Cometan says "This is my mission; it is all up to me."

[CQ:355] Cometan says "To be a writer is to gouge out one's mind, heart and soul and splatter them across the page for the world to judge."

[CQ:356] Cometan says "Perhaps this world is not ready for what I have to say..."

[CQ:357] Cometan says "We have had heroes here, and now He will be over hero for The Grand Journey."

[CQ:358] Cometan says "Religion is but a book; it is your own self and the decisions you make that form goodness and badness."

[CQ:359] Cometan says "If, it is my destiny, to die tomorrow, then I accept, for One so powerless as I cannot even hope to stop the will of The Divine."

[CQ:360] Cometan says "Divine, if I am soon to die, please just let it be, that I complete my mission first."

[CQ:361] Cometan says "Do not fear death, for it is merely our transcendence to true divinity."

[CQ:362] Cometan says "No matter how horrible, painful and terrifying past events may be, they were meant to happen for a reason and from an origin beyond our comprehension."

[CQ:363] Cometan says "From a naive seed to the forest of vast experience, my envisioned ideas connect what will be."

[CQ:364] Cometan says "I will be what I ought to be for if not, who am I?"

[CQ:365] Cometan says "Let philosophy be the light shining through the cloak of darkness that presently covers the world."

[CQ:366] Cometan says "Astronism is not to be explained so easily as others for its vastness and complexity is a topic of study, not skimming."

[CQ:367] Cometan says "There is a big difference between what one knows, what one believes and the true reality."

[CQ:368] Cometan says "To me, They are as real as you and I."

[CQ:369] Cometan says "Learn to love all and well, all will be."

[CQ:370] Cometan says "Not born royal or rich was I, but with a mind imaginative in all directions."

[CQ:371] Cometan says "The nights are best when bright with the wonderment of the world beyond."

[CQ:372] Cometan says "We all live lives of love and loss."

[CQ:373] Cometan says "The best and worst of writing is that it could always be better."

[CQ:374] Cometan says "Only one true friend have I, but not of this world is He."

[CQ:375] Cometan says "My struggles are my own and my creator is the only other who knows of them."

[CQ:376] Cometan says "One shall become, whenever One wills it so."

[CQ:377] Cometan says "A good deed does not erase a bad in my mind, yet neither does a bad deed erase a good."

[CQ:378] Cometan says "Goodbye my doubts, and good luck in hell."

[CQ:379] Cometan says "Hate not, for the day may come when doing so, will make you feel it forever."

[CQ:380] Cometan says "I do not play by fortuitous means. I plan and prepare and then play my hand."

[CQ:381] Cometan says "To be known for anything, but my mind would be a catastrophic legacy, in my mind."

[CQ:382] Cometan says "To know of All must be so wonderful."

[CQ:383] Cometan says "To imagine is oh so better than to know, yet too, so very inferior."

[CQ:384] Cometan says "If one is born to be great, the only way to know, is by the belief of one's own greatness."

[CQ:385] Cometan says "I'm the worst writer ever. There, I said it before the billions ever could, but now you will all have to think of something else to say, yet all else will be a complement for the worst has already been said, by me."

[CQ:386] Cometan says "To gain, we must first lose."

[CQ:387] Cometan says "Never mistake my surety for arrogance."

[CQ:388] Cometan says "I be merely the vehicle of the idea, never its superior."

[CQ:389] Cometan says "Learned more from my mission have I, than I ever did from any else."

[CQ:390] Cometan says "It is the idea that is special, not I."

[CQ:391] Cometan says "When I'm about to go to sleep, I often wonder, if it is to be, that I shall never awaken."

[CQ:392] Cometan says "Revolution is bloody, yet better still than living in a land of lies."

[CQ:393] Cometan says "There was an enlightenment in my mind, and too now, enlighten the world will I."

[CQ:394] Cometan says "No opinion is ever fact."

[CQ:395] Cometan says "It's funny how a once big problem, can soon seem so insignificant."

[CQ:396] Cometan says "Why must our beauteous world be so cruel?"

[CQ:397] Cometan says "There were the sad times, there were the happy times and then all the time between seems so empty now."

[CQ:398] Cometan says "Plan did I, perhaps too much, yet if not, how can one see where one is heading?"

[CQ:399] Cometan says "I don't think I understand my life and I doubt I ever will."

[CQ:400] Cometan says "The only epitomes of life are loving and learning."

[CQ:401] Cometan says "I need only Them and The Philosophy, no others else."

[CQ:402] Cometan says "I'm proud to be a dreamer for they are the best of us all."

[CQ:403] Cometan says "I shall give myself to the peoples of this world."

[CQ:404] Cometan says "I believe He and They shall play a larger role in the real world than other character brands."

[CQ:405] Cometan says "Some people are there for all our life and others are there for just a moment."

[CQ:406] Cometan says "The best shop is of course a shop of knowledge; a bookshop."

[CQ:407] Cometan says "There's no other shop like a bookshop. No other shop with such depth. No other shop with infinite ideas and possibilities."

[CQ:408] Cometan says "We seem to have forgotten the most important of all lessons most prominently propounded over two thousand years ago and so I will be the one to remind all; we know nothing and we shall be fulfilled in this for by this we understand that there is always something to know which provides us with a knowledge-seeking purpose."

[CQ:409] Cometan says "The keeper of the knowledge is the keeper of the power."

[CQ:410] Cometan says "Nothing, but a dream have I and so very precious it is to me."

[CQ:411] Cometan says "Appreciate the good times because you know the bad are waiting ahead."

[CQ:412] Cometan says "I am Their's and They are mine."

[CQ:413] Cometan says "If you look up towards the stars deeply, you will see and believe as I did and continue to do."

[CQ:414] Cometan says "The world has yet to know..."

[CQ:415] Cometan says "Music is the passport to my world of imagination."

[CQ:416] Cometan says "Deeply stare upward towards the world beyond and imagine every possibility."

[CQ:417] Cometan says "The Cosmos itself is God, for it is alive, it is Grand and it is the origin of all energies."

[CQ:418] Cometan says "I will be the greatest philosopher of all time."

[CQ:419] Cometan says "There's never a reason for you, to not become all that you do dream."

[CQ:420] Cometan says "I truly do love all peoples."

[CQ:421] Cometan says "Oh, but I do, I do owe the world my All, and so, that is what I shall give it."

[CQ:422] Cometan says "I have five best friends, all of whom were born in my mind."

[CQ:423] Cometan says "If angels do exist, then They are my angels."

[CQ:424] Cometan says "I'm in the business of building lives."

[CQ:425] Cometan says "The Philosophy is as One, for All."

[CQ:426] Cometan says "We only talk of what we know, so as to know of little is to talk of little."

[CQ:427] Cometan says "To Be who one is, is the greatest Be of All."

[CQ:428] Cometan says "So as my creator protects me, I shall protect Him, forever."

[CQ:429] Cometan says "Just remember, who you are, and always take that with you, wherever you do go."

[CQ:430] Cometan says "Don't stop along with those around you."

[CQ:431] Cometan says "In all nations, for all peoples."

[CQ:432] Cometan says "I have a thirst for revolution."

[CQ:433] Cometan says "My job is to make people care about things they otherwise wouldn't."

[CQ:434] Cometan says "I shall do all I was destined to do so."

[CQ:435] Cometan says "Your greatest enemies, are those who prevent you from learning all there is to know and more."

[CQ:436] Cometan says "I shall stand when no one else will."

[CQ:437] Cometan says "Make what you wish of Him for He is as much yours as He is mine."

[CQ:438] Cometan says "I shall do my divine duty, for that is my destiny here."

[CQ:439] Cometan says "He is here to show the worlds of The Cosmos the philosophy of the stars."

[CQ:440] Cometan says "Those born with, have a duty to those born without."

[CQ:441] Cometan says "There will always be another person to help."

[CQ:442] Cometan says "No other action provides me with as much fulfilment of faith than when I look up at the stars and wonders of all there is beyond our world."

[CQ:443] Cometan says "He be, not here for I, but for posterity."

[CQ:444] Cometan says "No matter how quixotic, if you believe it to be your destiny, you must see it through."

[CQ:445] Cometan says "Astronism is a champion of freethought."

[CQ:446] Cometan says "One with great successes has had equally great hardships."

[CQ:447] Cometan says "The secret to lasting happiness is being excited for life."

[CQ:448] Cometan says "We leave behind what we do sow."

[CQ:449] Cometan says "We all grow old. Some of us prolong it. Others accelerate it. Nobody can prevent it."

[CQ:450] Cometan says "Be what you know you are without fear of disapproval."

[CQ:451] Cometan says "My dreams are my driving force."

[CQ:452] Cometan says "It is stories that make the world go around."

[CQ:453] Cometan says "I often think of what it shall be like in 3017 and far beyond; the visions of the Humanic Exploration of The Cosmos introduced within The Omnidoxy shall have been long established by this time."

[CQ:454] Cometan says "Knowledge is intangible, so expressed it must be."

[CQ:455] Cometan says "From tsunamis to trickles to tsunamis; that is how my ideas do flow."

[CQ:456] Cometan says "I shall do, as I have been destined so."

[CQ:457] Cometan says "He is the best friend you could ever have."

[CQ:458] Cometan says "I was a nobody with a vision."

[CQ:459] Cometan says "I know how it all will be for I have seen it so."

[CQ:460] Cometan says "The best of us all are the storytellers and the dreamchasers."

[CQ:461] Cometan says "How lucky am I to have five guardian angels with a grand philosophical vision."

[CQ:462] Cometan says "The true sign of naivety is believing we know All there is to know."

[CQ:463] Cometan says "I must question, for if not, how can I evolve?"

[CQ:464] Cometan says "The vision guides you; you do not guide the vision."

[CQ:465] Cometan says "Piety begins at home."

[CQ:466] Cometan says "Let us all unite under the banner of divinity."

[CQ:467] Cometan says "Divinity transcends all."

[CQ:468] Cometan says "I must live to see this through."

[CQ:469] Cometan says "He will be there when I be not."

[CQ:470] Cometan says "I cannot defy God's will for me."

[CQ:471] Cometan says "Whatever does bring you to faith is good and divine."

[CQ:472] Cometan says "I believe in the meanings of things."

[CQ:473] Cometan says "Whether it be Cometan that brings you to faith or another figure, all that matters is that you have belief."

[CQ:474] Cometan says "To believe is so very superior than to not."

[CQ:475] Cometan says "I believe in All the possibilities of The Cosmos because despite everything, I have faith in the vastness, the complexity, and the creativity of The Divine."

[CQ:476] Cometan says "I believe in whatever it is that gives you strong faith."

[CQ:477] Cometan says "We must have faith, for if not, we lose a part of what makes us human."

[CQ:478] Cometan says "Faith is wider than you may realise."

[CQ:479] Cometan says "I see the light in the best of times, so I know what to look for when I'm in the worst of times."

[CQ:480] Cometan says "My faith is stronger than ever, even when the church is not."

[CQ:481] Cometan says "I shall become All that I know I was meant to be."

[CQ:482] Cometan says "I shall bring to philosophy and faith those in whom it has faded and eluded."

[CQ:483] Cometan says "My greatest fear, is that when in the state of judgement, I am shown All that I could have done, had I trusted more."

[CQ:484] Cometan says "I'm afraid of success, yet I must succeed."

[CQ:485] Cometan says "I have been gifted the grace of imagination, and for that, I am eternally grateful."

[CQ:486] Cometan says "You have succeeded even when you think you have failed."

[CQ:487] Cometan says "I kneel by the votive lights, praying to the Mother of All."

[CQ:488] Cometan says "I rush to the church to drown out the noise of this world."

[CQ:489] Cometan says "How does one begin something so monumental?"

[CQ:490] Cometan says "Return to church do I when the ways of this world distort my perceptions."

[CQ:491] Cometan says "In the pews I kneel, thinking of All I know I must do."

[CQ:492] Cometan says "For the greatest of tragedies I am destined to endure, I thank you for gifting them All to me."

[CQ:493] Cometan says "I would suffer All the pains eternally, of this world and beyond, if I could be given the grace to imagine The Philosophy's future, just once more."

[CQ:494] Cometan says "I wish to be the holiest in God's image."

[CQ:495] Cometan says "I must inspire Good Faith."

[CQ:496] Cometan says "While I do still breathe, I learn, for until I reach the state of holiness destined, I know nothing."

[CQ:497] Cometan says "For the worst of times, I thank you. For the best of times, I thank you. For the times of learning, I thank you most. Thank you Lord."

[CQ:498] Cometan says "Of beauteous minds have we; a mind's imagine of what could be."

[CQ:499] Cometan says "I go to the most beauteous church of my city. Not the tallest, not the largest, but the most inspirited one; the one fullest with that which makes a place of faith."

[CQ:500] Cometan says "If not read ten thousand books by my last breath, not read enough have I."

[CQ:501] "Solving the problems of this world may be something I have to let go. I suppose there's a lot I will have to let go."

[CQ:502] Cometan says "I will do All I can for this world and its peoples."

[CQ:503] Cometan says "One's mind is their greatest asset."

[CQ:504] Cometan says "This is the time for me to hone my methodologies for the world to see; to truly make this world better."

[CQ:505] Cometan says "Faith is All we ever truly have."

[CQ:506] Cometan says "How do I become what I know I must be?"

[CQ:507] Cometan says "It be not your beginning; it be not your end; it be All that exists between."

[CQ:508] Cometan says "I cannot let my mission die with me."

[CQ:509] Cometan says "I fear I will not get to do All that I must."

[CQ:510] Cometan says "He be the persona of the peoples."

[CQ:511] Cometan says "Death is in the hands of destiny and how cruel, yet Divine, it be."

[CQ:512] Cometan says "The superior way of learnedness is to teach oneself of the world."

[CQ:513] Cometan says "As long as my heart still beats, there will never not be work to do."

[CQ:514] Cometan says "I have no right to judge you, and all I ask in return, is that you do not judge me."

[CQ:515] Cometan says "If it is destined to be so, then it shall be."

[CQ:516] Cometan says "I must lead my life in the way I believe I must lead it."

[CQ:517] Cometan says "This world is lost, and The Philosophy must save it."

[CQ:518] Cometan says "Thinking back to a time when everything seemed so simple."

[CQ:519] Cometan says "I do not speak because I do work."

[CQ:520] Cometan says "Learning about All that has come before, is the greatest of allies in the fight for the future."

[CQ:521] Cometan says "I'm sick of the vices of this world."

[CQ:522] Cometan says "Philosophers of the past have not done that which need be done, so I suppose it remains up to me to fulfil the inadequacies of those philosophers past."

[CQ:523] Cometan says "Belief is All I have, truly."

[CQ:524] Cometan says "Isn't it odd that the plans of One can change All."

[CQ:525] Cometan says "Behind every war stands those whom seek to gain from it."

[CQ:526] Cometan says "The best artists are the greatest of criers."

[CQ:527] Cometan says "I like songs that spark one's imagination."

[CQ:528] Cometan says "I'm only good at being myself; to those who can be more than who they, I commend."

[CQ:529] Cometan says "Nothing is a constant in our lives; not money, ambitions, people, or anything else, except you; yourself, alone."

[CQ:530] Cometan says "Life is a fast-moving train; we're just passengers aboard changing carriages and waiting for our unique time to disembark."

[CQ:531] Cometan says "If today hasn't been filled with revelation, new ideas, or discoveries, then you must ask yourself why, and make a better tomorrow."

[CQ:532] Cometan says "The more you know about the secrets of the world, the harder it is to enjoy the world."

[CQ:533] Cometan says "I give my life to the world."

[CQ:534] Cometan says "It seems that the worst of things happen to the best of people."

[CQ:535] Cometan says "Often it is our greatest of achievements that receive so very little recognition."

[CQ:536] Cometan says "If one does not know All, one cannot decide which is the right path."

[CQ:537] Cometan says "My philosophy begins with The Cosmos."

[CQ:538] Cometan says "You can do everything, but you can't do everything well."

[CQ:539] Cometan says "All we truly have of days we live are the memories we make of them."

[CQ:540] Cometan says "I shall conquer the worlds of this world."

[CQ:541] Cometan says "London is calling my name and I must listen and direct myself towards this city."

[CQ:542] Cometan says "Sadly, I know not clearly of the subject of physics. Instead, I learn of the complex human nature, the epic mind, The Grand Cosmos, and the unknownness beyond the edge of The Cosmos known as The Universe."

