[2:113:4] Infinity is a concept and it shall remain as that forevermore because something that is infinite cannot ever be manifested in its entirety and therefore it cannot ever all be seen and so infinity is encapsulated as a concept, but this does not mean that it cannot exist or that it is inferior to something that can be manifested; this can be considered one of the many aspects of the nature of its infinity; its inability to be manifested.

[2:113:5] The concept of infinity holds an integral place in the Astronist cosmology, which itself rests at the heart of the Astronist tradition of philosophy, because although nothing infinite can exist within The Cosmos and The Cosmos itself is the direct opposite to infinite, The Universe, as one of the three essential existence of the Astronist cosmology is infinite by its core nature.

[2:113:6] The infiniteness of The Universe demonstrates a position for infinity; the notion that it does not exist cosmically for that which is cosmic is limited, but also that it does not exist divinely, as that which is Divine is beyond all parameters, but instead it exists as a middleground concept; one that exists between two extremities, of which we are at limited end and The Divine is the transcendent end.

[2:113:7] Meanwhile, The Universe exists between these two extremities and its core nature is considered to be infinite so in the Astronist cosmology, we understand that infinity is in fact not an ultimatum for it is not Divine and of course it is cosmic, but instead it is medianic, which demonstrates a peculiarly different way of perceiving infinite for pre-Astronistically, infiniteness has always been considered an ultimatum.

[2:113:8] For the insignificance of cosmic minds, it is no surprise that infinity has always been provided with this ultimatory quality and it is perhaps for this reason that many paradoxes have developed from humanic contemplations of the infinite.

[2:113:9] According to the Astronist cosmology, there cannot possibly exist an infinite amount of anything within boundaries of The Cosmos because The Cosmos is considered to be ultimately limited by its own core nature and therefore anything that is limited can neither be infinite itself nor can it hold within it anything that possesses infinite properties because The Cosmos itself disinfinite.

[2:113:10] Disinfinity, therefore, is just as important to the development of the Astronist cosmology as it pertains to the nature of all cosmoses, not just The Cosmos in which we reside; to be cosmic is to be disinfinite, and therefore disinfinity is synonymous with The Cosmos as one of the three essential existences of the Astronist cosmology.

[2:113:11] There is a third term to introduce herein that forms the third approach to understanding infinity which is transinfinity which is the type of infinity associated with divinity and The Divine as one of the three essential existences of the Astronist cosmology.

[2:113:12] As omnitioned, The Divine is without measure and so it is without infinite properties but The Divine is not considered to hold properties of measure because it is immeasurable therefore to apply the parameter of infiniteness to The Divine does not describe The Divine in the correct way in alignment with the Astronist cosmological understanding of The Divine, hence the introduction of transinfinity.

[2:113:13] In addition to disinfinity and infinity itself, transinfinity is a form of infinity that can be considered to describe a particular transcendence from all parameters and measurable properties; even though infiniteness is may not be able to be measured itself, it is still considered to be parameter for measure and therefore it remains inapplicable to The Divine.

[2:113:14] Transinfinity pertains to a state only in which The Divine resides that extends beyond measurability and exists not as a

[2:113:15] To apply these principles of infinity to an omnitological context, The Omniverse is able to be infinite because it resides within and makes up The Universe which is itself infinite so if something is infinite then that within it is able to also hold infinite properties, hence the reason why there can exist an infinite amount of cosmoses in The Omniverse in The Universe.

[2:113:16] To address the other existences of the Astronist cosmology, appellatively The Chaos, The Betwixity, and The Mytra, the middle one of these three is considered to be a disinfinite existence because The Betwixity resides within The Cosmos and all other cosmoses as a combination of dimensionality which, due to the cosmic properties of dimensionality, is ultimately disinfinite by its nature.

[2:113:17] Meanwhile, The Chaos is considered to be a defier of infinity because the true natureity and therefore the true purposes, properties and measurability of The Chaos remain unknown and therefore whether it is infinite, disinfinite, and perhaps even transfinite, we cannot determine.

[2:113:18] Because The Chaos is a defier in the Astronist cosmology, its true extent is unknown and it is this particular element of naturity that remains the foremost problem because it is by the extent of entities, elements, and existences that we determine their naturity.

[2:113:19] We determine The Cosmos and all within it by the extent of their measurability and existentiality which we have of course determined to be ultimately limited and therefore disinfinite while also determine The Universe by its extent which resides beyond that of The Cosmos and therefore pertains to infinity.

[2:113:20] Although The Divine holds no extent because of its own divinity and transinfinity, we can determine that because of this very fact, there exists no greater extent than The Divine and so therefore we can still categorise The Divine as the ultimation because we know that there exists nothing beyond The Divine as there is no greater extent than The Divine.

[2:113:21] However, with regards to The Chaos, due to its unknown extent, this poses a serious ontological issue for we cannot know the true beingness of The Chaos due to its unknownness; The Chaos is immeasurable because we do not know its extent.

[2:113:22] We do know that it cannot hold a greater extent than The Divine because there is no greater extent than The Divine as aforeaffirmed, but we do not know whether the extent of The Chaos resides only within this singular Cosmos in which we reside, whether it resides within other Cosmoses, whether it resides within The Omniverse, or whether it exists as part of or beyond The Universe; The Chaos is The Greater Unknown of the Astronist cosmology and although we do categorise some entities within The Cosmos as part of The Chaos, such as oblivions, these are only considered to be part The Chaos for its true extent and influence remains one of the greatest mysteries.

[2:113:23] When we consider entities, elements, and existences directly according to their extents in order to derive naturity, this is to be henceforth known as extent theory and is considered to be a major instrument for philosophisation within the Astronist philosophical tradition, especially when we are considering such vastly extracosmic existences as The Universe, The Omniverse, The Chaos, The Divine etc.

[2:113:24] Finally, that which is appellated as The Mytra in the Astronist cosmology again attempts to evade measurability due to the conceptual and more spiritual nature of that which it addresses and therefore, The Mytra again is not necessarily any or either infinite, disinfinite, or transfinite and this is to be further explored within infinetics.

[2:113:25] However, the Astronist Tradition does herein maintain that the nature of The Mytra is much easier to pin down because The Mytra can either be existent only within The Cosmos or outside of The Cosmos in which we reside and therefore existent in the other Cosmoses of The Omniverse in The Universe and so by this notion, the Astronist Tradition maintains that The Mytra is either disinfinite (part of The Cosmos only) or infinite (part of all other Cosmoses and therefore universal) by its nature.

[2:113:26] Despite this stance from the Astronist Tradition, there does exist a branch of Astronism that is to be known as mytranism which maintains that The Mytra is actually The Divine in both a universal and cosmical form and it is by The Mytra that The Divine intercedes with the universal and cosmical existences.

[2:113:27] To challenge the Astronist cosmological and infinitesimal view that all that exists within The Cosmos must be disinfinite because The Cosmos itself is disinfinite by its own inherent nature, some may put forth that there have been discoveries of surface areas and curves that hold infinite properties.

[2:113:28] However, in defence of the Cosmic Limitation Principle, as it is to be officially appellationed, notionise that these entities within The Cosmos that have been discovered to hold infinite properties does so in only one dimensionality so there has been a discovery of Gabriel's Horn that holds an infinite surface area but a finite volume.

[2:113:29] And so, there has been a discovery of curves having infinite length yet finite areas, but the notion that an entity is infinite in one dimensionality, but not infinite in another cancels out its own infinity and therefore these proclaimed discoveries of infinite are in fact only partially infinite and therefore they are finite by their nature.

[2:113:30] An entity is possible have hold an infinite property in one dimensionality in The Cosmos, but it cannot be infinite in all dimensionalities because it is cosmical and by the Cosmic Limitation Principle, we understand that all that exists within The Cosmos must be both finite and limited by its cosmical nature.

[2:113:31] Something that is only infinite in one dimensionality cannot be described as infinite because for something to be infinite it must be so in every way; The Universe, for example, in the Astronist cosmology is infinite all possible dimensions; it is not just infinite in one version of extent.

[2:113:32] It is instead infinite in all versions of extent and it is for this reason that Gabriel's Horn and the discovery of some curves that hold infinite length but finite area, they are not considered to be truly infinite entities for they are only infinite in one aspect of the existence and that is not infiniteness; that is instead cosmicality, finiteness, and limitation.

[2:113:33] By the notion that infinity is in fact only a middleground, the Astronist philosophical tradition departs from all other pre-Astronist traditions of thought and

philosophy which ascribe ultimatum to infinity and it is perhaps in this instance that we see one of the greatest divergences of the Astronist understanding of existence and cosmology from all that is pre-Astronist or non-Astronist by its orientation for infinity is not considered to be divinity as has been explained in this discourse and as shall be further eluded to in the final discourse of this disquisition.

[2:113:34] The Astronist philosophical tradition does not considered the topic of infinity to be primarily part of set theory, mathematics, or even as part of the philosophy of mathematics, but instead considers it to be primarily territory of cosmic philosophy and also determines it to be part of wider discussions of divinity, universality, cosmicity, existentiality, chaosity, and philosophical mysteries.

[2:113:35] The instance in which a topic like this is changed to being a territory of one subject area to another by a tradition of thought is to be henceforth known as the process of reterritorialisation and this has become a common practice of the Astronist philosophical tradition throughout the development of Astronism and the writing of The Omnidoxy.

[2:113:36] Manifestations of infiniteness are also of considerable importance to the study of infinetics because the question of whether infiniteness can be manifested at all is the primary area to contemplate for infineticists.

[2:113:37] It can be understanding the Astronist approach to understanding infinity and having identified infinity as a middleground between finiteness or disinfinity and transinfinity, hence the creation of a metaphysical balance of infinity between these two extremities.

[2:113:38] We shall now conduct a full instrumentation on the topic of infinity which involves the application of all the relevant instruments of study to the notion and topic infinity in order to derive greater and deeper conclusions and notions about the nature of infinity for the further development of the philosophical discussion of infinity and infinetical instrumentations shall henceforth remain one of the foremost duties of infineticists to conduct and later discuss and subsequently compare their instrumentations with their fellow infineticists.

[2:113:39] Beginning with the instrument of abundancy, we can notionise two extremities with regards to infinity in terms of its abundance; the first of these notions is that infinity holds no abundance because by its core meaning abundance is limited while infinity is not and therefore infinity defies the very purpose of abundance and therefore abundancy is inapplicable to infinity.

[2:113:40] Alternatively, the second of these notions is that infinity has an abundancy that is both immeasurable and transabundant meaning that infinity is the highest version of abundance and therefore all abundances are derived from infiniteness for they exist as

derivations or denominations of infiniteness therefore abundancy still remains applicable to the notion of infinity.

[2:113:41] The next of the instruments of study to apply to infinity is bipolarity which, according to the Astronist Tradition, is inapplicable to infiniteness because bipolarity suggests that the entity to which it is applied holds extremities, but the very core nature of infinity suggests that it holds no extremities so therefore bipolarity remains inapplicable to infinity because an infinite entity holds no bipolarities.

[2:113:42] As we apply the next instrument of study to infinity, we understand that perhaps due to the nature of the majority of instruments of study, which largely rests in measurement, infinity's immeasurability therefore defies the logic of the majority of such instruments for again we see this with the instrument of centricity, but the inapplicability of instruments to infinity does not mean that we cannot still learn greater amounts about the nature of infinity.

[2:113:43] The application of centricity to infinity causes issues because centricity is a cosmical measurement as centricity is based upon limitation of the entity in order to locate its central point in comparison to the extent of its other dimensions, but because a hypothetical or extracosmic infinite entity holds infinite dimensions, it would be impossible to pinpoint its centrality, hence the inapplicability of this instrument to infinity, but nevertheless we have learnt more about the nature of infiniteness by the inapplication of this instrument.

[2:113:44] Therefore, we can appreciate that inapplication does not always equate to disenknowledgement for the inapplicability of an instrument to a subject is demonstrative of that subject's character which helps us further formulate delineations.

[2:113:45] The Astronist Tradition notionises that because instruments of study have been created with the Cosmic Mind of Cometan and not a Universal Mind, this is why we are seeing a higher frequency of inapplication with regards to the instrumentation of infinity because infinity is not a cosmic notion or entity because it is universal in nature rather than cosmic.

[2:113:46] The instrumentising of chaosity to infinity does, however, break the pattern of inapplicability because upon applying chaosity, we understand that infiniteness is unknownness because the true extent of something holds infinite dimensions is ultimately known, hence the chaoticity of infinity.

[2:113:47] This is one of the reasons why The Chaos is notionised as being extracosmical by its nature because the unknownness of many aspects of universal entities and concepts such as infiniteness hold chaoticity in the natures which proximates The Chaos closer to The Universe rather than The Cosmos.

[2:113:48] As we begin to apply more instruments of study to the notion and concept of infinity, we really begin to understand the concept that is to be henceforth known itself as instrumentational effectiveness which pertains to the notion that the instruments of study of the Astronist philosophical tradition, when applied, are the most effective way of derive philosophical contemplations about vast entities and concepts, and also holds that no other pre-Astronist method of philosophical delineation is as effective as the combined force of the instruments of study.

[2:113:49] With the application of the instrument of compositivity to infinity, we can delineate that something that is infinite in dimension or quality, either physically infinite or conceptually infinite, as the Tradition does maintain that there exists two forms of infiniteness, holds the potential to also have infinite abundances of entities within itself, or to hold the ability to be split into an infinite amount of composite parts and combinations of composite parts in the formation of composite collectivities.

[2:113:50] Therefore, an infinite entity is able to be composite by its nature because compositivity is not limited to entities of a cosmic nature, but with the application of cosmicality to infinity, we can fundamentally notionise that, as a foundational element of the Astronist Tradition approach to the Astronist cosmology, The Cosmos, and therefore cosmicality, is ultimately limited and therefore cannot ever be infinite itself as an entity and therefore nor can anything inside of it, or any other cosmos be infinite by physical and conceptual measure.

[2:113:51] It is important to note here that the very notion of conceptual infinity sparks a debate within the Astronist philosophical tradition as it raises the important the important question of whether conceptual infinity can be cosmical or whether it is fundamentally extracosmical and as an additionally issue, also raises the question of whether sentient thoughts are infinite or finite.

[2:113:52] Philosophies and by their nature, true philosophers, should thrive from disagreement and should enjoy when different groups of people hold different opinions from one another which is why, throughout The Omnidoxy, we have shared many different points of view that reside within the Astronist philosophical tradition that oppose the Astronist Tradition because even though the Astronist Tradition is set in its outlook for conclusive and guiding purposes, the Astronist philosophical tradition and The Philosophy of Astronism inside remain abundant of opposing opinions and they do thrive upon such opinions and I, as Cometan, do also thrive upon such instances of opinion as long as they are justified for they are not they cannot be considered valid.

[2:113:53] Returning to the topic at hand, we therefore must introduce the non-Traditional belief orientation that is to be henceforth known as suppositionism which holds that sentient thought, as a form of conceptual infinity, is the only example of infiniteness in The Cosmos because the extent and potentiality of sentient thought is unknown which therefore injects a sense of chaoticity into the nature of sentient thought, therefore inferring that sentient thought may not be completely cosmical by its nature.

[2:113:54] Opposing this position is that which is to be aptly henceforth known as traditionalism, having derived its name from the Astronist Tradition which is the prominentmost adherent of it, maintains on this issue that sentient thought is ultimately limited by its nature due to its residence within The Cosmos and therefore its existential abidance to the Cosmic Limitation Principle and concludes that the unknownness of the extent of sentient thought is due to one factor; an entity's inability to perceive its own full potentiality due to a distinct lack of knowledge because of the limitations of knowledge in The Cosmos which itself disallows a full understanding of the concept and notion of infinity itself.

[2:113:55] Therefore, traditionalists maintain that conceptual infinity does not exist inside of The Cosmos or any of the other cosmoses while suppositionists notionise that conceptual infinity can and does exist in The Cosmos, and all other cosmoses, for it exists in our own very minds for our thoughts are fundamentally conceptually infinite because they hold the potential to continue on forever without end and often, suppositionists are characterised by invoking some greater connection between sentient minds and thoughts and chaotic and/or divinical essences in order to further formulate their stance.

[2:113:56] From this exemplar, we can understand that from a simple application, or even an inapplication of an instrument of study, does lead to the development of different belief orientations and subsequent deeper explorations of the subject on hand, thus further supporting the aforeintroduced notion of instrumentational effectiveness.

[2:113:57] The next of the instruments of study to apply to infinity is a pair, the negative extremity of which is disinnemny and the positive extremity of which is innemny, but the Astronist Tradition halts this particular part of the wider instrumentation by notionising that due to infinite entities being extracosmical, the innemny or disinnemny of infiniteness as a concept or an infinite object as a physicality is not possible.

[2:113:58] This is due to the Cosmic Limitation Principle and our residence within The Cosmos and so there is no way of verifying the existentiality of that which is infinite unless we exited The Cosmos itself which is not deemed possible due to our own cosmicality according to the Astronist Tradition.

[2:113:59] The next of the instruments of study to apply to the concept of infinity is dyadicity which, when applied to infinite, formulates an interest paradox that notionises that if something is infinite then can it truly be dyadic?

[2:113:60] The answer is that it can because something that is infinite holds the potential to be all things in all possible measurable and countable dimensions which not only means that it can be infinitely large, but that it can also be infinitely small and ever single measurable dimension in between those two extremities so an infinite can be both singular, dyadic, triadic, quadric and so on so forth.

[2:113:61] This is due to phasism which approaches the measurability and general understanding of an entity by grasping that it is made up of different phases of its own existence which can be split into composite parts, known as composite phases which also represent the entity in subject just as equally as its latest or ultimate phase.

[2:113:62] By applying this phasist approach to understanding infinity, or the infiniteness of an entity we can understand that an infinite entity, due to its infinite, holds an infinite amount of phases and therefore is able to be made up of an infinite amount of composite parts and so, if it can be made up of an infinite amount of composite parts then it can also be made up of just two parts so an infinite entity can be dyadic when it is split down into composite phases by the phasist approach.

[2:113:63] To apply the instrument of eternity to infinity is one of the few instruments that corresponds as infiniteness and eternity are perhaps the same concepts in different formulations for the former pertains to infiniteness in physical dimension while the latter pertains to infiniteness in chronological dimension, or duration.

[2:113:64] It is predicated herein and now and this following principle should be applied through all instances of association of infiniteness with an entity or concept that that which is to be labeled infiniteness must be so both in dimension and duration so an entity that is infinite in scale must also be infinite in the length of its existence for its to be truly infinite and this principle, the Eternal Duration Principle, as it shall henceforth be appellated is founded herein from that particular application of the instrument of eternity.

[2:113:65] Extrinsicity/intrinsicity applied to infiniteness poses difficulty in concluding because we do not know anything else about the nature of this supposedly infinite entity because it can only exist outside of The Cosmos and therefore cannot know anything else of it; the only reason we know that it can be infinite is because it does exist outside of The Cosmos that postulation can be made as it is based upon that which we know is correct about the nature of The Cosmos from the Astronist cosmology.

[2:113:66] Therefore, we can truly ever know the full extent of the extrinsicity and intrinsicity of an entity outside of The Cosmos because our minds cannot think on such universal scales, however, what we can do is apply extrinsicity/intrinsicity to an infinite entity that we understand to be The Omniverse.

[2:113:67] The Omniverse, as an infinite entity, is absolutely essential to the structure and fundamentality of The Cosmos and all other cosmoses and it encompasses them all on an infinite, never-ending scale and therefore we see how an infinite existence/entity can be intrinsic to a finite entity such as The Cosmos.

[2:113:68] However, The Omniverse is also essential to the structure of The Universe too as we have learnt from both the Astronist cosmology and the Astronist cosmological

hierarchy so there again we see how something that is infinite can be intrinsic to the structure of something else that is infinite that it also resides within; the exploration of the peculiar structural relationship between The Omniverse and The Universe is a topic for omnitologists and general compendologists to contemplate.

[2:113:69] The focality of infiniteness and infinite entities in relation to the context of The Cosmos is actually considered to be low due to the inability of infinite entities to interact with The Cosmos due to that which is known as disconnectionism which encompasses the notion uphold by the Astronist Tradition that there exists a silencing and disconnecting barrier between The Cosmos and all that exists outside of it which in turn halts all interactions from infinite and universal entities that exist outside of The Cosmos from entering and/or interacting within The Cosmos.

[2:113:70] Therefore, the overall focality of infiniteness and infinite entities to the events that are in daily occurrence that are effecting humanity is low, but in relation to the structure, orderity, and general existence of The Cosmos, the focality of infiniteness and infinite entities is considered to be high due to the existence of The Omniverse in The Universe, the former of which collectivises The Cosmos with all the other cosmoses while the latter is the existence in which those cosmoses reside.

[2:113:71] The application of formity to infiniteness poses the question of whether infinite entities grow to be infinite or whether they always have been infinite and also closely links to the application of the comparter instruments of graduality and immediacy which contemplate whether the existence of an infinite entity does occur through slowly progressing lengthy degrees or whether such an existing entity does occur via instancy of degrees.

[2:113:72] In relation to the question that formity has raised about infiniteness, we can logically derive that if something is infinite then, by the application of the Eternal Duration Principle, must hold an eternal duration of its existence both futurally and historically for if it does not hold these two eternal chronological durations then it cannot be truly infinite because if an entity is infinite it must be so in all ways without exception.

[2:113:73] Therefore, if an entity holds historical eternal duration then it cannot grow, it must always have existed because it holds an infinite existence which also lends itself to the questions posed by the two comparter instruments of graduality and immediacy.

[2:113:74] If an entity is infinite, then it must hold infinite duration in both past and future and in all other possible temporal directions and dimensions; also, if an entity is infinite, then it must be infinite by dimension too so if an entity must always have been infinite for it to be infinite by its nature then it cannot have gradually become infinite and so, infiniteness is strictly tied to the most extreme form of immediacy.

[2:113:75] The application of the instrument of inversivity to infinity of course results in the nature of finiteness, but to apply this to the cosmical theme that lays at the heart of the

Astronist philosophical tradition, and to also apply it to the Astronist cosmology, we understand there exists a firmly drawn line whereby all that is cosmic by its nature is intrinsically finite while all that is universal by its nature is intrinsically infinite which remains the prominentmost aspect of the differentiation of the two natures of cosmicity, or cosmicality, and universality.

[2:113:76] With the application of medianity to infiniteness, we draw upon an interesting notion that is held according to the Astronist Tradition with its basis supported in the Astronist cosmology that infiniteness holds a median position between finiteness and transfiniteness which does therefore determine infinity and the quality and state of infiniteness to be medianic by its nature.

[2:113:77] Applying mysteriousity to infiniteness results in the formulation of an unknownness about the nature of infiniteness, of which there is a distinct lack of knowledge due to the universality of infiniteness and our own cosmicities, hence drawing a sense of mysteriousity that can be found in both conceptual and physical infinities and even though mysteriousity is a distinct instrument from chaoticity, it does make links between infiniteness as a state with chaoticity as a quality that is primarily characterised as being unknown by its extent which is the entire premise of infiniteness because it holds no extent.

[2:113:78] A very interest dimension is revealed about the Astronist Tradition understanding of the nature of infiniteness when we apply the instrument of orderity to infinity because by doing so we notionise that because an infinite entity is without limitation then it cannot be predicated on order like all that is cosmical and therefore the Astronist Tradition upholds the view that infiniteness and infinite entities exist without order according to the natures of the different existences within the Astronist cosmology.

[2:113:79] Upon the application of the instrument of purposivity to infiniteness, we begin to explore the core nature of what it means to be infinite; the Astronist Tradition aligns itself with the notion that the essential purpose of both the conceptual form of infinity and the physical form of infinity is to structure.

[2:113:80] The structural functionality of infiniteness remains absolutely intrinsic to the Astronist cosmology with the examples of both The Omniverse and The Universe, but even though the unknownness of the true influence of infiniteness is due to its absence of extent, we understand that infinity's role in existence is one that binds the different existences together as is demonstrated by the aforeaffirmed medianic nature of infiniteness according to the Astronist cosmology and so we can therefore conclude that the purpose of infiniteness is existentially structuring, bonding, and underpinning.

[2:113:81] The next of the instruments of study that is in need of application to the topic of infinity is sensicality which addresses the question of whether an infinite entity can be seen, touched, heard, tasted, smelt, or imagined as the main elements of human sense.

[2:113:82] The Astronist Tradition notionises that because no entity of infinite dimensions or conceptuality can exist within The Cosmos due to the Cosmic Limitation Principle, it is therefore incorrect to state that an infinite entity can be perceived by a human, or any other sentient being, by any of the forms of senses that are available to them because infiniteness cannot be perceived by a cosmic perceiver.

[2:113:83] Additionally, the Astronist Tradition also addresses in this same instance of instrumentation that with regards to the ability of sentients to imagine infiniteness is also incorrect because of our own minds' inability to perceive that which is not cosmic in fundamental nature and even that which is cosmic, such as the most extreme distances, sizes, and abundances in The Cosmos, such as the size of galaxies, the amount of stars, and the disproximities of quasars are also literally unimaginable for humans to comprehend which therefore supports nothing that if humans cannot full comprehend the further extremities of that which is cosmic in nature then we shall certainly hold the ability to perceive that which is universal, or infinite by its nature.

[2:113:84] As we now move on we come to make the application of the instrument of study of symbioticity which poses the question of whether infinite entities are monolithic/singular/without need for another entity to dependent upon by their nature, or are they symbiotic (they not only thrive upon mutual relations with other entities, but they dependent upon such relations for its own existence).

[2:113:85] The Astronist Tradition holds that the quality and instance of symbioticity is not extracosmical by its nature and therefore, to be symbiotic, an entity must first be cosmic by its nature, and so therefore, an entity that is beyond any of The Cosmoses must be either universal or divinical in nature and so it therefore cannot be cosmic and therefore is not symbiotic, but not because it cannot be symbiotic, but because it needn't require symbioticity for all that is infinite requires not other entity for mutual benefit and existence because the entity of which we speak is infinite and therefore holds an infinite amount of all that is required for it to be in existence.

[2:113:86] The penultimate instrument of study that shall be applied in this instrumentation is synchronicity and generally notionises the question of whether infinite entities can and do exist in parallel to and in sync with other infinite or finite entities?

[2:113:87] The perspective on this question from the Astronist Tradition's perspective is one of acceptance and agreement for the first part of the question regarding infinite entities existing in sync to other infinite entities because as long as those entities exist outside of The Cosmos or any of The Cosmos of The Omniverse in The Universe then that is acceptable.

[2:113:88] However, due to the universality of infiniteness and the cosmicality, or cosmicity of finiteness, the Astronist Tradition holds that two entities displaying natures of these two different kinds are not able to exist in sync or in parallel to one another because by agreeing to such a statement, one suggests that cosmicness and universalness as natures

hold no cosmological hierarchical difference which is false when applied to the Astronist cosmological hierarchy.

[2:113:89] In addition to this proposition of the previous question, the application of synchronicity also poses the question, by extension to the previous, of whether an infinite entity must always encapsulate a finite entity?

[2:113:90] The Astronist Tradition's response to this question is of course yes because, due to the Cosmic Limitation Principle, a finite entity, or a cosmic entity, cannot encapsulate an infinite, or universal entity which is a response that also remains in alignment to the Astronist cosmological hierarchy.

[2:113:91] As we further explore the application of synchronicity, we develop that which is to be henceforth known as the Infinite Derivation which is an appellation that collectivises the different questions posed by synchronicity and considers them according to their derivative natures.

[2:113:92] This is further exemplified through question of whether an infinite entity and a finite entity both reside within an infinite entity?

[2:113:93] Again, the Astronist Tradition considers the Astronist cosmology in this instances and from it, understands that both an infinite entity and a finite entity can exist within an infinite entity because those two infinite entities do not clash with one another in their proportions.

[2:113:94] We see the most prominent example of this intrainfinity (an infinite entity within an infinite entity) in the Astronist cosmology when we consider the infiniteness of The Omniverse and its existence and residence within The Universe and so the Astronist Tradition permits the notion that an infinite entity may exist within another infinite entity because that notion does not defy the Cosmic Limitation Principle.

[2:113:95] However, an infinite entity cannot even encompass another infinite entity and so it is the word encompass that makes the difference between the Astronist Tradition's acceptance and non-acceptance of these similar statements.

[2:113:96] This is because an infinite entity that exists within another infinite entity hold the same infinite proportions like The Omniverse and The Universe for the latter does not encompass the former, but instead, the only state of existence that is able to encompass infinity is transfinity and another question as part of the Infinite Derivation collectivity is that which contemplates whether an infinite entity has to exist within a transfinite entity?

[2:113:97] The answer to the question from the Astronist Tradition's perspective is no because an infinite entity, such as The Omniverse exists within The Universe which is also an infinite entity, but injecting the word encompass into this question suggests a creating, surrounding, and underpinning element for the entity that is encompassing and so

because an infinite entity cannot encompass another infinite entity because their natures are equal, a transfinite entity is the only state of existence that is able to encompass an infinite entity.

[2:113:98] The only transfinite entity to exist according to the Astronist Tradition is The Divine for that is encompassing all in way that transcends beyond the physical dimensions to which cosmicities and universalities remain bound.

[2:113:99] The application of vastity to the topic of infinity marks the final entry of this instrumentation as well as the final portion of this discourse introducing infinetics before we end this discourse with some quotes from myself as Cometan that are to be widely promulgated post-omnidoxically as those which are to be known and classified as remicants.

[2:113:100] Remicants are quotations from within The Omnidoxo that are generally not part of the main topic of a discourse and so are surceasioned from the main discourse at the end, but are expected to remain some of the most widely promulgated quotes as they typically present Astronist or cometanic values and ideas in a brief manner.

[2:113:101] Returning to our application vastity to infinity, we must come to understand that infiniteness defies dimension because if something is infinite then its dimensions are immeasurable and for something to hold dimension it must measurable, however, it is important to note that that which is infinite is not transcendent by its nature as transcendence is an element that remains exclusive to that which is divinical.

[2:113:102] Therefore, vastity, which pertains to the largeness of something in relation to its dimensions, is inapplicable to infinity because something that is infinite is not only large, but it is without conclusively measurable dimensions while something that is large certainly does have measurable dimensions no matter large it is, but even this inapplication, again, demonstrates how the inapplicability of an instrument does not pertain to any notion of its uselessness.

—

[2:113:103] The future is freedom and it is towards this that I strive.

[2:113:104] If you strike me down, I'll become the most famous martyr in history and then my memory will henceforth serve as my loudest voice.

[2:113:105] As a philosopher, I not only believe in freedom of thought, I fight for it too.

[2:113:106] Our struggles are what make us happy because they provide us with a purpose even though we may not appreciate this during the struggle.

[2:113:107] Envy is one of the most interesting emotions because it holds a duality in its nature for it is not entirely bad; there are two sides to envy, one is negative and the other is positive.

[2:113:108] The negative side of envy is jealousy which is demonstrated when a person sees another person achieve or have what they also desire or hold to be their purpose and they dislike or even hate that person because they have either achieved this goal quicker or they have achieved it in some greater way than oneself.

[2:113:109] However, it is towards positive envy that we should direct ourselves.

[2:113:110] Positive envy is inspiration and hope which is demonstrated through seeing another person achieve their ambitions or attain a possession that oneself also desires, but one takes that person's success as an inspiration and hope that they shall also achieve the same for themselves and so an admiration is formed for the other person rather than a hatred.

[2:113:111] This is how one can become happy and sustain their happiness for a longevity.

[2:113:112] Astronism seeks freedom as its highest priority even though we may align to truth to freedom, we must understand that truth can be greatest confiner of all; the unknown may be daunting, but it always for one to be free within it while truth demands order, confinement to the word, and banishes ignorance.

[2:113:113] Therefore I, as Cometan, do not consider truth to be philosophical and I do not consider it to uphold the banner of freedom.

[2:113:114] The greatest champion of freedom remains philosophy, forever has been and forever will remain.

The Natures of The Divine (Divinology)

[2:114:1] To be Divine is to see and know of existence in more than one perspective; ultimately, to be Divine is not be here within The Cosmos, nor to reside within The Universe.

[2:114:2] We shall herein introduce that which is to be known as divinology which is a fundamental discipline of study of Astronist Philosophy concerned with the contemplation of the nature, role, functionality, and purpose of The Divine from within the Astronist Cosmology and is therefore essentially forming the foundations of Astronist theology, or theology in Astronism, hence subsequently forming the first philosophical theological system.

[2:114:3] A philosophical theological system can be considered a theology of a specific kind that resides within an organised philosophy or within a philosophical tradition and is characterised by a range of different theological approaches and belief orientations that are all contemplated equally and while one or more may be considered the chosen orientations of the tradition of the philosophy, they are still not considered in such a way of dogmatism that does not outlaw discussions of the other approaches.

[2:114:4] It remains important to note that divinology, despite it being the theology of Astronism, does not form any one single system of theology for followers of Astronism to adhere to for that would formulate Astronism as a religious tradition, but instead divinology offers many different approaches to understand the nature of The Divine which individuals are then expected to explore, contemplate, debate, and decide upon what they believe is the correct belief for them; this is the core essential of philosophical theology.

[2:114:5] Furthermore, it also remains important to say that our exploration and development of divinology does not argue for or against the existence of any god for that is not a divinological premise, but more a strictly theological and religious one, but instead, divinology is limited to the exploration of the different possible natures and ways of approaching belief or non-belief in The Divine specifically.

[2:114:6] The nature of divinology is fundamentally philosophical for it remains a discipline of study of Astronist Philosophy and so it holds the plurality of beliefs, openness to debate, non-dogmatism, as well as the right and ability to challenge at the heart of all of its contemplations.

[2:114:7] Divinologists are herein and henceforth tasked with formulate essays and treatises on exploring the nature of The Divine from the Astronist cosmology at great length and each philosopher of the Astronist philosophical tradition is encouraged to develop his/her own unique or combinatory formula for divinological understanding.

[2:114:8] It is also important to briefly address the rubral of the discourse as it pertains to the plurality of the natures of The Divine rather than The Divine holding a singular nature and therefore we can understand that there exists a multitude of natures to The Divine that are both contradictory of each other, but necessary in understanding the infinity of Divine nature.

[2:114:9] Some may wonder why the Astronist philosophical tradition is developing philosophical theology, but I herein postulate that it is necessary to develop such because religious theology seems to have oversimplified and dogmatised the concept of God in such a way that narrows and inhibits our ability to conceive God in God's eternity and infinity.

[2:114:10] Essentially, the simplification of divinity has been used as a way to formulate a comprehensible understanding of divinity for human beings, but by doing this, we subordinate God from God's true omnium.

[2:114:11] Philosophical theology does not attempt to simplify, narrow, systemise, or dogmatise God and by this approach, we expand what God could be rather than attempting to taper what God is and what God isn't; principally, the Astronist version of philosophical theology is the opening of theology from its systemised and dogmatised past by approaching contemplations about the nature of God from a philosophically characteristic way.

[2:114:12] To preface our understanding of the fundamentals of Astronist theology, we must introduce that which shall henceforth be known as divine minification which is the general orientation of Astronist Philosophy on The Divine as so is not characteristic of just the Astronist Tradition, but is rather a wider predication of the entirety of Astronist thought in relation to The Divine; this type of orientation is to be henceforth known as a supratraditionalisation because it extends beyond the Astronist Tradition and resides as a common element of wider Astronist Philosophy due to its deeper entrenchment in Astronist thought.

[2:114:13] The Astronist philosophical tradition orients itself on the decentralisation of the concept of God in the Astronist approach to cosmology, ontology, epistemology, and wider philosophy for two primary reasons.

[2:114:14] The first of which due to Astronism further defining itself as being a philosophical tradition rather than a religious tradition as well as a genuinely greater association and belief in The Cosmos though ideas about divine nature, divine intercession, and divine universals are pertinent topics within divinology, but to preface our introduction of divinology, it remains important to reiterate that the general status of The Divine is significantly decentralised and we even see this demonstrated through omnidoxical chronology as this discourse resides at the end of the second disquisition of The Omnidoxy rather than at the beginning of the first disquisition.

[2:114:15] From the Astronist tradition of logic, there shall form an Astronist Methodology, and from this there shall rise a newfound ideology of organisation, politics, economics, society, and culture that redefines, reinterprets, and reinspires philosophies of old and introduces those new, and this ideology is herein and henceforth established and known as Astronarianism which shall be latterdiscussed outside The Omnidoxy, but still residing within The Grand Centrality.

[2:114:16] That which is to be known as reinspiration remains a divinological term and pertains to the idea that The Divine, if divinical intercession is indeed concurred, does intervene in the events of The Cosmos through the minds of sentient beings, to which that which is known as personal inspiration is closely related.

[2:114:17] Reinspiration is therefore key to understanding divinical intercession and interrelatedly concerns different divinologies as some reject divinical intercession, others accept the notion while others hold a stance of neutrality or disconcern with the topic.

[2:114:18] Despite divinology itself being a discipline of study relating to the nature of The Divine, divinology as a term also may be used in reference to a philosophical tradition's particular understanding of divinity and the role of such in its own cosmology.

[2:114:19] This in turn broadens the use of the term divinology by using it in a similar way to terms such as theology, cosmology, and philosophy as these terms relate both to subjects, but also they may be used to refer to a particular entity's theology, cosmology, or philosophy in addition to also referring to the subject in general and so by this notion, we pertain to the multidefinitonality of the term divinology.

[2:114:20] Divinology is a discipline of study within sanitology and is collectivised under the appellation of The Five Lost Ologies, but a divinology is a way of approaching one's understanding and interpretation of that which is known as The Divine in the Astronist cosmology and demonstrates the pluralistic nature of The Philosophy of Astronism because people with varyingly different and opposing viewpoints can all consider themselves as adherents of The Philosophy.

[2:114:21] There are a number of different belief orientations within the Astronist philosophical tradition that are used in approaching and contemplating the nature of The Divine in the formation of different divinologies and are most commonly developed through the application of different approaches to theology and theism.

[2:114:22] We shall herein define each of the omnidoxical divinologies that are recognised to exist while many more different divinologies are expected to be created post-omnidoxically with further developments to approaching wider philosophy and theology in the future as contributed to by different philosophers and theologians.

[2:114:23] As this discourse now takes a definitionalist writing style, we come to address the first of these divinologies and is that which is to be henceforth known as the monistic divinology which pertains to considering The Divine to be the ultimatum of existence rather than a subordination element of existence; in a monistic divinology, The Divine is the origin of all that exists and holds only one nature and is therefore in opposition to the dualistic divinology.

[2:114:24] Apatheistic divinology is the next of the omnidoxical divinologies and considers The Divine to be an irrelevant element to the Astronist cosmology, especially as inferior to The Universe and The Cosmos in its importance or sees no purpose or function for The Divine in the Astronist cosmology.

[2:114:25] That which is to be henceforth known as an atheistic divinology is characterised by the denial the existence of The Divine as a godly entity and does not ascribe a universal or cosmic creator role to The Divine as people who follow this divinology do not believe in a creator God.

[2:114:26] That which is to be henceforth known as deistic divinology pertains to the notion that The Divine is the uncaused first cause creator of The Universe, but does not interfere directly with The Cosmos, but the extent to which The Divine's intercession with other cosmoses in The Universe remains unknown.

[2:114:27] An agnostic divinology supports the notion that the true existence of The Divine is unknown or unknowable unlike the affirmed and provable existences of both The Cosmos and The Universe and so compares these three different forms of essential existence from the Astronist cosmology with one another.

[2:114:28] That which is to be known as henotheistic divinology, also known as divinological monolatry refers to the divinology involving the worship of The Divine as the uncaused first cause creator of The Universe while also considering both The Universe and The Cosmos to be deities worthy of worship, and also considers there to be other known and unknown forms of deities that are worthy of worship in addition to The Divine itself.

[2:114:29] Furthermore, that which is to be known as ietsistic divinology pertains to the notion holding that The Divine, by its core nature as described in the Astronist cosmology, is both undetermined due to the vagueness attributed to it and transcendent because of its residence beyond both The Cosmos and The Universe.

[2:114:30] In addition to these divinologies, that which shall henceforth be known as an ignostic divinology involves the notion that the term The Divine holds no coherent definition or remains ultimately ambiguous and therefore any attempt to clarify its nature is meaningless and so this divinology opposes the purpose of the creation of the discipline of divinology itself.

[2:114:31] Dissimilarly, that which is to be known as a monotheistic divinology pertains to the notion that The Divine is the same one God described in the Abrahamic religions and is therefore all-powerful, omniscient, omnibenevolent and intervenes in the world.

[2:114:32] Oppositistically, that which is to be known as a dualistic divinology pertains to the notion that The Divine holds two fundamental natures within it that oppose one another and therefore this divinology itself opposes the monistic divinology and is also not to be confused with the latterintroduced binitarian divinology.

[2:114:33] Kathenotheistic divinology is another of the omnidoxical divinologies and supports the notion that The Divine holds a motional nature and therefore involves worshipping The Divine by these different instances of its nature.

[2:114:34] Another divinology is that which holds an omnistic approach which involves the recognition of all divinologies despite their possible contradictions of one another.

[2:114:35] A pandeistic divinology involves the notion that The Divine becomes The Universe after its creation and therefore ceased to exist as a separate entity, thus demonstrating why The Divine does not interfere in the affairs of The Universe or any of the cosmoses existent within it.

[2:114:36] Alternatively, that which is to be known as a panpsychist divinology relates to the notion that The Divine has a consciousness, a mind, and a soul and is very closely associated with that which is to be known as a euhemeristic divinology which is the divinology holding that The Divine is a real, animate entity rather than a metaphorical one; this divinology may be incorporated into other divinologies.

[2:114:37] Panentheistic divinology is a divinology holding that The Divine pervades and interpenetrates every part of The Universe and all the cosmoses within it and extends beyond both time and space and is the divinology of the Astronist Tradition along with the transtheistic divinology.

[2:114:38] That which shall be known henceforth as a pantheistic divinology supports the notion that The Divine is identical with reality and that all things in existence are composed of all-encompassing, immanent divinity.

[2:114:39] Meanwhile, that which is to be known as a polytheistic divinology relates to the notion that The Divine is not the only creator of The Universe, but is instead one of many different Divinities that hold different abilities and functionalities in the development of The Universe and subsequently creates the divinological pantheon.

[2:114:40] That which shall be henceforth known as the theistic divinology pertains to the belief that The Divine is the supreme being that created existence and is legitimised due to the lack of anthropomorphism, its unknowability, and the transcendent nature by which it is described in the Astronist cosmology.

[2:114:41] To introduce a transtheistic divinology relates to the divinology holding that The Divine is ultimately transcendent in its nature beyond the comprehension of all that resides within The Cosmos and The Universe and proclaims that the Astronist cosmology is predicated on the notion of transtheistic thinking.

[2:114:42] Meanwhile, a dystheistic divinology pertains to the divinology holding that The Divine is not wholly good and may possibly be evil by its core nature, hence the existence of evil in The Cosmos in order to invoke the problem of evil.

[2:114:43] Two more divinologies that we shall now define are to be known the perfectionistic and the alatristic divinology, the first of which holds that The Divine is the embodiment of perfection in every possible way while the second of which recognises the existence of The Divine, but does not consider the worship of The Divine to be integral or indeed relevant.

[2:114:44] An animistic divinology pertains to the divinology holding that The Divine, as a distinct spiritual essence, is manifested as and possessed within all the entities of existence inside The Cosmos and within all the other cosmoses of The Universe.

[2:114:45] Previously mentioned was the binitarian approach to divinology which pertains to the divinology holding that The Divine is fundamentally made up of two distinct natures that are not necessarily opposed to one another and therefore remains distinct from the dualistic divinology, but continues to remain opposed to the monistic divinology.

[2:114:46] Additionally, two other approaches to divinology include the egotheistic and the liberal, the former of which pertains to the divinology holding that each of ourselves are aspects of The Divine and in doing so we make ourselves Divine by nature while the latter of which is predicated on the belief in the existence of The Divine as ascribed in the Astronist cosmology without adhering to The Philosophy of Astronism.

[2:114:47] A prominent divinology is that which is to be known as the naturalistic divinology which holds that The Divine is fundamentally caused by the forces and laws of the natural or cosmic world rather than by supernatural forces and laws and therefore supports dedivination and dedivinationism.

[2:114:48] Meanwhile, that which is to be known as a post-theistic divinology relates to a divinology that supports the notion of The Divine in the Astronist cosmology is an obsolete relic of pre-Astronist religious influence on the formation of the Astronist cosmology and therefore The Divine should not be considered as a God because the notion of God belongs to a stage of human development now past and replaced by notions of both The Cosmos and The Universe.

[2:114:49] Uniquely, that which shall henceforth be known as a philotheistic divinology relates to the divinology holding the belief that The Divine exists independently of the

teachings and foundation of The Philosophy of Astronism, or any other organised philosophy.

[2:114:50] Also, that which is to be henceforth known as a physitheistic divinology relates to the divinology holding that The Divine is a manifestation of nature and therefore supports the attribution of physical forms to The Divine and therefore also supports anthropomorphism, anthropopathism, and theriomorphism.

[2:114:51] A distheistic divinology relates to a type of divinology holding that The Divine is a real entity rather than a metaphorical one, but that all that exists within The Universe and its cosmoses will never meet or interact with The Divine, especially not as a form of eternal afterlife as is ascribed in some religious traditions.

[2:114:52] Two similar divinologies are those which are to be known as the trinitarian divinology and the tritheistic divinology, but they remain distinct from one another as the former pertains to the divinology holding that The Divine comprises of three separate and distinguished component parts as opposed to holding a monistic, dualistic, or binitarian nature.

[2:114:53] Meanwhile, the latter of which, the tritheistic approach, relates to the divinology holding that The Divine is just one of three component parts of divinity, the other two being The Universe and The Cosmos from the Astronist cosmology, and therefore remains distinct from a trinitarian view as that divinology holds that The Divine itself holds three distinct natures rather than The Divine being one of three parts of an even higher omnipotence.

[2:114:54] That which will be known as a misotheistic divinology relates to hatred of The Divine from a human (or another form of sentient) perspective and finally, that which shall be termed as mediationism, or the mediationist divinology relates to the divinology holding that The Divine regularly and plainly intervenes in the orders and events in both The Cosmos and The Universe, and in the infinite amount of cosmoses within The Universe.

[2:114:55] There are a plethora of other concepts, ideas, and notions introduced herein that pertain to The Divine and its nature, role, and functionality, both within the Astronist cosmology and outside of its context.

[2:114:56] The first of these is that which is inspired from the term theophany and is to be henceforth known as a divinophany, or divinophanism, which relates to an appearance of The Divine within The Cosmos or the notion that this could at some point occur which is in opposition to the beliefs of the Astronist Tradition which continues to notionise that The Divine interpenetrates The Universe and The Cosmos but does not intervene or appear within either of these two existences.

[2:114:57] The interpenetration of The Divine into The Universe and The Cosmos is addressed by the different aforeintroduced divinologies which hold a range of different views, but the Astronist Tradition defines divinical interpenetration from divinical intercession, of which a divinophany is a product.

[2:114:58] Divinical interpenetration pertains more towards the intrinsic nature of The Divine and its ability to pervade all that it creates meanwhile divinical intercession pertains to the notion of the physicality of The Divine enter an existential realm of its creation, the latter of which is rejected by the Astronist Tradition due to the principle of Cosmic Limitation.

[2:114:59] Up until now, we have only addressed the principle of cosmic limitation in terms of that which resides within The Cosmos and how these entities cannot escape The Cosmos into The Universe, but this principle always applies in reverse towards The Divine in a markedly different however.

[2:114:60] To reverse this principle towards The Divine, the Astronist Tradition maintains that The Divine does not enter (nominity) existences that it has created rather than for reasons pertaining to ability (can not enter) and ethicality (should not enter) and it is for this reason that the Astronist Tradition rejects the notion of divinical intercession, but does support the notion of divinical interpenetration which is considered to rest at the core of the nature of The Divine.

[2:114:61] The mutability and immutability of The Divine is one of the prominentmost elements for divinologists to contemplate and formulate positions about; the Astronist Tradition maintains that The Divine holds an immutable nature in that it does not change over the course of time because The Divine exists beyond time as time remains an element of The Cosmos and that The Divine remains eternally unchangeable not because it cannot change (ability), or should not change (ethicality), but because it does not change (nominity) by the conduct of its nature.

[2:114:62] When we consider The Divine according to nominity (does not), ability (can not), and ethicality (should not) is that which is to be known as the Tridimensionality Principle.

[2:114:63] However, in the philosophical approach to the contemplation of The Divine, it is important to develop herein opposing stances towards considering the nature of The Divine, the primary two stances of which include mutabilism and immutabilism, the former of which supports the notion of the mutable nature of The Divine while the latter supports the notion of the immutable nature of The Divine.

[2:114:64] Another area of contemplation for divinologists to focus on is the extent of the simplicity and complexity of The Divine and it is the stance of the Astronist Tradition to notionise that The Divine is neither simple nor complex for these are humanic attribution based on the ability of the human mind to comprehend and gain knowledge of something.

[2:114:65] We cannot truly know anything about The Divine for we are fundamentally cosmic by our natures and therefore our comprehensions shall never extend beyond The Cosmos into The Universe and certainly not towards The Divine, but all divinologists can hope to achieve is the application of the principles we postulate and stand by in order to formulate an understanding of The Divine for the purpose of philosophical exploration.

[2:114:66] The Astronist Tradition aligns itself with the approach that is to be henceforth known as unintelligibilism which notionises that which has just been encapsulated in the previous insentensation; that The Divine remains transcendent from all that is cosmic in such a way that the application of not only humanically originating parameters, but any cosmically originating parameter is not applicable to The Divine because The Divine can neither be measured, comprehended, or conceptualised (hence the ambiguous role of The Divine in The Philosophy of Astronism) for all that we can apply to The Divine is speculation which forms the basis of divinology as a speculative discipline rather than a manifested discipline like the majority of the other discipline within Astronist Philosophy.

[2:114:67] Alternatively, that which shall be herein introduced and henceforth known as intelligibilism as a divinological belief orientation pertains to the notion that The Divine is intrinsically simple by its nature as opposed to complex or transcendent.

[2:114:68] The exploration and development of this belief orientation shall take place post-omnidoxically, but we shall herein postulate that the simplicity of The Divine can be derived from the Astronist cosmology by the notion that to The Divine, everything is simple because The Divine created all things and so it is only our inability to conceive divinely that we may automatically consider The Divine to be complex by its nature, but it instead holds a simple nature when it is considered of itself for it is the perfect ultimatum and therefore it is only complex to those that perceive it whom are indivine themselves.

[2:114:69] In addition to this, we shall also introduce the oppositism which is to be henceforth known as intricism which maintains that The Divine is a complex entity by its nature and again, this can be derived from studying the Astronist cosmology because intricists are expected to notionise that because The Divine is all-pervading, all-creating, all-knowing, and all-transcendent by its nature, it must therefore be complex by its nature for the functionalities by it operates and the reasons for which it has created The Universe are incomprehensible to the point at which they must be considered complex by any parameter for The Divine is immeasurable which suggests its complexity by that fact alone.

[2:114:70] That which is to be henceforth known as divinological theodicy refers to our consideration of The Divine in relation to the problem of evil and the Astronist Tradition considers The Divine to be merciless by its nature due to the aforescoursed merciless nature of The Cosmos as a directly Divine entity.

[2:114:71] Therefore, The Divine is never presented as good as the anthropomorphisation of The Divine in this way is not permitted in the Astronist Tradition, hence the argument of the problem of evil becomes an invalid one to propose because of the non-empathetic and merciless nature of The Divine from its presentation in the Astronist cosmology.

[2:114:72] In order to accurately describe The Divine, The Universe, and The Cosmos's natures in this non-empathetic, merciless, and neutrally cold way we shall herein introduce the term of depadethic which is to be aforeapplied to all other instances in which this same topic has been raised.

[2:114:73] Depadethicity, also to be known as depadism, refers to the notion that The Divine and therefore The Universe and The Cosmos hold natures and characteristics that are inherently non-empathetic, merciless, and neutrally cold in relation to human suffering, evility, cruelty, destruction and yet not without the retainment of order.

[2:114:74] Therefore, this fundamentally differentiates the nature of these existences from that of human nature which is predicated on the notions of mercy, empathy, sympathy, and care for each others' feelings; it is important to note that this does not superiorise humanity, but instead emphasises the encompassing nature of the existences of direct Divinity, but also this does not mean to suggest that all the cosmoses of The Universe as ours is for others may be that which is to be described as ontothic.

[2:114:75] Ontothicity is the oppositism to depadethicity as the former pertains to an existential realm like The Cosmos and suggests that it is a caring, merciful, and empathetic existence that actively cares for the entities within it and although the Astronist Tradition does not agree with this viewpoint regarding The Cosmos in which we reside, it does concur that another cosmos within The Universe may be ontothic by its nature which would therefore further blur the notion that The Divine holds a depadethic nature.

[2:114:76] Inspired from these natures, we now introduce two dichotomised theologies, the first of which is to be henceforth known as depadotheism and the second of which is to be known as ontotheism.

[2:114:77] Depadotheism involves the notion originating from the Astronist cosmology postulating that the nature of God is fundamentally merciless, non-empathic, and neutrally cold, though not in a way that is evil, especially used in order to contrast the nature of God and the existence God has created from that of human nature.

[2:114:78] Alternatively, ontotheism notionises that the nature of God is fundamentally merciful, empathetic, warm, loving, and caring for the needs, wants, fears, and hopes of humans which is the personality of God that is most closely associated with the Abrahamic form of God, but not with the traditional Astronist form of God.

[2:114:79] Depadotheistic thinking is characterised by the accusation to other forms of theism that the attribution of human qualities such as a loving, caring, merciful, and

morally good to God is fundamentally flawed because by doing this, humans are attempting to make God become human in its nature which is a form of anthropopathism.

[2:114:80] Anthropopathism is one of the most fundamental oppositions of The Philosophy of Astronism's approach to the contemplation of the nature of The Divine and the wider Astronist theological orientation.

[2:114:81] Depadotheism is fundamentally concerned with the moral and ethical nature of God rather than the existential and interactional nature of God which is concerned by the transtheism and panentheism elements of the Astronist Tradition's theological orientation and so by this notion, the Astronist Tradition's theological orientation can be considered triadic.

[2:114:82] In order to apply process theology to The Divine, the Astronist Tradition holds that The Divine is neither merciful nor just but merciless; The Divine is neither one or many but infinite; The Divine is transcendent rather than immanent; The Divine is eternal rather than temporal; The Divine is immutable rather than mutable but that which The Divine creates is mutable; The Divine is neither simple nor complex but transcendent in such a way that it is unable to be measured by cosmically-originate parameters such as simplicity and complexity.

[2:114:83] Antianthropomorphism is the belief orientation held by the Astronist Tradition that the anthropomorphisation of The Divine should never take place not because of aniconist beliefs because there exists no sacralisation of The Divine, but instead because Astronism does not believe in anthropocentrism and the anthropocentralisation of God is not considered to be a validating element of the truth of the God written of.

[2:114:84] Another area of contemplation for divinologists to address is that which is to be henceforth known as divinogeny which concerns the creator role of The Divine and the nature of this role.

[2:114:85] The first branch of belief orientation concerning divinogeny is that which is to be henceforth known as compogenism, also known as compogeny, and pertains to the belief that The Divine has finished creating and will create no more.

[2:114:86] Secondly, that which shall henceforth be known as unigenism, and also known as unigeny, involves the belief that The Divine created for one time and shall create no more.

[2:114:87] Regenism, also known as regeny, is the third of the five branches of orientation of divinogeny pertaining to the belief that The Divine has not finished creating yet and shall continue to create but its creativity shall at some point end.

[2:114:88] Fourthly, that which is to be known as pergenism, also known as pergeny, pertains to the belief that The Divine has neither finished creating nor shall The Divine

ever finish creating while that which is to be henceforth known as disogenism, also known as disogeny, relates to the denial that The Divine created The Universe at all, or that The Divine holds not creative role.

[2:114:89] It is herein affirmed that the Astronist Tradition is aligned with the orientation of pergenism due to the notion that The Divine is infinite by its nature and so, eternal creativity is also an essential element of Divine nature.

[2:114:90] The pergenist approach to understanding Divine nature and the role of divinical creativity rests in alignment to the Astronist cosmology and it is for this reason that the Astronist Tradition aligns itself to pergenism.

[2:114:91] The Astronist philosophical tradition, despite the orientation of the Astronist Tradition itself, encourages the broadening and further development and justification of the non-Traditional orientations as well as the introduction of new orientations post-omnidoxically.

[2:114:92] As we come to the end of this penultimate discourse and so the end of this gigantic disquisition that formulates the foundations of the inclusive discipline of sanitology and assembles a major portions of The Omnidoxo itself, we now briefly address some additional concepts that hold importance in the development of divinology.

[2:114:93] That which is to be henceforth known as divinological emanationism pertains to the notion that the proof of the existence of The Divine can be derived from the first reality of the Big Bang of The Cosmos and is a notion supported by the Astronist Tradition.

[2:114:94] Divinological aseity is the notion held by the Astronist Tradition that The Divine exists in and of itself and from itself and in this way, does not interact with any other entity outside of itself and therefore involves the exploration of the ontology of The Divine which requires further development and exploration post-omnidoxically.

[2:114:95] That which is to be known as divinological impassibility pertains to another element of The Divine's nature and involves the theological doctrine that The Divine does not experience pain or pleasure from the actions of another being and is closely related to The Divine's depadethic nature.

[2:114:96] Finally and so fittingly to end this grand disquisition, we shall introduce a title provided to The Divine by the Astronist Tradition that is to be henceforth known as The Divine, The Creator which emphasises its creative role in the existence of The Universe and subsequently, The Cosmos.

[2:114:97] The Divine, The Creator is the ultimatum of existence; it is all that we are, all that we were, and all that we will be and it is from The Divine that we shall never escape for we are encapsulated in that which it has created, The Cosmos which is itself encapsulated within The Universe.

[2:114:98] The Divine is all that is known and all that is unknown; The Divine is everything we are and everything we are not; The Divine is elemental to all entities and transcendental from all entities; The Divine is beyond, above, within, without, and upon all that is exists.

[2:114:99] We study divinology, but cannot ever achieve an understanding of The Divine that we can postulate is true for that is the proclivity of religious traditions, but in philosophy, we explore, contemplate, and discuss without end and to point such towards The Divine is certainly an eternal feat to tackle.

[2:114:100] For this reason, philosophical theology is developed for the Astronist philosophical tradition notionises that philosophy, throughout its recent history especially, has not contemplated enough in a systemised way the notion and nature of God, but the Astronist Tradition is to end this trend by the introduction of both philosophical theology and divinology.

Philosophic Public Relations

[2:115:1] As another major branch of promulgative theory that remains in conjunction with strategic promulgative management, that which is to be henceforth known as philosophic public relations refers to a form of public relations initiated and practiced by a philosophical institution and this first part of the discourse introduce the different possible approaches to publicising a philosophy.

[2:115:2] This is conducted in order to form a strategic communications process through which mutually beneficial relationships are built between the institution and its various publics, including fellow institutions, governments, non-governmental organisations, companies, seekers, followers, and even averters.

[2:115:3] Maintaining the public relations of a philosophy remains the central responsibility of the institution as part of its managerial operations and as a major duty of the role of proprietorship that a philosophical institution holds.

[2:115:4] The maintenance of public relations continues to be of imminent importance to the protection and promulgation of the philosophy.

[2:115:5] The philosophical institution not only has a responsibility to manage the philosophy, but also to protect it from those whom may wish harm upon it in either an exploitative or denigrational manner.

[2:115:6] To predicate our discussion of philosophic public relations, it is important that we now list the many different possible publics of a philosophical institution and although all of these won't always be prominent prominent publics, they are also expected to play at least a minor role in the sphere of a philosophical institution and the full list is as follows.

[2:115:6a] Fellow philosophical institutions.

[2:115:6b] State leadership.

[2:115:6c] Governmental organisations.

[2:115:6d] Non-governmental organisations.

[2:115:6e] Companies.

[2:115:6f] Seekers.

[2:115:6g] Followers.

[2:115:6h] Non-seekers.

[2:115:6i] The press.

[2:115:6j] Societies.

[2:115:6k] Unions.

[2:115:6l] Donators/investors.

[2:115:6m] Institutional staff and volunteers.

[2:115:6n] Employee families.

[2:115:6o] Institutional partners (either individuals or organisations).

[2:115:6p] Academic community/institutions.

[2:115:6q] Regulatory authorities.

[2:115:6r] Local governments.

[2:115:6s] Banks and insurers.

[2:115:6t] Rendition suppliers.

[2:115:6u] Rendition distributors.

[2:115:6v] Rendition retailers.

[2:115:6w] Institutional leaders.

[2:115:7] Additionally, it is also important for us to understand the many different functions of public relations if we are to form sophisticated discussion about the subject, especially so in relation to its many functions for a philosophy in particular and these include the following as listed.

[2:115:7a] Writing.

[2:115:7b] Media relations.

[2:115:7c] Social media interface.

[2:115:7d] Planning of public relations programmes, special events, press conferences etc.

[2:115:7e] Counselling.

[2:115:7f] Researching.

[2:115:7g] Publicity.

[2:115:7h] Marketing communications.

[2:115:7i] Organisational relations.

[2:115:7j] Follower relations.

[2:115:7k] Employee relations.

[2:115:7l] Government affairs.

[2:115:7m] Investorial relations.

[2:115:7n] Special public relations.

[2:115:7o] Public affairs and issues.

[2:115:7p] Crisis communications.

[2:115:8] There exists a major branch and approach of philosophic public relations that is to be known as promulgative public relations (also known as the approach of amassmentism) states that no matter in what way the philosophy is being spoken about, it is progressive because it is letting more and more people know about the philosophy, whether this be negative or positive press.

[2:115:9] That which is to be henceforth known as reservism is another approach to public relations in the context of a philosophy which is the oppositism to amassmentism and states that what is said about the philosophy should be much more controlled and should be majoratively positive if its reputation is to be maintained and its integrity protected rather than embracing all forms of publicity as is the preference of the approach of amassmentism.

[2:115:10] There are also other approaches to philosophic public relations, one of which is focused on the principles of retentionism which states that public relations should be used as a tool to retain the followers and partners of a philosophy rather than to promulgate and attract new followers.

[2:115:11] The essential message of this short discourse calls for the establishment of an intrainstitutional public relations department that governs all aspects of philosophic public relations for the institution rather than trusting an outsourced agency to take on the workload.

[2:115:12] Outsourcing is generally rejected in all its possible forms in philosophical marketing and advertising because such agencies are not considered by the Astronist Tradition to hold the same severity of responsibility as The Institution itself and its employees do as institutional employees are only able to become employees after agreeing to the initiation and oath.

[2:115:13] It is also important to note that such a department must include employees and volunteers of all different approaches to how a philosophy is to be marketed and publicised in order to ensure that all angles are covered in the process of the marketing of the philosophy.

[2:115:14] This is because different approaches to philosophical marketing theory offer different viewpoints of elements that perhaps would not have been considered if the department was full of employees and volunteers that share the same orientations; this can be known as a principle of diversity of thought orientation.

—

[2:115:15] This discourse on philosophic public relations is further expanded beyond the introduction of the different approaches to publicising a philosophy as we also introduce many different aspects of a philosophy that have not been addressed in the previous discourse, nor any other related discourse in The Omnidoxy.

[2:115:16] A prominent dimension in the context of omnidoxicology, the discipline of study that directly deals with The Omnidoxy, is that which is to be henceforth known as pridency.

[2:115:17] Pridency is a writing style characterised by a distinct element of unrelenting optimism and pride towards discussions and mentions of Astronism and can also be appellated as Optimistic Astronism.

[2:115:18] Pridency is largely employed within The Omnidoxy, of course, and throughout the majority of Astronist literature due to the intention of such literature being the dissemination of The Philosophy which any pessimistic writings are not considered to be in alignment with the achievement of.

[2:115:19] Additionally, that which shall henceforth known as pre-establishmentarianism which again, in an omnidoxicological context, refers to the writing style of predetermination as if the establishment of The Philosophy of Astronism is in occurrence or has already occurred and can be described as a category within pridency.

[2:115:20] To pre-establish is to speak of something in the context that it has already been established in the society or environment of the context; pre-establishmentarian remains a very important characteristic of the way in which The Omnidoxy is written and the majority of other early Astronist literatures.

[2:115:21] We shall now introduce an important dichotomy of thought that is not only important within the context of promulgation and philosophic public relations, but also transcends far beyond The Omnidoxo and Astronist Philosophy itself into wider society in both philosophical and non-philosophical contexts.

[2:115:22] The first part of this dichotomy is that which is to be henceforth known as the little town mentality and refers to the often inherent and subconscious reactive mentality that hearing foreign languages spoken, seeing people of a different race or religion in one's society, or speaking of a culture foreign to the immediate vicinity of the community is uncomfortable and stirs up emotions of a defensive and unsettling nature that are not necessarily acted upon and is not to be considered discriminatory, racist, or prejudicial.

[2:115:23] That which stands oppositistically to the little town mentality is that which is to be henceforth known as big town mentality which refers to the instance of not holding a subconscious reactive mentality when a foreign language is heard, or when one sees a person of a different race, culture, or religion in the society in which one resides, usually due to the normalisation of such elements through generations of integration.

[2:115:24] The process of globalisation, diversification, and pluralisation in a society is considered to be related to these two mentalities with the little town mentality existing as the inevitable precursor to the big town mentality; these two mentalities may also be applied to the context of the entry of The Philosophy of Astronism into a society and the reality in which such an entry will occur.

[2:115:25] That which is to be henceforth known as recognitionism and refers to the advocacy for the establishment and classification of philosophies in a similar way to religions by the government, the primary benefits of such an approach include that the government may subsidise such philosophies and such philosophies can receive protection from persecution by the government and other groups.

[2:115:26] Oppositistically to this approach, that which is to be known as the approach of nonrecognitionism refers to the intended absence of the advocacy for philosophies to be established and classified by the government of a country by the institution managing the philosophy.

[2:115:27] The major benefits of nonrecognitionism are that philosophies are able to act with much greater autonomy and much less oversight and regulation from the government unlike religions and this is expected to be the most popular approach for The Institution of The Philosophy of Astronism to take, especially during its initial entry into a new country, especially one with a partially hostile government.

[2:115:28] In the majority of traditions of religion, the activity of the spreading of the religion by the actions of its followers is provided with a prominent place and this is no different for post-Astronist philosophies.

[2:115:29] To introduce this activity in the context of Astronist Philosophy, it is to be henceforth known by three different appellations including to Astronise, astronicism, and astronosity.

[2:115:30] Astronisation involves a group's commitment to the act of publicly speaking of Astronism or actively disseminating Astronism by spreading awareness about its ideas, principles, and practices to as many people as possible, especially either through public debate, speeches, or via digital promulgative methods.

[2:115:31] This is defined from promulgation which is organised and funded dissemination enacted by The Institution of The Philosophy of Astronism and remains synonymous with the act of tirition, yet tirition is particularly focused on individual efforts to promulgate rather than by groups.

[2:115:32] The next portion of this section of the discourse shall pertain to the chronology or cycle of existence for a post-Astronist philosophy with the first stage of such a cycle henceforth known as ensolution.

[2:115:33] Ensolution pertains to when a philosophy is considered to have been historically officially started, founded, or constituted according to an institution, usually coinciding with the writing of the constitution of the institution that manages and holds proprietorship it, but this is not always the case as it is often the writing of the founding text that is associated with the ensolution of the philosophy.

[2:115:34] Relating to the opposite end of the cycle of existence for a philosophy, we come to the circumsolution which pertains to when a philosophy officially ends its activity, usually announced by the institution that holds proprietorship for it and coincides with the institution's deconstitution.

[2:115:35] Initially, as part of the state of circumsolution, the philosophy becomes dormant for ten years and if it does not reconstitute itself within this period, either under the previous institution or a new institution, then it becomes officially extinct.

[2:115:36] Institutionalism in an Astronist context refers to the principle that The Institution of The Philosophy of Astronism is predicated upon and this upholds the notion that a post-Astronist philosophy must have an incumbent institution holding its proprietorship and management for it to be considered active which is one of the most defining elements of a post-Astronist philosophy and is predicated according to the Astronist understanding of a philosophy.

[2:115:37] That which shall henceforth known as prosubscription, or a prosubscriptive, or prosubscriptivist philosophy refers to when a philosophy has followers, but does not have an institution that manages and holds proprietorship for the philosophy and is therefore

not predicated by an Astronist structure of philosophy and can be considered as the opposite to institutionalism.

[2:115:38] Prosubscriptionism is therefore the belief orientation opposing institutionalism and holds that a philosophy doesn't need an institution to manage it and hold proprietorship for it to be considered active because all it needs are followers and is largely a pre-Astronist structure for a philosophy and crucially, it is not considered to be a characteristic for an organised philosophy.

[2:115:39] The question of debate here is whether a philosophy practically requires an institution to manage it for it to be considered active which pertains to questions about what the most important aspect of a philosophy is; its followers, its contents, or its institution?

[2:115:40] What is the main defining aspect of an active philosophy? What is the main trigger for a philosophy's deconstitution and circumsolution? Lack of followers, collapse of its institution, or lack of funds to operate? This is strictly considered to be an important debate for metaphilosophers address and one that is expected to continue on throughout the history of Astronist Philosophy.

[2:115:41] Furthermore, there are two category types to consider here that remain relevant to this topic, the first of which is an active philosophy which pertains to a philosophy that is constituted according to an institution that holds a responsibility of proprietorship to manage it and therefore this designation is not predicated on any specific number of followers, or any specific amount of contents.

[2:115:42] The second of which is a dormant philosophy which is a philosophy that has been deconstituted and exists in the period of ten years directly proceeding its deconstitution, either waiting to be reconstituted or to be designated as extinct.

[2:115:43] Deconstitution is a long process that is similar to the process involving the dissolution of any organisation but of course, deconstitution in particular concerns itself with the dissolution of a philosophical institution that involves

[2:115:44] The deconstitution of a philosophical institution shall generally involve institutional employee and volunteer notification and discharge and all other internal operators and parties which shall be followed by the Statement of Deconstitution which is an extrainstitutional document announcing the institution's deconstitution to all external parties.

[2:115:45] After the Statement of Deconstitution has been submitted to the public, the Final Statement of Institution will be written which shall involve a final account of all financial and operational resources and to where these shall be directed upon the completion of the deconstitution of the institution.

[2:115:46] Also involved with the deconstitution process is the closing of all the accounts that the institution possesses with various third parties, the removal of the institution from governmental records and reregistering it as a deconstituted entity, as well as the closing down of all communication channels, including website, email accounts, and social media pages and further to this, all files of the institution must either be cleaned so that they are no longer available or vested to the responsibility of a related entity and in the case of Astronism, this would be the Astronism Archive as it remains a semiautonomous entity from The Institution of The Philosophy of Astronism and would therefore not be deconstituted if The Institution were ever to be.

[2:115:47] Specialised individuals that are to be known as deconstitutionists are omnidoxically and constitutionally vested with the responsibility of managing the process of the deconstitution of The Institution, but these same individuals are also expected to hold other specialities and offices within The Institution when they are not required to deconstitute; the Institutional Leader is herein announced as a deconstitutionist by default upon his or her ascendance to office.

[2:115:48] That which is to be known as the Leader's Finality refers to the last stage of the institutional deconstitution process and involves a television broadcast lead by the Institutional Leader in which he or she speaks of the philosophy and its institution for the final time and confirms the successful deconstitution of the institution.

[2:115:49] Of course, even after an institution has been deconstituted, there still remains a chance for it to be reconstituted and this process is to be known as institutional reconstitution and the group or the individuals that are involved in this process of reconstituting a philosophy after its dormancy are to be known as reconstitutionists.

[2:115:50] That which is to be termed as an extinct philosophy refers to a philosophy that has passed through a ten year period of dormancy after being deconstituted and has not been reconstituted during this time and so is considered to be officially extinct; that ten year period is to be henceforth known as denaration.

[2:115:51] This does not mean that it doesn't have followers which, from a proscriptivist viewpoint, means that it can still be designated as an active philosophy, but it just means that it has been without an incumbent institution to manage it for more than ten years and by Astronist account, it is to be considered extinct because due to the principle of institutionalism, a philosophical institution is not considered to be complete without an incumbent institution.

[2:115:52] There are herein introduced two terms that, to untrained minds, may seem synonymous with one another and include reconstitution and that which is to be known as a philosophical rebirth.

[2:115:53] To clarify, a philosophical reconstitution refers to the processes involves in either restarting a previously dormant institution, restoring its proprietorship, and establishing its organisation and operations.

[2:115:54] Meanwhile, a philosophical rebirth involves a specific circumstance of a philosophical reconstitution of a philosophy after its designation as being extinct rather than during the institution's denaration, or period of dormancy.

[2:115:55] That which is to be henceforth known as reconstitutionism refers to the belief orientation holding that the reconstitution of a philosophy is the superior way to revitalise it rather than simply the rearrangement of its contents, or its reappellation.

[2:115:56] Reconstitutionism calls for the entire rewriting of previously used constitution and sees other aspects such as the reemphasis of certain contents or the reappellation of the philosophy to be secondary actions in comparison to the writing of the philosophical institution's constitution.

[2:115:57] As the final element that deals with the chronology of a post-Astronist or post-Astronist philosophy, we come to that which shall be henceforth known as rebirthism, a rebirthist philosophy, and a rebirthist institution.

[2:115:58] Those whom are to be henceforth called rebirthists are a group that endeavours to rebirth a philosophy after its extinction, usually by reconstituting the philosophy, but they often go beyond this by changing the philosophy from its forms before its extinction due to beliefs that such forms caused its extinction in the first place.

[2:115:59] Rebirthist philosophies either hold close proximity to their pre-extinction forms or hold no resemblance at all yet they may still continue to use the same appellations to refer to the philosophy.

[2:115:60] The development of rebirthism as a belief orientation is expected to be conducted post-omnidoxically and the Astronist Tradition expects there to be many offshoot branches of Astronism that appellate themselves as rebirthist and are therefore non-Institutional branches of Astronism meaning that they have forsaken the role and proprietorship of The Institution of The Philosophy of Astronism, though they are still considered to be branches of Astronism.

—

[2:115:61] That which is to be known as prettification is herein introduced as a form of cosmic devotion that involves decorating a place, a rendition, or an ornament with flowers, orreries, ornaments of cosmic progeny and phenomena, placing works of art nearby, or completing a performance in a specified place as a form of decoration.

[2:115:62] Prettification is expected to be a popular form of cosmic devotion and one that both adults and children alike can engage with and does not necessarily require an in-depth understanding of Astronism, but simply a fascination with cosmic progeny and their philosophical meanings that are expressed through Astronism.

[2:115:63] That which is to be henceforth known as multisphericism, or multisphericity refers to the strategy undertaken by Brandon Taylorian for the Taylorian family in which each family members focuses on rising to the top of the different identified spheres or industries of the world, such as philosophy, entertainment, business, sports, among others and is an important guiding principle for the establishment of the Taylorian dynasty as an influential, meaningful, and contributory family.

[2:115:64] Despite the introduction of the sopharial schedule strictly belonging to the discipline of naology, it is herein introduced to the timing of its creation; in omnidoxicological terms, any instance in which a topic is introduced into a discourse that it strictly does not belong with due to the timing of its creation and the writing of the discourse happening simultaneously is to be henceforth known as heterochrony.

[2:115:65] The sopharial schedule refers to the partitioning of the day and night into different sections that are reserved for particular actions when one visits a sopharium, of which there are three main sections.

[2:115:66] The first of these is to be known as contemplative time and to the period of the day or night in which a sopharium must remain silent for personal reflection, ideation, and devotion.

[2:115:67] The second of these is to be known as debatory time which pertains to the period in which those entering a sopharium are encouraged to watch and involve themselves with debates, usually lead by sophians or philosophers.

[2:115:68] The final of the three sections that all sopharial schedules should include is that which is to be known as speakers' time - the period in which those entering a sopharium are encouraged to listen to the statements, ideas, and philosophisations of philosophers, usually coordinated by the sophian of the sopharium.

[2:115:69] It is not omnidoxically ascribed and so it is not herein mentioned what times a sopharium should allocate these different sections to for this responsibility is vested in the sophian of the particular sopharium, or the sopharial schedule may be agreed upon between groups of partnered sophariums to create consistency of sopharial schedules within a region, or it may be ascribed in the particular naological polity that the sopharium ascribes itself to.

—

[2:115:70] That which is to be henceforth known as the process of cosmophoresis refers to a metaphorical procedure that strictly belongs within a compendological discipline, especially within filamentology, as it relates to any instances that can be described as cosmic migration throughout the history of The Cosmos; how The Cosmos itself and the largest structures within it have migrated over cosmic periods of time to form how they are in the present epoch.

[2:115:71] Cosmophoretic occurrences are categorised as being the longest procedures within and of The Cosmos, and include processes such as galactic mergence, oblivionic formation, star formation, and galactic formation.

[2:115:72] A similarly structured word though definitionally dissimilar is cosmophore; to be cosmophoric is to be a bearer of cosmic qualities which encapsulates all composite entities within The Cosmos, except for those that are considered to be unknown as to their true extent and nature, such as oblivions; ultimately, to be cosmophoric is to be limited to one's existence within The Cosmos.

[2:115:73] There are other variations of phoricity, which refers to the instance of bearing certain qualities, and the others include divinophore/divinophoric which pertains to the bearing of divine qualities, uniphore/uniphoric which relates to a bearer of universal qualities and finally, chaosophore/chaosophoric which refers to an entity's bearing of chaotic qualities.

—

[2:115:74] Crucial to the successful promulgation of Astronism and its various concepts and branches are the words and sentence structures used in the explanation of Astronism; excessive detail must be henceforth taken in the structure of explanatory sentences pertaining to anything that relates to The Philosophy in order to achieve clarity and precision in all explanations published.

[2:115:75] The writing of explanations for Astronism and anything that pertains to it is considered to be a branch of Philosophic Public Relations and The Institution is herein charged with the responsibility to appoint wordsmiths and individuals with specialities in linguistics, semantics, and morphology in order to achieve the greatest level of clarity and precision for all explanatories, as they are to be known in the plural sense, published.

[2:115:76] We shall now provide an example of the importance of the creation of the explanatories, especially so in the publicity and promulgation of a philosophy with the Standardised Definition of Astronism as it shall henceforth be appellated and known as.

[2:115:77] Astronism, also known as Kosma, Cosmism, and Sophism, is a panentheistic and transtheistic organised philosophy within the wider Astronist philosophical tradition founded by Cometan that is predicated on the notions of cosmocentricity, sentientism and reascensionism and holds its own unique cosmology with the Omnidoxy as its founding

text. Its adherents are known by a wide range of demonyms according to the philosophy's many denominations and schools of thought, but these mainly include Astronists, Astronists, Astronists, Kosmans, Cosmists, and Sophists.

[2:115:78] To write a brief definition of The Philosophy of Astronism is expected to be notoriously difficult, as is the same for any other hugely varying subject that holds multiple dimensions and dozens of central themes and concepts which proves that there certainly does exist an art and technique to the construction of explanatories so that they are understandable and receptive to the audience reading them.

[2:115:79] The Standardised Definition of Astronism can be used throughout much of the basic instances of explanation for The Philosophy, particularly on social media pages and other websites as it successfully encapsulates the two core ideas of Astronism whilst also hinting that it holds a much greater amount of concepts, elements, and derivations than can be expressed in such a brief definition.

—

[2:115:80] We shall now address various other elements and terms that relate to Astronism and philosophy in a wider sense that are herein and now compiled in order to provide them with a place within The Omnidoxy; it must be noted now that this part of the discourse is of wildly heterohomochronic nature and so readers should attempt to attribute the following terms and notions with their proper disciplines for the majority do not strictly reside within Philosophic Public Relations, but there were ideated during the time of the writing of this particular discourse, hence their inclusion here.

[2:115:81] That which is referred to philosophy in space pertains to the practice of philosophy in space rather the belief and practice of a philosophy on a planet and therefore includes practice and belief conducted aboard spacecraft and space stations.

[2:115:82] In devotology, that which is to be known as a cosmic garden refers to a type of garden reflecting a cosmic theme and is typically considered to be an expression of alignment and devotion to The Philosophy of Astronism as a manifestation of devotion.

[2:115:83] That which is known as the cosmic ocean or celestial river refers to a pre-Astronist mythological motif found in the mythology of many cultures and civilisations, representing the world or cosmos as enveloped by primordial waters.

[2:115:84] This particular motif is of significance to the Astronist cultural and philosophical sphere because of its relation to the representation of cosmic events and is considered one of the most prominent of the pre-Astronist depictions of The Cosmos and the worlds within it according to the Astronist Tradition.

[2:115:85] That which is to be classified as a Form of Astronism is that which is to be henceforth known as Folk Astronism is an umbrella term used to collectively describe

forms of Astronism that incorporate native folk beliefs and practices that usually greatly deviate from Omnidoxical Astronism or Astronist Orthodoxy.

[2:115:86] Additionally, the three different variations of being an Astronist or Astronist are also introduced herein and the first of these is to be a lapsed Astronist which is a person that no longer identifies as Astronist but once did; it is also important to note that each of these terms can also be attributed to each of the official demonyms used in the appellation of Astronism, other examples of which may include a lapsed Astronist, or a lapsed Kosman.