[CQ:543] Cometan says "Stories have always been told, from the very beginning of existence; I'm just carrying on this tradition."

[CQ:544] Cometan says "I keep my dreams close to me for they are mine before they became the world's."

[CQ:545] Cometan says "To create The Philosophy as it does now exist, the youth and the sacrifice of my youth has been necessary."

[CQ:546] Cometan says "To think is wondrous, but to constantly repeat such, is dangerous."

[CQ:547] Cometan says "I must now rewrite what I had written, now under the newfound from; under newfound direction in a way I had not then understood."

[CQ:548] Cometan says "I'm going to have to accept that I must give my life to this."

[CQ:549] Cometan says "Over every obstacle I leap, over every trial I triumph, and over ever bridge I cross to see my vision come true."

[CQ:550] Cometan says "The days are long and the nights are cold, but in the end, I still have my dream."

[CQ:551] Cometan says "The you that you want to be is always opposite to the you that you truly are."

[CQ:552] Cometan says "There are times when I just need to cry."

[CQ:553] Cometan says "Don't become blinded to The Cosmos by the lights of the world."

[CQ:554] Cometan says "Everybody has pain and so, in that, I am no way unique, but it is my role to tell the world of the pains of the people."

[CQ:555] Cometan says "To write well you must both know of the world and the greater message you wish to share with the world beyond that which you write."

[CQ:556] Cometan says "I think it is important to share with the world my artist's journey."

[CQ:557] Cometan says "The most skilled of writing always stems from that which is not so."

[CQ:558] Cometan says "Listen to *Fantasia on a Theme* whilst looking up at a starry night sky and then you will begin to know of cosmical wonderment, of cosmocentric thinking, and you will begin to understand Astronism."

[CQ:559] Cometan says "Without conflict, all we have and all we are is stagnation."

[CQ:560] Cometan says "If you wish to understand Astronism, you must know that all the answers to The Cosmos in The Universe cannot and are not confined to The Earth."

[CQ:561] Cometan says "To filter out those with greater wisdom, look for those whom do not adhere to just one idea."

[CQ:562] Cometan says "I see a shooting star, though I need not make a wish, for The Cosmos knows already what I want for the world and All peoples; for them to see The Cosmos in wonderment as I do."

[CQ:563] Cometan says "Good writing is not shaped solely by words, but by the contexts, feelings, and hardships from which such words originate."

[CQ:564] Cometan says "Many have added to the world, but only a few have truly revolutionised it."

[CQ:565] Cometan says "The further the leap forward, the greater and more abundant the sacrifices."

[CQ:566] Cometan says "The Philosophical Reascension calls for the reconstruction of the paradigm of thought and the entire presence of philosophy in society as well as in our daily lives."

[CQ:567] Cometan says "I am but one young man with a vision to change the world as I see the inadequacies of the world at present."

[CQ:568] Cometan says "One cannot say they have seen or know of God if they have not seen the grandest elements of The Cosmos with their own eyes."

[CQ:569] Cometan says "Fear not for the world for it will survive on; it is the peoples I worry for and their tendencies to destroy themselves, each other, and the worlds in which they reside; this destructive mentality must change if the Humanic Exploration of The Cosmos is to be successful."

[CQ:570] Cometan says "Thank you, I say, to whomever gave me such an ability to imagine."

[CQ:571] Cometan says "One must believe one's greatness before they can transcend to it."

[CQ:572] Cometan says "To step into shoes long since worn is a great task by any means, but to step into shoes never yet worn, well, that is a feat few have dared to embark upon."

[CQ:573] Cometan says "Discard your doubts and assume your ambitions; such a mindset is the only way to enjoy the life we live."

[CQ:574] Cometan says "Bring to the world and to the minds of the peoples that which has been broken or that which has never existed before."

[CQ:575] Cometan says "There is only one thing one can do if one doesn't like the world they see around them."

[CQ:576] Cometan says "I was born into this world and I know and feel that I am here to change it."

[CQ:577] Cometan says "We, as a generation, must think about how we wish to be remembered."

[CQ:578] Cometan says "The cultures and arts of times are reflections of the people whom lived during those times."

[CQ:579] Cometan says "As a generation, we must make our own mark of culture so we are remembered in the way we wish to be."

[CQ:580] Cometan says "The greatest writers can project their message in the fewest of words."

[CQ:581] Cometan says "Become All that you were destined to be and someone somewhere shall thank you."

[CQ:582] Cometan says "You cannot know of the true God until you have witnessed the oblivions of The Cosmos face to face."

[CQ:583] Cometan says "Please World, just let me write in peace."

[CQ:584] Cometan says "I am making my mark on the world one word at a time."

[CQ:585] Cometan says "Those whom give their lives to the world are the best of peoples."

[CQ:586] Cometan says "Do not cry, for I shall return in your memories."

[CQ:587] Cometan says "I fail to accept those whom have double standards of reality and idealism."

[CQ:588] Cometan says "By which deed do you wish to be remembered?"

[CQ:589] Cometan says "I have existed only a short time and I can even tell you to live purely for oneself is never enough and never shall be."

[CQ:590] Cometan says "We fight our whole lives to build and watch how easy it is for such constructions to fall."

[CQ:591] Cometan says "I need not tell the people of the world of things that have already been spoken of; no, I must speak of things that have never been spoken of before."

[CQ:592] Cometan says "If the world chooses not to hear, then I shall just call louder."

[CQ:593] Cometan says "I must speak of that which no one else will."

[CQ:594] Cometan says "Call humanity what it is; an imperfection amongst perfection."

[CQ:595] Cometan says "Those whom say the youth know nothing are those whom know nothing themselves, as proven so by such a notion."

[CQ:596] Cometan says "Dream and dream again for they shall never stop until you make them true."

[CQ:597] Cometan says "Pity the minds that disdain opposition for opposition is the driving force of philosophy."

[CQ:598] Cometan says "We see the unquitarian view of our existence manifested in the fact that we each hold unique entrances into this world and unique exits out of it."

[CQ:599] Cometan says "The world we have created is full of costs and fees, but it costs nothing to gaze upon the stars towards world that has created us."

[CQ:600] Cometan says "Every time I peer up towards The Cosmos, I experience a renewed wonderment as if it was for the first time."

[CQ:601] Cometan says "The value of the written word is measured by the amount of people that read it."

[CQ:602] Cometan says "There are many great written works that have never had the pleasure of being read by more than a few individuals."

[CQ:603] Cometan says "If someone is prepared to talk ill of someone with you then they are also prepared to talk ill of you to someone else."

[CQ:604] Cometan says "Throughout all the tragedies and miracles of humanity's time upon The Earth, the stars have been our one true continuous overseer for although their guardianship of us may have been previously overlooked, the time has now come to for our eyes to grandly see the stars."

[CQ:605] Cometan says "They ask of my surety and the only way I can describe are the visions and premonitions I receive from the gift-giver, oh my oh my."

[CQ:605a] Cometan says "I, myself, do not truly know the origin of this certainty, but all I can say right now, for I do not and cannot know the answers for my morality does not allow, is that there is something within me: its strong and cunning and never-ending."

[CQ:605b] Cometan says "It tells me of my mission; my one and only true purpose; the passion of my person; perhaps one present day the answers will be presented, but due to my faith and belief and nature, I do not think this will be."

[CQ:605c] Cometan says "Alas, worry not will I, for the days will pass and so will mine and as long as I feel satisfied that my mission here is complete, the day the hole is filled with me, the happiest I shall be."

[CQ:606] Cometan says "Mission will mend me, fame will feed me, people will praise me, worlds will welcome me."

[CQ:606a] Cometan says "Friends will forget me, family will forgive me, love will learn me, wealth will worsen me."

[CQ:606b] Cometan says "Time will torment me, principles will discipline me, death will distract me, kindness will kiss me."

[CQ:606c] Cometan says "Wisdom will warn me, faith will fail me, morality will mould me, mistakes will make me."

[CQ:606d] Cometan says "And, in the end, when all one was, one is and one will be becomes as one, I will become as He and All."

[CQ:607] Cometan says "A burning desire, to breathe in, but not to breathe out."

[CQ:607a] Cometan says "Dream and dance, into the hole, of oblivion."

[CQ:607b] Cometan says "Understand all, you will not, so stop."

[CQ:607c] Cometan says "Fun and games, is all this is, in the end."

[CQ:607d] Cometan says "In pride and power, believe not, to pass and progress."

[CQ:607e] Cometan says "And there He goes, falling into nothingness, for eternity."

[CQ:608] Cometan says "To all seeking a good friend; He is here."

[CQ:608a] Cometan says "To all wishing for a dream to come true; He is here."

[CQ:608b] Cometan says "To all waiting for a chance to become; He is here."

[CQ:608c] Cometan says "And always will be; to guide, to care, to love."

[CQ:609] Cometan says "We are what we do most, are we not?"

[CQ:609a] Cometan says "And so, an Imaginer am I for the sun cannot rise, and neither may it set, without my mind imagining all kinds."

[CQ:609b] Cometan says "And so, I am what I am, an Imaginer, and oh so wondrous it is to be, one who can see, a great many things, all day and all night, especially when the sky is astrally illuminated."

[CQ:609c] Cometan says "Forever if that be right, an Imaginer, yes, oh yes, such a wonderment of being, seeing, and knowing."

[CQ:610] Cometan says "I believe in the green old grasses, I believe in the storms and shade, I believe in the God Almighty, for if not, then how, was I and The Beauteous Cosmos so made?"

[CQ:611] Cometan says "It is the nature of the character of philosophers to hold a predisposition of dissatisfaction with the world surrounding them."

[CQ:612] Cometan says "I see no greater pleasure than to contemplate to oneself and to philosophise to others about the most curious of topics."

[CQ:613] Cometan says "We must be the sentience we seek."

[CQ:614] Cometan says "I ask, when will our solitude end?"

[CQ:615] Cometan says "It isn't what you do in this life, it is whether the world sees and recognises what you do."

[CQ:616] Cometan says "I accept that I will never hold the privilege to witness the Neptune sunrise, but I possess strong faith that those whom descend from me will hold the opportunity to fulfil my dreams."

[CQ:617] Cometan says "I live to be known so that I am known to have lived."

[CQ:618] Cometan says "To do something truly great is to be the first to do it."

Glossary of the Omnidoxy

The Glossary of the Omnidoxy provides a list of definitions for one hundred of the most important words found within the Omnidoxy in relation to the founding of the Astronic Tradition and specifically, The Philosophy of Astronism.

1. **Anti-anthropocentrism:** the Astronist rejection of the centrality or importance of humanity in The Cosmos both collectively and individually, the latter of which pertains to the rejection of the centrality of the self.
2. **Astration:** a body of spiritual, physical, and intellectual practices considered by practitioners to be fundamental in achieving corporeal cosmosis.
3. **Astrocentrism:** not to be confused with cosmocentrism (personal reorientation towards The Cosmos), the reorientation of societal institutions towards The Cosmos, namely as a result of the cosmocentricities of individuals.
4. **Astrocism:** the tradition of mysticism within Astronism whose goal is to achieve corporeal cosmosis by locating various astronomical elixirs and by surmounting mysteries regarding The Cosmos.
5. **Astronarianism:** the ideological wing of Astronism that emerged during The Founding of Astronism and as a hallmark of Astronist philosophy and culture and within which the spacist movement originated.
6. **Astronic:** relating to the Astronic tradition and is used as an overarching term to encompass both Astronist and Astronist cultures and thought traditions.
7. **Astronic cosmology:** the cosmological system associated with Astronist beliefs regarding the nature, structure, chronology, and existential functionality of the universe.
8. **Astronic tradition:** the overarching tradition of thought and culture founded by Cometan within which Astronic religions, Astronic philosophy, Astronic ideology, and Astronic mythology reside.
9. **Astronisation:** the conceptual and physical process which the subject undergoes as part of its growing likeness towards Astronist ideals and beliefs.
10. **Astronism:** an organised philosophy teaching that humanity's destiny and existential purpose revolves around the exploration of The Cosmos and that personal union with The Cosmos, both spiritually, intellectually, and physically, is the most important goal.
11. **Astronist ethics:** the system of ethics associated with Astronism and approach to ethics as interpreted by Astronists.

12. **Astronist panentheism:** the Astronist interpretation of the nature of The Divine to be interpenetrative of The Cosmos and The Universe whilst also existing outside of both existences.
13. **Astronomical elixir:** in Astrocism, the belief that there exists a series of physical objects or places in The Cosmos that, upon being reached and understood, will lead to one's achievement of corporeal cosmosis.
14. **Astronomic Revolution:** the social, cultural, religious, and political revolution heralded by The Founding of Astronism disseminating the notion and belief that astronomy, space exploration, and The Cosmos should become central elements of people's lives individually and humanity as a whole for the progression and advancement of human civilisation and to proximate the connection between humanity and The Cosmos on a myriad of levels, both spiritually and intellectually, as well as culturally, technologically, and religiously.
15. **Astrosis:** the principal goal of Astrocism, or Astronic mysticism, to become enknnowledged of astronomical mysteries both through space exploration and through on-Earth cosmic devotion, Cosmic Awareness, and corporeal cosmosis.
16. **Astrosa:** the worldwide community of Astronists as considered to be a collectivity of like-minded individuals.
17. **Cometanism:** the branch or denomination of Astronism that is associated with the specific beliefs of its founder, Cometan, and his approach to Astronism which is distinguished from Institutional Astronism, the form of Astronism associated with what is espoused by The Institution of The Philosophy of Astronism.
18. **Conceptual elasticity:** the ability for Astronism to return and to retain its belief system even if some centre concepts are taking out or are disbelieved.
19. **Contributionism:** a transcensionist belief orientation holding that the achievement of transcension is only completable through contributions to society and that individual contributions to the collective should be the goal of people's lives.
20. **Corporeal cosmosis:** the belief in Astrocism, or Astronist mysticism, that one's achievement of cosmosis is possible while they are still alive in addition to when they have passed away which is known as post-corporeal cosmosis, or just simply known as cosmosis.
21. **Cosmicality:** a particular conception of The Cosmos, often applied as an instrument of study.

22. **Cosmic Awareness:** humanity's collective relationship with The Cosmos as a whole considered according to the fluctuating extent to which humanity is devoted to and religiously focused on astronomical progeny and phenomena as the principal sign of humanity's awareness.
23. **Cosmic devotion:** a set of practices and associated beliefs considered to proximate oneself to The Cosmos and improve one's personal relationship with The Cosmos with the intention of achieving transcension and corporeal cosmosis.
24. **Cosmic philosophy:** a branch of philosophy originating from within the Astronic tradition through The Founding of Astronism and deals with the study of the nature, ontology, forms, functions, structures, epistemologies, aesthetics, logic and metaphysics of The Cosmos as a whole or towards particular cosmic progeny and phenomena. Cosmic philosophy also encompasses the contemplation of space exploration in all aspects, particularly space ethics which is a branch of ethics founded by cosmic philosophy.
25. **Cosmocentrism:** the singular defining belief of Astronism and the worldview of the entire Astronic tradition in which The Cosmos is considered to be the only empirically real entity to provide existential purpose to humanity. Cosmocentricity involves placing The Cosmos at the centre of individual and societal spiritual, intellectual, economic and practical life. Cosmocentrism can be contrasted with other worldviews placing a focus on a particular entity or concept such as theocentrism, anthropocentrism, technocentrism, geocentrism, and others.
26. **Cosmodora:** an elaborate poem about cosmic progeny and phenomena that implicitly states Astronist beliefs and is a hallmark of cosmic philosophy, often used in non-academic circumstances to teach of the Astronist view of The Cosmos and its functions.
27. **Cosmomancy:** a divination system finding its origins within Astronism that is centred on the belief that The Cosmos can be invoked and interpreted so as to attain knowledge of the future and the unknown through practicing a series of divination techniques.
28. **Cosmos-Chaos Dichotomy:** the appellation for the dichotomy between The Cosmos and The Chaos from the Astronic cosmology, the former of which represents order, limitation, knownness, system and structure which the latter is the antithesis representing disorder, potential limitlessness, unknownness, and sporadic nature.
29. **Cosmosis:** referred to as "becoming One with The Cosmos", one of the central beliefs of Astronism stating that physical, spiritual, and intellectual union with the animate and whole entity known as The Cosmos is not only possible, but should be desirable as part of our existential purpose to progress and advance. It is considered to be achieved by all existential beings and entities as part of the cessation of their individual existences, such as the death of a human, which is known as post-corporeal cosmosis.