[2:115:87] A cultural Astronist refers to a person that identifies as Astronist but does not regularly practice The Philosophy of Astronism while a recovering Astronist pertains to a person that is returning to a greater level of adherence for The Philosophy of Astronism after lapsing.

[2:115:88] The Astronist film industry is an umbrella term for films containing an Astronist themed message or moral, produced by Astronist filmmakers to an Astronist audience, and films produced by non-Astronist with Astronist audiences in mind.

[2:115:89] These are most often expected to be interdenominational films, but can also be films targeting a specific denomination, belief orientations, or school of thought of The Philosophy of Astronism by emphasising certain ideas and themes.

[2:115:90] An important term to introduce is that which is to be known as declaration of philosophy pertains to a phrase that is said by a member of any philosophy to show either to themselves, their government or other members of the philosophy their belief and alignment to the philosophy.

[2:115:91] As part of the Forms of Astronism, there are two major derivations, the first of which is Astronist Orthodoxy which pertains to omnidoxically and institutionally aligned Astronism and the other is Astronist Heterodoxy which pertains to omnidoxically and institutionally divergent Astronism with Folk Astronism as the third Form existing as the middleground between the two.

[2:115:92] Another elemental term to the creation of the Astronist identity is Astronist or Astronist culture which is a term that encompasses all the cultural practices common to the Astronist philosophical tradition and those whom follow any one of its philosophies in the creation of distinct identity that is unique from all other people group, as well as from other philosophical, religious, and ideological followings.

[2:115:93] A person of philosophy can be described as any person who can be delineated or classified by an adherence to a philosophy, as opposed to those who do not publicly identify, or in any way espouse a philosophical alignment or lifestyle who may be known as non-philosophical, aphilosophical, and averters.

[2:115:94] That which is termed as interphilosophical dialogue refers to the instance in which two philosophical institutions that hold proprietorship over two different philosophies hold regular dialogue with one another and are in good relations with one another and hold regular interactions and communications with one another.

[2:115:95] In a similar vein of thought, that which is to be known as interphilosophical civil partnership/relationship/marriage refers to expectedly often instance in which people of two different philosophical alignments enter into a relationship or marriage with each other.

[2:115:96] In a religious context, the notion of interfaith marriage was a taboo for much of history and despite the fact that it is much more prevalent in today's modern societies, it is important to note that there exists a distinction that is to be made between philosophy and religion in this regard.

[2:115:97] Interphilosophicality in relation to marriage, civil partnerships, and relationships is a non-issue for the context of a philosophy because true philosophies should not require similarities in views for couples as religions often do encourage which demonstrates another important element of differentiation between the nature of a philosophy and that of a religion.

[2:115:98] That which is to be henceforth known as Astronist, or Astronist privilege (which may also be attributed to other demonyms) pertains to the instance in which a follower of The Philosophy of Astronism, or any of its denominations, schools of thought, or its belief orientations holds privilege in a society, especially over people of other philosophical alignments, religious faiths, or ideological alliances.

[2:115:99] This is considered to be an instance of preference by the Astronist Tradition because the Astronist Tradition cherishes and upholds principles of equality among philosophies and their followers, but this is nevertheless expected to be an occurrence in some future epoch of society.

[2:115:100] A minor Form of Astronism is that which is to be known as Prison Astronism which is derived from prison philosophy which refers to the philosophical beliefs, practices, and alignments of prison inmates, usually stemming from or including concepts surrounding their imprisonment and the accompanying lifestyle.

[2:115:101] The Astronist Tradition expects some prisoners to find solace in aligning themselves with The Philosophy with some reasons for a prisoner's alignment and practice of Astronism including the following:

[2:115:101a] Gaining direction and meaning in their life, especially when in the confines of prison.

[2:115:101b] Improving one's concept of self.

[2:115:101c] Promoting personal behavioural change.

[2:115:101d] Achieving greater levels of enknowledgegement.

[2:115:101e] Meeting other inmates.

[2:115:101f] Meeting sophians, institutional staff and volunteers.

[2:115:101g] Obtaining prison resources.

[2:115:101h] Improve one's level of ambitiousness

[2:115:102] That which is also categorised as a minor Form of Astronism is to be known as Engaged Astronism which refers to the application of Astronist philosophical ideas to the political, economic, environmental, and social landscape of a society.

[2:115:103] Traditionalisation is an important process in the context of the Forms of Astronism and refers to the process in which a philosophy is entrenched with a wide variety of different traditions, customs, and structures of belief and practice and in the context of Astronist Philosophy, refers to Omnidoxical Astronism, or Astronist Orthodoxy.

[2:115:104] Opposite to that process is detraditionalisation and involves the proceeding of the erosion of traditions within a system of thought, and in the context of Astronist Philosophy, specifically relates to the process in which the traditions of Omnidoxical Astronism are eroded over time for different reasons.

[2:115:105] That which is to be henceforth known as double alignment or multiphilosophical alignment and pertains to the instance in which a person is aligned to two different philosophies at the same time.

[2:115:106] A minority philosophy refers to a philosophy aligned to by a minority of the population of a country, state, city, locality, or region.

[2:115:107] Minority philosophies are most likely to be subject to stigma or discrimination and an example of a stigma is using the term cult to refer to the philosophy with its extremely negative and religious connotations which is particularly damming to a system of thought that designates itself as a philosophy.

[2:115:108] The protection of any instance in which Astronism holds the status of being a minority philosophy is of particular importance for The Institution of The Philosophy of Astronism in order to alleviate as much stigma, discrimination, and persecution as possible.

[2:115:109] The persecution of a minority or majority philosophy can originate either from

another majority philosophy and its institution, or by a majority or minority religion, by the reigning government, or by ideological and political parties and groups.

[2:115:110] That which shall henceforth be termed as a philosophical capital and refers to that which is considered to be the capital city of a country for The Philosophy of Astronism, typically the city that the most Astronists reside within, or the city that remains the most significant to Astronism in the country and may or may not be the same as the state capital of the country.

[2:115:111] An important process in the context of a philosophy is that which is to be known as philosophical assimilation refers to the adoption of a majority or dominant culture's philosophical alignments, practices and beliefs by a minority or subordinate culture.

[2:115:112] Further to this, the term of philosophical community encompasses a community as a group of individuals regarded collectively who practice the same philosophy and is one of the primary reasons for a person's alignment to a philosophy so that they can become part of that community.

[2:115:113] People who define themselves as having a particular philosophy are considered to be members of the philosophy's community and for the context of Astronism, the worldwide community of followers of The Philosophy is known as the astroza and it is the creation, establishment, and management of this community that is one of the primary responsibilities herein vested as The Institution of The Philosophy of Astronism.

[2:115:114] That which is to be henceforth known as philosophic fraud refers to a term used for civil or criminal fraud carried out in the name of a philosophy or from within a philosophy.

[2:115:115] A specific form of philosophic fraud is whereby one employs lies and/or commits deception in order to convince others of the superiority of their philosophy, or of their specific proclamations, which are themselves considered to be non-philosophical by the Astronist Tradition.

[2:115:116] A philosophical goods store which acts as a synonym for a rendition refers to a type of shop specialising in supplying materials used in the practice of a philosophy and that which is an associated industry is philosophical tourism which pertains to a type of tourism wherein people travel individually, or in groups for sopharial visitation, occurrological events, or for leisure purposes.

[2:115:117] That which is to be known as philosophical paranoia refers to an irrational fear of being purposefully attacked by an outside agent(s) in or through some philosophical context.

[2:115:118] Examples of this could include a person's fear of not holding enough knowledge which is to be known as agnosticia, a person's fear of embarrassment through losing a public debate which is to be known as defesia, or a person's fear of not achieving their full potential with the skills and talents they have been gifted which is to be known as impotentia.

[2:115:119] An important process that is directly involved in one of the core tents of Astronism that remains one of the most widely publicised and promulgated elements of The Philosophy, known as reascensionism, is that which is to be known as the process of rephilosophisation which can either occur on an individual basis, a group basis, or on a societal basis.

[2:115:120] Generally though, the term of rephilosophisation pertains to the societal scale and refers to the return of a society to a focus and centrality on philosophy and its powers of societal governance and organisation which, of course, is considered to be the primary goal of reascensionism which itself is one of the two main elements of Astronism alongside cosmocentricity as these two concepts both encompass the majority of the mission, identity, and vision that Astronism predicates itself on.

[2:115:121] That which shall be known as the practice of astralism, as followed and conducted by those individuals known as astralists, refers to a specific and unusually obsessive form of cosmic devotion directed towards stars characterised by a daily need to observe stars and practice different cosmic devotions including laudation, adoration, and wondermentation towards them.

[2:115:122] Despite the extraordinariness of this form of cosmic devotion, it still remains an accepted form by the Astronist Tradition and though fanaticism is not encouraged by the Tradition, a deeper devotion is encouraged and astralists demonstrate themselves as understand how individuals are able to hold deeper connections with celestials beyond philosophical feelings as are common to less extraordinary forms of cosmic devotion.

[2:115:123] That which is to be known a deathbed alignment refers to the instance in which a person on their deathbed claims alignment to a philosophy, but it may not be considered genuine depending upon the person's mental state during their proclamation.

[2:115:124] A person that has endured a deathbed alignment may also wish to change the contents of their will as well as the type of funeral they wish to be held after their passing which proves deathbed alignments to be particularly and uniquely influential occurrences.

[2:115:125] Turning towards a different subject, that which is to be known as cosmocontagion refers to the belief that cosmic, universal, or divinical properties within an object, place, or person may be passed to another object, place, or person, usually by direct contact or physical proximity and is to be categorised as part of a compendological discipline dealing with processes in The Cosmos.

[2:115:126] In a similar vein to the occurrences and processes involved in people's interactions with Astronism and followers of The Philosophy, that which is to be known as philosophical direction pertains to the practice of being with people as they attempt to deepen their relationship with The Divine, or to enknowledge themselves and grow in their own cosmicity; essentially, to deepen their knowledge of Astronism as well as improve their ability to utilise and navigate The Philosophy.

[2:115:127] An example of that which shall be known as philosophical fanaticism is the aforeintroduced devotological practice of astralism as philosophical fanaticism refers to an uncritical zeal, or with an obsessive enthusiasm related to one's own, or one's group's alignment to a philosophy.

[2:115:128] Before we end this discourse which has introduced a wide-ranging amount of new concepts and terms to ornament The Philosophy of Astronism and wider philosophy, and before we consider those which are termed as Modes of Philosophicity, we shall address secondary alignment.

[2:115:129] A secondary alignment refers to the philosophical alignment of an individual that results from a relationship with a follower of the philosophy, rather than from any particular aspect of the philosophy itself; essentially, it refers to the instance in which a person aligns to a philosophy for a reason other than the philosophy itself, the most common example of which is expected to be when one's partner is aligned to a philosophy and a person also aligns themselves to that same philosophy to feel closer to their partner.

[2:115:130] There are herein introduced two Modes of Philosophicity which collectively pertain to how a philosophy is to be experienced with a dichotomy of the doctrinal and the imagistic, thus forming Doctrinal Astronism and Imagistic Astronism.

[2:115:131] The imagistic Mode of Philosophicity is characterised by infrequently performed, high arousal occurrological events and is associated with small scale, exclusive groups of philosophical adherents.

[2:115:132] In contrast, Doctrinal Astronism is the second Mode of Philosophicity which is characterised by frequently performed, low arousal occurrological events such as daily recitations of The Omnidoxy, or events that take place daily, quickly, and purely out of convenience and is associated with larger inclusive communities, as found in the majority of cases of occurrology.

[2:115:133] By these notions, we can categorise the concept of the Modes of Philosophicity as part of the discipline of study of occurrology as it is based around the experience of Astronism which occurrology is largely vested in dealing with.

Introduction to Abettology

[3:1:1] We progress further through our introduction and exploration of The Philosophy of Astronism by embarking upon our study of the inclusive discipline of abettology which addresses the Astronist approach to the concepts and techniques of aiding, as well as the methods and practices of stewardship.

[3:1:2] In the second disquisition of The Grand Centrality of The Philosophy of Astronism, the roles and actions of aiding and stewarding are addressed whilst being elevated to their deserved place within Astronist philosophy.

[3:1:3] Aid and stewardship will be considered according to the way in which they can be applied to situations that presently face our world and the peoples within it, as well as those situations which we are expected to face in some future time, most likely not on the world upon which we now reside.

[3:1:4] Abettological approaches to philosophical enquiry and investigation take into account the ways in which one's assistance to something (aiding) and one's protection and preservation of something (stewardship) impact one's decisions, mentality, and contemplations.

[3:1:5] By this notion, abettological studies pervade many of the pre-Astronist branches of philosophy including ethics, logic, metaphysics, and ontology; within this disquisition, we must also apply explorations of abettology to other inclusive disciplines of the Astronist Tradition.

[3:1:6] It is herein defined that to aid is to provide support for the cause at hand whatever the cause may be; this means to provide the means for the cause to repair itself, or to advocate for the dissemination of the message of the cause with the ambition of others to feel empathy with its message and join.

[3:1:7] Whether the cause be deemed morally good or bad is a branch of abettology henceforth known as aidological ethics while general aidological does not tend to naturally contemplate such notions of morality.

[3:1:8] And it is too herein defined that to steward is to feel protection for and to provide one's responsibility to the cause at hand with the goal of preserving, yet also progressing it to achieve its overall improvement; either of an object, a place, an abstraction, or a person.

[3:1:9] Finally, abettology is inextricable from many of the notions made in all of the discourses in each of the disquisitions of The Omnidoxy due to helping (aid) and protecting (stewardship) existing at the heart of human compassion, sympathy, that which we understand to be good, and emotionality.

The Preservation of The Cosmos (Revology)

[3:2:1] There are only two disciplines within abettology; all others disciplines are to be henceforth classified as subdisciplines falling within either of these disciplines of study, or in particular cases, the categorisation of a codiscipline may be applied which is a subdiscipline that is officially categorised into two different disciplines due to its relevant application within both of them.

[3:2:2] One of these two disciplines of abettology is that which is henceforth known revology; students of this discipline must deal with the concepts, methods, and philosophies of stewardship.

[3:2:3] The philosophers and scholars of revology, henceforth known as revologists, are to develop many approaches and philosophies to stewardship and its proper practice.

[3:2:4] Therefore, the revological discipline deals with the study of stewardship with the sole purpose of achieving that which is considered the proper practice of stewardship; the properness of something is disputed by every individual due to each person's differences in opinion and this is why revological study, like many other Astronist disciplines, will never be truly complete for there will always be another opinion to change that which is deemed proper practice.

[3:2:5] Essentially, as an addition to the definition aforementioned at the beginning of this disquisition, stewardship in the context of Astronist philosophy is the notion of responsibility that all humans are expected to feel for The Cosmos, as it is defined in the Astronist cosmology, and should therefore take care of it by exploring it, philosophising about it, and devoting to it.

[3:2:6] By this notion, revolic stewardship can be described as the philosophised version of theological stewardship wherein humanity is expected to be responsible for the preservation of the world meaning The Earth.

[3:2:7] Revolic stewardship can be seen as the extension to theological stewardship wherein the world that is described in theological stewardship is expanded to The Cosmos in its entirety.

[3:2:8] Revological study and contemplation is therefore expected to deepen one's personal relationship with The Cosmos as a whole entity because in the process of understanding revolic stewardship for The Cosmos, one understands the importance of The Cosmos and our duty as sentient beings to do all we can to embrace cosmic existence which stands at the heart of not only The Philosophy of Astronism, but the entirety of Astronist Philosophy.

[3:2:9] With a true understanding of revolic stewardship, there is no doubt that one will receive cosmic devotions and philosophical experiences on levels higher than someone who does not share this understanding and devotion for The Cosmos.

[3:2:10] By this notion, we reveal the solemn importance of revological study, especially in understanding The Cosmos in the way that the true Astronist is expected to.

[3:2:11] Of course, this intertwinement between stewardship and cosmic devotion is due to the foundings of revolic and philosophical stewardship in theological stewardship for theological stewardship is structured in such a way that it is meant to proximate humanity with The Earth as god created it.

[3:2:12] The Astronist version of this includes The Earth also, but expands upon the original notion to include the entirety of The Cosmos, however, we must make the notion clear that The Cosmos isn't in need of protecting by humanity, it does not need humanity to help it survive, and it does not need humanity in general for it would function without humanity; this is henceforth known as Cosmic Independence.

[3:2:13] In this sense of the term stewardship, however, humans become stewards by a greater knowledge, exploration, and understanding of The Cosmos rather than by focusing on the protection of The Cosmos; by this notion, we see the diversity of concept of stewardship and how it easily it can be expanded, but this is important to its application within an Astronist philosophical context.

[3:2:14] This type of stewardship is henceforth known as Cosmic Stewardship and is to be elevated as the primary form of stewardship within the Astronist Tradition to its relevance within cosmic devotion and philosophical understanding.

[3:2:15] Cosmic Stewardship can be considered a subdiscipline within revology due to its significance and its importance to other areas of Astronist philosophical practice, and should remain the primary area of revological contemplation for students and philosophers of the discipline of study of revology.

[3:2:16] By the instance in which the definition of stewardship has been widened to encompass Cosmic Stewardship, it can be agreed that stewardship is a widely varying term that need be pinned down definitionally in an Astronist context.

[3:2:17] Despite stewardship being aforedefined within this very disquisition, we must further define the concept and practice of stewardship here; stewardship is the guidance of something along the preferred course towards a goal that is agreed upon by those whom are stewarding.

[3:2:18] The role and responsibility of stewardship involves the seeing, knowing, and understanding of something in a way that is deemed proper under the auspices of the context in which one is contemplating stewardship, and involves the using of this

understanding to look after the subject of stewardry both physically, emotionally, abstractly, and philosophically dependent upon the applicability of these senses.

[3:2:19] After the reaffirmation of the Astronist understanding of stewardship one may now be asking for an explanation of the differences between stewardship and aid, the two elements of the inclusive discipline of abettology, the subject which this disquisition is dedicated to contemplating.

[3:2:20] We shall begin this explanation of differences between stewardship and aid before we continue to explore the variety of forms of stewardry when applied to an Astronist context.

[3:2:21] The essential difference between stewardry and aidry is the specificity of the two for they do share an initial premise of support, however, the former is markedly longer term and involves protection for preservation while the latter is markedly shorter term and concerned with advocacy, physical help, repair, and remedying.

[3:2:22] Another pivotal difference between the two is that stewardry is distinctly prepared, planned, managed, and vocated while aidry, aidship, or aidhood involves the providence of support from some natural, unthinking, and unintentional source from within oneself; to aid is not to think, it is only to aid while stewardship is to think, to think and plan and manage that which is in need of stewarding.

[3:2:23] Stewardhood and aidhood are therefore differentiated by the way in which their shared premise of support is applied to the circumstances surrounding them; it can perhaps be argued that stewardship is a vocation while aid is more simply an urge to do the good that one seems before them.

[3:2:24] But we must turn our attentions to the Philosophy of Stewardship which is revology's main concern by the exploration of how and why and when stewardry is to be applied and accomplished.

[3:2:25] Revology is the discipline concerned with the concepts of stewardship in simpular terms and is to be explained henceforth to encompass all the Methods of Stewardship as they are to be known; these methods should involve a philosophy towards stewardship, techniques of practice, rationality of action, and is to henceforth hold a strong tradition of the proper practice of argumentation about stewardship.

[3:2:26] The first element of revology that we must discuss is that which is known as the management of resources; it stands true that The Cosmos is has been provided by whatever did create it with an abundant, yet limited amount of resources for the utility of The Cosmos, its progeny, its phenomena, and the sentient beings residing upon the worlds within it.

[3:2:27] Despite the vastness of resources in The Cosmos, the major obstacle remains solidified by the notion that humanity will not ever hold the abilities of technological advancement in order to fully discover and recourse all of such resources; by this notion, discoverability and recursability are the two parameters by which resources are to be measured and understand by.

[3:2:28] If the discoverability and the recursability of resources are the main parameters of resources, the former of which concerned with the extent to which resources are accessible, understandable, and attainable while the latter is concerned with the extent to which resources are useable, applicable, and resolvable for the circumstances at present.

[3:2:29] Furthermore, efficiency and effectivity are two more smaller parameters of resource management within the Philosophy of Stewardship; the first of these, henceforth known as the instance of efficiency, formulates either the extent to which humanity is efficient in identifying, attaining, and utilising such resources, or the extent to which the resource itself is applicable, or resolvable to the need that the resource is expected to fill or fix.

[3:2:30] By this notion, we can understand how the recursability of resources is prominent to the understanding of how resources are expected to be utilised.

[3:2:31] The Astronist Tradition understands there to be two approaches to the recursability, the first of which is characterised by the reduction of utility which involves one's conscious decision to reduce the extent to which they use a particular resource for the achievement of a wider goal, such as the reduction of the extent to which humanity is dependent upon a particular resource, or for the preservation of dwindling resource.

[3:2:32] The second of these approaches to recursability is known as the discoverment of resources which involves the action of seeking out a resource that is dwindling, or to discover an alternative resource so that the civilisation is not overly dependent upon the particular resource in question.

[3:2:33] The Astronist Tradition considers the first of these approaches known as the reduction of utility to be inactive by its own nature, and the second approach, known as the discoverment of resources to be active by its own nature.

[3:2:34] To expand upon these notions, it is held that to actively go and seek out a resource, or an alternative resource by the utility of instruments, methods, and knowledge is to work towards new resolutions of the dwindling resource issue, or the resource dependence issue.

[3:2:35] Oppositely, the reduction of the utility of resources is considered inactive due to the essentiality of the utility of resources; this does not mean that the advocations and campaigns for the reduction of utility should be halted, it simply points to the fact that

they shouldn't be emphasised to the point at which the reduction of the utility of resources overshadows the discovery of new abundances of the resource, or alternative resources.

[3:2:36] The Astronist Tradition in this context uniquely incorporates the economic consequences and issues associated with the reduction of the utility of resources for the actioning of this results in the decrease in productivity and the halt of business practice which is only expected to reduce the quality of life of people, the ability of people to philosophise, as well as the mismanagement of the allocation of resources.

[3:2:37] The Astronist Tradition maintains that neither of these approaches to the recursability of resources is deemed right, nor wrong, but instead these two approaches exist to be applied in different ways and in this history of human civilisation on The Earth, there stands no more crucial time for the proper recursability of resources.

[3:2:38] It is only logical to notion that reduction of the utility of resources is simply a postponement of the issue rather than its solution as it is the discovery of new resources that is considered to be an active proponent for advancement towards the resolution of the resource issue.

[3:2:39] The discoverment of new resources is therefore the preferred approach by the Astronist Tradition in the utility of resources rather than by the diminution of utility as the former is considered to be a more active proponent to the resolution of the issue than the latter.

[3:2:40] We must also consider the effectivity of resources as differentiated from the efficiency of resources which is the measurement of the extent to which the utility of a resource is able to reach the desired goal for the existence of the resource.

[3:2:41] For a resource to hold effectivity, it must first exists for the achievement of a goal for the effectivity of a resource measures the extent to which the resource is able to fulfil its purpose.

[3:2:42] There exists two more important components to the recursability of resources, the first of which is attitude which we must not understate the importance of.

[3:2:43] The essential reason for our discussion of resource management as a derivation of the practice of stewardry is due to the attitude of individuals humans, as well as humanity as a whole collectivised group.

[3:2:44] The attitude of ignorance and disenknowledge leads to a mismanagement of conservance and this is what the Astronist Tradition opposes for not all approaches to conservancy are proponents of progression and advancement.

[3:2:45] Those whom campaign for the proper methods of conservancy of resources have made great gains in the change of such attitudes and they should continue with such

disseminatory works whilst also having to accept that they will not ever be able to change the attitudes of all the peoples.

[3:2:46] The other area to contemplate here is the instance of wastage; the Astronist Tradition does not see the reduction of the utility of resources as practical or the primary method of recursability, yet this does not mean that the Astronist Tradition advocates for increase in wastage for this is one of the worst of all ethical acts.

[3:2:47] The wastage of something whether it be physical, or conceptual is the providence of something that hasn't been appreciated and so it has been carelessly destroyed or used in such a way that the efficiency and effectivity of its proper utility has been ignored or misunderstood.

[3:2:48] The Astronist Tradition considers it wrong to waste as this means that one is wasting the precious and abundant, yet limited resources of The Cosmos and this can only be categorised as ethically wrong.

[3:2:49] One may raise the argument that if the resources of The Cosmos are abundant then what is the harm in wasting them?

[3:2:50] To such a notion, the Astronist Tradition would reply with the counternotion that just because something exists in abundance does not mean that it will always exist in this way abundance, and nor should something that exists in abundance be exploited for its abundancy.

[3:2:51] To apply this to the context of cosmic devotion, enknowledge, and discovery, the Astronist Tradition presents and upholds the notion that The Cosmos should be utilised for its many different forms of resource both in physicality and conceptuality, yet it should only be utilised under regulation.

[3:2:52] With the heralding of the Humanic Exploration of The Cosmos comes the frightening notion that humanity will inevitably attempt to exploit The Cosmos and the valuables it holds; for this reason, we require correction in attitude and regulation in organisations and institutions if we are going to take resources from The Cosmos responsibly.

[3:2:53] And it is by this notion that we come to the notion of responsibility, known in revological study as responsibilitism, and returns to the familiar notion in theological stewardship that humanity is responsible for the care and preservation of the world.

[3:2:54] However, in Astronist and revological contexts, responsibility and the orientation of responsibilitism relate to the responsibility of humanity to utilise The Cosmos and its resources in a way that is not exploitative, that is beneficially balanced, that is regulated by uncorrupt institutions, and is approached with attitudes of conservancy, advancement, and discoverment as a mixtured whole.

[3:2:55] The primary notion within the orientation of responsibility is that which is characterised by the responsibility of humanity for their correct interaction with The Cosmos to be paramount rather than humanity being responsible for preservation of The Earth as provided by god as is explored in theological stewardship.

[3:2:56] Essentially, humanity isn't responsible for The Cosmos, it is only responsible for its actions in The Cosmos; this notion of differentiation still upholds the notions of the preservation of The Cosmos whilst maintaining the correct hierarchical structure as is defined by the Astronist Cosmology in that The Cosmos resides higher than humanity in all ways, and this is to be henceforth known as the Anthropic Responsibility Principle within responsibility.

[3:2:57] There exists many notions within the exploration of resource management in revology, and one of these notions is whether The Cosmos is made for humanity, whether it was just made for some universal or divinical means, or whether humanity exists for The Cosmos.

[3:2:58] This is notioned in order to derive the structure of humanity's stewardship, which also incorporates ontological ideas into the revological arena.

[3:2:59] With regards to this particular notion, the Astronist Tradition holds that The Cosmos is neither created for humanity nor is humanity created for The Cosmos; instead, an instance of noncompinence is formed in which neither entity exists for the other; essentially, humanity is so insignificant within the vastness of The Cosmos that to notionise that humanity is made for The Cosmos, and worst still that The Cosmos is made form humanity are both forgetting humanity's place within The Cosmos; this position is henceforth known as neutramotivism as part of the wider group of orientations within motivism and motivist thought.

[3:2:60] Humanity cannot exist for The Cosmos because if humanity disappeared today The Cosmos would still function as it does now tomorrow.

[3:2:61] However, if we create the opposite of this and say that if The Cosmos disappeared, we cannot possibly say that humanity would still exist so that does not therefore mean that humanity is created for The Cosmos? This is known as The For Notion.

[3:2:62] The only issue that the Astronist Tradition has with this notion is the use of the word "for" as this implies more than if we were to use the word "by".

[3:2:63] Even so, this notion places an obstacle in front of neutramotivism and thus forms neomotivism, which is the very preferred orientation of the Astronist Tradition on this issue and exists as mixture between neutramotivism and cosmotivism.

[3:2:64] Therefore, neomotivism holds the notion that neither humanity nor The Cosmos were created for each other, yet nor does mean that because humanity was created by The Cosmos that it was created for it; again, the keywords remain “for” and “by” and so too does this topic of ontology and revology remain one to be expanded upon as philosophers of Astronist philosophy do continue their contemplations.

[3:2:65] By this notion, we understand why humanity believes that The Cosmos is close to humanity emotionally and personally because we are part of humanity and our perceptions are limited by this very fact of our existence; to be part of a group that exists within something is bound to make one believe that that in which they exist is of proximation to them, or that they are important to it.

[3:2:66] This particular area of contemplation within revology, also known as ontological revology, is to be henceforth known as motivism.

[3:2:67] The chosen approach for the Astronist Tradition is known as neomotivism, while the notion that The Cosmos is made for humanity is known as egomotivism, the notion that humanity exists for The Cosmos is known as cosmotivism, and the notion that The Cosmos is made for some universal or divinical means is henceforth known as unimotivism.

[3:2:68] Neomotivist thought is characterised by the understanding that neither are humanity or The Cosmos created for one another, yet the former was created by the latter and attempts to dissociate the creation of something with the purpose of something, yet the orientation holds large variance in its stances whether it be more or less influenced by the orientation from which it is derived which is neutramotivism.

[3:2:69] Egomotivist thought is characterised by the notion that The Cosmos is created for humanity’s benefit and holds that The Cosmos should be the steward for humanity rather than humanity the steward for The Cosmos.

[3:2:70] The only instance in which the Astronist Tradition could be considered egomotivistic is in the sense that The Cosmos is the steward for humanity in a philosophical sense as a guide for humanity philosophically, henceforth known as The Cosmic Guide, as well as in the sense that The Cosmos cradles humanity by its progeny of The Earth, henceforth known as The Cosmic Cradle.

[3:2:71] Cosmotivist thought is characterised by the notion that humanity exists for The Cosmos, yet is not entirely discouraged to believe by the Astronist Tradition for it places The Cosmos above humanity in its properly ascribed place in the Astronist cosmology, however, it emphasises humanity’s proximation to The Cosmos as though the only sentient race in The Cosmos were humanity which is not believed in the Astronist Tradition.

[3:2:72] Unimotivist thought is characterised by the notion of the involvement of The Universe and/or The Divine as higher beings, realms, or powers thus removing humanity from the formula entirely and therefore places greater emphasises on the Astronist cosmology and the subsequent relationship between The Cosmos and the domains that exist beyond it.

[3:2:73] Within unimotivism, the notion that The Universe holds stewardhood for The Cosmos and all within it is known as Universal Stewardry and the notion that Divine holds stewardhood for both The Universe and The Cosmos and everything within them is known as Divine Stewardry.

[3:2:74] But how do we return our thoughts to a purely revological premise after contemplating such ontologically themed notion?

[3:2:75] The instance by which we understand the motivity for something's existence provides us with the philosophical means to propose ideas about how it should be stewarded, such as the notion of whether humanity is created for The Cosmos to steward The Cosmos which, we must add, is not altogether anti-Astronist idea, in fact, to be a steward for The Cosmos is of course encouraged in the Astronist Tradition.

[3:2:76] We cannot stand to make notions about correct practice of cosmic stewardry when we cannot agree on what the components of the argument were created for for there exists arguments such as egomotivism which suggest that The Cosmos is created for humanity and that The Cosmos should preserve humanity as a derivation of one of its progenies rather than the other way around.

[3:2:77] Furthererso, the Astronist Tradition considers The Cosmos itself to be a resource so the contemplation, discussion, and management of The Cosmos can be applied to the management of resources, therefore raising the importance of revological study to an even higher stage.

[3:2:78] One of the major arguments for the Humanic Exploration of The Cosmos is to discover new resources to return to The Earth for the benefit of humanity; although the Astronist Tradition supports this argument, it should not take this to be the main purpose for the Humanic Exploration of The Cosmos and from an ethical viewpoint, holds concerns with the notion that the purpose of space and its exploration is to gain the resources of space for the benefit of humanity.

[3:2:79] The essential notion within the orientation of benefitism is that for every action there must be benefit some party, even if that party is not present in the immediate vicinity; benefitist notions can be collectively described as a school of thought within Astronist Philosophy notionising that benefit forms purpose which forms action, or thought.

[3:2:80] In the context of stewardship, benefitism, known as benefitist stewardship holds the notion that stewarding must always be conducted with the intention for benefit whether for the party stewarding, the party being stewarded, or the some third party, and furthermore holds that the entire purpose of stewardship is for the benefit of at least one of the aforementioned parties.

[3:2:81] To go further, benefitism notionises that the proper practice of stewardship can be found in the extent to which parties benefit so the greater abundance of the benefits received, the greater the job the steward has completed, or the more well practiced the steward is with the extent of the amount and the quality of benefits being the main parameters of the proper practice of stewardship.

[3:2:82] The school of thought of benefitism is of course founded within abettological study as it too relates to aidological study, as we shall realise due to it being lattermentioned in this discourse, however, benefitism can be applied to many other areas of Astronist philosophical study in the vast majority of the inclusive disciplines and the disciplines of study and subdisciplines within them.

[3:2:83] Within the notions of responsibilitism is that area of contemplation which is known as responsible planning and it is that towards which we shall turn our attentions in the next part of our revological discourse.

[3:2:84] One of the many methods of stewardship is the focus on that which is known as responsible planning as a derivation within responsibilitism and is characterised by the construction of a plan of responsibility for the steward to follow.

[3:2:85] Responsible planning is made up four primary culminants, which are collectively abstract areas that plans are expected to affect, and in this context are environmental, social, political, and economic.

[3:2:86] The proper practice of stewardship is characterised by the balancing of these culminants in a way that stabilises them and infills them with that which the steward is stewarding; in case of Cosmic Stewardship, the steward is expected to incorporate each of these four culminants in their stewardship plan so as to make the stwardee sustainable and progressive in those four culminal areas.

[3:2:87] Essentially, responsible planning incorporates responsibilitism into the steward's plan and holds that the steward has a responsibility to fulfil each of the culminant areas and without this responsibility in stewardship planning, one cannot conduct responsible stewarding.

[3:2:88] The second to last area of core contemplation in revological study is that which is known as safeguarding which, in the context of Astronist and revological study, involves a measure undertaken by a steward in preventing undesirable for humanity from happening, or more involves the protection of The Cosmos from itself.

[3:2:89] In whichever form that one conducts safeguarding, it remains controversial with regards to the reasoning about its occurrence; to protect The Cosmos from itself is opposed as a notion by the Astronist Tradition due to the heightened existence of humanity that such a notion encapsulates.

[3:2:90] In addition, to prevent something undesirable in The Cosmos from happening to humanity is something that is considered both unnatural and undestinal by the Astronist Tradition because if humanity is destined to be harmed or even destroyed by The Cosmos, then the prevention of this is simply a postponement of humanity's same fate; we must reside within the destiny of The Cosmos and to interject is not to change destiny, it is simply to delay its occurrence.

[3:2:91] The sole purpose of the conduct of safeguarding in a revological sense is to protect either humanity from The Cosmos or The Cosmos from itself while in an aidological sense, it is much less controversial and more suitable to the Astronist Tradition's ideas for it is characterised by the protection of the individual, the object, or the cause that one is aiding, which we shall be further enlightened upon later during this same disquisition.

[3:2:92] The Stewardship of The Cosmos, or cosmostewardship, refers to the responsibility of humanity to conserve and explore The Cosmos and stewardists, as part of the belief of prostewardism which is latterdefined, believe in caring for The Cosmos as a solemn responsibility for all of humanity to constantly undertake.

[3:2:93] There are many derivations within philosophical stewardship (cosmostewardship) due to the complexities of the actions that can be undertaken in relation to the Humanic Exploration of The Cosmos and the humanic interactions with The Cosmos as well as the vast range of actions that can be conducted.

[3:2:94] Of concern for revologists is the practice of terraforming which is expected to be a highly divisive topic in relation to stewardship with proterraforming stewardists advocating for terraforming activities that further humanity, but also help conserve the cosmical beauteousness to the greatest possible extent meanwhile antiterraforming stewardists will vehemently oppose this viewpoint for they will instead opt for the orientation that is characterised by a complete opposition to terraforming practices due to the fact that they are considered highly damaging to the cosmic environment purely for humanic advancement benefit which is not considered to following the latterintroduced principle of Stewardship Proportionality.

[3:2:95] Cosmic Stewardship, also known as cosmostewardship, and other appellations which are latterintroduced, includes preservation of all of the natural world and the cosmic world including planets, comets, and all other cosmic phenomena, and the topography and zoologies of all worlds, including The Earth.

[3:2:96] There is, from its inception, a clear link between cosm stewardship and environmentalism which shall ultimately form Cosmic Environmentalism, also known as cosmoenvironmentalism, which encompasses the political transcendence of philosophical stewardship and its applications in the context of political discourses.

[3:2:97] Astronist environmentalism revolves around that which is to be henceforth known as custodianism as its main philosophical predication.

[3:2:98] Custodianism refers to the notion that humanity is merely a custodian of The Earth and crucially, that there will be different, in the distant future, species and forms of humanity residing upon The Earth.

[3:2:99] This is due to the processes involved within evolution as well as the Discovery of Sentience, and therefore humanity in the present day holds an obligation to both The Earth as a directly Divine entity of cosmicity and those future generations and species of sentience and non-sentience to preserve and conserve The Earth in all its beautiful glory.

[3:2:100] That which is to be henceforth known as Gaian Philosophy, which is to be further discussed in the latter discourse of Gaianology of this disquisition refers to the belief in sacredness and holiness of cosmic entities as well as anything within Astronist Philosophy that relates to The Earth specifically.

[3:2:101] Since time immemorial, the notion that humans are responsible for ruling over The Earth and their ownership of The Earth - this is known in an Astronist philosophical context as prohumanism.

[3:2:102] Alternatively, progaianism is established herein and supports the notion that The Earth rules over humanity and does not superiorise humanity over The Earth; progaianists opposes any notion that suggests that The Earth should be subdued by humanity.

[3:2:103] Additionally, that which is to be appellated as The Invocation of Transcension, or Transcensional Invocation, refers to the notion that through the practice of cosm stewardship, humanity will be able to achieve transcension and so making this link between cosm stewardship and the achievement of transcension places cosm stewardship on a high level within the philosophical theories and beliefs of Astronism as a whole.

[3:2:104] This formulates a level of importance for cosm stewardship that is provided to only a few other concepts and practices within Astronism for cosm stewardship is categorised as a way in which humanic transcension can be invoked both on an individual level, but also on a humanwide level.

[3:2:105] The Cosmos is the authority of humanity and like The Cosmos looks after humanity and has brought us our existence, we must do all we can to appreciate this, and preserve The Cosmos as the existence in which we reside.

[3:2:106] Sustainability in philosophy is manifested through the practices involved with cosm stewardship for it is the manifestation of sustainability that we now so desperately need as a species rather than simply speech about sustainability; for this reason, I will not speak of the importance of our sustainability as a species, but will instead demonstrate the importance of action by focusing on stewardship, especially cosm stewardship.

[3:2:107] We are in the geological age of the Anthropocene, but by the beliefs of sentientism, I predict that we shall, after the Humanic Exploration of The Cosmos has been fully established and our reach stretches beyond the solar system in which we reside, that we will enter the age of the Sentocene.

[3:2:108] This is to be a cosmic age that involves the initial meetings and interactions between different forms of sentience; this time is approaching and we must prepare ourselves for this and think about how we expect to be and act in the presence of sentience that does not hold the same Earthly origins as we do.

[3:2:109] A form of sustainability that is to be henceforth known as cosmosustainability, of which the concept of cosmoconservation is a derivation, refers to the study of the ability of The Cosmos, its progeny, and its phenomena, as well as all natural phenomena both terrestrially and extraterrestrially, to sustain themselves.

[3:2:110] Cosmosustainability advocates for the study of our natural progeny and phenomena are able to sustain themselves and apply this natural way of sustainment to how humanity can also sustain itself as humanity is considered to be just as much part of nature as the plants, the animals, and the cosmical progeny and phenomena.

[3:2:111] Therefore it is believed that humanity holds the ability to sustain itself in a way that is emulatory of the ways in which other natural progeny and phenomena sustain themselves.

[3:2:112] Spaciomodernisation refers to the notion that space exploration will lead to the full modernisation of human civilisation as whole due to the increase in resources.

[3:2:113] Another area of concern for revologists is the sustainability of philosophy itself which demonstrates how the discipline of revology is able to transcend into the realm of metaphilosophy with the sustainability of philosophy primarily concerned with the notion that philosophy is a vehicle through which we can realise and manifest our sustainable values and that philosophy itself holds a sustainable nature because it allows people to reach their full potential through so as to innovate both mentally and practically in order to further the principles held within sustainability.

[3:2:114] It is held herein that the principles of sustainability can and will only be manifested through their predication in thought first and action second for the former done well will set the latter on a course in which it will hold a much greater impact on the

world than if the thought beyond the action was not conducted in a way of strength and vision.

[3:2:115] Stewardship in the context of The Philosophy of Astronism, within which it is also retermed as cosmostewardship, cosmostewardry, astrostewardship, or astrostewardry, refers to the belief that humans are responsible for The Cosmos as one of its sentient progeny and should therefore do all they can to preserve and take care of The Cosmos, its other progeny, and its phenomena.

[3:2:116] This belief orientation is to be henceforth known as prostewardism as it notionises that humanity holds the ability to desecrate The Cosmos if it so chooses and so, the duty of humanity to be stewards of The Cosmos is essential to the preservation of The Cosmos in the beauteous state it does presently exist in.

[3:2:117] It is important to note that prostewardism does not support the notion of destructionism which notionises that humanity will sometime in the future, after the Humanic Exploration of The Cosmos has occurred, hold a power immense enough to destroy the entirety of The Cosmos for this is a belief that is generally rejected by the Astronist Tradition.

[3:2:118] Prostewardism forms the basis of the stewardship in the context of philosophy, and especially in the context of The Philosophy of Astronism, however, there does also exist its oppositism which manifests itself in the form of the belief orientation known as antistewardism.

[3:2:119] Antistewardism upholds the belief that firstly, humanity does not hold the ability to desecrate The Cosmos and that secondly, humanity doesn't hold any duty to be stewards of The Cosmos; it is important to note that antistewardism doesn't advocate destruction of natural phenomena and cosmic progeny, but it does believe that the notion that humanity has been vested with the responsibility for The Cosmos to be a false notion.

[3:2:120] There is expected to be an even split within believers of Astronism towards the Prosteward-Antisteward Dichotomy for there are logical elements to both sides with the former basing itself in the context of ethics, sentient responsibility, and the human capacity for destruction.

[3:2:121] Meanwhile, the latter bases itself in the context of the logic that no decree has been made by any forces of a transhumanic nature to say that humanity holds a responsibility to The Cosmos and it also notionises that humanity's capabilities for destruction are minuscule in comparison to the functions and forces within the nature of The Cosmos therefore attempting to make a superiority of human capability undermines that capacities of cosmic forces and abilities.

[3:2:122] Similar to pre-Astronist forms of theological stewardship, philosophical stewardship are expected to be people with a theological belief orientation that holds a

tendency to lean towards theism rather than atheism by the notion that The Divine created The Cosmos and all that is within it and so they believe that by Divine decree, they must take care of such a creation.

[3:2:123] However, building up the pre-Astronist form of stewardship, the Astronist approach to stewardship includes cosmical progeny and phenomena in addition to the animals and environment of The Earth which religious traditions had concerned themselves with over stewardship; this distinguishes philosophical stewardship from theological stewardship for the former makes the addition of cosmical entities to the concern of stewardship while the latter does not make these such additions.

[3:2:124] Philosophical stewardship is expected to transcend far beyond the remit of its theological originations into the realm of politics, especially so with regards to the Space Movement, and spacism with certain factions of spacism vesting greater importance in the concept of stewardship than others.

[3:2:125] In Astronism, stewardship refers to the extent to which the components available to us individually and those available to humanity collectively are used to preserve the beauteousness, orderity, and superiority of The Cosmos.

[3:2:126] Essentially, philosophical stewardship can be considered the utilisation, organisation, and management of the instruments provided in The Cosmos to further humanity in The Cosmos without leading to The Cosmos.

[3:2:127] The extent to which the greater humanic furtherance is achieved and the extent to which cosmic desecration is avoided is to be henceforth referred to and appellated as the Stewardship Proportionality; it is the ultimate task for revologists that they think of methods in which Stewardship Proportionality is able to be achieved.

[3:2:128] An element of cosmostewardship which is to be of major concern for revologists to contemplate is the question of what it means for humans to take care of the world and what ways can human impacts on both terrestrial and cosmic natural environments be reduced whilst also achieving humanic betterment and advancement.

[3:2:129] Herein it is stated with omnidoxical authority that Astronists are to hold a responsibility for the preservation of The Cosmos due to the sentience that they have been bestowed with and this is the same for all other sentient beings in The Cosmos.

[3:2:130] This is to be henceforth known as Sentient Bestowal for it notionises sentience as a gift that is to be respectfully received through the preservation of the existence within which we reside; The Cosmos and its progeny and phenomena as direct derivations of it.

[3:2:131] A disrespect for the existence within which one resides is considered to be a hallmark of ignorance and not something of Astronic character by any means because a disregard for The Cosmos is a disregard for oneself and one's species.

Introduction to Aidology

[3:3:1] The aiding of peoples in any way good, legal and positive is of necessity to that a person of respectable morals and upbringing and should hereby give, whether in wealth or time, how ever much they may afford to a person of need without thinking of any reciprocating action from that who is receiving of such aid.

[3:3:2] The act of aid is of universal value and adherence, thus individuals should make the decision of how much aid one gives, though it must be said that those which aid often are more probable to succeed and benefit as such actions attracts those of similar nature, attitude and moral.

[3:3:3] It is important to respect the necessity of the action of aid in one's existence as this action demonstrates what it means to be human, and thus separates oneself from those who do not aid one another.

[3:3:4] It is also important to enlighten one that the action of aid isn't done in just the love of the creator; it is done in the purest love and care for a fellow being without the threat of damnation or the promise of eternal peace.

[3:3:5] The improvement of another's life will thus improve thy own in time with only the satisfaction of doing a good deed the reward of such action.

[3:3:6] However, for the success of the action of aid, one must aid one who aids thus completing the Circle of Aid.

[3:3:7] This stands as the only path to complete one's journey of aid and must therefore become imperative to one's morality if one such individual seeks to enhance themselves and those surrounding.

[3:3:8] The action of aid is integral to the success of most of the other principles and ideas expounded in The Grand Centrality and should, therefore, be spoken about in a manner of subtlety and respect; not that of pride and falseness.

[3:3:9] The aid of those in an unfamiliar nation, culture, religion, race or sexuality runs parallel in importance to the aid of those familiar to thyself.

[3:3:10] Difference mustn't be a barrier to aiding; the difference of peoples must encourage one to learn and understand how best to aid a person in accordance to their preference and circumstance.

[3:3:11] One can learn about the actions of aid through the actions of those past and so good stewardship is necessary for the preservation of human history in order to ensure the survival of good deed and moral.

[3:3:12] The understanding of this importance will lead to the continuation of a strong culture of aiding, thus the betterment of peoples in every layer of society.

[3:3:13] Joining together peoples different is of the utmost importance for cohesion and, if this can be undertaken through the act of aid, then all is better for thyself, those surrounding and the wider world beyond.

[3:3:14] Stewardship is the duty of all humans to protect the world in which we have been gifted by our creator as well as all other life that resides on this planet.

[3:3:15] As a morally evolved species, humans can interpret and understand feelings thus it is the duty of all humans to stand for the protection of those that cannot express or haven't the authority to express their feelings.

[3:3:16] The stewardship of humans to protect the environment in which they live is of the utmost importance to the reflection of the human species as a morally governed peoples and so the conservation of nature should be at the core of all human thought for without nature, humans would not exist.

[3:3:17] Humans owe their lives to the environment around them thus they mustn't tarnish the perfect balances of the natural world, but must also ensure the protection of each other as one people, not a people separated by water or borders.

[3:3:18] Humans have a clear and coherent obligation to the Earth for their evolutionary succession, thus must do all they can to ensure the furtherance and conservation of the environment and all that live amid it.

[3:3:19] The evolutionary succession and continued prosperity of the human species is subject to their historical counterparts, thus the preservation of historical items is of the upmost importance to the success of stewardship.

[3:3:20] The destruction of such historical significance is the gravest crime to the creator of life as the destruction of history is the destruction of past lives.

[3:3:21] Humans owe their current successes to the generations before them which must always be respected and never obscured by any persons and it's the universal duty of all humans to stop such actions before so much damage is done that human history becomes distorted from that of the truth.

[3:3:22] Keepers of the pathway to purity, the attributes of honesty and transparency are.

[3:3:23] The preservation of human culture, religion and traditions is the final principle of stewardship, for this preservation distinguishes the human species from that of other future and past intelligent species.

[3:3:24] The moral code, cultural traditions and the establishment of beliefs through the various world religions is the making of the human species as a civilised and comparably intelligent peoples compared to that of our ancestral counterparts.

[3:3:25] As well as the preservation of past religions, traditions and cultures, there must be acceptance of future cultures, religions, ideologies and traditions for the advancement, furtherance and betterment of the human race.

[3:3:26] This acceptance is the key to unlocking the future of the distinction of the human species and its this acceptance entwined with the morality of humans and their duty to preserve the greatest gift from the creator, the gift of the mind, imagination and the ability to feel, understand and act upon such qualities.

—

[3:3:27] That which is to be henceforth known as Disoptical Astronism refers to a Form of Astronism that encompasses all expressions, presentations, and translations of Astronist ideas to blind or partially-sighted people and so the terms of disoptical and disopticality are herein first introduced so as to generally relate to the transmission of Astronism through means that are not primarily visual or visually dependent.

The Biotist Approach to Medicine & Narcotics

[3:4:1] Biotism consists of three movements within it that form the Biotist Triad including contranarcotism, probiotism, and organic purism.

[3:4:2] Organic purism upholds the principle stating that the unnecessary consumption of medicinal drugs holds a damaging impact on the ability of both our minds and bodies to fight infections and illnesses off ourselves, either in a physical or mental form, and therefore opts for the avoidance or the complete abstinence of medicines for consenting adults whose illnesses are not severe or life-threatening.

[3:4:3] The second part of the Biotist Triad is contranarcotism which upholds that the use of narcotic drugs (including cannabis, nicotine, cocaine, heroin, and others) is fundamentally and intrinsically damaging to a person's physical and mental state and that no matter the euphoric benefits received from the consumption of such drugs, the damages on a user's health holds much graver consequences.

[3:4:4] Therefore, works towards the complete eradication of narcotic drugs one nation at a time by employing economic and political pressures on the individuals and corporations that are feeding into such industries and by employing certain tactics to stop individuals from feeling that they should take such drugs or that they need such drugs in their lives to make them happy.

[3:4:5] Contranarcotism opens up a much wider debate about the nature of human happiness, contentment, depression, and fulfilment and poses questions about the reason for the pandemic of narcotic drug intake in the United Kingdom, the United States, and other countries around the world.

[3:4:6] Contranarcotists are not simply tasked with the eradication of narcotic drugs due to the fact that they are considered to be pure evil in their natures and intentions or the condemnation of people that take such drugs and those whom supply such drugs, but they are also primarily tasked with encouraging the contemplation of the reasons why people feel they need to take such damaging drugs.

[3:4:7] Also, why they feel their bodies and/or minds require such drugs to be consumed, what they feel they will receive in the short-term and the long-term from the consumption of such narcotics.

[3:4:8] Finally, if the answer is predicated upon escapism, then what is it that they are escaping from and how can we, as reascended philosophers who do not remove ourselves from society but instead immerse ourselves within it.

[3:4:9] How can we help such individuals hold new perspectives on their reasons for wanting to escape in order to minimise those reasons and allow the person to free themselves from their own perception as a form of personal transcension.

[3:4:10] Therefore, we understand that the role of contranarcotism is simply just the condemnation of narcotic drug abuse, but it also involves the methods and abilities that philosophers are able to apply from their own knowledge about perception, reality, belief, and reason to these needy individuals that require assistance to re-perceptualise and to transcend from themselves into a new unrecognisable individual compared to the person they used to be.

[3:4:11] We also understand the deeply philosophical nature of contranarcotism and how it involves the application of philosophy and the methods of philosophers in order to solve drug abuse which is considered not to be resolved through the consumption of other drugs, but a complete re-perceptualisation and transcension from one's former self into a new selfness; the act of freeing oneself from trappings of justification and reason that oneself has created that are often very irrational.

[3:4:12] Probiotism, as the third and final portion of the Biotist Triad, follows on from the ideas within organic purism by advocating for the use of alternative forms of medicines that are from purely natural and probiotic sources, rather than synthetic medicines, examples of which include the consumption of fresh foods like fruits and vegetables which are known to hold certain natural vitamins to help the body become stronger so that it is able to fight off illnesses with greater efficiency.

[3:4:13] Essentially, probiotism is centred on the idea of building up the strength and natural defensive systems of one's own body so that one's body is able to repel illnesses without the use of medicines.

[3:4:14] The combination of organic purism and probiotism consider themselves to be a form of that which is to be known as biohumanism which is closely related to transhumanism but instead notionises that humans are able to evolve beyond their current physical and mental limitations through strengthening their bodies and minds naturally through the application of the Biotist Triad in order to form a human species that holds a much greater sustainability in its ability to fend off illnesses.

[3:4:15] The ultimate goal of the Biotist Triad is that which is to be henceforth known as biosustainability, or as anthroposustainability which involves the idea that humans can achieve and should be striving towards the efficient utility of the physical resources they have, the avoidance of the depletion of their own internal natural resources, and the enhancement of those natural resources through the practice of organic purism and probiotism.

[3:4:16] Essentially, biosustainability propounds the preservation and enhancement of our internal selves through organic means just as environmental sustainability propounds the preservation of the environment's resources and the balanced utility of those resources for the achievement of human developments and aspirations.

[3:4:17] In this sense of biosustainability, each of our bodies assumes the role of the environment in this way and therefore must be preserved through organic purism and must be maintained in a way that it becomes autoenhancing and internally dependent rather than externally dependent.

The Contemplations of The Gaia (Gaianology)

[3:5:1] The Gaia may be used as another appellation for that which we call The Earth, but in the context of Astronist Philosophy, when the appellation of The Gaia is used, we are referring to a specific element of The Earth; The Earth's spirituality.

[3:5:2] The notion that The Earth holds a particular spirituality is not an Astronistically originating concept for the spirit of The Earth has been contemplated and even devoted to throughout the centuries of humanic religion, however, the Astronist version and contribution to the use of this term pertains, of course, to The Earth's spirituality, but also the focuses on the nature of the relationship between human and The Earth.

[3:5:3] One of the prominentmost questions that underpins this discourse is simply, why The Earth?

[3:5:4] Why has the sentient species of humanity evolved the way that it uniquely has upon The Earth? For what reason was this singular planet in the trillions of The Cosmos chosen to provide a home not only for humanity, but for many other non-sentient creatures too.

[3:5:5] This formulates the foundations of that which is known as Gaia Philosophy which is itself a pre-Astronist term, but in Astronist contexts, this is not to be confused with the belief orientation of gaianism which is also commonly used within this discussion.

[3:5:6] Gaia Philosophy encompasses the entire body of works and discussions taking place in relation to the role and nature of The Earth's spirituality, humanity's relationship with and to The Earth, and most importantly and now herein introduced, the contemplation of the role of The Earth in The Cosmos, especially in relation to the Astronist cosmology and other related concepts and theories.

[3:5:7] This provides Gaia Philosophy with a large body of new contemplations as introduced Astronistically with a particularly cosmical theme and orientation as is the case for most Astronist contributions to pre-Astronist ideas and areas of contemplation.

[3:5:8] The Astronist Tradition does not officially consider The Earth to hold a spirituality for the concept of the spirit continues to be a difficulty for the Tradition to accept and digest in other areas of contemplation, however, the Tradition does hold that The Earth and humanity have a special bond for one another as The Earth, despite the expected expansion of humanity into The Cosmos, will always remain the homeworld of the human species.

[3:5:9] In relation to The Earth's role in The Cosmos, the Astronist Tradition provides The Earth only with significance due to it being the homeworld of humanity, but it does not

provide The Earth with any special or superior status within The Cosmos because of this fact as is the tendency for non-Astronic viewpoints, especially those which hold a geocentric outlook.

[3:5:10] This is one of the primary difficulties with all Astronic approaches to the contemplation of and contribution to Gaia Philosophy because a cosmocentric outlook is attempted to be brought to an area of philosophy that is centred on contemplations of The Earth which pertains to why the Astronist Tradition is hesitant to provide The Earth with more importance than being the homeworld of humanity so as to maintain the cosmocentric worldview that remains a fundamental core to the foundations and identity of Astronism as a philosophy.

[3:5:11] However, throughout The Philosophy of Astronism, there expected to be a plethora of belief orientations that are to be developed post-omnidoxically that depart from this Traditional understanding which will ignite an area of study and debate within Astronist philosophy that is rich in depth and breadth.

[3:5:12] That which is to be introduced as Astronic gaianism is a form of gaianism that encompasses the belief in the sacredness and holiness of cosmic entities and holds an interesting classification because despite the fact that it is omnidoxically introduced here, it actually is considered to be a separate sister philosophy to The Philosophy of Astronism and there is to be much further developed post-omnidoxically as a result of this classification, however, due to its omnidoxical introduction, this demonstrates the interest and curiosity that Astronism holds with the ideas that reside within gaianism so much so as to create a version of gaianism that is Astronic in its character and theme.

The Foundings of Religions

[3:6:1] Religions and philosophical systems have been founded throughout history by a plethora of different individuals and although we often given little thought to equating the founding years and nature by which each religion was founded, there does exist some remarkable differences and we will discuss these differences as part of this discourse in relation to

[3:6:2] Firstly, we will begin with Astronism, the religion or philosophical system introduced herein by the Omnidoxy; I, as Cometan, have solely written the founding text of Astronism, after which I will spend my days founding and establishing Astronism into its Institutional form; I did not translate the words of the Omnidoxy from another text, neither were the words of the Omnidoxy recited to me by some higher power for instead I received personal inspirations to allow me to solely author the Omnidoxy which may also be referred to as ideational revelation or written revelation rather than divine revelation, supernatural revelation, or oral revelation as other religions have been established; therefore, the founder of Astronism is not only the writer of its founding text, but also the institutional founder of the religion/philosophy, thus diverging from other traditions wherein the central figure of the religion often did not write the founding text of the religion themselves or even establish the institutions which would later come to represent the religion.

[3:6:3] Secondly, we will look at Buddhism and how Buddhism, rather than being a written tradition from its beginnings like Astronism, was in fact an oral tradition for it was largely transmitted through word of mouth; although Buddha provided the teachings for Buddhism, the Buddha himself can't be said to have founded Buddhism for a distinction is made between the founding of something institutionally and organisationally and providing the ideas for the founding of something; additionally, Buddha did not write down any of his teachings, but instead taught them to his disciples, hence we see the clear difference between the nature of the founding of Buddhism and that of Astronism.

[3:6:4] Thirdly, we look at Christianity and how Christianity was initially an oral tradition until the narratives, sermons, and teachings of Jesus and those with whom he came into contact were compiled by the evangelists into the four gospels; Jesus never wrote any of his teachings down, but instead relied on preaching to spread his ideas and principles and so here, we understand the parallels between the founding of Christianity and Buddhism in this sense that they both relied on oral dissemination rather than written dissemination initially; it can be argued that it was St Paul and St Peter whom founded the structural, theoretical and institutional foundations of Christianity upon the actions and teachings of Jesus Christ.

[3:6:5] Fourthly, we look at Islam and how Islam was founded differently from all three of the religions thus far explored; Islam was founded through the initially oral revelation of the Quran to Muhammad by supernatural means whom institutionally founded the religion and allowed professional copyists, or scribes, to compile such revelations into

what would become the Quran so it was only after Muhammad's death that this process of compilation occurred; here, we see the differences in the founding of Islam because unlike other founders, Muhammad established the institutional forms of the religion and provided the revelations for the Quran to be compiled, but he did not play a role in the transcription of the Quran.

[3:6:6] Hinduism developed over centuries of contributions from various different writers and philosophers, as well as by lay people practicing a range of beliefs and practices as part of the Indus Valley River Civilisation culture; hence, Hinduism has no singular founder making it unique from other religions and due to this diverse contribution at the heart of its founding, there subsequently exist a plethora of schools of thought, beliefs, and practices that, although they share general principles, are largely uncoordinated and not streamlined like those in Christianity, Astronism and Islam.

[3:6:7] Although Abraham remains the patriarch of the Jewish faith, there existed a number of different prophets that held principal positions in developing Judaism; however, like Christianity and Islam as the two other major Abrahamic religions tracing their origins back to Judaism, Judaism also holds a singular founder which scholars have agreed is Abraham with other prophets including Moses, David, Joseph, Isaac, and Isaiah remaining important figures to the subsequent development and establishment of Judaism.

[3:6:8] Sikhism is a religion whose foundings constitute a singular figure, that of Guru Nanak Dev, whom was the first of ten Sikh gurus, although Guru Gobind Singh formalised the practices of the religion long after Guru Nanak Dev's death; therefore, similarly to Christianity and Buddhism, it can be said that Sikhism was created by the singular figure of Guru Nanak, however, it was established by the following nine Sikh gurus and later formalised; one of the most interesting patterns that has emerged from studying Sikhism is that, like Christianity and Buddhism, Sikhism's doctrines were compiled and contemplated over across centuries of time while notably Islam was created and formalised within a comparative short time period.

[3:6:9] Like Sikhism who traces its history back to ten important gurus, Jainism also holds a group of individuals, known as the twenty-four tirthankara to be the principal founders of the religion, however, like Hinduism also, Jainism is not considered to have one singular founder, although Mahavira is often mistakenly described as Jainism's founder.

[3:6:10] The study of the foundings of many different newer faiths and denominations as well as those from Taoic religious grouping can be studied and contemplated post-omnidoxically and applied in juxtaposition to the context of the founding of Astronism; as Astronism is founded and subsequently established, it will be important to take note of how these other religions and philosophical systems were also established whilst also understanding the present modern time in which Astronism has been founded and the unique position that we do hold as a 21st-century organised philosophy due to the technological opportunities and the globalised world that we do now reside within.

Introduction to the Elements of Astronist Symbology

[3:7:1] Astronist Symbology is the tradition of symbols associated with Astronism and wider Astronist and Astronist culture.

[3:7:2] Astronist Symbology is structured under eight different worlds including, Cosmic, Elemental, Plant, Animal, Human, Death, Afterworld, War, Allegories, Time, Emotions, Colour, and Spirit Worlds.

[3:7:3] Cosmic World

[3:7:4] Jesse refers to the representations of the character of Jesse in the setting of The Cosmos, but specifically taking on a human form.

[3:7:5] Ellena refers to the representations of the character of Ellena in the setting of The Cosmos, but specifically taking on a human form.

[3:7:6] Zara refers to the representations of the character of Zara in the setting of The Cosmos, but specifically taking on a human form.

[3:7:7] Harriet refers to the representations of the character of Harriet in the setting of The Cosmos, but specifically taking on a human form.

[3:7:8] Oliver refers to the representations of the character of Oliver in the setting of The Cosmos, but specifically taking on a human form.

[3:7:9] Jesse, Divine refers to the representations of the character of Jesse in the setting of The Cosmos, but specifically taking on a divine form in a physical transformation, the glowing of eyes, hair, and skin, and removal of all worldly accessories.

[3:7:10] Ellena, Divine refers to the representations of the character of Ellena in the setting of The Cosmos, but specifically taking on a divine form with the glowing of her eyes, hair, and skin, and the removal of all worldly accessories.

[3:7:11] Zara, Divine refers to the representations of the character of Zara in the setting of The Cosmos, but specifically taking on a divine form with the glowing of her eyes, hair, and skin, and the removal of all worldly accessories.

[3:7:12] Harriet, Divine refers to the representations of the character of Harriet in the setting of The Cosmos, but specifically taking on a divine form with the glowing of her eyes, hair, and skin, and the removal of all worldly accessories.

[3:7:13] Oliver, Divine refers to the representations of the character of Oliver in the setting of The Cosmos, but specifically taking on a divine form with the glowing of his eyes, hair, and skin, and the removal of all worldly accessories.

[3:7:14] The Divine refers to the representations of The Divine in the setting of The Cosmos, typically taking on the form of a bright sphere of radiant light.

[3:7:15] Divinity refers to the representations of Divinity in the setting of The Cosmos, typically taking on the form of cosmic entities, streams of radiant light, or actions that cannot be explained other than by divine intervention.

[3:7:16] Crescent refers to the representations of the crescent, typically coupled with stars and representing lunar power, and is most aligned with the character of Zara.

[3:7:17] Telescope refers to the representations of a telescope, typically featuring the character of Jesse and representing the seeking of knowledge and faith and is closely connected with The Philosophy of Astronism.

[3:7:18] Observatory refers to the representations of an observatory, typically centralised, coupled with stars, represented as a building of seeking knowledge and holding a strong connection to The Philosophy of Astronism.

[3:7:19] Planetarium refers to the representations of a planetariums, typically centralised, coupled with stars, represented as a building of holding knowledge and showing a strong connection to The Philosophy of Astronism.

[3:7:20] The World refers to the representations of The World, as distinct from The Earth, and most typically featuring at least one of the Astronist characters in their Divine forms.

[3:7:21] Worshipment refers to the representations of the action of worshipping in the setting of The Cosmos, most typically worshipping The Divine.

[3:7:22] Morphation refers to the representations of the process of one of the Astronist characters morphing, especially morphing into a Divine form.

[3:7:23] Morphation Phases refers to the representations of a particular morphation phase, typically one that shows a distinctive change

[3:7:24] Star refers to the representations of either a single star or a cluster, and typically demonstrates stars as the most common, yet beautiful form of divinity.

[3:7:25] The Cosmos refers to the representations of The Cosmos as a divinely-ordered universe, and acts as the setting for the Cosmic Era of Astronist Mystology, as well as being closely linked to The Philosophy of Astronism in that The Cosmos holds the answers to the mysteries of The Universe.

[3:7:26] The Universe refers to the representations of The Universe as an infinite, yet divinely-ordered whole, and typically is never fully resembled due to its infinity, and acts as the more elusive side of The Cosmos.

[3:7:27] Galaxy refers to the representations of galaxies as “Cosmic Cities”, and generally features additional symbols, or perhaps the inclusion of Astronist characters, typically in Divine form.

[3:7:28] Celestials refers to the representations of cosmic entities, typically more than one, and holding some sort of Divine feature, such as radiant light.

[3:7:29] Syzygy refers to the representations of any cosmic entity aligned in syzygy with another.

[3:7:30] The Sun refers to the representations of the star which Earth orbits, and typically includes the Earth so as to reaffirm this distinction.

[3:7:31] The Moon refers to the representations of the moon orbiting the Earth, and typically includes the Earth so as to reaffirm this distinction.

[3:7:32] Cosmic Sun refers to the representations of The Sun, most typically centralised, but featuring other cosmic entities and typically includes extra Divine and Cosmic patterns and radiances.

[3:7:33] Cosmic Moon refers to the representations of The Moon, most typically centralised, but featuring other cosmic entities and typically includes extra Divine and Cosmic patterns and radiances.

[3:7:34] Planets refers to the representations of planets, most typically represented as beacons of life and divinity.

[3:7:35] Space and Time refers to the visual representations of space and time, most typically in the form of 3D digital art and simulation to demonstrate the vast distances of The Cosmos.

[3:7:36] Knowledge refers to the representations of knowledge, most especially in the form of Jesse’s cranium, which emits radiant, Divine light, or wisps of information and numbers and typically with Divine Eyes.

[3:7:37] Creation refers to the representations of creation, most typically in the form of grand cosmic eruptions and spirals, typically linked to divinity, and feature Astronist characters in their Divine forms.

[3:7:38] The Earth refers to the representations of The Earth as the home of humanity and the place on which Jesse was placed to guide the world in Divine Destiny, and typically features The Sun and The Moon so as to reaffirm its distinction as The Earth.

[3:7:39] Mars refers to the representations of the planet Mars as a planet of potential habitation for humanity, and is the typical setting of futuristic cosmic arts depicting human colonisations of the planet.

[3:7:40] Saturn refers to the representations of the planet Saturn, and typically focusing on the planet's rings and typically featuring Astronist characters in Divine form, and featuring Divine patterns and radiances.

[3:7:41] Venus refers to the representations of the planet Venus, and typically focusing on the planet's stormy and deadly surface and atmosphere, and can feature Astronist characters in their Divine forms, and featuring Divine patterns and radiances.

[3:7:42] Mercury refers to the representations of the planet Mercury, and typically focusing on the planet's close proximity to The Sun, representing extremities as its temperatures fluctuate from day to night.

[3:7:43] Jupiter refers to the representations of the planet Jupiter, and typically focusing on the planet's volatility and its extreme danger.

[3:7:44] Neptune refers to the representations of the planet Neptune, and is typically paired with frozenness and detachment.

[3:7:45] Uranus refers to the representations of the planet Uranus, and is typically represented as a cosmic entity of distortion and off-balance.

[3:7:46] Pluto refers to the representations of the planet Pluto, and is typically represented along the Astronist character of Oliver specifically and infers isolation.

[3:7:47] The Beginning refers to the representations of the event known as The Big Bang, as depicts the beginning of The Universe, typically involving a Divine radiant light, and can feature The Divine and Astronist characters in their Divine forms, but typically placed beyond The Big Bang, in a dimension watching over the event.

[3:7:48] The End refers to the representations of the event wherein The Universe ends and can take many forms, whether the violent collapsing of The Universe or the end of The Universe by Divine intervention, and typically features The Divine and Astronist characters in Divine form, watching over The End of The Universe.

[3:7:49] Humanity refers to the representations of humanity both collectively and individually, especially those as separate from the Astronist characters, and typically

depicts the interactions between the Astronist characters and humans, those beings that are not directly in contact with The Divine.

[3:7:50] Divine Plain refers to the representations of the plain of existence first described in the final story of the Cosmic Era in Astronist Mystology, during which it was called The Eternal Plain, and typically relates to the idea of heaven, yet it represented in an even more Divine way.

[3:7:51] Paradise/Heaven refers to the representations of the existence of heaven or life after Earth more generally, the relationship between human-form Astronist characters and this idea.

[3:7:52] The Mechanism of The Universe refers to the representations of the distinct orderliness and workings of The Universe, typically to infer Divine architecture.

[3:7:53] Existence refers to the visual representations of the idea of existence, especially in contrast to the idea of non-existence, and is closely linked to the dialogue between Jesse, Divine and The Divine at the end of the Cosmic Era in Astronist Mystology.

[3:7:54] Non-existence refers to the visual representations of the idea of non-existence, especially in contrast to the idea of existence, and is closely linked to the dialogue between Jesse, Divine and The Divine at the end of the Cosmic Era in Astronist Mystology.

[3:7:55] Observancy refers to the representations of Astronist characters in their Divine forms looking upon The Cosmos, especially in admiration of its Divinity.

[3:7:56] Astrology refers to the representations of the studies and practices of astrology in Astronist art forms, typically depicting Jesse's admiration and wonderment for The Cosmos, specifically his fascination with stars.

[3:7:57] Astronomy refers to the representations of the studies and practices of astronomy in Astronist art forms, typically depicting Astronist characters conducting in the practices of astronomy, and is closely linked to knowledge seeking and The Philosophy of Astronism.

[3:7:58] Planetary Rotation refers to the representations of the rotations of planetary systems or particular planets and their relationship with Astronist characters and is typically paired with cosmic patterns and Divine radiances.

[3:7:59] Planetary Orbit refers to the representations of planetary orbits, and is typically paired with stars and can feature Astronist characters, especially in their Divine forms.

[3:7:60] Cosmic Concentricity refers to the representations of structure of cosmic systems in concentric patterns, and typically feature Astronist characters in their Divine forms and cosmic patterns and Divine radiances.

[3:7:61] Divine Light refers to the representations of Divine Light as distinct from light itself, typically overwhelming light and paired with Divine radiances. Divine Light is the mysterious and all-encompassing force found in the eyes of the Astronist characters when in Divine form.

[3:7:62] Lightform refers to the varied representations of light and how it travels and manifests itself in many different forms, as distinct from Divine forms.

[3:7:63] Cosmic Ring refers to the representations of rings, either physical or imaginary, that exist in The Cosmos, and typically infer totality and completion.

[3:7:64] The Void refers to the representations of voids in The Cosmos, typically characterised as the greatest forms of isolation, and desolation, but also invoking reflection, and are usually paired with the Astronist characters in either human or Divine form.

[3:7:65] Cosmic Soul refers to the representations of the soul in its cosmic form and content, typically represented as departing from Astronist characters upon their death in The Cosmos.

[3:7:66] Divine Sun refers to the representations and interpretations of The Sun as closest form taken by The Divine to humanity.

[3:7:67] Cosmic Divinity refers to the varied representations of divinity in The Cosmos by representing overwhelming radiant light, and typically features Astronist characters in their Divine forms.

[3:7:68] Directly Divine refers to the representations of the idea that The Cosmos and cosmic entities are of direct Divine source, and that humanity are of indirect Divine source.

[3:7:69] The Plan of Creation refers to the representations of grand and vast imageries most typically depicting The Divine and the Astronist characters in their Divine forms as the plan for the creation of The Universe is constructed.

[3:7:70] The Clock of Existence refers to the representations of the idea that existence of The Cosmos can be depicted in time, specifically in the form of a clock, whereby twelve midnight signals its birth and the twenty-four hour clock continues through dawn, day, dusk and evening, which is often titled, The Evening of The Cosmos.

[3:7:71] Fabled Era refers to all representations and interpretations of artworks inspired by the events of the Fabled Era of Astronist Mystology.

[3:7:72] Kingdoms Era refers to all representations and interpretations of artworks inspired by the events of the Kingdoms Era of Astronist Mystology.

[3:7:73] Legends Era refers to all representations and interpretations of artworks inspired by the events of the Legends Era of Astronist Mystology.

[3:7:74] Canonical Era refers to all representations and interpretations of artworks inspired by the events of the Canonical Era.

[3:7:75] Realities Era refers to all representations and interpretations of artworks inspired by the events of the Realities Era.

[3:7:76] Dimensions Era refers to all representations and interpretations of artworks inspired by the events of the Dimensions Era.

[3:7:77] Destinies Era refers to all representations and interpretations of artworks inspired by the events of the Destinies Era of Astronist Mystology.

[3:7:78] Cyber Era refers to all representations and interpretations of artworks inspired by the events of the Cyber Era of Astronist Mystology.

[3:7:79] Prophecies Era refers to all representations and interpretations of artworks inspired by the events of the Prophecies Era of Astronist Mystology.

[3:7:80] Cosmic Era refers to all representations and interpretations of artworks inspired by the events of the Cosmic Era of Astronist Mystology.

[3:7:81] Divinities Era refers to all representations and interpretations of artworks inspired by the events of the Divinities Era.

[3:7:82] Ancestries Era refers to all representations and interpretations of artworks inspired by the events of the Ancestries Era.

[3:7:83] Eternities Era refers to all representations and interpretations of artworks inspired by the events of the Eternities Era.

[3:7:84] Felicities Era refers to all representations and interpretations of artworks inspired by the events of the Felicities Era.

[3:7:85] Futurities Era refers to all representations and interpretations of artworks inspired by the events of the Futurities Era.

[3:7:86] Mysteries Era refers to all representations and interpretations of artworks inspired by the events of the Mysteries Era.

[3:7:87] Planisphere refers to the representation planispheres in Astronist works, typically being used by human-form Astronist characters as linked to astronomy and astrology, and is linked to The Philosophy of Astronism.

[3:7:88] Constellation refers to the representation of constellations in Astronist works, typically denoting links to astronomy and the seeking of knowledge of The Cosmos, so has strong connections to The Philosophy of Astronism.

[3:7:89] Cosmic Instrument refers to the representations of any objects possessed by Astronist characters in the setting of The Cosmos.

[3:7:90] Dark Matter refers to the representations of dark matter in Astronist artworks, typically represented as dark spots or swirling streams of darkness, evoking mystery and the role of darkness in The Universe.

[3:7:91] Cosmic Impulse refers to the representations of impulses in Astronist works, especially those experienced in The Cosmos by Astronist characters, either in Divine form or human form.

[3:7:92] Genesis refers to the representations of the moment of genesis of The Universe, closely related to The Big Bang, but chronologically, referring to a period after that event and focusing more on the creation of cosmic entities.

[3:7:93] Strength refers to the visual representations of the strength of the Astronist characters in the setting of The Cosmos, but mainly focusing on male physical strength of Jesse in particular, especially in his Divine form.

[3:7:94] Power refers to the visual representations of power in the setting of The Cosmos, most typically attributed to the powers of cosmic entities, or the Astronist characters in Divine form, or power of The Divine.

[3:7:95] Visibility refers to the representations of visibility in the setting of The Cosmos, especially when contrasted with the invisibility of entities, such as The Universe. This can also refer to the vision or foresight of the Astronist characters when in their Divine forms, thus directly inspired by Astronist Mystology.

[3:7:96] Embodiment refers to the representations of the embodiment of an idea in Astronist arts, typically an idea or feeling, such as hope, or unity.

[3:7:97] Godhead refers to the representations of the Astronist characters being Divine in nature.

[3:7:98] Divine Body Part refers to the representations of specifically body parts of Astronist characters while in Divine form.

[3:7:99] Triumphancy refers to the representations of Astronist characters, either in Divine or human form, overcoming an adversity, or triumphing over an evil entity.

[3:7:100] Chaos & Order refers to the representations of the nature of The Cosmos being in both chaos and order, evoking a sense of Divine intervention in the workings of The Cosmos.

[3:7:101] Gravity refers to the visual representations of the presence and force of gravity.

[3:7:102] Cosmic Egg refers to the representation of an egg as the creation of existence in The Cosmos and is typically surrounded by cosmic patterns and representations of cosmic entities, Divine radiances, and Divine Astronist characters.

[3:7:103] Cosmic Earth refers to the representation of The Earth centralised and surrounded by The Cosmos in The Universe.

[3:7:104] Dimensions refers to the representations of different dimensions in Cosmic Art, and most especially when Astronist characters in their Divine forms, are featured.

[3:7:105] Divine Eye refers to the representations of the eyes of Astronist characters when in their Divine forms, as glowing and having Divine power.

[3:7:106] Divine Hair refers to the representations of the hair of Astronist characters when in their Divine forms, as glowing and having Divine power.

[3:7:107] Divine Skin refers to the representations of the skin of Astronist characters when in their Divine forms, as glowing and having Divine power.

[3:7:108] Man in The Cosmos refers to the representations of Man, typically that of human Jesse or Oliver, as centralised and surrounded by The Cosmos in The Universe.

[3:7:109] Woman in The Cosmos refers to the representations of Woman, typically that of human Ellena, Zara, or Harriet, as centralised and surrounded by The Cosmos in The Universe.

[3:7:110] Boy in The Cosmos refers to the representations of Boy, typically that of young human Jesse or Oliver, as centralised and surrounded by The Cosmos in The Universe.

[3:7:111] Girl in The Cosmos refers to the representations of Girl, typically that of young human Ellena, Zara, or Harriet, as centralised and surrounded by The Cosmos in The Universe.

[3:7:112] Child in The Cosmos refers to the representations of Child, typically genderless and resembling divinity, as centralised and surrounded by The Cosmos in The Universe.

[3:7:113] Cosmic Offspring refers to the representations of a newborn child in The Cosmos, as distinct from Cosmic Birth and procreation.

[3:7:114] The True Divine As Light refers to the representations of The Divine as a sphere of overwhelming light as The True Divine, distinct from Earthly, Worldly, and Cosmic influences.

[3:7:115] The Emotionless Divine refers to the representations of The Divine as entirely separate from all cosmic, and human influences, in its depiction as a sphere of radiant light and consisting of both lightness and darkness, and most notable, good and evil.

[3:7:116] Emanation refers to the grand representations of lightness or darkness emanating from a particular source, especially one that is cosmic or Divine.

[3:7:117] Precognition refers to the representations of precognition and the possession of foresight, especially in the setting of The Cosmos, and possessing this foreknowledge by Divine power.

[3:7:118] Vision refers to the representations of vision in The Cosmos and having a superior vision of cosmic events and entities, especially in reference to Divine Eyes.

[3:7:119] Prophecy refers to the representations of prophesying the events of The Cosmos, especially representing Astronist characters as either receiving such prophecies, or providing such prophecies.

[3:7:120] The Cosmos of Knowledge refers to the representations of The Cosmos as the beacon of all knowledge and the only way to understanding the complexities and mysteries of The Universe.

[3:7:121] Cosmic Distance refers to the representations of distance in The Cosmos, especially in Astronist poetry.

[3:7:122] Cosmic Birth refers to the representations of birth in The Cosmos, especially as depicting the Astronist characters in their divine form, and inspired by the Cosmic Era of Astronist Mystology.

[3:7:123] Cosmic Death refers to the representations of death in The Cosmos, especially as depicting the Astronist characters in their divine form, and inspired by the Cosmic Era of Astronist Mystology.

[3:7:124] Pandemonium Cosmic Order refers to the oxymoronic representations of pandemonium order in The Cosmos, especially regarding cosmic entities as both creative and destructive.

[3:7:125] The Universal Seed refers to the representations of the seed of life in The Cosmos being central and creating cosmic entities surrounded by The Universe.

[3:7:126] Extraterrestrial refers to the representations of extraterrestrial beings and their contact with the Astronist characters, either in human or Divine form.