The other form, which is known as corporeal cosmosis, forms the basis of the tradition of mysticism within Astronism known as Astroicism wherein it is believed that cosmosis is achievable during one's life through transcension, cosmic devotion, space exploration, and enknowledgement.

30. **Creation theory:** a significant discipline of study of Astronic philosophy dealing with and discussing the various approaches and beliefs regarding the creation of The Cosmos and The Universe, and their interactions with one another thereafter. It is contrasted with finality theory.
31. **Definitionalism:** a form of writing present throughout the Omnidoxy characterised by its explanation of concepts and beliefs and various other elements of Astronism through a plethora of definitions rather than rhapsodic or poetical musings.
32. **Depadotheism:** also referred to as depadism, the form of theism originating from Astronic philosophy holding that God, or The Divine, has a merciless, non-empathic, and neutral nature that is completely removed and devoid of all human attributed emotions. Depadotheistic views of God are considered to be pure and without human applied attributes as a reflection of ourselves which is considered to be the basis of many non-Astronic theologies and to which depadotheism is opposed.
33. **Discipline of study:** a subject within the Astronic tradition of thought and culture systemised and provided with a title and within which subdisciplines reside.
34. **Discourse:** the secondary textual structure of the Omnidoxy after disquisitions comprised of a series of insentensations and of which there exists a variety of types either according to length or content or positioning within the disquisition.
35. **Disquisition:** the primary textual structure of the Omnidoxy within which a myriad of discourses reside. There are twelve disquisition comprising the Omnidoxy which hold a great variance in their lengths, subjects, and in the dominant forms of writing used within them.
36. **Divinology:** the discipline of study of Astronic philosophy dealing with the nature, ontology, existentiality, and other aspects of The Divine as the Astronist conception of God. A divinology is a specific conception or interpretation of The Divine, of which there are many, often in relation to traditional forms of theology.
37. **Enknowledgement:** a central practice of Astronism involving the importance of the acquisition of knowledge as the utmost priority for the subsequent achievement of transcension and corporeal cosmosis, and the improvement of a person's ability to philosophise.
38. **Ephemerality:** the eschatological belief of Astronism holding that cosmic nature, from which human nature is derived, is naturally and intrinsically impermanent and

transient therefore instances such as death are considered to be a natural part of cosmic existence and existential cessation without any form of afterlife due to one's completion of cosmosis.

39. **Extollation:** the tradition and process of the recognition of relevant people and their works and life stories within Astronism. Unlike in the Christian form of recognition known as canonisation, extollation can be designated to a person who is still alive and does not involve any notions of intercessory powers or connections to supernatural phenomena (that form of recognition is known as celestification). Instead, to be extolled means to have lived a life according to contributionism in which a person has contributed to the world in their own unique way according to their abilities and ambitions. Candidates for extollation are often confined to being inventors, astronomers, cosmologists, philosophers, writers, astronauts, and explorers.
40. **Finality theory:** the discipline of study of Astronic philosophy dealing with and discussing the various approaches and beliefs either regarding the end of the existence of The Cosmos and the events involved, or the proposed end of existence entirely, often referred to as Universal cessation which is itself, as a belief, rejected by the Astronic cosmology due to infinite nature of The Universe.
41. **Forms of Astronism:** the myriad of ways in which Astronism has and will continue to develop as an organised philosophy through the three principal forms of philosophical, theoretical, and practical. The study of the forms of Astronism also considers the various levels of orthodoxy within Astronism in addition to syncretism. The forms of Astronism remains an important system form labelling and categorising the various different manifestations of Astronism.
42. **Inclusive discipline:** a series of disciplines of study within Astronism collected together to form an inclusive discipline either due to their shared theme or according to their shared place of introduction or address within the Omnidoxy. Each disquisition of the Omnidoxy is assigned with an inclusive discipline hence there exists only twelve disciplines. Disciplines of study categorised within an inclusive discipline are known as inclusivised disciplines while those which are not are referred to as disinclusivised disciplines.
43. **Insentence:** the unique writing system used to organise the Omnidoxy characterised by the paragraphing of each sentence which are then indexed. Such sentences are then referred to as insentensations.
44. **Institutional Astronism:** the principal and authoritative form of Astronism espoused by The Institution of The Philosophy of Astronism and may also be referred to as Orthodox Astronism, or the Astronist Tradition.
45. **Instrument of study:** a type of conceptual characterised by its measurement of a subject to which it is applied. There exists a large body of instruments of study and

they make up a significant portion of philosophical inquiry. The collective study of instruments of theory is referred to as instrument theory which typically involves the comparison between different instruments.

46. **Intracoscism:** a belief orientation categorised as one of The Seven Tenets of Association and considered to be a form of cosmocentrism maintaining that questions regarding human existentiality are answerable through the exploration and enknowledge of The Cosmos as opposed to extracosmical concepts such as God.
47. **Humanic Exploration of The Cosmos:** the entire process and event of space exploration as considered to be inspired and fuelled by religious, intellectual, cultural, and destinal motivations in addition to the already established economic, technological, and financial motivations.
48. **Hyperdiscourse:** a type of discourse of the Omnidoxy characterised as being more than one hundred insentensations in total length.
49. **Limitationism:** also referred to as the Cosmic Limitation Principle, or the Principle of Cosmic Limitation, a central belief regarding the nature of cosmic existence holding that The Cosmos and all within that holds a cosmic nature is limited by that nature, is transient, and fundamentally finite. Limitationism informs the entire Astronist metaphysical and physical understanding of existence and by extension of its principles, denies the existence of a soul, especially a permanent spirit, denies the existence of an afterlife, and also postulates that all existence within The Cosmos cannot exist outside or exit The Cosmos which is a process known as transcosmisation.
50. **Manumissionism:** the Astronist theological orientation predicated upon the notion that freedom rather than submission should be central to one's beliefs. Manumissionism is contrasted with submissionism.
51. **Microdiscourse:** a type of discourse of the Omnidoxy categorised as being ten or fewer insentensations in total length and is therefore the shortest of all discourse types.
52. **Megadiscourse:** a type of discourse of the Omnidoxy categorised as having more than one thousand insentensations. It is the longest and most rare of all the discourse types.
53. **Motionalism:** the metaphilosophical and metareligious notion that a religion or a philosophy (or organised philosophy) can be structured on progression, the development of ideas, the addition of knowledge from scientific discovery, and the general principle that a belief system should serve and be moulded by the society and its needs in the present time and due to which the belief system should continually reshape itself to remain relevant in. Motionalism represents the fundamental structure, nature, and identity of Astronism as an organised philosophy.

54. **Multifaricity:** the state, fact, and nature of Astronism to be comprised of a number of different names and forms of reference.
55. **Naturalism:** one of the four principal schools of Astronist eschatology denying the existence of any form of supernaturalism and holds that nature, both terrestrial and cosmic, provides the answers to human existentiality. It advocates for the notion that humans are simply a product of nature without any divinely ascribed significance in The Cosmos. Other hallmarks of naturalistic eschatology are the denial of an afterlife, the denial of the existence of the soul, and the denial of the direct interaction between humans and The Divine (God).
56. **New Concept Development:** often abbreviated to NCD, the department within The Institution of The Philosophy of Astronism dedicated to receiving, reviewing, and officialising new beliefs, terms, and conceptals to become part of Astronism. Such decisions are made by a council of scholars and Institutional leaders. Unlike in other religions and philosophies, any person can submit their conceptual proposal which is derived from the Diversity of Thought policy of The Institution.
57. **Omnicreativity:** one of the Attributes of Divinity pertaining to The Divine's property and unique existential ability to have infinitely sustained an uncreated Universe and the infinite abundance of the isolated cosmoses that reside within The Universe and form The Omniverse.
58. **Omnidoxicology:** the discipline of study dealing with the exegesis, organisation, comparison, and criticism of the Omnidoxy; an expert in which is known as an omnidoxicologist. Less formal forms of study are referred to as omnidoxical studies or omnidoxy studies.
59. **Organised philosophy:** the technical designation of Astronism considered to be a synthesis of a religion and a philosophy.
60. **Pardiscourse:** a type of discourse of the Omnidoxy categorised as being between eleven and one-hundred insentensations in total length. Pardiscourses are longer than microdiscourses, yet remain shorter than both hyperdiscourses and megadiscourses.
61. **Personal inspiration:** the form of non-theistic revelation which Cometan is considered to have first experienced during his adolescence in which an intensive series of ideas overcome to the receiver regarding a range of subjects known as an indrucy.
62. **Phenomena:** one of two types of physical astronomical objects characterised as being an event rather than a semi-permanent entity. Examples of phenomena are supernovae and eclipses. Phenomena are contrasted with progeny, the other type of physical astronomical object.

63. **Philosophical Spirit:** a set of principle considered to be inherent of philosophic behaviour and values to which Astronists are bound and which are considered to be primary characteristics forming the identity of Astronism as an organised philosophy, or a synthesis of philosophy and religion.
64. **Poeticism:** one of three omnidoxyal writing styles in which Cometan took a metaphorical and distinctly poetic approach to discourse writing and is mostly commonly found in the Monodoxy.
65. **Progeny:** one of two types of physical astronomical objects characterised as a semi-permanent entity such as planets, stars, galaxies, and filaments. Progeny is the collective term for all these astronomical objects of this nature and are contrasted with phenomena which are astronomical events like supernovae and eclipses.
66. **Promulgation:** not to be confused with tirition, the form of the dissemination of Astronism through modern means of advertising and marketing. Essentially, the functions and methodologies propelling the commercialisation of Astronism.
67. **Reascensionism:** a central belief of Astronism calling for the reascension of philosophy as a once firmly engrained pillar of society that is believed to have been undermined as a social and cultural driver by its professionalisation. The reascensionist movement heralds the re-emergence of philosophy to become a central part of people's lives.
68. **Reinvigorationism:** the belief that space exploration and a general mass interest in astronomy and humanity's interaction with space must be re-emphasised as part of the Astronomic Revolution.
69. **Retronism:** any form of artistic expression or commemoration of pre-Cometan forms of cosmocentric thinking, particularly instances of which are known as retrons. Examples of retronism include artistic expressions of the first decade of the space age, or of pre-Cometan instances of space exploration having transcended to the mainstream cultural vernacular, such as the 1969 moon landing.
70. **Rhapsodicism:** one of the writing styles of the Omnidoxy and arguably the most numerous and is characterised by its distinct insensibility when it comes to the explanation and exploration of deeply complex philosophical concepts.
71. **Rubral:** the name for the title that is ascribed to each discourse in the Omnidoxy.
72. **Sentientism:** a belief orientation holding that there exists an abundance of all forms of life in The Cosmos, both sentient and non-sentient. It is categorised as one of The Seven Tenets of Association and is therefore central to Astronist beliefs.
73. **Space ethics:** also referred to as astroethics, the branch of ethics categorised within cosmic philosophy and derived from Astronist ethics. Space ethics considers and

explores a myriad of questions regarding the ethicality of human interaction in space and with extraterrestrial progeny and phenomena, namely as part of space exploration.

74. **Spacism:** the principal form and branch of Astronarianism maintaining an ideology fixated on space exploration. The spacist movement advocates for the political and economic emphasis on human exploration of space. It encompasses a vast array of concepts, rationalities and methods inspired by Astronist beliefs for the practical exploration of space. Spacism can be considered as Astronism's primary endeavour into the political realm as a practical function for the initiation of the Humanic Exploration of The Cosmos.
75. **Subdiscipline of study:** a discipline of study categorised within a wider discipline of study.
76. **Subordinationism:** the Astronist cosmological belief holding that all that exists cosmically does so in subordination to all that exists universally and divinely. Principally, it holds that all existence is subordinate to The Divine either as its creator (in the case of cosmic nature), or its sustainer (in the case of universal nature).
77. **Subsentensation:** a type of insentensation that is found as a subset of an insentensation. Each is indexed by the use of alphabetised letters placed after the insentensation number.
78. **Surceasion:** a break in a discourse characterised by the placement of a hyphen between two insentensations either to denote a change of topic or to denote a discourse extension.
79. **The Betwixity:** one of the lesser existences of the Astronic cosmology collectively pertaining to all space that exists between cosmic progeny and phenomena in The Cosmos.
80. **The Chaos:** the antithesis of The Cosmos and classified as one of the three lesser existences. The collective term for all instances of disorder, irregularity, volatility, and unknownness present in The Cosmos. The true extent of The Chaos is not considered to be derivable due to its unknown nature. It is considered that The Chaos holds the ability to transcosome, or travel between cosmoses in The Universe. The Chaos is not itself a physical entity, but instead a collectivity of entities that are considered to hold chaotic natures.
81. **The Compilation:** the appellation for the idea and instance in which Cometan had the idea to compile The Astronist Methodology and other pre-omnidoxical works fit within The Grand Centrality instead of them existing as separate publications. Two orientations are formed in relation to this and closely related topics include

compilationism and non-compilationism, especially by opening up discussions regarding the consequences of the proximation of Astronism with Astronarianism.

82. **The Cosmos:** referred to as the universe in mainstream terminology, the realm of existence in which humanity, all the galaxies and the space originating from The Big Bang reside. The Cosmos, or cosmic nature, is considered to be limited and transient and it is outside The Cosmos that the infinite and permanent Universe exists. It is postulated that there exists an infinite amount of cosmoses in The Universe which, when considered collectively, is known as The Omniverse. The Cosmos, in contrast with The Chaos, represents order, pattern, structure, and substance which are hallmarks of cosmic nature.
83. **The Divine:** the depadotheistic and panentheistic conception of God in Astronism which is classified as a realm of existence to which The Universe and The Cosmos are subordinate. The Divine is considered to not have created The Universe but is a sustainer of it due to the infinite nature of The Universe. The Divine is considered to be the creator of every Cosmos in The Universe.
84. **Theistic naturalism:** the most prominent theological position in Astronism and the theological approach undertaken by Institutional Astronism denying the existence of an afterlife, denying the interactionality between humanity and The Divine (God), yet affirming the existence, interpenetrativity, omn creativity, and the Attributes of God nonetheless.
85. **The Metagalaxy:** one of the existences of the Astronic cosmology pertaining to the spaces, progeny, and phenomena in The Cosmos beyond the bounds of individual galaxies, namely regarding philosophical contemplations of filaments, superclusters, hyperclusters, quasars, and other cosmical superstructures.
86. **The Metakosmia:** one of the subservient existences of the Astronic cosmology pertaining to the area or state of existence along the cosmic periphery beyond which The Universe begins. Reaching The Metakosmia is considered to be impossible for any cosmic entity or being. The Metakosmia is the point at which any cosmos ends and where The Universe therein begins.
87. **The Mytra:** categorised as one of the three lesser existences of the Astronic cosmology pertaining to a person's individual, unique, and consequential relationship with The Cosmos and involves physical, emotional, spiritual, mental, and intellectual dimensions. The state of a person's mytra is considered to be instrumental to the extent to which that person has achieved cosmosis.
88. **The Omniverse:** one of the realms of existence categorised as a subservient existences of the Astronic cosmology collectively relating to the infinite amount of cosmoses considered to exist within The Universe due to its infinite nature. It is important to note that each cosmos in The Universe is considered limited and transient while both

the frequency and abundance of cosmoses in The Universe infinite. This is because cosmoses are subject to Universal laws while all that exists within cosmoses are subject to Cosmic laws.

89. **The Seven Tenets of Association:** the seven central beliefs and principles forming the foundations of Astronist thought namely including sentientism, the Humanic Exploration of The Cosmos, and intracosmism. The Seven Tenets of Association only encompass a fraction of the plethora of beliefs associated with Astronism, however, they serve a foundational purpose and introduce the general theme of the organised philosophy.
90. **The Universe:** the realm of existence beyond The Cosmos and every other of the infinite amount of cosmoses existing within The Universe. It is beyond the periphery of every Cosmos that The Universe is considered to exist. Universal nature is fundamentally divergent from cosmic nature in that it remains an infinite and permanent.
91. **Tirition:** the process of the means by which Astronism is spread through non-commercial and non-advertising means (see promulgation). Tirition can be considered the equivalent of religious missionary work with a distinctly philosophic identity.
92. **Transcension:** the notion that humanity's exploration of space will lead to advancements in our physical, mental, spiritual, and intellectual abilities and knowledges and that space exploration for the purpose of transcending is humanity's existential purpose.
93. **Transcensionism:** the belief orientation derived from the notion of transcension and an Astronist eschatological school holding that it is humanity's existential purpose and destiny to explore space and that without humanity's commitment to its advancement towards space, that humanity will not achieve improvements in our knowledge, spirituality, intellectuality, physicality, and mentality. Essentially, transcensionism is predicated upon the notion that the endeavour of space exploration provides humanity with existential purpose without the need for the involvement of a God or the afterlife. Important to transcensionism is both corporeal cosmosis and contributionism.
94. **Transtellationism:** a major Astronist eschatological school encompassing a wide variety of beliefs and concepts involving some supernatural element and is therefore distinguished from the other Astronist eschatological schools. Transtellationism is the most broad of all the schools in terms of the variety of beliefs within it, the most prominent of which is transtellationism itself which notionises that upon our corporeal deaths our souls transmigrate either to The Cosmos as a whole, usually referred to as "the stars", or to a particular cosmic progeny or phenomena.

95. **Triadism:** a major Astronist cosmological belief regarding the nature of The Universe predicated upon three essential notions, the first of which is uncreatedness of The Universe, the second of which is the divine sustainment of The Universe, and the third of which is divine omnificativity which, when considered together, create the triadic formulation.
96. **Uncreatedness:** the Astronist cosmological belief holding that due to the infinite nature of The Universe, it couldn't have been created which would automatically deny its infinite nature; this is known as the problem of the createdness of The Universe. As a reaction to this, uncreatedness states that The Universe was not created by The Divine, but has instead always existed, but is nonetheless sustained by The Divine and is dependent upon The Divine for its continued existence, thus still adhering to the belief of subordinationism.
97. **Unique Way:** the Astronist response to the Buddhist doctrine of the Middle Way holding that unique combination of indulgence, moderation, and asceticism will be sought after and implemented by every single individual due to their uniqueness rather than a "one size fits all" doctrine in which the masses are ascribed with a set of general principles for them to form in uniformity.
98. **Uniquitarianism:** the central ontological position of Astronism holding that all sentient beings hold a state of consciousness and mentality known as unicity which is intrinsically linked to their destiny. Essentially, the nature of being in Astronism is therefore entirely considered through this understanding of unicity. Uniquitarianism first originated as the Astronist response to complementarianism and egalitarianism from which it developed to become the primary ontological position of Astronism.
99. **Universality:** an instrument of study pertaining to a particular conception of The Universe, its nature, its ontology, its existentiality, and its interactionality with other realms of existence in the Astronic cosmology.
100. **Vendox:** the most well-known symbol of Astronism. A vendox symbol is characterised by the depiction of a blank book in the centre of two strips almost circularly encompassing it entirely which then extend upwards vertically and between which six stars are often depicted.

Omnidoxical Register

Astronology

The overarching discipline of study of the Astronic tradition of philosophy, religion, ideology, mythology, and culture.

Forms of philosophy

Arrayal philosophy

philosophical investigations conducted in a group rather than individually.

Contental philosophy

a group of three connected philosophies that explore the contemplations of planets, particularly their differences in formation, character, and structure, with the group consisting of terrestrialism, gasism, and alternatism.

Equational philosophy

the expressions of philosophical instruments of study by strictly numerical and algebraic means, especially in the process of balancing an equation to derive inferences.

Experimental philosophy

philosophical approaches that involve the experimentation of the concept proposed in addition to its actual proposition.

Haptic philosophy

a type of philosophical investigation, and experience directed by the sense of touch and stands in close correspondence to Sensory Philosophy.

Organised philosophy

a philosophy in which its concepts, theories, and cosmologies are structured and established according to an applied schema, or the goal of which is unified under one governing entity, either a company, or government, or some other organisation.

Practical philosophy

a major discipline of study examining and reflecting on philosophical practices and devotions in order to understand the philosophy that is enacted in such practices, as well as considering the physical manifestations of The Philosophy of Astronism, one of the most prominent discipline categorised within practical philosophy is tiritology.

Sensory philosophy

a method of philosophical understanding manifested by a system of approaches based upon the five senses available to humans sound, vision, touch, taste, and smell as demonstrated by the practices of orchestration, visionation, contigation, tastation, and aromation respectively.

Spiritual philosophy

an approach to philosophical enquiry that is distinctly based upon notions of the supernatural, the spiritual, or that which is unproven, abstract, or illogical.

Disinclusivised Disciplines

Abiology

the study of all the inorganic and inanimate things of The Cosmos, such as the planets, the asteroids etc. in contrast to the study of the organic and animate entities of The Cosmos.

Acyrology

the discipline of study dealing with the misuse of Astronist terms and the consequences.

Aetiology

the establishment of a causation, origination, or reason for a philosophical concept, or a cosmical event, or phenomena.

Agathology

the philosophical study of being good or conveying goodness, and questioning what forms goodness, what it means to be good, and the distortion of goodness and its connection to truth.

Agriology

the philosophical study of primitivity.

Agrology

the science and art of agriculture, and its philosophical concepts and theories.

Agrotechnology

the application of technologies to agriculture, especially on another planet other than The Earth.

Alethiology

the philosophical study of the nature and concept of truth.

Alimentology

the philosophical study of nutrition physically, mentally, and philosophically and the concepts and theories that follow.

Anthrozoology

the study of the interactions between humans and animals, especially on another planet than The Earth.

Aphnology

the philosophical study of wealth, and the concepts and theories involved with that.

Archology

the philosophical study of the governance of something, and the concepts and theories involved.

Aretaics / Aretology

the philosophical study and contemplation of virtue.

Aristology

the study of cooking and dining, and the culture surrounding, especially on a different planet.

Autology

the philosophical study of oneself, and the surrounding concepts and theories.

Auxology

the philosophical study of growth physically, mentally, emotionally, and philosophically, and the surrounding concepts and theories.

Axiology

the philosophical study of value, and the surrounding concepts and theories.

Battology

the repetition of the same ideas, especially for pedagogic effect.

Bromatology

the study of food, and the surrounding philosophical concepts and theories.

Causology

the concepts of causation, as well as cause and consequence in The Cosmos, and cosmogony from a philosophical viewpoint.

Centralitology

the specific study and discussion of the words, interpretations, and subsequent philosophical schools, denominations, branches, wings, and sampanas derived from The Grand Centrality of The Philosophy of Astronism.

Centrology

the study of the centre something either physically or abstractly including contemplation of its relevance, and the true accuracy of claims made about the centre of entities or concepts.

Chresmology

similar to prophecies yet not as specific, the philosophical study of prophecies, and the surrounding concepts and theories.

CivicoLOGY

the study and application of architectural, town planning, and city planning theory, as well as the illustration of such theories in townscape, and cityscape drawings.

Civilisation Planning

the planning, organisation, and establishment of civilisations of all different types on any celestial body or world beyond The Earth.

Clonology

the study and philosophical understanding of cloning and clones, and the concepts and theories involved.

Cognitology

the philosophical study of both the mind and behaviour and their interactions.

Committology

the study of Astronist committees in government and their administrative roles.

Comparology

the major discipline of study dealing with the comparisons between Astronist philosophies and cosmologies and non-Astronist or pre-Astronist philosophies and cosmologies.

Criteriology

both the philosophical establishment of criteria when dealing with logic, and the study of how philosophical conclusions can be made by a structured criteria.

Defectology

often split into religious defectology or philosophical defectology, the study of the flaws or illogical aspects of a religion, a philosophy or an ideology when applied to the principles of logic and rationality.

Demology

the philosophical study of state and planet populations, as well as population activities, social conditions, and behaviours across a wide range of societal and civilisational scenarios.

Dittology

a twofold interpretation of an Astronist text, especially a philosophical text.

Divinology

the study and philosophical discussion of the nature of The Divine, and what it may mean from a human perspective to be godly, and the subsequent consequences of this role in The Universe, and may also discuss the concept of The Universe itself being god.

Apophatics

an approach to the study, perception, and understanding of that which is known as The Divine in the Astronist Cosmology that is characterised by attempting to notionise that which The Divine is not, rather than that which The Divine is, which is known as cataphatics.

Cataphatics

an approach to the study, perception, and understanding of that which is known as The Divine in the Astronist Cosmology that is characterised by attempting to notionise that which The Divine is, rather than that which The Divine is not, which is known as apophatics.

Divergetology

manifested by the concept appellated as The Divergency of Existence, the study and philosophical discussion of the theorised dimension in which everything that exists has its own unique origination, thus disregarding the homogeneity in origin from The Universe's beginning.

Dogmatology

not to be confused with comparology, the scholarly study of the comparison between The Philosophy of Astronism and another philosophy, or a religion.

Domology

the identification, categorisation, and contemplation of the fundamental principles and laws of The Cosmos and the ways in which it works.

Dysteleology

the philosophical study of the stance holding that existence has no final cause from purposeful design.

Economethodology

the study of the methods used in the establishment of a state's economy, and typically relates to an Astronist economic methodology.

Edgitology

the study of mental imageries and their philosophical, emotional, and spiritual consequences.

Entreprenology

the study of entrepreneurship, especially in the creation of an Astronist related business.

Ergology

the philosophical study of work, and the subsequent concepts and theories involved.

Ethnomethodology

the study of the methods used for the establishment of a particular social order, typically relating to an Astronist Methodology of social structure.

Etiology (Aetiology)

the discipline of study dealing with the investigation or attribution of the cause or reason for something.

Feminology

the representations, interpretations and depictions of female Astronist characters in all forms of Astronist works.

Festology

the study primarily of starlight festivals, but may be broadened to include the study of all other Astronist events.

General Cosmical Principles

the general principles of the exploration of The Cosmos and of life in The Cosmos on another planet, celestial body, space station, or spaceship, and greatly contributes to the overall Cosmic Philosophy.

Gerontology

the study of the social, psychological, philosophical, cognitive, spiritual, and biological affects and aspects of ageing.

Hemerology

the study of Astronist calendars, and their philosophical, symbolical, and financial aspects.

Henology

the philosophical study and discussion of that which is known "The One", or more broadly, oneness in Astronist Philosophy.

Hodology

the philosophical study of interconnected ideas from any other philosophical discipline.

Humanic Law

the laws of human interaction with non-human sentient beings.

Hygiology

the philosophical study of the preservation of health, especially in Astronist Philosophy.

Idiophilosophy

the study of the ways in which a particular philosophy, or philosophy in general, has had an impact on one's own personal mentality.

Inaugurology

a major discipline of study addressing the methodology of how an idea, a school of thought, or an entire philosophy is to be conveyed to an individual that is completely unaware of it beforehand, and involves concepts from education methodology

and pedagogy and was first outlined in the document known as *The Appendadoxy: Inaugurological Astronism*, and is closely associated with the practices and philosophies involved with cosmechism.

Intercivilisation

the study of the relationships between one civilisation and another, especially in spacial civilisations and colonies.

Interplanetary Commerce

the commerce between two or more planetary governments.

Interplanetary Consumer Protection

the bilateral consumer protection laws between two or more planetary governments.

Interplanetary Law

the overall laws between two or more planetary governments and includes all other aspects of interplanetary law.

Interplanetary Leadership

the overarching leadership between two or more planetary bodies, usually in the form of an interplanetary governmental organisation.

Interplanetary Plant Sciences

the comparisons between plant life and development between two different planets.

Interplanetary Policing

police conduct, policy, and interaction between two planets and two planetary governments.

Interplanetary Politics

the bilateral politics between two or more planetary bodies and their governments.

Interplanetary Prison

the policies relating to imprisonments between two or more planetary bodies and governments and their bilateral understandings of the incarcerations of a planetary citizen on a different planet.

Interplanetary Public Policy

public policy between two or more planetary governments and their mutual understandings with regard to public policy.

Interplanetary Public Sector

the comparison between the control of an economy by the states of two different planetary bodies.

Interplanetary Sciences

the comparison of scientific studies between two or more planets.

Interplanetary Taxation

the bilateral agreements between two planetary governments on the taxation of goods and services that the two governments in some way.

Interplanetary Telecommunications

the communications between two different planets.

Interplanetary Transportation

aspects of law and conduct in the transportations of people, traded goods, or other cargo between two or more planets, and may involve the study of bilateral agreements made between the governments of those planets.

Interspaciology

a discipline of study focusing on universal spacial significance or applicability, and is especially associated with subjects of a business, cultural, industrial, commercial, physical, medicinal, or educational nature.

Irenology

the philosophical study of peace, its attainment, and its interactions with humanity and humanity's inherent nature.

Maleology

the study of the representations, interpretations and depictions of male Astronist characters in all forms of Astronist works.

Astronist Deontology

the nature of duty and obligation from an Astronist ethical, moral, and philosophical standpoint.

Astronist Onomatology

the study, categorisation, creation, registration, as well as the origin, meaning, history, demographic usage of Astronist stylised names.

Astronist Ontology

the discipline of study primarily concerned with the Astronist approach to the nature of being by incorporating the Astronist Cosmology, as well as addressing and comparing non-Astronist approaches to ontological issues with the Astronist view.

Astronist Theology

the collective theological references and interpretations in Astronist works, philosophy, and culture, yet not in themselves a complete theology.

Astronist Teleology

a branch dealing with the philosophical study of nature according to purpose, direction, and goal, and the implementation of this approach into Astronist concepts, theories, philosophies, as well as other branches and disciplines within Astronist Philosophy.

Astronist Topology

the discipline of study dealing with the way in which the disciplines, concepts, theories, denominations and all other

elements of The Philosophy of Astronism are arranged and interrelated.

Cosmotopology

the constituent parts of The Cosmos and how they are arranged and how they interrelate from a philosophical perspective.

Neology

the study of the creation of the Astronist Terminologies, and their integrations and interactions with already existing words and terminologies, as well as the creation of new Astronist words after the initiation words listed in The Grand Lexicon of Astronology.

New (Cosmic) Age Rights

the entirety of rights that arose after the beginning of humanity's exploration of The Cosmos and typically revolve around spacial settings and the issues that branch from this.

New Culture

the study of cultures of different newly discovered planets and the peoples of societies and civilisations of those planets, as well as their similarities and differences to Earth and human cultures.

New World Development

the study of the planning, designing, establishment, and construction of towns, cities, and communities in a newly discovered world.

Nomology

the philosophical study of law and its nature in the interaction with the state, the people, and the government.

Omenology

the omens and their inclusions, symbolism, and inferences in Astronist literatures.

Omnidoxicology

a major branch of Astronology dealing with the study of The Omnidoxy including its insentensations, the interpretations of those insentensations, and the context in which The Omnidoxy was written, as well as including textual criticism, literary criticism, philology, and social science. Another term for this is Omnidoxy Studies, although that term is used in less formal and scholarly settings. This branch of study must not be confused with centralitology, or Centrality Studies, which deals only with the parts of The Grand Centrality that are not part of The Omnidoxy itself.

Oneirology

a discipline of study dealing with the relationship between dreams and philosophical knowledge and experience, and how one impacts the other.

Oryctology

the study of fossils, minerals, and rocks excavated from planets other than The Earth itself.

Paedology

the study of child philosophy, as well as the philosophical study of children themselves and their behaviours, and developments.

Pantheology

the branch of theology embracing all religions in their philosophical forms.

Pantoanthropology

the philosophical study and contemplations on the entirety of humanity's knowledge, and deals with the development of a philosophical system, or worldview in the understanding of all humanity's current, past, and future knowledges.

Paradoxy

a discipline of study and a major branch of philosophical contemplation dealing with all types of paradoxes found within Astronist Philosophy, and by this notion, it is a omni-disciplinary

area of contemplation for paradoxes do form in every discipline of philosophical study.

Parenology

a major discipline of study dealing with the procedures, actions, policies, beliefs, eras, leadership and overall governances of The Institution of The Philosophy of Astronism as well as investigating the ways in which the concepts, beliefs, and themes of The Philosophy of Astronism relate to politics, societies, cultures, and economics in different time periods and geographies.

Parenics

the study of the parenic relations of The Institution of The Philosophy of Astronism with other philosophical, or religious institutions, individuals, and organisations.

Pekingology

the study of all Astronist interactions with the People's Republic of China, especially Astronist Philosophy interacting with Chinese Philosophy.

Philorology

the study of the central texts of a philosophy, especially The Grand Centrality of The Philosophy of Astronism as the central text of Astronism, and Astronist Thought and Philosophy, as well as comparing the central texts of different philosophies.