[3:7:127] Those Awaiting (in The Cosmos) refers to the representations of sentient beings in The Cosmos, represented as awaiting for contact with humanity.

[3:7:128] Divine Impregnation refers to the representations of impregnation in The Cosmos, between two Divine beings, especially Divine Jesse and Divine Ellena.

[3:7:129] Jesse & The Divine refers to the representations of Jesse and The Divine, especially if those two entities are the only two in an artwork.

[3:7:130] Ellena & The Divine refers to the representations of Ellena and The Divine, especially if those two entities are the only two in an artwork.

[3:7:131] Zara & The Divine refers to the representations of Zara and The Divine, especially if those two entities are the only two in an artwork.

[3:7:132] Harriet & The Divine refers to the representations of Harriet and The Divine, especially if those two entities are the only two in an artwork.

[3:7:133] Oliver & The Divine refers to the representations of Oliver and The Divine, especially if those two entities are the only two in an artwork.

[3:7:134] Aurora refers to the representations of auroras in Astronist arts, as depicting lightness, energy, and divinity.

[3:7:135] Divine Incarnation refers to the representations of Astronist characters as they incarnate into their Divine forms.

[3:7:136] Divine Destruction refers to the representations of The Divine destructing in a way that must be occur in order to fulfil the order of The Cosmos.

[3:7:137] Twin Stars refers to the representations of binary stars, especially when Astronist characters in their Divine form, are also depicted.

[3:7:138] Triplet Stars refers to the representations of triplet star systems, especially when Astronist characters in their Divine form, are also depicted.

[3:7:139] Bipolarity refers to the representations of bipolar extremities in The Cosmos, especially when Astronist character in their Divine form, are also depicted.

[3:7:140] Divine Absorption refers to the representations of the event whereby the Divine Astronist characters are absorbed into The Divine light.

[3:7:141] True Divinity refers to the representations of The Divine as being both lightness and darkness, goodness and evilness, and creation and destruction.

[3:7:142] Philosophical Cosmos refers to the representations of The Cosmos, in a philosophical context, relating to the understanding of knowledge, existence, and reality.

[3:7:143] From One, Comes All refers to the visual representations of the idea that All comes from One, especially when related to The Big Bang.

[3:7:144] Cosmic War refers to the representations of war in The Cosmos, depicting Astronist characters, either in human or Divine form.

[3:7:145] Perspectivity of The Everything refers to the grand representations of perceiving The Cosmos as a whole, rather than a portion of it.

[3:7:146] The Products of Divinity refers to the representations of the idea of the products of The Divine, wherein cosmic entities are direct products of The Divine, and humanity is an indirect product of The Divine.

[3:7:147] Knowledge As Power refers to the representations of knowledge being the paramount quality and is closely linked to The Philosophy of Astronism.

[3:7:148] The Pilgrims of Divinity refers to the representations of Astronist characters as divintors and divinitrixes in The Cosmos.

[3:7:149] Earthbound refers to the representations of Astronist characters in their human form bound to The Earth.

[3:7:150] Surface-bound Perspective refers to the representations of Astronist characters, typically in their human form, holding a surface-bound perspective, especially resembling astronomical and astrological practices.

[3:7:151] Ring of Light refers to the representation of a Ring of Light, especially in a Divine existence, and symbolises Divine unity, completion, and renewal.

[3:7:152] Aurora Borealis refers to the representation of Aurora Borealis as a cosmic entity of direct divinity.

[3:7:153] Aurora Australis refers to the representation of Aurora Australis as a cosmic entity of direct divinity.

[3:7:154] Spacewalking refers to the representation of Astronist characters while spacewalking, usually symbolising Cosmic Exploration, seeking knowledge, and cosmic pioneering.

[3:7:155] Our Eye in Space refers to the representation of space telescopes symbolising seeking knowledge, technology, and vision into The Cosmos.

[3:7:156] Colourless World of The Moon refers to the representation of The Moon as grey and colourless, especially depicting Astronist characters as exploring The Moon.

[3:7:157] The Grand Bombardment refers to the representation of planets colliding in great cosmic destruction, especially when cosmic patterns and Astronist characters are depicted.

[3:7:158] The Crater, Ptolemaeus refers to the representation of The Moon's crater, Ptolemaeus, and the Astronist characters depicted exploring it.

[3:7:159] Lunar Mining refers to the representation of the activity of Lunar Mining and the Astronist character depicted in partaking in it, symbolising advancement and technology.

[3:7:160] Water Beyond Earth refers to the representation of the Astronist characters exploring beyond The Earth to discover water, as the representative of hope, life, and opportunity.

[3:7:161] Photosphere/Chromosphere refers to the representation of photospheres and chromospheres in Astronist arts, symbolising lightness and heat.

[3:7:162] Lagrangian Point refers to the representation of Astronist characters in the formation of a Lagrangian point, which has five distinct powers with the star centralised.

[3:7:163] Coronagraph refers to the representation of Astronist characters acting as coronagraphs to display beautiful shadows and lights.

[3:7:164] Cosmic Nuclei refers to the representation of centralised nuclei in The Cosmos, symbolising life, creation, and stimulation.

[3:7:165] Solar Wind refers to the representation of solar wind and the depiction of Astronist characters in their Divine form, energising from it.

[3:7:166] Planetary Formation refers to the representation of planetary formation and the depiction of Astronist characters in their Divine form, symbolising violent creation.

[3:7:167] Cosmic Formation refers to the representation of cosmic formation and the depiction of Astronist characters in their Divine form, symbolising directly Divine creation and cosmic renewal.

[3:7:168] Cosmic Eclipse refers to the representation of eclipses by Astronist Divine characters, surrounded by cosmic entities and patterns.

[3:7:169] Stardust refers to the representation of stardust, and its Divine connection, which symbolises synergy between Astronist Divine characters and The Cosmos, as stardust is a microcosm of cosmic divinity.

[3:7:170] Cosmic Collision refers to the representation of collisions in The Cosmos, and the depiction of Astronist characters in their Divine form.

[3:7:171] Cosmic Eruption refers to the representation of eruptions in The Cosmos, and the depiction of Astronist characters in their Divine form.

[3:7:172] Cosmic Explosion refers to the representation of explosions in The Cosmos, and the depiction of Astronist characters in their Divine form.

[3:7:173] Exploratory Technologies refers to the representation of exploratory technologies symbolising the practical seeking of knowledge, human advancement, and the exploration of The Cosmos.

[3:7:174] Futuristic Technologies refers to the representation futuristic technologies symbolising the future of humanity, the exploration of The Cosmos, and the seeking of the mysteries of The Cosmos by technology.

[3:7:175] Water As Treasure refers to the representation of water as the greatest treasure beyond The Earth, and it symbolises new life, and opportunity.

[3:7:176] Asteroids refers to the representation of asteroids, symbolising potential destruction, and volatility.

[3:7:177] The Great Red Spot refers to the representation of The Great Red Spot of Jupiter, that is depicted typically in the background of artworks, and symbolises extreme volatility, storminess, and cosmic extremity.

[3:7:178] The Rings of Saturn refers to the representation of The Rings of Saturn that symbolise cosmic completion and circularity.

[3:7:179] Cosmic Desolation refers to the representation of desolation in The Cosmos, and the depiction of Astronist characters, most especially in their Divine form.

[3:7:180] Perihelion refers to the representation of Astronist characters in their Divine form at their closest position to a star.

[3:7:181] The Lone Wanderer (Comet) refers to the representation of comets, symbolising frozenness, potential destruction, and deep space.

[3:7:182] Oort Cloud refers to the representation of an Oort Cloud, and the depiction of Astronist characters in their Divine form, symbolising Cosmic Mystery, prodigiousness, Cosmic Veils, and is closely linked to stardust.

[3:7:183] Alpha Centauri System refers to the representation of the Alpha Centauri System, symbolising cosmic neighbourhood, and proximity.

[3:7:184] Parallax refers to the visual representation of parallaxes, and the depiction of Astronist characters in their Divine form.

[3:7:185] Galactic Region refers to the representations of galactic regions.

[3:7:186] Galactic Sector refers to the representations of galactic sectors.

[3:7:187] Galactic Subsector refers to the representations of galactic subsectors.

[3:7:188] Hot Jupiter refers to the representations of Hot Jupiter classed planets.

[3:7:189] The Seven Sisters refers to the representations of The Seven Sisters star cluster, and the depiction of Astronist characters in their Divine form.

[3:7:190] Kepler 22B refers to the representations of Kepler 22B, symbolising Life Beyond Earth, and opportunity.

[3:7:191] Supervoid refers to the representations of supervoids, symbolising complete Cosmic Isolation, and deep space.

[3:7:192] Nascent refers to the representations of the space industry as a nascent industry, especially depicting Astronist characters in their human form.

[3:7:193] Planetary Nebula refers to the representations of planetary nebula, especially when Astronist characters are depicted in their Divine form.

[3:7:194] The Ring Nebula refers to the representations of The Ring Nebula specifically, and especially when Astronist characters are depicted in their Divine form.

[3:7:195] The Red Rectangle Nebula refers to the representations of The Red Rectangle Nebula specifically, and especially when Astronist characters are depicted in their Divine form.

[3:7:196] The Eskimo Nebula refers to the representations of The Eskimo Nebula specifically, and especially when Astronist characters are depicted in their Divine form.

[3:7:197] The Cat's Eye Nebula refers to the representations of The Cat's Eye Nebula specifically, and especially when Astronist characters are depicted in their Divine form.

[3:7:198] The Crab Nebula refers to the representations of The Crab Nebula specifically, and especially when Astronist characters are depicted in their Divine form.

[3:7:199] The Pillars of Creation refers to the representations of The Pillars of Creation specifically, and especially when Astronist characters are depicted in their Divine form, symbolising Divine Creation, and the reality of Cosmic Distance and that The Pillars of Creation no longer exist due to the time it has taken for their light to reach Earth.

[3:7:200] Supernova refers to the representations of supernovas, and the depiction of Astronist characters in their Divine forms, symbolising the violent creation of The Cosmos.

[3:7:201] Hypernova refers to the representations of hypernovas, and the depiction of Astronist characters in their Divine forms, symbolising the ultimate forces of violent creation and the necessity for cosmic entities to end.

[3:7:202] Pulsar refers to the representations of pulsars, and the depiction of Astronist characters in their Divine forms, symbolising cosmic elegance, extreme density, and often represented as some sort of weapon or cosmic ally by Divine Jesse.

[3:7:203] Quasar refers to the representations of quasars, and the depiction of Astronist characters in their Divine forms, symbolising the most powerful cosmic entity, godly destruction, as well as remoteness and cosmic searchlights.

[3:7:204] Globular Cluster refers to the representations of globular clusters, and the depiction of Astronist characters in their Divine forms, symbolising cosmic beauty, intensity, and detachment.

[3:7:205] Galactic Halo refers to the representations of halos above the heads of Astronist characters in their Divine forms, in the setting of The Cosmos.

[3:7:206] Galactic Disc refers to the representations of galactic discs, especially depicted in the hands of Astronist characters in their Divine forms in the setting of The Cosmos.

[3:7:207] The Cosmic Corkscrew refers to the representations of the pattern of a corkscrew in The Cosmos, especially when paired with the depiction of Astronist characters in their Divine forms.

[3:7:208] Novae refers to the representations of novae, and the depiction of Astronist characters in their Divine forms, especially slightly faded due to the stars sudden brightness, and symbolises energisation, suddenness, and perhaps Divine intervention.

[3:7:209] Light Echo refers to the representations of the contrasts of light, especially from intense to faded, in the setting of The Cosmos and depicted beside Astronist characters in their Divine forms.

[3:7:210] Cosmic Year refers to the representations of the cosmic year, and typically featuring Astronist characters in their Divine forms.

[3:7:211] Galactic Arm refers to the representations of a galactic arm, and typically depicting Astronist characters in their Divine forms.

[3:7:212] Galactic Spur refers to the representations of a galactic spur, and typically depicting Astronist characters in their Divine forms.

[3:7:213] Galactic Pool refers to the representations of a galactic pool of stars in The Cosmos, and typically depicts Astronist characters in their Divine forms, falling back into the pool of stardusts and stars.

[3:7:214] Galactic Core refers to the representations of a galactic core, and depictions of Astronist characters in their Divine forms, typically symbolising ultimate cosmic wonderment, congregation, and also beautiful danger.

[3:7:215] Black Hole refers to the representations of a black hole, and depictions of Astronist characters in their Divine forms either inside it, or watching it, and symbolises deadly mesmerisation, the greatest mystery of The Cosmos, the edge of understanding and The Unknown.

[3:7:216] Supermassive Black Hole refers to the representations of a black hole, and depictions of Astronist characters in their Divine forms, most typically watching one from afar, and symbolises The Grand Unknown, inescapability, and The Greatest of Forces in The Cosmos.

[3:7:217] Galactic Collision refers to the representations of galactic collisions, and depictions of Astronist characters in their Divine forms, and symbolises Grand Destruction, creative destruction, and galactic new life.

[3:7:218] Warpment refers to the representations of the practice of warping, and typically depicts Astronist characters in their human form, and symbolises human exploration of The Cosmos, advancement, technology, and seeking knowledge of The Cosmos in The Universe.

[3:7:219] Elemental World

[3:7:220] The Ten Cosmical Elements refers to the representations of The Ten Cosmical Elements of Astronist philosophy, including Divine, Universe, Chaos, Cosmos, Darkness,

Lightness, Fire, Water, Air, Earth in one artwork, and typically depicting Astronist characters in their Divine forms.

[3:7:221] Divine refers to the specific representation of the element of Divine, and typically features radiant light, Divine beings, and symbolises The Unknown, mystery, ultimacy, and The Eternal Plain.

[3:7:222] Chaos refers to the specific representation of the element of Chaos, and typically features sporadic, unordered, and uncontrolled parts of cosmical existence, and symbolises disorder, anti-cosmos, The Unknown, and perhaps, even evil.

[3:7:223] Cosmos refers to the specific representation of the element of Cosmos, and typically features cosmic entities, and the depiction of Astronist characters in Divine form, and symbolises knowledge, enlightenment, and seeking the truths and wonderments of The Cosmos in The Universe.

[3:7:224] Darkness refers to the specific representation of the element of Darkness, and typically depicts Astronist characters in Divine form, and symbolises loneliness, abandonment, and The Unknown.

[3:7:225] Lightness refers to the specific representation of the element of Lightness, and typically depicts Astronist characters in Divine form, and symbolises divinity, new life, and creation.

[3:7:226] Fire refers to the specific representation of the element of Fire, and typically depicts Astronist characters either in human or Divine form, and symbolises necessary pain, danger, destruction, shortness, and ignition.

[3:7:227] Water refers to the specific representation of the element of Water, and typically depicts Astronist characters either in human or Divine form, and symbolises renewal, lustration, healing, fluidity, and revitalisation.

[3:7:228] Air refers to the specific representation of the element of Air, and typically depicts Astronist characters either in human or Divine form, and symbolises volatility, whimsicality, and the sky.

[3:7:229] Earth/Nature refers to the specific representation of the element of Earth/Nature, and typically depicts Astronist characters either in human or Divine form, and symbolises new life, fauna and flora, and worldly beauty.

[3:7:230] Materiality refers to the representations of materiality, and symbolises worldliness, consumption, and wealth.

[3:7:231] Egg refers to the representations of an egg, and symbolises new life, nature, and existence.

[3:7:232] Breath refers to the representations of breathing, and symbolises essential life, shared existence, and the completion commonality of humanity.

[3:7:233] Ocean refers to the representations of oceans, and symbolises vastity, hidden life, hidden depth, and opportunity.

[3:7:234] River refers to the representations of rivers, and symbolises flowing life, constant change, and is typically the centre of pastoral life.

[3:7:235] Lake/Pond refers to the representations of lakes and ponds, and symbolises stagnancy especially in contrast to rivers, and are also typically central to pastoral life.

[3:7:236] Whirlpool refers to the representations of whirlpools, and symbolises change, transition, and potential turbulence.

[3:7:237] Waterfall refers to the representations of waterfalls, and symbolises volatility, great disturbance, and loudness and is typically featured in the background of pastoral settings.

[3:7:238] Flood refers to the representations of floods, and symbolises overwhelmingness, destruction, and natural disaster.

[3:7:239] Bubble refers to the representations of bubbles, and symbolises vulnerability, intimacy, weightlessness, transparency, and whimsicality.

[3:7:240] Sky refers to the representations of the sky, and symbolises new heights, vast distance, humanity's connection and Earthbound observance of The Cosmos.

[3:7:241] Cloud refers to the representations of clouds, and symbolises obstruction to The Cosmos, obscurity, and barriers to imagination.

[3:7:242] Wind refers to the representations of wind, and symbolises possibility, motion, and wildness.

[3:7:243] Rain refers to the representations of rain, and symbolises descending, gentle to torrential, fertilisation of the Earth, abundance and heavenly power.

[3:7:244] Storm refers to the representations of storms, and symbolises volatility, destruction, bursting points, and heavenly anger.

[3:7:245] Thunder refers to the representations of thunder, and symbolises anger, and heavenly turbulence.

[3:7:246] Lightning refers to the representations of lightning, and symbolises dazzlement, volatility, and heavenly destruction.

[3:7:247] Rainbow refers to the representations of rainbows, and symbolises the colour spectrum, beautiful nature, reflection, and the entrance to another world.

[3:7:248] Drought refers to the representations of droughts, and symbolises gradual and inevitable death.

[3:7:249] Avalanche refers to the representations of avalanche, and symbolises overwhelming destruction, frozenness, potential destruction, and vulnerability.

[3:7:250] Sandstorm refers to the representations of sandstorms, and symbolises extreme enigma and obscurity.

[3:7:251] Wildfire refers to the representations of wildfires, and symbolises wild destruction, and death.

[3:7:252] Blizzard refers to the representations of blizzards, and symbolises obscurity, and storminess.

[3:7:253] Dew refers to the representations of dew, and symbolises moisture as a sign of rejuvenation, grace, and vitality.

[3:7:254] Fog refers to the representations of fog, and symbolises blurriness, indistinct, and natural obscurity.

[3:7:255] Frozen refers to the representations of frozenness, and symbolises the preservation of life, and sustaining the natural essence of something.

[3:7:256] Snow refers to the representations of snow, and symbolises silent volatility, infinite intricacy, natural purity, and silent natural grace.

[3:7:257] Spark refers to the representations of sparks, and symbolises natural and common divinity and potential destruction.

[3:7:258] Sunrise refers to the representations of sunrises, and symbolises new beginnings, rising warmth, and Divine awakening.

[3:7:259] Solstice refers to the representations of solstices, and symbolises turning points, extremes of light and dark, and rotation of ascent and descent.

[3:7:260] Sunset refers to the representations of sunsets, and symbolises The Coming of The Cosmos, death of light, union of light and darkness, and falling light.

[3:7:261] Eclipse refers to the representations of eclipses, and symbolises hidden truth, obscuring of the truth, and repression.

[3:7:262] Stone refers to the representations of stone, and symbolises construction, development, and stability.

[3:7:263] Mountain refers to the representations of mountains, and symbolises an ascent to self-realisation, ascending closer to The Cosmos, a sense of centrality, and at a mountain's summit, a sharpened visualisation of The Cosmos.

[3:7:264] Valley refers to the representations of valleys, and symbolises lowness and heights, and a place of plentitude and collectivity.

[3:7:265] Subterranean refers to the representations of the subterranean world, and symbolises regression, furthest place away from The Cosmos, and concealment.

[3:7:266] Eruption refers to the representations of eruptions, and symbolises a Divine burst, and creative destruction.

[3:7:267] Volcano refers to the representations of volcanoes, and symbolises potential destruction or dormancy, and the destruction of human civilisation.

[3:7:268] Earthquake refers to the representations of earthquakes, and symbolises the destruction of human civilisation, the domino effect and catastrophe.

[3:7:269] Tornado refers to the representations of tornadoes, and symbolises the destruction of human civilisation, and devastation.

[3:7:270] Cave refers to the representations of caves, and symbolises The Earthly Unknown, hibernation, introversion, incubation, and has strong links to the subterranean world.

[3:7:271] Salt refers to the representations of salt, and symbolises concentrated strength, essential for life, and potentially poisonous.

[3:7:272] Desert refers to the representations of the desert, and symbolises barrenness, death, emptiness, hallucination and exaggeration.

[3:7:273] Arch refers to the representations of arches, and symbolises making connections, stability, and development.

[3:7:274] Forest refers to the representations of forests, and symbolises something seemingly endless, humanity as rendered small and young, and a place of spirituality, enchantment and secrets.

[3:7:275] Jungle refers to the representations of jungles, and symbolises exotic danger, primitivity, spontaneous growth and continuous decay.

[3:7:276] Marshland refers to the representations of marshland, and symbolises vulnerability, vitality, natural richness, unpredictability, and ugliness.

[3:7:277] Beach refers to the representations of beaches, and symbolises contrasting narrowness and openness, and fullness and emptiness, as well as innumerability, loneliness, and deep thought.

[3:7:278] Sinking Sand refers to the representations of sinking sand, and symbolises distraught, and has close links to the subterranean world.

[3:7:279] Island refers to the representations of islands, and symbolises isolation, remoteness, solitude, refuge, and captivation.

[3:7:280] Amethyst refers to the representations of amethyst, and symbolises protection, cleansing, and intuition.

[3:7:281] Amber refers to the representations of amber, and symbolises warmth, wellbeing, and nurturing.

[3:7:282] Ammolite refers to the representations of ammolite, and symbolises colourfulness, transition, and vibrancy.

[3:7:283] Aquamarine refers to the representations of aquamarine, and symbolises peace, communication, and empowerment.

[3:7:284] Beryl refers to the representations of beryl, and symbolises opaqueness, smoothness, and radiance.

[3:7:285] Charoite refers to the representations of charoite, and symbolises royalty, swirling patterns, and tranquility.

[3:7:286] Citrine refers to the representations of citrine, and symbolises imagination, whimsicality, clarity, and manifestation.

[3:7:287] Danburite refers to the representations of danburite, and symbolises transparency, and purity.

[3:7:288] Diamond refers to the representations of diamond, and symbolises initiation, hardness, purpose, and clarity.

[3:7:289] Emerald refers to the representations of emerald, and symbolises love, compassion, wisdom, and abundance.

[3:7:290] Garnet refers to the representations of garnet, and symbolises manifesting, self-worth, and healing.

[3:7:291] Jade refers to the representations of jade, and symbolises abundance, nature, energisation, femininity, and wellbeing.

[3:7:292] Jasper refers to the representations of jasper, and symbolises grounding, masculinity, and earth energy.

[3:7:293] Kyanite refers to the representations of kyanite, and symbolises psychic abilities, and communication.

[3:7:294] Magnetite refers to the representations of magnetite, and symbolises dullness, and fragmentation.

[3:7:295] Moonstone refers to the representations of moonstone, and symbolises intuition, internality, and patience.

[3:7:296] Mystic Quartz refers to the representations of mystic quartz, and symbolises The Cosmos, spectrum, kaleidoscopic, colouration, and pigmentation.

[3:7:297] Obsidian refers to the representations of obsidian, and symbolises protection, purification, and grounding.

[3:7:298] Onyx refers to the representations of onyx, and symbolises focus, discipline, and self-mastery.

[3:7:299] Pearl refers to the representations of pearl, and symbolises self-care, nurturing, and emotional healing.

[3:7:300] Peridot refers to the representations of peridot, and symbolises positivity, abundance, and creation.

[3:7:301] Quartz refers to the representations of quartz, and symbolises manifestation, amplification, and protrusions.

[3:7:302] Rhodonite refers to the representations of rhodonite, and symbolises purposefulness, generosity, and contribution.

[3:7:303] Ruby refers to the representations of ruby, and symbolises life force, courageousness, and passion.

[3:7:304] Sapphire refers to the representations of sapphire, and symbolises focus, discipline, and inner vision.

[3:7:305] Sunstone refers to the representations of sunstone, and symbolises warmth, mosaics, and visual reflection.

[3:7:306] Topaz refers to the representations of topaz, and symbolises manifestation, clarity, and magnification.

[3:7:307] Tourmaline refers to the representations of tourmaline, and symbolises joyfulness, emotional healing, and love.

[3:7:308] Triphane refers to the representations of triphane, and symbolises natural colouring, emergence, ambition, and dreaming.

[3:7:309] Turquoise refers to the representations of turquoise, and symbolises wholeness, oneness, truthfulness, and communication.

[3:7:310] Zircon refers to the representations of zircon, and symbolises grounding, and the realisation and materialisation of ideas.

[3:7:311] Zoisite refers to the representations of zoisite, and symbolises pungency, vivacity, and charred femininity.

[3:7:312] Landscape refers to the representations of landscapes, and symbolises freedom, vastness, nature in its widest expanse, and possibility.

[3:7:313] Equinox refers to the representations of equinoxes, and symbolises enlightenment, cosmic shifts, completion, and transition.

[3:7:314] Moon Phases refers to the representations of moon phases collectively, and symbolises change, completion and incompleteness, hidden truths, and cosmic obscurity.

[3:7:315] Plant World

[3:7:316] Tree refers to the representations of trees, and symbolises old age, wisdom, durability, new and old life, and extension.

[3:7:317] Oak Tree refers to the representations of oak trees, and symbolises grandeur, vastness, and the self-renewal of life through the seeded acorn.

[3:7:318] Olive Tree refers to the representations of olive trees, and symbolises sustainment in harsh surroundings, perpetual renewal, the bearing of fruits, and growth.

[3:7:319] Pine Tree refers to the representations of pine trees, and symbolises long life, constancy, courage, strength in adversity, and a vessel of nurturance, and is closely linked to the Astronist character of Zara.

[3:7:320] Birch Tree refers to the representations of birch trees, and symbolises regeneration, new dawns, hope and promises of what is to come.

[3:7:321] Ash Tree refers to the representations of ash trees, and symbolises towering heights, unlimited possibilities, untold depths, and a higher perspective.

[3:7:322] Beech Tree refers to the representations of beech trees, and symbolises combined wisdom, ancient knowledge, and elegance.

[3:7:323] Blackthorn Tree refers to the representations of blackthorn trees, and symbolises preparation, sweetness, and motherhood.

[3:7:324] Cherry Tree refers to the representations of cherry trees, and symbolises femininity, beautiful nature, youthful maternity and is most closely linked to the Astronist character of Ellena.

[3:7:325] Chestnut Tree refers to the representations of chestnut trees, and symbolises justice, retribution, repentance, and honesty.

[3:7:326] Elm Tree refers to the representations of elm trees, and symbolises guardianship, grandparenthood, and eternal stability.

[3:7:327] Fir Tree refers to the representations of fir trees, and symbolises the riches of nature, forthrightness, and transparency.

[3:7:328] Hawthorn Tree refers to the representations of hawthorn trees, and symbolises muchness, generosity, and benevolence.

[3:7:329] Holly Tree refers to the representations of holly trees, and symbolises beautiful danger, memory, salvation, and sacrifice.

[3:7:330] Honeysuckle Tree refers to the representations of honeysuckle trees, and symbolises delicacy, grace, and childhood.

[3:7:331] Ivy refers to the representations of ivy, and symbolises hardened femininity, cruelty, and entrapment.

[3:7:332] Juniper refers to the representations of juniper, and symbolises reward, desirability, and acquisitiveness.

[3:7:333] Lime Tree refers to the representations of lime trees, and symbolises togetherness, companionship, and fruitfulness.

[3:7:334] Maple Tree refers to the representations of maple trees, and symbolises withered dreams, the passing of time, abandonment, and is closely linked to the Astronist character of Harriet.

[3:7:335] Pear Tree refers to the representations of pear trees, and symbolises marriage, strong relationships, and being cosseted.

[3:7:336] Plum Tree refers to the representations of plum trees, and symbolises care between the youth and the old, the passing of knowledge, keepership, and is closely related to the characters of Cora Nixon and Rose Hurst.

[3:7:337] Snowberry Tree refers to the representations of snowberry trees, and symbolises maidenhood, virginity, purity, and daintiness.

[3:7:338] Spindle Tree refers to the representations of spindle trees, and symbolises complexity, unwavering kindness, love, and newlyweds.

[3:7:339] Sycamore Tree refers to the representations of sycamore trees, and symbolises knowledge, and the greatness of knowledge, as well as breadth and depth and substance, yet too, obliviousness, homeliness, and is closely to the Astronist character of Jesse.

[3:7:340] Walnut Tree refers to the representations of walnut trees, and symbolises hardiness, superiority, and unwavering honesty.

[3:7:341] Willow Tree refers to the representations of willow trees, and symbolises forgiveness, regret, persistency, restoration, caring from afar, and is closely linked to the Astronist character of Oliver.

[3:7:342] Yew Tree refers to the representations of yew trees, and symbolises sensibility, sturdiness, hidden complexity, secrets, mystery, and is closely linked to the subterranean world.

[3:7:343] Palm Tree refers to the representations of palm trees, and is most closely linked to the legend of the Astronist character of Phoenix.

[3:7:344] Roots refers to the representations of roots, and symbolises foundation, origin, source, possibility, potentiality, and resembles the idea of "From One Comes All".

[3:7:345] Tree of Life refers to the representations of the Tree of Life, and symbolises inclusion, organisation, great sagacity, and is infused with good and evil, and lightness and darkness.

[3:7:346] Garden refers to the representations of gardens, and symbolises the afterlife, thriving life, judgement, and the oxymoronic place of "unlimited enclosure".

[3:7:347] Flower refers to the representations of flowers in botanic symbolism, and symbolises eternal renewal, natural cycles, dissemination, and emergence.

[3:7:348] Rose refers to the representations of roses in botanic symbolism, and symbolises death, curious simplicity, defence and the essence of entirety.

[3:7:349] Thistle refers to the representations of thistles in botanic symbolism, and symbolises royalty, reverence, and respect.

[3:7:350] Apple refers to the representations of apples, and symbolises greed, sweetness, and remembrance.

[3:7:351] Peach refers to the representations of peaches, and symbolises good health, ampleness, femininity, and fecundity.

[3:7:352] Grape refers to the representations of grapes, and symbolises richness, colour, clustering and cultivation.

[3:7:353] Pomegranate refers to the representations of pomegranates, and symbolises hardness, crowning, blood, and masculinity.

[3:7:354] Mushroom refers to the representations of mushrooms, and symbolises weightlessness, uncanniness, magical, decay, and demonic vegetation.

[3:7:355] Mandrake refers to the representations of mandrakes in botanic symbolism, and symbolises fantasy, mysticism, superstition, fertility, ambiguity, and oxymoronic as it brings life and death, and it heals and poisons.

[3:7:356] Snowdrop refers to the representations of snowdrops in botanic symbolism, and symbolises wellspring, purity, and new life.

[3:7:357] Dragon's Blood Tree refers to the representations of dragon's blood tree, and symbolises durability, persistency, new heights, discovery and perennial existence.

[3:7:358] Cacti refers to the representations of cacti in botanic symbolism, and symbolises unconditional love, maternal protection, and longevity.

[3:7:359] Mangrove refers to the representations of mangroves in botanic symbolism, and symbolises aquatic life and beauty, complexity of life, and new hopes, and closely linked with the Astronist character of Jesse.

[3:7:360] Venus Flytrap refers to the representations of Venus flytraps in botanic symbolism, and symbolises death, hideosity, and uniqueness.

[3:7:361] Amaryllis refers to the representations of amaryllises in botanic symbolism, and symbolises shyness, timidity, and unrequited love.

[3:7:362] Begonia refers to the representations of begonias in botanic symbolism, and symbolises caution, warning, misfortune, unpleasant thoughts, and challenges, but ultimately, loyalty, forgiveness and guardianship, and is closely linked to the Astronist character of Oliver.

[3:7:363] Bluebell refers to the representations of bluebells in botanic symbolism, and symbolises humility, gratitude, and ancestry.

[3:7:364] Buttercup refers to the representations of buttercups in botanic symbolism, and symbolises summer, pastoral life, childishness, and richness.

[3:7:365] Clematis refers to the representations of clematises in botanic symbolism, and symbolises artifice, trickery, and mischievousness.

[3:7:366] Crocosmia refers to the representations of crocosmia in botanic symbolism, and symbolises natural dissemination, popularity, and overwhelmingness.

[3:7:367] Daffodil refers to the representations of daffodils in botanic symbolism, and symbolises rebirth, synonymous with spring, and new beginnings.

[3:7:368] Dahlia refers to the representations of dahlias in botanic symbolism and symbolises being multi-layered, holding substance and reliability.

[3:7:369] Daisy refers to the representations of daisies in botanic symbolism, and symbolises sincerity, childhood, and motherly love and care.

[3:7:370] Delphinium refers to the representations of delphiniums in botanic symbolism, and symbolises motivation, determination, and strength in adversity, and is closely associated with the Astronist character of Zara.

[3:7:371] Forsythia refers to the representations of forsythias in botanic symbolism, and symbolises nobility, boldness, cheerfulness, and anticipation.

[3:7:372] Foxglove refers to the representations of foxgloves in botanic symbolism, and symbolises healing, insincerity, wise femininity, and grandmotherly love.

[3:7:373] Fuchsia refers to the representations of fuchsias in botanic symbolism, and symbolises abundance, lusciousness, and harmony.

[3:7:374] Geranium refers to the representations of geraniums in botanic symbolism, and symbolises superficiality, understanding, and female beauty.

[3:7:588] Wheel refers to the representations of wheels, and symbolises creative rotation, completion, phases, morphation, eternity, time, duration, and the division of the cosmic whole, endless repetition, and the course of a life.

[3:7:589] Calendar refers to the representations of calendars, and symbolises the ordering of time, development, regularity, and the procession of The Cosmos.

[3:7:590] Compass refers to the representations of compasses, and symbolises direction, Divine architect of The Cosmos, measurement, geometry, and giving form and scale to the unknown.

[3:7:591] Scales refers to the representations of scales, and symbolises balance, logicity, measurement, the force of good and evil, mediation, and autumnal equinox.

[3:7:592] Direction refers to the representations of directions, and symbolises guidance, support, protection, and foresight.

[3:7:593] Chain refers to the representations of chains, and symbolises bloodshed, conflict, criminality, duality, fixation, imprisonment, dependence, subjugation, revenge, and slavery.

[3:7:594] Handcuffs refers to the representations of handcuffs, and symbolises criminality, punishment, justice, revenge, and entrapment.

[3:7:595] Net refers to the representations of nets and netting, and symbolises entrapment, punishment, justice, trickery, and revenge.

[3:7:596] Web refers to the representations of webs and webbing, and symbolises entrapment, ensnarement, punishment, and trickery.

[3:7:597] Thread refers to the representations of thread, and symbolises a basis, spindling, and a sense of femininity and entanglement.

[3:7:598] Basket refers to the representations of baskets, and symbolises birth, newborn child, motherhood, as well as cultivation, cookery, domesticity, and pastoral life.

[3:7:599] Purse refers to the representations of purses, and symbolises feminine wealth, royalty, nobility, and concealed money.

[3:7:600] Wallet refers to the representations of wallets, and symbolises masculine wealth, protection, and concealed money, but also a target of criminality, and the luring of danger.

[3:7:601] Money refers to the representations of money, and symbolises ostentatiousness, shallowness, and materialism, mainly due to the lack of concealment of the money.

[3:7:602] Comb refers to the representations of combs, and symbolises feminine beauty, grace, fertility, youthful femininity, clarity, and disentanglement.

[3:7:603] Torch refers to the representations of torches, which is one of Jesse's most associated items, and symbolises clarity, discovery, purity, lightness, divinity, heroic virtue, honour, harmony, grandiosity, and a sense of exploratory action.

[3:7:604] Scissors refers to the representations of scissors, and symbolises support, curtness, and candidness, but also, beauty, womanly femininity, change, and possibility.

[3:7:605] Veil refers to the representations of veils, and symbolises modesty, mystery, intrigue, concealment, a barrier, social reticence, silence, separation, religiosity, strong morality, and emphasises the idea that femininity is more than beauty.

[3:7:606] Helmet refers to the representations of helmets, and symbolises protection, war, conflict, and combat, but also, a barrier, and potential criminality.

[3:7:607] Hat & Headdress refers to the representations of hats and headdresses, and either symbolise comedy, or nobility depending on the style of the accessory.

[3:7:608] Wreath refers to the representations of wreaths, and symbolises death's calling, the completion of life, celestancy, divinity, and an omen.

[3:7:609] Hierarchy refers to the representations of hierarchies, and symbolises divinity, formationism, collectivism, and the levels of holiness.

[3:7:610] Language & Dialogue refers to the representations of language and dialogues, and symbolises connection, friendship, companionship, understanding, mutuality, and progression.

[3:7:611] Map refers to the representations of maps, and symbolises knowledge, education, perspectivity, and an understandable microcosm of a vast or complex entity.

[3:7:612] Crown refers to the representations of crowns, and symbolises nobility, royalty, honour, idolatry, and humanly divinity, especially as distinct from The Divine itself.

[3:7:613] Necklace refers to the representations of necklaces, and symbolises feminine fashion, womanly wealth, and nobility, but also, a target of criminality, luring danger, and has hints of sorcery, enchantment, and trickery.

[3:7:614] Earring refers to the representations of earrings, and symbolises feminine fashion, womanly wealth, and nobility, especially when the Astronist character of Ellena is depicted wearing this accessory.

[3:7:615] Ring refers to the representations of rings, and symbolises marriage, a microcosm of a deep connection, protection, and in a cosmic setting, perpetual life, eternal divinity, and Divine permanency.

[3:7:616] Apron refers to the representations of aprons, and symbolises culinary work, domesticity, artistry, and mastery.

[3:7:617] Shoe refers to the representations of shoes, and symbolises worldliness, materialism, femininity, fashion, authority, ownership, and a reflection of nobility and status.

[3:7:618] Umbrella & Parasol refers to the representations of umbrellas and parasols, and symbolises protection in two forms; one from water and one from heat, and so, is closely linked to the elements of water and fire.

[3:7:619] Telephone refers to the representations of telephones, and symbolises communication, connection, the shortening of distance, and friendship.

[3:7:620] Smartphone refers to the representations of smartphones, and symbolises advancing technologies, a taste of future, communication, the shortening of distance, business and commerce, and friendship.

[3:7:621] House refers to the representations of houses, and symbolises an essentiality, and shelter, especially as opposed to a warm place, and hope, family, and happiness.

[3:7:622] Home refers to the representations of homes, and symbolises family, hope, happiness, warmth, and a sense of centrality to life, domesticity, and pastoral and utopian lives.

[3:7:623] Gate & Door refers to the representations of gates and doors, and symbolises exclusivity, intrigue, mystery, secrets, possibility, metaphorical guardianship, but also, protection from whatever may be behind it.

[3:7:624] Lock refers to the representations of locks, and symbolises enclosure, concealment, entrapment, ensnarement, trickery, but also, Divine secrets, commitment, privacy, forbiddance, and in a cosmic setting, guardianship of the secrets of The Universe.

[3:7:625] Key refers to the representations of keys, and symbolises essential duality, especially paired with a lock, discovery, knowledge, understanding, maturity, and wisdom and high hierarchal status, especially of an individual holding a key, and in a cosmic setting, the unlocking of the secrets of The Universe.

[3:7:626] Window refers to the representations of windows, and symbolises opportunity, possibility, lightness in darkness, transparency, hope in the face of adversity, and escape in the face of entrapment.

[3:7:627] Stairway refers to the representations of stairways, and symbolises intrigue, mystery, secrets, possibility, rising to a higher status, rising to divinity, and in a cosmic setting, rising to greater knowledge and understanding of The Universe.

[3:7:628] Ladder refers to the representations of ladders, and symbolises opportunity, potentiality, hope, rising to a higher status, most especially in the human world.

[3:7:629] Passageway refers to the representations of passageways, and symbolises mystery, intrigues, uncovering secrets, concealment, trickery, darkness, evil, and has close links to the underworld, but also can symbolise escape from entrapment, opportunity, discovery, and greater knowledge.

[3:7:630] Attic refers to the representations of attics, and symbolises abandonment, horror, murder, concealment, criminality, suicide, and is contrasted as being the highest place in the home, but the lowest in terms of its purpose.

[3:7:631] Basement & Cellar refers to the representations of basements and cellars, and symbolises a deep connect to the underworld, and the underworld's grip on one's home.

[3:7:632] Catacombs refers to the representations of catacombs, and symbolises death in the underworld as the darkest position, being close to hell, devilment, trickery, sorcery, deception, ghostliness, but also, a necessary evil to lead to greater knowledge.

[3:7:633] Kitchen refers to the representations of kitchens, and symbolises the essence of domesticity, the centre of family life, the lifeblood of the home, and has close links to cookery and traditional femininity, but also symbolises stagnancy, sadness, and regret.

[3:7:634] Lamp & Candle refers to the representations of lamps and candles, and symbolises humanly light, as opposed to Divine or cosmic light, discovery, exploration, hope in the adversity of darkness, opportunity, possibility, and a sense of humanly elegance and searching for knowledge.

[3:7:635] Streetlamp refers to the representations of street lamps, and symbolises nocturnal light, mystery, intrigue, and hope in the adversity of the night.

[3:7:636] Oven refers to the representations of ovens, and symbolises stagnancy in domestic life.

[3:7:637] Table refers to the representations of tables, and symbolises centrality in the home, family, companionship, romance, and the centre of culinary appreciation.

[3:7:638] Chair & Throne refers to the representations of chairs and thrones, and symbolises domesticity, family, friendship, companionship, as well as royalty, nobility, idolatry, and humanly honour.

[3:7:639] Glass refers to the representations of glass, and symbolises transparency, opportunity, possibility, reflection, and escape from entrapment.

[3:7:640] Mirror refers to the representations of mirrors, and symbolises the power of light, beauty, life reflection, self-beautification, and self-realisation.

[3:7:641] Broom refers to the representations of brooms, and symbolises witchcraft, servancy, domesticity, and housekeeping.

[3:7:642] Bed & Bedroom refers to the representations of beds and bedrooms, and symbolises eroticism, privacy, intimacy, marriage, and the traditional setting of death.

[3:7:643] Cradle refers to the representations of cradles, and symbolises newborn child, protection, new life, the beginning of the life cycle, and safety.

[3:7:644] Bath & Bathing refers to the representations of bath and bathing, and symbolises lustration, cleansing, washing away memories, and has close links to rituals.

[3:7:645] Pool refers to the representations of pools, and symbolises tranquility, manmade paradise, and is the setting of summertime and vacation.

[3:7:646] Fountain refers to the representations of fountains, and symbolises fertility, vitality, serenity, sincerity, and eternal youthfulness.

[3:7:647] Well refers to the representations of wells, and symbolises the sustainment of life, the preservation of the sacred, but also, holds secrets, mystery, intrigue, and contrasts itself by holding close links to the underworld and death.

[3:7:648] Castle refers to the representations of castles, and symbolises a utopian and historical paradise, ancestral civilisation, royalty, nobility, stability, protection, and has close links to sorcery, magic, and mysticism. In a cosmic setting, symbolises dreaming and visions with a close connection to constellations as it typically below them while still retaining a strong connection to The Earth and is typically a place of many people, as opposed to the depictions of towers.

[3:7:649] City refers to the representations of cities, and symbolises modernity, advancing humanity and civilisation, intricacy and complexity, and the oxymoronic “crowded isolation”.

[3:7:650] Temple refers to the representations of temples, and symbolises worshipment, manmade god as opposed to the trueness of The Divine, calmness, serenity, reflection, morality, understanding, and is depicted as the historical centre of human society.

[3:7:651] Niche refers to the representations of niches, and symbolises a place of quiet reflection, refuge, and a place for the position of idols.

[3:7:652] Cloister refers to the representations of cloisters, and symbolises protection, modesty, devotion, concealment, detachment, and seclusion.

[3:7:653] Tower refers to the representations of towers, and symbolises isolation, lonesome death, and the oxymoronic “remote centrality”, especially in reference to it being a place of reclusiveness and torture as opposed to the depiction of a castle.

[3:7:654] Pillar/Column refers to the representations of pillars and columns, and symbolises essentiality and necessity, stability, manmade beauty, and the principles, the basis, and the foundations of something for without them, it would not exist.

[3:7:655] Bridge refers to the representations of bridges, and symbolises a connection between two otherwise unconnected entities, and in a cosmic setting, a connection to gaining knowledge of The Universe.

[3:7:656] Tunnel refers to the representations of tunnels, and positively symbolises discovery, alternative escape from entrapment, and struggle before resolution, but negatively symbolises death, the concealment of death, the underworld, and the afterlife.

[3:7:657] Street refers to the representations of streets, and symbolises direction, movability, the backbone of civilisation, but negatively symbolises a place of criminality and its ability to polarise from crowdedness and emptiness.

[3:7:658] Market refers to the representations of markets, and symbolises commerce, trade, and sociality, but also a place of thievery, deception, usury, and in a rural setting, the centrality of pastoral life.

[3:7:659] Education Institution refers to the representations of schools, colleges, and universities, and symbolises the place of education, knowledge, greater understanding of the world, and the centre of youthful society.

[3:7:660] Prison refers to the representations of prisons, and symbolises a place of deep reflection upon one’s life decisions, a place of opportunity, a place of understanding, and the oxymoronic “individual commonality”.

[3:7:661] Veneration refers to the representations of veneration, and symbolises divinity, faith, and the respect for the mysteries of The Divine, The Universe, and The Cosmos.

[3:7:662] Onlookers refers to the representations of onlookers, and symbolises detachment, impersonality, and a microcosm of humanity as an onlooker of The Cosmos in The Universe.

[3:7:663] Flute refers to the representations of flutes, and symbolises trickery, mischief and sorcery, but also, elegancy, and hypnotism.

[3:7:664] Piano refers to the representations of pianos, and symbolises the funnelling of emotions.

[3:7:665] Trumpet & Horn refers to the representations of trumpets and horns, and symbolises the arrival of nobility, royalty, and the musical connection between great distances, and is often depicted in pastoral life.

[3:7:666] Harp & Lyre refers to the representations of harps and lyres, and symbolises tranquility, serenity, harmony, honour, and musical femininity.

[3:7:667] Bell refers to the representations of bells, and symbolises devotion, a calling across vastness, and worshipment.

[3:7:668] Drum refers to the representations of drums, and symbolises harshness, curtness, but also, rituals, danger, and anxiety.

[3:7:669] Violin refers to the representations of violins, and symbolises grace, musical femininity, elegancy, delicacy, and has strong connections to The Cosmos.

[3:7:670] Silence refers to the representations of silence, and symbolises sacredness, the greatest gift from The Divine, and the oxymoronic "isolated fullness" of quieting the mind.

[3:7:671] The Devil refers to the representations of The Devil, and symbolises the manmade personification of evil, but also knowing that The Devil is not the trueness of evil, and that The Divine is All; both good and evil.

[3:7:672] Demon refers to the representations of demons and demonic beings, and symbolises an angel of evil, and should not be something avoided, but something faced, and Astronist characters are often depicted as facing demonic entities.

[3:7:673] Life & Death refers to the representations of life and death, and symbolises completion, but also the opportunity of something beyond if faith is present, and is often depicted in a circular shape and in wheels.

[3:7:674] Leadership refers to the representations of leaderships, and the leader is most typically depicted as the Astronist character of Jesse, but not entirely. Leadership is often depicted as the forefront of force, but other forces, whether in the form of other Astronist characters or cosmic force, support the leadership and act as pillars for the prosperity of the whole.

[3:7:675] Relationship refers to the representations of relationships, and symbolises a connection between two humans, but as distinctly inferior to the relationship an individual has with The Cosmos, and the relationship an individual has with The Divine.

[3:7:676] Friendship refers to the representations of friendships, and symbolises support, and protection in the face of adversity, but also the lesson of individuality and understanding that no matter how one is close to another, that “one” will always put themselves before yourself.

[3:7:677] Domesticity refers to the representations of domestic life and domesticity, and symbolises family, proximity, homeliness, warmth, the everyday, and the essence of pastoral and suburban living.

[3:7:678] Pilgrimage refers to the representations of pilgrims and pilgrimages, and symbolises devotion, holding faith close to one’s heart, and intensifying the proximity between oneself and one’s faith of God, as distinct from The Divine. In a cosmic setting, refers to the depiction of the seeking of knowledge of The Universe and a wonderment of The Cosmos as the equivalent of pilgrimage.

[3:7:679] Childhood refers to the representations of childhood, and symbolises innocence, but the possibility to blacken, vulnerability, sinlessness, purity, and uncorrupted, but also corruptible.

[3:7:680] Youth refers to the representations of youth and youthfulness, and symbolises insecurity, promise, hope, opportunity, possibility, the future of humanity, and the strength of the sense that anything is possible.

[3:7:681] Old Age refers to the representations of old age, and embodies the complete opposite to the tradition depiction of the Astronist character of Jesse in aesthetics, and typically symbolises narrowness, stubbornness, wisdom and overly assured of one’s knowledge, but also, the greatest responsibility for the guardianship of the young.

[3:7:682] Adulthood refers to the representations of adulthood, and symbolises a sense of greater knowledge, a sense of wisdom, a sense of knowing what and what not to do, and a sense of direction, but ultimately, nothing is assured.

[3:7:683] Men refers to the representations of men and manhood, and symbolises the assumption to the traditional role of man as protector, provider, and producer in all aspects of life, but also leaves room for insecurity, irresponsibility, ignorance, and ignobility.

[3:7:684] Women refers to the representations of women and womanhood, and symbolises the assumption to the traditional role of woman as carer, champion, and the quiet force upholding

[3:7:685] Sibling refers to the representations of siblings, and symbolises connection, family, relation, and pure offspring.

[3:7:686] Family refers to the representations of family, and symbolises homeliness, warmth, the essence of humanity, the purpose of life, and solidarity in the face of adversity.

[3:7:687] Grandparent refers to the representations of grandparents and grandparenthood, and symbolises guardianship, ultimate loyalty, and the impartation of wisdom.

[3:7:688] Mother refers to the representations of mothers and motherhood, and symbolises ultimate protection for her child, perpetual maternal love, and eternal loyalty, and the deepest Divine connection with another human, but also harbouring the possibility to have this destroyed.

[3:7:689] Father refers to the representations of fathers and fatherhood, and symbolises fatherly providence, eternal loyalty, perpetual paternal love, and ultimate protection his child, but also harbouring the possibility to have this destroyed.

[3:7:690] Cousin refers to the representations of cousins, and symbolises friendship, relation, family, and is closely linked to the relationship between the Astronist characters of Harriet and Jesse.

[3:7:691] Aunt & Uncle refers to the representations of aunties and uncles, and symbolises friendship, relation, and family.

[3:7:692] Worker refers to the representations of workers, and symbolises solidarity in the face of tyranny, unity in the face of adversity, as well as labouring for the land of the nation and the family, the spine of the country, and the lowest in traditional society.

[3:7:693] Horoscopy refers to the representations of horoscopy, and is often symbolised as forecasting a bad omen in one of the lives of the Astronist characters, but the truth of the forecast is never fully assured.

[3:7:694] Musical Notation refers to the representations of musical notations, and symbolises creativity, joy, romance, and the sounds of The Cosmos.

[3:7:695] Concord refers to the representations of a concord, and is often depicted in a political setting with a group of individuals surrounding a document symbolises the an agreement or treaty and the Astronist characters of Jesse, Ellena, Zara, Harriet and Oliver are depicted as leading the concord.

[3:7:696] Extremity refers to the representations of extremities, and is often depicted by contrasting lightness and darkness, the eight elements, vast distances, and also, in contrasting characters, colours, and sizes of subjects.

[3:7:697] Externality refers to the representations of externalities, and is often depicted as one subject clearly being on the outside of another, either by use of a barrier or by colours.

[3:7:698] Internality refers to the representations of internalities, and is often depicted as one subject clearly within another, either by use of barriers, boundaries, or matching shades of colours to indicate a commonality.

[3:7:699] Oppression refers to the representations of oppression, and symbolises mass social chaos, torture, torment, devilment, tyranny, mass death, destruction, fire, floods, and earthquakes, but typically, depicted as a lightness in the mass darkness, an Astronist character, typically Jesse, but not always, represents the saviour, the champion, and the hero or heroine of the people.

[3:7:700] Tyranny refers to the representations of tyranny, and most typically, Astronist characters are depicted in an expansive battle scene against the tyrant for the justice of the people whom the tyrant has oppressed.

[3:7:701] Revolution refers to the representations of revolution, and most typically, Astronist characters are depicted in an expansive scene, typically in an urban area, of the characters leading a mass of peoples in a revolution, most typically against an oppressive or torturous authority.

[3:7:702] Liberation & Freedom refers to the representations of liberation and freedom, and most typically, Astronist characters are depicted in the role of saviours, champions, and heroes, in the act of liberating oppressed peoples, slaves, giving hope to peoples in poverty, and setting free those who have been wrongly imprisoned.

[3:7:703] Anatomy refers to the representations of anatomy, and most typically, the anatomy of any of the Astronist characters is depicted, especially with a strong connection to alchemy, sorcery, and mysticism.

[3:7:704] Procreation refers to the representations of procreation, and most typically, nothing vulgar is shown, but procreation is given a vague, blurred, and distinctly Divine atmosphere, especially in the setting of The Cosmos.

[3:7:705] Farming, Cultivation & Agriculture refers to the representations of farming, cultivation, and agriculture, as the staple of pastoral life, and is often paired with summertime, warmth, bright colours, and is closely linked to nature, wildlife, the animal world, and emphasises the idea of humanity living from the fruits of The Earth, and as a directly result of the existence of The Universe and ultimately, The Divine.

[3:7:706] Madness refers to the representations of madness, and is most typically depicted in reference to the aftermath of Jesse's death, in which the other Astronist characters do spiral downwards, and so is closely linked to the mystological period of the Destinies Era.

[3:7:707] Prayer refers to the representations of prayer and praying, and it is most typically Jesse that is depicted in the act of praying, thus symbolising his religiosity, devotion, and faith in The Divine.

[3:7:708] Torture & Torment refers to the representations of torture and torment, and is most typically depicted beside the actions of an oppressive tyrant, with either Astronist characters suffering, or acting as the saviours to end the torture and torment.

[3:7:709] Superhuman refers to the representations of superhumans, and typically, this is in reference to the Astronist characters in their Divine forms, rather than any type of superhero or mutant form.

[3:7:710] Advanced Human refers to the representations of advanced humans, which most typically involves the advancement of humanity by way of technology, therefore a futuristic atmosphere is most often portrayed with either an apocalyptic atmosphere or futuristic utopia with a constantly strong connection to The Cosmos throughout.

[3:7:711] Wealth & Poverty refers to the contrasting representations of wealth and poverty, and is often depicted in the form of two contrasting people, or places, and most especially if it is an Astronist character that connects those two places or people.

[3:7:712] Illness refers to the representations of illness, and symbolises death's calling, the unknown, faith, and has close links to the afterworld, and The Divine.

[3:7:713] Sin refers to the representations of sin, and symbolises devilment, evilness, and darkness, especially when surrounded by lightness.

[3:7:714] Banishment refers to the representations of banishment, and symbolises loss, detachment, isolation, and is typically contrasted and resolved by an Astronist character coming to save the banished as their saviour, champions, and heroes, invoking the idea that no human should be left.

[3:7:715] Rejection refers to the representations of rejection, and symbolises isolation, loneliness, regret, discarded, malevolence, and socially departed.

[3:7:716] Wisdom refers to the representations of wisdom, and is depicted by using the element of lightness, bright colours, sagacity, and is personified by books to evoke knowledge, by Divine forms and formations to evoke divinity, and by the setting of The Cosmos to evoke divinity and the answers to the mysteries of The Universe.

[3:7:717] Imagination refers to the representations of imagination, as the centre of humanity's divinity, and the one, central Divine force that will drive humanity towards its greatest triumphs, and is often depicted as lightness, or multicoloured streams, especially in the setting of The Cosmos.

[3:7:718] Naivety refers to the representations of naivety, as being one of the greatest Divine gifts of the young, and the one feature that drives forward the imagination of humanity.

[3:7:719] Reflection refers to the representations of reflection, as one of the greatest practices in order to progress, and typically a mirror is depicted.

[3:7:720] Gesture refers to the representations of gestures, and typically involves the gesturing of one of the Astronist characters to evoke and emphasise a distinct emotion, and is most typically used when portraying the Astronist character of Ellena.

[3:7:721] Victory & Loss refers to the representations of victory and loss, and is typically depicted in a war or revolutionary setting, with the Astronist characters either leading the victory or being killed in the face of loss.

[3:7:722] Old & New refers to the representations of oldness and newness, and is most typically depicted as an individual of old age and an individual of young age, and what each individual can teach the other.

[3:7:723] Past, Present & Future refers to the representations of the past, present and the future, and is most typically depicted in the form of a triptych, and commonly evokes the idea of Jesse's or another Astronist character's life in its past, present, and future forms, can centre around an event, a place, or a group of people in their past, present, and future forms.

[3:7:724] Ignition refers to the representations of ignition, and is often paired with the element of fire and lightness and flowing energies, as well as eruptions, explosions, and in a cosmic setting, the ideas of cosmic bombardment, and Divine creation are evoked.

[3:7:725] The Five Senses refers to the representations of the five senses as vision, smell, touch, hearing, and taste, and are typically visually depicted as eyes, noses, hands, ears, and tongues, and often portrayed in the background or vaguely displayed.

[3:7:726] Unity refers to the representations of unity, and typically symbolises solidarity in the face of adversity and tyranny, revolution, liberation, freedom, and formationism is closely linked to the idea of unity of the Astronist characters.

[3:7:727] Evolution refers to the representations of evolution, and most typically refers to the evolution of the Astronist characters in both their ages, personalities, and their purposes for the peoples of the world and in The Cosmos, but more widely, can be depicted as the evolution of an event, a place, or The Cosmos itself, and is closely linked to the idea of morphation, progression, and betterment.

[3:7:728] Involution refers to the representations of involution, and most typically takes the form of a negative depiction with Astronist characters regressing or becoming weaker, and emphasises the opposite to the ideas and depictions of evolution, morphation, and betterment.

[3:7:729] Acidity refers to the representations of acids, and is most typically depicted as a substance, either physical or metamorphical, that burns into the physicality something, especially the Astronist characters when in their human forms, contrasted with acidity having no affect on Astronist characters in their Divine forms.

[3:7:730] Toxicity refers to the representations of toxicity, and is most typically depicted as an air based substance, either physical or metamorphical, which causes mass destruction, death, and extreme tragedy, and Astronist characters either depicted as dying from the toxicity, or being the saviours, champions, and heroes, which save humanity from the physical toxicity, or the metamorphical toxicity.

[3:7:731] Singularity refers to the representations of the singularity or a singularity, and the singularity is most typically a depiction of the point in a black hole in a deeply cosmic setting, and a singularity is most typically depicted as an Astronist character centralised with nothing else depicted.

[3:7:732] Infinity refers to the visual representations of infinity, and is most typically depicted as The Divine and most typically symbolises a sense of eternity, fullness, wholeness, and one's faith of The Divine.

[3:7:733] Zero refers to the visual representations of zeros, and typically symbolises emptiness, nothingness, voidness, and is typically represented by the absence of Astronist characters from Astronist artworks.

[3:7:734] One refers to the visual representations of one and oneness, and typically symbolises loneliness, divinity, leadership, confidence, individuality, origin, strength, and is represented by the presence of just one Astronist character, evoking solitology.

[3:7:735] Two refers to the visual representations of two and twoness, and typically symbolises marriage, partnership, relationships, balance, but also conflict, division and opposition, and is represented by the presence of just two Astronist characters, evoking duology.

[3:7:736] Three refers to the visual representations of three and three-ness, and typically symbolises human godliness, time (as in past-present-future, birth-life-death, and beginning-middle-end), and so symbolises completion, but also evokes the idea of "three's a crowd" and the possibility of one being left out with serious consequences, and is represented by the presence of just three Astronist characters, evoking trilogy.

[3:7:737] Four refers to the visual representations of four and four-ness, and typically symbolises stability, order, and foundation, and is represented by the presence of just four Astronist characters, evoking quadology, but is ultimately the number of distinct incompleteness because it is so close to the number of complete, five, but still, is very much inferior.

[3:7:738] Five refers to the visual representations of five and five-ness, and typically symbolises completion of formationism in reference to the presence of all five Astronist characters, thus evoking quintology. The number five and five-ness is revered and symbolises satisfaction, divinity, ultimate balance, harmony and peace.

[3:7:739] Six refers to the visual representations of six and six-ness, and is most closely linked to the Astronist character of Phoenix as the sixth Astronist character. The number six and six-ness symbolises the beyond, the passage of time, and also symbolises The Universe beyond The Cosmos.

[3:7:740] Seven refers to the visual representations of seven and seven-ness, and is most closely linked to the idea of The Unknown, and all this beyond The Cosmos and The Universe. The number seven and seven-ness symbolises mystery, envelopment, and has a sense of The Divine, but is distinctly still far away from The Divine.

[3:7:741] Eight refers to the visual representations of eight and eight-ness, and is most closely linked to The Eight Elements as whole, and so evokes completeness, wholeness, harmony, balance, power, and prosperity, but also closer links towards The Divine, infiniteness, and faith.

[3:7:742] Nine refers to the visual representations of nine and nine-ness, and is the number most closely linked to The Divine after the number, one. The number nine and nine-ness symbolises the end, resolution, death, completion, ultimate knowledge, wisdom, sagacity, and trueness.

[3:7:743] Minus refers to the visual representations of minus numbers or minus-ness, and is represented by the element of darkness, dullness, faded colours, and symbolises eternal loss, and regression.

[3:7:744] Fortress refers to the representations of fortresses, and is represented by a wall of darkness, a wall of lightness, or a metamorphical wall or barrier, and Astronist characters are often represented as either on one side of the fortress, or crossing between the fortress, or on both sides of the fortress to symbolise change, progression, and difference.

[3:7:745] Riddle, Puzzle & Code refers to the representations of riddles, puzzles, and codes, and symbolises mystery, learning, understanding, education, and are most typically depicted in the background in the setting of The Cosmos to symbolise the mysteries of The Universe.

[3:7:746] Women's Work refers to the representations of work traditionally done by women, and is most often depicted with the Astronist character of Ellena conducting housekeeping, cookery, child rearing, and needlework, but is also contrasted with male Astronist characters being present and conducting those same actions.

[3:7:747] Housewifery refers to the representations of housewifery, and is vastly represented by the Astronist character of Ellena, most typically, conducting in housework, but poignantly, including no children to stay within the canonical Astronist story, or including a child, Phoenix, to symbolise a time beyond the canonical Astronist story.

[3:7:748] Vegetation refers to the representations of vegetation collectively, most typically centralised and made vibrant and symbolises the pureness of The Earth as distinct from humanity, and new life, and natural richness.

[3:7:749] Script & Seal refers to the representations of all scripts and seals on official documentations of The People's Constitutional Company of Jesse Millette, and symbolises unity, solidarity, and ultimately, for the betterment of peoples.

[3:7:750] Magnetism refers to the representations of magnetism, and is represented by the closeness, proximity, and the sharing of lightness and energies and cosmic infusions, between Astronist characters or between an Astronist character and The Divine.

[3:7:751] Death World

[3:7:752] Death refers to the representations of death, and symbolises loss, detachment, loneliness, and the oxymoronic "unique commonality", but also a fulcrum of motivation, and a point of certainty.

[3:7:753] The Black Lady refers to the representations of The Black Lady, and symbolises the female bearer of death, terror, coldness, regret, the manifestation of guilt, extreme loneliness, and sin, but also, a sense of human commonality, togetherness, and unavailability.

[3:7:754] Allegory of Death refers to the representations of the Allegory of Death, and symbolises the different interpretations of death, and the events unknown and known that surround death, and both before and after death, invoking religion, faith, knowledge, and The Cosmos as consistently themes closely connected to death.

[3:7:755] Triumph of Death refers to the representations of the Triumph of Death, and symbolises the idea that death wins over all life, but is also visually represented to be fundamentally flawed due to life reoccurring, and death not being triumphant over The Divine.

[3:7:756] Danse Macabre refers to the representations of the Danse Macabre, and symbolises the personification of death as it enjoys taking life, and is represented by the

dancing of skeletons, especially with Astronist characters in torture and agony and dying below the dancing corpses.

[3:7:757] Horsemen of the Apocalypse refers to the representations of the Horsemen of the Apocalypse, and symbolises the male bearers of death, war, destruction, and famine, but also, a possibility of fighting death and surviving it, thus death not as an immediate inevitability.

[3:7:758] Grim Reaper refers to the representations of the Grim Reaper, and symbolises the genderless bearer of death, but distinctly, the immediate inevitability of death with no chance of negotiation or escape.

[3:7:759] Death and the Maiden refers to the representations of Death and the Maiden, and symbolises death's calling specifically for a woman, particularly any of the three female Astronist characters, typically with the Astronist character of Jesse attempting to fight death and save the woman.

[3:7:760] The Three Living and The Three Dead refers to the representations of The Three Living and The Three Dead, and symbolises a stalemate between life and death, and the endless "tug of war" between the two forces with death inevitably killing life, but life reoccurring in another form.

[3:7:761] Shade refers to the representations of shades and shadows, and symbolises death in its undeveloped form, an agent of death, and a place for death to flourish as a contrast to life.

[3:7:762] Investigated Body refers to the representations of an investigated body, and is represented by the dissection of the bodies of Astronist characters, and symbolises the gruesome way to gain knowledge of the human body as distinct from the human spirit which has left and can be depicted, or to understand the bodies and minds of the Astronist characters more specifically.

[3:7:763] Fragmented Body refers to the representations of a fragmented body, and is represented by the dismembered bodies of Astronist characters either wholly or partly depicted, and symbolises the ultimate desecration of someone's humanly form, violence, hatred, and human separation, but also, the action is inferior to an individual's spirit as that lives on and is often depicted as doing so.

[3:7:764] Crime refers to the representations of crime, and the Astronist characters are always represented as being the victims of crimes; never explicitly the perpetrators.

[3:7:765] Covering Tracks refers to the representations of covering tracks, and symbolises the knowing that one has done something wrong, immorality, secrets, and the concealment of truth.

[3:7:766] Sacrifice refers to the representations of sacrifices, and is most typically depicted as the Astronist character of Jesse being centralised as a sacrifice, and symbolises torture, eternal love, a saviour, a champion, and a hero.

[3:7:767] Funeral Lamentation refers to the representations of funeral lamentation, and is most often depicted canonically with Rose Hurst's funeral, Madelyn's Hurst's funeral, and uncanonically, Jesse's funeral, which is shrouded in mystery.

[3:7:768] Cemetery refers to the representations of cemeteries, and symbolises mass death, grief, the remembrance of people, horror, a place of murder, the city of the dead, criminality, and is most often represented with Astronist characters in mourning, and despair.

[3:7:769] Mausoleum refers to the representations of mausoleums, and symbolises the decoration of death, the entrapment of mourning, and the idolatry of figures in mourning.

[3:7:770] Monument to the Fallen refers to the representations of the Monument to the Fallen, and symbolises the uncanonical erection of monuments of Astronist characters after the canonical death of Jesse, and also refers to the vast rendition of Astronist characters in monuments.

[3:7:771] Tomb refers to the representations of tombs, and symbolises mortality, the commemoration of death, the end of one's humanness, and also refers to the decoration of tombs with Astronist characters.

[3:7:772] Stele refers to the representations of steles, and symbolises the preservation of the memories of an individual and steles are most typically represented as being one or more of the Astronist characters, as preservers, champions of memory, and saviours.

[3:7:773] Sarcophagus refers to the representations of sarcophagi, and symbolises the housing of bodily death and acts as a symbol for one's final humanly resting place.

[3:7:774] Urn refers to the representations of urns, and symbolises the memory of someone lost to the human world, the compacting of death, the death of someone or something with less relevance, and can more sinisterly symbolise the ultimate desecration of someone to become nothing but dust and renditioned urns can be decorated with Astronist characters.

[3:7:775] Grave Goods refers to the representations of grave goods, and most typically references the renditioned objects decorated with Astronist characters that can be placed with the deceased in their coffins, and collectively symbolise hope, peace, completion, memories, and offerings to God.

[3:7:776] Funeral Mask refers to the representations of funeral masks, and most typically symbolises the individual as they wanted to be remembered, and how the world wanted to remember them.

[3:7:777] Funerary & Posthumous Portrait refers to the representations of funerary and posthumous portraiture, and most typically depicts dead people in their most realistic form through art in order to preserve the last appearance of an individual before they passed in the afterworld. Astronist characters can also be represented in this way, most especially drawing upon symbolisms of their lives floating around their caskets to represent the life they have lived.

[3:7:778] Naikos refers to the representations of naikos, and most typically depict an Astronist character and how they died, both canonically and uncanonically.

[3:7:779] Reliquary refers to the representations of reliquaries, and most typically depict Astronist characters in veneration, with each character conducting an action most associated with them, either canonically or uncanonically.

[3:7:780] Afterworld

[3:7:781] Last Judgement refers to the representations of the Last Judgement as initiated in Christian theology, is typically symbolised with the Astronist characters either collectively or individually being judged by The Divine, most usually depicted as an overwhelmingly radiant sphere of light, with a Divine setting as distinct from a cosmic setting.

[3:7:782] Psychostasis refers to the representations of psychostasis, which is most typically symbolised with the Astronist characters either collectively or individually, waiting to hear their fate, most typically in a seemingly Divine setting as distinct from a cosmic setting, but noteworthy is the typical depiction of the Astronist characters in their human forms in this setting, thus evoking the idea that psychostasis is fundamentally humanity's creation, and so, is not truly Divine.

[3:7:783] Book of the Dead refers to the representations of the Book of the Dead, and is most typically depicted as part of the Grave Goods, and serves as the deceased's credentials, detailing the conducts of the individual during their life.

[3:7:784] Island of the Dead refers to the representations of the Island of the Dead, and is most typically depicted as an island in or between the living world and the afterworld, but distinctly indivine, upon which the five Astronist characters stand as three distinct identities; unifiers, champions, and heroes.

[3:7:785] Journey to the Afterworld refers to the representations of the Journey to the Afterworld, including a vast array of depictions and interpretations, but most commonly refers to the journey upon the Astronist characters take, either individually or collectively, as they leave behind the living world and venture toward the afterworld.

[3:7:786] Light of the Afterworld refers to the representations of the Light of the Afterworld, and is an alternative depiction and most typically symbolised by the contrasting idea that the afterworld is full of radiance, glory, and light.

[3:7:787] Gods of Death refers to the representations of the Gods of Death, and most commonly symbolise hideosity, a triumphant evil, grotesqueness, gruesomeness, horror, the greatest of nightmares, mythical creatures, and are distinctly indivine.

[3:7:788] Purgatory refers to the representations of purgatory inspired by Christian theology, and most commonly depicted are the Astronist characters, either individually or collectively, entering, enduring, and completing purgatory, with the slightest of hopes of meeting The Divine.

[3:7:789] Hell refers to the vast representations of hell inspired by Christian theology, and most commonly depicted are the Astronist characters, either individually or collectively, entering, enduring, or escaping hell.

[3:7:790] Cosmic Afterworld refers to the vast representations of the Cosmic Afterworld, and is most typically symbolised with the venerated Astronist characters in Divine form, existing as unifiers, champions, and heroes in The Cosmos.

[3:7:791] Paradise refers to the vast representations of paradisaal existence, and is most typically symbolised with the Astronist characters, distinctly in human form to convey paradise as a human creation, serving a godly figure and living in a place of light, radiance, abundance, and eternalness.

[3:7:792] Necropolis (The City of The Dead) refers to the representations of The City of The Dead, and symbolises eternal death, the ultimacy of death, the territory of death, and the authority of the death world.

[3:7:793] War World

[3:7:794] Allegory of War refers to the representations of the Allegory of War, which is vastly depicted, but typically involves an extensive scene of war, of which either one or all five Astronist characters are partaking in, either in human form or Divine form, and either physically or metamorphically.

[3:7:795] Battle refers to the representations of battles, and symbolises mass destruction, bloodshed, carnage, savagery, torture, loss, mass death, and depicted, are the Astronist characters either defending against evil forces, are being overrun by evil forces and suffering from torture, death etc.

[3:7:796] Duel to the Death refers to the representations of the Duel to the Death, which is vastly depicted, but most typically involves an extensive scene of spectators, with one or

more Astronist characters centralised and in the stance of combat in the face of an adversary, or the Astronist characters can be depicted as spectators, watching on from the crowd. These depictions symbolise brutality, concentrated bloodshed, hatred, and the act of killing for the satisfaction of one's ruler, or to prove one's worthiness.

[3:7:797] Arms and Instruments of Death refers to the representations of the Arms and Instruments of Death, is depicted by the honourable stance of an Astronist character holding their arms and wearing their armour in preparation for battle, usually backdropped by a pastoral, or cosmic setting.

[3:7:798] Heroic Deeds refers to the representations of the Heroic Deeds, which is vastly depicted, but most typically involves the representation of one or more Astronist characters conducting deeds of charity, chastity, courageousness, and goodwill, usually backdropped by a pastoral, or cosmic setting.

[3:7:799] Death of the Hero refers to the representations of the Death of the Hero, which is vastly depicted, but most typically involves the representation of one or more Astronist characters dying after conducting heroic feats.

[3:7:800] Holocaust refers to the representations of holocausts, and symbolises mass destruction, mass death, desecration, and the loss of individuality, and is most often represented by one or more Astronist characters suffering as a victim of a holocaust.

[3:7:801] Victims refers to the vast representations of victims, and is most typically depicted by one or more Astronist characters suffering from the acts of another.

[3:7:802] Murder refers to the vast representations of murder, and is most typically depicted by one or more Astronist characters being a victim of murder.

[3:7:803] Suicide refers to the vast representations of suicide, and is most typically depicted by one or more Astronist characters helping someone from committing suicide.

[3:7:804] Blood refers to the vast representations of blood, and symbolises life, divinity, warmth, good-heartedness, generosity, sacrifice, honour, glory, heroism, heritage, an essentiality, and the force of life.

[3:7:805] Plague refers to the vast representations of plagues, and symbolises mass death, mass destruction, calamity, and is most typically depicted by Astronist characters either suffering from plagues, or heroically fighting against plagues.

[3:7:806] Martyrdom refers to the vast representations of martyrs and martyrdoms, and symbolises renunciation of an evil belief and devilment, individuality, strength in the face of a stronger adversary, death for fighting for one's beliefs, and is most typically depicted by Astronist characters as martyrs.

[3:7:879] Centaur refers to the representations of Centaurs of Greek Mythology, and is represented as a guardian, a protector, and a saviour of powerless people, and often symbolised alongside Astronist characters as an ally, most especially in the setting of mythical war.

[3:7:880] Cerberus refers to the representations of Cerberus of Greek Mythology, and is represented as a wild guard, hellishness, and a servant of the underworld, and often symbolised with Astronist characters, most typically attacking them.

[3:7:881] Chimera refers to the representations of Chimera of Greek Mythology, and is represented as being hideous, but also, ultimately of goodness, and is often symbolised alongside Astronist characters, typically fighting against evil spirits, especially Manticores.

[3:7:882] Cyclops refers to the representations of Cyclops of Greek Mythology, and is represented as the distortion of humanity, deadly vision, disgruntlement, and is often symbolised as an outcast, a target of hatred, and Astronist characters are most typically symbolised alongside the creature, either defending the creature, or scared of the creature.

[3:7:883] Doppelgänger refers to the representations of Doppelgänger, and is represented as the essence of human duality, alter egos, but also, ultimate danger if one means their Doppelgänger, and is often symbolised by the Doppelgänger of each Astronist characters, most typically not facing each other, or to portray ultimate doom, the Astronist characters facing their Doppelgänger.

[3:7:884] Dwarf refers to the representations of Dwarfs, and is represented as the essence of underestimation, concealed intelligence, victims of persecution, and Astronist characters are often depicted alongside dwarfs, as friends, especially in the setting of mythical war.

[3:7:885] Elf refers to the representations of Elves of Germanic Mythology, and are represented as harbouring superior intelligence, rarity, holding foresight, and with the ability to know all about an individual by looking into their eyes, and Astronist characters are often symbolised as deeply allied with elves, especially in the setting of mythical war.

[3:7:886] Fairy refers to the representations of Fairies, and are represented as spiritually wild, unpredictable, holding inane logic, and Astronist characters are often symbolised as being transported by hundreds of fairies, especially in a mythical setting.

[3:7:887] Gnome refers to the representations of Gnomes, and are represented as helping Astronist characters, but still keeping reserved and always slightly disgruntled, and so never truly trustworthy.

[3:7:888] Goblin refers to the representations of Goblins, and are represented as assisting Astronist characters, but never in the conduct of war or in a war setting, and are most typically symbolised as the protectors of wealth and fortune, but still, never truly trustworthy.

[3:7:889] Golem refers to the representations of Golems of Jewish Folklore, and are represented as reliable and absolutely loyal guardians, especially of something of great value, and depicted as the protectors of Astronist characters in mythical war, and are willing to die for the protection of the characters.

[3:7:890] Gorgon refers to the representations of Gorgons of Greek Mythology, and are represented as the essence of dread, despair, and the draining of life force, and are seen as great enemies, especially in mythical war.

[3:7:891] Griffin refers to the representations of Griffins of Ancient Egyptian Mythology, and are represented as the ultimate defenders of freedom, liberty, and solidarity, and are seen as one of the greatest allies of goodness, and are often depicted with Astronist characters in mythical warfare.

[3:7:892] Hydra refers to the representations of Hydras of Roman Mythology, and are mostly represented as the greatest beasts of the ocean world, a creature with no loyalty to neither goodness nor evilness, a creature of immense leverage over all oceans, but is most typically represented as hostile towards Astronist characters.

[3:7:893] Imp refers to the representations of Imps of Germanic Mythology, and are represented as servants of devilment, deadly mischief, and evil trickery, and most typically symbolised in attacking Astronist characters for furtherance of devilment and evil.

[3:7:894] Leprechaun refers to the representations of Leprechauns of Irish Mythology, and are represented as conducting harmless mischief, the bringers of good luck, and the guardians of wellspring, and are most typically symbolised in non-war mythical settings alongside Astronist characters, but Leprechauns are never fully trustworthy.

[3:7:895] Loch Ness Monster refers to the representations of the Loch Ness Monster, and is a consistent feature in various Astronist stories, and even present in The Original Jesse Millette Series, and is most typically symbolised as extremely elusive, an omen of doom, and the heralding of bad luck, and young death, but also, at the pinnacle, a symbol of saviour and a force against evil.

[3:7:896] Manticore refers to the representations of Manticore of Person Mythology, and is represented as the direct adversary of the Chimera, and fights for the prevalence of evil, the domination of devilment, and is depicted as fighting against Astronist characters, in mythical warfare.

[3:7:897] Medusa refers to the representations of the Medusa of Greek Mythology, and is represented as the champion of feminine devilment, the protector of trickery, deception, and corruption, and is often depicted as the direct adversary to the female Astronist characters, in mythical combat.

[3:7:898] Minotaur refers to the representations of Minotaurs of Greek Mythology, and is represented as the guardian of evil spirits, and the preserver of destruction, and murder, and is often depicted as the direct adversary of Griffins and the Astronist character of Jesse in mythical warfare.

[3:7:899] Mutant refers to the representations of Mutants, and are represented as abnormalities of humanity, humanity's outcasts, and the result of wild technology and experimentations, and can either be depicted as fighting for evil or good spirits, but Astronist characters are often depicted as being friendly towards outcasted Mutants.

[3:7:900] Nymph refers to the representations of Nymphs, and are represented as the essence of innocence, holding indestructible connections to nature and the nature of The Earth itself, but also, are represented as sensual beings of either gender, seductresses or seducers, and lustful creatures, and Astronist characters are often targeted by Nymphs for these very reasons, especially Astronist characters depicted in their Divine forms.

[3:7:901] Ogre refers to the representations of Ogres, and are represented as the essence of hideosity, outcasts of the mythical world, the embodiment of terror and unpleasantry, and Astronist characters are most often symbolised as either afraid of Ogres or accepting of them.

[3:7:902] Pegasus refers to the representations of the Pegasus, and is represented as the mythical form of divinity, and the essence of purity, all that is good, generosity, sacrifice, and unity against evil spirits, and Astronist characters are most often depicted as riding the Pegasus, or waging mythical warfare alongside the Pegasus, and of noteworthy, is that the Pegasus can only be depicted once in any one artwork due to its mythological Divine connection.

[3:7:903] Phoenix refers to the representations of the Phoenix, and is represented as the greatest symbol of rebirth, rejuvenation, and the reincarnation of overwhelming power, goodness, and unity against evil spirits, and Astronist characters are most often depicted as waging mythical warfare alongside the Phoenix, but the Phoenix is too, so very unpredictable, and ultimately, has no absolute loyalty in warfare, and is closely linked to the Astronist character, Phoenix and vicariously, also the Astronist character, Jesse.

[3:7:904] Pixie refers to the representations of Pixies, and are represented as the essence of deceit, the oxymoronic "lethal delicacy", and are often depicted as taking neither side between good and evil spirits, but present only to cause harmful mischief for both sides, and are often depicted as leading the Astronist characters astray, especially Astronist characters in their human childhood forms.

[3:7:905] Satyr refers to the representations of Satyrs of Greek Mythology, and are represented as stronger in numbers rather than individually, thus honing the ideas of solidarity, and unity against evil spirits, and are most typically symbolised as friends of Astronist characters in mythical settings, but also quite shy, but loving, caring, and eager to protect.

[3:7:906] Sphinx refers to the representations of the Sphinx of Egyptian Mythology, and is symbolised as the leader of the mythical realm, the holder of a Divine connection, and due to its immense size, the greatest of warriors, the mythical god of all that is good, and can

only be depicted once in any one artwork due to its divinity. Astronist characters are often represented in private conversation with the Sphinx and the legend surrounding the Sphinx is that when the Sphinx comes to the battlefield, “silence shall fall upon all warriors, good and evil, in the face of such divinity, before an overwhelming radiance consumes the entirety of the battlefield, and all that is good ultimately and absolutely prevails”.

[3:7:907] Sprite refers to the representations of Sprites, and are represented either in groups or individually, as the essence of the ethereal and spiritual world, and are said to be the keepers of the secrets of the mythical realm, and are neither good nor evil, but of Divine nature.

[3:7:908] Thunderbird refers to the representations of the Thunderbird, and are symbolised as giant eagle-like birds that descend from the clouds of storms that they have created with lightening bolts emitting from their bodies and thunder said to shake the core of the realm, and can only be called upon by the Sphinx, and Astronist characters are often represented as in deep awe of this grand and rare creature.

[3:7:909] Valkyrie refers to the representations of Valkyries of Norse Mythology, and are symbolised as the spectators of warfare, and it is the essence of warfare that they do feed upon and it is the Valkyries that have an influence over who dies in battle and who lives.

[3:7:910] Vampire refers to the representations of Vampires of European Mythology, and are symbolised as cowardice creatures, reclusive, cunning, and are rarely depicted in a setting of mythical warfare, but are typically associated with evil spirits and have a strong hatred towards the Astronist characters for their divinity.

[3:7:911] Werewolf refers to the representations of Werewolves of European Mythology, and are symbolised as creatures of the night, and isolation, and are most typically depicted in one-to-one mythical combat, rather than in large-scale mythical warfare.

[3:7:912] Zombie refers to the representations of Zombies, and are most typically symbolised as the guardians of the dead of the mythical realm, and are symbolised as creatures of horror, detachment from the realm, and have no other purpose than to disseminate death and terror, and are rarely depicted in large-scale mythical warfare.

[3:7:913] Exorcism refers to the representations of exorcisms, and symbolises spiritual renewal, the termination of evil spirits, and it is the Astronist character, Jesse, that is most often depicted as being exorcised.

[3:7:914] Spirit, Mind & Faith As One refers to the representations of the Spirit, Mind & Faith As One, and symbolises the concepts of The Spirit, as one’s connection to The Divine, The Mind, as one’s gift of The Divine, and The Faith, as one’s belief of The Divine, resembles the wholeness of these three components As One, most typically symbolised by a three-pronged formation of lights, often positioned above the five Astronist characters.

[3:7:915] Witch refers to the representations of witches, and symbolises the embodiment of feminine deceit and trickery, as well as the illusion, enchantment, deadly female, and female hideosity, especially as an opposite to the Astronist character, Ellena.

[3:7:916] Dragon refers to the representations of dragons, and symbolises the greatest of beasts, and can be depicted either as the greatest enemy, or the greatest protector.

[3:7:917] Illusion refers to the representations of illusion, and can symbolise devilment, misery, poison, and superior trickery.

[3:7:918] The Fallen Souls refers to the representations of The Fallen Souls, resembling the souls of the dead that have not yet entered the afterworld, and symbolises eternal loss, and Astronist characters are depicted as being terrorised by The Fallen Souls.

[3:7:919] Eternity refers to the representations of eternity, and symbolises The Divine, and the mysteries of The Universe, and is most often symbolised by the Ouroboros, cosmic rings, and circular shapes.

[3:7:920] Dot & Bindi refers to the representations of dots and the bindi, and symbolises mystery, creative center, infinity, new life, opportunity, balance, and The Divine order of The Cosmos, and is closely linked to the ideas of cosmic concentricity, and is most often depicted discreetly in the backgrounds of artworks rather than taking a centralised position.

[3:7:921] Mandala refers to the representations of Mandalas of Tantric Buddhism, and most typically, Astronist characters are depicted on the outside of the Mandala, as the modern protectors and preservers of it.

[3:7:922] Labyrinth refers to the representations of labyrinths, and symbolises transformation, the journey to reality, the changeability of reality, inconsistent patterns, confusion, the journey for clarity, and the journey of one's greatest nightmares, and resembles Astronist characters as the venturing through The Grand Labyrinth.

[3:7:923] Effigy refers to the representations of effigies, and symbolises the destruction or damage of a model of an Astronist character, typically in protest of Astronist characters.

[3:7:924] Apparition & Ghost refers to the representations of apparitions and ghosts, and symbolises otherworldliness, as distinct from the spiritual world, the lost souls of the human world, and typically resembles Astronist characters either as apparitions themselves, or witnessing apparitions.

[3:7:925] Repetition refers to the representations of repetition in the depictions of Astronist characters in one artwork, and is typically used to symbolise a distinction between the Astronist characters, their ages, and their appearances.

[3:7:926] Multiplication refers to the representations of multiplication, typically the multiplication of Astronist characters or another subject on the scale of hundreds, or perhaps, thousands.

[3:7:927] Ethereal refers to the representations of ethereality, and refers to the subjects taking on ethereal forms, such as mythical creatures, and even certain forms of the Astronist characters themselves.

[3:7:928] Crossroads refers to the representations of crossroads, and symbolises opportunity, possibility, chance, change, and humanity's free will, and is resembled by the Astronist characters at a crossroads of two or more depicted decisions, and can also infer the consequences of their decisions.

[3:7:929] Parallels refers to the representations of parallels, and is depicted by the representations of parallel lines or the parallels of Astronist characters in their differing forms.

[3:7:930] Signature refers to the vast representations of the signature symbols, sigils, or forms of Astronist characters.

[3:7:931] Spiral refers to the representations of a spiral pattern, and symbolises the most widespread pattern of the natural world, The Cosmos, growth, transformation, spiritual journey, outward expansion, and is closely linked to the ideas of cosmic concentricity, and is a symbolism of the order of The Cosmos and infers the secrets of The Universe.

[3:7:932] Argyle refers to the representations of an argyle pattern, and symbolises interconnection, and the foundations of The Cosmos.

[3:7:933] Asymmetry refers to the representations of asymmetric patterns, and symbolises the opportunity for change, patternless, randomness, and oppositeness.

[3:7:934] Death & Rebirth refers to the representations of death and rebirth depicted as one and the same, and symbolises the oxymoronic "oppositely identical" and is closely related to the mythical creature of the Phoenix and the Astronist character, Phoenix.

[3:7:935] Blank refers to the representations of blankness, and symbolises emptiness, cosmic voids, inanity, and the oxymoronic "full barrenness".

[3:7:936] Distortion refers to the representations of the distortions of the Astronist characters and symbolises the opposite of the Divine Astronist characters, charred by the human world, and typically depicted as desperate to regain their divinity.

[3:7:937] Soul refers to the representations of the souls of the Astronist characters and symbolises the death of an Astronist character, and the distinction between the Astronist

character and their soul, which is said to be the one entity that holds the character's divinity.

[3:7:938] Champions refers to the representations of Astronist characters as champions of humanity under the banner of The Divine, with vast depictions of different settings from paradisaal to war to Divine settings, and usually falls in alignment with the concepts and depictions of formationism.

[3:7:939] Blotch refers to the representations of Astronist characters blotched or partly cutoff from the artwork, either purposefully or not, and typically symbolises a loss of divinity, evil spirits at work, or the Astronist characters desecrated by the evilness of the world.

[3:7:940] Perfection refers to the representations of Astronist characters in a state of perfection, and symbolises divinity, clarity, serenity, peace, and prosperity, most typically to evoke a sense of leadership, strength, unity, and betterment, and uses the visual concepts of formationism to evoke such ideas.

[3:7:941] Beautification refers to the representations of Astronist characters in a state of beautification, most typically depicted by two or three faces of the Astronist characters, from a state of unrecognisable hideosity, to the Divine form, or a perfect and recognisable form of the Astronist character.

[3:7:942] Checkered refers to the representations of a checkered pattern, and symbolises repetition, hypnotism, the oxymoronic "Identical Opposites", the oxymoronic "Complex Simplicity", and is associated with trickery, mischief, and eternity.

[3:7:943] Concentricity refers to the representations of a concentric pattern, and is a symbol of The Divine, and also resembles The Order of The Cosmos, and is considered to be one of the answers to the mysteries of The Universe.

[3:7:944] Crosshatch refers to the representations of a crosshatch pattern, and symbolises entrapment, the oxymoronic "Orderly Confusion", strength, stability, and protection.

[3:7:945] Dots refers to the representations of a dotted pattern, and symbolises infinite centralities, hypnotism, complexity, and is closely associated with the structure of The Cosmos.

[3:7:946] Floral refers to the representations of a floral pattern, and symbolises the unique beauty of nature, natural intricacy and complexity, and is closely associated with the Astronist character, Ellena.

[3:7:947] Formationism refers to the representations of formationism of Astronist Collectivism, and involves the five main types of formation: solitology, duology, triology, quadology, and quintology.

[3:7:948] Solitology refers to the representations of solitology, and resembles an Astronist character alone in formation, and symbolises divinity, individuality, strength, leadership, and loneliness.

[3:7:949] Duology refers to the representations of duology, and resembles two Astronist characters in formation, and symbolises marriage, balance, partnership and opposition.

[3:7:950] Triology refers to the representations of triology, and resembles three Astronist characters in formation, and symbolises time, completion, human godliness, and weakened unity.

[3:7:951] Quadology refers to the representations of quadology, and resembles four Astronist characters in formation, and symbolises incompleteness and inferiority.

[3:7:952] Quintology refers to the representations of quintology, and resembles five Astronist characters in formation, and symbolises ultimate completion, ultimate superiority, and ultimate unity, as well as divinity, balance, and harmony.

[3:7:953] Grid refers to the representations of a grid pattern, and symbolises order, stability, and foundation.

[3:7:954] Mosaic refers to the representations of a mosaic pattern, and symbolises the essence of creativity, imagination, The Cosmos, fusion, synergy, and intricacy.

[3:7:955] Paisley refers to the representations of a paisley pattern, and symbolises ultimate creativity, complexity, fusion in The Cosmos, delicacy, and new life.

[3:7:956] Speckled refers to the representations of a speckled pattern, and symbolises distortion, and a botched identity.

[3:7:957] Stripes refers to the representations of a stripe pattern, and symbolises progression, and the future, and diagonal stripes symbolise deviance from a destined path.

[3:7:958] Symmetry refers to the representations of a symmetric pattern, and symbolises perfection, divinity, unnaturalness, and the oxymoronic "Oppositely Identical".

[3:7:959] Zigzag refers to the representations of a zigzag pattern, and symbolises stagnation, progression and regression, protrusion, and repetition.

[3:7:960] Diagram Wheel refers to the representations of a Diagram Wheel, typically to represent distinctions between two or more similar subjects.

[3:7:961] Triangle refers to the representations of triangles, and symbolises direction, and can fluctuate between stability, and instability, and symbolise law, justice, progression, and revelation.

[3:7:962] Square & Rectangle refers to the representations of squares and rectangles, and symbolises stability, familiarity, trust, order, rationality, formality, and logic, conformity, solidarity, but due to the symbolism of four and four-ness, squares and rectangles ultimately represent incompleteness, and specifically, squares symbolise equality.

[3:7:963] Hexagon refers to the representations of hexagons, and symbolises naturalness, balance, union, rebirth, and The Beyond due to its six sides and its six-ness and is closely associated with the Astronist character, Phoenix, as distinct from the five main Astronist characters.

[3:7:964] Pentagon refers to the representations of pentagons, and is the most highly revered shape in Astronist Symbology due to its association with five-ness and the completion of formationism, and symbolises divinity, completeness, ultimate stability, and unity.

[3:7:965] Octagon refers to the representations of octagons, and symbolises a sense of completion due to it being linked to The Eight Elements, and renewal, transition, and totality.

[3:7:966] Heptagon refers to the representations of heptagons, and most prominently symbolises the strongest sense of The Unknown out of all the symbolism of shapes due to its seven-ness and not being directly associated with any Astronist characters.

[3:7:967] Nonagon refers to the representations of nonagons, and has close symbolism with The Divine due to it being the shape with the highest number of sides discussed in Astronist symbology, thus evoking completion, ultimacy, and superiority.

[3:7:968] Circle refers to the representations of circles, and symbolises no beginning and no end, completion, The Universe (especially an unfilled circle), centrality, divinity, but also, limitation, entrapment, and protection, endurance, perfection, safety, and security.

[3:7:969] Semicircle refers to the representations of semicircles, and symbolises the complete opposite of circular symbolism.

[3:7:970] Cube refers to the representations of cubes, and symbolises all that a square symbolises, but is emphasises the third dimension, evoking the symbolism of new possibilities, greater knowledge, and less restriction.

[3:7:971] Sphere refers to the representations of spheres, and is the second most revered shape in Astronist Symbology after Pentagons due to spherical symbolising a very strong

connection to the order, structure, and beauty of The Cosmos, as well as The Earth itself. In addition, spheres symbolise infinite complexity, possibility, and the harbouring of life.

[3:7:972] Mask refers to the representations of masks, and symbolises psychological expression, misidentification, preferred identity, perfection or hideosity, obscurity, deceit, ambiguity, the unknownness of humanity.

[3:7:973] Incense refers to the representations of incense, and symbolises ascension, aromatic lustration, ritual healing, immediacy, unpredictability, and purification.

[3:7:974] Ritual refers to the vast representations of rituals, and are most symbolised in being shrouded in darkness, typically in the presence of evil spirits, but the majority of times, done in positivity.

[3:7:975] Ash refers to the representations of ash and ashes, and symbolises the return to the origin, colourlessness, finality, the end of love, hopelessness, mournfulness, sorrow, death, and destruction.

[3:7:976] Bless refers to the representations of blessing, and symbolises acceptance, transference, authority, and affirmation.

[3:7:977] Disease refers to the representations of disease, and symbolises dissemination of death, human suffering as distinct from being of divinity, morbidity, depression, and evokes a sense of hopelessness, both short and long-lived.

[3:7:978] Wound refers to the representations of a wound, and symbolises criticality, misfortune, vulnerabilities, defeat, bitterness, despair, hideosity, and the revelation of the inner-workings or secrets of someone, either physically or emotionally.

[3:7:979] Medicine refers to the representations of medicine, and symbolises chance, hope, change, either naturalness or unnaturalness (depending on the medicine), betterment, progression, compassion, sympathy, and the restoration of bodily balance and fluency.

[3:7:980] Poison refers to the representations of poison, and symbolises threat, untimely death, deceit, misidentification, cruelty, hostility, murder, and a quick death.

[3:7:981] Murder refers to the representations of murder, and most prominently symbolises the pure liberty of humanity's free will, as given by The Divine.

[3:7:982] Suicide refers to the representations of suicide, and symbolises extreme humanity, mental torture, and the pure liberty of humanity's free will, to alter one's own Divine destiny.

[3:7:983] Starvation refers to the representations of starvation, and symbolises the cruelty of humanity and the cruelty of The Earth, as well as extreme suffering, and death from the inside out.

[3:7:984] Strangulation refers to the representations of strangulation, and symbolises human monstrosity, extremity, and cold-blooded murder.

[3:7:985] Drowning refers to the representations of drowning, and most typically depicts Astronist characters drowning horrifically, thus symbolising extreme fatality, cruelty, engulfment, and the oxymoronic "Life Kills".

[3:7:986] Death Be Near refers to the representations of death's proximity, either physically or mentally and can be symbolised by the personification of death, or by the depiction of darkness, shadow, or the thoughts of death or murder.

[3:7:987] Crucifixion refers to the representations of crucifixion, and most typically symbolises the crucifixion of Christ according to Abrahamic theology, and depicts Astronist as external spectators of the crucifixion, so not actually present in order to show reverence to Christian theology.

[3:7:988] Hanging refers to the representations of hanging, and symbolises persecution, instant death, painless death, and betrayal to fellow humans.

[3:7:989] Slaves & Saviours refers to the representations of slaves and saviours, and most typically resembles peoples enslaved that are shown to be liberated by the Astronist characters, either collectively or individually.

[3:7:990] Burial & Coffin refers to the representations of burial, and symbolises silence, mystery of the underworld, exploration of the afterworld, descent, submersion, forgotten, the encompassing womb of Mother Earth, eternal bed.

[3:7:991] Cremation refers to the representations of cremation, and symbolises dispersal, reconstitution, nothingness, non-existence, purification, and desecration.

[3:7:992] Cryonics refers to the representations of cryonics, and symbolises hope, future technologies, revival, regeneration, technological resurrection, and immortality.

[3:7:993] Slumber refers to the representations of slumber, and is most typically resembled by the depictions of Astronist characters sleeping in any type of place, but typically, in bed.

[3:7:994] Decomposition & Rotten refers to the representations of decomposing and rotten corpses, and is most typically symbolic of disintegration, inhuman appearance, gradual decay, separation, reduction, disgrace, but also, gruesomely romantic if the Astronist characters of Jesse and Ellena decompose together.

[3:7:995] Dismemberment refers to the representations of dismembering, and symbolises desecration of human life, unrecognisable dissolution, fragmentation, sacrifice, and the obscurity of identity.

[3:7:996] Shape-shifting refers to the representations of shape-shifting, and resembles the Astronist characters as shape-shifters, and symbolises supernatural humanity, obscurity, misidentification, and future potentiality.

[3:7:997] Metamorphosis refers to the representations of metamorphosis, and resembles the transformation of an Astronist character from their child form to their adult form in two or more distinct stages, or the natural change of an insect or amphibian in the same way, and is closely, but still very distinct, from morphation.

[3:7:998] Transcendence refers to the representations of transcendence, and resembles the Divine transcendence of Astronist characters, especially depicting them entering The Eternal Plain, or transforming from their human form to their Divine form.

[3:7:999] Grail refers to the representations of grails, and symbolises an object, most typically one that is golden or said to harbour special powers, and depicts Astronist characters in either protecting the grail, or searching for it.

[3:7:1000] Ancestor & Descendant refers to the representations of ancestors and descendants, and most typically resembles the ancestors and descendants of Astronist characters, especially Jesse's ancestors and descendants.

[3:7:1001] Balance & Equilibrium refers to the visual representations of balance and equilibriums, and most typically takes the form of scales, or anchors, in order to symbolise equality, stability, strength, and justice.

[3:7:1002] Destiny refers to the visual representations of destiny, and is most typically resembled by two paths, especially one of darkness and the other of lightness and Astronist characters depicted before the two paths, attempting to make a decision between the two, but also, destiny is resembled in many other ways, and due to its vast visualisations, it is a concept that is highly discussed and depicted, especially so in cosmic and Divine settings.

[3:7:1003] Harmony refers to the representations of harmony, which is most typically resembled in a Divine setting with the Astronist characters in their Divine forms, in perfect and complete formation, and especially if The Divine is present and centralised, but there can also be other variations of the depictions of harmony, such as harmony in cosmic or human settings.

[3:7:1004] Cosmic Genesis in the Retort refers to the representations of Cosmic Genesis in the Retort, in Astronist Symbology, symbolises the heating of The Universe by The Big Bang, in order to purify, or perhaps re-purify, The Universe in order for it to reunite, and

for The Cosmos to form and become as it is now. Cosmic Genesis in the Retort is resembled by the Astronist characters in their Divine forms, overlooking the purification of The Universe, and the structuring, ordering, and creation of The Cosmos, most typically depicted below The Divine.

[3:7:1005] Philosophical Tree refers to the representations of the Philosophical Tree, and symbolises the purity of environmental life, as the forefather of human life, and so, the Philosophical Tree must be eternally defended and protected against all human atrocities, and from all those who wish to end environmental life, and so the Philosophical Tree is revered as a God and holds the grandest of wisdom, sagacity, and the secrets of The Earth and its place in The Cosmos.

[3:7:1006] Philosophical Egg refers to the representations of the Philosophical Egg, and symbolises the purity of human life itself, as the greatest and most complex gift from The Divine, and should be eternally defended and protected against all those who wish to end life, and the Philosophical Egg is an embodiment of all human life and so, the Philosophical Egg should be guarded and preserved and treated as a God, for it resembles life itself.

[3:7:1007] Matrix refers to the representations of a matrix, and is most typically resembled by a complex ordered wholeness of codes, quantities, and energies, that seem to create another world made from the technologies of humanity, and Astronist characters are often depicted as existing in this newfound, wholly technological world in a digital form.

[3:7:1008] Guardianship refers to the representations of guardianship, and most typically depicts Astronist characters in their Divine forms as guardians of humanity or individual humans, or can be depicted as guardians of The Eternal Plain, or The Cosmos, or guardians of The Divine.

[3:7:1009] Alternation refers to the representations of alternation, and most typically depicts Astronist alternating between their human form and Divine form within one artwork, especially to evoke a greater sense of divinity of the Astronist characters and also, Divine intercession.

[3:7:1010] Androgyny refers to the representations of androgyny, and is most typically resembled by a naked and headless body holding the heads of two Astronist characters; one female and the other male.

[3:7:1011] The Beautiful Evil & The Hideous Good refers to the representations of the concept of The Beautiful Evil & The Hideous Good, and is depicted simply as a subject that is beautiful, but evil, and contrasting that with a subject that is hideous, but good, thus symbolising hypocrisy, nature's deception, and the ultimate oxymoron.

[3:7:1012] Astrodoeia refers to the representations of Astrodoeias of Astronist Mythology, and resembles a humanoid creature with a Divine heart that is always depicted, typically

by an open chest, alongside light colours and radiance, and fights for the prevalence of good spirits, and is typically depicted alongside Astrodomina, as its direct adversary.

[3:7:1013] Astrodomina refers to the representations of Astrodominas of Astronist Mythology, and resembles a humanoid creature with an indivine heart that is always depicted, typically by an open chest, and alongside dark colours and shadow, and fights for the destruction of life, and is typically depicted alongside Astrodoeia, as its direct adversary.

[3:7:1014] Biosimus refers to the representations of the Biosimus of Astronist Mythology, and resembles a giant rock creature existing in almost constant secrecy and with its face facing downwards and its back covered in grass and trees as an ultimate disguise, and symbolises being scared of the dangers of the realm, but the Biosimus is said to be as old as the realm itself and holding knowledge of the realm's creation and evolution.

[3:7:1015] Corax refers to the representations of Coraxes of Astronist Mythology, and resembles a raven-like bird depicted as a bird of the realm's night, and so, a bird of ultimate bravery to live in the night of the realm, and are most typically depicted in dark colours, but can also be depicted holding stripes of vibrant colour depending on their elemental alignment, but is said to be the mythical embodiment of the element of darkness.

[3:7:1016] Dodecado refers to the representations of Dodecados of Astronist Mythology, and resembles a twelve-headed, or twelve-footed creature, with limited abilities, and widely considered extinct in the realm, so is, therefore, extremely valuable if found and sold, and symbolises a creature of outcast, slavery, and vulnerability.

[3:7:1017] Erosatus refers to the representations of Erosatuses of Astronist Mythology, and resembles a male creature of immense handsomeness and masculine perfection, and is often depicted as a puppet of evil spirits to tempt female spirits towards the side of evil by temptation, eroticism, and lustfulness.

[3:7:1018] Faurisaisus refers to the representations of the Faurisaisus of Astronist Mythology, and resembles a centaur-like creature of great soldiership; willing to die for the cause of goodness alongside his brothers, whom all share the everlasting virtue of the love, protection, and preservation of goodness.

[3:7:1019] GeoNomo refers to the representations of GeoNomonos of Astronist Mythology, and resembles a gigantic tortoise roaming the grasslands and jungles of the realm for millennia, and according to legend, is the creature with the highest wisdom of the ways of The Cosmos and the realm out of all other creatures, and symbolises eternal fatherhood, and ultimacy in nature.

[3:7:1020] Haliomorph & Haliomorpha refers to the representations of Haliomorphs, resembled as male, and Haliomorphas, resembled as female, of Astronist Mythology, and resembles the incarnation of The Sun in both male and female forms respectively.

[3:7:1021] Intox refers to the representations of Intoxes, and resembles a small fox-like beast whose tail is made of fire and whose whole body can become a pyro-beast when provoked, and works for the prevalence of good spirits despite its initial air of deception, corruption, and disloyalty.

[3:7:1022] Jamek refers to the representations of Jameks of Astronist Mythology, and resembles a shape-shifting creature, but it is not known what its true form is, due to the ancientness of the creature and its tendency to be reclusive, but it is an ally of the good spirits of the realm.

[3:7:1023] Kristatus refers to the representations of Kristatuses of Astronist Mythology, and resembles a creature said to be a cousin to the fabled angels, are able to see into the far future, and although absolutely good, wise, and sagacious, are forbidden from warfare due to the immense damage it is legend that they once caused in a previous battle of the realm.

[3:7:1024] Leptolass refers to the representations of Leptolasses of Astronist Mythology, and resembles the incarnation of light in the realm and the embodiment of the element of lightness in the body of a girl, or young woman, symbolising ultimate innocence, absolute power of lightness, and the highest form of holiness in the realm, and Leptolasses are said to have infinite lifespans.

[3:7:1025] Magnus Electra refers to the representations of the Magnus Electra of Astronist Mythology, and resembles a giant eel-like creature and it is legend that the creature is the keeper of the realm's oceans and holds the fatal power of electrocution, and in mythical warfare, stands as neutral, but holds aggressive tendencies against those who oppose destiny.

[3:7:1026] Nitida refers to the representations of Nitidas of Astronist Mythology, and resembles a lizard-like creature with radiant scales and symbolises the element of Divine.

[3:7:1027] Ouio refers to the representations of the Ouio of Astronist Mythology, and resembles a strange lion-like beast mixed with the features of a tiger and wolf, and a beast of isolation, ultimate wisdom, and one said to be in direct contact with The Divine, and present when the realm was created.

[3:7:1028] Polymanx refers to the representations of Polymanxes of Astronist Mythology, and resembles a creature made up of thousands of tiny men and fights for the prevalence of evil spirits in mythical warfare.

[3:7:1029] Quadrilad refers to the representations of Quadrilads of Astronist Mythology, and resembles a human young man with four of all features, and symbolises equality, and abundance, and is ultimately not a warrior, but is of goodness and generosity, despite being outcasted, persecuted, and ridiculed.

[3:7:1030] Rompulman refers to the representations of Rompulmen of Astronist Mythology, and resembles a rare creature with no warrior-like tendencies, but is said to hold great intelligence, is very shy, dwarf-like, and mysterious, with large eyes under a cloaked head. Rompulmen usually live alone and it is legend that nobody has ever heard one speak before.

[3:7:1031] Sanguinsara refers to the representations of Sanguinsaras of Astronist Mythology, and most typically resembles a flower, especially a lotus flower, and it is legend that it possesses great worldly power, and holds superior knowledge of all life, matter, and most crucially, existence. The Sanguinsara takes the role of the guru of the realm, and is eternally of good existence.

[3:7:1032] The Three Fiends refers to the representations of The Three Fiends of Astronist Mythology, and resembles three little boys as fiends and symbolises mischief, trickery, and are the servants of evil spirits.

[3:7:1033] Urma refers to the representations of Urmas of Astronist Mythology, and resembles a woman with long flowing hair, often positioned in water, to symbolise the healing powers of the watery depths, the renewal powers of pure water, and symbolises the mythical embodiment of the element of water.

[3:7:1034] Vernavelox refers to the representations of the Vernavelox of Astronist Mythology, and most typically resembles a gust of air from the heavens of the realm, giving life to the nature and wildlife of the realm, or can be depicted as the feminine embodiment of the element of Earth.

[3:7:1035] Whym & Whymtrix refers to the representations of Whyms, resembled as male, and Whymtrixes, resembled as female, of Astronist Mythology, and resembles the embodiment of the element of air, and is most typically depicted as a young boy/girl with powerful gusts rotating around him/her, and their eyes a bright white glowing colour.

[3:7:1036] Xantox refers to the representations of Xantoxes, and resembles a great beast with giant claws, wild fur, and sharp teeth, typically depicted with the power of fireballs and is the mythical embodiment of the element of fire.

[3:7:1037] Yewko refers to the representations of Yewkoes of Astronist Mythology, and resembles a humanoid creature of immense evil that is renowned for kidnapping children and never allowing them to escape its clutches, and in mythical war, it fights for the prevalence of evil spirits.

[3:7:1038] Zygo & Zygotrix refers to the representations of Zygoes, resembled as male, and Zygotrixes, resembled as female, of Astronist Mythology, and resembles the embodiment of the concept of marriage between man and woman, typically in their supernatural forms.

Introduction to the Elements of Astronist Architecture

[3:8:1] Astronist Architecture is the newfound genre of architectural theory, design, and application which attempts to reignite restoration of buildings as opposed to the defacing, or demolition of them, the reorientation of the purpose of buildings, promotes the restructure of architectural education, and tackles The Next Architectural Frontier

[3:8:2] Namely architectural design and construction in space, or on planets other than The Earth; this also encompasses the new sub-genres of Philosophical Architecture, and Cosmic Architecture, as well as further developing the Philosophy of Architecture, especially from an Astronist worldview perspective.

[3:8:3] The theorising, designing, and planning of buildings, and other structures, especially those of a philosophical premise, which typically feature distinctly Astronist characteristics, ornamentations, and attributes.

[3:8:4] An abacus, in Astronist Architecture, is the flat slab of stone atop of a capital, typically featuring cosmical imagery and ornamentation.

[3:8:5] An accouplement, in Astronist Architecture, is the adjoining structure between the top of two archways, typically cosmically ornamented, or may relate to any archway with two columns on either side.

[3:8:6] In Astronist Architecture, to be achromatic refers to a style of flooring that does not use any colour ornamentation, and may be broadened to the use of no colour in any ornamentation, or architecture.

[3:8:7] An acrostellarium, in Astronist Architecture, also known as an acroterium, is a pedestal, usually cosmically ornamented and high, supporting a statue of an Astronist character.

[3:8:8] To be addorsed, in Astronist Architecture, is the opposite of affronted, meaning to be set back to back, typically of Astronist statues, or figurines.

[3:8:9] An aeromaison, in Astronist Architecture, is a class of Astronist building that is specially designed to function from the collection of air for its kinetic energy usages.

[3:8:10] Affronted, in Astronist Architecture, is the opposite of addorsed, a style of Astronist statue, or figure which face each other.

[3:8:11] Aforepoint, in Astronist Architecture, as part of Architectural Theory, is a term used to specify in an architectural illustration the area in which one is referring to, especially in relation to another point that is typically behind it.

[3:8:12] Air-grating, in Astronist Architecture, is a grille or grating that admits air, especially found in an Astronist planetarium, or observatory.

[3:8:13] Allotment, in Astronist Architecture, found mainly in eidouraniums, is an area with the sole purpose of individuals making organised and scheduled speeches on a topic important to them.

[3:8:14] Almery, in Astronist Architecture, is a recess in an observatory, or eidouranium in which a small, typically golden, orrery is usually placed.

[3:8:15] Alrine, in Astronist Architecture, is the higher half of any Astronist building, usually exclusively used in Architectural Theory.

[3:8:16] Alternaterium, in Astronist Architecture, is a theatre dedicated for the purpose of an oration, typically those of an alternative nature to those already established, and are almost always found in eidouraniums.

[3:8:17] Altrio, in Astronist Architecture, is a type of archcrown featuring three crowns instead of just one.

[3:8:18] Ambulatory, in Astronist Architecture, is a type of walkway atop an eidouranium, or observatory, but is typically not open to the public.

[3:8:19] An analogue, in Astronist Architecture, is an analogue clock in an Astronist building.

[3:8:20] An animatrium, in Astronist Architecture, is the room of an Astronist philosophical building that is domed and in which fractal and kaleidoscope animations are displayed above on screen that cover the entire ceiling.

[3:8:21] Annan, in Astronist Architecture, is the term for the front of an Astronist building, especially when depicted in Architectural Theory.

[3:8:22] Annexe, in Astronist Architecture, are the outbuildings of an estate of an Astronist building when described collectively.

[3:8:23] An annularity, in Astronist Architecture, is a type of capital with a ring-shaped ornament atop of it.

[3:8:24] Anterium, in Astronist Architecture, is the part of an Astronist philosophical building that is south of the equatorium; the front half of the building.

[3:8:25] To be anticlastic, in Astronist Architecture, is to be of a double-curved surface in which the two curvatures lie in opposite directions, and is typically cosmically ornamented.

[3:8:26] An apexion, in Astronist Architecture, is the absolute top point of an Astronist observatory.

[3:8:27] Apparatus, in Astronist Architecture, is the collective noun for the various astronomical equipment found in Astronist building, the most common of which are telescopes, and orreries.

[3:8:28] An appelliage, in Astronist Architecture, is the view of an Astronist building from the front, especially in architectural design, and theory.

[3:8:29] An appodome, in Astronist Architecture, is a small version of a dome atop a larger dome, especially found on an Astronist observatory.

[3:8:30] An arboretum, in Astronist Architecture, as part of gardenry, is a type of garden filled with a range of tree species and families.

[3:8:31] An archcrest, in Astronist Architecture, is a pavilion style structure atop an archway, especially one with cosmical ornamental decoration.

[3:8:32] Archcrowns, in Astronist Architecture, are a type of decor at the tip of an archway featuring an Astronist crown ornamentation.

[3:8:33] Architecturalism is the principle that architecture should be at the centre of a society's culture, education, and philosophy, and advocates for the continual redefinition of the architectural landscape, as well as the restoration of architecture.

[3:8:34] An armarium, in Astronist Architecture, is a type of small library within some planetariums, typically holding philosophical, cosmological, and astronomical books.

[3:8:35] An ascendancy, in Astronist Architecture, is at least one set of steps beyond another, typically a term used in Architectural Theory.

[3:8:36] An assemblance, or assemblancy, in Astronist Architecture, is the main auditorium of an eidouranium used for many purposes, and is typically heavily cosmically ornamented.

[3:8:37] An astra, in Astronist Architecture, is a type of star ornamented finial used numerous times on Astronist buildings, and in some styles, the star itself is cosmically ornamented.

[3:8:38] An astragal, in Astronist Architecture, is a narrow and semicircular moulding found at the top and bottom of a column, door, or window frame.

[3:8:39] Astramic, in Astronist Architecture, is a specific type of ceiling that is cosmically ornamented, with some styles stretching the ornamentation onto the walls of the room as well.

[3:8:40] An astroarch, in Astronist Architecture, is a type of archway that is completely ornamented with unique cosmical patterns and imagery.

[3:8:41] An astrobase, in Astronist Architecture, is the base of a column, or archway that is completely ornamented in cosmical patterns and imagery, exclusively found in Astronist buildings.

[3:8:42] An astrocapital, in Astronist Architecture, is a type of capital featuring a star atop of it, or more broadly, features an orrery atop of it.

[3:8:43] An astrodicule, in Astronist Architecture, is a type of aedicule; an architectural frame supported by two columns over which is an entablature with pediment, that is made distinct by it almost always being completely ornamented with cosmical imagery and patterns.

[3:8:44] An astrodium, in Astronist Architecture, is the term given to the court adjoined to, or at the centre of an Astronist philosophical building, in which a garden, cosmicals, telescopes, astrolabes, and other Astronist philosophical objects are present.

[3:8:45] An astronomique, in Astronist Architecture, is a large structure built onto the front of some Astronist buildings that displays a flurry of cosmical ornamental patterns, icons, and sculptures, and typically stretches from ground level above the entrance to the top, and is usually accompanied by windows on either side on each level.

[3:8:46] An astropodium, in Astronist Architecture, is a unique type of podium which is cosmically ornamented and is used in many of the oration rooms and areas of Astronist buildings and their estates.

[3:8:47] An astrotrave, in Astronist Architecture, is a type of architrave that is cosmically ornamented.

[3:8:48] An astrotry, in Astronist Architecture, is a small room either in a house, Planetarium, Observatory, or an Eidouranium, in which the study of astronomy, cosmology, and philosophy is conducted, either individually or in small groups.

[3:8:49] An athenium, often described as an Astronist Library, Astronist Library, or Astronic Library, is a large room within an Observatory, Grand Observatory, or an Eidouranium, or a building itself varying in size, that houses collections of books, periodicals, digital archives, essays and treatises, with a distinct focus on philosophical, astronomical, and cosmological study, and may also feature lecture rooms, debating chambers, and quiet study areas.

[3:8:50] Aureation, in Astronist Architecture, is the collective term for the use of the colour golden in Astronist buildings.

[3:8:51] An aureatory, in Astronist Architecture, is any type of room that is almost all decorated and ornamented with a golden shade of colour.

[3:8:52] An axis, in Astronist Architecture, is an imagery line in Architectural Theory between the centre of a room and the various objects and other parts of the room within it, including the self; the person viewing, or using the room.

[3:8:53] An balthalum, in Astronist Architecture, is a strip around the base of a baluster, typically cosmically ornamented.

[3:8:54] A band, in Astronist Architecture, is a strip on the façade of an Astronist building, typically cosmically ornamented and positioned above a series of windows, and is most commonly horizontal, but may also be vertical.

[3:8:55] A barning, in Astronist Architecture, is the use of a barn-like structure and interior for the main room of an Astronist building, and is similar to that of a hall with the higher ceiling being the main distinction.

[3:8:56] A battery, in Astronist Architecture, as part of gardenry, is a raised platform in the estate of an Astronist building typically overlooking a wall, or low hedge.

[3:8:57] A begunets, in Astronist Architecture, is a strip or series of strips atop each other below the domes, or appodomes of an Astronist observatory.

[3:8:58] A belfry, in Astronist Architecture, is a bell-tower of an Astronist building, typically cosmically ornamented.

[3:8:59] A bisector, bisection, or bisect, in Astronist Architecture, is a term used almost exclusively in Architectural Theory to describe something when split equally into two parts.

[3:8:60] Bizarre, in Astronist Architecture, is a class of architectural ornamentation, or style which departs from the traditional Astronist design.

[3:8:61] Boce, in Astronist Architecture, is the bottom slab of stone sometimes acting as the foundation of a fence, or railing, and is typically cosmically ornamented.

[3:8:62] Boiserie, in Astronist Architecture, is wooden panelling especially found in the interior of some rooms in Astronist buildings typically on the dado part of the wall of the room, but may also be on the dydo, the flooring, or even the ceiling, and is sometimes cosmically ornamented.

[3:8:63] A bornan, in Astronist Architecture, is the back of an Astronist building, especially when depicted in Architectural Theory.

[3:8:64] A bosket, in Astronist Architecture, as part of gardenry, is the type of plantation in a garden that is typically separated from a larger garden on the estate of some Astronist buildings which only includes species of small trees.

[3:8:65] A botanicapital, in Astronist Architecture, is a rare type of capital featuring the depiction in stone of some botanical plant.

[3:8:66] A bower, in Astronist Architecture, as part of gardenry, a purposefully created alcove in the estates of some Astronist buildings over which branches of trees hang, and may feature stone slabs in the ground that are cosmically ornamented, and is most often used a passage to another section of a garden, but may just be used as a decorative niche.

[3:8:67] Brickling, in Astronist Architecture, is the display of bricks in either the interior or exterior of the Astronist building in such a pattern whereby larger bricks are separated by smaller bricks, and typically refers specifically to the latter of these in this type of pattern.

[3:8:68] Bullant, in Astronist Architecture, is a back door featured in some Astronist buildings, typically not accessible to the public and is used only by staff, and is thus separate from the priorance.

[3:8:69] A bustress, in Astronist Architecture, is a type of statue, or figure with a dual purpose of decoration, as well as serving to be a supporting point for the room, or building itself.

[3:8:70] Cabochon, in Astronist Architecture, is a protruding circular element, usually found on an entablature, or pediment, and most commonly depicts a planet, or another cosmical icon.

[3:8:71] Capital, in Astronist Architecture, is a term for the tallest part of the building, typically a spire, dome, or pyramidal structure, or is the typically stone branching out section at the top of a column, which may be ornamented in a plethora of styles.

[3:8:72] A carousel, in Astronist Architecture, is a type of relief found in the pediment of some archways, and on walls, consisting of at least three Astronist, or cosmical images, not in a morphation process, but three or most distinctly different icons typically facing rightward.

[3:8:73] A caryatide, in Astronist Architecture, is a carved, straight standing figure of either Ellena, Harriet, or Zaran Astronist characters, typically consisting of the main structure of a column.

[3:8:74] A cascation, in Astronist Architecture, is a waterfall, or any time of apparatus involving the flow of water in any Astronist building, or in any estate of an Astronist building.

[3:8:75] A casita, in Astronist Architecture, is a small pavilion typically found at the centre of a symposium, and is often heavily ornamented with cosmical imagery.

[3:8:76] To catenate, or catenary, in Astronist Architecture, is to ornament any architectural article with a chain-like form.

[3:8:77] Cavation, in Astronist Architecture, is the rare construction of a catacomb below an Astronist building.

[3:8:78] Cecenture, in Astronist Architecture, is the point of connection between a cosmosphere, or giant orrery and the roof, or ceiling.

[3:8:79] Celestium, in Astronist Architecture, is a type of cosmical finial used often on Astronist buildings.

[3:8:80] Celestofret, in Astronist Architecture, is a type of fret that features cosmical, and celestial imagery, and ornamentation.

[3:8:81] Celestoon, in Astronist Architecture, is a type of festoon featuring cosmical, and celestial imagery, and ornamentation.

[3:8:82] Celetrium is the highest room in some Astronist philosophical buildings, in which celestial patterns and constellations are lit up through skylights to form a display, and from which the terracery is accessible.

[3:8:83] Centrality, in Astronist Architecture, is a term used in Architectural Theory to describe the exact centrepiece of an Astronist building, and may be used in a gardenry context to include the estate of the building as well, and typically atop of which stands an orrery.

[3:8:84] Centrecircle, in Astronist Architecture, is the ornamented circle in the floor around the centrality of an Astronist building, and the diameter of which can vary.

[3:8:85] A centrestand, in Astronist Architecture, is a stand in the centre of a room affixed to the flooring that is usually octagonal in its surface shape, and may be used for astronomical instruments to be placed upon it, and is typically heavily cosmically ornamented in the highcosma style.

[3:8:86] A chamber, in Astronist Architecture, is a type of outbuilding consisting of a raised platform surrounded on all sides by steps, with the main building typically squared, pillared, singularly floored with a rooftop terrace and numerous cosmical ornamental

decor, and typically featuring on each corner beside the steps, a fountain, or telescope; this building is most often related to the subject of Gardenry, mostly by its location, with its most common purpose to shelter those whom wish to conduct astronomy, especially during bad weather, but is also often used during Starlight Festivals.

[3:8:87] Chapterhouse, in Astronist Architecture, is a small and private reading room in an eidouranium, typically branching from an athenium.

[3:8:88] A chest, in Astronist Architecture, is the area in front of the portrance of an Astronist building, typically heavily ornamented with cosmical imagery and pattern work.

[3:8:89] A chord, in Astronist Architecture, is the area in front of the priorance of an Astronist building, typically heavily ornamented with cosmical imagery and pattern work.

[3:8:90] A circulum, in Astronist Architecture, is the thin strip around the bottom of the interior of a dome, either in a planetarium, or observatory.

[3:8:91] Circursium, in Astronist Architecture, is a type of structure, either affixed to a wall, or a structure in its own right, resembling the pattern of a big top of a circus tent, typically featuring many cosmical ornamentations.

[3:8:92] A cistern, in Astronist Architecture, as part of gardenry, another term for a pond in the garden in the estate of an Astronist building.

[3:8:93] A claustrum, in Astronist Architecture, is a panel, either wooden, stone, or metal pierced with geometrical and cosmical patterns and imagery.

[3:8:94] A coilage, in Astronist Architecture, is the varied depictions of a stylised coil shape when described collectively, and especially when cosmically ornamented.

[3:8:95] A colonette, in Astronist Architecture, is a type of column that has a thinner shaft.

[3:8:96] A Columned Court, in Astronist Architecture, a type of courtyard which is surrounded on at least two sides by a series of columns.

[3:8:97] A columnine, in Astronist Architecture, is a type of column featuring two pillars and is characterised by an entwined structure.

[3:8:98] A columnite, in Astronist Architecture, is a type of column that is characterised by a statue atop of it.

[3:8:99] A columnobe, in Astronist Architecture, is a type of column that is characterised by a globe atop of it.

[3:8:100] A columnery, in Astronist Architecture, is a type of column that is characterised by an orrery atop of it.

[3:8:101] A cometary, in Astronist Architecture, is a type of depiction of a comet typically placed atop a plinth or pedestal in the centre of a courtyard, or square, and can vary widely in its size, ornamentation, and orientation.

[3:8:102] Commercia, in Astronist Architecture, is a term used to describe collectively the Astronist buildings or the parts of them that are used solely for commercial purposes.

[3:8:103] A conceit, in Astronist Architecture, as part of gardenry, is a type of ornamental bridge in a garden on the estate of some Astronist buildings, usually not walkable, and purely there for decorative purposes.

[3:8:104] A concentricapital, in Astronist Architecture, a type of capital which depicts a concentric ornamentation, or design atop of it.

[3:8:105] Concentricity of Architecture, in Astronist Architecture, refers to the principle in Architectural Theory that in all astronomically and cosmically inspired styles of architecture, a concentric shape should be adopted in order to properly reflect the natural concentric shape of planetary systems, and galaxies.

[3:8:106] Concert, in Astronist Architecture, is five columns most associated with Gardenry, which are arranged in four corners to create a square shape, and the fifth column is positioned in the centre, and can be arranged in any distance from one another.

[3:8:107] Concourse, in Astronist Architecture, as part of gardenry, is the place in a garden on the estate of some Astronist buildings where more than two paths branch out to lead to other parts of the garden.

[3:8:108] Conservationism, in Astronist Architecture, refers to the principle holding that the conservation of architectural beauty, design, and ornamentation should be held with great importance, and insists that methods of architectural restoration should be taught in schools to continue to the conservation of the architectural culture of the world.

[3:8:109] Conservatory, in Astronist Architecture, as part of gardenry, is another term for a greenhouse on the estate of an Astronist building, typically with extra ornamentations than a simple greenhouse.

[3:8:110] A conspicutor, in Astronist Architecture, is the part of an Astronist building that an individual notices first when approaching it, or the part of the building which an individual remembers most.

[3:8:111] Corbel, in Astronist Architecture, is a piece of stone, wood, or metal jutting out from a wall to support an superincumbent weight above it, and encompasses a vast range of ornamentation styles, though it is almost always cosmically ornamented.

[3:8:112] Core, in Astronist Architecture, is a term used to describe the room in which the centrality of the building resides.

[3:8:113] Corine, in Astronist Architecture, in any Astronist building, is the use of two or more sets of steps after each other, especially to create a grandiose view upward.

[3:8:114] A cornerpocket, in Astronist Architecture, also known as a bulb, is the creation of small circular rooms on each corner of some Astronist buildings, on all levels, and are typically used as seating areas.

[3:8:115] A cornersquare, in Astronist Architecture, is a type of cornerpocket with its main distinct being the square shape of the room, as opposed to the traditional circular shape of most cornerpockets.

[3:8:116] A coronet, in Astronist Architecture, is the small flight of steps most commonly found surrounding giant orreries, and cosmospheres.

[3:8:117] Cosma, in Astronist Architecture, is a far-reaching style of the ornamentation of ceilings in most Astronist buildings traditionally including elaborate and unique depictions of The Cosmos, consisting of galaxies, nebulae, black holes, stars, and comets, and may also represent humanity in the form of the Astronist characters.

[3:8:118] Cosmadome, in Astronist Architecture, is a type of dome characterised by its interior and exterior depictions and ornamentations of cosmical symbols, and imagery.

[3:8:119] Cosmatus, in Astronist Architecture, is the version of the cosma style of ceiling ornamentation specific to the walls and floors of Astronist buildings.

[3:8:120] Cosmic Decoration, in Astronist Architecture, is the collective term for all architectural articles that have been cosmically designed and ornamented.

[3:8:121] Cosmic Garden, in Astronist Architecture, as part of gardenry, is a type of small garden in the estate of some Astronist buildings consisting of heavily ornamented astronomical instruments, as well as cosmically ornamented walls, and pathways.

[3:8:122] Cosmoboros, in Astronist Architecture, is the circular symbol inspired by that of the ouroboros, but instead depicting The Cosmos in an endless cycle to represent wholeness, and order, and may also feature a black hole in the centre.

[3:8:123] Cosmocture, in Astronist Architecture, is the term almost exclusively used in Architectural Theory describing collectively all cosmically influenced buildings, architectural styles, and ornamental designs.

[3:8:124] Cosmocapital, in Astronist Architecture, is a type of capital depicting The Cosmos.

[3:8:125] Cosmoform, in Astronist Architecture, is a wing-shaped section of an Astronist building, which is usually cosmically ornamented.

[3:8:126] Cosmomaison, in Astronist Architecture, is a house which is almost all cosmically ornamented on its exterior.

[3:8:127] Cosmotopiary, in Astronist Architecture, as part of gardenry, is the creation of topiaries that resemble cosmical images, and symbols, or may also resemble one or more of the Astronist characters.

[3:8:128] A cottagelgarden, in Astronist Architecture, as part of gardenry, is a type of garden which is cultivated to blend mixtures of plants growing together, as if naturally.

[3:8:129] Crossette, in Astronist Architecture, is a series of stone blocks shaped as sun rays, typically found above archways, windows, or doors, and are usually cosmically ornamented, and may at times overlap each other.

[3:8:130] Crown is a logo or crest representing the head of an Astronist character, typically used in Astronist Architecture, Astronist Art, and in some official documentations.

[3:8:131] Crowncapital, in Astronist Architecture, is a type of capital ornamented by one or more crown designs which depict the face of an Astronist character.

[3:8:132] Curvance/Curvancy, in Astronist Architecture, is the structure of bricks, or stones so as to create an upward curve effect, and typically wherever used, acts as the main foundation of the structure of the building, and is thus clearly visible from each side of the building.

[3:8:133] Curverculum, in Astronist Architecture, is a giant picture frame usually found in the art galleries, or museums of Astronist buildings which is fixed into the floor and stands in curvature so as to give the impression of immersion into the painting, or illustration.

[3:8:134] Cyanicism, in Astronist Architecture, is the style of Astronist building construction characterised by the use of many domes, as well as domes upon domes, and the cyanic colour that the domes are usually painted, and which derives the title of this style.

[3:8:135] *Cylindrica*, in *Astronist Architecture*, is a term for the area in which a spiral staircase is built, and the walls of which are usually cosmically ornamented.

[3:8:136] *Dado*, in *Astronist Architecture*, is the lower part of the wall of an orrery, astrotry, or globetry in an *Astronist* philosophical building.

[3:8:137] *Daïs*, in *Astronist Architecture*, is a raised platform onto which an orrery, telescope, or another astronomical instrument may be placed.

[3:8:138] *Demesne*, in *Astronist Architecture*, is the term describing an *Astronist* building and the entirety of its estate collectively.

[3:8:139] *Descendency*, in *Astronist Architecture*, is a series of columns in a concentric pattern in a *discoidery* in which each inward level is followed by a downward step, until the centre is reach where typically an ornate, and usually unique orrery is placed.

[3:8:140] A *discoidery*, in *Astronist Architecture*, is a room in an *Astronist* building, typically a *Grand Observatory*, or an *Eidouranium*, in which a *descendency* can be found.

[3:8:141] The term *domical*, in *Astronist Architecture*, relates to a domed structure, or roofing style.

[3:8:142] *Duodum*, in *Astronist Architecture*, is the depiction of just two of *The Five Astronist Characters* anywhere in an *Astronist* building, especially so in a floor ornamentation.

[3:8:143] *Dydo*, in *Astronist Architecture*, is the higher part of the wall of an orrery, astrotry, or globetry in an *Astronist* philosophical building.

[3:8:144] *Editionism* refers to a principle holding that architecture should be free from all the constraints of history and preservation, and holds that the functionality of certain buildings is inevitable to change, and thus, does not heavily advocate for the restoration of buildings, but the update of them to serve new purposes.

[3:8:145] *Educatia*, in *Astronist Architecture*, is a term relating to the entirety of all *Astronist* educational buildings when described collectively.

[3:8:146] *Eidouranium* is the largest, most rare, and prominent of all *Astronist* buildings, featuring both a *planetarium*, a *pantheon*, and an astronomical telescope, as well as dedicated spaces to education, and philosophy.

[3:8:147] *Elevatium*, in *Astronist Architecture*, is a term used in *Architectural Theory* relating to the way in which visitors to an *Astronist* building would elevate up through the levels of the building, most commonly stairs, but also sometimes by elevators.

[3:8:148] Ellipsis, in Astronist Architecture, is any part of an architectural design which is purposefully cut out to allow air to flow through.

[3:8:149] An enclave, in Astronist Architecture, is a term in gardenry relating to the part of an outside estate of an Astronist building which is separated by a palisade.

[3:8:150] Entasis, in Astronist Architecture, in the creation of column's shaft, is the use of a wider base to minimise the visual illusion of concavity, and is usually uniquely ornamented with cosmically patterns and imagery.

[3:8:151] An enterprisium, in Astronist Architecture, is a room, most typically found in an eidouranium, used for the purpose of entrepreneurial planning, designing, and the creation of ideas, and is supposed to get fellow entrepreneurs together to share ideas, perhaps partner, and to help find them investors; also known as a networking room.

[3:8:152] An equatorium, in Astronist Architecture, is a corridor in some Astronist philosophical buildings, especially in Africa, The Middle East and South Asia, that is ornately decorated and stretches across the width of the building and thus separates the anterium from the posterium.

[3:8:153] Étoilum, in Astronist Architecture, is a special type of star depiction typically having six points, with the north and south points being long than the two on either side, and may also resemble a north star, and can be most commonly found in the pediments above archways, or in flooring and ceiling designs and ornamentations.

[3:8:154] Exedra, in Astronist Architecture, as part of gardenry, is a rare outdoor structure resembling a semicircular shape supported by columns and usually has built in front of it a stage or platform from which orators may speak to audiences seated below.

[3:8:155] Exegetrum, in Astronist Architecture, is a large room typically found in eidouraniums in which the study of religious, or philosophical texts only takes place, but differs from that of a private reading room in that other people are present, and it is more communal in its layout.

[3:8:156] An extrinsium, in Astronist Architecture, is a term commonly used in Architectural Theory to describe Astronist outbuildings collectively.

[3:8:157] An eye, in Astronist Architecture, is the largely colloquial term given to describe the reception of an eidouranium, or grand observatory, from which information about the building and its facilities is available.

[3:8:158] A fencelette, in Astronist Architecture, is a type of railing typically found alongside steps and stairs in Astronist buildings that is characterised by its shorter height and its vacant structure.

[3:8:159] A figurecrown, in Astronist Architecture, is a type of column characterised by the sculpture, or figurine which supports it, and it is structured upon.

[3:8:160] A floracapital, in Astronist Architecture, is a type of capital featuring the depiction of flora, and may also depict the Astronist character of Ellena.

[3:8:161] A forecourt, in Astronist Architecture, is the term for a courtyard that directly precedes the main building, typically by a short flight of steps.

[3:8:162] A forepoint, in Astronist Architecture, is a term used in Architectural Theory to describe a point in a building which precedes another.

[3:8:163] A Formation Garden, in Astronist Architecture, as part of a gardenry, is a type of garden of an Astronist building's estate characterised by its terraced levels.

[3:8:164] A forum, in Astronist Architecture, as a part of gardenry, is the portion of an Astronist building's estate characterised by a square featuring a column in the centre.

[3:8:165] A framentry, in Astronist Architecture, is a type of window frame, or the frame of an astronomique that features cosmical ornamentation patterns.

[3:8:166] A galacapital, in Astronist Architecture, is a type of capital with a galactical ornamentation.

[3:8:167] A gallery, in Astronist Architecture, is a type of corridor within an Astronist building that is structured by at least twenty columns on either side of the corridor.

[3:8:168] A Gallery Garden, in Astronist Architecture, as part of gardenry, is a type of garden which is looked down upon from a gallery.

[3:8:169] Gardenry, in Astronist Architecture, also known as Demesnery, and Estatuary, is the practical application, and study of garden landscaping, outbuilding architecture, and garden structures in the estates of Astronist buildings, and is subsequently followed by the writing up of the theory of these architectures.

[3:8:170] Geometric Flooring, in Astronist Architecture, is a style of flooring within some rooms of Astronist buildings which involves a vast range of geometrical patterns, typically of a cosmical theme, and separated into different sections, or quadrants.

[3:8:171] Germinature, in Astronist Architecture, is a type of flower ornamentation, typically on a capital, or pediment which depicts a series of flowers and the germination process.

[3:8:172] Ginpalace, in Astronist Architecture, is an ornately and cosmically decorated room in some eidouraniums in which a restaurant may be located, and alcoholic drinks may be served.

[3:8:173] A Grand Observatory is the most principal Astronist building of a nation, yet distinctly larger and more architecturally unique, second only to an Eidouranium.

[3:8:174] Helioatrum, in Astronist Architecture, is a type of atrium which is distinctly ornamented with sun-like and heliocentric patterns, and imagery.

[3:8:175] Helioal, in Astronist Architecture, is a type of sun-like flooring ornamentation in which the sun is placed at the centre of the room which is usually circular in shape and the sun rays usually stretch to the edges.

[3:8:176] A helixium, in Astronist Architecture, is a type of podium resembling a helix shape, typically with used to support an orrery, or telescope.

[3:8:177] Highcosma, in Astronist Architecture, is a term used in Architectural Theory to describe an especially ornate version of the Cosma style, typically characterised by its richly golden theme, the size of the canvas on which it is set, and the large size of the subject of the illustration, or painting ornamentation.

[3:8:178] Highgarden, in Astronist Architecture, as part of gardenry, and used as a term in Architectural Theory, is to describe a version of gardenry that is characterised by a richly golden theme of ornamentation, and ornately decorated outdoor structures.

[3:8:179] A horn, in Astronist Architecture, is a projection at each corner of a capital, usually an Astronist character.

[3:8:180] A hydromaison, in Astronist Architecture, is a class of Astronist building that runs purely from water collection, and utilisation.

[3:8:181] Hypaethral, in Astronist Architecture, is a term to describe the parts of an Astronist building that aren't roofed, typically used in Architectural Theory.

[3:8:182] Hypaethria, or a hypaethrium, in Astronist Architecture, is an unroofed columned area, typically an area ten by ten, but its size can vary widely.

[3:8:183] Ichnographia, in Astronist Architecture, is the slab of stone below a column, or archway that may vary in shape, and size, but is always cosmically ornamented.

[3:8:184] Icon, in Astronist Architecture, is a term used in Architectural Theory, to describe the depiction of an Astronist character on any architectural article.

[3:8:185] Impluvium, in Astronist Architecture, is a type of unroofed area as part of an astrodiom featuring a very shallow pool, typically one of checkered tiles, into which rainwater falls into and drains out of, and sticking out of the centre of the pool, an orrery is typically positioned.

[3:8:186] Incipit, in Astronist Architecture, is a term for the entrance of a promontory.

[3:8:187] An informatium, in Astronist Architecture, is a type of Astronist building typically found in city centres and in which all information about the city is archived.

[3:8:188] Instrumentise/Instrumented, in Astronist Architecture, as also a part of gardenry, is the adornment of an area, such as on a lawn, or courtyard, with philosophical, and astronomical instruments, such as telescopes, and orreries.

[3:8:189] Jacket, in Astronist Architecture, is a term used solely in Architectural Theory for the front page of an essay and the images used, if any.

[3:8:190] A jessium, in Astronist Architecture, is a type of floor ornamentation style which depicts the Astronist character of Jesse.

[3:8:191] Kallenary, in Astronist Architecture, as part of gardenry, is a type of outdoor structure on the estate of some Astronist buildings whose foundations take the shape of a three-pointed star, and typically comprises of three distinct levels, and is very heavily ornamented, especially with cosmical patterns and imagery.

[3:8:192] A kawn, in Astronist Architecture, specifically in Astro-Arab Architecture, is the colloquial term for a type of vast floor ornamentation which depicts The Cosmos.

[3:8:193] A kineticery, in Astronist Architecture, and widely used in Architectural Theory, is describing an Astronist building which is motional, and or part of the building that is moveable, or is always in movement.

[3:8:194] Kintana, in Astronist Architecture, specifically in Malagasy Architecture, is a four-pointed star above the portrance of an Astronist building, or atop the entire building.

[3:8:195] Kokebi, in Astronist Architecture, specifically in Ethiopian Architecture, is a four-pointed star above the portrance of an Astronist building, or atop the entire building.

[3:8:196] A kosmium, in Astronist Architecture, is a rare room typically only found inside an eidouranium in which a virtual map of the galaxy is projected and the public can walk through it and pin point certain planetary systems, and cosmic phenomena and learn about them, and is thus distinct from a normal planetarium by its virtual reality feature.

[3:8:197] Kosmeria, in Astronist Architecture, is a type of tile that features a variety of cosmical imagery, symbols, and patterns used in many rooms of Astronist buildings.

[3:8:198] Kosmopolis, in Astronist Architecture, is a term used typically only in Architectural Theory to describe a city, or town which has been heavily influenced by cosmical ornamentation and Astronist Architecture, so much so that the buildings, the streets, and the architectural ornamentations have changed to reflect this.

[3:8:199] Lowcosma, in Astronist Architecture, is a term used in Architectural Theory to describe an especially non-ornate version of the Cosma style, typically characterised by its largely monotone colour scheme, its modernistic approach, and its lack of detail in cosmical ornamentation, usually because of its mass usage.

[3:8:200] Lowgarden, in Astronist Architecture, as part of gardenry, and used as a term in Architectural Theory, is to describe a version of gardenry that is characterised by a lack of grandiose in ornamentation, and a distinct lack of decoration for outdoor structures.

[3:8:201] Mascaron, in Astronist Architecture, is a broad term used to describe the representation of a human face, or part of a human face, though typically not of an Astronist character.

[3:8:202] Metalment, in Astronist Architecture, refers to the use of metalwork in the construction of Astronist buildings, or in ornamentation design.

[3:8:203] Millettä is the first form of Astronist architectural style, characterised by a tone of revivalism, featuring turrets, and terraces, with a concentric bird's-eye view and is most commonly found in the Eastern world.

[3:8:204] Millettë is the second form of Astronist Architecture, typified by elaborate hexagonal gazebos, cylindrical structures, and modern open air spaces, as well as conic turrets and distinctly smaller domical roofings, most commonly found in African countries, and interiorly, encrustations, statues, and artworks are featured throughout.

[3:8:205] Millettenium, in Astronist Architecture, refers to a rare structure of Astronist buildings comprising of corine steps upon which giant columns emerge to form the larger superstructure of the Millettenium; beyond this, at the top of the corine steps, four giant columns on either side support the main interior of the structure atop of which a walkable and balustraded terrace can be found; the main archway of the Millettenium is supported by the eight columns, and beyond which a typically circular columned area opens out and from which other corridors can be accessed; the main distinguishing feature of the Millettenium superstructure is the unique and grandiose of its attributes when compared to other architectural structures, and it is considered the highest product of the highcosma style. (Ref: Architectural Theory, p.g. 127)

[3:8:206] Millettesque relates to a style of architecture, or ornamental design which is in resemblance to Astronist culture, philosophy, and symbolism.

[3:8:207] Millettī is the third form of Astronist architectural style, characterised by the distinct baroque style adopted with a uniquely cosmic theme, as well as featuring gothic encrustations, and incrustations, with an emphasis on spires rather than domes, and is the least common form of Astronist Architecture.

[3:8:208] Millix refers to a type of Astronist artifactual sculpture which may depict any of The Five Astronist Characters, and most typically stands atop an Astronist Planetarium, Observatory, or Eidouranium, and is considered to be the highest point of the building and the furthest point away from the Millox.

[3:8:209] Millettö is the fourth style within Astronist architecture, characterised by its pentagonal shape, its lack of human depictions and reliefs, and its distinct architectural modernity, and is most commonly found in predominantly Islamic countries.

[3:8:210] Millettoquine, in Astronist Architecture, is the specific depiction in the form of an encrustation, of The Five Astronist Characters, typically somewhere on the outside of an Astronist Planetarium, Observatory, or Eidouranium.

[3:8:211] Millox is the lowest point, the furthest point away from the Millix, or the object at the lowest point within an Astronist Planetarium, Observatory, or Eidouranium, and so, is distinct from a Millix, in that a Millox could be a different object in each Astronist building, but is most commonly either embedded or incrustated in the floor, or is buried beneath the floor, and can be an artefact, or part of an orrery.

[3:8:212] Millettü is the most common and definitive of the five Astronist architectural styles, characterised by a focus on domical and pyramidal roofings, the presence of all five of The Astronist Characters in all reliefs, an emphasis on grandeur, rich colours, Astronomism and Cosmosism, as well as the inclusion of encrustations, and artworks, and typically aims to stand out along a cityscape.

[3:8:213] A miradorium, in Astronist Architecture, as part of gardenry, is a simple outbuilding in the estate of some Astronist buildings consisting of just a raised platform typically all surrounded by between three and six steps, and on top of which may stand an astronomical instrument, and embedded into the floor of which may be cosmical patterns and Astronist imagery.

[3:8:214] Monumentalism, in Astronist Architecture, is the principle of architectural design and construction holding that all buildings, and all parts and ornamentations of buildings must be monumental in both their scale, and in their beauty, and even more so to serve the masses; to inspire wonderment, knowledge, ambition, and imagination.

[3:8:215] A morphel, in Astronist Architecture, is a series of sculptures, or figurines usually found atop an Astronist building, or gardenry outbuilding that depict the morphation process of the initial figurine to the final one; typically one of greater knowledge, triumph, and physicality.

[3:8:216] Morphenment, in Astronist Architecture, similar to a morphel, is a series of sculptures, or figurines usually in the form of a figurecrown that are made distinct by the change in perspective from one to the next. Typically, they are found in sequences of four; a front view of the figurecrown, a back view, a left view, and a right view.

[3:8:217] Najima, in Astronist Architecture, specifically in Arab Architecture, is an eight-pointed star found most commonly above the portrances of Astronist buildings, or atop the entire building.

[3:8:218] A needle, in Astronist Architecture, and also as part of gardenry, is a tall and thin structure typically in the centre of a courtyard resembling a needle shape, and atop of which either a point, a small figurine, or a star is affixed.

[3:8:219] A notionery, in Astronist Architecture, as part of a gardenry, is a type of outbuilding most commonly found on the estate of an Astronist building characterised by the small plash surrounding it; a notionery consists of an outdoor platform surrounding the main structure beside the plash and typically balustraded, and the structure itself is pavilion-like with four archways on each side, and almost all notioneries feature a stairway leading up to the terrace, whereupon the main purpose of a notionery is realised; orators can speak to the public beyond the plash, especially of a philosophical topic.

[3:8:220] An observatory is a principal Astronist building featuring an astronomical telescope, and is most typically centred in the cities of a nation.

[3:8:221] An openary, in Astronist Architecture, is an architectural element most commonly found in tropical countries whereby a room can be made unroofed by a mechanical system.

[3:8:222] Oppan, in Astronist Architecture, is a term used to describe the right side of an Astronist building, especially when in relation to the left, back, and front sides of the building.

[3:8:223] Opport, in Astronist Architecture, is a term used to describe any door to an Astronist building other than the front, back, or bullant doors.

[3:8:224] An Oratory Garden, in Astronist Architecture, as part of gardenry, is a type of garden on the estate of some Astronist buildings that features instruments and outbuildings which are best suited for orators to conduct their speeches.

[3:8:225] Orb Roofed, in Astronist Architecture, is a term describing a type of capital upon which an orb-shaped relief is affixed, and usually cosmically ornamented.

[3:8:226] An orberium, in Astronist Architecture, is a rare room within few Astronist buildings in which orb-shaped planets are projected upward from the ground in order to

create a space for studying their topographies, atmospheres, and all their other characteristics, and typically the floorings of orberiums are ornamented in highcosma.

[3:8:227] Ordonnance, in Astronist Architecture, is a style of ornamental design, and architectural positioning in which all attributes are systematically and orderly arranged so that they are perpendicular to one another, and is usually in contrast the cosma style of design and positioning which is traditionally more whimsical with less uniformity.

[3:8:228] An Ornamented Column, in Astronist Architecture, is a term describing a column shaft that is ornamented, typically with cosmical imagery and patterns.

[3:8:229] An orrerium is a room within a Planetarium, Observatory, or an Eidouranium, in which a clockwork model of the solar system is constructed and put on display, and typically, the larger the building the Orrery is in, the larger and more ornate and elaborate the clockwork model is.

[3:8:230] Outspread, in Astronist Architecture, is a category of Astronist building in which the width of the building is at least twice as long as its depth, and is thus most commonly characterised by its very wide appellation, and is a style mainly used on the construction of observatories.

[3:8:231] An overwatch, in Astronist Architecture, refers to any place within an Astronist building, or in the gardens and estate of an Astronist building where an individual can look down onto a wide area.

[3:8:232] A paladin, in Astronist Architecture, is a type of hidden door traditionally built behind bookshelves, but may also be found behind picture frames, and mirrors, and usually leads to some underground passage, or may lead to another room.

[3:8:233] Palisade, in Astronist Architecture, is a term in gardenry referring to the wall in the estate of an Astronist building which is as wide as the estate itself, and separates the main estate from the enclave.

[3:8:234] Par, in Astronist Architecture, is another term for ceiling, especially one that is cosmically ornamented, and especially when used alongside the terms dado, and dydo.

[3:8:235] A parallax, in Astronist Architecture, is the specific term for the viewpoint towards a Millettenium from the bottom of the corine steps looking up, and is also more colloquially called the grandiose view.

[3:8:236] Parallelum, in Astronist Architecture, is a term used in Architectural Theory, describing the moment when a person walks up steps and on either side of them, the columns, or walls are equidistant from one another.

[3:8:237] Paralyseium, in Astronist Architecture, is a type of building that isn't motional, and has no moving parts, especially in contrast to the term, kineticery, used for a building that is motional, or has moving parts.

[3:8:238] Parametric Method, in Astronist Architecture, is a methodology of building design and construction in which the parameters naturally, financially, physically, and in terms of resources are analysed and taken into account during the architectural design stage.

[3:8:239] Pavilionry, in Astronist Architecture, as part of gardenry, is a type of giant pavilion which is distinguished from that of a normal pavilion by its ornately affixed and embedded cosmical ornamental patterns, the numerous columns that support its structure, and its large archways. Some pavilionries feature stairways and rooftop balustraded terraces and even cornerpocket style rooms, while others feature domed rooftops.

[3:8:240] Pendantsry, in Astronist Architecture, is a feature found in many high-ceilinged rooms and halls, especially those of a barning style, within Astronist buildings that structures the beams in vaults so as to form central pendant-like structure to hang down from the converging vaults, and onto which lights can be hung, or ornaments can be affixed.

[3:8:241] Pendlement, in Astronist Architecture, is a type of patio that is cosmically ornamented and encrusted.

[3:8:242] Pentagonium, in Astronist Architecture, is a style of appelliage that resembles a pentagonal shape.

[3:8:243] Pfefferum, in Astronist Architecture, is a beautifully encrusted accent wall of a room in some Astronist buildings, typically with golden leaves, or golden ornamentations of some kind.

[3:8:244] Philosopher's Garden/Philosophy Garden, in Astronist Architecture, as part of gardenry, is a type of area on the estate of some Astronist buildings in which the study, debate, and intimate discussion of philosophical concepts, and ideas is conducted with fellows, and strangers alike, especially in the setting of a restaurant, or open courtyard, or on an instrumented lawn.

[3:8:245] Philosophia, in Astronist Architecture, is the entirety of Astronist philosophical buildings when considered, or described collectively.

[3:8:246] Philosophopolis, in Astronist Architecture, is a portion of a town, or city which is dominated by philosophical buildings, and cosmical imagery.

[3:8:247] Phrontistery is a large complex used by both students and the general public for a vast range of educational needs, with most including primary, secondary and higher education facilities within the complex, and are managed by Millette Education, the educational subsidiary of The People's Constitutional Company of Jesse Millette.

[3:8:248] Pickering, in Astronist Architecture, is a term used to describe a wall with a number of different crevices on it, typically for holding different ornaments, or small instruments.

[3:8:249] Pinnacle, in Astronist Architecture, is an ornamental pyramid, or cone atop many parts of Astronist buildings, but not usually on the highest point, also known as the millix, and is typically ornamented crockets, and a finial with cosmical ornamentation.

[3:8:250] Planetarium is a type of domed building used to project images of The Cosmos as a philosophical, and educational experience, and is the most common of all Astronist buildings.

[3:8:251] Plash, in Astronist Architecture, as part of gardenry, is the square-shaped pond surrounding a notionery, at some part over which a small bridge extends to other people to walk across it to reach the notionery.

[3:8:252] Polarium, in Astronist Architecture, as part of gardenry, is a type of archway exit from an estate of an Astronist building that is not through the building itself, and is typically on the opposite side of the estate from the building, and is usually traditionally ornamented with cosmical imagery, and patterns.

[3:8:253] Portalment, in Astronist Architecture, is a type of door to some Astronist buildings which is characterised by its gigantic size, and is a term typically reserved for double doors that are at least ten feet in height.

[3:8:254] Portrance, in Astronist Architecture, is a outdoor structure sometimes considered to be part of gardenry that can be most commonly found at the front of the estate of some larger Astronist buildings, and consists of three archways; the central one typically used for vehicles and the two on either side of this used for pedestrians; the variety of portrances is vast as some can be very large, and even have their own terraces and stairways within them, while others can be affixed to the front of the Astronist building itself, which is why its inclusion into gardenry is somewhat disputed.

[3:8:255] Posterium, in Astronist Architecture, is the part of an Astronist philosophical building that is north of the equatorium; the back half of the building.

[3:8:256] Postrance, in Astronist Architecture, is the back door of an Astronist planetarium.

[3:8:257] Primepoint, in Astronist Architecture, is a term used in Architectural Theory, and throughout the architectural designing process that refers to the point within an Astronist

building, or in the estate of an Astronist building which is most likely to see the largest amounts of footfall, especially at any one time, which is usually the atrium of the building.

[3:8:258] Prinscinity, in Astronist Architecture, is the typically walkable and balustraded terrace atop an archway of a Millettenium, also featuring its own pavilion structure atop itself, and is very heavily ornamented.

[3:8:259] Priorance, in Astronist Architecture, is the front door of an Astronist planetarium.

[3:8:260] A prismatory, in Astronist Architecture, is usually a series of around five or more seats embedded into a wall, with encrusted and ornamented niches featuring finials, and pinnacles atop of them.

[3:8:261] A Prodiginary Sculpture, in Astronist Architecture, is a rare class of giant sculpture, typically depicting an Astronist character, or something cosmical, and is usually at least twenty meters in height.

[3:8:262] A promontory is a kind of remote observatory, especially one built or sponsored by The People's Constitutional Company of Jesse Millette, and is distinctly scientific rather than philosophical, and is typically not open to the public, yet too, is architecturally distinct and ornate.

[3:8:263] A proscenium, in Astronist Architecture, is the metaphorical vertical plane of space in any area of an Astronist philosophical building, especially in an astrodium.

[3:8:264] A protrusery, in Astronist Architecture, is a type of rounded protrusion common in many Astronist buildings, typically used as a small seating area, and may be similar to a bay window.

[3:8:265] A punctulary, in Astronist Architecture, is two typically hollow and wide columns beside an archway, usually made distinct by the surrounding smaller columns, and is always heavily ornamented.

[3:8:266] Quarried Dome, in Astronist Architecture, is the interior of a dome ornamented by signature quarried patterns.

[3:8:267] Quarters, in Astronist Architecture, specifically Architectural Theory, refers to the name given to the illustration of an Astronist building, and its estate from a bird's eye view.

[3:8:268] Quoin, in Astronist Architecture, is a term used in Architectural Theory to describe any external corners of an Astronist building, especially which jut out, and are ornamented.

[3:8:269] Rand, in Astronist Architecture, as part of gardenry, is any border, or margin that separates a pathway from a lawn, or flowerbed, especially one that features ornamental designs.

[3:8:270] To rearchitect, or rearchitecture, in Astronist Architecture, is the process of re-envisioning, or upgrading an Astronist building to a higher level, such as from a planetarium to an observatory, by adding certain characteristics which would make it class as such.

[3:8:271] Refectory, in Astronist Architecture, is a large room in a phrontistery used for communal eating, and is usually cosmically ornamented, typically in the lowcosma style, and in an eidouranium, may be used to refer to a restaurant, and in gardenry, an outdoor communal eating space, especially in a Philosopher's Garden.

[3:8:272] Regolo, in Astronist Architecture, is a type of portico used for the front of some Astronist buildings, and is typically cosmically ornamented.

[3:8:273] To render, rendering, or renderation, in Astronist Architecture, is a term describing the entire process of planning, designing, and constructing an Astronist building.

[3:8:274] A revetment, in Astronist Architecture, as part of gardenry, is a slanted wall, typically below an overwatch, and may be cosmically ornamented.

[3:8:275] Ridging, in Astronist Architecture, is the structural apex of a pitched roof of an Astronist building.

[3:8:276] A rivergarden, in Astronist Architecture, as a part of gardenry, is a type of a garden in the estate of some Astronist buildings through which a river flows, whether artificially, or naturally.

[3:8:277] Riverhouse, in Astronist Architecture, as part of a gardenry, is a type of large outbuilding on the estate of an Astronist building characterised by its position beside a pond, lake, or river, and is usually heavily cosmically ornamented, and in its most basic form, consists of an orrerium as its main room, an astrotry, and a telescopetry, with some riverhouses consisting of extra rooms.

[3:8:278] A riverry, in Astronist Architecture, as part of gardenry, is a unique type of outbuilding found in the estate of some Astronist building that is constructed on the eyot of river, and may also be constructed as though it is a bridge stretching across the river itself.

[3:8:279] A ruck, in Astronist Architecture, is a place inside or outside an Astronist building, typically an observatory, or eidouranium, where crowds are encouraged to gather, especially to witness a show, or an oration.

[3:8:280] Rudenture, in Astronist Architecture, is a term for exposed cabling anywhere inside a sopharium.

[3:8:281] A salientry, in Astronist Architecture, as part of gardenry, is a type of outdoor structure found in the estates of some Astronist buildings, built in front of large hedges and consists of a central pavilion through which individuals may walk to pass through the hedge, and also consists on either side of it, usually five columns and niches between them, and usually close by to a fountain, or an orrery. (Ref: Architectural Theory, p.g. 151)

[3:8:282] Sanctuarium, in Astronist Architecture, is a very rare room within only some eidouraniums that is typically positioned either at the very top of the building, or underground, and is notoriously difficult to gain access to, mainly to due the fact that it stores documents, books, and other texts, as well as ornaments, that are unique, and therefore, valuable.

[3:8:283] A sannan, in Astronist Architecture, is a term to describe the left side of an Astronist building, especially in Architectural Theory, and especially when in relation to the other sides.

[3:8:284] A Scholar's Garden, in Astronist Architecture, as part of gardenry, is a type of walled garden, or area, on the estate of some Astronist buildings in which only official scholars may enter in order to discuss the most pressing of philosophical, academic, and perhaps political and social matters, and is usually accompanied by a private refectory.

[3:8:285] A scintilla, in Astronist Architecture, also called a scintillatory, is a type of electronic effect most typically used in the ceilings of Astronist buildings to resemble stars, and creates a display of continual scintillation and is most beautiful at night.

[3:8:286] Sculpture Garden, in Astronist Architecture, as part of gardenry, is a type of walled garden on the estate of some Astronist buildings, that features more sculptures than it does plants, flowers, and other natural phenomena.

[3:8:287] Sculpturology, in Astronist Architecture, and as part of gardenry, is the study of sculptures of Astronist influence, cosmical and astronomical themed, and those of philosophical influence.

[3:8:288] A solarium, in Astronist Architecture, and may also be part of gardenry, is an area, typically terrace, or balcony, in an Astronist building that is purposefully constructed to be exposed to sunlight, and the same in the context of a garden.

[3:8:289] A starwalk, in Astronist Architecture, is a type of narrow bridge stretching from one watchtower to another featuring a curved understructure, typically suspended over a deep chasm, and over which people walk to view the stars and is usually dotted on either side by telescopes.

[3:8:290] A statuarium, in Astronist Architecture, is a kind of sculpture, or statue that is so large and embedded into the front, or back of the Astronist building, that the public walk between the legs of the statue to enter or exit the building.

[3:8:291] A stellarium, in Astronist Architecture, is a type of retractable roof of some Astronist buildings, similar to an openary, but distinct in that its positioning is best suited to view stars at night.

[3:8:292] A sturden, in Astronist Architecture, is a raised block of stone resembling the bottom half of a pyramid shape which is used to stand an orrery, or another astronomical instrument upon.

[3:8:293] A substratium, in Astronist Architecture, is an underground network of passages and corridors which can be accessed from within the Astronist building under which they are located and can be used for various purposes, the most common of which is as a library.

[3:8:294] A subterrarium, in Astronist Architecture, in some Astronist buildings, is a type of underground hall, or room which is glass roofed, and typically the public walk above, and may look down and see through into the room.