Ponerology

the philosophical study of evil, and the surrounding concepts and theories.

Pneumatology

the affects of being in space, or being on another planet, or celestial body other than The Earth, on the human respiratory system.

Ptochology

the philosophical study of poverty, and the surrounding concepts and theories.

Purpology

the discipline of study concerned with the overall purpose of existence, as well as the nature of purpose, and its application in philosophical concepts and theories.

Social Order

the study of general social order and involves the structures of society, social authority, and the interactions of people in a society that form its order.

Sociomethodology

the study of the methods used in the demographic calculation of social measures, features, and systems.

Sophology

the philosophical study of wisdom, and the surrounding concepts and theories.

Spacioeconomics

the overall study of the various economies of different planets, celestial bodies, and space stations.

Spaciology

encompassing all the concepts, methods, objects, conducts, organisations and philosophies associated with spacefaring.

Astrobiology

the discipline of philosophical contemplation dealing with life on planets other than The Earth.

Astrocinematography

a branch of study pertaining to the art of the use of photography and camerawork on worlds other than The Earth, or in space itself.

Astroclimatology

a discipline of philosophical contemplation dealing with the weather conditions prevailing in certain geographically areas and

regions on worlds other than The Earth, or over long periods on worlds other than The Earth.

Astroecology

a discipline of philosophical contemplation dealing with the differences in the ways in which organisms relate to one another and to their physical surroundings on worlds other than The Earth.

Astrofilming

the branch of study dealing with the making, processing, and distributing of films of celestial entities, or of cosmical environments.

Astrogeology

the scientific ideas and theories forming the discipline of studying the geology of celestial bodies, and particularly the possibilities for human development and industrialisation.

Astrography

the scientific discoveries, ideas, and theories forming the subject of Astrography based up on the research and developments conducted by Astronist organisations, or based upon Astronist ideology.

Astromuseology

the management of a museum on The Earth about astronomy and cosmology, or the management of a museum on another planet, or celestial body, whether about astronomy and cosmology, or not.

Astronavigation

scientific theory and engineering dealing with the construction, designing, and manufacturing of spacecraft, and the navigation of spacecraft through space, and all that this entails.

Astroceanology

the study of oceans on planets and celestial bodies other than The Earth.

Astrophilosophy

the philosophical perspective on specific celestial entities rather than The Cosmos as a whole.

Astroport

the sports that have arisen since the beginning of humanity's exploration of The Cosmos, especially sports that can best be played offworld, or offearth.

Astrotopography

a discipline of philosophical contemplation dealing with the arrangement of the natural and artificial physical features in areas on worlds other than The Earth itself.

Astrotourism

the entirety of tourism in space and all its many aspects.

Astrovideography

the creation and production of videos of celestial entities, and is distinct from astrofilming as astrovideography deals only with shorter videos that aren't film length.

Astrozoology

a discipline of philosophical contemplation rooted in scientific study concerned with the behaviours, structures, physiologies, classifications, and distributions of animals on worlds other than The Earth.

Cosmic Archaeology

a discipline of study dealing with the many different ways that humanity have perceived, debated, and interacted either conceptually or physically with The Cosmos as entity itself, or any of its progeny through the history of humanity and through the different periods of human civilisation on The Earth.

Cosmic Architecture

the art and practice of designing and constructing buildings and other structures on celestial entities other than The Earth, for a wide variety of usages.

Cosmic Culture

the entirety of the cultural aspects of all different civilisations on celestial bodies and planets beyond The Earth, and collectively refers to all culture relating to offearth and all culture originating offearth.

Cosmic Civilisation Development

the entire development of a civilisation beyond The Earth.

Cosmic Disease

the outbreak of disease in civilisations beyond The Earth, the greater possibility of diseases beyond The Earth, and the development of new diseases not able to occur on The Earth.

Cosmic Evolution

a subdiscipline of study dealing either with the evolution of The Cosmos, or with the evolution of worlds other than The Earth.

Cosmic Institutions

the various institutions involved in the regulation of space, and those institutions that were established with the purpose of control humanity's exploration of The Cosmos.

Cosmic Literature

the literatures that arose just before and after humanity's exploration of The Cosmos and reference this exploration, or may also refer to the literatures of other civilisations on worlds other than The Earth.

Cosmic Marketing & Advertising

the marketing and advertising of space travel, astrotourism, business in space, and generally life beyond The Earth, or on another planet.

Cosmic Media

the entirety of all media beyond The Earth and on other specific planets, space stations, and celestial bodies.

Cosmic Music & Instruments

the music style that arose which identifies its style of being cosmical, and in relation to humanity's exploration of The Cosmos.

Cosmic Publishing

the entirety of books and other published articles either referencing to spacial affairs, or originating from a planet other than The Earth.

Cosmic Social Hierarchy & Class

the development of class in civilisations and societies beyond The Earth, and the subsequent effects of this.

Cosmic Social Order

the overall social order of a civilisation beyond The Earth, or of a society developed beyond The Earth.

Cosmic Social Policy

the study of the general policies of a state or society that involves sociological contexts and affects.

Cosmic Social Problems & Services

the overall social problems of a civilisation or society on a planet beyond The Earth, and the services provided by that society, or its government intended to combat such problems.

Cosmic Sociology

the overall sociological aspects of a society, or state beyond The Earth on another planet or celestial body.

Spacial Law

newfound concepts of legality relating to space exploration, space colonisation, and space exploitation.

the system of laws specific to the issues and jurisdictions beyond Earth compounded for the construction of spacial law.

Interplanetary Law

the overall laws between two or more planetary governments and includes all other aspects of interplanetary law.

Interspatial Law

the all-encompassing study of law relating to interspatial business, life, industry, and general existence.

Planetary Law

the study of the entirety of the laws of a planet and the government, or governments, that rule it, and involves many other branches of studies of law.

Synechology

the philosophical study of theories concerning continuity and universal causation.

Systemology

the philosophical study of systems of thought, and the logic that has established such systems.

Taxology

the identification, naming, and classification of anything Astronist related.

Textology

the study of the journey of a writer in the creation and production of a text, especially a philosophical text, but not always.

Thanatology

the philosophical study of death, and the surrounding concepts and theories.

Timology

the philosophical study of success and excellence in some specific area, and the surrounding concepts and related theories involved.

Transitology

the study of the processes and occurrences involved during the transition from one political regime to another, or from one philosophical association to another.

Vendoxology

the systemic study of the various different utilities, meanings, variations, and beliefs associated with and devoted to the use of a vendox symbol, the most commonly known of which is the Astronism Symbol.

Xenology

the discipline of study of extraterrestrial and sentient life beyond The Earth, primarily from a philosophical imperativeness to discover such.

Xenoarcheology

a subdiscipline dealing with the physical remains of past peoples and civilisations of a planet, or celestial body, other than The Earth.

Xenobiology

the subdiscipline studying the biologies of non-human sentient life on a planet other than The Earth.

Inclusivised Disciplines

Compendology

the inclusive discipline encompassing all philosophies, theories, disciplines, concepts, derivations, and schools of thought that address the nature, the order, the beauty, the functionality, and the existence of The Cosmos, or any one of its progeny either considered individually, or collectively as part of a group. Compendology exists in parallel to the disquisitional appellation of The Principles of The Aesthetic Cosmos. Compendology is the largest of all the inclusive disciplines, and the disquisition to which it is associated as part of The Omnidoxy is the largest segment of the entire document. Compendology is considered to exist as the most foundational of all the Astronist philosophical disciplines, as well as being the most widely encompassing discipline.

Abundology

focuses on the concept of abundance in philosophical means.

Cosmical Abundance

the abundance of The Cosmos as a whole rather than the abundance of its composite parts.

Mental Abundance

physical abundances by the mind rather than by their actual physicalities, as well as the contemplations of the extent to which a human mind is able to comprehend abundances.

Philosophy of Abundance

to understand the naturity of celestials as they exist in scale, especially in size comparisons between celestials and objects that humans can comprehend the size of. There are three levels to this philosophy including Physical Abundance, Mental/Abstract Abundance, and Cosmical Abundance.

Physical Abundance

the scales and amounts of physical attributes of celestials, such as the amount of stars of a galaxy.

Adiabatics

a branch of cosmic philosophy focusing on the concept of heat in The Cosmos, and the role of heat in cosmogony.

Cryonics

the Astronic approach and philosophy to understanding and justifying the practices and usages of cryonics.

Pyronics

the discipline of study dealing with the heating up of something, or the return of something to its original, normal, or functional temperature, and most often relates to the increasing of a human's body temperature to a normal and functional state after being in a state of cryonic deep-freeze, especially for a journey in space.

Aerolithology

the philosophical study of meteorites.

Anisotropics

explores the concept of some cosmical entities having different values, meanings, and consequences when studied, measured, or viewed from a different perspective, or direction.

Anthropics

the Anthropic Principle and the notions it addresses, and the consequences of its application both conceptually, and societally.

Astronomics

the financial management of economies beyond The Earth, the financial management of the overall space industries, and the nature of economies beyond The Earth.

Astronomology

the study and discussion of the role of astronomy and its practices in society, as well as its fundamental purpose, nature, and the future of the practice.

Gnomonics

the subject entailing the study, construction, design, and positioning of sundials and the ornamentations on them.

Holography/Holographics

the systems, technologies, and usages of holograms, as well as the study of holograms as a discipline.

Satellitics

the philosophy of satellites, their purposes, the possible technological improvements, and a wider discussion of satellites on an abstract level.

Chaology

the cosmic philosophical study of The Chaos as part of Astronic cosmology.

Chromatics

a large branch of study within cosmic philosophy as a derivation of Astronic philosophy dealing with two concepts. The first dealing with the role of colour in The Cosmos, and the second dealing with cosmic events that occur consecutively, or as a result of each other.

Cometology

the cosmic philosophical study involving approaches to the understanding of comets, especially in Astronic cosmology.

Concentritology

closely related with concentricism, the branch of study and philosophical discussion of the concentricity of celestial entities, and the purpose, logic, and meaning of this particular order in The Cosmos, and the discussion of the nature of concentricity.

Cosmechism

an educative form of some branch or discipline of Astronism either in the form of questions and answers or statements to be memorised, yet it is unlike The Cosmechesis which is a set poem derived from The Omnidoxy for cosmechism can come in many different forms from non-omnidoxical sources. The official collective appellation for which is The Cosmechism.

Cosmecology

the philosophical study of The Earth in relation to cosmic phenomena, especially in relation to cosmocentricity and Astronic cosmology.

Cosmic Cyberlaw

the wide-ranging aspects of digital laws on planets and celestial bodies other than on The Earth.

Cosmoapplication

a discipline of compendology and a major practice involving the application of cosmical entities to those of the natural world, and intends to draw connections between such entities in the categories of appearance, functionality, and their role in the system.

Cosmochronology

the philosophical study timescales of the objects and events of The Cosmos.

Cosmography

the general features of The Cosmos, such as planets, comets, asteroids, nebulae, and supernovae, and how these features affect the philosophical concepts of The Cosmos.

Cosmopsychology

the wide-ranging psychological affairs and issues that arise within a society, or nation state on another planet or celestial body.

Cosmopsychotherapy

the practice of psychotherapy in order to treat psychological issues that have originated from the individual beyond in space, or on another planet other than The Earth.

Cosmotime Law

equivalent to Maritime Law, and deals with spacial trade and spacial naval matters.

Cosmotopography

the cosmic philosophical study of the natural physical features of celestial entities in The Cosmos and the different

contemplations and conclusions made regarding the physical characteristics of such entities.

Spaciocartography

a major discipline of study dealing with the systemic mapping of space, phenomena in space, and all the progenies of The Cosmos, either collectively, or individually.

Topocentrics

the discussion that current world religions hold such a naturity which makes them geocentric, or anthropocentric, and only take the perspective of The Earth in The Cosmos, which Astronism teaches to be regressive.

Creation Theory

a major branch of cosmic philosophy dealing with the various different approaches to the creation of The Cosmos.

Cryology

the branch of cosmic philosophy studying low temperatures and subsequent phenomena in relation to cosmical events, and entities.

Cyclometrics / Cycleseology

the branch of cosmic philosophy dealing with cycles of The Cosmos from a philosophical perspective.

Omnicyclics

a subdiscipline of cyclometrics studying all the cycles of existence, both those that exist presently, those that have existed in the past, those that are expected to exist in the future, and all the possibilities of those cycles in their existences.

Polycyclics

a subdiscipline of cyclometrics dealing with the contemplation of a multitude of cycles, especially those which interact with one another.

Divergetology

finding its origins in the Duodoxy as part of sanitology yet classified as part of compendology, the discipline of study

and branch of cosmic philosophy dealing with the notion of the divergence of existence in The Cosmos and subsequent associated consequences of the application of such a notion to various subjects.

Drentology

the major branch of cosmic philosophy dealing with the study and contemplations of Cosmic Alchemy.

Dynastesiology

a major branch of cosmic philosophy dealing with the way in which The Cosmos is structured hierarchically, as a dynasty of cosmical entities categorised according to size, functionality, abundance, and naturity.

Entropics/Entropology

also known as entropology, the branch of cosmic philosophy dealing with The Chaos in relation to The Cosmos and the interactions between them, and how some celestial entities decline into disorder, or how their natures are of disorder initially.

Epochology

the cosmic philosophical study of the age, and chronology of both The Universe, and The Cosmos.

Periology

a large subdiscipline of study within cosmic philosophy dealing with cosmic periods, and the ways in which these periods have caused the evolution of The Cosmos and their purposes, patterns, and consequences.

Primordiology

a large subdiscipline of study in cosmic philosophy dealing specifically with the time period after The Big Bang when the first celestial entities began to form, and attempts to identify their natures, their purposes, and the ways in which their existence influenced cosmogony.

Quantumology

a large subdiscipline of study within cosmic philosophy dealing with the cosmical period just after that which is studied in Primordiology, and focusing on the maturity and development of larger celestial entities, as well as the expansion of The Universe during that period.

Seasonology

dealing with the definitive seasons that occur in The Cosmos, such as following the formation of a planetary system, or galaxy, the nature of such time periods, and their inferences on cosmogony.

Transientology

a prominent discipline of study within cosmic philosophy concerning the philosophical contemplation of transience and the transient existence of some celestial entities.

Equatology

a small discipline of study in cosmic philosophy dealing with the nature of equators in all aspects and disciplines.

Familiology

a major discipline of study within cosmic philosophy dealing with the classification and organisation of celestial entities into families according to their natures, features, and positionings in The Cosmos which form The Seven Cosmical Families.

Filamentology

a discipline of study in cosmic philosophy dealing with the largest structures, and superstructures of The Cosmos, and how and why their existences may create new concepts about the arrangement and order of The Cosmos in The Universe, and how celestial entities are related to The Cosmos as a well-ordered whole.

Finality Theory

a cross-disciplinary area of contemplation and philosophical study and investigation involving all variations of the ways in which each of The Cosmos, The Universe, and The Divine will end, and how these endings will interact with one

another, but also how they stand in comparison to one another.

Firmamentology

a discipline of study in cosmic philosophy dealing with the nature of firmamental elements, the three most prominent of which being lightness, darkness, and luminosity.

Formatology

in cosmic philosophy, the discipline of study and philosophical discussion of the formational chronology and structure of celestial entities in The Cosmos.

Astrodynamics

a subdiscipline of formatology within cosmic philosophy dealing with the formational dynamics of stars, and other stellar objects in The Cosmos.

Cosmodynamics

a subdiscipline of formatology within cosmic philosophy dealing with the formational dynamics of The Cosmos itself, and other non-stellar objects.

Proplydics

the large subdiscipline of study in formatology of cosmic philosophy dealing with the nature and philosophy of the formation of planetary and solar systems.

Protology

the large discipline of study in cosmic philosophy, specifically in Cosmic Philosophy, dealing with the philosophy, natures, and concepts surrounding the initial stages of the formation of celestial entities.

Gnosiology

the philosophical study of knowledge of The Cosmos, as distinct from Epistemology.

Gravitology

a major discipline dealing with the notions and contemplations focusing on the role of gravity in The

Cosmos, and The Universe from a philosophical perspective, and explores the concepts of gravitation as The Divine, gravity being the one and only universal force, and the force which seems to bind all existence together, as well as a discussion on the nature of gravity.