[3:8:295] Symbolance, in Astronist Architecture, is the display of the Astronism Symbol, especially atop an Astronist building, or atop a structure, or outbuilding.

[3:8:296] A symposium, in Astronist Architecture, is a type of large debating hall that is heavily ornamented with cosmical and Astronist imagery, that may sometimes be constructed underground, typically beneath eidouraniums.

[3:8:297] A telescopetry is a small room in a residence, in which a telescope is positioned by a window, through which an individual can study astronomy, always with a distinct connection to philosophy.

[3:8:298] A tenement, in Astronist Architecture, is the term used to describe the Astronist building, as distinct from the entire estate itself.

[3:8:299] A terracery, in Astronist Architecture, is any type of outdoor balcony adjoined to an Astronist philosophical building, the most common of which are accessible from the celetrium, and can feature patterned or globographic floors.

[3:8:300] Terracing, in Astronist Architecture, are wide, shallow steps used to provide standing room for spectators in many halls, large rooms, and planetariums in Astronist buildings, and may also be used around the estate wherever practical, especially surrounding notioneries.

[3:8:301] A theaterium, in Astronist Architecture, is a theatre present in some eidouraniums that is heavily cosmically ornamented, usually in the highcosma style, and in which a great variety of shows, ballets, and orchestral performances are conducted throughout the year.

[3:8:302] A towerpoint, in Astronist Architecture, on the estates of some Astronist buildings, is the two towers constructed equidistantly from the central building which are most often used as observation points. (Ref: Architectural Theory, p.g. 558)

[3:8:303] Towngarden, in Astronist Architecture, as part of gardenry, is a type of garden of Astronist buildings where the garden itself is located on a terrace, or large balcony of the main building, and is most usually found on Astronist buildings that are located in the centre of towns and cities, thus where there is little room for a full garden, or estate.

[3:8:304] Tracinghouse, in Astronist Architecture, as part of gardenry, is an outbuilding on the estate of some Astronist buildings in which the resident masons, restorers, curators, or architects can conduct their designing, restoration, and small-scale construction works, and is usually not open to the public.

[3:8:305] A trellisium, in Astronist Architecture, as part of gardenry, is a screen-work made of thin strips of timber laths crossing each other to form a lattice on which plants grow, and is specifically the use of the trellis to form a long archway corridor over which plants grow, and under which a pathway is built for the public to walk on.

[3:8:306] A triodum, in Astronist Architecture, is the depiction of just three of The Five Astronist Characters anywhere in an Astronist building, especially so in a floor ornamentation.

[3:8:307] A tripocket, in Astronist Architecture, is a type of large protrusery consisting of three bays branching off from the central room, which is almost always circular in shape. (Ref: Architectural Theory, p.g. 305)

[3:8:308] Triumphalism, in Astronist Architecture, is any type of room, ornamentation, structure, outbuilding, or area that is dedicated to a particular advancement in philosophy, astronomy, or cosmology, or is dedicated to a person whom added to philosophy, astronomy, cosmology, or architecture in some way, especially the Astronist versions of these subjects.

[3:8:309] A trundelle, in Astronist Architecture, and also part of gardenry, is a type of parasol that is affixed into the ground, especially into a pendlement, that is used in many refectories, and also for shading in other places around the estate of an Astronist building, and may or may not be cosmically decorated.

[3:8:310] A tunnellery, in Astronist Architecture, a type of ceiling used for some niches, and in other areas, in Astronist buildings, made distinct by its half-cylindrical shape, and is usually heavily ornamented with cosmical patterns and imagery.

[3:8:311] An underwatch, in Astronist Architecture, is the area beneath an overwatch where one can look up to see the overwatch.

[3:8:312] Vantage, a vantagery, or vantagism, in Astronist Architecture, and a part of gardenry, refers to the architectural style and principle holding that at every suitable, safe, and possible place, the public must be able to look back see where they had walked from, and so, encourages architects to create plenty of observation points, balconies, and terraces throughout the building they are designing.

[3:8:313] A vantagement, in Astronist Architecture, specifically relating to the Millettenium, is the point at which one reaches the circular open area beyond the corine steps and looks back, but may also relate to this same action when standing on the balustraded terrace atop of the main archway of the Millettenium.

[3:8:314] Velvo, in Astronist Architecture, is a term for any ornamental motifs that are positioned between a series of windows on either the interior, or exterior of an Astronist building.

[3:8:315] A vexillo, in Astronist Architecture, and also sometimes a term in gardenry, is when a flag, typically the Official Flag of The People's Constitutional Company of Jesse Millette, or the flag of The Institution of The Philosophy of Astronism is hoisted atop an Astronist building.

[3:8:316] Virtualism, in Astronist Architecture, and as part of gardenry, is the principle holding that through virtual construction of the building and estate beforehand, the designing, planning, and the final construction result will be of much higher accuracy to what was envisioned.

[3:8:317] A ward, in Astronist Architecture, is a term used to describe each individual room of an art gallery within an Astronist building.

[3:8:318] Watchtower, in Astronist Architecture, as part of gardenry, is a type of outdoor structure consisting of a singular solid column with typically five different levels with many ornamentations affixed to it with each level usually characterising a different cosmical theme or Astronist character depiction, and many of which can be present in just one estate of an Astronist building. (Ref: Architectural Theory, p.g. 488)

[3:8:319] Wilderness Garden, in Astronist Architecture, as part of gardenry, is a type of open lawn, usually perfectly square, or rectangular in shape that doesn't feature any astronomical instruments, or any other plants, or ornamentations.

[3:8:320] Xymicism, in Astronist Architecture, is an architectural style of some Astronist buildings resembling a rigid and cubic central structure with four cornersquares on each corner, typically featuring heavy ornamentation and embedded columns, and may or may not feature a dome, or a terracery atop of it.

[3:8:321] Xystum, in Astronist Architecture, is a type of heavily ornamented alleyway, or passage, that is usually founded to conjoin one corridor to another, especially when each corridor is parallel to each other.

[3:8:322] Yelm, in Astronist Architecture, is a collective term for all plant life that is purposefully positioned inside an Astronist building, especially in an inside garden.

[3:8:323] A zyta, in Astronist Architecture, is a large storage space found close to the top of some Astronist buildings in which archives, valuables, and other storage items may be kept, with its size varying dramatically from building to building.

Introduction to the Elements of Astronist Propaganda

[3:9:1] The study of Astronist Propaganda is another subject of immense complexity and vastness due to the major differences in the nature, representation, and relevance of propaganda from nation to nation, and more than in other subjects, the context of the political landscape, societal structure, and governmental processes must be held intrinsically to all essays written on the subject due to their immense impact on the subject.

[3:9:2] The variations of Astronist Propaganda are vast due to the variety of different backgrounds, characters, and narratives depicted, and it can change greatly from country to country depending on the political landscape of the nation.

[3:9:3] Due to this, those whom study the subject understand that their writings on the subject could easily become non-relevant in an ever-changing political landscape.

[3:9:4] Due to the distorted nature of certain Astronist Propaganda to support particular political campaigns and systems, those whom study this can never be truly sure of the truth, but it is still firmly held by The People's Constitutional Company of Jesse Millette that all propaganda either created, or at least authorised by them conveys the message that they wish to espouse in that particular country in which it is displayed.

[3:9:5] The study of Astronist Propaganda can easily overflow into other areas of study, such as those of Popular Culture study, Maleology, Feminology, and Symbology as well as others, which thus alludes that someone studying Astronist Propaganda should be well versed in the aspects, concepts, and viewpoints expressed in other closely related subjects.

[3:9:6] This results in an individual writing an essay with a multi-subject base, mixed with influences from their personal, cultural, religious, ethnic, and national backgrounds.

[3:9:7] A signpost, in Astronist Propaganda, is the central figure or point of interest in the propaganda piece, most typically is one of The Five Astronist Characters.

[3:9:8] Undercurrent, in Astronist Propaganda, is the term used to describe the underlying message, or allegory of a propaganda piece.

[3:9:9] Lunge, in Astronist Propaganda, is the collective term for one or more propaganda pieces that utilise the same theme, costume setup, and figures.

[3:9:10] A quilt, in Astronist Propaganda, a descriptor for the overall colour scheme, background choice, and tones used in a particular propaganda piece; for example, a red cosmic quilt would describe a propaganda piece as having an overall red colour scheme on a cosmic background.

[3:9:11] Munster, in Astronist Propaganda, is the collective depiction of buildings, especially those of philosophical basis, in propaganda pieces.

[3:9:12] Aspartame, in Astronist Propaganda, is the addition of ornaments to a propaganda piece, adopted from Astronist Ornamentation.

[3:9:13] Jingle, in Astronist Propaganda, is another word for the finish of the propaganda piece, especially when in print, and can include many types of print finishes.

[3:9:14] Didactic Function, in Astronist Propaganda, is the belief that the central functionality of propaganda is to educate the people in alignment with the ideals of the implemented philosophy.

[3:9:15] Mass Understanding, in Astronist Propaganda, refers to the belief that the central functionality of propaganda is to galvanise a mass understanding of a single concept.

[3:9:16] Visualisation of Philosophy, in Astronist Propaganda, refers to the belief that the central functionality of propaganda is to mass visualise with clarity the abstract concepts of philosophical thought schools and systems.

[3:9:17] Slogan, in Astronist Propaganda, pertains to the use of words, or phrases on the propaganda piece itself in order to clarify the message of the piece, and is distinct from the captionisation.

[3:9:18] Festivation, in Astronist Propaganda, is the specific depiction of a festival as the setting for a propaganda piece.

[3:9:19] Festivity, in Astronist Propaganda, pertains to the extent to which a propaganda piece is considered to be joyous, typically derived from the character's facial expressions, the colour scheme used, and the subject of the piece.

[3:9:20] Vibrancation, in Astronist Propaganda, the deliberate use of vibrant filters and effects on a propaganda piece in order to increase its attractiveness, and its vibrancy.

[3:9:21] Space Propaganda, in Astronist Propaganda, is the specific style of propaganda that is most typically characterised by a space background, or includes imagery of space technology, space symbols, and other cosmical inspirations.

[3:9:22] Symbolical Propaganda, in Astronist Propaganda, is the use of symbols in propaganda in order to derive a particular message to the audience, but not one of obviousness.

[3:9:23] Technologicality, in Astronist Propaganda, is the extent to which a propaganda piece features technological imagery, and symbolism.

[3:9:24] Captionisation, in Astronist Propaganda, is the title of the propaganda piece as distinct from the slogan, or any other writing or text, and is typically not placed on the piece itself, but typically in the description of the piece.

[3:9:25] Glorification, in Astronist Propaganda, is the specific type and style of a propaganda piece that typically depicts the characters in the piece to be in awe of the signpost, or central subject, or figure of the piece, and is most often associated with a very glossed, and overtly vibrant style.

[3:9:26] Commonplace, in Astronist Propaganda, refers to the depiction of everyday occurrences, and domestic life in a propaganda piece, especially when exaggerated to look more utopian than their reality.

[3:9:27] To be diurnal or diurnalism, in Astronist Propaganda, is the depiction in a propaganda piece of daytime, or the background, signpost, or event occurring during the day, especially midday.

[3:9:28] To be nocturnal, or nocturnalism, in Astronist Propaganda, relates to the depiction in a propaganda piece of nighttime, or the background, signpost, or event occurring during the night, especially during a clear and starry night, or at midnight.

[3:9:29] Narrativism, in Astronist Propaganda, pertains to a style of propaganda that depicts a story, or suggests at least part of a story.

[3:9:30] Anti-militarism, in Astronist Propaganda, pertains to the view held that new propaganda should not be bound to its militaristic style of its past uses, but should be broadened in its uses, and be utilised for a variety of different things, and especially does not support the militarisation of a country through the use of propaganda as it was once used for.

[3:9:31] Pro-knowledge, in Astronist Propaganda, relates to the stance held that knowledge and its representation should be the central attribute to new propaganda, especially above over traditional attributes such as that of politics, military, and religion.

[3:9:32] Educentrism, in the context of Astronist Propaganda, relates to the centrality of education in a particular propaganda piece, especially when given the role of the signpost.

[3:9:33] Cosmocentrism, in the context of Astronist Propaganda, relates to the centrality of The Cosmos, and space exploration and discovery in general in a particular propaganda piece, especially when given the role of the signpost.

[3:9:34] Consumercentrism, in Astronist Propaganda, relates to the depiction of the consumer and the materialistic culture to be at the centre of modern society, especially over politics, the military, and religion.

[3:9:35] Portraiture, in Astronist Propaganda, pertains to the creation of a propaganda piece in a portrait format, typically showing greater detail of the attire, facial expressions, and the other aesthetics of the central figure.

[3:9:36] Landscaping, in Astronist Propaganda, is the creation of a propaganda piece in a landscape format, typically showing greater detail of nature, the countryside, or the setting in which the piece is set, rather than a centrality on the individual characters present in the piece.

[3:9:37] Peopled, in Astronist Propaganda, is the amount and the extent to which a particular propaganda piece is peopled with figures.

[3:9:38] Anchoring, in Astronist Propaganda, relates to the frontmost figure, or depiction on a propaganda piece, typically being one of The Five Astronist Characters.

[3:9:39] Fixed In Time, in Astronist Propaganda, is the phrase used to describe a propaganda piece that is clearly associated with a particular period of time due to the attire worn, the art style of the piece, and the central subject.

[3:9:40] Bastionism, in Astronist Propaganda, is the specific depiction of an authority in a propaganda piece, particularly one that espouses the principles of a certain system of thought, or methodology, and can be embodied in a person, a building, a book, or something more abstract.

[3:9:41] Greatness In All Dynamics, in Astronist Propaganda, is a phrase coined to describe the central ambition of each of The Five Astronist Characters which is to achieve greatness in all they do, in every aspect and dimension, and this is often represented through the triumph of the characters of difficulties, and obstacles.

[3:9:42] Pastoralism, in the context of Astronist Propaganda, relates to the specific depiction of a pastoral, or countryside scene, especially one whereby nature is the centrality, rather than humanity.

[3:9:43] Urbanism, in the context of Astronist Propaganda, is the specific depiction of an urban scene, especially one whereby the buildings and structures of the city are the centrality, rather than humanity.

[3:9:44] Cosmism, in the context of Astronist Propaganda, is the specific depiction of a cosmic scene, especially one whereby The Cosmos, or a part of The Cosmos is the centrality, rather than humanity.

[3:9:45] Concoursation, in Astronist Propaganda, is the term used to describe the specific depiction of crowds in a propaganda piece.

[3:9:46] Attiration, in Astronist Propaganda, is the depiction and study of the various attire represented in a propaganda piece, and what that particular attire may suggest about the wearer, and its subsequent impact on the message of the piece.

[3:9:47] A quadrant, in Astronist Propaganda, is the use of four quadrant squares in the creation of a propaganda piece to ensure proper alignment.

[3:9:48] A quinrant, in Astronist Propaganda, is the use of five quadrant squares in the creation of a propaganda piece in order to ensure the positioned centrality of the chosen signpost.

[3:9:49] A hexarant, in Astronist Propaganda, is the use of six quadrant squares in the creation of a propaganda piece in order to ensure proper alignment between the subjects of the piece.

[3:9:50] A heptarant, in Astronist Propaganda, is the use of seven quadrant squares in the creation of a propaganda piece in order to ensure the positioned centrality of the chosen signpost, as well as the proper alignment of the subjects.

[3:9:51] Octarant, in Astronist Propaganda, is the use of eight quadrant squares in the creation of a propaganda piece in order to ensure proper alignment between the subjects of the piece.

[3:9:52] A nonarant, in Astronist Propaganda, refers to the use of nine quadrant squares in the creation of a propaganda piece in order to ensure the positioned centrality of the chosen signpost, as well as the proper alignment of the subjects.

[3:9:53] Heroism, in Astronist Propaganda, is the specific depiction and study of a male Astronist Character icon as a hero in a propaganda piece.

[3:9:54] Heroinism, in Astronist Propaganda, is the specific depiction and study of a female Astronist Character icon as a heroine in a propaganda piece.

[3:9:55] Innovationism, in Astronist Propaganda, refers to the art style of making innovation and its imageries central to the propaganda piece, and using connotations of education, knowledge, and creativity to push a particular message, or subject.

[3:9:56] Non-theocentrism, in Astronist Propaganda, is the argued point that there is a distinct lack of theological or religious prominence portrayed within the propaganda pieces and styles.

[3:9:57] Humanism, in Astronist Propaganda, is the argued point that due to the lack of theological or religious prominence portrayed within propaganda styles, a conclusion is made that Astronist Propaganda advocates for the concepts of humanism, anthropocentrism, and a non-religious society.

[3:9:58] Animalation, in Astronist Propaganda, is the specific depiction of animals in a propaganda piece, or in a lunge of pieces.

[3:9:59] Floralation, in Astronist Propaganda, is the specific depiction of flowers, and plant life in a propaganda piece, or in a lunge of pieces.

[3:9:60] Culturalcentrism, in Astronist Propaganda, is the point argued that all propaganda should hold at its core the culture of the nation in which it is distributed, rather than multicultural, relativistic cultures, or rebellious cultures.

[3:9:61] Philosophocentrism, in Astronist Propaganda, refers to the belief that all propaganda pieces should overtly expound the official philosophy and worldview of the nation in which the propaganda is distributed, and believes this to be the central piece of all propaganda.

[3:9:62] Advancism, in Astronist Propaganda, is any type of propaganda style that advocates for the somewhat elusive achievement of advancement in its messages and subject, especially without giving too much detail into how this could be practically achieved.

[3:9:63] Creative Industry, in Astronist Propaganda, pertains to the specific depiction of creative industries as the central occupations of humanity, especially when also depicting the use of advanced technology for industrial and laborious work.

[3:9:64] Scientism, in Astronist Propaganda, refers to the depiction of science, knowledge, and scientists themselves to be the centre of advancement and progression for all of human society, and may also relate to the depiction of abstract scientific concepts, or the depiction of scientific symbols and imageries in propaganda pieces.

[3:9:65] Sciencentrism, in Astronist Propaganda, is the belief held that propaganda in modern society should be used to further mass interest in science by depicting the positioning the study of sciences at the centre of human society.

[3:9:66] Zaranianised Propaganda, in Astronist Propaganda, is a particular propaganda piece, or a lunge of pieces that have the Astronist Character of Zara as their central figure, or signpost, especially when other Astronist Characters are pictured in the background.

[3:9:67] Ellenarianised Propaganda, in Astronist Propaganda, refers to a particular propaganda piece, or a lunge of pieces that have the Astronist Character of Ellena as their central figure, or signpost, especially when other Astronist Characters are pictured in the background.

[3:9:68] Harrietarianised Propaganda, in Astronist Propaganda, is a particular propaganda piece, or a lunge of pieces that have the Astronist Character of Harriet as their central

figure, or signpost, especially when other Astronist Characters are pictured in the background.

[3:9:69] Jessianised Propaganda, in Astronist Propaganda, refers to a particular propaganda piece, or a lunge of pieces that have the Astronist Character of Jesse as their central figure, or signpost, especially when other Astronist Characters are pictured in the background.

[3:9:70] Oliverianised Propaganda, in Astronist Propaganda, is a particular propaganda piece, or a lunge of pieces that have the Astronist Character of Oliver as their central figure, or signpost, especially when other Astronist Characters are pictured in the background.

[3:9:71] Finally, that which is to be known as The Frontier in Astronist Propaganda, refers to the depiction of the abstract concept that the nation, and humanity collectively, must always be working and progressing toward The New Frontier, or just simply The Frontier, which is a utopian vision personalised to the nation in which the propaganda is distributed.

Introduction to Pre-Omnidoxical Astronist Theories

[3:10:1] The theories that are listed in this discourse are to be known as pre-omnidoxical theories, particularly known as cradalic theories because their origins rests in The Grand Cradle of Astronology, yet they retain their Cometanic authorship and have herein been transferred into the Omnidoxy; theories in the context of Astronist philosophy are also referred to as postulations, they are provided with titles or appellations while notions are not which relates to the difference between theories and notions.

[3:10:2] All-ignorance, All-blindness & All With One; the Astronist theory describing one's experience when with The Divine after their death.

[3:10:3] Becoming As One; the Astronist theory describing the moment when one becomes One with The Divine.

[3:10:4] Circumstance & Consequence Theory; the Astronist theory that one's circumstance will be equally weighted with consequences.

[3:10:5] Crossroads of Enlightenment Theory; the Astronist process of choosing one's path in life and beyond and deciphering the morally good and morally bad paths with the ultimate goal of fulfil one's Divine Path of Enlightenment.

[3:10:6] Crossroads of Morality Theory; the Astronist theory that one's morality is always split between what is considered good in one's mind and what is considered bad, but also expresses the importance of recognising alternative options and alternative justifications yet ultimately makes the decision right to their individual morality.

[3:10:7] Destiny of One Theory; the Astronist theory that one's destiny will converge to their eternal moment with The Divine regardless of their wrongdoings.

[3:10:8] Devil There Is, But Only In Human Theory; the Astronist theory that the devil does not physically exist in itself, but exists in the form of morality.

[3:10:9] Divine, Peace Is Not Theory; the Astronist theory that The Divine is not of peace because peace do not exist for The Divine for there to be peace, there must also be war and so peace is a human idea, not a divine one.

[3:10:10] Faith, Morality & Astronism Theory; the Astronist theory that for one to fulfil themselves, they must have faith, morality and Astronism and that each entity is equally interdependent on the other two.

[3:10:11] Faith Without Foundation Theory; the Astronist theory that faiths do not recognise morality and ideology as separate entities, thus lack foundation to support followers completely; the Astronist theory that faiths are hypocritical due to them not fulfilling their principles in universal circumstances; the Astronist theory that faiths must

not hold one back from their Divine Path of Enlightenment or the perceived destined path of humanity.

[3:10:12] The Divine Eternity; the Astronist theory of the eternal moment in which one becomes as One with The Divine.

[3:10:13] Furtherance of Thyself & Betterment of Peoples Theory; the Astronist theory that one cannot better those around them without first bettering themselves.

[3:10:14] Infinite World Theory; the Astronist theory that when one becomes as One with The Divine, their world is of infinite size, complexity, purity and knowledge.

[3:10:15] Knowledge None Theory; the Astronist theory that one as is now is without knowledge compared to The Universe and The Divine, and one should not see themselves otherwise.

[3:10:16] Knowledge as Power Theory; the Astronist theory that knowledge is the highest form of power.

[3:10:17] Limitless & Doubtless Theory; the Astronist theory that one should always practice their knowledge limitlessly and doubtlessly in every circumstance.

[3:10:18] Multiverse Theory; the Astronist theory that The Divine creates, sees and knows every existence in multiple universes.

[3:10:19] Music in Astronism; the Astronist theory that music can be a key to unlock imaginative and ambitious enlightenments.

[3:10:20] One and All Theory; the Astronist theory that one makes decisions for both oneself and all.

[3:10:21] One of All Theory; the Astronist theory that one makes decisions not for oneself, but for all.

[3:10:22] Peace of Falseness Theory; the Astronist theory that peace underpinned by fear is ultimately of falseness.

[3:10:23] Perspectives of The Universe Theory; the Astronist theory that The Universe is perceived differently for every entity, thus creating infinite perspectives.

[3:10:24] Same Source, Structure and Kin Theory; the Astronist theory that all entities are of the same eventual origin, The Divine, thus all entities are of same source, structure and kin as each other.

[3:10:25] Stagnancy for One Theory; the Astronist theory that regressive entities are continuously stagnating the enlightenments of those in which they influence.

[3:10:26] The Blank Book; the Astronist theory that within Astronist works, one's book of religious faith isn't specified.

[3:10:27] The Chosen Few Theory; the Astronist theory that there are The Chosen Few who are destined for their Divine Path of Enlightenment.

[3:10:28] The Circle of Aid Theory; the Astronist theory that one must aid another for The Circle of Aid to be completed.

[3:10:29] The Conscious, The Unconscious & The Synchronous Between the Worlds; The Astronist theory that there are three states of understanding between worlds; The Conscious is all that exists within the consciousness of the Jesse Millette character; The Unconscious is all that do not exist within the consciousness of the Jesse Millette character; The Synchronous is the convergence of existence within the consciousness of the Jesse Millette character.

[3:10:30] The Creator of One; The Creator of All Theory; the Astronist theory that The Divine creates both one and all.

[3:10:31] The Gift-giver Theory; the Astronist theory that The Divine is the giver of all entities.

[3:10:32] The Grand Unknown Theory; the Astronist theory that space is unknown until explored.

[3:10:33] The Importance of History Theory; the Astronist theory that learning from historical events is an important technique to support moral decisions of the future.

[3:10:34] The Importance of Perspectives Theory; the Astronist theory that humans should understand the varied perspectives of entities in The Universe and The Universe itself.

[3:10:35] The Importance of the Practice of Acceptance Theory; the Astronist theory that acceptance is the most divine practice.

[3:10:36] The Importance of the Practice of Patience Theory; the Astronist theory that patience is the most divine practice.

[3:10:37] The Internal, The External & The Parallel Between the Worlds; the Astronist theory that there are states of reality in three worlds; The Internal is the world in which Jesse Millette lives; The External is the world in which Jesse Millette exists, yet is fictitious; The Parallel is the world in which Jesse Millette both lives and exists.

[3:10:38] The Omnipotent, Omnipresent and Omniscient World of Astronaria, The Enigmatic State; the point at which a person has fulfilled all of The Eleven Grand Principles of Astronism and is now beyond all that is human and physical and is existing in The Divine Eternity.

[3:10:39] The One Judge Theory; the Astronist theory that there is only one true judge in The Universe and that is The Divine.

[3:10:40] The State of Eternal Freedom Theory; the Astronist theory that once death has passed, an eternal existence of freedom commences.

[3:10:41] The Theory of Insignificance; relating to Insignificism, The Theory of Insignificance is the Astronist theory that humans have become collectively egotistical and therefore ignorant to their place in The Universe; if one follows this theory, one believes that humanity is no significance to The Universe as a whole.

[3:10:42] The Theory of Progress & Stagnancy; the Astronist theory stating that to progress is the ultimate sanctity, whereas to stagnate is the ultimate vice.

[3:10:43] The Theory of The Divine; the Astronist theory that The Divine is the unspecified creator of all that has, is and will exist and that all existing entities will, after death, become as One with The Divine.

[3:10:44] The Theory of the Three Worlds; the Astronist theory that there are three existing states of understanding; The Real is the world of physicality; The Ideal is the world of the mind and spirituality; The Parallel is the world of imagination and enlightenment.

[3:10:45] The Tree of Jesse; the Astronist theory derived from The Tree of Jesse in Christianity, depicting the fictional ancestors and descendants of the character of Jesse Millette.

[3:10:46] The Universal Value Theory; the Astronist theory that there are certain entities holding values of which all other entities can understand, recognise and apply to existence and belief.

[3:10:47] The Wider Spectrum Theory; the Astronist theory stating that the spectrum of human understanding is infinitesimal compared to The Universe and that it should be one's goal to widen their understanding of knowledge to the fullest, yet always remembering The Widest Spectrum cannot be attained until The Divine Eternity.

[3:10:48] The Will of The Divine Theory; the Astronist theory that The Divine's will is a force that must be accepted for it is immeasurable and unstoppable.

[3:10:49] The Picture We See Theory; the Astronist theory that refers to the infinitesimal view of humanity compared to the widest view of The Universe.

[3:10:50] The True Purpose Theory; the Astronist theory stating that all's true purpose is to reach The Divine Eternity.

[3:10:51] Thought, Idea & Action Theory; the Astronist theory stating the steps of one's path of enlightenment chronologically; one thinks, one expands ideas and one takes action.

[3:10:52] Triunity of Oneself Theory (One Was, One Is and One Will Be); the Astronist theory that one has three separate entities; one's past, one's present and one's destiny and that these three entities do become as One when one dies.

[3:10:53] True Peace Theory; the Astronist theory that true peace comes only during The Divine Eternity.

[3:10:54] Worthiness & Readiness Theory; the Astronist theory that one must be of both worthiness and readiness to receive and take action upon their Divine Path of Enlightenment.

Introduction to the Elements of Astronist Art

[3:11:1] Astronist Art is the study and practice of the visual arts encompassing illustration, drawing, painting, photography, and animation, resembling the character, culture, and philosophy of the Astronist style and worldview, and has includes many derivations, the largest and most prominent of which is Cosmic Art.

[3:11:2] Astronist Art as a subject of study focuses much more on the abstract concepts, and different styles and artistic movements within Astronist Art rather than the study of the techniques, ornamentations, and symbolisms of the art pieces themselves.

[3:11:3] Art Theory is the analysis, and subsequent criticisms and conclusions derived from the study of Astronist Art, and the transposition of these ideas into a critical essay.

[3:11:4] Advancism is an art movement within Astronist Art that is resembled by its depiction of humanity's advancements in philosophy, technology, science, and astronomy, and typically depicts these through the representations of The Five Astronist Characters, and largely takes its influence from the Realism art movement.

[3:11:5] Cosmic Art, as a derivation of Astronist Art, is a far-reaching art style present in many different art movements which is inherent and deeply intertwined with the wider Astronist Art style that encompasses the depictions of cosmical, celestial, and galactical entities, as well as astronomical practices, and instruments in art pieces, and typically draws upon Cosmic Philosophy for its inspiration, and may be seen throughout Astronist Architecture, Art, Literature, Culture, and Philosophy.

[3:11:6] Cosmism is a branch of knowledge in The Philosophy of Astronism, as well as an art movement within Cosmic and Astronist Art, that is arguably inspired by Russian Cosmism, concerning the study of, and the advocacy for the depiction of The Cosmos in art, ornamentation, architecture, and design, and typically takes a distinct culture, and creative arts point of view for the implementation of Cosmic Philosophy.

[3:11:7] Derivation, in Astronist Art, is an art movement, or style whose origins, or influence that can be derived from the wider Astronist Art style, or from another movement within Astronist Art.

[3:11:8] Ellenarianism is an art movement within Astronist Art that focuses all its art pieces on the Astronist character of Ellena as the central figure and subject.

[3:11:9] Galactico, in Astronist Art, refers to the act of painting one's face, or someone else painting one's face, to form a series of galactical and cosmical patterns across the face and body.

[3:11:10] Harrietarianism is an art movement within Astronist Art that focuses all its art pieces on the Astronist character of Harriet as the central figure and subject.

[3:11:11] Jessianism is an art movement within Astronist Art that focuses all its art pieces on the Astronist character of Jesse as the central figure and subject.

[3:11:12] Astronarianism, in the context of Astronist Art, is the art movement characterised by its focus on political and social reform in following the Astronist Methodology, and typically depicts social and political utopia, with some cosmical and astronomical influences, and usually centred around the depiction of The Five Astronist Characters in the leadership of the social and political reform.

[3:11:13] Morphism is an art movement within Astronist Art characterised by the depiction of a particular character, or place and its gradual depreciation, or appreciation through different paintings, or illustration, typically positioned side by side in chronological order.

[3:11:14] New Realism, also known as Astronist Realism, is an art movement within Astronist Art that considers its foundations to be the classical Realism art movement, and is typically characterised by the representation of people, places, or any other subject in a way that is true to sight, and may either reflect the daily lives of people, or may be used for propaganda purposes to represent what is called The New Reality, which is traditionally a utopian representation of people, typically The Five Astronist Characters, in such a way that suggests it is attainable for the future of the current society, or the individual.

[3:11:15] Oliverianism is an art movement within Astronist Art that focuses all its art pieces on the Astronist character of Oliver as the central figure and subject.

[3:11:16] Ornamentationism refers to an art movement within Astronist Art holding that the established styles of modernism and futurism do not reflect modernity, or the future due to their general lack of character, depth, and clarity for audiences, and thus, strongly advocates for the re-emergence of an heavily ornamented style, whilst still supporting functionalism, and is also largely influenced by the Cosmism art movement.

[3:11:17] Reorientationism is a major art movement initiated by Astronist Art, and wider Astronist Philosophy and Culture, that strongly opposes the heavily functionalist and characterless postmodernist art and architectural style and its wider culture.

[3:11:18] Reorientationism strongly advocates for the education of art history, religious art, as well as the Philosophy of Art, and holds the philosophy that art should be at the centre of human society, for it is the reflection of what is achieved in a given period of human history.

[3:11:19] Though not technically an art style itself, Reorientationism plays a more social, educational, cultural, and political role in the representation of the art styles it supports, and in what it calls The Struggle against the established modernist and postmodernist

functionalist and characterless art, and describes a future redirected towards a rich artistic character, style, and culture, with space exploration, and cosmic adoration as its centrality.

[3:11:20] Also, Reorientationism raises concepts, questions, and discussions on the Philosophy of Art, and reaffirms the purpose, and the natural need for ornamented, and philosophical art in human society, and strongly supports its sister movements; Ornamentationism and Cosmism.

[3:11:21] Philosophical Art, in Astronist Art, refers to artistic imagery using philosophical inspirations, and motifs and is often intended to uplift and enlighten the mind, to raise one's philiosity, and is usually made distinct by the corresponding Organised Philosophy.

[3:11:22] Spacial Art is an art movement within Astronist Art that is characterised by its depiction of humanity's exploration, colonisation, and general wonderment of space, and may also depict human civilisations on other planets, and on spacecraft, and traditionally depicts The Five Astronist Characters.

[3:11:23] Spacial Realism is an art movement within Astronist Art, and as a derivation of Spacial Art, characterised by its depiction of space colonisation, exploration, education, and wonderment through a Realist style foundation, and traditionally depicts The Five Astronist Characters.

[3:11:24] Zaranianism is an art movement within Astronist Art that focuses all its art pieces on the Astronist character of Zara as the central figure and subject.

[3:11:25] Absolute Centrality, in Cosmic Art, as a derivation of Astronist Art, is the centrepoint within the core of the galaxy, also known as the galactic centrality, and is the position of the galaxy's black hole.

[3:11:26] Argent, in Cosmic Art, as a derivation of Astronist Art, refers to a silver theme.

[3:11:27] Arm, in Cosmic Art, as a derivation of Astronist Art, is the region of a spiral galaxy that departs from the galactic concentricity, but not to be confused with a galactic tail.

[3:11:28] Aureate, in Cosmic Art, as a derivation of Astronist Art, refers to a golden theme.

[3:11:29] Celestial Web, in Cosmic Art, as a derivation of Astronist Art, refers to the depiction of a web-like structure of gas and dust within, or between celestial entities, especially during an explosion.

[3:11:30] Centort, in Cosmic Art, as a derivation of Astronist Art, is the circular central region between the upport and the lowort of a cosmic art piece.

[3:11:31] Centream, in Cosmic Art, as a derivation of Astronist Art, refers to the middle section of a galactic arm.

[3:11:32] Cerulean, in Cosmic Art, as a derivation of Astronist Art, refers to a blue theme.

[3:11:33] Collidiary, in Cosmic Art, as a derivation of Astronist Art, is the depiction of two celestial entities colliding with one another, as distinct from the concept of mergence.

[3:11:34] Compaction, or compactality, in Cosmic Art, as a derivation of Astronist Art, when a huge amount of stars are depicted in one cosmic art piece especially in an overlapping, or mesmerising way, and is the opposite to scatterance.

[3:11:35] Concentristellar, in Cosmic Art, as a derivation of Astronist Art, refers to a star formation and depiction whereby four stars surround perpendicular to each other a central star, typically one that is brighter and larger than those surrounding, and is a formation that has symbological meanings.

[3:11:36] Core, in Cosmic Art, as a derivation of Astronist Art, is the centre region of a galaxy.

[3:11:37] Cosmic Concentricity, in Cosmic Art, as a derivation of Astronist Art, is the depiction of concentric shapes and patterns in cosmical scenes.

[3:11:38] Cruxa, in Cosmic Art, as a derivation of Astronist Art, also known as the Cruxa Core, is the region of the galaxy beyond the vergence, and is the most outer part of the galactic core.

[3:11:39] Dexort, in Cosmic Art, as a derivation of Astronist Art, is the right side of a cosmic art piece.

[3:11:40] Enflamation, in Cosmic Art, as a derivation of Astronist Art, refers to a red theme.

[3:11:41] Flushance, in Cosmic Art, as a derivation of Astronist Art, refers to a pink theme.

[3:11:42] Flux/Fluxity, in Cosmic Art, as a derivation of Astronist Art, is a term for the depictions of the arms of nebulaic gas and dust that are separated by dark voids.

[3:11:43] A forearm, in Cosmic Art, as a derivation of Astronist Art, is the part of a galactic arm joining it to the rest of the galaxy, and precedes the centream.

[3:11:44] Foreground Distortion, in Cosmic Art, as a derivation of Astronist Art, is the depiction of stars in front of galaxies, or another celestial entity that is in reality much larger than a single star.

[3:11:45] Greyence, in Cosmic Art, as a derivation of Astronist Art, refers to a grey theme.

[3:11:46] High Compaction, in Cosmic Art, as a derivation of Astronist Art, is the level of compaction featuring very little space between stars, and holds a large amount of star clusters in the art piece.

[3:11:47] High Scatterance, in Cosmic Art, as a derivation of Astronist Art, the level of scatterance featuring huge amounts of space between stars, almost to the point where only half a dozen stars are depicted.

[3:11:48] Imaginism, in Cosmic Art, as a derivation of Astronist Art, is an artistic style depicting artificial, or imagined celestial entities, and scenes, rather than natural, or actual celestial entities, such as those seen in astrophotography.

[3:11:49] Intermittedox, in Cosmic Art, as a derivation of Astronist Art, is a type of tetradoxical star whose rays are intermittent.

[3:11:50] Low Compaction, in Cosmic Art, as a derivation of Astronist Art, is the level of compaction featuring more space between stars than normal compaction, and holds a smaller amount of star clusters in the art piece.

[3:11:51] Lowort, in Cosmic Art, as a derivation of Astronist Art, is the lower part of a cosmic art piece, below both the centort, and the upport.

[3:11:52] Low Scatterance, in Cosmic Art, as a derivation of Astronist Art, is the level of scatterance featuring smaller amounts of space between stars than normal scatterance, almost to the point where it resembles compaction.

[3:11:53] Middelity, in Cosmic Art, as a derivation of Astronist Art, is the region of the galaxy taking up the middle ring between the core and periphera, and is typically at the centre of the region called the mid rim.

[3:11:54] Naturalism, in Cosmic Art, as a derivation of Astronist Art, is an artistic style depicting actual celestial entities, such as in astrophotography, rather than imagined, or artificial celestial entities.

[3:11:55] Nebulaic, or an art piece that is created nebulaically, relates to nebulae in Cosmic Art, their shapes, structures, natures, colours, and formations.

[3:11:56] Nebulaic Conformation, in Cosmic Art, as a derivation of Astronist Art, is the natural and artificial depiction of a recognisable creature, person, or place in the form of a nebulaic cloud.

[3:11:57] Onplane, in Cosmic Art, as a derivation of Astronist Art, is the depiction of a star in the foreground of a nebulaic gas and dust formation.

[3:11:58] Orangence, in Cosmic Art, as a derivation of Astronist Art, refers to an orange theme.

[3:11:59] Ovality, in Cosmic Art, as a derivation of Astronist Art, is the core region of a two-armed galaxy shaped as an oval.

[3:11:60] Perarm, in Cosmic Art, as a derivation of Astronist Art, is the region at the end of a galactic arm.

[3:11:61] Periphera, in Cosmic Art, as a derivation of Astronist Art, also known as the Peripheral Core, is the region of the galaxy marking the very edge and most outer ring of the galactic concentricity.

[3:11:62] Peripheral Glow, in Cosmic Art, as a derivation of Astronist Art, is the lining of bright colour along the edges of a nebulaic cloud, especially when in contrast to the deep darkness of space.

[3:11:63] Planetary Series, in Cosmic Art, as a derivation of Astronist Art, is a type of morphational art characterised by the depiction of the same planet multiple times in a series, with each depiction typically showing some sort of gradual change.

[3:11:64] Primarity, in Cosmic Art, as a derivation of Astronist Art, is the most prominent subject of a cosmic art piece, both in terms of its positioning, size, and colour.

[3:11:65] Purecentre, to be purecentral, or to hold purecentrality, in Cosmic Art, as a derivation of Astronist Art, is a term describing the very centre of a depicted star.

[3:11:66] Purplence, in Cosmic Art, as a derivation of Astronist Art, refers to having a purple theme.

[3:11:67] A quadradox, in Cosmic Art, as a derivation of Astronist Art, is when each ray of a tetradox star stretches as far as the edge of the image.

[3:11:68] Rufescent, in Cosmic Art, as a derivation of Astronist Art, is another term for a red theme, especially one tinged with red.

[3:11:69] Scatterance, or scatterancy, in Cosmic Art, as a derivation of Astronist Art, is when only a small amount of stars are depicted in one cosmic art piece especially in such a way that large amounts of space are left between each star.

[3:11:70] Secarity, in Cosmic Art, as a derivation of Astronist Art, is the second most prominent subject of a cosmic art piece after the primarity.

[3:11:71] Sepia, in Cosmic Art, as a derivation of Astronist Art, refers to having a brown theme.

[3:11:72] Sinnort, in Cosmic Art, as a derivation of Astronist Art, is the left side of a cosmic art piece.

[3:11:73] Supplement, in Cosmic Art, as a derivation of Astronist Art, is the occasional addition of an artificial illustrative section of a natural image in order to complete it, but it is a technique often frowned upon by naturalist cosmic artists.

[3:11:74] Tail, in Cosmic Art, as a derivation of Astronist Art, is the region of a galaxy that is much smaller than an arm, and instead of forming the structure of the galaxy, is a jutting out string of stars.

[3:11:75] Tertiarity, in Cosmic Art, as a derivation of Astronist Art, is the third most prominent subject of a cosmic art piece after the security, and usually refers to all other subjects of the art piece other than the primarity and the security.

[3:11:76] Tetradox, in Cosmic Art, as a derivation of Astronist Art, is the term used to describe the distinct four beams of light emitted by an actual star, which are typically perpendicular to each other.

[3:11:77] The upport, in Cosmic Art, as a derivation of Astronist Art, is the upper region of a cosmic art piece.

[3:11:78] Vergence, in Cosmic Art, as a derivation of Astronist Art, pertains to the region of a galaxy just one ring beyond the core.

[3:11:79] To be virescent, in Cosmic Art, as a derivation of Astronist Art, is to have a green theme.

[3:11:80] A whisp, in Cosmic Art, as a derivation of Astronist Art, is a nebulaic dust and gas formation depicted as a whispical and flowing tail.

[3:11:81] Yellowance, in Cosmic Art, as a derivation of Astronist Art, refers to a yellow theme.

Introduction to the Elements of Civicology

[3:12:1] Civicology, civicological study, or to be a civicologist is the study and application of architectural, town planning, and city planning theory, as well as the illustration of such theories in townscape, and cityscape drawings.

[3:12:2] Astronist Civicology is the study and application of Civicology in a distinctly Astronist context, such as the towns and cities which The People's Constitutional Company of Jesse Millette has been heavily involved in the development of, and the focus on Astronist buildings in town and city planning.

[3:12:3] Town Planning is the design, attribution, and subsequent construction of a town.

[3:12:4] City Planning is the design, attribution, and subsequent construction of a city.

[3:12:5] Attribution, in Astronist Civicology, is the term given to collectively describe the naming, and labelling of roads, buildings, places within the town, or city, or the naming, and labelling of the town, or city itself.

[3:12:6] Suburban Planning refers to the design, attribution, and subsequent construction of a suburban area.

[3:12:7] Space Colony Planning is the design, attribution, and subsequent construction of a space colony.

[3:12:8] Atlas, in Astronist Civicology, is a book of town, city, suburban, and space colony plans, and maps and illustrations in a variety of viewpoints.

[3:12:9] Blueprinting, in Astronist Civicology, is the process of constructing blueprints in order to convey a city, town, suburban, or space colony plan, especially when inside an atlas.

[3:12:10] Incunabulum, in Astronist Civicology, refers to the use of the archaic word to describe a book, and refers to a text-only book which is to accompany an atlas as a reference book.

[3:12:11] Borough Naming, in Astronist Civicology, is the process of selecting and designating names for the boroughs in a city or town.

[3:12:12] City Illustration, in Astronist Civicology, refers to the painting, drawing, or sketching of a cityscape and are most usually found in civicological atlases.

[3:12:13] Underground Network Planning, in Astronist Civicology, is the design, naming, planning, and subsequent construction of an underground railway.

[3:12:14] *City History*, in *Astronist Civicology*, is the thorough commentary of a city's history, especially in relation to its planning, construction, and development, and is most typically found in an incunabulum.

[3:12:15] *Town History*, in *Astronist Civicology*, is the thorough commentary of a town's history, especially in relation to its planning, construction, and development, and is most typically in an incunabulum.

[3:12:16] *Topography*, in *Astronist Civicology*, refers to the depiction of natural features and phenomena in city and town illustrations, especially when relating to how the town or city has been constructed around these phenomenas.

[3:12:17] *Civitates* is the title of the main atlas of *Astronist Civicology*.

[3:12:18] A *terrarium*, in *Astronist Civicology*, are the two plates sometimes found on either side of the main illustration, typically of a terrarium style illustration and featuring The Earth or another planet.

[3:12:19] A *terrarium* is a type of illustration in *Astronist Civicology*, in which the town, city, suburban area, or space colony is drawn to be inside a globe, and is sometimes drawn beside The Earth, or another planet on the *terrarium* on either side of the main illustration.

[3:12:20] *Staffage*, in *Astronist Civicology*, similar to its original definition, refers to the inclusion of people, animals, or other figures in the foreground of a civicological townscape or cityscape, especially as a reflection of whom would typically live in the town or city illustrated.

[3:12:21] *Epaulette*, in *Astronist Civicology*, is the addition of an ornamental pattern on the four corners of a civicological illustration.

[3:12:22] *Compendia*, in *Astronist Civicology*, refers to the collection of civicological atlases and incunabula in one book.

[3:12:23] *Bordermaking*, in *Astronist Civicology*, refers to the creation of various styles, and colours of borders on a civicological illustration.

[3:12:24] *Centrepiece*, in *Astronist Civicology*, the central-most building, or area, of a city or town, as emphasised in a civicological illustration.

[3:12:25] *Centrefold*, in *Astronist Civicology*, typically of a bird's eye view of a city or town, a thin strip of area circling the centrepiece of a civicological illustration.

[3:12:26] *Outskirting*, in *Astronist Civicology*, is the process of designing, and attribution of the outskirts of a town or city.

[3:12:27] Concentricity of City, in Astronist Civicology, relates to the planning theory and design of the concentric pattern of a city.

[3:12:28] Compaction, in Astronist Civicology, is the type of planning theory and design that preferences a compact pattern for a city, or town.

[3:12:29] Dispersion, in Astronist Civicology, is the type of planning theory and design that preferences a dispersive pattern for a city, or town.

[3:12:30] Landmarking, in Astronist Civicology, is the process of labelling, and emphasising landmarks on a civicological illustration, or the creation such landmarks for town or city planning purposes.

[3:12:31] Gauntfield, in Astronist Civicology, is the thin and sometimes indistinct line of boundary of the edge of a city or town.

[3:12:32] Bird's Eye View, in Astronist Civicology, pertains to the design and planning method of illustrating a city, town, suburban area, or space colony plan from a bird's eye viewpoint.

[3:12:33] Plane Landing View, in Astronist Civicology, pertains to the design and planning method of illustrating a city, town, suburban area, or space colony plan from the view similar to the angle that a plane would see when landing, so incorporates a sense of verticality and horizontality into the illustration.

[3:12:34] Levelled View, in Astronist Civicology, refers to the most common of civicological illustration for the design and planning of a city, town, suburban area, or space colony which gives a landscape view of the area as though one is standing and looking across the area from a grounded angle.

[3:12:35] Landscape, in Astronist Civicology, refers to the land depicted in illustration as surrounding the city, town, suburban area, or space colony.

[3:12:36] Wellspring, in Astronist Civicology, is the depiction of one type of building in an abundant way in an illustration of a city, or any other type of landscape.

[3:12:37] Fecundity, in Astronist Civicology, is the point during the civicological design and planning stages wherein there are many ideas, but typically, not enough space or funds to realise these ideas to their desired states.

[3:12:38] Citypeople, in Astronist Civicology, is the type of staffage specifically depicted in the foreground of a city illustration.

[3:12:39] Townspeople, in Astronist Civicology, is the type of staffage specifically depicted in the foreground of a town illustration.

[3:12:40] Suburbanpeople, in Astronist Civicology, is the type of staffage specifically depicted in the foreground of a suburban illustration.

[3:12:41] Colonypeople, in Astronist Civicology, is the type of staffage specifically depicted in the foreground of a space colony illustration.

[3:12:42] Concourse, in Astronist Civicology, is the area at the entrance of a city, or town, typically characterised by a Philosophical Statement.

[3:12:43] Philosophical Statement, in Astronist Civicology, is a statement decreeing the philosophical affiliation of a town, city, or another area, typically in the form of a large tablet, or a stature, or pillar.

[3:12:44] Natural Provider, in Astronist Civicology, is the natural phenomenas that directly benefit the town, city, or space colony depicted in the civicological illustration, especially in terms of their defensive, agricultural, and climatological advantages.

[3:12:45] Roading, in Astronist Civicology, refers to the planning, design, and designation of roads in a city, town, or suburban area.

[3:12:46] Labelling, in Astronist Civicology, is the process of labelling of a civicological illustration by the most significant roads, buildings, landmarks, and boroughs.

[3:12:47] Squaring, in Astronist Civicology, is the process of planning and designing the squares of a city.

[3:12:48] Greening, in Astronist Civicology, is the process of planning and designing the green areas and parks of a town, suburban area, or city.

[3:12:49] Amphitheatrum, in Astronist Civicology, is the process of planning and designing a games area, or entertainments area of a city, town, or suburban area.

[3:12:50] Eyot/Eyotting, in Astronist Civicology, is the term given for an island in the middle of a river, especially a river running through a town or city, and especially if that island is developed and buildings are constructed upon it.

[3:12:51] Boundarising, in Astronist Civicology, is the process of creation either an artificial or natural border for a town or city during the design and planning theory.

[3:12:52] Exterior City, in Astronist Civicology, is the part of a city which resides aside an assigned city boundary.

[3:12:53] Interior City, in Astronist Civicology, is the part of a city which resides within the assigned city boundary.

[3:12:54] Core City, in Astronist Civicology, is the part of a city which resides at the centre and is typically varied in its distinction, but usually encompasses both the centrepiece, the centrefold, and perhaps a slightly larger piece of area encompassing these two subparts.

[3:12:55] Centrepoint, in Astronist Civicology, is the geographical centre of the city or town, as opposed to the architectural or cultural centre, and typically does not centre on a building, unless the building is precisely constructed over the centrepoint.

[3:12:56] Residentia, in Astronist Civicology, are the parts of a city, or town that most predominantly are used for residential buildings and usage.

[3:12:57] Suburbia, in Astronist Civicology, is the term given to describe the entirety of the suburban area of a city rather than just one suburb.

[3:12:58] Commercia, in Astronist Civicology, are the parts of a city, or town that most predominantly are used for commercial buildings and usage.

[3:12:59] Stragglings/Stragglers, in Astronist Civicology, relates to houses and persons situated outside the city boundary that are not part of a distinct suburb, but are still considered official citizens of that city.

[3:12:60] Jutting, in Astronist Civicology, is when the territory of a city or town juts out a considerable way, especially in order to encompass a special landmark.

[3:12:61] Cresting, in Astronist Civicology, is the drawing of the city or town's official crest on the civicological illustration.

[3:12:62] Enclave, in Astronist Civicology, is the part of the city that is distinctly apart or separate from the main city, and is not a suburb, but is still considered as part of the city.

[3:12:63] Cityshape/Cityshaping, in Astronist Civicology, the basic and early process conducted in the designing and planning stages of a city, town, or other development, that consists of the general shaping of the area to encompass certain geographical and artificial landmarks, and gives the developers the first look at the boundaries of the development.

[3:12:64] Entrenchment, in Astronist Civicology, is the process of the establishment of an official map for a city, town, suburb, or space colony development, with little room for alteration once submitted.

[3:12:65] Virtual Planning, in Astronist Civicology, is the main method utilised for the designing, planning, and attribution of a development by digital means.

[3:12:66] *Virtual View*, in *Astronist Civicology*, is the design and planning method of constructing a city, town, suburban area, or space colony plan on a digital system, and for a virtual view, and resembles the ability to navigate streets virtually.

[3:12:67] *Heighting*, in *Astronist Civicology*, is the listing of the heights of buildings across a town or city, especially in order from tallest to shortest.

[3:12:68] *Ensuration*, in *Astronist Civicology*, is the process of ensuring that there are a balance of the amount of any one type of building, including governmental, educational, commercial, historical, religious, philosophical buildings.

[3:12:69] *Fortification*, in *Astronist Civicology*, in some developments, is the planning and design of forts and other defensive structures, either to protect the city or town from natural disasters, or to defend against any other type of potential hostility, or damage.

[3:12:70] *Confluxion*, in *Astronist Civicology*, is the process of placing alongside one another the illustrations of two cities, or two towns onto one plate.

[3:12:71] *Situation*, in *Astronist Civicology*, is the term used to describe the general geography and geology of the surrounding landscape of a particular development, and typically includes, at the most basic level, the height of the development and its surroundings from sea level, and the types of terrain most common in and around the area.

[3:12:72] *Annex*, in *Astronist Civicology*, is the part of a city, typically found within a jut, in which a significant population live, and although is within the boundary of the city, is notably distinct.

[3:12:73] *Descriptor Board*, in *Astronist Civicology*, is a board found alongside an civicological illustration, typically on either side of the illustration on the terrarum, that holds a description of the illustrated development, and is typically very ornately decorated with Astronist ornamentals.

Introduction to the Elements of Astronist Ornamentation & Ornamentation Theory

[3:13:1] Astronist Ornamentation are the elegant patterns and ornamental designs characterised by their distinct Astronist style, and are used in Astronist Architecture, Astronist Rendition, and in Astronist Art, alongside the incorporation of Astronist Symbology to evoke meaning.

[3:13:2] Ornamentation Theory, as derived from Astronist Ornamentation, and as the sister subject to Architectural Theory, Art Theory, and Rendition Theory, is the study and critical discussion of the ways in which a rendition or art piece is ornamented, and is usually accompanied by a critical essay, or a lecture on the ornamental methodologies, styles, and influences used to create the ornamentation.

[3:13:3] A centrum, in Astronist Ornamentation, is an ornamental pattern typically found in documentations, and centralised on the page, with a distinct connection to plant life and floristry.

[3:13:4] A centrine, in Astronist Ornamentation, is the distinct centrepiece of an ornamentation, typically encompassed by a circularation.

[3:13:5] Circularation, in Astronist Ornamentation, is any type of circular, or partly circular pattern, especially one completely or partly encompassing another pattern.

[3:13:6] Appurtenance, in Astronist Ornamentation, is any pattern added to an already existing pattern.

[3:13:7] Symmetrisation, in Astronist Ornamentation, refers to the addition of ornamentations and patterns to an existing ornament in the effort of making the original ornamentation symmetrical.

[3:13:8] Humanation, in Astronist Ornamentation, is the addition of humans to an ornamentation, or pattern, especially one or more of the five Astronist characters.

[3:13:9] Cosmic Man, in Astronist Ornamentation, is the depiction of the Astronist characters of Jesse, Oliver, or Phoenix, in a cosmical setting, typically in a solitological, duological, or triological formation, surrounded by cosmic visual imagery, symbols, and motifs.

[3:13:10] Cosmic Woman, in Astronist Ornamentation, is the depiction of the Astronist characters of Harriet, Zara, or Ellena, in a cosmical setting, typically in a solitological, duological, or triological formation, surrounded by cosmic visual imagery, symbols, and motifs.

[3:13:11] Arcadia, in Astronist Ornamentation, part of Utopian art, is the depiction of a pastoral scene, typically decorated by the presence of wildlife, flora, and at least one of The Five Astronist Characters.

[3:13:12] Barnstar, in Astronist Ornamentation, is the depiction of a five-pointed star, typically on the face of a building, and featuring The Five Astronist Characters on each of the points of the star.

[3:13:13] Eternal Knot, in Astronist Ornamentation, is the depiction of a crisscross pattern, most commonly forming the border of an ornamental design, and typically featuring cosmical influences.

[3:13:14] A Flame Palmette, in Astronist Ornamentation, is the depiction of a fan-shaped palm leaf, and in an Astronist context, usually features alongside it, cosmical and galactical patterns, and symbolism.

[3:13:15] Fleur-de-lis, in Astronist Ornamentation, is the depiction of a stylised lily used in ornamental decoration, and in an Astronist context, typically features alongside it, and atop of it, many cosmical and galactical patterns, and symbolisms.

[3:13:16] A headpiece, in Astronist Ornamentation, is a unique decoration printed in the blank space at the beginning of the chapter, typically both at the top and bottom of the page, and may also be found on the inside cover, and to keep in line with Astronist style, commonly features cosmical, and galactical patterns, and symbolisms.

[3:13:17] An openwork, in Astronist Ornamentation, a technique that produces decorative patterns by creating holes in solid materials, typically to create cosmical, or galactical patterns.

[3:13:18] A starburst or sunburst symbol, in Astronist Ornamentation, is a type of symbol resembling a star-like image with rays emanating from it, and is prevalently featured throughout many types of Astronist Ornamentation, Rendition, and Art.

[3:13:19] A triquetra, in Astronist Ornamentation, also known as a trefoil knot, or a trinity knot, resembles a knotted three-point pattern that is often used alongside cosmical and galactical patterns and symbolisms in Astronist Ornamentation, Rendition, and Art.

[3:13:20] An accompaniment, in Astronist Ornamentation, refers to two or more patterns of the same ornamentation which are separated, but could be joined and match to form a perfect larger pattern.

[3:13:21] Clusteration, in Astronist Ornamentation, is the purposeful clustering of patterns towards one end or part of an ornamentation, typically leaving an empty space, and evoking the idea of isolation, abandonment, and rejection.

[3:13:22] Collocation, in Astronist Ornamentation, refers to the connection between different patterns of the same ornamentation, particularly in meaning, rather than in appearance.

[3:13:23] Astronotation is the depiction of astronomic observation, equipment, and philosophy in patterns, and ornamentations, especially in Astronist Ornamentation.

[3:13:24] Cosmication pertains to the depiction of cosmic and celestial objects, particularly stars, comets, planets, and others, in the creation of patterns and ornamentations, especially in Astronist Ornamentation.

[3:13:25] Galactication relates to the depiction of galaxies, planetary systems, and larger cosmic entities in the creation of patterns and ornamentations, especially in Astronist Ornamentation.

[3:13:26] Cosmic Ornamentation is intrinsically connected with Astronist Ornamentation, and is the use of celestial, astronomical, and galactical patterns in the creation of an ornamentation.

[3:13:27] Spirallation refers to the use of spirals to create patterns of galactication.

[3:13:28] Courantation, in Astronist Ornamentation, is the depiction of one or more Astronist characters running, especially in-line with the ideas of Formationism.

[3:13:29] A reornament, in Astronist Ornamentation, is the depiction of a shape within the same shape.

[3:13:30] Horizontation, in Astronist Ornamentation, refers to the creation of patterns in a distinctly horizontal direction, especially if the rest of the ornamentation follows a vertical direction.

[3:13:31] Vertication, in Astronist Ornamentation, refers to the creation of patterns in a distinctly vertical direction, especially if the rest of the ornamentation follows a horizontal direction.

[3:13:32] Alternation, in Astronist Ornamentation, pertains to the reoccurrence of two patterns or shapes, especially to form a line, and used on the coving between the wall and the ceiling inside Astronist philosophical buildings.

[3:13:33] Solaration is the depiction of The Sun in Astronist Ornamentation.

[3:13:34] Animalation is the depiction of animals in Astronist Ornamentation.

[3:13:35] Soffitation, in Astronist Ornamentation, are the patterns created on the soffit of a structure, especially a column, colonette, and cozonette.

[3:13:36] Labyrinthation, in Astronist Ornamentation, is the depiction of a labyrinth as a pattern, or an ornamentation.

[3:13:37] Pastellation, in Astronist Ornamentation, refers to the use of pastel colours in patterns and ornamentation.

[3:13:38] Vaultation, in Astronist Ornamentation, are the patterns created on the vault structures inside Astronist philosophical buildings.

[3:13:39] Bordering, in Astronist Ornamentation, as distinct from the border itself, is the creation of patterns on borders in the completion of ornamentations.

[3:13:40] Dimensionisation, in Astronist Ornamentation, is the creation of patterns in three-dimension with the use of shading.

[3:13:41] Intrication, in Astronist Ornamentation, is a style of ornamentation using very intricate patterns of appurtenance.

[3:13:42] Adornment, in Astronist Ornamentation, is the process by which an adorer supplements an ornament by adding more patterns to it in the effort of enhancing the ornament's beauty.

[3:13:43] Enamellation, in Astronist Ornamentation, refers to the process of using enamel to embellish the ornamentation, especially to make it look glossier.

[3:13:44] Gradation, in Astronist Ornamentation, refers to a series of patterns or symbols on an ornamentation which successively change, especially in size, or morph into another pattern or symbol.

[3:13:45] Frettition, in Astronist Ornamentation, is a repeating ornamental design of vertical or horizontal direction.

[3:13:46] Outlination, in Astronist Ornamentation, is the process of using the technique of outlining on ornamentals in order to insulate and make the patterns stand out, especially from a bold background.

[3:13:47] Celette, in Astronist Ornamentation, is a round, stylised celestially inspired design, used extensively in Astronist sculptural objects.

[3:13:48] Cosmic Flora, in Astronist Ornamentation, refers to an architectural ornament in the form of a flowerhead, inside which cosmic-inspired icons are engraved, most commonly stars.

[3:13:49] A spiroette, in Astronist Ornamentation, is a spirographic pattern embossed onto an ornament.

[3:13:50] A margent, in Astronist Ornamentation, is a vertical arrangement of celestial, cosmic, or galactical patterns embossed, or embedded onto metal plates.

[3:13:51] Alternatively, a margentine, in Astronist Ornamentation, is a collectivity of two or more margents together to form a larger pattern, or picture.

[3:13:52] Interlaccation, in Astronist Ornamentation, is the process of using the decorative element of interlace to create looped, braided, or knotted complex geometric patterns, especially if such patterns hold a cosmic theme.

[3:13:53] Milleiaster, in Astronist Ornamentation, is a style of background using many different small cosmic and galactical patterns, most usually depicted on a black backdrop to represent space.

[3:13:54] Stellarette, in Astronist Ornamentation, is a motif in decorative art which, in most characteristic expression, resembles the fan-shaped tails of shooting stars.

[3:13:55] Astroige, in Astronist Ornamentation, is a style of mosaic commonly used for floorings in Astronist philosophical buildings, characterised by cosmic and galactical patterns encrusted into the tile.

[3:13:56] Cosmuster, in Astronist Ornamentation, refers to the celestially-inspired ornamental patterns sculpted and encrusted onto balusters.

[3:13:57] Field, in Astronist Ornamentation, is the extent of the size, material, and shape of the surface upon which an ornament is created.

[3:13:58] Monogramation, in Astronist Ornamentation, refers to the process of using monograms, or letters, in ornaments, either in subtlety or in plain sight.

[3:13:59] Superimposition, in Astronist Ornamentation, pertains to the technique of making one pattern seem as though it is overlapping another, especially when this creates a jutting effect.

[3:13:60] Ornamental Humanism, in Astronist Ornamentation, is the depiction of humans, especially one or more of the Astronist characters in ornamentations.

[3:13:61] Engraving, in Astronist Ornamentation, and in particular metalworks, is the process of cutting and carving out a surface in order to form intricate patterns.

[3:13:62] Interjection, in Astronist Ornamentation, in particular metalworks, refers to the process of incorporating colour into metallic engravings in order to lift the pattern from the metallic background.

[3:13:63] Cosmocade, in Astronist Ornamentation, refers to the celestially-inspired raised patterns threaded onto brocades.

[3:13:64] Scintillation, in Astronist Ornamentation, is the use of shading and colour to display the twinkling of stars in an ornamental design, or pattern.

[3:13:65] Celeworks, in Astronist Ornamentation, are the collective patterns, works, and ornaments, either wholly or partly celestially inspired, and typically characterised by the depictions of cosmic utopia, other worlds, and The Divine.

[3:13:66] Astroworks, in Astronist Ornamentation, refers to the collective patterns, works, and ornaments, either wholly or partly astronomically inspired, and typically characterised by the depictions of astronomy, space exploration, and stars.

[3:13:67] Stellarworks, in Astronist Ornamentation, are the collective patterns, works, and ornaments, either wholly or partly inspired by stelliform, and typically characterised by stars, and the centrality of stars.

[3:13:68] Cosmoworks, in Astronist Ornamentation, are the collective patterns, works, and ornaments, either wholly or partly cosmically inspired, and typically characterised by cosmic entities, galaxies, planetary systems, and nebulae.

[3:13:69] Cometine, in Astronist Ornamentation, is the specific depiction of a comet, particularly atop the ornament and rising, with its tail forming borders for further ornamental patterns.

[3:13:70] Galaxine, in Astronist Ornamentation, refers to the specific depiction of a galaxy, particularly with its arms and overall size exaggerated and particularly when depicted alongside other spiral galaxies.

[3:13:71] Meteorine, in Astronist Ornamentation, refers to the specific depiction of a meteorite shower.

[3:13:72] Solarine, in Astronist Ornamentation, is the specific depiction of The Solar System, or another planetary system with a centralised star.

[3:13:73] Utopine, in Astronist Ornamentation, is the specific depiction of a planetary, or cosmic utopia.

[3:13:74] Planetine, in Astronist Ornamentation, refers to the specific depiction of a planet.

[3:13:75] Jessine, in Astronist Ornamentation, refers to the specific depiction of the Astronist character, Jesse.

[3:13:76] Ellenine, in Astronist Ornamentation, pertains to the specific depiction of the Astronist character, Ellena.

[3:13:77] Zarine, in Astronist Ornamentation, is the specific depiction of the Astronist character, Zara.

[3:13:78] Oliverine, in Astronist Ornamentation, is the specific depiction of the Astronist character, Oliver.

[3:13:79] Harrine, in Astronist Ornamentation, refers to the specific depiction of the Astronist character, Harriet.

[3:13:80] Phoenixine, in Astronist Ornamentation, refers to the specific depiction of the Astronist character, Phoenix.

[3:13:81] Organisationism, in Astronist Ornamentation, is the design style and practice holding that ornamentations should always be organised with borders, and should never look overly opulent, or resemble any type of chaos.

[3:13:82] Cubine, in Astronist Ornamentation, refers to the use of cubic shapes to create ornamental patterns.

[3:13:83] Trianguline, in Astronist Ornamentation, is the use of triangular shapes to create ornamental patterns.

[3:13:84] Pentagine, in Astronist Ornamentation, refers to the use of pentagonal shapes to create ornamental patterns.

[3:13:85] Cosmicality, in Astronist Ornamentation, refers to the extent to which an ornamental pattern uses cosmically-inspired designs, symbols, and icons.

[3:13:86] Cosmocery, in Astronist Ornamentation, is the stonework, or metalwork element that support the glass in a window, typically characterised by celestial, galactical, and cosmic patterns.

[3:13:87] Volution, in Astronist Ornamentation, refers to a spiral scroll design characterised by celestial and cosmic patterns, and typically resembles a spiral galaxy.

[3:13:88] Insulation, in Astronist Ornamentation, is the process of best insulating an ornamental pattern dependent upon the colours present.

[3:13:89] A void, in Astronist Ornamentation, is the empty spaces of an ornamental pattern, or design.

[3:13:90] Indentation, in Astronist Ornamentation, refers to the use of multiple borderings.

[3:13:91] Astrocening, in Astronist Ornamentation, refers to the practice of inlaying different metals into one another to produce intricate patterns similar to niello.

[3:13:92] An astrocener, in Astronist Ornamentation, refers to the patterns created from the process of astrocening.

[3:13:93] A quatrefoil, in Astronist Ornamentation, refers to an ornamental design of four lobes, typically in the shape of stars, in which small ornamentals and sculptural figurines are depicted.

[3:13:94] Continuation, in Astronist Ornamentation, is the use of repetitive patterns to form a continuous strip, either vertically, or horizontally.

[3:13:95] Ventment, in Astronist Ornamentation, a style of continuation using an interlocking tube system, typically decorated in galactical and cosmic icons.

[3:13:96] Linearation, in Astronist Ornamentation, is a style of ornamental design that strictly uses only a linear pattern of lines, both in verticalation and horizontation.

[3:13:97] Contrapuntalism, in Astronist Ornamentation, is the design style and practice holding that if a pattern does not notably contrast with the main pattern then that secondary pattern must not be included in the ornamentation, as only contrapuntal patterns should exhibited.

[3:13:98] Astro-Islamic Ornamentation refers to the forms of Astronist Ornamentations found in Islamic countries, or created by Muslims, which, by decree of The People's Constitutional Company of Jesse Millette, must follow the laws of the Quran, in the forbiddance of the depictions of living creatures, and are thus characterised by the centralisation of the depictions of cosmic entities, celestial symbols, and galactical imagery as a suitable alternative.

[3:13:99] Elemental Ornamentation, in Astronist Ornamentation, is the main artistic style of the branch of Astronism called Elementalism, and follows the idea that ornaments should fundamentally consist of the representations of the eight Astronist elements and their corresponding colours and symbols.

[3:13:100] Pulsaration, in Astronist Ornamentation, is the specific depiction of a pulsar in a rotational form, by using shadowing, blurriness, and stretching colours.

[3:13:101] Obliviation, in Astronist Ornamentation, the specific depiction of a black hole, characterised by a distinct blackness, and by the blurriness, stretching, and distortion of surrounding patterns, symbols, colours, and motifs.

[3:13:102] Quasaration, in Astronist Ornamentation, is the specific depiction of a quasar by the use of rotational effects for the accretion disk, bright colours for the jet, and blackness for the core.

[3:13:103] Yǔzhòu, in Astronist Ornamentation, specifically Astro-Sino Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:104] Kawn, in Astronist Ornamentation, specifically Astro-Arab Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:105] Nisarga, in Astronist Ornamentation, specifically Astro-Bengali Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:106] Sýmpan, in Astronist Ornamentation, specifically Astro-Greek Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:107] Uchū, in Astronist Ornamentation, specifically Astro-Japanese Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:108] Tontolo Izaò Voarindra, in Astronist Ornamentation, specifically Astro-Malagasy Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:109] Viśva, in Astronist Ornamentation, specifically Astro-Marathi Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:110] Lar, in Astronist Ornamentation, specifically Astro-Burmese Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:111] Brahmāṇḍa, in Astronist Ornamentation, specifically Astro-Nepali Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:112] Brahmaḍa, in Astronist Ornamentation, specifically Astro-Punjabi Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:113] Akilam, in Astronist Ornamentation, specifically Astro-Tamil Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:114] Čakrwāl, in Astronist Ornamentation, specifically Astro-Thai Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:115] Evren, in Astronist Ornamentation, specifically Astro-Turkish Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:116] Vũ trụ, in Astronist Ornamentation, specifically Astro-Vietnamese Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:117] Zendalo, in Astronist Ornamentation, specifically Astro-Xhosa Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:118] Yonke Indawo, in Astronist Ornamentation, specifically Astro-Zulu Ornamentation, relates to the depiction of The Cosmos in ornaments, and the symbols, icons, and imageries associated with The Cosmos.

[3:13:119] Astronaution, in Astronist Ornamentation, is the specific depiction of an astronaut, typically alongside The Earth, a spacecraft, or an extraterrestrial colony.

[3:13:120] Cosmonaution, in Astronist Ornamentation, refers to the specific depiction of a cosmonaut, typically alongside celestial objects, and deep space cosmic entities.

[3:13:121] The term jewellery, in Astronist Ornamentation, refers to the use of precious stones and gems in ornaments on renditions.

[3:13:122] Crozation, in Astronist Ornamentation, is the use of a crozier design, either in vertication, or horizontation.

[3:13:123] Articulative, in Astronist Ornamentation, is the joint between one pattern and another, especially in interlaccation, or between an appurtenance, and the original pattern.

[3:13:124] Phoenixary, in Astronist Ornamentation, is the specific depiction of a phoenix bird in various patterns, designs, and symbols.

[3:13:125] Miniature, in Astronist Ornamentation, is a picture, symbol or decorated letter of an ornament, especially when placed alongside picture, symbol, or decorated letter of a larger scale.

[3:13:126] Metamorphosis, in Astronist Ornamentation, refers to the depiction of a person, animal, or cosmic entity experiencing the process of transformation from an immature, and small state, to a mature and larger state, especially in gradation.

[3:13:127] Tonation, in Astronist Ornamentation, refers to the process of harmonising two or more different colours of an ornamental pattern, or design, especially by using the techniques of shading, emboldening, and colour mixture.

[3:13:128] Gridding, in Astronist Ornamentation, is the design style of segmenting ornaments into grids, especially with the use of borders, and borderings.

[3:13:129] Concretion, in Astronist Ornamentation, is a type of ornamental design, or pattern embedded into a concrete surface.

[3:13:130] Jasperian, in Astronist Ornamentation, relates to the use of jasper, the semi-precious stone, in ornaments.

[3:13:131] Crosshatching, in Astronist Ornamentation, is the use of any type of crosshatched pattern, or design on an ornamentation.

[3:13:132] Transposition, in Astronist Ornamentation, is the act and process of transposing an ornamental pattern, or design onto either a blank canvas, or an already existing ornamentation.

[3:13:133] Entwinementation, in Astronist Ornamentation, is an ornamental pattern that is characterised by an intertwining motif.

[3:13:134] Reticulation, in Astronist Ornamentation, is a style of ornamental pattern resembling an interlaced network.

[3:13:135] Randomation, in Astronist Ornamentation, is a style of ornament resembling a randomised design with no distinct pattern.

[3:13:136] Origination, in Astronist Ornamentation, is the stage of the ornamental creation process in which the initial design and theme is constructed, but no colour or detail is yet added.

[3:13:137] Conduction, in Astronist Ornamentation, refers to the unique process of heating an ornamentation, either on canvas, or on a metal plate, in order to change, or distort the colouration.

[3:13:138] Colouration, in Astronist Ornamentation, are the colours of an ornament regarded collectively.

[3:13:139] Characteration, in Astronist Ornamentation, are the Astronist characters of an ornament regarded collectively.

[3:13:140] Proofing, in Astronist Ornamentation, is the process of reviewing an ornamentation before an endorsement, and attempting to detect any mismatching in the interlocation, or any other mistaken appurtenance.

[3:13:141] Endorsement, in Astronist Ornamentation, is the process of an authority verifying an ornamentation for publication; in an Astronist case, this endorsing body is The Institute for Astronic Arts.

[3:13:142] Mismatching, in Astronist Ornamentation, is making a mistake of the ornament's interlocation, usually because all the parts of the interlocation don't totally match.

[3:13:143] Ornamentist, in Astronist Ornamentation, refers to an individual who is official commission to construct an ornament.

[3:13:144] Endowment, in Astronist Ornamentation, refers to the process of officially commissioning an ornamentist to construct an ornament.

[3:13:145] Monumentation, in Astronist Ornamentation, is the specific application of an ornamental pattern onto a monument.

[3:13:146] Confination, in Astronist Ornamentation, is the ornamental style of distinctly restricting the space, and scope of an ornamental pattern, especially in a sudden way, and typically by the use of borders.

[3:13:147] A coronet, in Astronist Ornamentation, is the part of an ornament at the very top of the field.

[3:13:148] A footer, in Astronist Ornamentation, is the part of an ornament at the very bottom of the field.

[3:13:149] The pinion, in Astronist Ornamentation, is the part of an ornament on both the left and the right sides of the field.

[3:13:150] An annexe, in Astronist Ornamentation, is the part of an ornament attached as an extension to the standard field, especially a square-shape.

[3:13:151] A garland, in Astronist Ornamentation, is the part of an ornament resembling a wreath of flowers and leaves along the coronet of the ornament, or the along the footer of the ornament.

[3:13:152] A procession, in Astronist Ornamentation, is a repetitive ornamental pattern that points in one direction.

[3:13:153] A perimeter, in Astronist Ornamentation, is the continuous line forming the boundary between the ornamentation, and the externality.

[3:13:154] Externality, in Astronist Ornamentation, refers to the space beyond the perimeter of the ornamentation.

[3:13:155] The foreground, in Astronist Ornamentation, is the part of the ornament that is visually nearest to the observer, or the ornamental pattern of a superimposition that is visually atop of the other pattern.

[3:13:156] A mullion, in Astronist Ornamentation, is a type of border, or bordering separating ornamental patterns from one another.

[3:13:157] Marrying, in Astronist Ornamentation, is the transposition of two separated accompaniments and the conjoining of these.

[3:13:158] Medallionation, in Astronist Ornamentation, is the depiction of a medallion or pendant, especially when depicted as hanging from an ornamental pattern.

[3:13:159] Panelling, in Astronist Ornamentation, is the use of multiple vertication wooden plates alongside eachother, onto which patterns are ornamented.

[3:13:160] Astrostrade, in Astronist Ornamentation, is the particular style of railing supported by balusters featuring cosmic and celestially-inspired ornamental patterns and sculptures, and commonly found in Astronist philosophical buildings.

[3:13:161] An eave, in Astronist Ornamentation, is the part of an ornamental pattern that overhangs the main ornamentation border.

[3:13:162] A crest, in Astronist Ornamentation, is the most central point of the ornamentation, surrounding by the cynosure.

[3:13:163] A cynosure, in Astronist Ornamentation, is the central portion of an ornamentation, especially the crest.

[3:13:164] Crenellation, in Astronist Ornamentation, is a repetitive ornamental pattern attached to the perimeter of the ornament.

[3:13:165] Perforation, in Astronist Ornamentation, refers to a dotted pattern across the ornamentation.

[3:13:166] Surmountation, in Astronist Ornamentation, is a type of ornamentation surmounted onto an ornamented pedestal.

[3:13:167] Cosmogree, in Astronist Ornamentation, is a type of ornamental pattern work of fine wire, typically gold or silver, used to form delicate tracery.

[3:13:168] Branching, in Astronist Ornamentation, is a type of ornamental pattern shaped as tree branches, and are defined by their interconnecting and complex design.

[3:13:169] Alcovation, in Astronist Ornamentation, a type of ornamental motif in which figures stand in alcoves, typically stacked upon each other, with ornamental patterns decorating the edges.

[3:13:170] A pentych, in Astronist Ornamentation, is a picture or relief carving on five panels that are pentagonally shaped.

[3:13:171] Anachronism, in Astronist Ornamentation, refers to the creation of an ornament using styles and pattern work from another distinct period for modern day endorsement.

[3:13:172] Grisaillation, in Astronist Ornamentation, is the creation of an ornamental motif and pattern using grey monochrome, typically to imitate sculpture.

[3:13:173] A formulae, in Astronist Ornamentation, is the recipe of colour palettes, design styles, and ornamental patterns used in an ornamentation, especially regarded collectively.

[3:13:174] A drapery, in Astronist Ornamentation, is a type of motif resembling curtains, typically hanging from the perimeter of the ornament.

[3:13:175] Nodation, in Astronist Ornamentation, is the point in an ornamental pattern, especially an interlacion, at which lines or pathways intersect or branch out.

[3:13:176] Ornamental Cosmism is a branch of Cosmism relating to the shift in mentality in the art and design world towards the rapid inclusion of cosmic, and celestial symbols, icons, and imagery onto ornamentations, particularly inspired by the philosophy of Cosmism, a branch of The Philosophy of Astronism.

[3:13:177] Scribing, in Astronist Ornamentation, relates to the types of writing on ornamentations, especially titles, and the ornamentist's name, but excluding monogramations.

[3:13:178] Successor, in Astronist Ornamentation, especially relating to ornamental archives, is the specific ornament, or ornamental style that is confirmed to be chronologically succeeding another.

[3:13:179] Predecessor, in Astronist Ornamentation, especially relating to ornamental archives, is the specific ornament, or ornamental style that is confirmed to be chronologically preceding another.

[3:13:180] Hinging, in Astronist Ornamentation, is the part of the ornamental pattern which is cut off by a border, or bordering.

[3:13:181] Ascension, in Astronist Ornamentation, is any part of the ornamental pattern or motif which points upwards.

[3:13:182] Descension, in Astronist Ornamentation, is any part of the ornamental pattern or motif which points downwards.

[3:13:183] Interspersion, in Astronist Ornamentation, are the parts of an ornamental pattern which are separate from and scattered between the main pattern, typically precious stones, dots, or cosmic and galactical shapes.

[3:13:184] Shaping, in Astronist Ornamentation, relates to the shape of the perimeter of the entire ornament, typically square or rectangularly shaped.

[3:13:185] A frontispiece, in Astronist Ornamentation, is a type of ornamentation typically found above, or around the entrance to an Astronist philosophical building of any kind.

[3:13:186] Instrumentation, in Astronist Ornamentation, are the tools and techniques adopted by an ornamentist in order to create a particular ornament regarded collectively.

[3:13:187] Philosophy of Practice, in Astronist Ornamentation, are the particular philosophy adopted during the creation of an ornament, or for which the ornament is created to further, and especially the revelation of this to the ornament's observer.

[3:13:188] An article, in Astronist Ornamentation, refers to when multiple ornaments are compiled together in a book or are physically collected, especially for the purpose of study.

[3:13:189] Variation, in Astronist Ornamentation, is the extent to which an article of ornaments is varied in colour, size, and style.

[3:13:190] An escutcheon, in Astronist Ornamentation, is the part of an ornamentation bearing a shield with a coat of arms.

[3:13:191] Modation, in Astronist Ornamentation, refers to the way in which an ornament is displayed, such as the object onto which, or where, it is mounted.

[3:13:192] Enamellist, in Astronist Ornamentation, refers to an individual who conducts, or specialises in enamellation.

[3:13:193] Elevation, in Astronist Ornamentation, refers to the reconstruction of an ornamental pattern or motif to appear higher on the ornament than it had previously.

[3:13:194] Demotion, in Astronist Ornamentation, is the reconstruction of an ornamental pattern or motif to appear lower on the ornament than it had previously.

[3:13:195] A quarry, in Astronist Ornamentation, is a type of ornamental pattern, or an actual motif, resembling a wide pit in which different layers are visible with the use of multiple borders beside one another.

[3:13:196] The term assortment, in Astronist Ornamentation, is the critical analysis of the assortment of ornamental patterns and motifs on an ornamentation field.

[3:13:197] Illustratine, in Astronist Ornamentation, is a type of ornamentation resembling a fully coloured and detailed illustration, especially one featuring humans.

[3:13:198] A keystone, in Astronist Ornamentation, a type of motif, typically positioned just below the coronet, around which a pattern is centralised.

[3:13:199] The summit, in Astronist Ornamentation, the top side of the perimeter of an ornament.

[3:13:200] The mantel, in Astronist Ornamentation, is the bottom side of the perimeter of an ornament.

[3:13:201] The sinistral, in Astronist Ornamentation, is the left side of the perimeter of an ornament.

[3:13:202] The dextral, in Astronist Ornamentation, is the right side of the perimeter of an ornament.

[3:13:203] Cornering, in Astronist Ornamentation, refers to the use of corners in ornamental patterns.

[3:13:204] A medium, in Astronist Ornamentation, relates to the material or surface used in the creation of an ornamentation.

[3:13:205] Commons, in Astronist Ornamentation, relates to the indistinct, or unnamed patterns or motifs created on an ornamentation.

[3:13:206] Bonding, in Astronist Ornamentation, refers to the action and process of fixing two or more previously separated ornamental plates together.

[3:13:207] Ligature, in Astronist Ornamentation, are the materials and techniques used in the process of bonding ornamental plates.

[3:13:208] A couch, couching, or being couched, in Astronist Ornamentation, is the action and process of taking down an ornament from display, especially for restorative purposes.

[3:13:209] A tye, in Astronist Ornamentation, are two of the same patterns or motifs on the same ornamentation that are distinctly separated, especially when one is featured on one side of the ornamentation to the other.

[3:13:210] A token, in Astronist Ornamentation, is a type of repetitive ornamental pattern which features just one type of motif and typically holds just one solid background colour.

[3:13:211] Doubling, in Astronist Ornamentation, is when an ornamental pattern features two identical motifs alongside one another.

[3:13:212] A contour, in Astronist Ornamentation, is a type border, or bordering that is curved as opposed to the traditional linear design.

[3:13:213] A cosmoket, in Astronist Ornamentation, is a type of crocket featuring a distinct celestial or cosmic symbol or icon, typically found on Astronist philosophical buildings.

[3:13:214] Volume, in Astronist Ornamentation, is the amount or density of motifs on an ornament.

[3:13:215] Pavilication, in Astronist Ornamentation, is the practice of microscopic study of ornamental patterns, especially from a bird's eye view.

[3:13:216] Pendentine, in Astronist Ornamentation, is a common type of ornamental design, typically found on drawer handles on furnitures, as well as on lighting fixtures, whereby a typically metal ornament hangs from the main structure of the furniture, or fixture.

[3:13:217] Centralisation, in Astronist Ornamentation, is a type of clusteration and ornamental style whereby all pattern and design is concentrated to the centre of the ornamental field, typically leaving a large void between the pattern and the perimeter.

[3:13:218] Meanderation, in Astronist Ornamentation, is a common type of ornamental pattern which has a meandering and intertwining pathway across the ornamental field.

[3:13:219] Aquasion, in Astronist Ornamentation, is a type of concretion and sculptural ornament which uses water to fill the indentations and depressions of the ornamental pattern.

[3:13:220] Framing, in Astronist Ornamentation, refers to the process of framing an ornamentation, typically an illustrative ornamentation, but may also refer to the encasing of an ornamental relief.

[3:13:221] Facings, in Astronist Ornamentation, is a type of unique ornamental design which both centralises and focuses on the depiction of human faces, especially close-up, and typically featuring ornamental patterns and motifs on the face.

Introduction to the Elements of Astronist Rendition & Rendition Theory

[3:14:1] Astronist Rendition refers to the study and practice of using distinct Astronist traditions, styles, and designs on trinkets, antiques, and other ornaments during the crafting process, and in Rendition Theory, relates not to the individual ornamentations encrusted onto the object, but the study of the object itself.

[3:14:2] Rendition Theory is a subject derived from Astronist Rendition, and a sister subject to Architectural Theory, and Art Theory, the study and critical discussion of the ways in which an object, or ornamented is encrusted with ornamentations, and is usually accompanied by a critical essay, or lecture on the crafting of such an object.

[3:14:3] Cosmocruz is the main relief associated with The Philosophy of Astronism, a representation of The Five Astronist Characters in complete quintinity, which is repeated in many different renditions, from trinkets, to ornaments, to figurines, as well as being featured on the Official Flag of The People's Constitutional Company of Jesse Millette.

[3:14:4] Crownring is a ring with the head of one of The Five Astronist Characters on it, most typically encrusted by a ruby, or another precious stone.

[3:14:5] An orrery is the most important form of rendition within Astronist Rendition, one of the central instruments of astronomy that is a clockwork model of the solar system, or of the galaxy itself, or of another planetary system, and is rendered into many different themes, sizes, and ornamental versions.

[3:14:6] An astrotapestry is a type of tapestry featuring cosmical, celestial, astronomic, and galactical icons and symbolism.

[3:14:7] An astrance, in Astronist Rendition, is a type of heavily ornamented decorative floor stand, typically of waist height, found in some Astronist philosophical buildings that most traditionally displays a handcrafted celestial ornament atop of it.

[3:14:8] An astrochronometer is a clock, usually a digital clock, which can measure the Cosmic Year, the Galactical Year, or the standard Solar Year, and is most typically found in the observatories, and eidouraniums of towns and cities.

[3:14:9] A tokenette is a metallic golden, typically six-pointed, embellished star with a central motif, commonly of a cosmical, celestial, or galactical entity.

[3:14:10] An Astronist Diorama, in Astronist Rendition, is a kind of model representing a scene with three-dimensional versions of Astronist characters, in a whole variety of settings, and scenarios.

[3:14:11] An armillary sphere is a type of rendition that resembles a model of objects in The Cosmos, typically centred on either a black hole, or a galactical entity, and consists of a spherical framework of rings which represent lines of celestial longitude and latitude, and the largest of such renditions can be found in Astronist eidouraniums, or grand observatories.

[3:14:12] An astrobath is a type of garden or lawn ornament resembling a bird bath, but instead featuring a distinct galactical shape, and the pedestal upon which the bath is constructed is often fitted with cosmical light patterns and celestial imagery.

[3:14:13] A starcatcher is a type of garden ornament built to catch the light of stars through the one-hundred and eighty degree recording of a clear night sky, and commonly characterised by its domed head and its four legs.

[3:14:14] A stellorb is a type of mechanical garden or lawn ornament, most closely resembling a yard globe, atop of which stars, typically in their correct astronomical positions from one another, are represented and slowly move so as to represent a microcosm of a cosmic year.

[3:14:15] A primord is a type of stone casing found at the base of, and around the supporting structure of, many Astronist renditions, especially larger garden, and freestanding interior, ornaments.

[3:14:16] A cosmosphere, in Astronist Rendition, is a giant, typically bronze, sculpture resembling an orrery, yet instead of displaying The Solar System, it displays The Cosmos, and can most often be found in front of Astronist buildings, in town or city squares, and sometimes instead Astronist buildings in large open lobbies and foyers.

[3:14:17] A statuary is a sculpture, representing one or more of The Five Astronist Characters, or a cosmical, celestial, or galactical entity, which is typically freestanding, life-size, and or larger, and can be positioned interiorly, or exteriorly.

[3:14:18] A celestopyary is the branch of topiary that focuses on the depictions of cosmical, celestial, and galactical entities, patterns, and icons, and is closely associated with an Astronist imagery style, and The Philosophy of Astronism itself, specifically the branch of Cosmism.

[3:14:19] A Concreted Telescope is a type of outdoor telescope, typically used as a garden or lawn ornament, that is concreted into the ground and commonly features a rotational optical tube.

[3:14:20] An Astro-Ring, or astronoring, is a type of ring specifically worn by senators, representatives, ambassadors and certain leader members of The People's Constitutional

Company of Jesse Millette, typically featuring some distinctions according to the differing ranks of the wearer.

[3:14:21] Alternatively, a philosophical ring a type of golden ring worn by sophians, or any other individual with philosophical authority, typically members of The Institution of The Philosophy of Astronism, and is typically engraved with the name of the philosophical building in which that individual works.

[3:14:22] A cosmoring is a type of ring featuring cosmical, celestial, or galactical engravings and patterns on it, and is closely associated with the artistic branch of The Philosophy of Astronism called Cosmism.

[3:14:23] A crestring is a type of signet ring upon who's head a crest, typically The Grand Crest of The People's Constitutional Company of Jesse Millette, is engraved and can thus be put into ink and pressed onto an official documentation in order to authenticate it.

[3:14:24] An astroerdapfel is a type of electrical rendition resembling the solar system along with its nearest neighbouring star systems, and is thus distinct from an orrery.

[3:14:25] An astrarium is a type of mechanical rendition resembling an ornate astronomical clock, typically manufactured so largely that it fills up the room in an Astronist eidouranium, or grand observatory.

[3:14:26] An astrolabe, in Astronist Rendition, is the electrical version of an original astrolabe, resembling a metallic plate which fits into a specially constructed cut-out section in the floor and projects a holographic recording of a planetary systems, or a larger recording of many star systems.

[3:14:27] A cosmolabe, in Astronist Rendition, is an electrical version of an original astrolabe, resembling a metallic plate which fits into a specially constructed cut-out section in the floor and projects a holographic recording, but instead of projecting planetary or star systems, it projects a galaxy-wide system, or a mixture of celestial objects.

[3:14:28] An astronomical clock, in Astronist Rendition, is a clock with special mechanisms and dials to display astronomical information, such as the relative positions of the sun, moon, the planets, and Astronist constellations, and in an Astronist philosophical context, typically is constructed on the side of eidouraniums, grand observatories, or observatories.

[3:14:29] A cosmodial, in Astronist Rendition, is an electrical device resembling a sundial, but instead displays a planetary systems on a screen on a metallic plate, and shows the extent which the planets have completed their orbits around their respective stars.

[3:14:30] Astrochronometer, in Astronist Rendition, an electrical device displaying informations about the timescales and lifespans of stars and star systems by projecting the

information, and is typically positioned on a pedestal in an astrotry in Astronist philosophical buildings.

[3:14:31] An astro-ring, in Astronist Rendition, is a type of outdoor and stationary telescopic device that is often found in the astrodiums of Astronist philosophical buildings, which records the movement of stars as they pass across the circular optic of the device, and is typically left outside for months at a time before the recording is taken out and reviewed.

[3:14:32] A Cosmical Gyroscope, in Astronist Rendition, is a type of gyroscope that, instead of centred around a disc, gyrates around a motif of a cosmical, or galactical entity.

[3:14:33] A celatone is a device originally invented by Galileo Galilei, and in Astronist Rendition, is constructed for use inside various rooms of Astronist philosophical buildings, especially for viewing cosmical projections.

[3:14:34] An astrodisk, in Astronist Rendition, is a giant specialised antenna and radio receiver, sometimes constructed to sizes larger than 200 and 300-meters wide, and often ornately ornamented, especially those that are constructed alongside Astronist philosophical buildings, especially promontories.

[3:14:35] A helioscope, in Astronist Rendition, is an instrument used in the observation of the sun and sunspots, typically found in the astrodiums of Astronist philosophical buildings.

[3:14:36] An electro-planisphere, in Astronist Rendition, is a type of planisphere that operates from an electrical source, and is typically resembled in the form of an interactive screen on which star charts and Astronist constellations are displayed and can be adjusted to display the visible stars for any time and date.

[3:14:37] A globetoph, in Astronist Rendition, refers to large and ornately decorated globes, most typically found in globetries in Astronist philosophical buildings.

[3:14:38] An alidade, in Astronist Rendition, is an ornately ornamented device that allows one to sight a distant object, and are typically found on terraceries of Astronist philosophical buildings, and are used for looking out across vast landscapes and cityscapes.

[3:14:39] A triquetrum, in Astronist Rendition, is a device in an Astronist philosophical building in the room of the same name, which projects rotational cosmical patterns on the floor from the ceiling.

[3:14:40] A gnomon, in Astronist Rendition, refers to any part of a device or rendition, especially a triquetrum, that casts a shadow, or allows for light patterns to be created.

[3:14:41] A telescope, in Astronist Rendition, is the most commonly manufactured and depicted rendition, with an array of symbolisms and philosophical relevance.

[3:14:42] A tellurion, in Astronist Rendition, is a specific type of orrery of Eastern Cosmism, found in Astronist philosophical buildings.

[3:14:43] A loxocosm, in Astronist Rendition, is a specific type of orrery of African Cosmism, found in Astronist philosophical buildings.

[3:14:44] A torquetum, in Astronist Rendition, is a specific type of orrery of Indian Cosmism, found in Astronist philosophical buildings.

[3:14:45] A turquet, in Astronist Rendition, is a specific type of orrery of Latin American Cosmism, found in Astronist philosophical buildings.

[3:14:46] A volvelle, in Astronist Rendition, is a type of moveable chart embedded into, or slightly raised up from, the floors of various rooms in Astronist philosophical buildings, that can be used in the education of cosmology and astronomy.

[3:14:47] A Solar Telescope, in Astronist Rendition, is a type of telescope that is specially constructed for the purpose of observing the Sun and other relatively close solar objects.

[3:14:48] An astroanklet, in Astronist Rendition, is a piece of jewellery worn around the ankle featuring cosmical, celestial and galactical patterns.

[3:14:49] A barrettine, in Astronist Rendition, is a piece of jewellery for hair adornment that features cosmical, celestial, and galactical patterns.

[3:14:50] A bracelette, in Astronist Rendition, is a piece of jewellery fixed to one's wrist and features cosmical, celestial, and galactical patterns.

[3:14:51] A celetelaine, in Astronist Rendition, is a piece of ceremonial jewellery typically attached to one's back or chest with series of chains chains suspended from it and features cosmical, celestial, and galactical patterns.

[3:14:52] A Cosmocollar Pin, in Astronist Rendition, is a piece of decorative jewellery attached to the collar of a man's blazer, typically featuring the head of one of The Five Astronist Characters, or cosmical, galactical, or celestial patterns or imagery.

[3:14:53] An astrolink, in Astronist Rendition, is a piece of jewellery for men and boys used to secure the cuffs of dress shirts, and features the head of one of The Five Astronist Characters, or cosmical, galactical, or celestial patterns or imagery.

[3:14:54] A *ferronnière*, in *Astronist Rendition*, is a piece of jewellery closely resembling an original *ferronnière* which encircles the wearer's forehead, yet features cosmical, galactical, and celestial patterns and imagery.

[3:14:55] A *celelace*, in *Astronist Rendition*, is any type of necklace featuring cosmical, galactical, or celestial patterns and imagery, or motifs of *Astronist* characters.

[3:14:56] An *astrodant*, in *Astronist Rendition*, is any type of pendant featuring cosmical, galactical, or celestial patterns and imagery, or motifs of *Astronist* characters.

[3:14:57] The term *watch*, in *Astronist Rendition*, is any type of watch featuring cosmical, galactical, or celestial patterns and imagery, and especially resembling the watch owned by the *Astronist* character of Jesse as featured in the *Original Jesse Millette Series*.

[3:14:58] A *cosmosium*, in *Astronist Rendition*, is a type of ten pillared pavilion either of full, or small scale, upon a decagonal shaped base, the sides of which are typically embedded with cosmical maps and illustrations, and the whole rendition is typically heavily cosmically ornamented in the high *cosma* style, and usually, atop of which a highly ornamented *orrery* is affixed.

[3:14:59] Finally, a *tellurium*, in *Astronist Rendition*, is a type of rendition much like an *orrery* but only depicting The Earth, The Moon, and The Sun, or another planet, its moons, and its parent star, but uniquely includes seasonal informations.

Introduction to the Elements of Orrology

[3:15:1] The hypertopic of Orrology refers to an Astronist Subject as a branch of study dealing with the designing, distribution, and usage of orreries, and the various different parts of orreries.

[3:15:2] Centrement is the part of an orrery relating to the stand upon which the sun is positioned.

[3:15:3] Centralum relates to The Sun, or the star of an orrery.

[3:15:4] Corum is the part of an orrery relating to its central stem from which all the feederments branch out and upon which the centrement sits.

[3:15:5] Discment is the part of an orrery pertaining to the rings most commonly built as the corum, typically displays notions of astrology, alignment, or some other type of message.

[3:15:6] Feederment is the part of an orrery relating to the horizontal branches that stretch out from the corum from which the peduncle shoots upward and upon which planetments sit.

[3:15:7] Helve is the part of an orrery relating to the handle by which the orrery may be held to move it.

[3:15:8] Levelum relates to perceiving an orrery in level with one's eyes.

[3:15:9] Nadirum relates to perceiving an orrery from beneath it.

[3:15:10] Orrerate/Orreration/Orrerational/Orrerative relates to the official process of designing, manufacturing, and distributing orreries.

[3:15:11] To be orrological or to study orrologically relates to the study of Orrology.

[3:15:12] Orrologist is an individual who studies Orrology.

[3:15:13] Peduncle is the part of an orrery relating to the vertical stem shooting upward from the feederment and upon which the planetment sits.

[3:15:14] Perdain, perdainment, perdaination, or perdainative is the act of using orreries for wondermental or astronomical practices.

[3:15:15] Pinment is the part of an orrery relating to the legs upon which the orrery stands.

[3:15:16] Planetment is the part of an orrery relating to the stand upon which the planets are positioned.

[3:15:17] Planetum relates to an individual planet of an orrery.

[3:15:18] Planeture collectively relates to all the planets of an orrery.

[3:15:19] Zenithum relates to perceiving an orrery from above.

Introduction to Equitology

[4:1:1] A dangerous act justice can be for those especially acting in ignorance of the divine, for those who acting in such a way will make judgements not of morality and faith, but of selfishness and corruption.

[4:1:2] Judgement can only be made by the divine and any judgement in the ignorance of divinity is judgement neither fair, just nor right and mustn't, therefore, be responded to as such.

[4:1:3] If judgement is to be made without ignorance of the divine, one must make judgement by way of morality and faith and therefore, within thy words, the one of divine source will reside.

[4:1:4] One of judgement must not allow monetary, political or threat of violence influence their judgement and so one must understand that if one is to take the role judge, one must make decisions in accordance to that of divinity and be willing to sacrifice in order for true, fair and divine justice to reign.

[4:1:5] If one is to take on the role of judgement, one takes on the responsibilities of enforcing justice therefore one must keep their mind, faith and morality clear of distractions, temptations and distorting influences of any form.

[4:1:6] If justice is the consequence of bad action, then justice itself must be of divine nature in order to prevent hypocrisy.

[4:1:7] It is the justice of one that reflects and can be the guiding light for many others to steer away from that which stands as the opposite of divine, good deed and moral.

[4:1:8] It is, therefore, of imperative importance that every justice enforced is of divine judgement for one wrong justice can reflect and encourage those of vulnerability to go down the path opposite that of divinity.

[4:1:9] Those of wrongdoing are those of lacking strength to see the one of divinity yet restoration of oneself is always present to enforce repentance and rehabilitation to those of us that have chosen the path of opposite that of divinity.

[4:1:10] Always, there will be, those lacking strength, but it is those with strength that have a duty to those without to show them that they do have strength and that the divine is within and is surrounding them.

[4:1:11] The path of restoration is of eventual nature; one will always find their way to it whether in this world or at the feet of the divine.

[4:1:12] One may act in their restoration to prove to the divine that they are beginning the process of restoring their strength and one act of genuine goodness will forsake a hundred acts of evilness with addition of repentance and rehabilitation.

[4:1:13] Justice is not only a consequence, but a reflection and an example for others of how acting without faith, morality and divinity will lead to further downfall of one's soul and it is that justice that is formed to show one that they have committed an act of evilness.

[4:1:14] It is human's justice that walks closest to the abyss of darkness for humans may be influenced by surrounding forces yet one who acts in divine judgement will discover that they cannot be influenced by these and will therefore, create a justice of divinity for their fellow human; the justice of the one divine.

[4:1:15] Patience is the practice of perceptive thinking and restraining oneself from the involvement in a circumstance and consequence of reduced rational thought.

[4:1:16] This practice of patience can be used to quiet thy mind in times of great chaos and noise so one can see the wider spectrum in order to make a decision of clarity and progression.

[4:1:17] It is the nature of a human to intensify one's mind when making decisions, but it is this intensification leading one to make rash and uninformed decisions of a nonsensical nature.

[4:1:18] However, it is the practice of patience that allows one to see beyond a decision before oneself and to look towards a wider view of circumstance and consequence that may arise in the future.

[4:1:19] It is those who first do realise the internal and external benefits of patience practice that call themselves Astronist, and if it is the duty of humanity to excel and create and explore, then we must be a people of patience in order for our true purposes to be realised.

[4:1:20] Those without patience hold an attitude of stagnancy, a lack of perceptivity and will find themselves falling behind, for their thoughts are not of progressive nature, although to one without intelligence, it may look as though the opposite is true.

[4:1:21] Practicing patience provides one with the tools to take a view of better boundlessness for one may then only see how one's decision may impact upon the lives of all and it is this improved foresight of circumstance and consequence that allows one to make a decision based upon one's faith, one's morality and one's connection to the divine.

[4:1:22] It is, however, important to note that the practice of patience is arguably limited to decisions not bound by short-time and those of novice and yet even experience, do find practising patience in these such pressures, an unnatural task and so it falls only to those of extreme ability who are able to practice proper patience in pressure.

[4:1:23] Use one's practice of patience occurs in everyday circumstance then a better and more satisfying outcome they will receive yet it is this practice of patience that will allow one to see that beyond oneself and for the betterment of peoples, will use their patience, faith and motivation through good deed and moral.

[4:1:24] The one of divinity is one of ultimate patience as the divine waits for all things and so the practice of patience is the practice too, of taking a step closer to the one of divinity, the creator.

[4:1:25] A stand, take, with all those who practice patience too and go and share the benefits of patience with those around thee, the world called Earth and the worlds beyond that of thy own for the practice of patience is of universal value and its relevance spans many other principles and sits at the heart of thought and attitude for one who practices patience views all things in a way no other can, but the one of divinity.

The Study of Justice (Jurantology)

[4:2:1] That which shall henceforth be referred to as jurantology is to pertain to the study of justice and the philosophisation and contemplation of this topic, especially so from an Astronist perspective; we find the importance of justice to philosophy in the quality of justness and by the notion that justifying and being just are essential elements of what it means to be a philosopher; to contemplate on justice is to learn how to be just.

[4:2:2] It is essentially held herein principally that justice is something that is to be served, but is only to be so by trusted institutions which also hold the ability to outline the principles of justice; of course, different justices will arise according to the differences in principles of said trusted institutions; of course, also, our study and contemplations on justice will also inevitably include philosophisations on the topic of law, its practice, its relationship to philosophy, and the different forms that it may possibly take.

[4:2:3] The definition of justice according to the Astronist perspective consists of the following; the quality and practice of fairness according to the views and beliefs held and debated; to be a philosopher is to understand that justness is an integral part of your person; you do not so lightly favour one over another, but when you do, you do so align yourself with the most rational and logically justified of options.

[4:2:4] The nature of justice is that it is set on a series of principles, the most prominent of which in the context of philosophy being logical justification, fairness of opinion, thought diversity, soundness, and rationality, however, the principles upon which justice is structured may change just as easily as the wind changes direction and so this means, just like the nature of Astronism itself, justice is motional.

[4:2:5] However, having said this about the nature of justice, there has been constructed the concept of propriety in response to this motional nature of justice and of course, propriety pertains to the holding on of traditions and standards of behaviour and practice so as to slow down the quickness of the motional nature of justice for a justice whose principles are changing too often and rapidly is not a structured justice, nor is it a stable one that upon which law can be administered; hence, propriety is an essential extension to controlling the motional nature of justice.

[4:2:6] That which is to be henceforth known as extral justice shall pertain to the forms of law and order systems that either exist beyond The Earth or pertain to subjects which concern environments and circumstances beyond The Earth, of which multiplanetary law is a principal example; extral justice is the most important area of justice and law for Astronists contemplate due to its outer space theme and how that correlates to the theme of the entire Astronist belief structure.

[4:2:7] Spacial law is the branch of law that is concerned with establishing and administering rules and regulations in relation to celestial and astronomical bodies and spaces beyond The Earth, either on other planetary bodies or in space itself aboard spacecraft; spacial law is considered to be one of the primary extra-philosophical subjects which Astronists intend to hold serious discussions over as part of their debates, but also, that they intend to hold an influence over as the foundations of spacial law, as a new branch of law, continue to be structured.

[4:2:8] Justice, law & order beyond The Earth is essential to the viability of the Humanic Exploration of The Cosmos and so whatever is essential to the accomplishment of space exploration is essential to the concerns of Astronism and Astronists.

[4:2:9] We must command the universality of law in the environment of space or else space will become the chaos of all chaoses far beyond the microcosms of chaos that we have witnessed upon The Earth in different periods throughout our history; the law must be enforced in the context of space in the name of the preservation of space itself; it, henceforth, shall always be the emphasis for all Astronists to prioritise the preservation of space at all contents and especially so in the creation and enforcement of laws.

[4:2:10] Two other branches of law are also expected to arise with the exploration of space and in accordance with the beliefs of Astronism that there exists sentient life on other worlds, there will therefore arise human law and non-human law which will be administered justly and fairly; there will be a set of laws for how humans are to treat and interact with extraterrestrial life, whether sentient or non-sentient, and there must be laws that civilise any life that is sentient but is not yet civilised.

[4:2:11] As we begin to introduce these types of law, it seems prudent to introduce a whole new category of law which is to be known as sentient law which administers laws and regulations regarding questions such as, what is sentience, what privileges do sentient beings hold, what responsibilities do they hold, how can they be identified, and how they can be communicated with and treated justly so as to avoid the emergence of a culture of speciesism.

[4:2:12] Different justice systems for different planets, or different institutions that may hold jurisdiction on multiple planets will inevitably develop as space exploration continues, but the complexities of these systems will far outweigh those which are present upon this singular planet upon which we reside; there will exist a complexity of federations interconnecting different star systems and subsequent planets and regions of space; there will exist a diversity of structures for governments; new forms of political theory and ideology will develop that we cannot yet imagine for ideologies for in response to the issues and problems faced by society so we cannot yet develop those ideologies because are not yet as a society facing such problems that will inevitably occur in the context of space, but these issues will arise and our societies will be moulded by them just as our societies upon The Earth have been shaped by the problems we have faced throughout our individual societal histories; for the context of space societies, there is no

difference, perhaps except in the nature of the problems, their complexities, and what we require to solve such problems.

[4:2:13] The following are fundamental points of Spacial Law that will one day need to be addressed and fully implemented as Humanity's Exploration of The Cosmos continues; that which is described as the confederation refers to the proposed governmental system from the Astronist perspective that should best be implemented during these times under the confederative structure.

[4:2:14] Accords, acts, bills, charters, and statutes will all still be in utility and will be applied in order to implement the rule of law as well as create new laws as the systems of governance, views of certain topics, and as major events changing political landscapes will inevitably occur.

[4:2:15] Constitutionality and the extent of the influence of a constitution are also expected to be hot topics of debate as part of jurantology due to the fact that constitutionality is one of the most widely utilised forms of justice implementation or governmental structure, of which the rule of law is a subsequence.

[4:2:16] Planetary constitutions will need to be devised and distributed for entire planets as they interact with other planetary governments and even governments of entire star systems; one of the most important questions to answer as part of spacial law is whether humanity intends to act in space under the banner of a species, a religion, a singular nation, a federation, or under the banner of a single planet or group of planets and their governments; this is to be henceforth known as the Spacial Identity Problem and is expected to ignite interesting discussions about who humanity intends to be and whether we intend to be fragmented or united as part of our exploration of space and our interaction with other systems and planetary bodies.

[4:2:17] The prohibition of politicians and government employees from profiting, in any way, from advanced knowledge of government contracts, building proposals, or any other illicit or underhand activities, especially so in relation to the exploitation of space and its resources is essential; we must remember that exploration can and will so turn into exploitation if we do not affirm spacial law and enforce it vigorously from the beginning.

[4:2:18] Bills that prohibit certain ideologies, religions, and philosophies that are considered harmful for betterment and progression will be accepted as long as those bills are written and passed by all members of a collective government that remain impartial to the specific beliefs of such systems of thought; a system of thought must always be allowed to be practiced especially so if it holds differing opinions for this is in accordance with the principles of the Philosophical Spirit, upon which all future societies should be based in order to encourage diversity and to reduce belief persecution; just because a system of thought disagrees with the dominant system of thought in their beliefs does not mean that it should not be allowed to be practiced; however, if a system of thought spreads hatred or solicits violence in its teachings then that would be classed as a harmful

system of thought; the clear definition of harmfulness is essential in the context of this debate remains crucial.

[4:2:19] That which is herein introduced as the Convention of Civilised Systems shall be the principal authoritative organisation responsible for the determination of which planets and star systems can be considered civilised, minor systems, or uninhabited; this process of mass categorisation will occur endlessly as part of the Humanic Exploration of The Cosmos, but also, remains an essential process that a singular authority should be responsible for and for all Astronists, this organisation shall be known as the Convention of Civilised Systems.

[4:2:20] The Convention of Civilised Systems is responsible for keeping a catalogue of the systems considered to be civilised, minor, and uninhabited, but is also provided herein with the authority of being able to define what a civilised, minor, or uninhabited celestial body are.

[4:2:21] The Convention of Civilised Systems, however, is not given the authority to decide upon sentience, and does not consider sentience as part of its conclusions about civilisation and the standards for civility.

[4:2:22] As part of the omnidoxical approach to understanding civility, a civilised system can be considered a celestial body upon which buildings are constructed through which the inhabitants of are able to access clean drinkable water, where electricity is available, wherein there is a heating system and wherein there is a sufficient food supply for the overwhelming majority of the society's inhabitants.

[4:2:23] Those which are to be known as Confederative Accords are guidelines that determine what a civilisation on a planet, or what an entire planetary civilisation needs to do to join and remain a member of a wider confederation of civilisations; due to the importance of confederations to the beliefs of Astronarianism, the development of Confederative Accords is considered a key part of confederationism.

[4:2:24] Droid regulations and droid sentience are two more closely associated topics of interest for jurantologists and those studying and debating jurantology and wider spacial law to consider; droid regulations refers to the set of principles and rules involved with purchasing, handling, and maintaining a droid while droid sentience refers to a wider debate about whether droids are able to hold sentience, whether they should be considered to be sentient beings, whether they should hold the same rights as organic beings, and whether they should ever be made to be sentient intentionally in the future by manufacturers.

[4:2:25] Those which are to be henceforth known as Space Navigational Accords are another set of laws and regulations as a derivation of spacial law regarding the proper conduct of navigation through space territories and regions in different kinds of spacecraft; these accords will be essential as mass cosmic travel becomes normalised after

the Humanic Exploration of The Cosmos and mass production of rocket engine fuel becomes marketised; Space Navigational Accords can be compared to the rules of driving on the roads on The Earth, but are instead much more complex due to the complications of travel through space; entire books will be written on this subject and subsequently, Space Navigational Accords must be included in every planetary government or confederation's laws about the protection of their spacescope; the spacescope refers to the area of space that a singular planetary is geographically and politically granted with holding its territory over and is similar to the concept of airspace for instead for a spacial context; the study and development of Space Navigational Accords is essential because in forthcoming years, every person will hold the ability to become a spacefarer; the novelty of astronauts will fade away as more and more people can themselves explore space; the term, astronaut, will therefore be reserved for scientists who physically explore and study or for deep space explorers.

[4:2:26] Those which are herein termed and introduced as Developmental Rights pertain to the right of all organised groups to have the ability to start a civilisation on an uninhabited planet, but that their initiation of this civilisation must be sent to a central confederative authority for approval and that this proposal must be sent by a registered institution to that central confederative authority if that new planetary civilisation intends to become part of said confederation.

[4:2:27] That which shall henceforth be known as the Non-sentient Creatures Transportation Decree refers to an imperative future law that outlaws the unauthorised transportation of non-sentient creatures between planets and star systems in order to avoid detrimental encounterments between different species that may pass on diseases to other animals, or may significantly disturb the structure of the ecosystem to a detrimental affect after their unnatural introduction.

[4:2:28] That which is to be known as the practice of planet granting refers to the process of a central often confederative authority officially providing a group of people or an organisation with sovereignty over an entire planet, or a majority of the planet for the purpose of civilising or for some other purpose, such as for enterprise or livestock rearing.

[4:2:29] As another key part of spacial law, the differences between the terms of colonisation, civilisation, and settlementation must be studied and understood in their different contexts; firstly, colonisation refers to when one authority takes control over a territory that rightly belongs to another authority or group, often forcefully and for profiteering in some way or for territorial expansion; civilisation refers to the development a society and civilisation in a previously uninhabited territory, or a territory in which there exists no authority proclaiming it to be their territory; finally, settlementation refers to when a group of people, an individual, or a family make an uninhabited area their home without officialising their habitation with an authority or without officially joining a confederation, hence they have no official rights to be there and are not protected from an authority wanting to colonise that same area.

[4:2:30] That which I herein introduce as to disevercate, or disevercation refers to action of starting to build a settlement on a planet that has not been officially granted permission by a central confederative authority, and therefore a disevercated settlement or civilisation is one that is not protected by a wider confederation and may also be referred to as an independent civilisation or an independent settlement.

[4:2:31] Such settlements are also to be called disevic settlements and are to be referred to as being in a state of disevity.

[4:2:32] That which is to be henceforth referred to as Interplanetary Communication Systems pertains to a brand new communication systems which will certainly be needed to communicate to different worlds both within systems and beyond systems for various different purposes, both government-to-government communications, business-to-business communications, business-to-consumer communications, and for personal communications.

[4:2:33] That which is to be henceforth known as Deep Space Monitoring refers to the practice of monitoring the furthest reaches of outer space by different governmental and non-governmental agencies often with the purpose of maintaining the safety of deep space explorers as well as to serve for new star systems and signs of further extraterrestrial life.

[4:2:34] That which is to be known as Confederation Security is a major branch of study for the context of spacial confederationism and pertains to the various systems and methods of security implemented in order to maintain the security on and between planets and star systems that are members of a wider confederation; it is one of the principal roles and purposes of joining a confederation to secure safety and security for an established civilisation, hence Confederation Security is one of the primary purposes for the existence and erection of confederationism as a system of spacial governance

[4:2:35] That which is to be henceforth known as xenocentrism refers to a belief in the supremacy of one species of another to which the Astronist Tradition is completely opposed.

[4:2:36] That which is to be known as the process of the Harmonisation of Species refers to the accord and law that all species in The Cosmos are equal in their rights to exist and reside upon planets which they hold citizenship or are legally permitted to live on and that no species should ever be treated as lesser than another by the comparison of either species' level of sentience.

[4:2:37] Finally, as part of this jurantological introductory discourse, the term ataraxy is introduced and pertains, in this context, to the quality of calmness and serenity in the face of unfairness and injustice, but that also followed, in a measured and organised manner, a bombardment of justifications for the reversal of such unfairness and injustice.

[4:2:38] As Astronists, we hold consciences against injustice; we must fight for what we believe always because no other group is going to give it to us; we must understand that fighting for what we believe to be right and just is the only way that we will be able to form our identity as Astronists.

[4:2:39] Just as other religious and philosophical groups fight for their identities, Astronists must also fight for ours and our fight is predicated upon the principles of freedom to believe or disbelief, justification of our beliefs and opinions, working to preserve such principles of justification, and also effectuating change in thought and action to create a world and a humanity that is conscious of The Cosmos and is centred on both The Cosmos and the principles of philosophical understanding and belief.

The Study of Patience (Tolereology)

[4:3:1] Tolereology is herein introduced as a territory of philosophy which focuses on the study of patience, the nature of patience, the applicability of patience to the way we individually and collectively act and think and finally, the functions of patience in the world around us and how we may be forced to be patient or how we can choose to be patient.

[4:3:2] The Astronist definition of patience is knowing when to act, but more importantly, knowing when not to act; non-action is just as important as action in this world; knowing when not to act is a pinnacle element of what it means to understand patience; however, non-thinking is never permitted and should not ever be encouraged; we should always think, but we should not always act upon our thoughts for the time of the world may be not be ready for what we intend to act upon and in this, we understand that patience for progression is key to the achievement of that which we intend.

[4:3:3] The differences and similarities between patience and toleration are also to be explored by tolerological study, hence the name for the entire discipline; my understanding of the difference between patience and toleration is that patience is the acceptance of something due to its inability to happen or be present in a timeframe previously outlined but this is not necessarily in relation to something harmful; toleration, on the other hand, pertains to inacceptance of something, but coupled with an inability to change it, hence one must tolerate rather than be patient for something; in toleration, there is no specific end point or goal while with patience, this is usually some sort of ambition or desire for something that cannot yet occur either due to one's own shortcomings or due to some wider uncontrollable circumstances.

[4:3:4] Patience is all about opportunity; either taking options or not taking options and is about accepting when options are not presently available; hope is also integral to the practice of patience for hope is the driving force of you staying on your set path; the loss of hope often causes the loss of one's patience, hence one loses that determination within them to continue along whatever endeavour they had the intentions of forging either for themselves, for someone else, or for a wider group.

[4:3:5] One could argue that there exists three essential forms of patience as part of one's study and contemplation of the nature of patience, thus making patience tridimensional.

[4:3:6] The first of these forms is perseverance in the face of delay; delays in this world are abundance and come in an almost endless variety of forms; perseverance is a primary form of patience; it can be considered a manifestation of patience; to be able to persevere is to still hold the hope that future opportunities to achieve one's goals will come and that those opportunities will be within one's reach to attain them.

[4:3:7] Tolerating provocation without a response of anger is another hallmark of patience in the manifestation of toleration; understanding the purpose and nature of provocations means that one will not be so quick to allow them to ensnare oneself; provocations are purposefully built to ignite rage and reaction, but by non-action we are able to conquer the provocation; this is one of these instances in which non-action is the superior form of response; to be proactive in the face of provocation is the most superior of all responses, even above that of non-action.

[4:3:8] Lastly, patience is about enduring long-term difficulties without resorting to foolish and rash actions and thoughts or conducting acts which can be considered immoral or damaging to one's integrity.

[4:3:9] Essentially, patience is endurance and in the context of tolerology, we term this specific form of endurance as endurance for it does remain multi-faceted.

[4:3:10] The motivator of patience is the hope that one's patience will end in reward, or the end of that which is causing pain.

[4:3:11] Patience is the oppositism of rash action; patience is the understanding that rash action will not achieve our desires as quickly as we would ever have hoped; patience holds no function if our path is smooth and easy to walk along; patience is only functional along paths of hardships, tribulations, and tragedies, but the reality is that all of our paths hold this characteristic in their own unique ways; patience is also about understanding that each and every person holds a unique path for their beingness and that no singular rule or method be applied to every person's path, but that a diversity of ideas and changes in thought and method must be implemented in order to achieve that which we desire; there are instances in which we can employ trivial patience or micropatience for small and easily overcome problems and then there are other times when we must employ seminal patience or macropatience for large and not so easily overcome problems that we each all face according to unquities.

[4:3:12] There are two further extensions to types of patience that we should also explore as part of tolerology, the first of which is to be known as Fool's Patience which pertains to waiting too long and not taking opportunities when they do arise; this can be considered patience that has gone too extreme; the person needs to remind themselves that they are a transient being and that time is passing; opportunities should be taken when they arise; if they do not work as intended, then you know that your destiny is not defined by that single opportunity for others will come, but you must always take opportunities when they do arise if they are suitable to your present circumstances; a person that does not take a good opportunity that could lead to the achievement of their ambitions is a victim of Fool's Patience.

[4:3:13] The second of these extensions is Coward's Patience which is when one uses patience as an excuse so as not to take risks due to fear of loss; Coward's Patience is perhaps the worst of all patience because it is the misuse of patience as something that

holds oneself back from achieving their ambitions, but anybody who is a victim of Coward's Patience does not truly understand the nature or the purpose of patience.

[4:3:14] In the context of the Humanic Exploration of The Cosmos, patience will be an essential element of the exploration's success; we must be patient for although we are destined to explore The Cosmos, The Cosmos has its own destiny and it is most significant than our own; patience will need to be employed in the context of our exploration of space for humanity's discovery and exploration of the progeny and phenomena of The Cosmos is the most important and will be the most rewardsome of all of humanity's endeavours throughout the entirety of its history, hence all that generates reward is worth greater patience than that which generates little reward and of course, the Humanic Exploration of The Cosmos will constitute the former of these.

—

[4:3:15] That which is herein introduced and shall be henceforth known as probabilitarianism is the principal approach and understanding held by Astronism and the Astronist Tradition of Astronism, in addition to Cometanism, towards the topic of patience.

[4:3:16] The essential premise of probabilitarian thought is that all occurrences in The Cosmos are based upon a limited probability due to the Cosmic Limitation Principle which governs the nature of The Cosmos; hence, the probabilitarian approach to patience is that taking of opportunities when they do arise is all the time increasing the ability of one's desires becoming the reality; non-action in the face of opportunities is considered to lower the probability of a person's desires becoming a reality.

[4:3:17] Furthermore, understanding this in the context of patience states that patience should only be administered in moderation and that in order to increase the probability of one's desire becoming true, one must be proactive in taking action and grasping opportunities wherever they arise in order to increase likelihood of the manifestation of one's desires.

[4:3:18] Probabilitarianism understands desire according to a scale of likelihood and the more we are proactive in achieving our desires with an undercurrent of patience and hope, the more realistic our desires will be to manifest.

[4:3:19] Probabilitarian philosophy, when applied to all other contexts and topics, takes into consideration the likelihood of events literally and principally, but instead of denying the likelihood of something, probabilitarianism encourages proactivity in taking the necessary steps to increase the likelihood or probability of that desire to occur or manifest.

[4:3:20] Probabilitarianism therefore encourages a moderate administration of patience along with a proactive approach to increase the likelihood of desired events or circumstances to occur or manifest.

[4:3:21] Probabilitarianism remains the cornerstone of the Astronist approach to understand the administration of patience as something that should only be moderately applied as an undercurrent of thought in the face of delay and obstacle; probabilitarianism reminds that patience must not be the driving force of our desires, but instead, proactivity and the understanding of opportunities and grasping them when they inevitably do arise is the correct way.

—

[4:3:22] Interestingly, Buddhism centres its philosophy on the notion that desire is negative and that it should be annihilated if we are to be alleviated from suffering; although I am an admirer of Buddhism myself, I find this to be ultimately at odds with the reality of life and the human psychology which is no doubt predicated upon desire.

[4:3:23] Astronism does not consider desire to be a bad or negative emotion, but it is instead something that needs to be controlled and managed; we must manage our desires; I do agree with Buddha in the notion that desire causes suffering, but I diverge when I say that desire *needn't* cause suffering as long as we measure our expectations according to the reality of the circumstances.

[4:3:24] The main form of suffering in this life is disappointment; if we lower our expectations to a moderate level, then our desires are balanced and we are unaffected less severely by the inevitable occurrence of disappointment.

[4:3:25] Our desires are not only what make us human, but they are what keep us alive; our desire to be, to live, to become, and to transcend to new heights all form whom we uniquely are.

[4:3:26] I consider Buddhism to be at fault in this context because there exists no need to annihilate desire if our expectations are controlled; we only suffer when our expectations are not manifested as we had originally intended so what we must do is we must control our expectations in a measured way; this does not mean that we cannot imagine, it simply means that we must understand that the greater the desire, the more time it will require to manifest and the greater effort and proactivity it will need to sustain itself.

[4:3:27] Therefore, in Astronism, instead of removing desire from our lives, we must embrace our desires with the understanding that our desires form whom we are, but that we must also simultaneously control our expectations in relation to our desires; hence, this is why Astronism creates and aligns itself with the philosophy of probabilitarianism for this philosophy advocates for the emphasis of our desires, but equally so, the proactivity in making our desires a likelihood, the management of our expectations and understanding that our desires are totally and inextricably tied to our destinies; Astronism doesn't consider desire to be damaging but instead considers disappointment to be damaging.

[4:3:28] When we want our desires to manifest, they will not; when we could do without our desires manifesting, they do just that; this is the way of The Cosmos.

[4:3:29] The Destinal-Imaginal Dichotomy refers to the idea that there exists a dichotomy between the belief that people hold divinely provided destinies that are driving their ambitions and ideas which pertains to the destinal part meanwhile the latter imaginal half pertains to the notion that ideas and ambitions are strictly corporeal and come only from our experiences and influences that inform our minds to initiate our imaginations.

The Omnidoxical Approach To Trivial & Seminal Incidences

[4:4:1] Throughout the Omnidoxy, I have addressed a huge amount of philosophical, theological, and religious issues and topics that have significant effects on what we believe, how we think, how we act, and how we can all understand the world.

[4:4:2] However, now has come the time to address certain issues that people face in their day-to-day lives in our liberal modern societies in which many new and possibly unorthodox and potentially immoral problems arise.

[4:4:3] It is important that new religions and philosophies address some of these relatively trivial yet persisting problems that continue to effect individuals in today's society.

[4:4:4] New religions should address these problems and should provide people with guidelines of how to act in certain scenarios and social settings and how to deal with particular situations.

[4:4:5] Of course, with all of the situations that occur in life, they cannot all be captured by this singular discourse, however, one can take inspirations from the way in which it is ascribed herein to approach certain topics in order to inform how they approach their own individual specific scenarios.

[4:4:6] Working with a person in a job who has a crush on them (lesbian crush) and has been invited to an event but doesn't want to hurt feelings — return gifts and have an honest conversation, but not in the setting of work.

[4:4:7] Money is tight after moving — suggestion is a take-out and cuddling instead of something expensive for anniversary.

[4:4:8] Sex has occurred on a first date and the guy hasn't called back after two weeks — this person is not interested in taking the relationship further and this should be accepted as their decision; the man should always be the one to recontact the woman after a date.

[4:4:9] Boyfriend is forty-four and girlfriend is twenty-four years of age; girlfriend has no children, isn't married and has a job; boyfriend has three children with one woman; married for seven years and has been divorced for seven years; he wants to meet her parents; been with him for three years — she has to own the love and be confident because if she is with an older man then she has to be a stronger and older woman in her mind.

[4:4:10] Plans with friend to go shopping were cancelled but then bumps into the friend by mistake and haven't spoken since — text her and in person explain why there is an issue in the friendship now; it is also better to be honest and upfront with people in order to resolve situations like this.

[4:4:11] Should a person travel alone when friends don't have the funds for a person's birthday? — yes, it is big world out there and there is a lot to explore which can be done alone, but it doesn't have to be a lonely trip; no acquaintances can be made quickly on trips and you can still have good times with them.

[4:4:12] Friend has a monobrow and she gets talked about behind her back; should she be told? — speak to her about it calmly and sensibly and ask her if she feels that she want to keep the monobrow; if she does, then leave it alone, but if she doesn't then help her to get rid of it; don't tell her that others have been speaking about her because it is unnecessary and will make her feel unconfident.

[4:4:13] A twenty year old daughter is with a thirty-five year old boyfriend; should she be confronted regarding this? — the best way is to have a conversation with her; when a 35 year old man is interested in a twenty year old girl, there is something not right on his part because they do not and should not have things in common; as the mother, it is your responsibility to find out why this relationship is happening, especially due to the fact that the daughter is still only twenty years old.

[4:4:14] Girlfriend looks at boyfriend's phone and another girl texts saying "don't worry, I won't get too attached"; boyfriend says it is a friend from college; girlfriend has been with him for almost three years — don't leave him over this, but certainly keep your eyes on his behaviour to understand whether this so-called friend means something more to him.

[4:4:15] A girl wants to date a man and a woman at the same time; can she go behind the man she is seeing's back with a woman? — no, this is because same-sex sex is still counted as cheating so a choice has to be made.

[4:4:16] Girl and her boyfriend split up two months ago, but now he wants to be friends with benefits; no children together; with him together for five months — if you are not presently in a relationship and you feel comfortable with the low expectations for this arrangement then go ahead, but not if you feel that you might catch feelings for this person.

[4:4:17] A woman wants her children to get involved in helping with the thanksgiving party as they don't clean up after themselves — save plastic containers for them to take instead of expensive Tupperware; have an honest conversation to say that mum needs assistance with cleaning if they wish to continue coming to her home for thanksgiving.

[4:4:18] A woman's friend is consistently rude to wait staff in restaurants even though she is a nice person to her friends — have an honest conversation with the friend about this as upfrontness and honesty is required to resolve this scenario.

[4:4:19] A son is thirty and his mother has a boyfriend who is just three years older than him and his mother is constantly wanting the son to like her boyfriend but the son doesn't want to reciprocate — the Omnidoxical approach is to be nice and humour his mother by

being civil and friendly with her mother's boyfriend; there should be not stigma to the fact that she has not chosen a boyfriend of her own age.

[4:4:20] A boyfriend has a foot fetish that he hasn't told his boyfriend yet — ask him about whether this would be something he would be interested in doing; it all about being upfront and honest without fear of shame or rejection; if we are rejected in our desires then we must accept this, but if they would have accepted all along, you have wasted time worrying; you should know your partner well enough to understand that they would not judge you for this.

[4:4:21] A friend of a woman has seen that woman's husband in a bar with another woman kissing him; should she tell her friend? — she needs to be told but the friendship may need to be sacrificed in order to do the right thing which is often the case; friendships come and go, but your own integrity needs to stay intact so telling the friend about this is the moral course of action.

[4:4:22] A man's ex-boyfriend was so well liked by his family that they continue to contact his ex-boyfriend — that isn't right because that demonstrates a lack of loyalty and each and every family member participating in this needs to be calmly, but firmly told that this is wrong.

[4:4:23] A woman's mother cannot cook but how can she be told that her cooking isn't good? — Don't be mean, but give it to her gently; the aim of being honest and upfront isn't about hurting feelings, but is instead about helping others and providing clarity in how we feel towards one another no matter the circumstances.

[4:4:24] A woman has been dating a man for three months and a conversation came up about exchanging Christmas presents but the girl wants an expensive handbag — this is totally inappropriate for a three month relationship; something more appropriate would be to invite one another around to each person's family home to meet, if not already, and interact with family members; small gifts are suitable but nothing extravagant at this stage.

[4:4:25] A woman has been dating a guy for a couple of months but doesn't give his girlfriend his weekend time to her as he spends all his time with his family members; he is thirty-two — it is too soon for her to be introduced to the family; three months is the magic time; don't be accusatory but have a conversation about spending more time together at the weekend if this relationship is going to continue.

[4:4:26] A wife wants the possibility of a threesome in her relationship with her husband and another woman — if it a desire that has to be fulfilled then it should be done on a vacation rather than in one's own native country.

[4:4:27] A man's downstairs neighbour is harassing him by complaining about him walking around his apartment upstairs and yells at him whenever they bump into each

other; she has been there less time than him — don't do another thing to appease her; people need to learn manners and by standing one's ground in what one knows is right without being argumentative is the best way to show the aggressor that you will not be fazed by their rants and ravings.

[4:4:28] A woman has been with her boyfriend for three years and works an overnight shift but gets strange calls from coworkers; she suspects him of cheating and asks whether she should do a drive-by his work to check — yes, just do a check by renting a car, but if you don't see any evidence, then you shouldn't pursue this because you should trust your partner.

[4:4:29] A woman recently divorced after thirty years and wants her 27 year old daughter who has a good job to move out of the house; mother wants her house to herself for dating — the daughter needs to be helped to get a house or apartment of her own and she needs to be given a date by the time of which she needs to move out.

[4:4:30] A woman is six months pregnant at forty-six years old with her first child and her boyfriend is thirty-four and he has two other children and has had two previous failed marriages; should she marry this man? — no because it isn't required currently; you have already committed the act of premarital sex, therefore, there is no obligation to be married to this man yet; a good test will be to see how he is as a father to the child; he is committed and responsible then marriage may be more suitable later on.

[4:4:31] Wife and husband have been married nine years and usually go to restaurants for their anniversary, but she wants to go to the club instead, how does she convince her husband to go? — promise him that he will get whatever he wants if he goes in exchange for his patience with her to fulfil her fantasy of going to the clubs, but don't ask this of him often.

[4:4:32] A girl has been told by her boss that she needs to terminate the contract of a coworker that she has become friends with — the moral to this story is that you do not make friends at work; this friend is not paying her bills; she needs to do as her boss says and she needs to fire the coworker, but do so in the most friendly and least cutting way as possible.

[4:4:33] A girl has been single for one year and the last guy she dated she waited two months to have sex with him and it was terrible; should she wait or have sex quicker to understand whether they are intimately compatible — sex should only be enacted between a man and woman not a boy and girl; you need to understand whether who you are dating is a man or a boy and you need to understand whether you are willing to help him become a man because many young men require this from their female counterparts.

[4:4:34] A woman's son broke up with his girlfriend two years ago, but the mother is still in contact with her on friendly terms but son has asked her to not speak with his ex-girlfriend — it is entirely wrong for the mother to do this and she should cut direct

communicate with the ex-girlfriend, but of course, if she happens to bump into her then she can be friendly with her, but beyond that, no communication is permissible.

[4:4:35] A girl feels that a guy she knows is showing signs that he is homosexual, but he is dating one of her girl friends — it is definitely not her place to say anything as she could end up hurting this man's feelings and she could also ruin her friend with her friend; it is important that we do not try to understand other people's relationships in such a personal way; allow them to be as they are; friendships and relationships begin to go wrong when people get too engrossed in other people's affairs.

[4:4:36] A woman has a friend who is in a mid-life crisis; her son's girlfriend comes over to the house looking attractive but then the mother goes out to buy similar younger clothes, should she be told about this? — yes, for her own dignity, she needs to dress suitably for her age, especially in front of her son and her friends; she is damaging her own reputation and she needs to ensure that she maintains her dignity so have a conversation with her calmly, honestly, and also firmly, but also prepare for your friendship with her to end if she rejects what you have said.

[4:4:37] A coworker has suggested to another coworker at work that this woman should be fired because she is too assertive and has a bad attitude; this coworker is still trying to be friends with her, what can be done to alleviate tensions in the office? — one needs to accept some blame for this because the coworker is feeling things for a reason and try to have an honest conversation with this coworker; that is the only way to resolve this issue.

[4:4:38] A girl has been invited to an event which she attended with her boyfriend, but at the event her boyfriend got made because another man (whom she has already previously been with) bought her a drink — it wasn't wrong of the man for buying her the drink, but if she accepted the drink, that is wrong; upon receiving the drink, she should have declined it and told the man that her boyfriend was buying her a drink instead; if she didn't do or say something similar to that then she needs to apologise to her boyfriend.

[4:4:39] A wife talks about her sex life and personal life with her friends and her husband is mad about it — it is wrong to do this because those elements of her life should remain private; if she feels comfortable enough with her friends then snippets of her personal life can be revealed, but not extensive detail.

[4:4:40] A girl broke up with her boyfriend a few months ago, he wants to get back together, but she doesn't, although she is happy to continue to have sex with him, what should she do? — she needs to end communication with this man because it is unfair to continue on a sexual relationship if either party has desire for the relationship to progress beyond that.

[4:4:41] A woman has a daughter that she does everything with; her daughter wants to move out but her mother is encouraging her to stay at home — the mother needs to allow the daughter to move out and begin her own separate life; they can still be close with each

other and do many things with each other, but the daughter, rightly and naturally so, wants freedom and independence and the mother should respect this always.

[4:4:42] A woman has a childhood friend who lives on the other side of the country who she doesn't speak to that often, but she has realised that her friend has started dating her ex-boyfriend, should her friend be told? — yes, her friend should be told as soon as possible; the friendship may end, but it may be rejuvenated in years to come; it is also better to be upfront and demonstrate honesty and this is one of those scenarios that requires that type of approach.

[4:4:43] A woman's best friend has recently broke up with her boyfriend who has no family in the city they live in; would it be wrong for this woman to reach out to her friend's ex-boyfriend to say that she is there if he needs help with anything considering he has no other friends or family in the city? — yes, this would be wrong to do; it is a violation of the trust and loyal that should be shared in the friendship.

[4:4:44] A woman used to date a man seven years her junior before she moved to the city, but should a serious relationship with him be pursued; he has less experiences than she does; there is no exclusivity currently — this relationship requires more time to mature further in order to understand whether this man is mature enough to continue the relationship in the way that meets both party's expectations.

[4:4:45] A woman's ex-boyfriend's new girlfriend has a problem with him coming to his ex's house to see his three year old daughter, should she be approached to make her more comfortable? — yes, the mother needs to assure the new girlfriend that her relationship with the man is now strictly platonic and only for the sake of their daughter and it needs to be explained to her that as the mother of his daughter, she will continue to be in their lives.

[4:4:46] A pair of twin women, one of them is single and the other is married, but when they go out together, the one that is married is always hit on by men rather than the one who is single, should they switch places? — no, you should always be genuine with who you are and not try to deceive another person; be who you are and be confident and eventually, the right person will come.

[4:4:47] A woman has been married for 15 years, but when this woman's husband takes her out, he complements other women rather than his wife — he needs to be told that this is wrong and that this hurts his wife's feelings; an honest and upfront conversation that you carefully control so as not to devolve it into an argument is the best way to resolve this issue.

[4:4:48] A girl has a boyfriend who is twenty years her senior but he scolds her like she is his daughter, but she loves him and has been with him for two years — this is just a habit that needs breaking by both of them together; an honest conversation needs to be had

about this; firmness and emotionality need to be employed in order to stop this habit from continuing.

[4:4:49] A woman is getting married in two months; her sister and mother are planning the bridal shower, but the woman doesn't want her mother present when strippers arrive at the shower, how should she tell her mother that she cannot be at that part of the shower? — an honest conversation needs to be had and the mother will understand that it would be inappropriate for her to attend that part of the shower.

[4:4:50] A woman dates her boyfriend for four years but he sucks his thumb and she broken up with him, but he wants her back as a his girlfriend, what should be done? — that is just a habit that needs to get out of the habit of doing; if that is his main flaw, then that can be resolved with a firm conversation and consistency.

[4:4:51] A girl has four roommates, one of whom has a boyfriend with whom she has sex in the common room — they must to be more discrete with when and where they have sex; it is wrong to do that in a public place where they know that others use frequently; they need to be told that it is inappropriate.

[4:4:52] A guy at work has been flirting with this woman but she is in a relationship and she doesn't mix business with pleasure, but he has been spreading rumours that they are sleeping together, what should be done? — he needs to be firmly told outside of working hours that this is wrong and that if he continues, then she will get the boss of the company involved to resolve the matter which will most likely end in him being fired from the company; firmness, honesty, and upholding one's integrity are essential to resolve this situation.

[4:4:53] A girl's ex-boyfriend is now dating her sorority sister; this seems to be breaking an ethical code for sorority sisters, but she still has feelings for her ex, what should she do? — this girl needs to understand that getting too attached to either of these people is only going to hurt her in the end; she must move on in order to preserve her own integrity.

[4:4:54] A woman is friends with a couple who are swingers and they have asked her to have a threesome with them, what should she do? — it is inevitable in this world that there exists a variety of different sexual preferences and acts that are not necessarily normalised in our society at present; if this woman is happy to conduct this act, she needs to understand that there should be no more feelings involved beyond the act itself.

[4:4:55] Many men are flocking around a girl who has a boyfriend who doesn't trust her to not cheat on him, how should she prove to him that she would never cheat? — all she can do is continue to prove to him that she is not interested in any other men, however, he should trust her if they want to continue being partners and it isn't right that he puts unnecessary pressures on her when she hasn't done anything wrong; if he cannot eventually trust her, then he may not be the right person for her.

[4:4:56] A woman's coworker has found a man she likes after being single for five years, but when on a night out, the man flirted with her when her friend went to the restroom, what should the friend do? — she needs to immediately tell the friend what happened; like all similar instances, the friendship may need to be sacrificed as a result of this; this is more of a test of their friendship than anything else; the friend needs to accept that this may end the friendship, but that in years to come, they may reconcile their friendship, but to avoid having something on your own conscience, it is important to tell the friend what has happened.

[4:4:57] A girl and her parents disagree about where she should go to university; her parents want her stay closer to home, but their daughter wants to go further afield for greater independence, what should she do? — the daughter needs to follow her own dreams and ambitions and go further afield, however, her parents deserve an explanation of why she wishes to do this.

[4:4:58] A woman has a friend who takes advantage of her friend's generosity too much; the friend likes staying over at her house; she cooks and cleans for the friend homeowner, but she is unemployed and she has been for a long time; she is a couch-surfer; what should happen here? — the friend needs to be told that it is inappropriate for her to be couch-surfing in her friend's home; she needs to be firmly told that her friend will help her to find a job and that she will go with her to look for an flat to live in, but she will no longer allow the friend to couch-surf in her home; this may jeopardise the friendship, but the independence of your home is more important and this friend needs to understand that what she is doing is inappropriate.

[4:4:59] A girl's boss (who she has slept with) and his girlfriend were looking for apartments and he mentioned to his girlfriend that he knew where the girl lived and his girlfriend is now suspicious about what has occurred between them, what should the girl do? — she needs to reassure the girlfriend in a calm and honest conversation that she no longer has any interest in her boss in a romantic way, which she shouldn't have had anyway, although that cannot be helped now; upfrontness and honesty is the best policy in this situation, but this conversation needs to be had outside of the setting of the office.

[4:4:60] A girl is dating a boy who is involved in the music industry, and even though he treats her well, he doesn't want her for a girlfriend — he needs to explain to her how he feels in a comfortable environment, such as in a park as the best place; honesty of feelings is the best way to break the relationship off with someone; calmness and sincerity will be felt by the other person through the delivery of the rejection.

[4:4:61] A woman's little sister comes to visit her every weekend and when she comes to visit, she raids the wine cabinet of three or four bottles of wine; she doesn't clean up, and makes her older sister serve her; what should the older sister say to her younger sister? — she needs to sit her down in public environment (not in the house/apartment) in order to have a calm and sincere conversation regarding the fact that she can't do that any longer

because it isn't fair; again, honesty and sincerity in one's delivery is the superior to resolution of such issues.

[4:4:62] A woman has received an invitation to go to her friend's 50th birthday party, but there is a £20 charge for all guests, should the friend go and should she buy her friend a gift too? — it is wrong for the host to charge £20 for guests to come; the friend should not attend.

[4:4:63] A girl has a crush on her boss; he's married — do not pursue this; it is immoral to do so.

[4:4:64] A man's two exes got together with each, one with whom he dated for ten years, and another for just ten months, he wants the one back whom he was with for ten years, should he break them up? — no, it would be wrong to intentionally break up a relationship for one's own pursuits; there are plenty of other people in the world to fall in love with again; if they happen to break up on their own accord, then pursuit of him at that point is appropriate, but not whilst they are still together.

[4:4:65] A woman has a boyfriend who is ten years younger than her; they have been together for 13 years; she has been married before but he hasn't; he wants to get married, but the woman is worried that marriage with him will ruin the relationship — this is a scenario in which one person's experience clouds their vision because it is possible that we can be too experienced of certain scenarios, so much so that we become cynical and blind to the reality that this is a new person and a new relationship; we should always apply our experiences in past relationships to our new and current relationships; this is one of those scenarios.

[4:4:66] A woman wants to move to Australia for a guy who she has known for only one month, but he has 3 children already with two other women and he is fourteen years older than her — this relationship needs to be ended immediately for obvious reasons and that this woman is losing her own dignity by being with this man.

[4:4:67] A woman has been dating a guy for two months and he has taken her out to meet his friends, one of whom is her ex-boyfriend who she was with for four months, should she tell him? — yes, she needs to be very honest with her boyfriend, and realistically, this relationship cannot continue because there are too many complexities involved and someone is going to get hurt; there are seven billion people in this world and we needn't be dating in such close circles.

[4:4:68] A woman has an eighteen year old daughter at university and wanted to know if she can bring home a young man friend at the weekend to her parents' house, should the parents allow this? — yes, they should allow because there is nothing wrong with being friends with the opposite sex, however, depending on the leniency of the parents, they are of course entitled to ask the daughter to only sit with the young man in common spaces in the house rather than alone in her room.

[4:4:69] A university friend keeps asking to see copies of my assignments so that she can take inspiration for her own assignments, but it's every single assignment that she wants to look at, how should this be approached? — you need to have a firm conversation with this friend to let them know that although you do want to help them with their studies, it is unfair to you to allow them to see every assignment that you write and that they need to respect your decision when you say that you would prefer not to show.

[4:4:70] A woman has a fifteen year daughter and they are discussing the topic of sex and the daughter wants to understand her mother's sex history, so what should she say? — honesty is the best policy with this topic, but it is important not to go into too much detail about your own endeavours as the daughter is still fairly young to go into such detail.

[4:4:71] A woman and her friends have committed to having dinner at each of their houses once a month, but one of her friends whenever she hosts, licks the spoon that is used to make the food and continues stirring with that same spoon, should something be said? — yes, she needs to be told about this by all of the other hosts albeit not in an argumentative way, but instead in a way that is calm and sincere; the delivery of this is the key element to resolving the issue.

[4:4:72] A woman has been with her boyfriend for seven years and she believes he has been cheating on her because she has found clothes a bigger size than her own in his apartment — he needs to be asked about this because he could well be cheating on her, but she can't make that accusation without more proof; questions regarding the subject should be pressed, but further investigation is required; honesty is always the best policy in this scenario; you need to tell him to be honest with you if he is having an affair or not.

[4:4:73] A woman who has been married for twenty-eight years has moved her mother and her aunt into her home due to their old ages and strained finances, but this is causing issues for intimacy in her marriage, what could be done? — if they have the finances to go on short vacations then that would be a suitable resolution to the problem, however, if they don't have finances for such things, then they need to find ways to work around the other people in their home; the daughter/niece took in her mother and aunt and this is the consequence of that decision.

[4:4:74] A man is sure that a female coworker was in a pornographic film, should she be confronted about this? — no, she doesn't need to be confronted about this; if the man is the boss of a company then it would be appropriate to confront, but the fact that he is just a coworker means that her being involved a pornographic film, no matter how immoral that is to him, does not affect him so he doesn't confront her about her own private matters.

[4:4:75] A woman's husband thinks it is okay to call her best friend for advice when they get into arguments, what should she do about it? — this is utterly wrong to do this and the husband needs to be told by both his wife and his wife's friend in unison that this habit

cannot go on; if he feels that he needs to speak to someone, then he should speak to a family member if not his wife herself.

[4:4:76] A woman has been married for three years and her husband wants her to suck his toes during their intimate moments, but she doesn't want to — she needs to be honest with him to say that she cannot and will not fulfil that particular desire of his and he needs to accept that if he wishes for the relationship to continue.

[4:4:77] A young man has been dating a man whom he is starting to develop feelings for, but originally their dating was on a friends-with-benefits basis; should the relationship be progressed or does he need to back away? — he needs to hint that he has developed more feelings for this man and that he would like to take the relationship beyond a friends-with-benefits basis; if the man rejects then he needs to accept that this relationship will not go further and that he needs to move on.

[4:4:78] A girl has been on-and-off with a young man whom she loves for five years, she is wondering whether she needs to move on? — she needs to move on from this relationship, but she should have one final discussion with the young man to ensure and to understand whether he is willing to progress the relationship to the next stage; if he isn't, then you need to move on and find another person.

[4:4:79] A man dating a girl for two months has invited her on a trip to another city, but she feels it is too soon to go on a trip with him, what should she do? — she should definitely go because this is a crucial time in their relationship regarding whether she feels that this is the right person for her to continue the relationship with; she should book her hotel separately and she should stay in a separate room or even in a separate hotel, but it is important for her to go to test the viability of the relationship.

[4:4:80] A mother took her four year old daughter to get a manicure and when her mother told her that she couldn't get the colour she wanted, the daughter gave her the most devilish of looks which embarrassed the mother and made her angry with her daughter, what should the mother do so that the daughter doesn't do this again to her? — the mother needs to sit the daughter down in a quiet room and she needs to have some firm words with her about she should respect her, especially when she is in public; firmness, upfrontness, and a stern face are essential to show the child the severity of what she has done so that she does not continue that behaviour.

[4:4:81] A girl and her boyfriend have been together for a year, but she found a female deodorant in his car which he said he had bought due to the greater effectiveness of women's deodorants in comparison to men's deodorants, is this a major concern? — no, it isn't to be a major concern as of right now, but monitoring his behaviour closely is now a priority, but you mustn't pursue this further unless you find more evidence of a possible situation of cheating.

[4:4:82] A woman volunteered to be the editor of the community newsletter, but now she wants to back out due to other work commitments, how can she find a way to leave without upsetting her neighbours? — she is within her rights to remove herself from the position, but it should be her responsibility to find the new person to fulfil the role.

[4:4:83] Ten years ago, a homosexual man had sexual relations with his girl friend's boyfriend, should she be told? — yes, she certainly does need to know; she needs to be told immediately even though this will inevitably implode the friendship and possibly even her relationship with her boyfriend; it is important to always maintain your own integrity.

[4:4:84] A woman has met a man through an online dating site and he wants to take her on a trip, she cancels all of her plans to go with him, but then he cancels on her at the last minute, is this a deal breaker? — yes, it is definitely a deal breaker for the relationship; we need people in our lives who are responsible and sensible and who we can trust be there when we need them; also considering the fact that they have met on an online dating site, it is easier to say that she will find someone else who can commit to going a trip with her.

[4:4:85] A man's best girl friend is getting married, but she wants him to be part of the wedding and to wear a kilt, but that's not his style, how can he tell her? — he just needs to have a conversation with her about this and be honest with her in the context of a public setting like a park or a restaurant; if she won't budge on her desire for him to wear the kilt, then it would be right for him to wear it just for that one day to make his friend happy even though it isn't his style; perhaps he could say that he will wear it for part of the day.

[4:4:86] A woman has met a man, but the man doesn't cook at all and he wants to go out to eat for the rest of his life; the woman is worrying that this is a deal breaker for the relationship — no, this isn't a deal breaker as long as the man is willing to pay for the majority of the meals out then the matter is settled; also, she needs to say to her boyfriend that sometimes cooking can be fun and romantic when you cook alongside your partner together; it is important that she tries to sell it to him so that he can change his mind every so often and eat in.

[4:4:87] A husband and wife have been married for fourteen years; the husband travels a lot, and his wife is sending him sexual images that he isn't responding to them in the way she desires, but how should he respond? — in a relationship that is long distant, it is important to always keep the sensual element of the relationship alive because otherwise, you risk losing that connection with one another; he should devote time to speaking to her sensually and perhaps reciprocating by sending her pictures or by going on video chat with his wife regularly.

[4:4:88] A girl has been dating a man for three years and he told her he is bisexual, what should she do? — it is important for her to be understanding in this circumstance; this man is still in the process or may have just completed the process of understanding his own identity; if you cannot deal with knowing that your boyfriend and potential future husband is attracted to both men and women then this isn't the right relationship for you,

however, if you could accept that this is who he is then you can work through this issue together.

[4:4:89] A girl asked a coworker out on a date, but he turned her down and now it is awkward at work, but how can she show him that she is over him? — the best way to show that she has gotten over him is by dating other people and not showing him any attention that could be interpreted as her being attracted to him.

[4:4:90] A woman has a sixteen year old daughter who has just lost her first job due to a change of hours, but should her mother step in and call the boss to protect her? — no, our children need to experience these normal occurrences for what they are; it is normal for her daughter to experience this in a job and it will now be her next endeavour to find another job; her mother needn't get involved with the boss as it may only upset her daughter in the end knowing that her mother has gotten involved.

[4:4:91] A girl has been broken up with her ex-boyfriend for two years, but he comes into her place of work constantly with his new girlfriend, how can she deal with this? — politely go over to the new girl and explain who you are and what her boyfriend is doing and how it is inappropriate; this will soon get him to stop coming in your place of work.

[4:4:92] A married woman has a friend who complains that she cannot find love, but the married woman receives more attention than her friend, but should she direct them to her friend? — do not direct them towards one's friend; her friend needs to find love on her own because a person that is right for her will be attracted to her; introducing a person that finds you attractive to your friend will not work, however, you could try and find somebody who would be attracted to your friend's attributes.

[4:4:93] A man of eighty-two years old asks out a girl of thirty years old, what should she do? — there is no reason why she shouldn't go out on a date with this man to discover whether they have anything in common; nothing needs to be committed to and nothing serious needs to be discussed; this may wish to have younger company around him and there is nothing wrong with that along as the woman understands that this man of course will not always hold the same interests or certainly not the same priorities as her.

[4:4:94] A woman's husband constantly buys drinks for his friends, her friends, and friends of their friends when they go out together, what can be done about this? — she needs to have a conversation with him about this and how he shouldn't feel obligated to buy everyone drinks when they go out; this is a habit that can be easily overcome with an honest and upfront conversation.

[4:4:95] A woman re-entered the dating scene and currently has three men she is seeing simultaneously; should she tell each man that she is dating others? — no, she needn't tell each of them about the other, but she does need to make a decision about which man she wishes to continue a relationship with because it isn't right to continue dating three men simultaneously and this may backfire on her at some point in the future.

[4:4:96] A woman meets a gentleman at an event, but he is married — no, it is wrong to pursue men that are married as this encourages adultery which is never morally upstanding.

[4:4:97] A man left this woman for another woman but he continuously texts her saying that he wants her back, what should she do? — she needs to ignore his texts and she needs to move on with her life; this man doesn't have respect for her and neither is he serious with continuing a relationship which we can see with how he has treated the other woman.

[4:4:98] A woman's husband began going to the gym and has started posting half naked pictures online because his ego has gone too far, what should his wife say? — he needs to stop posting such pictures online if his wife does not support him to do so and he should understand why she doesn't want him to do this in such a public space.

[4:4:99] A hairdresser's mother never supported her career to be a business owner, but now comes into the salon without an appointment and wants the service for free — the daughter needs to explain to her mother that she does require an appointment, especially so if she wishes to continue having her hair done for free because her daughter is losing business because of what her mother is doing; raising the issue of how her mother didn't support her career should be done at a separate time, but should still be raised if it continues to both the daughter.

[4:4:100] A man and his three friends have planned a trip and had originally planned to split the costs four ways, but one of the friends has backed out, should the friend who backed out still pay his share? — yes, the friend should still pay his share even if he isn't going because he had committed to going during the booking of the trip; however, posing this to him may ruin the friendship, but that is not to be feared for maintaining our integrities is the most important part of all these scenarios.

[4:4:101] A woman's mother's best friend has introduced her to using sex toys and other forms of sexual stimulation devices, but the mother has begun speaking to her daughter about this, how should the daughter tell her mother that she doesn't want to speak about those things? — this issue can be simply resolved through an honest, affirmed, stern, and clear conversation between the daughter and her mother and how the daughter finds her mother to be inappropriate in what she says.

[4:4:102] A woman's boyfriend is too tired for sexual intercourse after working hard, does she have the right to be frustrated and suspicious? — yes, but she shouldn't directly take this out and moan at her boyfriend because that approach will push him further away from her as he will feel suffocated by her; instead, she needs to take a proactive approach to stimulate sensuality from him, such as organising a vacation together, a night in for just the two of them or some other way of igniting relaxation and sensuality where he doesn't need to feel tired or worried about work.

[4:4:103] A woman of thirty-one has been approached by a man sixteen years her senior who has a twenty five year old son, would it be strange for her to pursue this relationship considering the fact that she is closer in age to the man's son than himself? — yes, it isn't right for him to approach her in this way, especially considering the age of his son and she must consider how a relationship with this older man would work for her priorities.

[4:4:104] A woman's husband, whom she been married to for twenty three years, commutes to work, but has suggested that they invest in a crash-pad for him to stay in during the week, is she being unreasonable for wanting him to come home every night? — it depends on how far he has to travel to commute; maybe, instead of getting a crash-pad, the family could relocate closer to his place of employment which would solve the issue and allow him to come home every night to his wife.

[4:4:105] A woman in her forties has a long distance relationship for three years with a man twenty nine years of age, should she move to the country to be with him? — it really depends on whether both are financially stable to support one another independently of each other, but are also willing to work together to become as one to begin their life joined together; three years for a long distance relationship is like three months in a normal relationship; by at the maximum of three years, you should know whether you intend to be with this person or not.

[4:4:106] A girl's boyfriend doesn't like to engage in foreplay, how is this brought up to him without hurting his feelings? — she needs to be honest with him about her sensual fantasies and desires and how it is part of his responsibility as her partner to fulfil those to some extent, but not necessarily in their entirety; if he really doesn't wish to engage in foreplay then it is also part of her responsibility to accept his wishes.

[4:4:107] A girl bought her boyfriend some nice items for Christmas but she caught him texting a friend of his saying that he didn't like the presents, what should she do? — she needs to confront him about this; she shouldn't be concerned that he doesn't like presents, but she should instead be concerned that he felt that he couldn't speak directly to her about it and instead opted to speak to his friend which was wrong; an honest, clear, and firm conversation needs to be had here in order to resolve this issue.

[4:4:108] A girl and her boyfriend have been living with each other for eight months and they do everything together, but she wants more space and wants him to move out, but how does she ask this of him without him breaking up with her? — reclamation of her life is not something which should require him to move out; she just simply needs some breathing space because she feels suffocated; this issue here is that she has already taken the step of moving in with her boyfriend; to get him to move out at this stage would be a major regression in the relationship and would cause severe division and damage to the trust already built; therefore, moving out isn't an option if she intends to stay with her boyfriend; instead, she should look at doing activities that only she is interested in or spending more to alone by speaking to her boyfriend and telling him that sometimes she

needs him to go out of the house and she needs to be alone and if he is understanding and the right person for her, then he will accept this as one of her needs.

[4:4:109] A woman was in her last relationship for thirteen years and within the first year of her new relationship, she told him that she wants to know if he wants to marry her and have a child after a year, should he be given more time to decide? — yes, although a year is enough to know if you love someone and want to spend more time with them to progress the relationship, it still isn't enough time to decide specifically when you want to get married and when you want to have a child, especially when the decision is forced upon one of the parties by the other; she needs to give him more time, perhaps by suggesting that they set a date to be engaged to show that commitment which will then lead onto the next step of marriage and subsequently children when they are both ready and circumstances are suitable.

[4:4:110] A woman pregnant with twin girls has chosen names, but her mother doesn't like them, should she change the name choices to suit her mother? — no, it is important that your daughters are given the names you intended for them; your mother had the chance to name you as her daughter so she should be the most understanding person with regards to how you wish to do the same.

[4:4:111] A woman has been with her boyfriend for ten years and recently, she has caught feelings for her high school sweetheart as he has come back into her life, and she has been hanging out with him behind her boyfriend's back — it is time for her to break up with her boyfriend to allow him to be with someone who really loves him; you can go back with your high school sweetheart, but know that you must not go back to your boyfriend again because it is unfair to lead on any person's emotions.

[4:4:112] A woman wanted her boyfriend to buy her a diamond bracelet; they have been dating for one year, and he got into an argument about it with her and has suggested that they take a break; they haven't spoken to one another for a week — you need to give him the benefit of the doubt about buying expensive things; to buy expensive gifts is not necessary after a year of dating and you will push him further away from you if you continue to suffocate him with your demands of gifts; perhaps he doesn't have the funds to do that or maybe he had planned to purchase you something else; you must have a conversation with him about this in order to resolve.

[4:4:113] A woman goes through her boyfriend of two and a half year's phone; she finds texts from another woman on his phone sharing pictures — she must confront him about this to discover of what has happened between her boyfriend and this woman before she can make a decision about whether she will continue this relationship.

[4:4:114] A woman has been with her boyfriend two and half years and she noticed that he had liked his ex's pictures on a social media site; the girlfriend spoke to her cousin about this, but her cousin recorded what the girlfriend had said and then sent this to the boyfriend; should the cousin be forgiven? and should the boyfriend be liking such

pictures? — the cousin should certainly not be spoken to about such matters and again the cousin should be told that what she did was wrong both by the girlfriend and the boyfriend in unison for getting involved in their relationship in such a way; however, the girlfriend should really have spoken to her boyfriend directly about this matter; he shouldn't be sending pictures to any other girls and he needs to be honest and clear with how he feels about the future of this relationship.

[4:4:115] A woman goes to business events and greets people with a kiss on the cheek, but they return by trying to kiss her — the woman should shake a man's hand firmly rather than greeting them with a kiss on the cheek; this will demonstrate to them that she does not intend to show any further affection and that she wishes to keep all interactions as professional as possible.