Habitabilitism

the discipline of study and area of contemplation of the concepts involved with the habitability of worlds in The Cosmos beyond The Earth itself and what this means for humanity.

Heliology

a discipline of study within cosmic philosophy dealing with The Sun specifically, its formations, its relations with humanity, and all the philosophical discussions surrounding The Sun.

Heterogenology

the study and philosophical discussion of the fact that The Cosmos has become heterogenous superstructure over the course of its evolution, and what this may mean for its overall structure, its relationship with The Universe, and The Divine, and ultimately, its eventual fate.

Homogenology

finding its origins in the Duodoxy as part of sanitology yet classified as part of compendology, a discipline of study and philosophical discussion of the dimension in which all existence came from one origin, and the ability for one to explore every parallel chronology due to each chronology originating from the same coordinates.

Infinetics

finding its origins in the Duodoxy as part of sanitology yet classified as part of compendology, the discipline of study and philosophical discussion of the dimension in which one

may see and know all possibilities and imaginable possibles in every possible universe's chronology; a Divine state.

Instrument Theory

a discipline of study dealing with the contemplation of the application of an instrument of study, and the nature of such an application.

Introspectics

a discipline of study and one of the central areas of contemplation and discussion that explores the concept and practice of introspection, and also applies introspection onto various abstract concepts, as well as physical entities, such as an individual, or The Cosmos, or The Universe itself.

Astrography

in introspectics of cosmic philosophy, closely associated with astrophotography, dealing with all contemplations of human productions of how The Cosmos does appear as an important contributor to Cosmic Art.

Chromatics

a large subdiscipline of study within cosmic philosophy as a derivation of Astronomy dealing with two concepts within Cosmic Philosophy. The first dealing with the role of colour in The Cosmos, and the second dealing with cosmic events that occur consecutively, or as a result of each other.

Inerteology

a subdiscipline within introspectics of cosmic philosophy dealing with the inertia and its naturity, interactions with cosmic entities, and the ways in which it occurs.

Observology

a subdiscipline of study within cosmic philosophy dealing with the philosophical concepts surrounding the observability of The Cosmos, and The Universe, and the very nature of The Observable Universe.

Opticology

a subdiscipline of study of introspectics as part of cosmic philosophy dealing with the philosophical contemplations of the

utility of different optical systems in telescopes, and other observational equipments, especially prioritising efficiency, clarity, and ability.

Spectrics

a subdiscipline of introspectics in cosmic philosophy, specifically in Cosmic Philosophy, as part of wider Astronomy dealing with the spectrum colour band witnessed in The Cosmos, its naturity, purpose, and influence on cosmogony.

Stratony

a subdiscipline of introspectics of cosmic philosophy dealing with the distribution, age, classification, and economic important of certain cosmic entities, as well as the history of the interactions between the celestial and other celestials.

Kalology

the philosophical study of the beauty and aesthetics of The Cosmos.

Kosmetrics

also known as The Geometry of The Cosmos, the study and philosophical discussion of the shape of The Cosmos, and the subsequent shape of The Universe, and how these interact with one another.

Astrometrics

the subdiscipline of study within kosmetrics as a derivation of cosmic philosophy dealing with the philosophical discussion over the measurement of celestial entities, and the measurement of The Cosmos, and The Universe.

Elliptics

the philosophical perspective on the shape of the ellipse in The Cosmos, especially of elliptical galaxies, and how these may have affected cosmogony.

Equatology

a subdiscipline of study in cosmic philosophy dealing with the nature of equators in all aspects and disciplines.

Galaxometrics

also known as galaxometry, a subdiscipline of kosmetrics in cosmic philosophy dealing with the positions, motions, shapings, and magnitudes of galaxies in a similar way to the branch of astrometry and planetometry.

Isotropics

a subdiscipline of study in cosmic philosophy, specifically Cosmic Philosophy, within the discipline of kosmetrics dealing with the philosophical discussions and natures of celestial entities that when perceived and measured, are the same in all directions and from every perspective.

Orbitology

the philosophy of orbits, their connection to concentritology, and most broadly, the patterns, shapes, and structures of The Cosmos and celestial entities.

Parallactics

a subdiscipline within kosmetrics of cosmic philosophy dealing with the philosophy of parallax and its occurrences in cosmical setting, as well as contemplating the nature of the parallax and its inferences and utilities.

Planetometrics

a subdiscipline of kosmetrics in cosmic philosophy dealing with the positions, motions, shapings, and magnitudes of planets in a similar fashion to astrometry.

Syzygyology

the philosophical discussion of the oppositions of two celestial entities, especially of a planet and a star.

Limitology

a large discipline of study within cosmic philosophy as part of wider Astronology dealing with the various concepts and contexts surrounding limitations, especially in both abstract and physically cosmical terms.

Macrocosmology

the philosophical study of The Cosmos on a large scale, or in wholeness.

Mereology

the discipline study and discussion of parts and the wholes they form, both in physical and abstract senses, and especially with regards to The Cosmos in The Universe, and their subsequent relationship.

Mergenics

the discipline of study and philosophical discussion of the nature of celestial entities when merging with one another, and the processes involved, and what may be inferred from these processes about the nature of The Cosmos.

Microcosmology

the philosophical study of The Cosmos on a smaller, narrower scale, or in isolation.

Morphology

a large discipline of study in cosmic philosophy dealing with the philosophical standpoint and concepts on the formations, structures, and shapes of celestial objections, or The Cosmos, or The Universe themselves.

Nephology

the philosophical study of clouds in relation to the wonderment of The Cosmos, and involves the newfound concept of Nepholism which holds that clouds are the main natural obstructions to cosmical wonderment.

Obliviology

the discipline of study and philosophical discussion of the nature, purpose, motionality, structure, and possibility of black holes.

Singuletics

the philosophy of singularities, their naturity, purpose, and the inferences that can be made towards its influence on cosmogony.

Observology

a discipline of study within cosmic philosophy dealing with the philosophical concepts surrounding the observability of

The Cosmos, and The Universe, and the very nature of The Observable Universe.

Omnitology

finding its origins in the Duodoxy as part of sanitology yet classified as part of compendology, the discipline of study dealing with concepts surrounding the idea of The Omniverse, and which all possible cosmologies and laws of physics in all the possible universes are studied.

the study and philosophical discussion of the dimension in which multiple and perhaps infinite universes exist to form The Greater Universe, and how the natures, purposes, and differing laws of physics of these omniverses.

Omnology

the study and philosophical discussion of the future and fate of the expansion of The Cosmos in The Universe, and how this may affect the relationship between these two entities.

Orbanology

a major discipline of study dealing with a wide variety of concepts including the nature of causality, relativity, origination, and intuition, but principally considers to the concepts and instruments of naturality and rationality.

Astrophysicality

in orbanology of cosmic philosophy, a subdiscipline addressing the nature of stars with the intention of drawing conclusions about their originations, functionalities, physical features, and the metaphorical qualities of stars.

Astrophysiology

in orbanology of cosmic philosophy, a branch of the subdiscipline of astrophysicality dealing with the nature of the relationship between sentient beings and the stars of The Cosmos and is largely philosophical and metaphorical.

Causology

the discipline of study deriving from cosmic philosophy dealing with the concepts of causation, as well as cause and consequence in The Cosmos, and cosmogony from a philosophical viewpoint.

Metaphilosophy

a subdiscipline of orbanology within cosmic philosophy dealing with the nature and contemplation of philosophy itself and the different ways philosophy can be used for betterment and also studying the Astronist approach to philosophy and its utilities.

Noology

the discipline of study dealing with the philosophical contemplations of human intuition and reason as the phenomena of the mind.

Originetics

a major subdiscipline of study in cosmic philosophy dealing with the nature of origin, and the concepts of originality, the significance of origin, and the philosophy of origin, either from a cosmical context, or from a more abstract context.

Purpology

the major subdiscipline of study in cosmic philosophy dealing with the overall purpose of existence, as well as the nature of purpose, and its application in philosophical concepts and theories.

Ordology

a discipline of study of cosmic philosophy dealing with the contemplations of the orderity of The Cosmos in Astronist Cosmology and in Cosmic Philosophy with which one may use the instrument of study of orderity in order to study.

Perfectics

a major discipline of study within cosmic philosophy as part of the wider Astronic tradition dealing with the philosophy of perfection, the concepts surrounding the nature, purpose, and intentions of reaching perfection, and from a purely cosmical context, the philosophical discussion of The Perfect Cosmos, as an entirely order, beautiful, and fully functioning whole, and thus, the truest embodiment of perfection.

Perimetrics

the study and philosophical discussion of the nature, consequences, purpose, and motionality of the edge of The Cosmos, and how this may impact upon the relationship between The Cosmos and The Universe.

Phantasmatography

a discipline of study in cosmic philosophy dealing with the analysis and criticism of Astronic philosophical works, including The Grand Centrality itself.

Phenomenography

a discipline of study in cosmic philosophy dealing with the abnormal and phenomenal elements, events, and occurrences of The Cosmos and all relevant instruments of study are to be applied.

Planetary Studies

a discipline of philosophical contemplation and study dealing with planets, their geographies, their topographies, and their histories, and holds within it many different derivations, one of which being aerography which focuses on the classical planet of Mars.

Planetics

a discipline of study of structurology within cosmic philosophy dealing with the philosophy of planets, and typically specifies its discussions on individual planets, their natures, climates, and habitabilities.

Planetology

a discipline of philosophical contemplation and study of cosmic philosophy dealing with planets, their geographies, their topographies, and their histories, and holds within it many different derivations, one of which involving the study of the Classical Planets.

Areography

a subdiscipline of planetology dealing with the philosophical contemplation of all the geographical aspects of the classical planet of Mars.

Joviology

the subdiscipline dealing with the philosophical contemplation of the Classical Planet of Jupiter.

Mercuriology

the subdiscipline dealing with the philosophical contemplations relating to the Classical Planet of Mercury.

Neptunology

the subdiscipline dealing with the philosophical contemplations of the Classical Planet of Neptune.

Saturnology

the subdiscipline of study dealing with the philosophical contemplations of the Classical Planet of Saturn.

Terrenology

a subdiscipline of study dealing with the philosophical contemplation of The Earth as a Classical Planet.

Uranology

the discipline of study concerning the philosophical contemplation of Uranus as a Classical Planet.

Venusology

the discipline of study concerning the philosophical contemplation of the Classical Planet of Venus.

Pneumovology

also simply known as vology, the discipline of study dealing with the Astronic philosophical approach and contemplations about invisible, or spiritual entities, and related concepts, such as those of ghosts, and other paranormal entities and activities.

Sidereology (Astronist Mysticism)

the development and practices of mystical theory and theology combined with Astronist stories, tradition, and philosophy, often closely associated with Mystology.

Prophetics

a major discipline of cosmic philosophy dealing with the notions and contemplations involved with the future of humanity from the perspective of the Astronist Tradition, as outlined in a series of prophecies.

Anthropics

a subdiscipline of prophecies in cosmic philosophy dealing with the Anthropic Principle and the notions it addresses, and the consequences of its application both conceptually, and societally.

Transhorology

the major subdiscipline of study in cosmic philosophy dealing with the potentiality of travelling through spacetime, or travelling through warps to reach distant parts of the galaxy, or The Cosmos.

Xenoprophetics

in prophecies of cosmic philosophy, the subdiscipline dealing with all contemplations and notions involved in the future of different sentient species.

Prospology

a major discipline in cosmic philosophy dealing with the entirety of prospection, including methodologies, and ethics of prospection, as well as all other aspects of the practice.

Reciprology

a discipline of study in cosmic philosophy dealing with the reciprocal nature of certain celestial entities in The Cosmos, and the nature, purpose, and structure of reciprocity from a philosophical standpoint, as well as the discussion of the concept of mutual benefit, and The Symbiotic Cosmos.

Reversology

a large discipline of study in cosmic philosophy as part of wider Astronic philosophy dealing with the concepts relating to reversal processes taking place in The Cosmos, especially in relation to time, and may even relate to the reversal of The Universe back to its origin state, and is a topic that can easily overflow into other subject areas of cosmic philosophy.

Selenology

a large discipline of study in cosmic philosophy dealing with the structure, formation, naturity, classification, and categorisation of moons, as well as the moon's relationship with its planet.

Sentientology

a major discipline of study in cosmic philosophy dealing with the discussion of sentient life beyond The Earth and the various concepts and theories surrounding such a vast topic.

Sentientics

a major subdiscipline of sentientology within cosmic philosophy dealing with the mapping of sentient life and the variations of sentient life on different planets, and in different star systems, sectors, and regions of the galaxy.

Solarology

a large discipline of study in cosmic philosophy dealing with the formation, structure, and subsequences of The Sun, and its philosophical positions, and roles in The Cosmos.

Spacial Psychology

a discipline of study in cosmic philosophy dealing with the realities of how space travel, living in space, experiencing space, living on worlds or celestials other than The Earth will effect one's mentality and the wider psychology of humanity as a whole.

Anthropological Cosmology

in spacial psychology, a type of cosmos that emphasises and is concerned with the role of humanity in the wider cosmical system as a factor in human psychological wellbeing and typically incorporates the Anthropic Principle, anthropocentrism, and others, in order to form The Anthropic Cosmos.

Spacio-Sentient Psychology

in spacial psychology of cosmic philosophy, the branch of study concerned with how the effects of space and spacefaring effect species other than human, as derivation of the subdiscipline known as Sentient Psychology.

Sporadics

a major discipline of study in cosmic philosophy dealing with the nature, and purpose of The Chaos, the absolute opposite to The Cosmos.

Stellarology

a discipline of study and a bridged discipline connecting heliology to obliology dealing with all contemplations relating to concepts, theories, and proclamations made about and between stars and black holes and the relationship and interconnection they share.

Stratigraphy

the ordering and relative positioning of the strata of different planetary bodies.

Structurology

a major discipline of study in cosmic philosophy dealing with the general structures of celestial entities, and their consequential impacts on cosmogony.

Synchronology/Synchronics

a large discipline of study in cosmic philosophy dealing with the philosophical discussion and analysis of the apparent synchronised patterns, structures, and formations of celestial entities, and how these have impacted cosmogony.

Synodics

the discipline of study in cosmic philosophy dealing with the philosophical discussion of the alignment of two planets, or two other celestial entities so they appear to be in the same place in the sky from the perspective of The Earth.

Tantology

a discipline of study in cosmic philosophy dealing with the contemplation of shockwaves in The Cosmos, their causes,

consequences, and involves all the applications of the instruments of study.

Transientology

a discipline of study within cosmic philosophy concerning the philosophical contemplation of transience and the transient existence of some celestial entities.

Ultimatology

the discipline of study and philosophical discussion of the ultimacies of The Cosmos, and of The Universe, the most common of which is the ultimate fate of The Universe, and the nature, motionality, purpose, and subsequent consequences, both theologically, and in terms of humanity's perspective, with the inevitable events during the apogenesis of The Universe.

Totology

the large discipline of study in cosmic philosophy dealing with celestial entities in their whole, complete, or mature states, or when studied collectively, or may be the study of The Universe, or The Cosmos as perceived in their totalities.

Vacuology

also known as Black Hole Cosmology, refers to the major discipline of study in cosmic philosophy dealing with concepts of black holes either destroying, or being in some part responsible for the creation of The Cosmos, or The Universe.

Universology

the philosophical study of the entity known as The Universe in Astronist Cosmology, as distinct from The Cosmos, and involves surrounding concepts and theories.

Unology

the major discipline of study in cosmic philosophy dealing with the nature of The Universe, as a separate entity from The Cosmos.

Sanitology

the inclusive discipline dealing with the entirety of Astronic approaches to logic and involves the formation of the Astronist and Astronist traditions of logic and rationality. Sanitology holds within it the most diverse of disciplines and subdisciplines dealing with topics of an varied nature from a range of different perspectives. Sanitology as an inclusive discipline is encapsulated by the second disquisition of the Omnidoxy aptly titled The Principles of The Logical Cosmos.

Amatology

the discipline of study dealing with Cometanic love, or the interpretation of Cometan's philosophical musings in relation to the topic of love.

Aphnology

the discipline of study dealing with all contemplations regarding the topic of money and wealth, its accumulation, its function in society, and its relationship with other systems and structures in society.

Argumentology

also referred to as argument theory, the discipline of study dealing with the methods and practice of argumentation.

Comparology

the discipline of study dealing with all instances of comparison in relation to religious and philosophical conceptals as well as traditions as a whole. It can be considered as the Astronic form of comparative religion.