[4:4:116] A woman's boyfriend works in a gym and there is a girl in their that is flirting with the boyfriend — it's the boyfriend's fault for showing the girl any attention or sign that he was at all interested in her; his girlfriend should not get involved at this stage; this is his problem and he should deal with this to resolve it.

[4:4:117] A woman's boyfriend has a lock on his phone and takes it with him everywhere meanwhile she has no locks on her phone and allows him to go on the phone; should the girlfriend be worried? — no, there is no need to be worried about this; it just means that her boyfriend is more secretive or private than she is, but that doesn't mean he is cheating on her or being in any deceitful; it just simply means that he would prefer to keep his phone locked when he isn't around as that is his own personal property.

[4:4:118] A man and his girlfriend work at the same bar together, she gets a lot of male attention such as phone numbers from men and tips; should the man say anything to either his girlfriend or the men? — no, not at all, as long as his girlfriend is coming home to him every night then he has nothing to be worried about and it is good for him that he works there with her because he can keep an eye how other men are treating her and if he ever sees any type of misconduct, he can quickly step in and state who he is; furthermore, demonstrating that type of confidence will go far in securing and strengthening the trust and love in the relationship.

[4:4:119] A seventy year old widow wants to know where to go to meet someone age appropriate — one of the best places for older people to meet people their own age is to get involved in charity or to get involved in the local church, or even by using more modern forms of communications like social media and networking sites.

[4:4:120] A girl's boyfriend has no sense of style; how does she gently tell him what ring to pick out that is nice for their engagement? — she can send across pictures of rings to put him on the right track, but she can also get one of his friends to go with him to pick the ring having her told the friend how to guide him to picking a good ring prior.

[4:4:121] A woman can't afford to buy anything for her boyfriend this Christmas, and she feels guilty, should she tell him to take the presents he has bought for her back to the store? — no, it wouldn't be right for her to say that; instead, she needs to explain to him beforehand her financial constraints and how she won't have enough funds to pay for an good set of gifts this year; if he is understanding and the right boyfriend for her then he will understand.

[4:4:122] A twenty-two year woman still lives with her mother, but her mother is very overbearing, such as she still has a curfew; her mother wants to know everything her daughter is doing, and her mother wants to be with her daughter all the time — the twenty-two year old daughter needs to move out of the house if she does not like the way that her mother runs or controls what goes on her house or who comes in and out of her house and at what times; her daughter, naturally and rightly so, feels suffocated by her mother, but the only way to resolve this is by getting her independence by moving out; alternatively, she could have a conversation with her mother about this, but her mother will have the final say since the daughter remains living under her mother's roof and her rules.

[4:4:123] A woman is six months pregnant and her husband is very concerned that she will not be able to retain her figure after the pregnancy, how does she get him to stop talking about this? — he needs to understand and accept that once a woman is pregnant, her body naturally changes shape and form, especially after giving birth, and although his wife will work hard to return to her original figure, he should love her for who she is as his wife and the mother of his child; this can be resolved with an honest and firm conversation about what is the priority in relationships.

[4:4:124] A woman and her boyfriend have been together for 8 months and she wants to go to an upcoming party, but her boyfriend doesn't want to go because he is more anti-social than she is, how can she convince him to go? — there are two possible ways to approach this situation, either she convinces him to go by saying that she will do something with that he enjoys to do or she can go to the party on her own with the him; the girlfriend needs to have a conversation with her boyfriend stating the importance of compromising in a relationship; the fact that comprise is essential to the functionality of a relationship and that he needs to compromise just this once on this issue.

[4:4:125] A woman has a male co-worker who is skinny-shaming her about the weight she has lost — she needs to ask this co-worker to meet her somewhere outside of the office space environment and she needs to have an honest and affirmed, though not argumentative conversation with this co-worker to let him know of her concerns and that if the skinny-shaming continues, she will have no choice but to report this co-worker to the higher authorities within the company; firmness and professional will be key to resolving this situation with an honest conversation in the correct setting.

[4:4:126] A woman is eight months pregnant and strangers come up to her everywhere and pet her stomach and give lots of unsolicited advice, what can she do stop them? — she can

get step back when they try to pet her stomach which shows a physical rejection of their attempt to pet her stomach after which they will understand you are uncomfortable with their presence; if you allow the physical interaction to occur, people will take for granted that you will allow their unsolicited advice to be heard also therefore the rejection needs to take place at the initiation with the physical stepping away to show that their physical interaction is not wanted.

[4:4:127] A girl has a boyfriend with an outgoing personality and other girls take this as him flirting with them, how can she tell him to calm it down? — she needs to have an honest conversation with him about how his outgoing personality is being interpreted by other girls, despite the fact that it is attractive and likeable; you need to explain that you don't wish for him to change, but that toning down the extent to which he is outgoing will provide greater clarity of his intentions with his girlfriend, but also his disinterest in other girls so as to present greater external clarity.

[4:4:128] A man's friend's boyfriend has found out that her boyfriend is cheating on her, should this man tell his female friend that her boyfriend is cheating on her; they have been friends for five years — yes, like in all other scenarios in which you receive information like this, it is important to uphold and preserve your own conscience regarding these matters; you should tell her, but you need to be ready to sacrifice your friendship with her as a direct result.

[4:4:129] A woman has two teenage boys, but she works full time and doesn't see what they do at the house when she isn't there, would it be appropriate for her to get a secret webcam? — it would only be appropriate for the mother to buy a webcam pointed at the front door to see who is coming and going from her house; an inside webcam would be going too far.

[4:4:130] A girl keeps calling a woman's son to speak with him all night over the phone and it is disturbing the functionality of the house; should the mother block the little girl's number? — yes, the girl needs to understand that she cannot ring this woman's son night after night as she is ringing his mother's house, not her son's house so time for speaking on the phone must be done according to the mother's rules.

[4:4:131] A woman has been friends with a man for four years; she loves him, but he is about to get married this summer, should she say something? — no, this woman has become a victim of Fool's Patience; she has waited too long to be with the man she loves and she has lost him as a direct result of her inability to take the opportunities afforded to her to be with him; she cannot and should not say anything; she needs to move on with her life and accept that she is too late.

[4:4:132] A woman has been sexually active with a man for two years and the girl is starting to develop feelings, should she pursue this? — the best thing to do in this scenario is to have a conversation with the man to understand whether he sees the relationship going beyond sex; if he does, then they can move forward, but if he doesn't, then she

needs to accept it for what it is and she will learn next time that a relationship forged on sex is not the relationship to forge feelings upon.

[4:4:133] Two girls are roommates, but one of the girls wants the other to move out so that she can move her boyfriend into the apartment; however, the real estate is in a prime location, what should she do? - they can no longer be friends; this is a clear violation of both the roommate agreement and the friendship that has been forged as part of this apartment sharing agreement.

[4:4:134] A woman has been seeing a man for two years, but the man doesn't want to label the relationship, should the woman be concerned? — when a person isn't ready to label something, that typically means that they are not comfortable with wanting to progress the relationship beyond what it currently exists as; the woman needs to understand what the man wants from the relationship; if his expectations do not align somewhat with hers then this is not the right relationship for her and she needs to move on.

[4:4:135] A woman's boyfriend is a physiotherapist and goes to different people's houses to provide his sessions, however, one female client of his cooks him dinner; should the boyfriend drop her as a client? — no, because that would mean losing business for him, however, he needs to be more strict with all of his clients so that they understand that such actions are inappropriate; people only take action when they feel comfortable enough to do so and this female client has been made to feel comfortable enough to cook him meals; this is something that he needs to resolve as part of the way he portrays himself and isn't something to be concerned about for his relationship with his girlfriend.

[4:4:136] A woman has been with her boyfriend for a year now, but the girl was with a mutual friend of theirs beforehand, should she tell him about this? — yes, honesty is the best policy in all types of relationships; if we aren't honest with one another from the beginning, we risk falling into the habit of thinking that dishonest is a form of protection, when in fact, it is actually a form of deception; the boyfriend needs to know about this; if it ends the relationship as a result, then that is the price paid for honest, but best to be honest now than to wait another few years to do so; really, the girlfriend should have told him this information much sooner than after a year of being together.

[4:4:137] A woman has a female friend who has recently been divorced; however, her ex-husband keeps trying to contact her, how can she tell him to stop contacting her as it is not appropriate? — she needs to have a conversation with the ex-husband in unison with her female friend, the divorcé, regarding this situation; the ex-husband needs to be told in firmness and honesty that what he is doing is entirely wrong and that he needs to stop this; once this conversation has been had, actions need to be taken to block the man.

[4:4:138] When is it the appropriate age for a woman to stop getting plastic surgery? — there is no and there should be no societally-ascribed age to stop getting plastic surgery; if you wish to get plastic surgery then you are entitled to do so no matter how old you are; however, you do need to take into consideration medicality of the situation, namely,

understanding the extent to which old age plastic surgery is safe to proceed with which of course surgeons can assist with understanding.

[4:4:139] A woman has been playing matchmaker with two of her friends, but they have recently broken up and now she feels that her friend treated the man wrongly, should she let it go? - yes, women act differently with friends than they do with their partners and this isn't something that the matchmaker should get involved with, however, the friend may resent you for wasting her time with a man she isn't suitable for; the moral of this story is to avoid playing matchmaker as much as possible.

[4:4:140] A woman got married this year and even though she and her fiancé had originally planned to do a large wedding, they were forced to cancel those plans due to affordability, and settled for a much smaller wedding; however, the guests and bridal party were offended and so the couple are not getting invited to anything now; was she right to do that? — a couple should be allowed to change their mind about the technicalities of their own wedding without being judged heavily for this about their friends and family; a reevaluation of such friends and family members needs to be had by the couple; perhaps a conversation with friends and family members individually will help to solve this issue.

[4:4:141] A woman has a female co-worker who is new to their corporate office, however, this new co-worker's dress is not appropriate for the corporate office; such as scruffy clothing and jeans, although she is good at her job; should the coworker speak to this girl? — yes, this girl needs to understand that looking professional is just as important as being and acting professional and being good at her job and that by dressing in such an unprofessional way, she isn't doing herself any favours; this is a conversation that needs to take place using honesty, sincerity, and calmness, and needs to take place outside of the setting of the office.

[4:4:142] A couple love each other and want to get married, but the man wants his fiancé to sign a prenuptial agreement, but his fiancée is hesitant to do so; what should she do? — in today's world in which capital is held in all many of objects, it is important to have agreements, especially for those holding creative capital such as myself for example; protecting what is yours from others, even your spouse, is important because you remain a person of individuality; therefore, prenuptial agreements, although they may not be pleasant, are sometimes necessary to ensure the sincerity of the marriage partner whether it be a man or woman being asked to sign one.

—

[4:4:143] A huge range of different versions of the Omnidoxy will exist throughout its history due to the importance of the commerciality of the treatise, included versions of which are the following; thinline, ultrathin, small print, medium print, large print, indexed, non-indexed, red letter, wide-margin, narrow-margin, paperback, hardcover, leatherbound, columned, uncolumned, pocket, reference, study, standard, living, message,

chronological, children's, parallel, leadership, calligraphic, cosmic, engraved, encased, digitised, critical, footnoted, and notational.

The Catalogue of Extolled Persons of the Astronist Tradition

[4:5:1] Every belief system holds a system in which they credit different individuals for their contributions, hence it is even more so important for the Astronist tradition due to the fact that it introduced and prioritises contributionism as part of its beliefs, that it also holds a system in which it is able to classify people with outstanding contributions in specific fields; this process at the centre of this system for Astronism is to be henceforth referred to as extollation.

[4:5:2] Like in all systems of credit in religious traditions, there exists a hierarchy and the Astronist system of extollation is no different; in the Astronist tradition, there are extolled persons, celestans, and finally, at the highest point, there are the cometans; it is the extolled persons that shall be listed in this discourse and subsequent discourses while the celestans and cometans shall be theoretically explored and designated in a post-omnidoxical setting upon the complete establishment of The Institution.

[4:5:3] Despite the fact that Astronism does hold the process of extollation close to its core, it remains important to reaffirm the difference between the Astronist tradition of celebration and the traditions of celebration of prominent individuals in other religions; people are not be worshipped, but are instead to be enknowledgeed about, revered, and spoken of more often than they presently are so that they are not forgotten for their contributions to the world and it is this principle which rests at the heart of the tradition of extollation as part of Astronism.

[4:5:4] Also introduce the notion that a person may choose one or more extolled persons to be their personal guardian which is to be known as a protol; people can look towards their protol(s) for inspiration and guidance by studying their life and relating to their own struggles and this important practice for Astronists is to be henceforth known as protolance.

[4:5:5] Extolled philosophers in the Astronist philosophical tradition are also known as Contributors to Thought.

[4:5:6] In the Astronist tradition, celestans are people that are considered to have contributed to the furtherance of Astronism and are certified thereafter, cometans are people that are considered to have mastered their understanding of Astronism and The Cosmos to such an extent that they are provided with this title, after they have successfully progressed along their path to Cometanhood.

[4:5:7] By these notions, we can understand the distinct difference between a person that is extolled in the Astronist and a person that can be described as a saint in other religious traditions; the extolled persons of the Astronist tradition are not to be worshipped, nor are they considered to have any special connection to some supernatural power, despite any of their own proclamations of such, however, they are considered to be inspired persons in the same way that I, as Cometan, am an inspired person for I have experienced personal

inspirations, or ideational revelations just as these brilliant minds of have also experienced.

[4:5:8] All entries are provided in alphabetical order according to their surnames as part of these different extollative lists.

[4:5:9] The following list details philosophers which are to be considered extolled in the Astronist tradition due to the significance of their contributions to the field of philosophy.

[4:5:10] Nicola Abbagnano - For their contributions made to existentialism in 20th century philosophy.

[4:5:11] Muhammad Abduh, (1849–1905) - For being a founding figure of Islamic Modernism and contributing to 18th century Islamic jurisprudence and philosophy.

[4:5:12] Peter Abelard, (1079–1142) - For their contributions to the tradition of scholasticism as well as being preeminent logician.

[4:5:13] Abhinavagupta (fl. c. 975–1025) - For their achievement of polymathy, and for contributing to Indian philosophy, specifically in the branch of aesthetics.

[4:5:14] Isaac ben Judah Abravanel, (1437–1508) - For their contributions to biblical commentary and religious philosophy.

[4:5:15] Marilyn McCord Adams, (1943-2017) - For their contributions to the philosophy of religion, theology, and medieval philosophy.

[4:5:16] Joseph Addison, (1672–1719) - For their contributions as a prominent essayist, poet, and playwright in the 17th century.

[4:5:17] Adelard of Bath, (12th century) - For their contributions to natural philosophy, as well as for his translation of Arabic and Greek works of astronomy and philosophy into Latin.

[4:5:18] Alfred Adler, (1870–1937) - For being the founder of the school of individual psychology, as well as his contributions to psychotherapy and related theories.

[4:5:19] Theodor Adorno, (1903–1969) - For their contributions to philosophy, sociology, and for his compositional career.

[4:5:20] Jamal al-Din al-Afghani, (1839–1897) - For their contributions to Islamic ideology during the late 19th century, as well as for his political activism.

[4:5:21] Rodolphus Agricola, (1443–1485) - For their contributions to northern European humanism, as well as for being an educator, musician, and Hebrew scholar.

[4:5:22] Heinrich Cornelius Agrippa, (1436–1535) - For their achievement of polymathy, for his occult writings, and his contributions as a legal scholar and theologian.

[4:5:23] Pierre d'Ailly, (1350–1420) - For their contributions to theology, and for his works on astrology.

[4:5:24] Kazimierz Ajdukiewicz, (1890–1963) - For their contributions to semantics, as well as being a prominent figure in the Lwów-Warsaw school of logic.

[4:5:25] Albert of Saxony (c. 1316-1390) - For their contributions to both logic and physics.

[4:5:26] Albertus Magnus, (1193-1280) - For their contributions to Christian theology in the 13th century.

[4:5:27] Joseph Albo, (1380–1444) - For their contributions to Jewish philosophy during the fifteenth century, especially regarding the fundamentals of Judaism.

[4:5:28] Alcmaeon of Croton, (5th century BC) - For their contributions to natural philosophy and medical theory during the era of antiquity.

[4:5:29] Virgil Aldrich, (1903–1998) - For their contributions to the philosophical branches of art, language, and religion.

[4:5:30] Yohanan ben Isaac Alemanno, (1433–1504) - For their contributions to humanist and Jewish philosophy.

[4:5:31] Alexander of Aphrodisias, (2nd century) - For their contributions to commentary on the writings of Aristotle.

[4:5:32] Alexander of Hales, (d. 1245) - For their important contributions in the development of scholasticism, as well as the Franciscan School.

[4:5:33] Samuel Alexander, (1859–1938) - For being the first Jewish fellow of an Oxbridge college and for his contributions to 19th century philosophy.

[4:5:34] Dante Alighieri, (1265–1321) - For their major poetic contributions during the Late Middle Ages.

[4:5:35] Antonio Aliotta, (1881–1964) - For their contributions to experimental psychology and Italian philosophy in the 20th century.

[4:5:36] Abd al-Jabiri, (1935-2010) - For their contributions to Islamic philosophy and thought in the 20th century.

[4:5:37] Abdullah al-Qasemi, (1907–1996) - For their contributions as a Saudi Arabian 20th-century writer and one of the most controversial intellectuals in the Arab world due to his radical change from defending Salafism to defending atheism and rejecting organised religion.

[4:5:38] William Alston, (born 1921) - For their contributions as an American philosopher and for making influential contributions to the philosophy of language, epistemology, and Christian philosophy.

[4:5:39] Johannes Althusius, (1557–1638) - For their contributions as a German jurist and Calvinist political philosopher.

[4:5:40] Louis Althusser, (1918–1990) - For their contributions as a French Marxist philosopher and how his arguments and theses were set against the threats which he considered to be attacking the theoretical foundations of Marxism; such arguments included the influence of empiricism on Marxist theory as well as humanist and reformist socialist orientations which manifested as divisions in the European communist parties in addition to the problem of the "cult of personality" and of ideology.

[4:5:41] Robert Alyngton, (d. 1398) - For their contributions as an English philosopher who developed new logical, semantic, metaphysical, and ontological theories in 14th century thought; additionally, for being credited with creating the ideological foundation for the Oxford Realists by substituting reference to objective reality with reference to mental and linguistic reality.

[4:5:42] Bhimrao Ambedkar, (1891–1956) - For their contributions as an Indian jurist, economist, politician and social reformer who inspired the Dalit Buddhist movement and campaigned against social discrimination towards the untouchables (Dalits), while also supporting the rights of women and labour.

[4:5:43] Ambrose, (c. 340-397) - For their contributions as a bishop of Milan who became one of the most influential ecclesiastical figures of the 4th century. Ambrose was one of the four original Doctors of the Church,

[4:5:44] Abu'l Hasan Muhammad Ibn Yusuf al-'Amiri, (d. 992) - For their contributions as a Muslim theologian and philosopher of Persian origin, who attempted to reconcile philosophy with religion, and Sufism with conventional Islam; while al-'Amiri believed the revealed truths of Islam were superior to the logical conclusions of philosophy, he argued that the two did not contradict each other.

[4:5:45] Ammonius Hermiae, (5th century) - For their contributions as a Greek philosopher, and the son of the Neoplatonist philosophers Hermias and Aedesia; he was a pupil of Proclus in Athens, and taught at Alexandria for most of his life, writing commentaries on Plato, Aristotle, and other philosophers.

[4:5:46] Ammonius Saccas, (3rd century) - For their contributions as a Greek philosopher from Alexandria who was often referred to as one of the founders of Neoplatonism; he is mainly known as the teacher of Plotinus, whom he taught for eleven years from 232 to 243.

[4:5:47] André-Marie Ampère, (1775–1836) - For their contributions as a French physicist and mathematician who was one of the founders of the science of classical electromagnetism, which he referred to as “electrodynamics”; he is also the inventor of numerous applications, such as the solenoid (a term coined by him) and the electrical telegraph; an autodidact, Ampère was a member of the French Academy of Sciences and professor at the École polytechnique and the Collège de France.

[4:5:48] Anton Wilhelm Amo, (1703-c. 1759) - For their contributions as a Ghanaian philosopher from what is now Ghana; a teacher at the universities of Halle and Jena in Germany after studying there; brought to Germany by the Dutch West India Company in 1707 as a child, and given as a gift to the Dukes of August Wilhelm and Ludwig Rudolf von Wolfenbüttel, he was treated as a member of the family of Anthony Ulrich, Duke of Brunswick-Wolfenbüttel, he was the first African known to have attended a European university.

[4:5:49] Anaxagoras, (died 462 BC) - For their contributions as a Pre-Socratic Greek philosopher; responding to the claims of Parmenides on the impossibility of change, Anaxagoras described the world as a mixture of primary imperishable ingredients, where material variation was never caused by an absolute presence of a particular ingredient, but rather by its relative preponderance over the other ingredients

[4:5:50] Anaxarchus, (fl. 340 BC) - For their contributions as a Greek philosopher of the school of Democritus; together with Pyrrho, he accompanied Alexander the Great into Asia. The reports of his philosophical views suggest that he was a forerunner of Pyrrhonism.

[4:5:51] Anaximander, (c. 610 BC-c. 546 BC) - For their contributions as a pre-Socratic Greek philosopher who lived in Miletus, a city of Ionia (in modern-day Turkey); he belonged to the Milesian school and learned the teachings of his master Thales; he succeeded Thales and became the second master of that school where he counted Anaximenes and, arguably, Pythagoras amongst his pupils.

[4:5:52] Anaximenes of Miletus - For their contributions as an Ancient Greek Pre-Socratic philosopher active in the latter half of the 6th century BC.

[4:5:53] Alan Ross Anderson, (1925–1973) - For their contributions as an American logician and professor of philosophy at Yale University and the University of Pittsburgh; a frequent collaborator with Nuel Belnap, Anderson was instrumental in the development of relevance logic and deontic logic.

[4:5:54] John Anderson, (1893–1962) - For their contributions as a Scottish philosopher who occupied the post of Challis Professor of Philosophy at Sydney University from 1927 to 1958; he founded the empirical brand of philosophy known as Australian realism.

[4:5:55] Ando Shoeki, (1703–1762) - For their contributions as a Japanese philosopher of the 18th century; he rejected much of the Buddhist and Confucian thinking prevailing in Edo period of Japan; he also opposed feudalism in the political system; Shoeki never became a prominent philosopher, and throughout his life he had few followers compared to other beliefs in Japan.

[4:5:56] Andronicus of Rhodes, (c. 70 BC) - For their contributions as a Greek philosopher from Rhodes who was also the scholarch (head) of the Peripatetic school; he is most famous for publishing a new edition of the works of Aristotle that forms the basis of the texts that survive today.

[4:5:57] Peter Annet, (1693–1769) - For their contributions as an English deist and early freethinker.

[4:5:58] Anniceris, (fl. 300 BC) - For their contributions as a Cyrenaic philosopher; he argued that pleasure is achieved through individual acts of gratification which are sought for the pleasure that they produce, but he also laid great emphasis on the love of family, country, friendship and gratitude, which provide pleasure even when they demand sacrifice.

[4:5:59] G. E. M. Anscombe, (1918–2001) - For their contributions as a British analytic philosopher; she wrote on the philosophy of mind, philosophy of action, philosophical logic, philosophy of language, and ethics; she was a prominent figure of analytical Thomism.

[4:5:60] Anselm, (1034–1109) - For their contributions as an Italian Benedictine monk, abbot, philosopher and theologian of the Catholic Church, who held the office of archbishop of Canterbury from 1093 to 1109; after his death, he was canonised as a saint; his feast day is 21 April. Beginning at Bec, Anselm composed dialogues and treatises with a rational and philosophical approach, sometimes causing him to be credited as the founder of Scholasticism.

[4:5:61] Antiochus of Ascalon, (c. 130-68 BC) - For their contributions as an Academic philosopher. He was a pupil of Philo of Larissa at the Academy, but he diverged from the Academic skepticism of Philo and his predecessors; he was a teacher of Cicero, and the first of a new breed of eclectics among the Platonists; he endeavoured to bring the doctrines of the Stoics and the Peripatetics into Platonism, and stated, in opposition to Philo, that the mind could distinguish true from false.

[4:5:62] Antiphon, (480-403 BC) - For their contributions as the earliest of the ten Attic orators, and an important figure in fifth-century Athenian political and intellectual life.

[4:5:63] Antisthenes, (c. 444-365) - For their contributions as a Greek philosopher and a pupil of Socrates; Antisthenes first learned rhetoric under Gorgias before becoming an ardent disciple of Socrates; he adopted and developed the ethical side of Socrates' teachings, advocating an ascetic life lived in accordance with virtue; later writers regarded him as the founder of Cynic philosophy.

[4:5:64] Karl-Otto Apel, (born 1922) - For their contributions as a German philosopher and Professor Emeritus at the University of Frankfurt am Main; he developed a distinctive philosophical approach which he called transcendental pragmatics.

[4:5:65] Apuleius, (c. 123-c. 180) - For their contributions as a Latin-language prose writer, Platonist philosopher and rhetorician.

[4:5:66] Thomas Aquinas, (1225–1274) - For their contributions as an Italian Dominican friar, Philosopher, Catholic priest, and Doctor of the Church; he is an immensely influential philosopher, theologian, and jurist in the tradition of scholasticism.

[4:5:67] Isaac ben Moses Arama, (1420–1494) - For their contributions as a Spanish rabbi and author; he was at first principal of a rabbinical academy at Zamora (probably his birthplace); then he received a call as rabbi and preacher from the community at Tarragona, and later from that of Fraga in Aragon.

[4:5:68] Arcesilaus, (316–241 BC) - For their contributions as a Greek philosopher and founder of the Second or Middle Academy—the phase of Academic scepticism.

[4:5:69] Archytas, (428–347 BC) - For their contributions as an Ancient Greek philosopher, mathematician, astronomer, statesman, and strategist; he was a scientist of the Pythagorean school and famous for being the reputed founder of mathematical mechanics, as well as a good friend of Plato.

[4:5:70] Roberto Ardigò, (1828–1920) - For their contributions as an Italian philosopher; he was an influential leader of Italian positivism and a former Roman Catholic priest.

[4:5:71] Hannah Arendt, (1906–1975) - For their contributions as a German-American philosopher and political theorist; her many books and articles on topics ranging from totalitarianism to epistemology have had a lasting influence on political theory; Arendt is widely considered one of the most important political philosophers of the twentieth century.

[4:5:72] Aristippus of Cyrene, (c. 435-366 BC) - For their contributions as the founder of the Cyrenaic school of Philosophy; he was a pupil of Socrates, but adopted a very different philosophical outlook, teaching that the goal of life was to seek pleasure by circumstances to oneself and by maintaining proper control over both adversity and prosperity; his outlook came to be called "ethical hedonism."

[4:5:73] Aristo of Chios, (fl. 250 BC) - For their contributions as a Stoic philosopher and colleague of Zeno of Citium; he outlined a system of Stoic philosophy that was, in many ways, closer to earlier Cynic philosophy; he rejected the logical and physical sides of philosophy endorsed by Zeno and emphasised ethics; although agreeing with Zeno that Virtue was the supreme good, he rejected the idea that morally indifferent things such as health and wealth could be ranked according to whether they are naturally preferred.

[4:5:74] Aristotle, (384 BC–322 BC) - For their contributions as a Greek philosopher during the Classical period in Ancient Greece, the founder of the Lyceum and the Peripatetic school of philosophy and Aristotelian tradition; along with his teacher Plato, he has been called the "Father of Western Philosophy".

[4:5:75] Arius, (256–336) - For their contributions as a Libyan presbyter and ascetic, and priest in Baucalis in Alexandria, Egypt; his teachings about the nature of the Godhead in Christianity, which emphasised God's uniqueness and the Christ's subordination under the Father, and his opposition to what would become the dominant Christology, Homoousian Christology, made him a primary topic of the First Council of Nicaea, which was convened by Emperor Constantine the Great in 325.

[4:5:76] Mohammed Arkoun, (born 1928) - For their contributions as an Algerian scholar and thinker; he was considered to have been one of the most influential secular scholars in Islamic studies contributing to contemporary intellectual Islamic reform.

[4:5:77] Jacobus Arminius, (1560–1609) - For their contributions as a Dutch theologian from the Protestant Reformation period whose views became the basis of Arminianism and the Dutch Remonstrant movement.

[4:5:78] David Malet Armstrong, (born 1926) - For their contributions as an Australian philosopher; he is well known for his work on metaphysics and the philosophy of mind, and for his defence of a factualist ontology, a functionalist theory of the mind, an externalist epistemology, and a necessitarian conception of the laws of nature.

[4:5:79] Antoine Arnauld, (1612–1694) - For their contributions as a French Roman Catholic theologian, philosopher and mathematician; he was one of the leading intellectuals of the Jansenist group of Port-Royal and had a very thorough knowledge of patristics.

[4:5:80] Matthew Arnold, (1822–1888) - For their contributions as an English poet and cultural critic who worked as an inspector of schools; Arnold has been characterised as a sage writer, a type of writer who chastises and instructs the reader on contemporary social issues.

[4:5:81] Kenneth Arrow, (born 1921) - For their contributions as an American economist, mathematician, writer, and political theorist; he was the joint winner of the Nobel Memorial Prize in Economic Sciences with John Hicks in 1972.

[4:5:82] Valentin Ferdinandovich Asmus, (1894–1975) - For his contributions as a member of the small group who continued the classical European philosophical tradition through the early Soviet times; he was an independent thinker and unorthodox Marxist, with interests in the history of philosophy and aesthetics.

[4:5:83] Mary Astell, (1666–1731) - For their contributions as an English feminist writer and rhetorician; her advocacy of equal educational opportunities for women has earned her the title "the first English feminist."

[4:5:84] Athanasius of Alexandria, (298-373) - For his contributions as the 20th bishop of Alexandria (as Athanasius I); his intermittent episcopacy spanned 45 years (c. 8 June 328 – 2 May 373), of which over 17 encompassed five exiles, when he was replaced on the order of four different Roman emperors; Athanasius was a Christian theologian, a Church Father, the chief defender of Trinitarianism against Arianism, and a noted Egyptian leader of the fourth century.

[4:5:85] Gwenaëlle Aubry, (born 1971) - For their contributions as a French novelist and philosopher.

[4:5:86] Augustine of Hippo, (354–430) - For their contributions as a Roman African, early Christian theologian and philosopher from Numidia whose writings influenced the development of Western Christianity and Western philosophy.

[4:5:87] Marcus Aurelius, (121–180) - For their contributions as a Roman emperor (from 8 March 161 to 17 March 180) and Stoic philosopher.

[4:5:88] Peter Aureol, (c. 1280-1322) - For their contributions as a scholastic philosopher and theologian.

[4:5:89] Sri Aurobindo, (1872–1950) - For their contributions as an Indian philosopher, yogi, guru, poet, and nationalist; he joined the Indian movement for independence from British rule, for a while was one of its influential leaders and then became a spiritual reformer, introducing his visions on human progress and spiritual evolution.

[4:5:90] John Austin, (1790–1859) - For their contributions as a noted English legal theorist, who influenced British and American law with his analytical approach to jurisprudence and his theory of legal positivism; in opposing traditional approaches of "natural law", Austin argued against any necessary connections between law and morality; human legal systems, he claimed, can and should be studied in an empirical, value-free way.

[4:5:91] John Langshaw Austin, (1911–1960) - For their contributions as a British philosopher of language and leading proponent of ordinary language philosophy, perhaps best known for developing the theory of speech acts.

[4:5:92] Richard Avenarius, (1843–1896) - For their contributions as a German-Swiss philosopher; he formulated the radical positivist doctrine of "empirical criticism" or empirio-criticism.

[4:5:93] Averroes (or Ibn Rushd), (1126–1198) - For their contributions as a Muslim Andalusian philosopher and thinker who wrote about many subjects, including philosophy, theology, medicine, astronomy, physics, Islamic jurisprudence and law, and linguistics; his philosophical works include numerous commentaries on Aristotle, for which he was known in the West as The Commentator; he also served as a judge and a court physician for the Almohad caliphate.

[4:5:94] Avicenna (or Ibn Sina), (980–1037) - For their contributions as a Persian Muslim polymath who is regarded as one of the most significant physicians, astronomers, thinkers and writers of the Islamic Golden Age; he has been described as the father of early modern medicine; of the 450 works he is known to have written, around 240 have survived, including 150 on philosophy and 40 on medicine.

[4:5:95] Alfred Jules Ayer, (1910–1989) - For their contributions as an English philosopher known for his promotion of logical positivism, particularly in his books *Language, Truth, and Logic* (1936) and *The Problem of Knowledge* (1956).

Extolled Philosophers (Surname “B”)

[4:6:1] Franz Xaver von Baader, (1765–1841) - For their contributions as a German Catholic philosopher, theologian, physician and mining engineer; resisting the empiricism of his day, he denounced most Western philosophy since Descartes as trending into atheism and has been considered a revival of the Scholastic school; he was one of the most influential theologians of his age but his influence on subsequent philosophy has been less marked.

[4:6:2] Charles Babbage, (1791–1871) For their contributions as an English polymath; a mathematician, philosopher, inventor and mechanical engineer, Babbage originated the concept of a digital programmable computer; considered by some to be a "father of the computer", Babbage is credited with inventing the first mechanical computer that eventually led to more complex electronic designs, though all the essential ideas of modern computers are to be found in Babbage's analytical engine.

[4:6:3] Gaston Bachelard, (1884–1962) - For their contributions as a French philosopher; he made contributions in the fields of poetics and the philosophy of science; to the latter he introduced the concepts of epistemological obstacle and epistemological break.

[4:6:4] Johann Jakob Bachofen, (1815–1887) - For their contributions as a Swiss antiquarian, jurist, philologist, anthropologist, and professor for Roman law at the University of Basel from 1841 to 1845.

[4:6:5] Francis Bacon, (1561–1626) - For their contributions as an English philosopher and statesman who served as Attorney General and as Lord Chancellor of England; his works are credited with developing the scientific method and remained influential through the scientific revolution.

[4:6:6] Roger Bacon, (1214–1294) - For their contributions as a medieval English philosopher and Franciscan friar who placed considerable emphasis on the study of nature through empiricism.

[4:6:7] Alain Badiou, (born 1937) - For their contributions as a French philosopher, formerly chair of Philosophy at the École normale supérieure (ENS) and founder of the faculty of Philosophy of the Université de Paris VIII.

[4:6:8] Hibat Allah Abu'l-Barakat al-Baghdaadi, (1080–1165) - For their contributions as an Islamic philosopher, physician and physicist of Jewish descent from Baghdad, Iraq.

[4:6:9] Annette Baier, (born 1929-2012) - For their contributions as a New Zealand philosopher and Hume scholar, focused in particular on Hume's moral psychology; she was well known also for her contributions to feminist philosophy and to the philosophy of mind, where she was strongly influenced by her former colleague, Wilfrid Sellars.

[4:6:10] Kurt Baier, (born 1917) - For their contributions as an Austrian moral philosopher who taught for most of his career in Australia and the United States.

[4:6:11] Alexander Bain, (1818–1903) - For their contributions as a Scottish philosopher and educationalist in the British school of empiricism and a prominent and innovative figure in the fields of psychology, linguistics, logic, moral philosophy and education reform; he founded *Mind*, the first ever journal of psychology and analytical philosophy, and was the leading figure in establishing and applying the scientific method to psychology.

[4:6:12] Karl Friedrich Bahrdt, (1741–1792) - For their contributions as an unorthodox German Protestant biblical scholar, theologian, and polemicist.

[4:6:13] Lynne Rudder Baker, (born 1944) - For their contributions an American philosopher and author; at the time of her death she was a Distinguished Professor at the University of Massachusetts Amherst; she was a native of Atlanta.

[4:6:14] Mikhail Bakhtin, (1895–1975) - For their contributions as a Russian philosopher, literary critic, semiotician and scholar who worked on literary theory, ethics, and the philosophy of language; his writings, on a variety of subjects, inspired scholars working in a number of different traditions (Marxism, semiotics, structuralism, religious criticism) and in disciplines as diverse as literary criticism, history, philosophy, sociology, anthropology and psychology.

[4:6:15] Mikhail Bakunin, (1814–1876) - For their contributions as a Russian revolutionary anarchist and founder of collectivist anarchism; he is considered among the most influential figures of anarchism and one of the principal founders of the social anarchist tradition; Bakunin's enormous prestige as an activist made him one of the most famous ideologues in Europe, gaining substantial influence among radicals throughout Russia and Europe.

[4:6:16] Arthur Balfour, (1848–1930) - For their contributions as a British statesman and Conservative Party politician who served as Prime Minister of the United Kingdom from 1902 to 1905.

[4:6:17] John Balguy, (1686–1748) - For their contributions as an English divine and philosopher.

[4:6:18] Domingo Báñez, (1528–1604) - For their contributions as a Spanish Dominican and Scholastic theologian.

[4:6:19] Antonio Banfi, (1886–1957) - For their contributions as an Italian philosopher and senator.

[4:6:20] Abraham bar Hiyya Ha-Nasi, (1070–1136) - For their contributions as a Jewish mathematician, astronomer and philosopher who resided in Barcelona.

[4:6:21] Jonathan Barnes, (born 1942) - For their contributions as an English scholar of ancient philosophy.

[4:6:22] Brian Barry, (1936–2009) - For their contributions as a moral and political philosopher.

[4:6:23] Karl Barth, (1886–1968) - For their contributions as a Swiss Reformed theologian who is most well known for his landmark *The Epistle to the Romans*, involvement in the Confessing Church, authorship of the *Barmen Declaration*, and especially his five volume theological summa *the Church Dogmatics* (published in twelve part-volumes between 1932-1967).

[4:6:24] Roland Barthes, (1915–1980) - For their contributions as a French literary theorist, philosopher, critic, and semiotician. Barthes' ideas explored a diverse range of fields and he influenced the development of many schools of theory, including structuralism, semiotics, social theory, design theory, anthropology, and post-structuralism.

[4:6:25] Bartolus de Saxoferrato, (1313–1357) - For their contributions as an Italian law professor and one of the most prominent continental jurists of Medieval Roman Law; he belonged to the school known as the commentators or postglossators.

[4:6:26] Johann Bernhard Basedow, (1724–1790) - For their contributions as a German educational reformer, teacher and writer; he founded the *Philanthropinum*, a short-lived but influential progressive school in Dessau, and was the author of "*Elementarwerk*", a popular illustrated textbook for children.

[4:6:27] Basilides, (c. 117–138) - For their contributions as an early Christian Gnostic religious teacher in Alexandria, Egypt who taught from 117 to 138 AD, and claimed to have inherited his teachings from the Apostle Saint Matthias.

[4:6:28] Georges Bataille, (1897–1962) - For their contributions as a French intellectual and literary figure working in literature, philosophy, anthropology, economics, sociology and history of art; his writing, which included essays, novels, and poetry, explored such subjects as erotism, mysticism, surrealism, and transgression; his work would prove influential on subsequent schools of philosophy and social theory, including poststructuralism.

[4:6:29] Charles Batteux, (1713–1780) - For their contributions as a French philosopher and writer on aesthetics.

[4:6:30] Jean Baudrillard, (1929–2007) - For their contributions as a French sociologist, philosopher, cultural theorist, political commentator, and photographer; he is best known for his analyses of media, contemporary culture, and technological communication, as well as his formulation of concepts such as simulation and hyperreality.

[4:6:31] Bruno Bauer, (1809–1882) - For their contributions as a German philosopher and historian; as a student of G. W. F. Hegel, Bauer was a radical Rationalist in philosophy, politics and Biblical criticism; Bauer investigated the sources of the New Testament and, beginning with Hegel's Hellenophile orientation, concluded that early Christianity owed more to ancient Greek philosophy (Stoicism) than to Judaism.

[4:6:32] David Baumgardt, (1890–1963) - For their contributions as an early 20th century German Jewish philosopher in the field of philosophical history; he was a professor of Philosophy at the University of Berlin.

[4:6:33] Alexander Gottlieb Baumgarten, (1714–1762) - For their contributions as a German philosopher.

[4:6:34] Pierre Bayle, (1647–1706) - For their contributions as a French philosopher and writer best known for his seminal work the Historical and Critical Dictionary, publication beginning in 1697; Bayle was a Calvinist Protestant (Huguenot); as a forerunner of the Encyclopedists and an advocate of the principle of the toleration his works subsequently influenced the development of the Enlightenment.

[4:6:35] Monroe Beardsley, (1915–1985) - For their contributions as an American philosopher of art.

[4:6:36] James Beattie, (1735–1803) - For their contributions as a Scottish poet, moralist and philosopher.

[4:6:37] Cesare, Marquis of Beccaria, (1738–1794) - For their contributions as an Italian criminologist, jurist, philosopher, and politician, who is widely considered as the most talented jurist and one of the greatest thinkers of the Age of Enlightenment.

[4:6:38] Jakob Sigismund Beck, (1761–1840) - For their contributions as a German philosopher.

[4:6:39] Vissarion Belinsky, (1811–1848) - For their contributions as a Russian literary critic of Westernizing tendency; Belinsky played one of the key roles in the career of poet and publisher Nikolay Nekrasov and his popular magazine *Sovremennik*.

[4:6:40] Robert Bellarmine, (1542–1621) - For their contributions as an Italian Jesuit and a cardinal of the Catholic Church; he was canonised a saint in 1930 and named Doctor of the Church, one of only 36; he was one of the most important figures in the Counter-Reformation; Bellarmine was a professor of theology and later rector of the Roman College, and in 1602 became Archbishop of Capua; he supported the reform decrees of the Council of Trent.

[4:6:41] Nuel Belnap, (born 1930) - For their contributions as an American logician and philosopher who has made contributions to the philosophy of logic, temporal logic, and structural proof theory.

[4:6:42] Friedrich Eduard Beneke, (1798–1854) - For their contributions as a German psychologist and post-Kantian philosopher.

[4:6:43] Walter Benjamin, (1892–1940) - For their contributions as a German Jewish philosopher, cultural critic and essayist; an eclectic thinker, combining elements of German idealism, Romanticism, Western Marxism, and Jewish mysticism, Benjamin made enduring and influential contributions to aesthetic theory, literary criticism, and historical materialism.

[4:6:44] Gottfried Benn, (1886–1956) - For their contributions as a German poet, essayist, and physician; he was nominated for the Nobel Prize in Literature five times.

[4:6:45] Jonathan Bennett, (born 1930) - For their contributions as a British philosopher of language and metaphysics, and a historian of early modern philosophy.

[4:6:46] Jeremy Bentham, (1748–1832) - For their contributions as an English philosopher, jurist, and social reformer regarded as the founder of modern utilitarianism.

[4:6:47] Richard Bentley, (1662–1742) - For their contributions as an English classical scholar, critic, and theologian; he was Master of Trinity College, Cambridge; Bentley was the first Englishman to be ranked with the great heroes of classical learning and was known for his literary and textual criticism; called the "founder of historical philology", Bentley is credited with the creation of the English school of Hellenism, and introduced the first competitive written examinations in a Western university.

[4:6:48] Nikolai Berdyaev, (1874–1948) - For their contributions as a Russian political and also Christian religious philosopher who emphasised the existential spiritual significance of human freedom and the human person.

[4:6:49] Gustav Bergmann, (1906–1987) - For their contributions as an Austrian-born American philosopher; he studied at the University of Vienna and was a member of the Vienna Circle.

[4:6:50] Henri Bergson, (1859–1941) - For their contributions as a French-Jewish philosopher who was influential in the tradition of continental philosophy, especially during the first half of the 20th century until the Second World War; Bergson is known for his arguments that processes of immediate experience and intuition are more significant than abstract rationalism and science for understanding reality.

[4:6:51] George Berkeley, (1685–1753) - For their contributions as an Irish philosopher whose primary achievement was the advancement of a theory he called

"immaterialism" (later referred to as "subjective idealism" by others); this theory denies the existence of material substance and instead contends that familiar objects like tables and chairs are only ideas in the minds of perceivers and, as a result, cannot exist without being perceived; Berkeley is also known for his critique of abstraction, an important premise in his argument for immaterialism.

[4:6:52] Isaiah Berlin, (1909–1997) - For their contributions as a Russian-British social and political theorist, philosopher and historian of ideas; although averse to writing, his improvised lectures and talks were recorded and transcribed, with his spoken word being converted by his secretaries into his published essays and books.

[4:6:53] Claude Bernard, (1813–1878) - For their contributions as a French physiologist.

[4:6:54] Bernard of Chartres, (d. 1130) - For their contributions as a twelfth-century French Neo-Platonist philosopher, scholar, and administrator.

[4:6:55] Bernard of Clairvaux, (1090–1153) - For their contributions as a French abbot and a major leader in the reform of Benedictine monasticism that caused the formation of the Cistercian order.

[4:6:56] Bernard Silvestris (or Bernard of Tours), (1147–1178) - For their contributions as a medieval Platonist philosopher and poet of the 12th century.

[4:6:57] François Bernier, (1620–1688) - For their contributions as a French physician and traveller.

[4:6:58] Eduard Bernstein, (1850–1932) - For their contributions as a German social-democratic Marxist theorist and politician; Bernstein had held close association to Karl Marx and Friedrich Engels, but he saw flaws in Marxist thinking and began to criticise views held by Marxism when he investigated and challenged the Marxist materialist theory of history; he rejected significant parts of Marxist theory that were based upon Hegelian metaphysics and rejected the Hegelian dialectical perspective.

[4:6:59] Ludwig von Bertalanffy, (1901–1972) - For their contributions as an Austrian biologist known as one of the founders of general systems theory (GST), the "conceptual part" of which was first introduced by Alexander Bogdanov; this is an interdisciplinary practice that describes systems with interacting components, applicable to biology, cybernetics and other fields; Bertalanffy proposed that the classical laws of thermodynamics might be applied to closed systems, but not necessarily to "open systems" such as living things; his mathematical model of an organism's growth over time, published in 1934, is still in use today.

[4:6:60] Bhartrhari, (5th century) - For their contributions as a Sanskrit writer to whom are normally ascribed two influential Sanskrit texts; the Vākyapadīya and the Śatakatraya.

[4:6:61] Gabriel Biel, (1425–1495) - For their contributions as a German scholastic philosopher and member of the Canons Regular of the Congregation of Windesheim, who were the clerical counterpart to the Brethren of the Common Life.

[4:6:62] Georg Bernhard Bilfinger, (1693–1750) - For their contributions as a German philosopher, mathematician and statesman, son of a Lutheran minister.

[4:6:63] Alfred Binet, (1857–1911) - For their contributions as a French psychologist who invented the first practical IQ test, the Binet–Simon test.

[4:6:64] Ludwig Binswanger, (1881–1966) - For their contributions as a Swiss psychiatrist and pioneer in the field of existential psychology; he is considered the most distinguished of the phenomenological psychologists, and the most influential in making the concepts of existential psychology known in Europe and the United States.

[4:6:65] Max Black, (1909–1988) - For their contributions as a British-American philosopher, who was a leading figure in analytic philosophy in the years after World War II; he made contributions to the philosophy of language, the philosophy of mathematics and science, and the philosophy of art, also publishing studies of the work of philosophers such as Frege.

[4:6:66] Simon Blackburn, (born 1944) - For their contributions as an English academic philosopher known for his work in metaethics, where he defends quasi-realism, and in the philosophy of language; more recently, he has gained a large general audience from his efforts to popularise philosophy.

[4:6:67] William Blackstone, (1723–1780) - For their contributions as an English jurist, judge and Tory politician of the eighteenth century; he is most noted for writing the Commentaries on the Laws of England.

[4:6:68] Hugh Blair, (1718–1800) - For their contributions as a Scottish minister of religion, author and rhetorician, considered one of the first great theorists of written discourse.

[4:6:69] William Blake, (1757–1827) - For their contributions as an English poet, painter, and printmaker; largely unrecognised during his lifetime, Blake is now considered a seminal figure in the history of the poetry and visual arts of the Romantic Age.

[4:6:70] Maurice Blanchot, (1907–2003) - For their contributions as a French writer, philosopher, and literary theorist.

[4:6:71] Percy Brand Blanshard, (1892–1987) - For their contributions as an American philosopher known primarily for his defence of reason; a powerful polemicist, by all accounts he comported himself with courtesy and grace in philosophical controversies and exemplified the "rational temper" he advocated.

[4:6:72] Blasius of Parma (or Biagio Pelacani da Parma), (1345–1416) - For their contributions as an Italian philosopher, mathematician and astrologer; he popularised English and French philosophical work in Italy, where he associated both with scholastics and with early Renaissance humanists.

[4:6:73] Ernst Bloch, (1885–1977) - For their contributions as a German Marxist philosopher.

[4:6:74] Ned Block, (born 1942) - For their contributions as an American philosopher working in philosophy of mind who has made important contributions to the understanding of consciousness and the philosophy of cognitive science.

[4:6:75] Maurice Blondel, (1861–1949) - For their contributions as a French philosopher, whose most influential works, notably *L'Action*, aimed at establishing the correct relationship between autonomous philosophical reasoning and Christian belief.

[4:6:76] Charles Blount, (1654–1693) - For their contributions as an English deist and philosopher who published several anonymous essays critical of the existing English order.

[4:6:77] Norberto Bobbio, (1909–2004) - For their contributions as an Italian philosopher of law and political sciences and a historian of political thought.

[4:6:78] Jean Bodin, (1530–1596) - For their contributions as a French jurist and political philosopher, member of the Parlement of Paris and professor of law in Toulouse; he is best known for his theory of sovereignty; he was also an influential writer on demonology.

[4:6:79] Anicius Manlius Severinus Boethius, (AD 480-524 or 525) - For their contributions as a Roman senator, consul, magister officiorum, and philosopher of the early 6th century. He was born about a year after Odoacer deposed the last Roman Emperor and declared himself King of Italy.

[4:6:80] Boetius of Dacia, (c. 1240-c. 1280) - For their contributions as a 13th-century Danish philosopher.

[4:6:81] Alexander Bogdanov, (1873–1928) - For their contributions as a Russian and later Soviet physician, philosopher, science fiction writer, and revolutionary.

[4:6:82] Jakob Böhme, (1575–1624) - For their contributions as a German philosopher, Christian mystic, and Lutheran Protestant theologian; he was considered an original thinker by many of his contemporaries within the Lutheran tradition, and his first book, commonly known as *Aurora*, caused a great scandal.

[4:6:83] David Bohm, (1917–1992) - For their contributions as an American scientist who has been described as one of the most significant theoretical physicists of the 20th century

and who contributed unorthodox ideas to quantum theory, neuropsychology and the philosophy of mind.

[4:6:84] Niels Bohr, (1885–1962) - For their contributions as a Danish physicist who made foundational contributions to understanding atomic structure and quantum theory, for which he received the Nobel Prize in Physics in 1922; Bohr was also a philosopher and a promoter of scientific research.

[4:6:85] Nicolas Boileau-Despréaux, (1636–1711) - For their contributions as a French poet and critic; he did much to reform the prevailing form of French poetry, in the same way that Blaise Pascal did to reform the prose.

[4:6:86] Samuel Bold, (1649–1737) - For their contributions as an English clergyman and controversialist, a supporter of the arguments of John Locke for religious toleration.

[4:6:87] Henry St John, 1st Viscount Bolingbroke, (1678–1751) - For their contributions as an English politician, government official and political philosopher; he was a leader of the Tories, and supported the Church of England politically despite his anti-religious views and opposition to theology.

[4:6:88] Ludwig Boltzmann, (1844–1906) - For their contributions as an Austrian physicist and philosopher whose greatest achievement was in the development of statistical mechanics, which explains and predicts how the properties of atoms (such as mass, charge, and structure) determine the physical properties of matter (such as viscosity, thermal conductivity, and diffusion).

[4:6:89] Bernard Bolzano, (1781–1848) - For their contributions as a Bohemian mathematician, logician, philosopher, theologian and Catholic priest of Italian extraction, also known for his antimilitarist views.

[4:6:90] Louis Gabriel Ambroise de Bonald, (1754–1840) - For their contributions as a French counter-revolutionary philosopher and politician; mainly, he is remembered for developing a set of social theories that exercised a powerful influence in shaping the ontological framework from which French sociology would emerge.

[4:6:91] Francesco Bonatelli, (1830–1911) - For their contributions as a 19th-century Italian philosopher of the Roman Catholic spiritualist tradition.

[4:6:92] Bonaventure, (1221–1274) - For their contributions as an Italian medieval Franciscan, scholastic theologian and philosopher; the seventh Minister General of the Order of Friars Minor, he was also Cardinal Bishop of Albano; he was canonised on 14 April 1482 by Pope Sixtus IV and declared a Doctor of the Church in the year 1588 by Pope Sixtus V.

[4:6:93] Dietrich Bonhoeffer, (1906–1945) - For their contributions as a German pastor, theologian, anti-Nazi dissident, and key founding member of the Confessing Church; his writings on Christianity's role in the secular world have become widely influential, and his book *The Cost of Discipleship* has been described as a modern classic.

[4:6:94] Charles Bonnet, (1720–1793) - For their contributions as a naturalist and philosophical writer who was born at Geneva, of a French family driven into the region by the religious persecution in the 16th century.

[4:6:95] George Boole, (1815–1864) - For their contributions as a largely self-taught English mathematician, philosopher and logician, most of whose short career was spent as the first professor of mathematics at Queen's College, Cork in Ireland.

[4:6:96] Bernard Bosanquet, (1848–1923) - For their contributions as a British philosopher and political theorist, and an influential figure on matters of political and social policy in the late 19th and early 20th centuries.

[4:6:97] Rudjer Bosovich, (1711–1787) - For their contributions as a Ragusan physicist, astronomer, mathematician, philosopher, diplomat, poet, theologian, Jesuit priest, and a polymath from the city of Dubrovnik (modern-day Croatia), who studied and lived in Italy and France where he also published many of his works.

[4:6:98] Pierre Bourdieu, (1930–2002) - For their contributions as a French sociologist, anthropologist, philosopher and public intellectual; Bourdieu's work was primarily concerned with the dynamics of power in society, especially the diverse and subtle ways in which power is transferred and social order is maintained within and across generations.

[4:6:99] Jacques-Bénigne Bossuet, (1627–1704) - For their contributions as a French bishop and theologian, renowned for his sermons and other addresses; he has been considered by many to be one of the most brilliant orators of all time and a masterly French stylist.

[4:6:100] Christopher Jacob Boström, (1797–1866) - For their contributions as a Swedish philosopher; his ideas dominated Swedish philosophy until the beginning of the twentieth century; he also had a great influence on Swedish cultural life.

[4:6:101] Henri de Boulainvilliers, (1658–1722) - For their contributions as a French nobleman, writer and historian.

[4:6:102] Emile Boutroux, (1845–1921) - For their contributions as an eminent 19th century French philosopher of science and religion, and an historian of philosophy; he was a firm opponent of materialism in science; he was a spiritual philosopher who defended the idea that religion and science are compatible at a time when the power of science was rising inexorably.

[4:6:103] Oets Kolk Bouwsma, (1898–1978) - For their contributions as an American philosopher born of Dutch-American parents in Muskegon, Michigan.

[4:6:104] Borden Parker Bowne, (1847–1910) - For their contributions as an American Christian philosopher, preacher, and theologian in the Methodist tradition; he was nominated for the Nobel Prize in Literature nine times.

[4:6:105] Robert Boyle, (1627–1691) - For their contributions as an Anglo-Irish natural philosopher, chemist, physicist, and inventor; Boyle is largely regarded today as the first modern chemist, and therefore one of the founders of modern chemistry, and one of the pioneers of modern experimental scientific method; he is best known for Boyle's law, which describes the inversely proportional relationship between the absolute pressure and volume of a gas, if the temperature is kept constant within a closed system.

[4:6:106] F. H. Bradley, (1846–1924) - For their contributions to a British idealist philosopher; his most important work was *Appearance and Reality* (1893).

[4:6:107] Thomas Bradwardine, (c. 1290-1349) - For their contributions as an English cleric, scholar, mathematician, physicist, courtier and, very briefly, Archbishop of Canterbury; as a celebrated scholastic philosopher and doctor of theology, he is often called Doctor Profundus (medieval epithet, meaning "the Profound Doctor").

[4:6:108] Richard-Bevan Braithwaite, (1900–1990) - For their contributions as an English philosopher who specialised in the philosophy of science, ethics, and the philosophy of religion; he was a lecturer in moral science at the University of Cambridge from 1934 to 1953, then Knightbridge Professor of Moral Philosophy there from 1953 to 1967; he was president of the Aristotelian Society from 1946 to 1947, and was elected a Fellow of the British Academy in 1957.

[4:6:109] Richard B. Brandt, (1910–1997) - For their contributions as an American philosopher working in the utilitarian tradition in moral philosophy.

[4:6:110] Franz Brentano, (1838–1917) - For their contributions as an influential German philosopher, psychologist, and priest whose work strongly influenced not only students Edmund Husserl, Sigmund Freud, Tomáš Masaryk, Rudolf Steiner, Alexius Meinong, Carl Stumpf, Anton Marty, Kazimierz Twardowski, and Christian von Ehrenfels, but many others whose work would follow and make use of his original ideas and concepts.

[4:6:111] Percy Williams Bridgman, (1882–1961) - For their contributions as an American physicist who received the 1946 Nobel Prize in Physics for his work on the physics of high pressures; he also wrote extensively on the scientific method and on other aspects of the philosophy of science.

[4:6:112] Edgar S. Brightman, (1884–1953) - For their contributions as an American philosopher and Christian theologian in the Methodist tradition, associated with Boston

University and liberal theology, and promulgated the philosophy known as Boston personalism; he was president of the American Academy of Religion in 1942–1943.

[4:6:113] Jean Anthelme Brillat-Savarin, (1755–1826) - For their contributions as a French lawyer and politician, and gained fame as an epicure and gastronome: "Grimod and Brillat-Savarin; between them, two writers effectively founded the whole genre of the gastronomic essay."

[4:6:114] Richard Brinkley, (fl. 1350-1373) - For their contributions as an English Franciscan scholastic philosopher and theologian; he was at the University of Oxford in the mid-fourteenth century; he produced a *Summa Logicae* in a nominalist vein in the 1360s or early 1370s, and other works.

[4:6:115] Radulphus Brito, (c. 1270-c. 1320) - For their contributions as an influential grammarian and philosopher, based in Paris.

[4:6:116] C. D. Broad, (1887–1971) - For their contributions as an English epistemologist, historian of philosophy, philosopher of science, moral philosopher, and writer on the philosophical aspects of psychical research; he was known for his thorough and dispassionate examinations of arguments in such works as *Scientific Thought*, published in 1923, *The Mind and Its Place in Nature*, published in 1925, and *An Examination of McTaggart's Philosophy*, published in 1933.

[4:6:117] Luitzen Egbertus Jan Brouwer, (1881–1966) - For their contributions as a Dutch mathematician and philosopher, who worked in topology, set theory, measure theory and complex analysis; he was the founder of the mathematical philosophy of intuitionism.

[4:6:118] Thomas Brown, (1778–1820) - For their contributions as a Scottish philosopher and poet.

[4:6:119] Peter Browne, (1666–1735) - For their contributions as an Irish Anglican priest and Bishop of Cork and Ross.

[4:6:120] Orestes Brownson, (1803–1876) - For their contributions as a New England intellectual and activist, preacher, labor organizer, and noted Catholic convert and writer; Brownson was a publicist, a career which spanned his affiliation with the New England Transcendentalists through his subsequent conversion to Roman Catholicism.

[4:6:121] Emil Brunner, (1889–1966) - For their contributions as a Swiss Reformed theologian; along with Karl Barth, he is commonly associated with neo-orthodoxy or the dialectical theology movement

[4:6:122] Giordano Bruno, (1548–1600) - For their contributions as an Italian Dominican friar, philosopher, mathematician, poet, cosmological theorist, and Hermetic occultist; he is known for his cosmological theories, which conceptually extended the then-novel

Copernican model; he proposed that the stars were distant suns surrounded by their own planets, and he raised the possibility that these planets might foster life of their own, a philosophical position known as cosmic pluralism; he also insisted that the universe is infinite and could have no "center".

[4:6:123] Leon Brunschvicg, (1869–1944) - For their contributions as a French Idealist philosopher; he co-founded the *Revue de métaphysique et de morale* with Xavier Leon and Élie Halévy in 1893.

[4:6:124] James Bryce, 1st Viscount Bryce, (1838–1922) - For their contributions as a British academic, jurist, historian and Liberal politician.

[4:6:125] Martin Buber, (1878–1965) - For their contributions as an Austrian-born Israeli Jewish philosopher best known for his philosophy of dialogue, a form of existentialism centred on the distinction between the I–Thou relationship and the I–It relationship.

[4:6:126] Justus Buchler, (1914–1991) - For their contributions as an American philosopher, author and professor; he made contributions to the subjects of naturalism and metaphysics, introducing the concept of the natural complex.

[4:6:127] Ludwig Büchner, (1824–1899) - For their contributions as a German philosopher, physiologist and physician who became one of the exponents of 19th-century scientific materialism.

[4:6:128] Henry Thomas Buckle, (1821–1862) - For their contributions as an English historian, the author of an unfinished *History of Civilization*, and a strong amateur chess player; he is sometimes called "the Father of Scientific History".

[4:6:129] Malcolm Budd, (born 1941) - For their contributions as a British philosopher.

[4:6:130] Johann Franz Buddeus, (1667–1729) - For their contributions as a German Lutheran theologian and philosopher.

[4:6:131] Buddhaghosa, (5th century) - For their contributions as a 5th-century Indian Theravada Buddhist commentator, translator and philosopher; he worked in the Great Monastery (Mahāvihāra) at Anurādhapura, Sri Lanka and saw himself as being part of the Vibhajjavāda school and in the lineage of the Sinhalese Mahāvihāra.

[4:6:132] Claude Buffier, (1661–1737) - For their contributions as a French philosopher, historian and teacher, was born in Poland of French parents, who returned to France and settled in Rouen soon after his birth.

[4:6:133] Georges-Louis Leclerc, Comte de Buffon, (1707–1788) - For their contributions as a French naturalist, mathematician, cosmologist, and encyclopédist.

[4:6:134] Sergei Nikolaevich Bulgakov, (1871–1944) - For their contributions as a Russian Orthodox Christian theologian, philosopher, and economist.

[4:6:135] Edward Bullough, (1880–1934) - For their contributions as an English aesthetician and scholar of modern languages, who worked at the University of Cambridge; he did experimental work on the perception of colours, and in his theoretical work introduced the concept of psychological distance; that which "appears to lie between our own self and its affections" in aesthetic experience.

[4:6:136] Rudolf Bultmann, (1884–1976) - For their contributions as a German Lutheran theologian and professor of the New Testament at the University of Marburg; he was one of the major figures of early-20th-century biblical studies; a prominent critic of liberal theology, Bultmann instead argued for an existentialist interpretation of the New Testament; his hermeneutical approach to the New Testament led him to be a proponent of dialectical theology.

[4:6:137] Jacob Burckhardt, (1818–1897) - For their contributions as a Swiss historian of art and culture and an influential figure in the historiography of both fields; he is known as one of the major progenitors of cultural history.

[4:6:138] Tyler Burge, (born 1946) - For their contributions as a Distinguished Professor of Philosophy at UCLA; Burge has made contributions to many areas of philosophy, including the philosophy of mind, philosophy of logic, epistemology, philosophy of language, and the history of philosophy.

[4:6:139] Jean Buridan, (1300–1358) - For their contributions as an influential 14th century French philosopher; Buridan was a teacher in the faculty of arts at the University of Paris for his entire career, focusing in particular on logic and the works of Aristotle.

[4:6:140] Edmund Burke, (1729–1797) - For their contributions as an Anglo-Irish statesman born in Dublin, as well as an author, orator, political theorist and philosopher, who after moving to London in 1750 served as a member of parliament (MP) between 1766 and 1794 in the House of Commons with the Whig Party.

[4:6:141] Walter Burley, (c. 1275-c. 1345) - For their contributions as a medieval English scholastic philosopher and logician with at least 50 works attributed to him; he studied under Thomas Wilton and received his Master of Arts degree in 1301, and was a fellow of Merton College, Oxford until about 1310; he then spent sixteen years in Paris, becoming a fellow of the Sorbonne by 1324, before spending 17 years as a clerical courtier in England and Avignon; Burley disagreed with William of Ockham on a number of points concerning logic and natural philosophy.

[4:6:142] Myles Frederic Burnyeat, (born 1939) - For their contributions as an English scholar of ancient philosophy.

[4:6:143] Richard Burthogge, (1638–1704) - For their contributions as a physician, magistrate and philosopher.

[4:6:144] Joseph Butler, (1692–1752) - For their contributions as an English bishop, theologian, apologist, and philosopher.

[4:6:145] Samuel Butler, (1835–1902) - For their contributions as the iconoclastic English author of the Utopian satirical novel *Erewhon* (1872) and the semi-autobiographical Bildungsroman *The Way of All Flesh*, published posthumously in 1903; both have remained in print ever since; in other studies he examined Christian orthodoxy, evolutionary thought, and Italian art, and made prose translations of the *Iliad* and *Odyssey* that are still consulted today; he was also an artist.

Extolled Philosophers (Surname “C”)

[4:7:1] Pierre Jean George Cabanis, (1757–1808) - For their contributions as a French physiologist, freemason, and materialist philosopher.

[4:7:2] Amílcar Cabral, (1924–1973) - For their contributions as a Bissau-Guinean and Cape Verdean agricultural engineer, intellectual, poet, theoretician, revolutionary, political organiser, nationalist and diplomat; he was one of Africa's foremost anti-colonial leaders.

[4:7:3] Edward Caird, (1835–1908) - For their contributions as a Scottish philosopher.

[4:7:4] Dorion Cairns, (1901–1973) - For their contributions as a studier of the phenomenological theory of value with Winthrop Bell at Harvard University in 1923 and 1924.

[4:7:5] Thomas Cajetan, (1469–1534) - For their contributions as an Italian philosopher, theologian, cardinal (from 1517 until his death) and the Master of the Order of Preachers 1508-18; he was a leading theologian of his day who is now best known as the spokesman for Catholic opposition to the teachings of Martin Luther and the Protestant Reformation while he was the Pope's Legate in Augsburg, and perhaps also among Catholics for his extensive commentary on the Summa Theologica of Thomas Aquinas.

[4:7:6] Calcidius, (4th century) - For their contributions as a 4th-century philosopher (and possibly a Christian) who translated the first part (to 53c) of Plato's Timaeus from Greek into Latin around the year 321 and provided with it an extensive commentary.

[4:7:7] Mario Calderoni, (1879–1914) - For their contributions as an Italian philosopher and theorist of Italian law (Italian analytical pragmatism).

[4:7:8] Callicles, (late 5th century BC) - For their contributions as an ancient Athenian political philosopher best remembered for his role in Plato's dialogue Gorgias, where he "presents himself as a no-holds-barred, bare-knuckled, clear-headed advocate of Realpolitik"; while he provides a counter-argument to Plato's philosophical ideas, the lack of other contemporaneous sources about him suggests that he may be no more than a character created by Plato for the dialogue; another idea proposed is that Callicles is a fragment of what Plato may be, had he not Socrates to guide him; he is the antithesis to Socrates.

[4:7:9] John Calvin, (1509–1564) - For their contributions as a French theologian, pastor and reformer in Geneva during the Protestant Reformation; he was a principal figure in the development of the system of Christian theology later called Calvinism, aspects of which include the doctrines of predestination and of the absolute sovereignty of God in salvation of the human soul from death and eternal damnation, in which doctrines Calvin was influenced by and elaborated upon the Augustinian and other Christian traditions; various

Congregational, Reformed and Presbyterian churches, which look to Calvin as the chief expositor of their beliefs, have spread throughout the world.

[4:7:10] Tommaso Campanella, (1568–1639) - For their contributions as a Dominican friar, Italian philosopher, theologian, astrologer, and poet.

[4:7:11] George Campbell, (1719–1796) - For their contributions as a figure of the Scottish Enlightenment, known as a philosopher, minister, and professor of divinity; Campbell was primarily interested in rhetoric, since he believed that its study would enable his students to become better preachers; he became a philosopher of rhetoric because he took it that the philosophical changes of the Age of Enlightenment would have implications for rhetoric.

[4:7:12] Norman Robert Campbell, (1880–1949) - For their contributions as an English physicist and philosopher of science.

[4:7:13] Albert Camus, (1913–1960) - For their contributions as a French philosopher, author, and journalist; he won the Nobel Prize in Literature at the age of 44 in 1957, the second youngest recipient in history.

[4:7:14] Georges Canguilhem, (1904–1995) - For their contributions as a French philosopher and physician who specialised in epistemology and the philosophy of science (in particular, biology).

[4:7:15] Georg Cantor, (1845–1918) - For their contributions as a German mathematician; he created set theory, which has become a fundamental theory in mathematics.

[4:7:16] Johannes Capreolus, (1380–1444) - For their contributions as a French Dominican theologian and a Thomist.

[4:7:17] Claudia Card, (born 1940) - For their contributions as the Emma Goldman (WARF) Professor of Philosophy at the University of Wisconsin–Madison, with teaching affiliations in Women's Studies, Jewish Studies, Environmental Studies, and LGBT Studies.

[4:7:18] Gerolamo Cardano, (1501–1576) - For their contributions as an Italian polymath, whose interests and proficiencies ranged from being a mathematician, physician, biologist, physicist, chemist, astrologer, astronomer, philosopher, writer, and gambler; he was one of the most influential mathematicians of the Renaissance, and was one of the key figures in the foundation of probability and the earliest introducer of the binomial coefficients and the binomial theorem in the Western world; he wrote more than 200 works on science.

[4:7:19] Thomas Carlyle, (1795–1881) - For their contributions as a Scottish philosopher, satirical writer, essayist, translator, historian, mathematician, and teacher; considered one of the most important social commentators of his time, he presented many lectures during his lifetime with certain acclaim in the Victorian era.

[4:7:20] Gershom Carmichael, (c. 1672–1729) - For their contributions as a Scottish philosopher.

[4:7:21] Rudolf Carnap, (1891–1970) - For their contributions as a German-language philosopher who was active in Europe before 1935 and in the United States thereafter; he was a major member of the Vienna Circle and an advocate of logical positivism; he is considered "one of the giants among twentieth-century philosophers."

[4:7:22] Carneades, (c. 214–129 BC) - For their contributions as an Academic skeptic born in Cyrene; by the year 159 BC, he had started to refute all previous dogmatic doctrines, especially Stoicism, and even the Epicureans whom previous skeptics had spared; as head of the Academy, he was one of three philosophers sent to Rome in 155 BC where his lectures on the uncertainty of justice caused consternation among leading politicians.

[4:7:23] Lewis Carroll, (1832–1898) - For their contributions as an English writer of world-famous children's fiction, notably *Alice's Adventures in Wonderland* and its sequel *Through the Looking-Glass*; he was also a mathematician, photographer, and Anglican deacon.

[4:7:24] Nancy Cartwright (born 1943) - For their contributions as a philosopher of science and is professor of philosophy at the University of California at San Diego and the University of Durham.

[4:7:25] Carl Gustav Carus, (1789–1869) - For their contributions as a German physiologist and painter, born in Leipzig, who played various roles during the Romantic era; a friend of Johann Wolfgang von Goethe, he was a many-sided man: a doctor, a naturalist, a scientist, a psychologist, and a landscape painter who studied under Caspar David Friedrich.

[4:7:26] Paul Carus, (1852–1919) - For their contributions as a German-American author, editor, a student of comparative religion and philosopher.

[4:7:27] Antonio Caso, (1883–1946) - For their contributions as a Mexican philosopher and rector of the former Universidad Nacional de México, nowadays known as the National Autonomous University of Mexico from December 1921 to August 1923; along with José Vasconcelos, he founded the Ateneo de la Juventud, a humanist group against philosophical positivism.

[4:7:28] Ernst Cassirer, (1874–1945) - For their contributions as a German philosopher; trained within the Neo-Kantian Marburg School, he initially followed his mentor Hermann Cohen in attempting to supply an idealistic philosophy of science.

[4:7:29] Hector-Neri Castañeda, (1924–1991) - For their contributions as a Guatemalan philosopher and founder of the journal *Noûs*.

[4:7:30] Carlo Cattaneo, (1801–1869) - For their contributions as an Italian philosopher and writer, famous for his role in the Five Days of Milan on March 1849, when he led the city council during the rebellion.

[4:7:31] Stanley Cavell, (born 1926) - For their contributions as an American philosopher; he was the Walter M. Cabot Professor of Aesthetics and the General Theory of Value at Harvard University; he worked in the fields of ethics, aesthetics, and ordinary language philosophy.

[4:7:32] Margaret Cavendish, (1623–1673) - For their contributions as an English aristocrat, philosopher, poet, scientist, fiction-writer, and playwright during the 17th century.

[4:7:33] Celsus of Alexandria, (2nd century) - For their contributions as a 2nd-century Greek philosopher and opponent of early Christianity; *On The True Doctrine* is the earliest known comprehensive criticism of Christianity.

[4:7:34] Michel de Certeau, (1925–1986) - For their contributions as a French Jesuit and scholar whose work combined history, psychoanalysis, philosophy, and the social sciences.

[4:7:35] Pyotr Chaadaev, (1794–1856) - For their contributions as a Russian philosopher; he was one of the Russian Schellingians.

[4:7:36] Considering that Chaadaev was one of the Russian Schellingians, it would be interesting to apply the beliefs and philosophical standings of Astronist beliefs to the context of the various Russian groups; Russian Enlightenment, Slavophiles and *pochvennichestvo*, Russian symbolists, the Westernisers, the Russian Schellingians, Russian positivists, Russian Machists, Russian cosmists, Occultists, and many groups of philosophers of Russian philosophy.

[4:7:37] Chanakya (or Kautilya) (321–296 BC) - For their contributions as an ancient Indian teacher, philosopher, economist, jurist and royal advisor; as such, he is considered the pioneer of the field of political science and economics in India, and his work is thought of as an important precursor to classical economics.

[4:7:38] Chang Hsueh-ch'eng (or Zhang Xuecheng), (1738–1801) - For their contributions as a Qing dynasty historian, writer and philosopher; his father and his grandfather had been government officials, but, although Zhang achieved the highest civil service examination degree in 1778, he never held high office.

[4:7:39] Chang Tsai (or Zhang Zai), (1020–1077) - For their contributions as a Chinese Neo-Confucian moral philosopher and cosmologist; he is most known for laying out four ontological goals for intellectuals; to build up the manifestations of Heaven and Earth's spirit, to build up good life for the populace, to develop past sages' endangered scholarship, and to open up eternal peace.

[4:7:40] William Ellery Channing, (1780–1842) - For their contributions as the foremost Unitarian preacher in the United States in the early nineteenth century and, along with Andrews Norton (1786–1853), one of Unitarianism's leading theologians; Channing was known for his articulate and impassioned sermons and public speeches, and as a prominent thinker in the liberal theology of the day; his religion and thought were among the chief influences on the New England Transcendentalists although he never countenanced their views, which he saw as extreme.

[4:7:41] Walter Charleton, (1619–1707) - For their contributions as a natural philosopher and English writer. According to Jon Parkin, he was "the main conduit for the transmission of Epicurean ideas to England".

[4:7:42] Pierre Charron, (1541–1603) - For their contributions as a French 16th-century Catholic theologian and philosopher, and a disciple and contemporary of Michel de Montaigne.

[4:7:43] François-René de Chateaubriand, (1768–1848) - For their contributions as a French writer, politician, diplomat and historian who founded Romanticism in French literature; descended from an old aristocratic family from Brittany, Chateaubriand was a royalist by political disposition; in an age when a number of intellectuals turned against the Church, he authored the *Génie du christianisme* in defense of the Catholic faith.

[4:7:44] Walter Chatton, (1290–1343) - For their contributions as an English Scholastic theologian and philosopher who regularly sparred philosophically with William of Ockham, who is well known for Occam's razor.

[4:7:45] Ch'en Hsien-chang, (1428–1500) - For their contributions as the founder of a Chinese school of thought, invented a new method for moral teaching to resolve a traditional problem concerning about how to keep the mind centred on principle; he emphasised the way of acquiring insight for oneself by quiet-sitting.

[4:7:46] Cheng Hao (or Ch'eng Ming-Tao), (1032–1085) - For their contributions as a neo-Confucian philosopher from Luoyang, China; his philosophy was dualistic (between all that is tangible and all that is intangible) and pantheistic (believing that all that is intangible is the same thing, such as god, the human nature, feelings, actions (we see things acting, but not the action itself), movement (likewise), social roles and relations (likewise), chance, etc., and that such a unified, universal principle is in everything that is sensible rather than in an external reality as in Platonism); among his quotes are "outside dao there are no things and outside things there is no dao", "we call it god to emphasise the wonderful mystery of principle in ten thousand things, just as we call it lord (di) to characterise its being the ruler of events" and "in terms of the reality, it is change; in terms of principle, it is dao; in terms of its function, it is god; in terms of its destiny in a human being, it is human nature".

[4:7:47] Cheng Hsuan (or Zheng Xuan), (127-200) - For their contributions as an influential Chinese commentator and Confucian scholar near the end of the Han Dynasty.

[4:7:48] Cheng Yi (or Ch'eng Yi Chu'an), (1033–1107) - For their contributions as a Chinese philosopher of the Song Dynasty.

[4:7:49] Nikolai Chernyshevsky, (1828–1889) - For their contributions as a Russian revolutionary democrat, materialist philosopher, critic, and socialist (seen by some as a utopian socialist). He was the leader of the revolutionary democratic movement of the 1860s, and had an influence on Vladimir Lenin, Emma Goldman, and Serbian political writer and socialist Svetozar Marković.

[4:7:50] Chia Yi (or Jia Yi or Chia I), (201-169 BC) - For their contributions as a Chinese writer, poet and politician of the Western Han dynasty, best known as one of the earliest known writers of fu rhapsody and for his essay "Disquisition Finding Fault with Qin", which criticises the Qin dynasty and describes Jia's opinions on the reasons for its collapse.

[4:7:51] Chiao Hung, (1540–1620) - For their contributions as an important figure in late Ming intellectual history; in his own day he was praised for his accomplishments in prose-writing as much as for his active interest in Neo-Confucian and Buddhist metaphysics.

[4:7:52] Boris Chicherin, (1828–1904) - For their contributions as a Russian jurist and political philosopher, who worked out a theory that Russia needed a strong, authoritative government to persevere with liberal reforms; by the time of the Russian Revolution, Chicherin was probably the most reputable legal philosopher and historian in Russia.

[4:7:53] Ch'ien Mu, (1895–1990) - For their contributions as a Chinese historian, philosopher and writer; he is considered to be one of the greatest historians and philosophers of 20th-century China.

[4:7:54] Chih Tun (or Zhi Dun) (314-366) - For their contributions as a Chinese Buddhist monk and philosopher; a Chinese author, scholar, and confidant of Chinese government officials in 350 CE, he claimed that all who followed Buddhism would, at the end of their life, enter Nirvana.

[4:7:55] William Chillingworth, (1602–1644) - For their contributions as a controversial English churchman; besides his principal work, Chillingworth wrote a number of smaller anti-Jesuit papers published in the posthumous *Additional Discourses* (1687), and nine of his sermons have been preserved.

[4:7:56] Roderick Chisholm, (1916–1999) - For their contributions as an American philosopher known for his work on epistemology, metaphysics, free will, value theory, and the philosophy of perception; he was often called "the philosopher's philosopher."

[4:7:57] Noam Chomsky, (born 1928) - For their contributions as an American linguist, philosopher, cognitive scientist, social critic, and political activist; sometimes called "the father of modern linguistics", Chomsky is also a major figure in analytic philosophy and one of the founders of the field of cognitive science.

[4:7:58] Tasan Chông Yagyong, (1762–1836) - For their contributions as one of the greatest thinkers of the later Joseon period, wrote highly influential books about philosophy, science and theories of government, held significant administrative positions, was a close confidant of King Jeongjo (ruled 1776-1800), and was noted as a poet.

[4:7:59] Chou Tun-Yi (or Zhou Dunyi or Chou Lien-Hsi or Zhou Lianxi), (1017–1073) - For their contributions as a Song dynasty Chinese Neo-Confucian philosopher and cosmologist born during the Song Dynasty; he conceptualised the Neo-Confucian cosmology of the day, explaining the relationship between human conduct and universal forces.

[4:7:60] Christine de Pizan, (c. 1365-c. 1430) - For their contributions as an Italian and French author; she is best remembered for defending women in *The Book of the City of Ladies* and *The Treasure of the City of Ladies*; Christine was a prominent moralist and political thinker in medieval France.

[4:7:61] Chrysippus, (279–207 BC) - For their contributions as a Greek Stoic philosopher; a prolific writer, Chrysippus expanded the fundamental doctrines of Zeno of Citium, the founder of the school, which earned him the title of Second Founder of Stoicism.

[4:7:62] Thomas Chubb, (1679–1747) - For their contributions as an English lay Deist writer, born near Salisbury; he saw Christ as a divine teacher, but held reason to be sovereign over religion; he questioned the morality of religions, while defending Christianity on rational grounds; despite little schooling, Chubb was well up on the religious controversies of the day.

[4:7:63] Alonzo Church, (1903–1995) - For their contributions as an American mathematician and logician who made major contributions to mathematical logic and the foundations of theoretical computer science; he is best known for the lambda calculus, Church–Turing thesis, proving the undecidability of the Entscheidungsproblem, Frege–Church ontology, and the Church–Rosser theorem; he also worked on philosophy of language.

[4:7:64] Patricia Churchland, (born 1943) - For their contributions as a Canadian-American analytical philosopher noted for her contributions to neurophilosophy and the philosophy of mind.

[4:7:65] Paul Churchland, (born 1942) - For their contributions as a Canadian philosopher known for his studies in neurophilosophy and the philosophy of mind.

[4:7:66] Leon Chwistek, (1884–1944) - For their contributions as a Polish avant-garde painter, theoretician of modern art, literary critic, logician, philosopher and mathematician.

[4:7:67] Cicero, (106 BC–43 BC) - For their contributions as a Roman statesman, orator, lawyer and philosopher, who served as consul in the year 63 BC; he came from a wealthy municipal family of the Roman equestrian order, and is considered one of Rome's greatest orators and prose stylists.

[4:7:68] August Cieszkowski, (1814–1894) - For their contributions as a Polish philosopher, economist and social and political activist; his Hegelian philosophy influenced the young Karl Marx and action theorists.

[4:7:69] Emil Cioran, (1911–1995) - For their contributions as a Romanian philosopher and essayist, who published works in both Romanian and French; his work has been noted for its pervasive philosophical pessimism, and frequently engages with issues of suffering, decay, and nihilism.

[4:7:70] Hélène Cixous, (born 1937) - For their contributions as a professor, French feminist writer, poet, playwright, philosopher, literary critic and rhetorician; she founded the first centre of feminist studies at a European university at the Centre universitaire de Vincennes of the University of Paris (today's University of Paris VIII).

[4:7:71] Clarembald of Arras, (1110–1187) - For their contributions as a French theologian.

[4:7:72] Samuel Clarke, (1675–1729) - For their contributions as an English philosopher and Anglican clergyman; he is considered the major British figure in philosophy between John Locke and George Berkeley.

[4:7:73] Johannes Clauberg, (1622–1665) - For their contributions as a German theologian and philosopher. Clauberg was the founding Rector of the first University of Duisburg, where he taught from 1655 to 1665; he is known as a "scholastic cartesian".

[4:7:74] Cleanthes, (301–232 BC) - For their contributions as a Greek Stoic philosopher and successor to Zeno of Citium as the second head (scholarch) of the Stoic school in Athens.

[4:7:75] Clement of Alexandria, (2nd-3rd century) - For their contributions as a Christian theologian who taught at the Catechetical School of Alexandria; a convert to Christianity, he was an educated man who was familiar with classical Greek philosophy and literature; as his three major works demonstrate, Clement was influenced by Hellenistic philosophy to a greater extent than any other Christian thinker of his time, and in particular by Plato and the Stoics.

[4:7:76] Catherine Clément, (born 1939) - For their contributions as a French philosopher, novelist, feminist, and literary critic.

[4:7:77] Cleomedes, (2nd century) - For their contributions as a Greek astronomer who is known chiefly for his book *On the Circular Motions of the Celestial Bodies*.

[4:7:78] William Kingdon Clifford, (1845–1879) - For their contributions as an English mathematician and philosopher; building on the work of Hermann Grassmann, he introduced what is now termed geometric algebra, a special case of the Clifford algebra named in his honour.

[4:7:79] Catherine Trotter Cockburn, (1679–1749) - For their contributions as an English novelist, dramatist, and philosopher; she wrote on moral philosophy, theological tracts, and had a voluminous correspondence.

[4:7:80] Lorraine Code, (born 1937) - For their contributions as the Professor Emerita of Philosophy at York University in Toronto, Ontario, Canada and a Fellow of the Royal Society of Canada; her principal area of research is feminist epistemology and the politics of knowledge.

[4:7:81] G.A. Cohen, (1941-2009) - For their contributions as a Canadian Marxist political philosopher who held the positions of Quain Professor of Jurisprudence, University College London and Chichele Professor of Social and Political Theory, All Souls College, Oxford.

[4:7:82] Hermann Cohen, (1842–1918) - For their contributions as a German Jewish philosopher, one of the founders of the Marburg school of neo-Kantianism, and he is often held to be "probably the most important Jewish philosopher of the nineteenth century".

[4:7:83] L. Jonathan Cohen, (born 1923) - For their contributions as a British philosopher; he was Fellow and Praelector in Philosophy, 1957–90 and Senior Tutor, 1985–90 at The Queen's College, Oxford and British Academy Reader in Humanities, University of Oxford, 1982–84.

[4:7:84] Morris Raphael Cohen, (1880–1947) - For their contributions as an American philosopher, lawyer, and legal scholar who united pragmatism with logical positivism and linguistic analysis.

[4:7:85] Samuel Taylor Coleridge, (1772–1834) - For their contributions as an English poet, literary critic, philosopher and theologian who, with his friend William Wordsworth, was a founder of the Romantic Movement in England and a member of the Lake Poets.

[4:7:86] John Colet, (1466–1519) - For their contributions as an English churchman and educational pioneer; Colet wanted people to see the scripture as their guide through life; furthermore, he wanted to restore theology and rejuvenate Christianity; Colet is an important early leader of Christian humanism as he linked humanism and reform.

[4:7:87] Lucio Colletti, (1924–2001) - For their contributions as an Italian Western Marxist philosopher; Colletti started to be known outside Italy because of a long interview that Marxist historian Perry Anderson published in the *New Left Review* in 1974.

[4:7:88] Arthur Collier, (1680–1732) - For their contributions as an English Anglican priest and philosopher; his views are grounded on two presuppositions; the utter aversion of common sense to any theory of representative perception; the difference between imagination and sense perception is only one of degree.

[4:7:89] R. G. Collingwood, (1889–1943) - For their contributions as an English philosopher, historian and archaeologist; he is best known for his philosophical works, including *The Principles of Art* (1938) and the posthumously published *The Idea of History* (1946).

[4:7:90] Anthony Collins, (1676–1729) - For their contributions as an English philosopher, and a proponent of deism.

[4:7:91] John Comenius, (1592–1670) - For their contributions as a Czech philosopher, pedagogue and theologian from the Margraviate of Moravia who is considered the father of modern education; he served as the last bishop of the Unity of the Brethren before becoming a religious refugee and one of the earliest champions of universal education, a concept eventually set forth in his book *Didactica Magna*.

[4:7:92] Auguste Comte, (1798–1857) - For their contributions as a French philosopher and writer who formulated the doctrine of positivism; he is often regarded as the first philosopher of science in the modern sense of the term; Comte is also seen as the founder of the academic discipline of sociology.

[4:7:93] Étienne Bonnot de Condillac, (1715–1780) - For their contributions as a French philosopher and epistemologist, who studied in such areas as psychology and the philosophy of the mind.

[4:7:94] Marquis de Condorcet, (1743–1794) - For their contributions as a French philosopher and mathematician; his ideas, including support for a liberal economy, free and equal public instruction, constitutional government, and equal rights for women and people of all races, have been said to embody the ideals of the Age of Enlightenment and Enlightenment rationalism.

[4:7:95] Confucius, (551 BC – 479 BC) - For their contributions as a Chinese philosopher and politician of the Spring and Autumn period; the philosophy of Confucius, also known as Confucianism, emphasised personal and governmental morality, correctness of social relationships, justice and sincerity; his followers competed successfully with many other schools during the Hundred Schools of Thought era only to be suppressed in favour of the Legalists during the Qin dynasty.

[4:7:96] Benjamin Constant, (1767–1830) - For their contributions as a Swiss-French political activist and writer on politics and religion; he was the author of a partly biographical psychological novel, *Adolphe*; he was a fervent classical liberal of the early 19th century, who influenced the Trienio Liberal movement in Spain, the Liberal Revolution of 1820 in Portugal, the Greek War of Independence, the November Uprising in Poland, the Belgian Revolution, and liberalism in Brazil and Mexico.

[4:7:97] Lady Anne Finch Conway, (1631–1679) - For their contributions as an English philosopher whose work, in the tradition of the Cambridge Platonists, was an influence on Gottfried Leibniz; Conway's thought is a deeply original form of rationalist philosophy, with hallmarks of gynocentric concerns and patterns that lead some to think of it as unique among seventeenth-century systems.

[4:7:98] Nicolaus Copernicus, (1473–1543) - For their contributions as a Renaissance-era mathematician and astronomer, who formulated a model of the universe that placed the Sun rather than the Earth at the center of the universe, in all likelihood independently of Aristarchus of Samos, who had formulated such a model some eighteen centuries earlier.

[4:7:99] Henry Corbin, (1903–1978) - For their contributions as a philosopher, theologian, Iranologist and professor of Islamic Studies at the *École pratique des hautes études* in Paris, France.

[4:7:100] Geraud de Cordemoy, (1626–1684) - For their contributions as a French philosopher, historian and lawyer; he is well known for his works in metaphysics and for his theory of language.

[4:7:101] Moses ben Jacob Cordovero, (1522–1570) - For their contributions as a central figure in the historical development of Kabbalah, leader of a mystical school in 16th-century Safed, Ottoman Syria.

[4:7:102] Uriel da Costa, (1585–1640) - For their contributions as a Jewish philosopher and skeptic who questioned the Catholic and Rabbinic institutions of his time.

[4:7:103] Antoine Augustin Cournot, (1801–1877) - For their contributions as a French philosopher and mathematician who also contributed to the development of economics.

[4:7:104] Victor Cousin, (1792–1867) - For their contributions as a French philosopher; he was the founder of "eclecticism", a briefly influential school of French philosophy that combined elements of German idealism and Scottish Common Sense Realism; as the administrator of public instruction for over a decade, Cousin also had an important influence on French educational policy.

[4:7:105] Louis Couturat, (1868–1914) - For their contributions as a French logician, mathematician, philosopher, and linguist.

[4:7:106] William Crathorn, (14th century) - For their contributions as an English Dominican philosopher, from Oxford; he was a philosopher who immediately followed in the intellectual tradition of William of Ockham and worked to strengthen his philosophical works.

[4:7:107] Cratylus, (c. 400 BC) - For their contributions as an ancient Athenian philosopher from the mid-late 5th century BCE, known mostly through his portrayal in Plato's dialogue Cratylus; he was a radical proponent of Heraclitean philosophy and influenced the young Plato.

[4:7:108] James Edwin Creighton, (1861–1924) - For their contributions as an American philosopher who believed no system of thought can be the product of an isolated mind.

[4:7:109] Hasdai Crescas, (c. 1340-1410) - For their contributions as a Catalan-Jewish philosopher and a renowned halakhist (teacher of Jewish law). He is known as one of the major practitioners of the rationalist approach to Jewish philosophy

[4:7:110] Benedetto Croce, (1866–1952) - For their contributions as an Italian idealist philosopher, historian and politician, who wrote on numerous topics, including philosophy, history, historiography and aesthetics.

[4:7:111] Christian August Crusius, (1715–1775) - For their contributions as a German philosopher and Protestant theologian.

[4:7:112] Ralph Cudworth, (1617–1688) - For their contributions as a famed English Anglican clergyman, Christian Hebraist, classicist, theologian and philosopher, and a leading figure among the Cambridge Platonists.

[4:7:113] Nathaniel Culverwel, (1619–1651) - For their contributions as an English author and theologian.

[4:7:114] Richard Cumberland, (1631-1718) - For their contributions as an English philosopher, and Bishop of Peterborough from 1691; in 1672, he published his major work, *De legibus naturae* (On natural laws), propounding utilitarianism and opposing the egoistic ethics of Thomas Hobbes; Cumberland was a member of the Latitudinarian movement, along with his friend Hezekiah Burton of Magdalene College, Cambridge and closely allied with the Cambridge Platonists, a group of ecclesiastical philosophers centred on Cambridge University in the mid 17th century.

[4:7:115] Cyrano de Bergerac, (1619–1655) - For their contributions as a French novelist, playwright, epistolarian and duelist.

[4:7:116] Heinrich Czolbe, (1819–1873) - For their contributions as a German physician and materialist philosopher.

Extolled Philosophers (Surname “D, E, and F”)

[4:8:1] Jean le Rond d'Alembert, (1717–1783) - For their contributions as a French mathematician, mechanic, physicist, philosopher, and music theorist.

[4:8:2] Damascius, (c. 462-540) - For their contributions as "the last of the Neoplatonists," as the last scholar of the School of Athens he was one of the pagan philosophers persecuted by Emperor Justinian I in the early 6th century AD, and was forced for a time to seek refuge in the Persian court, before being allowed back into the Empire.

[4:8:3] Peter Damian, (c. 1007-1072) - For their contributions as a reforming Benedictine monk and cardinal in the circle of Pope Leo IX; Dante placed him in one of the highest circles of Paradiso as a great predecessor of Saint Francis of Assisi and he was declared a Doctor of the Church in 1828.

[4:8:4] Arthur Danto, (born 1924) - For their contributions as an American art critic and philosopher; he is best known for having been an influential, long-time art critic for *The Nation* and for his work in philosophical aesthetics and philosophy of history, though he contributed significantly to a number of fields, including the philosophy of action.

[4:8:5] Charles Darwin, (1809–1882) - For their contributions as an English naturalist, geologist and biologist, best known for his contributions to the science of evolution; his proposition that all species of life have descended over time from common ancestors is now widely accepted, and considered a foundational concept in science.

[4:8:6] Erasmus Darwin, (1731–1802) - For their contributions as an English physician; one of the key thinkers of the Midlands Enlightenment, he was also a natural philosopher, physiologist, slave-trade abolitionist, inventor and poet.

[4:8:7] David of Dinant, (12th century) - For their contributions as a pantheistic philosopher; he may have been a member of, or at least been influenced by, a pantheistic sect known as the Amalricians.

[4:8:8] David the Invincible, (late 6th century) - For their contributions made to philosophy under the name given to a Neoplatonist Armenian philosopher of the 6th century.

[4:8:9] Donald Davidson, (1917–2003) - For their contributions as an American philosopher.

[4:8:10] Jalal al-Din al-Dawani, (1426–1502) - For their contributions as a leading philosopher, theologian, jurist and poet of 15th Century Iran.

[4:8:11] Simone de Beauvoir, (1908–1986) - For their contributions as a French writer, intellectual, existentialist philosopher, political activist, feminist and social theorist; though she did not consider herself a philosopher, she had a significant influence on both feminist existentialism and feminist theory.

[4:8:12] Bruno de Finetti, (1906–1985) - For their contributions as an Italian probabilist statistician and actuary, noted for the "operational subjective" conception of probability; the classic exposition of his distinctive theory is the 1937 "La prévision: ses lois logiques, ses sources subjectives," which discussed probability founded on the coherence of betting odds and the consequences of exchangeability.

[4:8:13] Joseph de Maistre, (1753–1821) - For their contributions as a French-speaking Savoyard philosopher, writer, lawyer, and diplomat, who advocated social hierarchy and monarchy in the period immediately following the French Revolution.

[4:8:14] Paul de Man, (1919–1983) - For their contributions as a Belgian-born literary critic and literary theorist; at the time of his death, de Man was one of the most prominent literary critics in the United States—known particularly for his importation of German and French philosophical approaches into Anglo-American literary studies and critical theory.

[4:8:15] Augustus De Morgan, (1806–1871) - For their contributions as a British mathematician and logician; he formulated De Morgan's laws and introduced the term mathematical induction, making its idea rigorous.

[4:8:16] Francesco de Sanctis, (1817–1883) - For their contributions as a leading Italian literary critic and scholar of Italian language and literature during the 19th century.

[4:8:17] Richard Dedekind, (1831–1916) - For their contributions a German mathematician who made important contributions to abstract algebra (particularly ring theory), axiomatic foundation for the natural numbers, algebraic number theory and the definition of the real numbers.

[4:8:18] Gilles Deleuze, (1925–1995) - For their contributions as a French philosopher who, from the early 1950s until his death in 1995, wrote on philosophy, literature, film, and fine art.

[4:8:19] Bernard Delfgaauw, (1912-1993) - For their contributions as a Dutch philosopher; he studied Dutch language, history, philosophy, and Hebrew language at the University of Amsterdam.

[4:8:20] Elijah Delmedigo, (1460–1497) - For their contributions as a strong follower of Averroes' doctrines, even the more radical ones: unity of intellect, eternity of the world, autonomy of reason from the boundaries of revealed religion.

[4:8:21] Giorgio Del Vecchio, (1878–1970) - For their contributions as a prominent Italian legal philosopher of the early 20th century; among others he influenced the theories of Norberto Bobbio; he is famous for his book Justice.

[4:8:22] Democritus, (460-370 BC) - For their contributions as an Ancient Greek pre-Socratic philosopher primarily remembered today for his formulation of an atomic theory of the universe.

[4:8:23] Daniel Dennett, (born 1942) - For their contributions as an American philosopher, writer, and cognitive scientist whose research centres on the philosophy of mind, philosophy of science, and philosophy of biology, particularly as those fields relate to evolutionary biology and cognitive science.

[4:8:24] Denys the Carthusian (or Denys de Leeuwis), (1402–1471) - For their contributions as a Roman Catholic theologian and mystic.

[4:8:25] Jacques Derrida, (1930–2004) - For their contributions as an Algerian-born French philosopher best known for developing a form of semiotic analysis known as deconstruction, which he discussed in numerous texts, and developed in the context of phenomenology; he is one of the major figures associated with post-structuralism and postmodern philosophy.

[4:8:26] René Descartes, (1596–1650) - For their contributions as a French philosopher, mathematician, and scientist; Descartes' *Meditations on First Philosophy* (1641) continues to be a standard text at most university philosophy departments.

[4:8:27] Robert Desgabets, (1610–1678) - For their contributions as a French Cartesian philosopher and Benedictine prior.

[4:8:28] Antoine Destutt de Tracy, (1754–1836) - For their contributions as a French Enlightenment aristocrat and philosopher who coined the term "ideology".

[4:8:29] Paul Deussen, (1845–1919) - For their contributions as a German Indologist and professor of Philosophy at University of Kiel.

[4:8:30] Alejandro Deustua, (1849–1945) - For their contributions as a Peruvian philosopher, educator and statesman; he was the Prime Minister of Peru from 9 August 1902 until 4 November 1902.

[4:8:31] John Dewey, (1859–1952) - For their contributions as an American philosopher, psychologist, and educational reformer whose ideas have been influential in education and social reform; Dewey is one of the primary figures associated with the philosophy of pragmatism and is considered one of the fathers of functional psychology.

[4:8:32] Dharmakirti, (c. 7th century) - For their contributions as an influential Indian Buddhist philosopher who worked at Nālandā; he was one of the key scholars of epistemology (pramana) in Buddhist philosophy, and is associated with the Yogācāra and Sautrāntika schools; he was also one of the primary theorists of Buddhist atomism.

[4:8:33] Albert Venn Dicey, (1835–1922) - For their contributions as a British Whig jurist and constitutional theorist; he is most widely known as the author of *Introduction to the Study of the Law of the Constitution* (1885); the principles it expounds are considered part of the uncodified British constitution.

[4:8:34] Denis Diderot, (1713–1784) - For their contributions as a French philosopher, art critic, and writer, best known for serving as co-founder, chief editor, and contributor to the *Encyclopédie* along with Jean le Rond d'Alembert; he was a prominent figure during the Enlightenment.

[4:8:35] Dietrich of Freiberg, (13th century) - For their contributions as a German member of the Dominican order and a theologian and physicist; he was named provincial of the Dominican Order in 1293, Albert the Great's old post.

[4:8:36] Kenelm Digby, (1603–1665) - For their contributions as an English courtier and diplomat; he was also a highly reputed natural philosopher, and known as a leading Roman Catholic intellectual and Blackloist.

[4:8:37] Dignaga, (c. 480–c. 540) - For their contributions as an Indian Buddhist scholar and one of the Buddhist founders of Indian logic (*hetu vidyā*); Dignāga's work laid the groundwork for the development of deductive logic in India and created the first system of Buddhist logic and epistemology (*Pramana*).

[4:8:38] Wilhelm Dilthey, (1833–1911) - For their contributions as a German historian, psychologist, sociologist, and hermeneutic philosopher, who held G. W. F. Hegel's Chair in Philosophy at the University of Berlin; as a polymathic philosopher, working in a modern research university, Dilthey's research interests revolved around questions of scientific methodology, historical evidence and history's status as a science.

[4:8:39] Hugo Dingler, (1881–1954) - For their contributions as a German scientist and philosopher; Dingler's position is usually characterised as "conventionalist" by Karl Popper and others; sometimes he is called a "radical conventionalist" (also referred to as "critical voluntarism" in the secondary literature), as by the early Rudolf Carnap.

[4:8:40] Diodorus Cronus, (3rd century BC) - For their contributions as a Greek philosopher and dialectician connected to the Megarian school. He was most notable for logic innovations, including his master argument formulated in response to Aristotle's discussion of future contingents.

[4:8:41] Diogenes Laertius, (3rd century) - For their contributions as a biographer of the Greek philosophers; nothing is definitively known about his life, but his surviving *Lives and Opinions of Eminent Philosophers* is a principal source for the history of ancient Greek philosophy; his reputation is controversial among scholars because he often repeats information from his sources without critically evaluating it.

[4:8:42] Diogenes of Apollonia, (c. 460 BC) - For their contributions as an ancient Greek philosopher, and was a native of the Milesian colony Apollonia in Thrace.

[4:8:43] Diogenes of Oenoanda, (2nd Century) - For their contributions as an Epicurean Greek from the 2nd century AD who carved a summary of the philosophy of Epicurus onto a portico wall in the ancient Greek city of Oenoanda in Lycia (modern day southwest Turkey).

[4:8:44] Diogenes the Cynic of Sinope, (412-323 BC) - For their contributions as a Greek philosopher and one of the founders of Cynic philosophy.

[4:8:45] Dogen Zenji (or Dōgen Kigen), (1200–1253) - For their contributions as a Japanese Buddhist priest, writer, poet, philosopher, and founder of the Sōtō school of Zen in Japan.

[4:8:46] Dong Zhongshu (or Tung Chung-shu), (c. 176-c. 104) - For their contributions as a Han Dynasty Chinese scholar; he is traditionally associated with the promotion of Confucianism as the official ideology of the Chinese imperial state; he apparently favoured heaven worship over the tradition of cults celebrating the five elements.

[4:8:47] Herman Dooyeweerd, (1894–1977) - For their contributions as a professor of law and jurisprudence at the Vrije Universiteit, Amsterdam from 1926 to 1965; he was also a philosopher and principal founder of Reformational philosophy with Dirk Vollenhoven, a significant development within the Neocalvinist (or Kuyperian) school of thought.

[4:8:48] Fyodor Dostoyevsky, (1821–1881) - For their contributions as a Russian novelist, short story writer, essayist, journalist and philosopher. Dostoevsky's literary works explore human psychology in the troubled political, social, and spiritual atmospheres of 19th-century Russia, and engage with a variety of philosophical and religious themes.

[4:8:49] Fred Dretske, (born 1932) - For their contributions as an American philosopher noted for his contributions to epistemology and the philosophy of mind.

[4:8:50] Hans Adolf Eduard Driesch, (1867–1941) - For their contributions as a German biologist and philosopher from Bad Kreuznach; he is most noted for his early experimental work in embryology and for his neo-vitalist philosophy of entelechy: he has also been credited with performing the first artificial 'cloning' of an animal in the 1880s, although this claim is dependent on how one defines cloning.

[4:8:51] Emil du Bois-Reymond, (1818–1896) - For their contributions as a German physician and physiologist, the co-discoverer of nerve action potential, and the developer of experimental electrophysiology.

[4:8:52] Jean-Baptiste Dubos, (1670–1742) - For their contributions as a French author.

[4:8:53] Émilie du Châtelet, (1706–1749) - For their contributions as a French natural philosopher, mathematician, physicist, and author during the early 1730s until her untimely death due to childbirth in 1749; her most recognised achievement is her translation of and commentary on Isaac Newton's book Principia containing basic laws of physics; the translation, published posthumously in 1759, is still considered the standard French translation today.

[4:8:54] Guillaume du Vair, (1556–1621) - For their contributions as a French author and lawyer.

[4:8:55] Curt Ducasse, (1881–1969) - For their contributions as a philosopher who taught at the University of Washington and Brown University.

[4:8:56] Pierre Duhem, (1861–1916) - For their contributions as a French theoretical physicist who worked on thermodynamics, hydrodynamics, and the theory of elasticity; Duhem was also a historian of science, noted for his work on the European Middle Ages; as a philosopher of science, he is remembered principally for his views on the indeterminacy of experimental criteria.

[4:8:57] Eugen Dühring, (1833–1921) - For their contributions as a German philosopher, positivist, economist, and socialist who was a strong critic of Marxism.

[4:8:58] Michael Dummett, (born 1925) - For their contributions as an English academic described as "among the most significant British philosophers of the last century and a leading campaigner for racial tolerance and equality."

[4:8:59] Duns Scotus, (c. 1266-1308) - For their contributions as one of the three most important philosopher-theologians of Western Europe in the High Middle Ages, together with Thomas Aquinas and William of Ockham; Scotus has had considerable influence on both Catholic and secular thought; the doctrines for which he is best known are the "univocity of being", that existence is the most abstract concept we have, applicable to everything that exists; the formal distinction, a way of distinguishing between different aspects of the same thing; and the idea of haecceity, the property supposed to be in each individual thing that makes it an individual; Scotus also developed a complex argument for the existence of God, and argued for the Immaculate Conception of Mary.

[4:8:60] Profiat Duran (or Efodi or Isaac ben Moses Levi) (c. 1349-c. 1414) - For their contributions as a physician, philosopher, grammarian, and controversialist in the 14th century.

[4:8:61] Simeon ben Zemah Duran (or Rashbaz), (1361–1444) - For their contributions as a Rabbinical authority, student of philosophy, astronomy, mathematics, and especially of medicine, which he practised for a number of years at Palma (de Majorca); a major 15th century posek, his published decisions in matters of halacha have been widely quoted in halachic literature for hundreds of years.

[4:8:62] Durandus of St. Pourçain, (c. 1275-1334) - For their contributions as a French Dominican philosopher and theologian.

[4:8:63] Émile Durkheim, (1858–1917) - For their contributions as a French sociologist; he formally established the academic discipline and—with W. E. B. Du Bois, Karl Marx and Max Weber—is commonly cited as the principal architect of modern social science.

[4:8:64] Ronald Dworkin, (born 1931) - For their contributions as an American philosopher, jurist, and scholar of United States constitutional law.

[4:8:65] John Earman, (born 1942) - For their contributions as an American philosopher of physics; he is an emeritus professor in the History and Philosophy of Science department at the University of Pittsburgh.

[4:8:66] Johann Augustus Eberhard, (1739–1809) - For their contributions as a German theologian and "popular philosopher".

[4:8:67] Meister Eckhart, (1260–1327/8) - For their contributions as a German theologian, philosopher and mystic, born near Gotha, in the Landgraviate of Thuringia (now central Germany) in the Holy Roman Empire.

[4:8:68] Umberto Eco, (born 1932) - For their contributions as an Italian novelist, literary critic, philosopher, semiotician, and university professor.

[4:8:69] Arthur Stanley Eddington, (1882–1944) - For their contributions as an English astronomer, physicist, and mathematician of the early 20th century who did his greatest work in astrophysics; he was also a philosopher of science and a populariser of science.

[4:8:70] Jonathan Edwards, (1703–1758) - For their contributions as an American revivalist preacher, philosopher, and Congregationalist Protestant theologian; Edwards is widely regarded as one of the America's most important and original philosophical theologians; Edwards' theological work is broad in scope, but he was rooted in Reformed theology, the metaphysics of theological determinism, and the Puritan heritage.

[4:8:71] Paul Edwards, (1923–2004) - For their contributions as an Austrian-American moral philosopher; he was the editor-in-chief of MacMillan's eight-volume Encyclopedia of Philosophy from 1967, and lectured at New York University, Brooklyn College and the New School for Social Research from the 1960s to the 1990s.

[4:8:72] Christian von Ehrenfels, (1856–1932) - For their contributions as an Austrian philosopher, and is known as one of the founders and precursors of Gestalt psychology.

[4:8:73] Albert Einstein, (1879–1955) - For their contributions as a German-born theoretical physicist who developed the theory of relativity, one of the two pillars of modern physics (alongside quantum mechanics).

[4:8:74] Mircea Eliade, (1907–1986) - For their contributions as a Romanian historian of religion, fiction writer, philosopher, and professor at the University of Chicago; he was a leading interpreter of religious experience, who established paradigms in religious studies that persist to this day.

[4:8:75] Elias, (6th century) - For their contributions as a Greek scholar and a commentator on Aristotle and Porphyry.

[4:8:76] George Eliot, (1819–1880) - For their contributions as an English novelist, poet, journalist, translator, and one of the leading writers of the Victorian era.

[4:8:77] T. S. Eliot, (1888–1965) - For their contributions as one of the twentieth century's major poets; he was also an essayist, publisher, playwright, and literary and social critic.

[4:8:78] Elisabeth of Bohemia, (1618–1680) - For their contributions as a philosopher best known for her correspondence with René Descartes; she was critical of Descartes' dualistic metaphysics and her work anticipated the metaphysical concerns of later philosophers.

[4:8:79] Jon Elster, (born 1940) - For their contributions as a Norwegian social and political theorist who has authored works in the philosophy of social science and rational choice theory; he is also a notable proponent of analytical Marxism, and a critic of neoclassical economics and public choice theory, largely on behavioural and psychological grounds.

[4:8:80] Ralph Waldo Emerson, (1803–1882) - For their contributions as an American essayist, lecturer, philosopher, and poet who led the transcendentalist movement of the mid-19th century; he was seen as a champion of individualism and a prescient critic of the countervailing pressures of society, and he disseminated his thoughts through dozens of published essays and more than 1,500 public lectures across the United States.

[4:8:81] Empedocles, (490 BC–430 BC) - For their contributions as a Greek pre-Socratic philosopher and a citizen of Akragas, a Greek city in Sicily. Empedocles' philosophy is best known for originating the cosmogonic theory of the four classical elements.

[4:8:82] Friedrich Engels, (1820–1895) - For their contributions as a German philosopher, communist, social scientist, journalist and businessman.

[4:8:83] Epicharmus, (c. 540–450 BC) - For their contributions as a Greek dramatist and philosopher who is often credited with being one of the first comic writers, having originated the Doric or Sicilian comedic form.

[4:8:84] Epictetus, (AD 55–c. 135) - For their contributions as a Greek Stoic philosopher; Epictetus taught that philosophy is a way of life and not just a theoretical discipline; to Epictetus, all external events are beyond our control; we should accept calmly and dispassionately whatever happens; however, individuals are responsible for their own actions, which they can examine and control through rigorous self-discipline.

[4:8:85] Epicurus, (341 BC–270 BC) - For their contributions as an ancient Greek philosopher and sage who founded a highly influential school of philosophy now called Epicureanism; an extremely prolific writer, he is said to have originally written over 300 works on various subjects, but the vast majority of these writings have been lost.

[4:8:86] Desiderius Erasmus, (1466–1536) - For their contributions as a Dutch Christian humanist who is widely considered to have been the greatest scholar of the northern Renaissance; originally trained as a Catholic priest, Erasmus was an important figure in classical scholarship who wrote in a pure Latin style.

[4:8:87] Johannes Scotus Eriugena, (c. 800-c. 880) - For their contributions as an Irish theologian, neoplatonist philosopher, and poet.

[4:8:88] Rudolf Christoph Eucken, (1846–1926) - For their contributions as a German philosopher; he received the 1908 Nobel Prize for Literature "in recognition of his earnest search for truth, his penetrating power of thought, his wide range of vision, and the warmth and strength in presentation with which in his numerous works he has vindicated and developed an idealistic philosophy of life", after he had been nominated by a member of the Swedish Academy.

[4:8:89] Eudoxus of Cnidus, (408 BC - 355 BC) - For their contributions as an ancient Greek astronomer, mathematician, scholar, and student of Archytas and Plato; all of his works are lost, though some fragments are preserved in Hipparchus' commentary on Aratus's poem on astronomy.

[4:8:90] Eusebius of Caesarea, (264–339) - For their contributions as a historian of Christianity, exegete, and Christian polemicist; he became the bishop of Caesarea Maritima about 314 AD; together with Pamphilus, he was a scholar of the Biblical canon and is regarded as an extremely learned Christian of his time.

[4:8:91] Gareth Evans, (1946–1980) - For their contributions as a British philosopher who made substantial contributions to logic, philosophy of language and philosophy of mind he is best known for his posthumous work *The Varieties of Reference* (1982), edited by John McDowell; the book considers different kinds of reference to objects, and argues for a number of conditions that must obtain for reference to occur.

[4:8:92] Emil Fackenheim, (1916–2003) - For their contributions as a noted Jewish philosopher and Reform rabbi.

[4:8:93] Thome H. Fang, (1899–1976) - For their contributions as a Chinese philosopher.

[4:8:94] Frantz Fanon, (1925–1961) - For their contributions as a French West Indian psychiatrist, political philosopher, revolutionary, and writer from the French colony of Martinique, whose works are influential in the fields of post-colonial studies, critical theory and Marxism.

[4:8:95] Al-Farabi, (870–950) - For their contributions as a renowned philosopher and jurist who wrote in the fields of political philosophy, metaphysics, ethics and logic; he was also a scientist, cosmologist, mathematician and music scholar.

[4:8:96] Michael Faraday, (1791–1867) - For their contributions as an English scientist who contributed to the study of electromagnetism and electrochemistry; his main discoveries include the principles underlying electromagnetic induction, diamagnetism and electrolysis.

[4:8:97] Michelangelo Fardella, (1646–1718) - For their contributions as an Italian scientist; he excelled in physics and mathematics, and was both the chair of philosophy in Modena and of astronomy and philosophy in Padoue.

[4:8:98] Raimundo de Farias Brito, (1862–1917) - For their contributions as a writer and philosopher Brazil and is considered as one of the biggest names in the philosophical thinking of the country and author of one of the most complete philosophical works originally produced in Brazil, in which he identified the planes of knowledge and being, dogmatically returning to traditional metaphysics, of a spiritualist character.

[4:8:99] Austin Marsden Farrer, (1904–1968) - For their contributions as an English Anglican philosopher, theologian, and biblical scholar; his activity in philosophy, theology, and spirituality led many to consider him one of the greatest figures of 20th-century Anglicanism.

[4:8:100] Fazang (or Fa-Tsang), (643-712) - For their contributions as the third of the five patriarchs of the Huayan school of Mahayana Buddhism; he was an important and influential philosopher, so much so that it has been claimed that he "was in fact the real creator of what is now known as Hua-yen."

[4:8:101] Gustav Fechner, (1801–1887) - For their contributions as a German philosopher, physicist and experimental psychologist; an early pioneer in experimental psychology and founder of psychophysics, he inspired many 20th-century scientists and philosophers.

[4:8:102] Andrew Feenberg, (born 1943) - For their contributions as an American philosopher; he holds the Canada Research Chair in the Philosophy of Technology in the School of Communication at Simon Fraser University in Vancouver; his main interests are philosophy of technology, continental philosophy, critique of technology and science and technology studies.

[4:8:103] Valentin Feldman, (1909–1942) - For their contributions as a French philosopher and Marxist of Jewish-Russian origin; in 1942, he was murdered by the Nazis during the Occupation of France.

[4:8:104] Joel Feinberg, (1926–2004) - For their contributions as an American political and legal philosopher; he is known for his work in the fields of ethics, action theory, philosophy of law, and political philosophy as well as individual rights and the authority of the state; Feinberg was one of the most influential figures in American jurisprudence of the last fifty years.

[4:8:105] José Pablo Feinmann, (born 1943) - For their contributions as an Argentine philosopher, writer, playwright and TV host; he has also written several screenplays for domestic film production and international coproductions.

[4:8:106] François de Salignac de la Mothe-Fénelon, (1651–1715) - For their contributions as a French Roman Catholic archbishop, theologian, poet and writer; he today is remembered mostly as the author of *The Adventures of Telemachus*, first published in 1699.

[4:8:107] Feng Youlan, (1895–1990) - For their contributions as a Chinese philosopher who was instrumental for reintroducing the study of Chinese philosophy in the modern era.

[4:8:108] Adam Ferguson, (1723–1816) - For their contributions as a Scottish philosopher and historian of the Scottish Enlightenment; Ferguson was sympathetic to traditional societies, such as the Highlands, for producing courage and loyalty; he criticised commercial society as making men weak, dishonourable and unconcerned for their community.

[4:8:109] Ann Ferguson, (born 1938) - For their contributions as an American philosopher, and Professor Emerita of Philosophy and Women's Studies at the University of Massachusetts Amherst.

[4:8:110] Jose Ferrater-Mora, (1912–1991) - For their contributions as a Spanish philosopher; he became known for his inclusion of humans and non-human animals within the same moral sphere, or continuum, arguing that the difference was one of degree, not kind.

[4:8:111] Luigi Ferri, (1826–1895) - For their contributions as an Italian philosopher born at Bologna.

[4:8:112] James Frederick Ferrier, (1808–1864) - For their contributions as a Scottish metaphysical writer and philosopher; he introduced the word epistemology in philosophical English.

[4:8:113] Ludwig Feuerbach, (1804–1872) - For their contributions as a German philosopher and anthropologist best known for his book *The Essence of Christianity*, which provided a

critique of Christianity which strongly influenced generations of later thinkers, including Karl Marx, Sigmund Freud, Friedrich Engels, Richard Wagner, and Friedrich Nietzsche.

[4:8:114] Paul Feyerabend, (1924–1994) - For their contributions as an Austrian-born philosopher of science best known for his work as a professor of philosophy at the University of California, Berkeley, where he worked for three decades (1958–1989).

[4:8:115] Johann Gottlieb Fichte, (1762–1814) - For their contributions as a German philosopher who became a founding figure of the philosophical movement known as German idealism, which developed from the theoretical and ethical writings of Immanuel Kant. Recently, philosophers and scholars have begun to appreciate Fichte as an important philosopher in his own right due to his original insights into the nature of self-consciousness or self-awareness.

[4:8:116] Marsilio Ficino, (1433–1499) - For their contributions as an Italian scholar and Catholic priest who was one of the most influential humanist philosophers of the early Italian Renaissance; he was an astrologer, a reviver of Neoplatonism in touch with the major academics of his day and the first translator of Plato's complete extant works into Latin.

[4:8:117] Hartry Field, (born 1946) - For their contributions as an American philosopher; he is Silver Professor of Philosophy at New York University and a notable contributor to philosophy of language, philosophy of mathematics, epistemology, and philosophy of mind.

[4:8:118] Robert Filmer, (1588–1653) - For their contributions as an English political theorist who defended the divine right of kings.

[4:8:119] Eugen Fink, (1905–1975) - For their contributions as a German philosopher.

[4:8:120] John Finnis, (born 1940) - For their contributions as an Australian legal philosopher, jurist and scholar specialising in jurisprudence and the philosophy of law.

[4:8:121] Kuno Fischer, (1824–1907) - For their contributions as a German philosopher, a historian of philosophy and a critic.

[4:8:122] Ronald Fisher, (1890–1962) - For their contributions as a British statistician and geneticist. For his work in statistics, he has been described as "a genius who almost single-handedly created the foundations for modern statistical science" and "the single most important figure in 20th century statistics".

[4:8:123] John Fiske, (1842–1901) - For their contributions as an American philosopher and historian.

[4:8:124] Pavel Aleksandrovich Florenskii, (1882–1937) - For their contributions as a Russian Orthodox theologian, priest, philosopher, mathematician, physicist, electrical engineer, inventor, polymath and neomartyr.

[4:8:125] Georges Florovsky, (1893–1979) - For their contributions as an Orthodox Christian priest, theologian, historian and ecumenist.

[4:8:126] Robert Fludd, (1574–1637) - For their contributions as a prominent English Paracelsian physician with both scientific and occult interests; he is remembered as an astrologer, mathematician, cosmologist, Qabalist and Rosicrucian apologist; Fludd is best known for his compilations in occult philosophy; he had a celebrated exchange of views with Johannes Kepler concerning the scientific and hermetic approaches to knowledge.

[4:8:127] Jerry Fodor, (born 1935) - For their contributions as an American philosopher and cognitive scientist.

[4:8:128] Robert J. Fogelin, (born 1932) - For their contributions as an American philosopher; he was a professor of philosophy and Sherman Fairchild Professor in the humanities (emeritus) at Dartmouth College where he had taught since 1980.

[4:8:129] Dagfinn Føllesdal, (born 1932) - For their contributions as a Norwegian-American philosopher; he is the Clarence Irving Lewis Professor of Philosophy Emeritus at Stanford University, and professor emeritus at the University of Oslo.

[4:8:130] Pedro da Fonseca, (1528–1599) - For their contributions as a Portuguese Jesuit philosopher and theologian; his work on logic and metaphysics made him known in his time as the Portuguese Aristotle; he projected the 'Cursus Conimbricenses' realised by Manuel Góis and others.

[4:8:131] Bernard le Bovier de Fontenelle, (1657–1757) - For their contributions as a French author and an influential member of three of the academies of the Institut de France, noted especially for his accessible treatment of scientific topics during the unfolding of the Age of Enlightenment.

[4:8:132] Philippa Foot, (born 1920) - For their contributions as a British philosopher; she was one of the founders of contemporary virtue ethics, inspired by the ethics of Aristotle; her later career marked a significant change in view from her work in the 1950s and 1960s, and may be seen as an attempt to modernise Aristotelian ethical theory, to show that it is adaptable to a contemporary world view, and thus, that it could compete with such popular theories as modern deontological and utilitarian ethics.

[4:8:133] David Fordyce, (1711–1751) - For their contributions as a Scottish philosopher, a contributor to the Scottish Enlightenment.

[4:8:134] Michel Foucault, (1926–1984) - For their contributions as a French philosopher, historian of ideas, social theorist, and literary critic; Foucault's theories primarily address the relationship between power and knowledge, and how they are used as a form of social control through societal institutions.

[4:8:135] Simon Foucher, (1644–1696) - For their contributions as a French polemic philosopher; his philosophical standpoint was one of Academic skepticism; he did not agree with dogmatism, but neither did he resort to Pyrrhonism.

[4:8:136] Alfred Fouillée, (1838–1922) - For their contributions as a French philosopher.

[4:8:137] Charles Fourier, (1772–1837) - For their contributions as a French philosopher, influential early socialist thinker and one of the founders of utopian socialism; some of Fourier's social and moral views, held to be radical in his lifetime, have become mainstream thinking in modern society; for instance, Fourier is credited with having originated the word "feminism" in 1837.

[4:8:138] Francis of Marchia, (ca. 1290- ca. 1344) - For their contributions as an Italian Franciscan theologian and philosopher.

[4:8:139] Francis of Meyronnes, (1285–1328) - For their contributions as a French scholastic philosopher; he was a distinguished pupil of Duns Scotus, whose teaching (Scotism) he usually followed.

[4:8:140] Sebastian Franck, (1499–1542) - For their contributions as a 16th-century German freethinker, humanist, and radical reformer.

[4:8:141] Jerome Frank, (1889–1957) - For their contributions as an American legal philosopher and author who played a leading role in the legal realism movement, Chairman of the Securities and Exchange Commission, and a United States Circuit Judge of the United States Court of Appeals for the Second Circuit.

[4:8:142] Erich Frank, (1883–1949) - For their contributions as a German historian of philosophy.

[4:8:143] Semën Liudvigovich Frank, (1877–1950) - For their contributions as a Russian philosopher; born into a Jewish family, he became a Christian in 1912.

[4:8:144] William K. Frankena, (1908–1994) - For their contributions as an American moral philosopher; he was a member of the University of Michigan's department of philosophy for 41 years (1937–1978), and chair of the department for 14 years (1947–1961).

[4:8:145] Harry Gordon Frankfurt, (born 1929) - For their contributions as an American philosopher; he is professor emeritus of philosophy at Princeton University, where he

taught from 1990 until 2002, and previously taught at Yale University, Rockefeller University, and Ohio State University.

[4:8:146] Benjamin Franklin, (1706–1790) - For their contributions as an American polymath and one of the Founding Fathers of the United States; Franklin was a leading author, printer, political theorist, politician, Freemason, postmaster, scientist, inventor, humorist, civic activist, statesman, and diplomat; as a scientist, he was a major figure in the American Enlightenment and the history of physics for his discoveries and theories regarding electricity; as an inventor, he is known for the lightning rod, bifocals, and the Franklin stove, among other inventions; he founded many civic organisations, including the Library Company, Philadelphia's first fire department and the University of Pennsylvania.

[4:8:147] Michael Frede, (1940–2007) - For their contributions as a prominent scholar of ancient philosophy, described by *The Telegraph* as "one of the most important and adventurous scholars of ancient philosophy of recent times."

[4:8:148] Gottlob Frege, (1848–1925) - For their contributions as a German philosopher, logician, and mathematician; he is understood by many to be the father of analytic philosophy, concentrating on the philosophy of language and mathematics.

[4:8:149] Hans Frei, (1922–1988) - For their contributions as an American biblical scholar and theologian who is best known for work on biblical hermeneutics.

[4:8:150] Sigmund Freud, (1856–1939) - For their contributions as an Austrian neurologist and the founder of psychoanalysis, a clinical method for treating psychopathology through dialogue between a patient and a psychoanalyst.

[4:8:151] Jakob Friedrich Fries, (1773–1843) - For their contributions as a German post-Kantian philosopher.

[4:8:152] Friedrich Fröbel, (1782–1852) - For their contributions as a German pedagogue, a student of Johann Heinrich Pestalozzi, who laid the foundation for modern education based on the recognition that children have unique needs and capabilities.

[4:8:153] Marilyn Frye, (born 1941) - For their contributions as an American philosopher and radical feminist theorist; she is known for her theories on sexism, racism, oppression, and sexuality; her writings offer discussions of feminist topics, such as: white supremacy, male privilege, and gay and lesbian marginalisation.

[4:8:154] Fujiwara Seika, (1561–1619) - For their contributions as a Japanese neo-Confucian philosopher in the Edo period.

[4:8:155] Lon L. Fuller, (1902–1978) - For their contributions as a noted legal philosopher, who criticised legal positivism and defended a secular and procedural form of natural law theory.

[4:8:156] Nikolai Fyodorovich Fyodorov, (1828–1906) - For their contributions as a Russian Orthodox Christian philosopher, who was part of the Russian cosmism movement and a precursor of transhumanism; Fyodorov advocated radical life extension, physical immortality and even resurrection of the dead, using scientific methods.

Extolled Philosophers (Surnames “G, H, and I”)

[4:9:1] Gadadhara Bhattacharya, (1604–1709) - For their contributions as a member of Navya-Nyaya school of extreme realists, Gadadhara wrote on the philosophy of language, of mind, and legal theory.

[4:9:2] Hans-Georg Gadamer, (1900–2002) - For their contributions as a German philosopher of the continental tradition, best known for his 1960 magnum opus *Truth and Method* (*Wahrheit und Methode*) on hermeneutics; he was a Protestant Christian.

[4:9:3] Gaius, (110–180) - For their contributions as a celebrated Roman jurist.

[4:9:4] Galen, (131–201) - For their contributions as a Greek physician, surgeon and philosopher in the Roman Empire; arguably the most accomplished of all medical researchers of antiquity, Galen influenced the development of various scientific disciplines, including anatomy, physiology, pathology, pharmacology, and neurology, as well as philosophy and logic.

[4:9:5] Galileo Galilei, (1564–1642) - For their contributions as an Italian astronomer, physicist and engineer, sometimes described as a polymath; Galileo has been called the "father of observational astronomy", the "father of modern physics", the "father of the scientific method", and the "father of modern science".

[4:9:6] Pasquale Galluppi, (1770–1846) - For their contributions as an Italian philosopher and a professor at the University of Naples, where he died in 1846.

[4:9:7] Rafael Gambra Ciudad, (1920-2004) - For their contributions as a Spanish philosopher, a secondary education official, a Carlist politician and a soldier; in philosophy he is considered key representative of late Traditionalism; his works fall also into theory of state and politics; he is best known as author of books focusing on secularisation of Western European culture in the consumer society era.

[4:9:8] Mahatma Gandhi, (1869–1948) - For their contributions as an Indian activist who was the leader of the Indian independence movement against British colonial rule; employing nonviolent civil disobedience, Gandhi led India to independence and inspired movements for civil rights and freedom across the world.

[4:9:9] Gangeśa, (fl. c. 1325) - For their contributions as an Indian mathematician and philosopher from the kingdom of Mithila; he established the Navya-Nyāya ("New Logic") school.

[4:9:10] Réginald Garrigou-Lagrange, (1887–1964) - For their contributions as a French Catholic theologian; he has been noted as a leading neo-Thomist of the 20th century.

[4:9:11] Christian Garve, (1742–1798) - For their contributions as one of the best-known philosophers of the late Enlightenment along with Immanuel Kant and Moses Mendelssohn.

[4:9:12] Pierre Gassendi, (1592–1655) - For their contributions as a French philosopher, priest, astronomer, and mathematician; while he held a church position in south-east France, he also spent much time in Paris, where he was a leader of a group of free-thinking intellectuals; he was also an active observational scientist, publishing the first data on the transit of Mercury in 1631; the lunar crater Gassendi is named after him.

[4:9:13] Gaunilo, (11th century) - For their contributions as a Benedictine monk of Marmoutier Abbey in Tours, France; he is best known for his contemporary criticism of the ontological argument for the existence of God which appeared in St Anselm's Proslogion.

[4:9:14] Aksapada Gautama, (c. 2nd century BC) - For their contributions as the principal author of the Nyaya-sutras.

[4:9:15] Siddhartha Gautama (or Buddha), (ca. 563-483 BC) - For their contributions as a monk, mendicant, sage, philosopher, teacher and religious leader on whose teachings Buddhism was founded; Gautama taught a Middle Way between sensual indulgence and the severe asceticism found in the śramaṇa movement common in his region; Gautama is the primary figure in Buddhism; he is believed by Buddhists to be an enlightened teacher who attained full Buddhahood and shared his insights to help sentient beings end rebirth and suffering; accounts of his life, discourses and monastic rules are believed by Buddhists to have been summarised after his death and memorised by his followers; various collections of teachings attributed to him were passed down by oral tradition and first committed to writing about 400 years later.

[4:9:16] David Gauthier, (born 1932) - For their contributions as a Canadian-American philosopher best known for his neo-Hobbesian social contract (contractarian) theory of morality, as developed in his 1986 book *Morals by Agreement*.

[4:9:17] John Gay, (1685–1732) - For their contributions as an English poet and dramatist and a member of the Scriblerus Club.

[4:9:18] Peter Geach, (born 1919) - For their contributions as a British philosopher and professor of logic at the University of Leeds; his areas of interest were the philosophical logic, ethics, history of philosophy, philosophy of religion and the theory of identity.

[4:9:19] Arnold Gehlen, (1904–1976) - For their contributions as an influential conservative German philosopher, sociologist, and anthropologist.

[4:9:20] Antonio Genovesi, (1712–1769) - For their contributions as an Italian writer on philosophy and political economy.

[4:9:21] Giovanni Gentile, (1875–1944) - For their contributions as an Italian neo-Hegelian idealist philosopher, educator, and fascist politician.

[4:9:22] Gerhard Gentzen, (1909–1945) - For their contributions as a German mathematician and logician; he made major contributions to the foundations of mathematics, proof theory, especially on natural deduction and sequent calculus.

[4:9:23] George of Trebizond, (1395–1484) - For their contributions as a Greek philosopher, scholar and humanist.

[4:9:24] Gerard of Cremona, (1114–1187) - For their contributions as an Italian translator of scientific books from Arabic into Latin.

[4:9:25] Gerard of Odo (or Gerald Odonis), (1290–1349) - For their contributions as a French theologian and Minister General of the Franciscan Order.

[4:9:26] Alexander Gerard, (1728–1795) - For their contributions as a Scottish minister, academic and philosophical writer; in 1764, he was the Moderator of the General Assembly of the Church of Scotland.

[4:9:27] Gerbert of Aurillac (or Pope Sylvester II) (c. 950-1003) - For their contributions as Pope from 2 April 999 to his death in 1003; he was a prolific scholar and teacher; he endorsed and promoted study of Arab and Greco-Roman arithmetic, mathematics, and astronomy, reintroducing to Europe the abacus and armillary sphere, which had been lost to Latin (though not Byzantine) Europe since the end of the Greco-Roman era.

[4:9:28] Giacinto Sigismondo Gerdil, (1718–1802) - For their contributions as an Italian theologian, bishop and cardinal, who was a significant figure in the response of the papacy to the assault on the Catholic Church by the upheavals caused by the French Revolution.

[4:9:29] Jean Gerson, (1363–1429) - For their contributions as a French scholar, educator, reformer, and poet, Chancellor of the University of Paris, a guiding light of the conciliar movement and one of the most prominent theologians at the Council of Constance; he was one of the first thinkers to develop what would later come to be called natural rights theory, and was also one of the first individuals to defend Joan of Arc and proclaim her supernatural vocation as authentic.

[4:9:30] Gersonides (or Levi ben Gershon), (1288–1344) - For their contributions as a medieval French Jewish philosopher, Talmudist, mathematician, physician and astronomer/astrologer.

[4:9:31] Edmund Gettier, (born 1927) - For their contributions as an American philosopher and Professor Emeritus at the University of Massachusetts Amherst; he is best known for his short 1963 article "Is Justified True Belief Knowledge?", which has generated an

extensive philosophical literature trying to respond to what became known as the Gettier problem.

[4:9:32] Arnold Geulincx, (1624–1669) - For their contributions as a Flemish philosopher; he was one of the followers of René Descartes who tried to work out more detailed versions of a generally Cartesian philosophy.

[4:9:33] Alan Gewirth, (1912–2004) - For their contributions as an American philosopher, a professor of philosophy at the University of Chicago, and author of *Reason and Morality* (1978), *Human Rights: Essays on Justification and Applications* (1982), *The Community of Rights* (1996), *Self-Fulfillment* (1998), and numerous other writings in moral philosophy and political philosophy.

[4:9:34] Joseph Geyser, (1869–1948) - For their contributions as a German philosopher.

[4:9:35] Al-Ghazali, (1058–1111) - For their contributions as one of the most prominent and influential philosophers, theologians, jurists, and mystics of Sunni Islam; he was of Persian origin.

[4:9:36] Allan Gibbard, (born 1942) - For their contributions to contemporary ethical theory, in particular metaethics, where he has developed a contemporary version of non-cognitivism; he has also published articles in the philosophy of language, metaphysics, and social choice theory.

[4:9:37] Edward Gibbon, (1737–1794) - For their contributions as an English historian, writer and Member of Parliament.

[4:9:38] Josiah Gibbs, (1839–1903) - For their contributions as an American scientist who made significant theoretical contributions to physics, chemistry, and mathematics.

[4:9:39] Gilbert of Poitiers, (1070–1154) - For their contributions as a scholastic logician and theologian.

[4:9:40] Giles of Rome, (c. 1243-1316) - For their contributions as a Medieval philosopher and Scholastic theologian and a friar of the Order of St Augustine, who was also appointed to the positions of Prior General of his Order and as Archbishop of Bourges.

[4:9:41] Étienne Gilson, (1884–1978) - For their contributions as a French philosopher and historian of philosophy; a scholar of medieval philosophy, he originally specialised in the thought of Descartes, yet also philosophised in the tradition of Thomas Aquinas, although he did not consider himself a Neo-Thomist philosopher.

[4:9:42] Asher Ginsberg (or Ahad Ha'am), (1856–1927) - For their contributions as a Hebrew essayist, and one of the foremost pre-state Zionist thinkers; he is known as the founder of cultural Zionism

[4:9:43] Vincenzo Gioberti, (1801–1852) - For their contributions as an Italian clergyman, philosopher, publicist and politician.

[4:9:44] Joseph Glanvill, (1636–1680) - For their contributions as an English writer, philosopher, and clergyman.

[4:9:45] Jonathan Glover, (born 1941) - For their contributions as a British philosopher known for his books and studies on ethics.

[4:9:46] It is important to note that with all of the philosophers compiled in this list, there will exist many with opposing views on a huge range of topics and this is to be rejoiced by the principles of the Philosophical Spirit; furthermore, it also remains important to state that all of these extolled persons lived tremendously varying lives, none of whom are considered to be saintly by the Astronist tradition, and certainly all of whom are not considered to be perfect ethical embodiments as some will have supported causes that are not necessarily today widely practiced or supported, however, it is this progression of thought in Astronism that we cherish and it is the appreciation and enknowlegdement of views from different points of history, whether we today agree with them or not, that is the most important element and it is this principle that runs as the undercurrent of the extollative tradition within Astronism.

[4:9:47] Rudolph Goelenius, (1547–1628) - For their contributions as a German scholastic philosopher.

[4:9:48] Kurt Gödel, (1906–1978) - For their contributions as an Austro-Hungarian-born Austrian, and later American, logician, mathematician, and philosopher; considered along with Aristotle, Alfred Tarski and Gottlob Frege to be one of the most significant logicians in history, Gödel had an immense effect upon scientific and philosophical thinking in the 20th century, a time when others such as Bertrand Russell, Alfred North Whitehead, and David Hilbert were analysing the use of logic and set theory to understand the foundations of mathematics pioneered by Georg Cantor.

[4:9:49] Godfrey of Fontaines, (c. 1250-1309) - For their contributions as a scholastic philosopher and theologian, designated by the title Doctor Venerandus; he made contributions to a diverse range of subjects ranging from moral philosophy to epistemology, however, he is best known today for his work on metaphysics.

[4:9:50] William Godwin, (1756–1836) - For their contributions as an English journalist, political philosopher and novelist; he is considered one of the first exponents of utilitarianism and the first modern proponent of anarchism.

[4:9:51] Johann Wolfgang Goethe, (1749–1832) - For their contributions as a German writer and statesman; his works include four novels; epic and lyric poetry; prose and verse dramas; memoirs; an autobiography; literary and aesthetic criticism; and treatises on

botany, anatomy, and colour; in addition, numerous literary and scientific fragments, more than 10,000 letters, and nearly 3,000 drawings by him have survived.

[4:9:52] Friedrich Gogarten, (1887–1968) - For their contributions as a Lutheran theologian, co-founder of dialectical theology in Germany in the early 20th century.

[4:9:53] Alvin Goldman, (born 1938) - For their contributions as an American philosopher who is Board of Governors Professor of Philosophy and Cognitive Science at Rutgers University in New Jersey and a leading figure in epistemology.

[4:9:54] Gongsun Longzi, (c. 300 BC) - For their contributions as a Chinese philosopher and writer who was a member of the School of Names (Logicians) of ancient Chinese philosophy; he also ran a school and enjoyed the support of rulers, and advocated peaceful means of resolving disputes in contrast to the wars which were common in the Warring States period.

[4:9:55] Nelson Goodman, (1906–1998) - For their contributions as an American philosopher, known for his work on counterfactuals, mereology, the problem of induction, irrealism, and aesthetics.

[4:9:56] Gorgias, (c. 483–375 BC) - For their contributions as an ancient Greek sophist, pre-Socratic philosopher, and rhetorician who was a native of Leontinoi in Sicily.

[4:9:57] Johann Christoph Gottsched, (1700–1766) - For their contributions as a German philosopher, author, and critic; for about thirty years, he exercised an almost undisputed literary dictatorship in Germany.

[4:9:58] Marie de Gournay, (1565–1645) - For their contributions as a French writer who wrote a novel and a number of other literary compositions, including *The Equality of Men and Women* (Equality of men and women, 1622) and *the ladies' Grievance* (Grievance ladies, 1626).

[4:9:59] Baltasar Gracián y Morales, (1601–1658) - For their contributions as a Spanish Jesuit and baroque prose writer and philosopher.

[4:9:60] Antonio Gramsci, (1891–1937) - For their contributions as an Italian Marxist philosopher and communist politician; he wrote on political theory, sociology and linguistics; he attempted to break from the economic determinism of traditional Marxist thought and so is considered a key neo-Marxist.

[4:9:61] Asa Gray, (1810–1888) - For their contributions as considered the most important American botanist of the 19th century; his *Darwiniana* was considered an important explanation of how religion and science were not necessarily mutually exclusive; Gray was adamant that a genetic connection must exist between all members of a species; he was also strongly opposed to the ideas of hybridisation within one generation and special

creation in the sense of its not allowing for evolution, as he felt evolution was guided by a Creator.

[4:9:62] John Gray, (born 1948) - For their contributions as an English political philosopher with interests in analytic philosophy and the history of ideas.

[4:9:63] Thomas Hill Green, (1836–1882) - For their contributions as an English philosopher, political radical and temperance reformer, and a member of the British idealism movement; like all the British idealists, Green was influenced by the metaphysical historicism of G. W. F. Hegel; he was one of the thinkers behind the philosophy of social liberalism.

[4:9:64] Pope Gregory I, (540-604) - For their contributions as Pope of the Catholic Church from 3 September 590 to 12 March 604 AD; he is famous for instigating the first recorded large-scale mission from Rome, the Gregorian Mission, to convert the then-pagan Anglo-Saxons in England to Christianity; Gregory is also well known for his writings, which were more prolific than those of any of his predecessors as Pope.

[4:9:65] Gregory of Nazianzus, (329-389) - For their contributions as a 4th-century Archbishop of Constantinople, and theologian; he is widely considered the most accomplished rhetorical stylist of the patristic age; as a classically trained orator and philosopher he infused Hellenism into the early church, establishing the paradigm of Byzantine theologians and church officials.

[4:9:66] Gregory of Nyssa, (c. 335-398) - For their contributions as a bishop of Nyssa from 372 to 376 and from 378 until his death; he is venerated as a saint in Roman Catholicism, Eastern Orthodoxy, Oriental Orthodoxy, and Anglicanism; Gregory, his elder brother Basil of Caesarea, and their friend Gregory of Nazianzus are collectively known as the Cappadocian Fathers.

[4:9:67] Gregory of Rimini, (d. 1358) - For their contributions as one of the great scholastic philosophers and theologians of the Middle Ages; he was the first scholastic writer to unite the Oxonian and Parisian traditions in 14th-century philosophy, and his work had a lasting influence in the Late Middle Ages and Reformation.

[4:9:68] Herbert Paul Grice, (1913–1988) - For their contributions as a British philosopher of language, whose work on meaning has influenced the philosophical study of semantics; he is known for his theory of implicature.

[4:9:69] James Griffin, (born 1933) - For their contributions as an American-born philosopher, who was White's Professor of Moral Philosophy at the University of Oxford from 1996 to 2000.

[4:9:70] Germain Grisez, (born 1929) - For their contributions as a French-American philosopher; Grisez's development of ideas from Thomas Aquinas has redirected Roman Catholic thought and changed the way it has engaged with secular moral philosophy.

[4:9:71] Robert Grosseteste, (1175–1253) - For their contributions as an English statesman, scholastic philosopher, theologian, scientist and Bishop of Lincoln.

[4:9:72] Reinhardt Grossmann, (born 1931) - For their contributions as a German-born American philosopher; Grossman's work is notable for its openness to both contemporary analytical philosophy and modern continental philosophy.

[4:9:73] John Grote, (1813–1866) - For their contributions as an English moral philosopher and Anglican clergyman.

[4:9:74] Hugo Grotius, (1583–1645) - For their contributions as a Dutch jurist; along with the earlier works of Francisco de Vitoria and Alberico Gentili, he laid the foundations for international law, based on natural law; a teenage intellectual prodigy, he was born in Delft and studied at Leiden University; he was imprisoned for his involvement in the intra-Calvinist disputes of the Dutch Republic, but escaped hidden in a chest of books. Grotius wrote most of his major works in exile in France.

[4:9:75] Adolf Grunbaum, (born 1923) - For their contributions as a German-American philosopher of science and a critic of psychoanalysis, as well as Karl Popper's philosophy of science.

[4:9:76] Guan Zhong (or Kuan Tzu or Kwan Chung or Guanzi) (740-645 BC) - For their contributions as a Chinese philosopher and politician; he served as chancellor and was a reformer of the State of Qi during the Spring and Autumn period of Chinese history.

[4:9:77] Guo Xiang, (c. 252-312) - For their contributions as credited with the first and most important revision of the text known as the Zhuangzi which, along with the Tao Te Ching, forms the textual and philosophical basis of the Taoist school of thought; he was also a scholar of xuanxue.

[4:9:78] Edmund Gurney, (1847–1888) - For their contributions as an English psychologist and parapsychologist; at the time the term for research of paranormal activities was "psychical research".

[4:9:79] Aron Gurwitsch, (1901–1973) - For their contributions as a Litvak American phenomenologist.

[4:9:80] Jürgen Habermas, (born 1929) - For their contributions as a German philosopher and sociologist in the tradition of critical theory and pragmatism; he is perhaps best known for his theories on communicative rationality and the public sphere.

[4:9:81] Ian Hacking, (born 1936) - For their contributions as a Canadian philosopher specializing in the philosophy of science; throughout his career, he has won numerous awards, such as the Killam Prize for the Humanities and the Balzan Prize, and been a member of many prestigious groups, including the Order of Canada, the Royal Society of Canada and the British Academy.

[4:9:82] Ernst Haeckel, (1834–1919) - For their contributions as a German zoologist, naturalist, philosopher, physician, professor, marine biologist, and artist who discovered, described and named thousands of new species, mapped a genealogical tree relating all life forms, and coined many terms in biology, including ecology, phylum, phylogeny, and Protista.

[4:9:83] Axel Anders Theodor Hagerstrom, (1868–1939) - For their contributions as a Swedish philosopher.

[4:9:84] Yehuda Halevi, (c. 1085-1141) - For their contributions as a Spanish Jewish physician, poet and philosopher.

[4:9:85] Johann Georg Hamann, (1730–1788) - For their contributions as a German philosopher, whose work was used by his student J. G. Herder as a main support of the Sturm und Drang movement, and associated by historian of ideas Isaiah Berlin with the Counter-Enlightenment.

[4:9:86] Octave Hamelin, (1856–1907) - For their contributions as a French philosopher; he taught as a professor at the University of Bordeaux (1884-) and the University of Sorbonne (1905-).

[4:9:87] Sir William Hamilton, (1788–1856) - For their contributions as a Scottish metaphysician.

[4:9:88] David Walter Hamlyn, (born 1924–2012) - For their contributions as a Professor of Philosophy at Birkbeck College, London (1964–1988), and editor of *Mind* (1972–1984); his major interests were in Aristotle (whose *de Anima*, II and III and parts of I, he translated with a commentary, 1968) and in Ludwig Wittgenstein, both of whom influenced Hamlyn's approach to questions in epistemology and philosophy of psychology.

[4:9:89] Stuart Hampshire, (1914–2004) - For their contributions as an Oxford University philosopher, literary critic and university administrator; he was one of the anti-rationalist Oxford thinkers who gave a new direction to moral and political thought in the post-World War II era.

[4:9:90] Hassan Hanafi, (born 1935) - For their contributions as a professor and chairs the philosophy department at Cairo University; he is a leading authority on modern Islam.

[4:9:91] Han Fei, (d. 233 BC) - For their contributions as a Chinese philosopher or statesman of the "Legalist" school during the Warring States period, and a prince of the state of Han.

[4:9:92] Han Wonjin, (1682–1751) - For their contributions as a major thinker of the Korean neo-Confucian tradition; one of the leading scholars of his time, he is especially remembered as a protagonist in the Horak controversy, which he ignited with the observation that ki (in Chinese, qi) or 'material force' is present even when the mind is in a meditative, quiescent state.

[4:9:93] Han Yu, (768–824) - For their contributions as a Chinese writer, poet, and government official of the Tang dynasty who significantly influenced the development of Neo-Confucianism; described as "comparable in stature to Dante, Shakespeare or Goethe" for his influence on the Chinese literary tradition, Han Yu stood for strong central authority in politics and orthodoxy in cultural matters.

[4:9:94] Alastair Hannay, (born 1932) - For their contributions at the Professor emeritus at the University of Oslo.

[4:9:95] Eduard Hanslick, (1825–1904) - For their contributions as a German Bohemian music critic.

[4:9:96] Norwood Russell Hanson, (1922–1967) - For their contributions as an American philosopher of science; Hanson was a pioneer in advancing the argument that observation is theory-laden — that observation language and theory language are deeply interwoven — and that historical and contemporary comprehension are similarly deeply interwoven; his single most central intellectual concern was the comprehension and development of a logic of discovery.

[4:9:97] Sandra Harding, (born 1935) - For their contributions as an American philosopher of feminist and postcolonial theory, epistemology, research methodology, and philosophy of science.

[4:9:98] R. M. Hare, (1919–2002) - For their contributions as an English moral philosopher who held the post of White's Professor of Moral Philosophy at the University of Oxford from 1966 until 1983.

[4:9:99] Gilbert Harman, (born 1938) - For their contributions as an American philosopher, who taught at Princeton University from 1963 until his retirement in 2017.

[4:9:100] Adolf von Harnack, (1851–1930) - For their contributions as a Baltic German Lutheran theologian and prominent church historian; he produced many religious publications from 1873 to 1912.

[4:9:101] James Harrington, (1611–1677) - For their contributions as an English political theorist of classical republicanism, best known for his controversial work, *The Commonwealth of Oceana* (1656); this work was an exposition on an ideal constitution, designed to facilitate the development of a utopian republic.

[4:9:102] William Torrey Harris, (1835–1909) - For their contributions as an American educator, philosopher, and lexicographer.

[4:9:103] H. L. A. Hart, (1907–1992) - For their contributions as a British legal philosopher, and a major figure in political and legal philosophy; he was Professor of Jurisprudence at Oxford University and the Principal of Brasenose College, Oxford; his most famous work is *The Concept of Law* (1961; 3rd edition, 2012), which has been hailed as "the most important work of legal philosophy written in the twentieth century".

[4:9:104] David Hartley, (1705–1757) - For their contributions as an English philosopher and founder of the Associationist school of psychology.

[4:9:105] Eduard Von Hartmann, (1842–1906) - For their contributions as a German philosopher, author of *Philosophy of the Unconscious* (1869).

[4:9:106] Nicolai Hartmann, (1882–1950) - For their contributions as a Baltic German philosopher; he is regarded as a key representative of critical realism and as one of the most important twentieth century metaphysicians.

[4:9:107] Charles Hartshorne, (1897–2000) - For their contributions as an American philosopher who concentrated primarily on the philosophy of religion and metaphysics, but also contributed to ornithology; he developed the neoclassical idea of God and produced a modal proof of the existence of God that was a development of St. Anselm's ontological argument; Hartshorne is also noted for developing Alfred North Whitehead's process philosophy into process theology.

[4:9:108] William Harvey, (1578–1657) - For their contributions as an English physician who made seminal contributions in anatomy and physiology; he was the first known physician to describe completely, and in detail, the systemic circulation and properties of blood being pumped to the brain and body by the heart, though earlier writers, such as Realdo Colombo, Michael Servetus, and Jacques Dubois, had provided precursors of the theory.

[4:9:109] Seiichi Hatano, (1877–1950) - For their contributions as a Japanese philosopher, best known for his work in the philosophy of religion dealing mostly with western religion and also western philosophical thoughts in theological aspects of Christianity.

[4:9:110] Hayashi Razan, (1583–1657) - For their contributions as a Japanese Neo-Confucian philosopher, serving as a tutor and an advisor to the first four shōguns of the Tokugawa

bakufu; he is also attributed with first listing the Three Views of Japan; Razan was the founder of the Hayashi clan of Confucian scholars.

[4:9:111] Friedrich Hayek, (1899–1992) - For their contributions as an Anglo-Austrian economist and philosopher best known for his defence of classical liberalism; Hayek shared the 1974 Nobel Memorial Prize in Economic Sciences with Gunnar Myrdal for his "pioneering work in the theory of money and economic fluctuations and penetrating analysis of the interdependence of economic, social and institutional phenomena".

[4:9:112] William Hazlitt, (1778–1830) - For their contributions as an English essayist, drama and literary critic, painter, social commentator, and philosopher.

[4:9:113] Christian Friedrich Hebbel, (1813–1863) - For their contributions as a German poet and dramatist.

[4:9:114] G.W.F. Hegel, (1770–1831) - For their contributions as a German philosopher and an important figure of German idealism; he achieved wide recognition in his day and—while primarily influential within the continental tradition of philosophy—has become increasingly influential in the analytic tradition as well; although Hegel remains a divisive figure, his canonical stature within Western philosophy is universally recognised.

[4:9:115] Martin Heidegger, (1889–1976) - For their contributions as a German philosopher and a seminal thinker in the Continental tradition and philosophical hermeneutics, and is "widely acknowledged to be one of the most original and important philosophers of the 20th century."

[4:9:116] Karl Heim, (1874–1958) - For their contributions as a professor of dogmatics at Münster and Tübingen.

[4:9:117] Werner Heisenberg, (1901–1976) - For their contributions as a German theoretical physicist and one of the key pioneers of quantum mechanics.

[4:9:118] Virginia Held, (born 1929) - For their contribution as the leading moral, social/ political and feminist philosopher whose work on the ethics of care sparked significant research into the ethical dimensions of providing care for others and critiques of the traditional roles of women in society.

[4:9:119] Hermann von Helmholtz, (1821–1894) For their contributions as a German physician and physicist who made significant contributions in several scientific fields.

[4:9:120] Franciscus Mercurius van Helmont, (1614–1698) - For their contributions as a Flemish alchemist and writer, the son of Jan Baptist van Helmont; he is now best known for his publication in the 1640s of his father's pioneer works on chemistry, which link the origins of the science to the study of alchemy.

[4:9:121] Claude Adrien Helvétius, (1715–1771) - For their contributions as a French philosopher, freemason and *littérateur*.

[4:9:122] Carl Gustav Hempel, (1905–1997) - For their contributions as a German writer and philosopher; he was a major figure in logical empiricism, a 20th-century movement in the philosophy of science; he is especially well known for his articulation of the deductive-nomological model of scientific explanation, which was considered the "standard model" of scientific explanation during the 1950s and 1960s.

[4:9:123] Frans Hemsterhuis, (1721–1790) - For their contributions as a Dutch writer on aesthetics and moral philosophy.

[4:9:124] Henricus Regius, (1598–1679) - For their contributions as a Dutch philosopher, physician, and professor of medicine at the University of Utrecht from 1638.

[4:9:125] Henry of Ghent, (c. 1217-1293) - For their contributions as a scholastic philosopher, known as Doctor Solemnis (the "Solemn Doctor").

[4:9:126] Henry of Harclay, (1270–1317) - For their contributions as an English medieval philosopher and university chancellor.

[4:9:127] Ronald William Hepburn, (1927–2008) - For their contributions as a Scottish philosopher.

[4:9:128] Heraclides Ponticus, (387–312 BC) - For their contributions as a Greek philosopher and astronomer who was born in Heraclea Pontica, now Karadeniz Ereğli, Turkey, and migrated to Athens; he is best remembered for proposing that the Earth rotates on its axis, from west to east, once every 24 hours; he is also hailed as the originator of the heliocentric theory, although this is doubted by some.

[4:9:129] Heraclitus of Ephesus, (ca. 535-475 BC) - For their contributions as a pre-Socratic Greek philosopher, and a native of the city of Ephesus, then part of the Persian Empire.

[4:9:130] Johann Friedrich Herbart, (1776–1841) - For their contributions as a German philosopher, psychologist and founder of pedagogy as an academic discipline.

[4:9:131] Edward Herbert, 1st Baron Herbert of Cherbury, (1583–1648) - For their contributions as an Anglo-Welsh soldier, diplomat, historian, poet and religious philosopher of the Kingdom of England.

[4:9:132] Johann Gottfried Herder, (1744–1803) - For their contributions as a German philosopher, theologian, poet, and literary critic. He is associated with the Enlightenment, Sturm und Drang, and Weimar Classicism.

[4:9:133] Abraham Cohen de Herrera (or Alonso Nunez de Herrera or Abraham Irira), (1562–1635) - For their contributions as a religious philosopher and cabbalist.

[4:9:134] John Herschel, (1792–1871) - For their contributions as an English polymath, mathematician, astronomer, chemist, inventor, experimental photographer who invented the blueprint, and did botanical work.

[4:9:135] Heinrich Rudolf Hertz, (1857–1894) - For their contributions as a German physicist who first conclusively proved the existence of the electromagnetic waves theorised by James Clerk Maxwell's electromagnetic theory of light; the unit of frequency, cycle per second, was named the "Hertz" in his honour.

[4:9:136] Hervaeus Natalis, (1250–1323) - For their contributions as a Dominican theologian, the 14th Master of the Dominicans, and the author of a number of works on philosophy and theology.

[4:9:137] Alexander Herzen, (1812–1870) - For their contributions as a Russian writer and thinker known as the "father of Russian socialism" and one of the main fathers of agrarian populism.

[4:9:138] Abraham Joshua Heschel, (1907–1972) - For their contributions as a Polish-born American rabbi and one of the leading Jewish theologians and Jewish philosophers of the 20th century. Heschel, a professor of Jewish mysticism at the Jewish Theological Seminary of America, authored a number of widely read books on Jewish philosophy and was active in the civil rights movement.

[4:9:139] Hesiod, (c. 700 BC) - For their contributions as a Greek poet generally thought by scholars to have been active between 750 and 650 BC, around the same time as Homer; he is generally regarded as the first written poet in the Western tradition to regard himself as an individual persona with an active role to play in his subject.

[4:9:140] Moses Hess, (1812–1875) - For their contributions as a French-Jewish philosopher and a founder of Labor Zionism; his socialist theories, predicated on racial struggle, led to conflict with Karl Marx and Friedrich Engels; as a devoted Spinozist, Hess was profoundly influenced by Spinoza's life and philosophy.

[4:9:141] Sergei Iosifovich Hessen, (1887–1950) - For their contributions as a disciple of Rickert, has been described as 'the most brilliant and philosophically gifted' representative of Neo-Kantian transcendentalism in Russia on the eve of the Revolution.

[4:9:142] William of Heytesbury (or Hentisberus or Hentisberi or Tisberi), (1313–1373) - For their contributions as an English philosopher and logician, best known as one of the Oxford Calculators of Merton College, Oxford, where he was a fellow.

[4:9:143] John Hick, (1922-2012) - For their contributions as a philosopher of religion and theologian born in England who taught in the United States for the larger part of his career; in philosophical theology, he made contributions in the areas of theodicy, eschatology, and Christology, and in the philosophy of religion he contributed to the areas of epistemology of religion and religious pluralism.

[4:9:144] Laurens Perseus Hickok, (1798–1888) - For their contributions as an American philosopher and divine.

[4:9:145] Hierocles, (2nd century) - For their contributions as a Stoic philosopher.

[4:9:146] David Hilbert, (1862–1943) - For their contributions as a German mathematician and one of the most influential and universal mathematicians of the 19th and early 20th centuries.

[4:9:147] Hildegard of Bingen, (1098–1179) - For their contributions as a German Benedictine abbess, writer, composer, philosopher, Christian mystic, visionary, and polymath; she is considered to be the founder of scientific natural history in Germany.

[4:9:148] Hillel ben Samuel of Verona, (1220–1295) - For their contributions as an Italian physician, philosopher, and Talmudist.

[4:9:149] Hermann Friedrich Wilhelm Hinrichs, (1794–1861) - For their contributions as a German philosopher.

[4:9:150] Jaakko Hintikka, (born 1929) - For their contributions as a Finnish philosopher and logician.

[4:9:151] Hippias, (5th century BC) - For their contributions as a Greek sophist, and a contemporary of Socrates; with an assurance characteristic of the later sophists, he claimed to be regarded as an authority on all subjects, and lectured on poetry, grammar, history, politics, mathematics, and much else.

[4:9:152] Hippocrates, (460–380 BC) - For their contributions as a Greek physician of the Age of Pericles (Classical Greece), who is considered one of the most outstanding figures in the history of medicine.

[4:9:153] Ho Yen, (190–249) - For their contributions as an official, scholar and philosopher of the state of Cao Wei in the Three Kingdoms period of China.

[4:9:154] Thomas Hobbes, (1588–1679) - For their contributions as an English philosopher, considered to be one of the founders of modern political philosophy.

[4:9:155] Leonard Trelawny Hobhouse, (1864–1929) - For their contributions as a British liberal political theorist and sociologist, who has been considered one of the leading and earliest proponents of social liberalism.

[4:9:156] William Ernest Hocking, (1873–1966) - For their contributions as an American idealist philosopher at Harvard University; he continued the work of his philosophical teacher Josiah Royce (the founder of American idealism) in revising idealism to integrate and fit into empiricism, naturalism and pragmatism.

[4:9:157] Shadworth Hodgson, (1832–1912) - For their contributions as an English philosopher; he worked independently, without academic affiliation.

[4:9:158] Harald Høffding, (1843–1931) - For their contributions as a Danish philosopher and theologian.

[4:9:159] Wesley Newcomb Hohfeld, (1879–1918) - For their contributions as an American jurist; he was the author of the seminal *Fundamental Legal Conceptions as Applied in Judicial Reasoning and Other Legal Essays* (1919).

[4:9:160] Baron d'Holbach, (1723–1789) - For their contributions as a French-German author, philosopher, encyclopedist and prominent figure in the French Enlightenment.

[4:9:161] Robert Holcot, (1290–1349) - For their contributions as an English Dominican scholastic philosopher, theologian and influential Biblical scholar.

[4:9:162] Friedrich Hölderlin, (1770–1843) - For their contributions as a German poet and philosopher; described by