Core sanitology

the discipline of study dealing with the introduction and foundational beliefs and conceptual elements of the Astronic form of logic.

Cosmoanthropology

the cross-disciplinary study in cosmic philosophy, sanitology, and anthropology dealing with contemplations regarding all aspects of human life and society in an off-

Earth context. Essentially, the study of anthropology in the context of space.

Cyporeology

the discipline of study dealing with religious and philosophical beliefs of the individual essentially considering why different individuals believe what they do. It is an extensive study incorporating anthropological, psychological, and sociological elements.

Destinology

the discipline of study dealing with all instances of contemplation regarding destiny and how this concept relates to other disciplines and areas of contemplations in Astronic philosophy and religion.

Divinology

a major discipline of study dealing with all the possible conceptions of The Divine, the identity, role, attributes, and functions of The Divine, as well as the interactionality between The Divine and other realms of existence within the Astronic cosmology. A divinology can also mean a specific conception of The Divine.

Hyporeology

the discipline of study distinguished from cyporeology and considers why groups and entire societies believe what they do as part of their religious and philosophical leanings. Like its counterpart discipline, the study incorporates various anthropological, psychological, and sociological elements.

Maleology

the discipline of study dealing with the nature, identity, role, and function of masculinity in 21st century society onwards.

Astronist etiquette

the discipline of study dealing with the approach to and form of etiquette originating from within Astronist culture.

Naology

a major branch of sanitology dealing with the study of the construction, function, location, management and politics of sophariums, or Astronist places of philosophy.

Astropharology

a subdiscipline of study within naology dealing with starhouses, their constructions, functions and management.

Eidology

a subdiscipline of study within naology dealing with eidouraniums, their constructions, functions and management.

Observatology

a subdiscipline of study within naology dealing with both observatories and grand observatories, their constructions, functions and management.

Phrontology

a subdiscipline of study within naology dealing with phrontisteries, their constructions, functions and management.

Planetarology

a subdiscipline of study within naology dealing with planetariums, their constructions, functions and management.

Promontology

a subdiscipline of study within naology dealing with promontories, their constructions, functions and management.

Turology

a subdiscipline of study within naology dealing with subsophariums including pelleniums, riverhouses, astrotries, telescopetries, and orreriums involving their constructions, functions and management.

Naturology

the discipline of study dealing with the application of philosophical modes and techniques of inquiry to the natural terrestrial world.

Noctology

the discipline of study dealing with the practices and beliefs in noctism, noct people, and the process of noctisation.

Occurrology

the discipline of study dealing with all forms of practice and eventing that takes place in relation to Astronism or in the name of Astronist beliefs.

Devotology

the subdiscipline of study within occurrology dealing with all forms of devotional practices within Astronism, either of a private or public nature.

Festology

the subdiscipline of study within occurrology specifically dealing with Starlight Festivals.

Verontology

the subdiscipline of study within occurrology dealing with all forms of events, commemorative occasions, and organised practices.

Peripheral sanitology

the discipline of study dealing with the peripheral elements of Astronic logic as outlined in the ninth discourse of the Duodoxy.

Philosophic marketing

the discipline of study dealing with promulgation, its management, ethicality, and all methods and techniques associated with promulgative management.

Praxology

the discipline of study dealing with the study of Astronist practices in relation to Astronist beliefs and the intersectionality between these two manifestations of Astronism.

Proprietology

the discipline of study dealing with the nature and function of the role of The Institution of The Philosophy of Astronism as the proprietor of Astronism.

Tiritology

the discipline of study dealing with the methods of tirition involving the dissemination of Astronism through non-advertising means, such as through more traditional religious missiology.

Tunology

the discipline of study dealing with the study of all Astronic contributions to music and the tradition of music associated with Astronist and Astronist cultures.

Velocitology

the discipline of study dealing with the philosophical discussion of speed in The Cosmos, or The Universe, and its relation to cosmogony.

Abettology

the inclusive discipline dealing with the contemplation and study of stewardship and aid, how these two concepts and their subsequent actions manifest themselves in the world, and their interactions with one another. The inclusive discipline of abettology is encapsulated by the third disquisition of the Omnidoxy which is titled The Principles of Aid & Stewardship. In addition, categorised within abettology are various real-world manifestations of Astronism and connected facets of both Astronic and Astronist culture,

namely the introduction of a body of terminologies for Astronist symbology, Astronist architecture, Astronist propaganda, Astronist theory, Astronist art, civicology, Astronist ornamentation, Astronist rendition, and orrology.

Aidology

the discipline of study dealing with the nature, role, ability, manifestations, and functions of aid, aiding oneself, aiding others, and aiding inanimate objects or causes.

Aidological ethics

the branch of aidology concerned with the ethical system that emerged from the establishment of aidology as a discipline of Astronic philosophy and deals with the compatibility between aidological ethics and Astronist ethics.

Gaianology

the discipline of study dealing with the concept known as The Gaia which is the consideration of The Earth as a spiritual and contemplative entity of animation.

Revology

one of two major disciplines of study of abettology dealing with the nature, role, ability, manifestations, and functions of stewardship, especially so in relation to the stewardship and preservation of The Cosmos.

Equitology

the inclusive discipline dealing with all contemplations regarding justice and patience and the philosophical approach to understanding these extensive concepts. The discipline of study of equitology is encapsulated by the fourth disquisition of the Omnidoxy titled The Principles of Justice & Patience. Also categorised as part of equitology is the study of the tradition of recognition within Astronism, namely involving extollation, celestification, and cometanisation (however, the achievement of Cometanhood is instead categorised as part of prerology) which make up an extensive portion of the inclusive discipline.

Celestology

the discipline of study dealing with the lives of celestants, or celebrated Astronists, involving the pinpointing of reasons for their celestification.

Extollogy

the discipline of study dealing with the processes, requirements, and Institutional operations involved with the tradition of extollation.

Jurantology

the discipline of study dealing with the concept of justice, its applications, manifestations, and all philosophical contemplations of justice.

Tolereology

the discipline of study dealing with the concept of patience, its applications, manifestations, and all philosophical contemplations of patience.

Xentology

the inclusive discipline dealing with contemplations regarding and subjects involving or associated with ambition and the concept of enlightenment or heightened understanding. This inclusive discipline is encapsulated by the fifth disquisition of the Omnidoxy titled The Principles of Ambition & Enlightenment. One of the largest discourses of the entire Omnidoxy is found in the xentological disquisition which is a terminological discourse covering a huge amount of terms relating to a vast array of concepts, practices, and elements of Astronism and The Institution of The Philosophy of Astronism. It is that particular discourse that makes up the majority of the length of the disquisition.

Aspology

the discipline of study dealing with the concept of ambition, its applications, manifestations, and all philosophical contemplations of ambition.

Illuminology

the discipline of study dealing with the concept of enlightenment, its applications, manifestations, and all philosophical contemplations of enlightenment.

Ghenology

the inclusive discipline dealing with introducing Astronic ontology and all contemplations relating the nature of being and the philosophy of perception. This inclusive discipline of study is encapsulated by the sixth disquisition of the Omnidoxy titled The Principles of

Ontology & Perception. Various other topics of study are considered as part of ghenology including conceptual theory, the ontology of The Institution, the role and identity of the padron, the Astronist philosophy of religion, Astronic metaphilosophy and philosophic strategy.

Astronic ontology

the form of and approach to ontology undertaken by the Astronic tradition of philosophy and religion.

Institutional ontology

the form of ontology and subdiscipline of study within Astronic ontology dealing with all aspects of the nature of being of The Institution of The Philosophy of Astronism and, as a study, is particularly linked to the proprietology.

Conceptual theory

the discipline of study dealing with the form and functions of concepts as well as the value, applicability, and the general ontology of concepts as abstracts rather than physicalities.

Padronology

the discipline of study dealing with the role, identity, function, and the general ontology of the padron, the leader of The Institution of The Philosophy of Astronism. Padronological study considers the relationship between the padron and Astronist beliefs as well as the authority of padron and his or her role within The Institution.

Philosophic strategy

the discipline of study dealing with the application of methods, concepts, and theories derived from the study of strategy to the context of the dissemination of an organised philosophy.

Philosophy of perception

the discipline of study dealing with the concept of perception, its applications, manifestations, and all philosophical contemplations of perception.

Expology

the inclusive discipline dealing with the contemplation of all aspects of space exploration and introduces and incorporates a large variety of disciplines also from within other inclusive disciplines such as space ethics and cosmic philosophy. This inclusive discipline is encapsulated by the seventh disquisition of the Omnidoxy titled The Principles of Cosmic Exploration. Expology, in addition to dealing with space exploration, also encompasses a large variety of topics relating to Astronism and metaphilosophy, such as the differences and relationship between philosophical and scientific astronomy, the Astronist approach to reinterpreting and recategorising astrology, as well as studying the motional nature of Astronism amongst other topics.

Geoastronomy

the discipline of study dealing with the study of the geographic distribution of Astronism according to demographics. In addition, this broad discipline deals with the difference in presence of Astronism and The Institution of The Philosophy of Astronism across different continents, regions, countries, and localities and makes comparisons between the presence, manifestations, and forms of each.

Hobbology

the discipline of study dealing with hobbies and activities associated with Astronist and Astronic culture and those hobbies which have arisen out of Astronism.

Rhemnology

the inclusive discipline dealing with a wide-ranging set of topics principally based on the concept of advancement and the introduction and formulation of the Astronic eschatology which itself includes Astronic thanatology and Astronic necrology. This inclusive discipline is encapsulated by the eighth disquisition of the Omnidoxy titled The Principles of Advancement & Eschatology.

Astronic eschatology

the major discipline of study making up an important branch of Astronism dealing with all concepts and beliefs concerned with death, the destiny and purpose of humanity, and the existence or non-existence of the afterlife.

Astronic thanatology

the subdiscipline of study within Astronic eschatology dealing with the contemplation and study of death from an Astronist perspective, particularly the events leading up to one's death and the processes involved in a person's death rather than considering what occurs after one's death which remains the territory of eschatology.

Astronic necrology

a subdiscipline of study dealing with comparisons between different funerary traditions and the study of funerary traditions and their meanings in general from an Astronist perspective rather than dealing with Astronist funerary traditions themselves.

Dysteleology

the discipline of study specifically dealing with contemplations regarding the purpose of individual human lives, the existential purpose of humanity as a whole, and the nature of the question of the purpose of life itself.

Incorporeology

the discipline of study that rationally contemplates the existence or non-existence of the soul in the context of Astronic philosophy and offers differing views on the existentiality, role, and function of the soul.

Mortology

the discipline of study dealing with the various funerary traditions omnidoxically sanctioned to be of an Astronist leaning.

Transanthropology

the discipline of study dealing with the Astronist interpretation of transhumanist beliefs and theories and also involves the incorporation of Astronist ideals into pre-existing and newly founded transhumanist postulations.

Contology

the inclusive discipline dealing with the introduction and systematic explanation of the foundations of the Astronist ethical system in addition to the Astronist approach to considering epistemology. This inclusive discipline also considers a vast array of smaller topics and contemplates on different emotions and actions through an ethical lens. Contology is encapsulated by the ninth disquisition of the *Omnidoxy* titled *The Principles of Epistemology and Ethics*.

Astronist epistemology

the discipline of study specifically dealing with contemplations regarding the purpose of individual human lives, the existential purpose of humanity as a whole, and the nature of the question of the purpose of life itself.

Astronist ethics

the major discipline of study making up an important branch of Astronism dealing with all concepts and beliefs concerned with death, the destiny and purpose of humanity, and the existence or non-existence of the afterlife.

Macroethics

the subdiscipline of study within Astronic eschatology dealing with the contemplation and study of death from an Astronist perspective, particularly the events leading up to one's death and the processes involved in a person's death rather than considering what occurs after one's death which remains the territory of eschatology.

Microethics

a subdiscipline of study dealing with comparisons between different funerary traditions and the study of funerary traditions and their meanings in general from an Astronist perspective rather than dealing with Astronist funerary tradition themselves.

Astronist social teaching

the discipline of study and branch of the philosophy and theology of Astronism dealing with various social topics and issues informing the whole Astronist ethical system, such as the topics of euthanasia, abortion, race, gender and sexuality.

Durantology

the inclusive discipline dealing with the roles, functions, and applicabilities of the two concepts and physical manifestations of space and time. This discipline also principally encompasses all discussions of scientific theories and how these are to inform and affect Astronist beliefs and theories both presently and in the future with the introduction of new discoveries. This inclusive discipline is encapsulated by the tenth disquisition of the Omnidoxy titled as The Principles of Space & Time. In addition to the study of space and time at its core, durantological study is composed to various other topics, such as the role of Astronist characters in Astronism, the introduction of the Astronic Journal, and exploring Institutional policymaking.

Institutional policymaking

the discipline of study dealing with the policies that govern The Institution of The Philosophy of Astronism and can be considered as a branch of Institutional management.

Tractology

the discipline of study dealing with the concept and physical existence of space and is contrasted with durantology as the discipline dealing with the concept and physical manifestations of time and its associations.

Quillitology

the inclusive discipline dealing with the combined contemplations of both peace and acceptance as two widely interpretable and multi-applicable concepts. This inclusive discipline is encapsulated by the eleventh disquisition of the Omnidoxy which is aptly titled The Principles of Peace & Accpetance. Other discourses within this disquisition again cover a wide range of topics from the introduction of the conception of good and evil in astronism to the forms of devotion to meteorological progeny and phenomena to the consideration and explanation of astronomical commemorations.

Atmosphericism

the discipline of study and form of Astronist devotional practices involving devotion to and concentration of terrestrial meteorological progeny and phenomena rather than cosmic progeny and phenomena.

Avicinology

the major cross-disciplinary branch of study addressed within quillitology yet also categorised within occurrology dealing with the form of Astronist practices involving the commemoration of significant and minor astronomical events.

Endrology

the discipline of study dealing with the concept of acceptance, its applications, manifestations, and all philosophical contemplations of acceptance.

Serenology

the discipline of study dealing with the concept of peace, its applications, manifestations, and all philosophical contemplations of peace.

Prerology

the inclusive discipline fundamentally dealing with the contemplation and consideration of the concepts of imagination and freedom from an Astronist perspective in philosophical terms. However, prerology extends far beyond these two concepts to address topics of a wide variety with extensive consequence for the entirety of the Astronist theological and philosophical belief system. This inclusive discipline is encapsulated by the twelfth and final disquisition of the Omnidoxy which is aptly titled The Principles of Imagination & Freedom.

Amnology

the discipline of study dealing with all contemplations and musings regarding the topic of freedom in addition to the application of the concept of freedom to parts or the whole of Astronism or the wider Astronic tradition.

Astronic soteriology

the discipline of study and approach taken by the Astronic tradition in the formulation of the soteriology of Astronism.

Cometanology

the major discipline of study dealing with the personage of Cometan, his philosophership, his role within Astronism,

and the study of the title and state of mind of Cometanhood and how that is achieved.

Cometanic ontology

the branch of Cometanology specifically dealing with the ontology of the personage of Cometan, principally considering whether one or two personas existed within him.

Initiology

the discipline of study dealing with all contemplations and musings in relation to the topic of imagination in addition to the application of the concept and action of imagination to parts or the whole of Astronism or the wider Astronic tradition.

Mystology

the discipline of study dealing with Astronist mystology involving the performance of exegeses across the final discourse of the Omnidoxy that introduces this newly formulated form of narration and genre.

The Grand Lexicon of Astronomy

The Grand Lexicon of Astronomy in no way disregards words from all other authorised dictionaries and The Grand Lexicon and the words within it, are to be utilised in addition to the words and meanings of The Oxford English Dictionary and all other authorised dictionaries of the world. The Grand Lexicon's purpose is to encourage the integration of Astronist linguistics and terminologies into The Oxford English Dictionary and all other verified dictionaries in all languages.

Aarical

Aasi'panyar'ism - also known as Larism, the denomination of The Philosophy of Astronism most predominantly adhered to in Myanmar, specifically the most urban and flat regions in the centre and south of the country.

Derivatives

Aasi'panyar'ist

Abacus - in Astronist Architecture, the flat slab of stone atop of a capital, typically featuring cosmical imagery and ornamentation.

Abaissant - to be degrading about a philosophy, or a particular philosophical concept.

Derivatives

Abaissantly

Abandonment - in an Astronist contextualisation, the process and action of an Astronist business abandoning a particular market or industry in which it has seen repeated decline and divestment, especially after a stalwart campaign to change such circumstances.

Abarticulate - in Astronist Philosophy, the displacement of a philosophical concept from its original position, especially moving from one discipline to another.

Derivatives

Abarticulating
Abarticulated
Abarticulation
Abarticulational
Abarticulationally
Abarticulative
Abarticulatively

Abasement - in an Astronist contextualisation, when a individual, a group, or an organisation mocks The Philosophy of Astronism, often considered a level below blasphemy.

Abasourdissement - to be bewildered about a philosophical concept.

Abatement - in an Astronist contextualisation, the occurrence wherein anti-Astronist sentiment becomes less intense or widespread.

Abatement - a feeling of a loss of hope and courage towards one's understanding of their philosophy.

Abberation - in Astronist Philosophy, the instance and process in which there exists a major defect in one's philosophical argument formed by their observation of the subject.

Derivatives

Abberative
Abberational

Abbreviation - in Constitutional Terminology, to abbreviate phrases, especially titles of agencies, organisations, and companies.

Abdicate - in an Astronist contextualisation, the official action taken by an ambassador, representative, or another executive individual working within The People's Constitutional Company of Jesse Millette, wherein they officially cease their role, and this is typically done before The Grand Astronist Congress.

Derivatives

Abdication
Abdicator

Abe - in Astronist Philosophy, the philophon for the discipline of Abettology.

Abemise - in Astronist Philosophy, in a philosophical argumentation, to digress from the present concept of discussion.

Aberrant - in an Astronist contextualisation, a course of business practice, or administrative operation which deviates from the traditional and accepted course of action, especially in the response to a problem.

Derivatives

Aberrance
Aberrancy

Aberration - in an Astronist contextualisation, a departure in astronomical terms from the expected, or firmly presumed outcome.

Derivatives

Aberrational

Aberrationism

- a school of thought within The Philosophy of Astronism focusing on any idea that departs from the traditional, or dogmatic Astronist philosophy, especially one that does not base its concepts on the words of The Grand Centrality.
- in sentientology of Astronist Philosophy, the philosophical orientation associated with the Aberration Principle.

Derivatives

Aberrationist

Aberrationistic

Aberration Principle - in sentientology of Astronist Philosophy, the belief upheld by the Astronist Tradition and acting as one of the central attributes of The Philosophy of Astronism characterised by the belief that the discovery of sentient life is inevitable and that all institutions and individuals opposing and doubting sentience should patiently wait for the institutions that are pro-sentient to conduct their works in the effort of discovering sentient life on worlds other than The Earth.

Abet - in an Astronist contextualisation, the action of individual whom encourages another to do something criminal against The People's Constitutional Company of Jesse Millette.

Derivatives

Abetment

Abettor

Abêtissement - non-thinking, or not concerned; a sense of mindlessness towards philosophical contemplation in relation to illogicality.

Abeyance - in an Astronist contextualisation, of a role, building, room, or even a business depending upon the circumstances, which is in a state of temporary disuse, or suspension.

Ability - in Astronist Education, the potential for a student to perform a particular subject area to which they have been assigned due to their interest, enthusiasm, ambition, or their natural talent for the subject.

Ability Grouping - in Astronist Education, the process of grouping together individuals with interests and talents in similar subjects areas, or in subject areas that suit one another.

Abiology - an Astronist Subject dealing with the study of all the inorganic and inanimate things of The Cosmos, such as the planets, the asteroids etc. in contrast to the study of the organic and animate entities of The Cosmos.

Derivatives

Abiological

Abiologic

Abiologically

Abiologist

Abiosis - in Spacial Psychology of Astronist Philosophy, the absence of life on a particular world and the psychological impacts on the human mind knowing that there exists no life, or very little life on which the planet they reside.

Abject - in an Astronist contextualisation, a currently bad circumstance or event occurs within The People's Constitutional Company of Jesse Millette which is experienced to its highest degree.

Derivatives

Abjection

Abjectial

Abjure - in an Astronist contextualisation, the action, typically officially taken after one's abdication from their executive role within The People's Constitutional Company of Jesse Millette of solemnly renouncing their executive obligations to the Company.

Derivatives

Abjuration

Abjurer

Abkhazian Astronism

- the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Republic of Abkhazia.
- the denomination of The Philosophy of Astronism most predominantly adhered to in the region of Abkhazia, by the Abkhaz peoples.

Ablepsy - in Astronist Philosophy, not to be confused with anopsony, one's inability to envision beyond their current means, or the current state of the world and the abilities of humanity, typically used in a derogatory fashion.

Derivatives

Ablepsia

Ableptical

Ableptically

Ablutory - in Naology and Astronist Architecture, a room within an Astronist building of any sort that is used for washing and toilet facilities.

Derivatives

Ablutories

Ablutorial

Abnegationism - a school of thought of The Philosophy of Astronism focusing on the ideas of renunciation interpreted from Astronist thought, especially the rejection of societal traditions.

Derivatives

Abnegationist

Abnegationistic

Abondamment - in Astronist Philosophy, a philosophical discipline that sees prolific popularity in its study.

Abonnement - subscription to a philosophical magazine.

Abouchement - in Astronist Philosophy, one philosophy that is linked to another by its theme and nature.

Aboundment - in Astronist Philosophy, the instance and fact in which somethings abounds.

Aboutissement - in Astronist Philosophy, the outcome of a philosophical argumentation.

Abridgement - a shortened version of an Astronist Founding Work, especially for commercial purposes.

Derivatives

Abridgemented

Abridgemental

Abrogation - in Astronist Philosophy, an official action of The Institution of The Philosophy of Astronism involving the abolition, or repeal of a philosophical concept, theory, or branch from the Astronist Tradition.

Abrutissement - in Astronist Philosophy, one's feeling of exhaustion after a philosophical argumentation.

Abscido - in Astronist Philosophy, to separate one philosophical concept from another.

Absconditus - in Astronist Philosophy, a philosophical concept that was once previously hidden within another philosophical concept.

Absention - in Astronist Philosophy, the instance in which a philosophical concept is absent from a philosophical argumentation, but upon reflection, should have been included.

Absolute Calefact - in Astronist Philosophy, the appellation for the opposite to Absolute Zero meaning the highest temperature physically possible in The Cosmos.

Absolute Centrality - in Cosmic Art, as a derivation of Astronist Art, the centrepiece within the core of the galaxy, also known as the galactic centrality, and is the position of the galaxy's black hole.

Absolute End - in Astronist Philosophy, especially the discipline of ultimatology, an alternative appellation for an apogenesis for either an individual entity, or The Cosmos itself.

Absolute Extremity - in obliviology of Astronist Philosophy, an alternative appellation for a black hole as it is considered to be more accurately descriptive of the entity and its functionalities.

Absolute Oppositism - in Astronist Philosophy, that which is an oppositism to something else, but it must be so in every aspect of the applied entity.

Absolute Void - in Astronist Philosophy, an appellation for the instance in The Vacuological Cosmos during which The Cosmos is absolutely empty of all existence and The Cosmos is therefore a vacuum.

Absorptionism - a school of thought of The Philosophy of Astronism relating to the process of a larger school of thought absorbing a smaller school, and the subsequent domination of the larger school.

Derivatives

Absorptionist

Absorptionistic

Absque - in Astronist Philosophy, without meaning, or significance.

Abstract Abundance - see Mental Abundance.

Abstractionism - a school of thought of The Philosophy of Astronism focusing on the consideration of an idea or theory independently from its associations, or attributes, and may also relate to the belief in the removal of art from philosophical theory.

Derivatives

Abstractionist

Abstractionistic

Abstract Astronism - part of Divisionology, and also known as Conceptual Astronism, the first sector of the four Levels of Astronism relating only to the concepts, ideas, and abstract systems of the philosophy.

Abstruse - in an Astronist contextualisation, a document made and published by The People's Constitutional Company of Jesse Millette typically dealing with a subject of law, finance, business, or philosophy which is difficult for the average person without prior knowledge to understand.

Derivatives

Abstrusive

Abstrusion

Abundance Inability - in Astronist Philosophy, the appellation for the point at which one human mind cannot comprehend abundance passed said point and in a wider sense, contemplates the stage at which comprehension becomes incomprehension.

Abundancy - in Astronist Philosophy, an instrument of study measuring the quantity of something, especially a celestial, as quantified by the proximities between such celestials.

Derivatives

Abundancies

Abundantia - in Astronist Philosophy, relating to a multitude of different disciplines of The Philosophy of Astronism.

Abundology - a small branch of study within Astronology deriving from Astronist Philosophy, that primarily focuses on the concept of abundance in philosophical means.

Derivatives

Abundological

Abundologically

Abundologist

Abutor - in Astronist Philosophy, to make full use of something.

Acabit - in Astronist Philosophy, relating to similarity in conceptuality.

Academia - in an Astronist contextualisation, the pursuit and achievement of an Astronist education, as well as all the buildings, examinations, and companies part of the Astronist education system, when referred to collectively.

Academicisation - another term for professionalisation.

Derivatives

Academicise

Academicised

Accaparement - in Astronist Philosophy, the technique in philosophical argumentation of cornering someone through answering all of their questions and not allowing any of their arguments to succeed.

Accede - in an Astronist contextualisation, of an individual, assume an executive, ambassadorial, senatorial, or representative role within The People's Constitutional Company of Jesse Millette, especially shortly after someone's abdication from the role.

Derivatives

Acceder

Accedial

Accelerating Motionality - in Astronist Philosophy, the appellation for that which moves at an accelerating speed, either physically or conceptually.

Acceleration - in an Astronist contextualisation, the rapid and typically unexpected increase of manufacturing a particular product due to a sudden increase in demand, and is always inevitably followed by a deceleration.

Accelerationism - in Astronist Philosophy, as defined from Astronist Accelerationism which is a wing of governance of Astronarianism, but instead within omnology, the orientation and school of thought characterised by the belief that The Cosmos is not expanding at a constant rate, but at an accelerating rate.

Derivatives

Accelerationist

Accelerationistic

Accelerity - in Astronist Philosophy, a twinstrument, the counterpart of which is known as decelerity, and measures the extent to which something accelerations, primarily in a physical sense, but also in a conceptual sense.

Derivatives

Accelerities

Accendition - in Astronist Philosophy, the act of illuminating someone towards a new philosophical concept that they had not yet been aware of.

Derivatives

Accenditional

Accenditionally

Accentuate - in an Astronist contextualisation, of a business, a policy, or a news story about the Company, purposefully make more prominent so more people will see it, or know of it.

Derivatives

Accentuation

Accentuatory

Acceptancy - in an Astronist contextualisation, relating to the practice of the acceptance of hardships, a major precept of Astration.

Acceptation - in an Astronist contextualisation, relating to a meaning of a word or phrase within The Grand Lexicon, considered to be officially understood and accepted.

Acception - in Astronist Philosophy, the sense in which something is said.

Accession - in an Astronist contextualisation, the official term reserved in usage for when an individual takes on either the role of The Vice Chairman, or The Chairman of The People's Constitutional Company of Jesse Millette.

Derivatives

Accessor

Accessional

Accessory course - in Astronist Education, a course taken that is considered secondary to the student's primary interest course, and is taken as a accompanying subject to enhance and complement their primary subject and interests.

Acclaim - in an Astronist contextualisation, the praise received by The People's Constitutional Company of Jesse Millette for something in particular that the Company either orchestrated itself, or was fundamental in the achievement of.

Derivatives

Acclamation

Acclimatisation - in an Astronist contextualisation, the official process of The People's Constitutional Company of Jesse Millette, or one of its subsidiaries wherein the Company, or subsidiary must reorganise itself, or adjust itself to suit a new state of affairs in the country in which it is conducting operations.

Accoler - in Astronist Philosophy, to discuss two different philosophical concepts in simultaneity.

Derivatives

Accolering

Accolered

Accolerer

Accompaniment - in Astronist Ornamentation, two or more patterns of the same ornamentation which are separated, but could be joined and matched to form a perfect larger pattern.

Accompicence - in Astronist Philosophy, a celestial formation or event that is considered to be complete, perfect, or achieving the peak of its ability.

Derivatives

Accompicent

Accompicently

Accompicency

Accompicencial

Accost - in an Astronist contextualisation, a bold, swift, and somewhat aggressive course of action taken by The People's Constitutional Company of Jesse Millette in the event something highly threatening to Company operations.

Derivatives

Accostation

Accostal

Accouchement - in an Astronist contextualisation, specifically in Cosmic Mystology as part of wider Mystology, relating to the cosmical births of Jesse, and The Four Protectors.

Accouplement - in Astronist Architecture, the adjoining structure between the top of two archways, typically cosmically ornamented, or may relate to any archway with two columns on either side.

Derivatives

Accouplements

Accoutre - in an Astronist contextualisation, a term reserved solely for referring to The Chairman of The People's Constitutional Company of Jesse Millette wherein they are clothed, or equipped in something noticeable, or impressive, especially during an important speech, or address.

Derivatives

Accoutrement

Accredit - in an Astronist contextualisation, the action wherein The People's Constitutional Company of Jesse Millette, or one of its subsidiaries, gives credit to an individual whom has been commissioned to do work for the Company.

Derivatives

Accreditation

Accrediture - in Astronist Education, the awarding of credit and certification to a student that has achieved a certain degree of qualification in a subject from an Astronist Phrontistery.

Derivatives

Accreditures

Accrete - in an Astronist contextualisation, the standard official business policy and aim undertaken and expounded by The People's Constitutional Company of Jesse Millette to all subsidiaries in all markets that Company growth through gradual accumulation should be the universal business practice.

Derivatives

Accretion

Accretive

Accretional - in Astronist Philosophy, relating to the occurrences of accretion in different instances throughout The Cosmos.

Accretionism - a school of thought of The Philosophy of Astronism focusing on the concept that any type of entity must see gradual growth from immaturity to maturity, and that only something of Divine nature can exist wholly at all times.

Derivatives

Accretionist

Accretionistic

Accroissement - a philosophy that is experiencing growth in the number of adherents.

Accumulation Culture - in Astronist Philosophy, the appellation for the culture of society focused on the accumulation of certain objects and concepts such as the accumulation of money, food, drugs, and alcohol for the purposes of escapism with two philosophical schools of thought to developed to approach this known as definitivism and tolism. The accumulation culture is considered to be the primary causality for the depression of humans and the breaking apart of the societal structure and it is Astronarianism that the Astronist Tradition works to develop to address such societal degradations.

Accumulationism - in Astronist Philosophy, the school of thought addressing the Accumulation Culture, and the nature of definitivism and tolism, as well as the nature of accumulation in general and its psychological consequences on the human mind.

Derivatives

Accumulationist

Accumulationistic

Accumulative Cosmology - in Astronist Philosophy, a type of cosmos maintaining that the progenies of The Cosmos exist as they do because of an accumulation of elements to form the cosmical progeniture.

Accusation - in an Astronist contextualisation, the official term for when a individual, a group, or an organisation makes a claim against the Company, typically when the executives of the Company have to get involved to resolve such a matter.

Accusator - in Astronist Philosophy, an individual that accuses a person of distorting a philosophy into something that it is not considered to be.

Acentric

- in an Astronist contextualisation, a type of subsidiary that takes the official stance of not centring its practices, principles, and philosophies with those of The People's Constitutional Company of Jesse Millette, but only named so when this has been accepted by the Company itself for a reason deemed as valid.
- in Astronist Philosophy, also known as decentericity, a disbelief in the notion that the centre of something, whether it be physical or abstract, is right to be corresponded to the highest level of importance.

Derivatives

Acentricity
Acentrical
Acentrically

Acerbic - in an Astronist contextualisation, a sharp and forthright tone adopted by a speaker for The People's Constitutional Company of Jesse Millette, or by an executive of the Company.

Acharnement - in an Astronist contextualisation, a derogatory term used to describe an individual, a group, or an organisation that has repeatedly attempted to attack The People's Constitutional Company of Jesse Millette, or one of its subsidiaries.

Derivatives

Acharner
Acharnal

Achord - in Astronist Music, to provide a musical idea with chords, typically splendoras in order for them to become achorded splendoras.

Derivatives

Achording
Achorded
Achordation
Achordal

Achorded splendoras - in Astronist Music, a splendoras that is played in chords rather than in separate consecutive notes.
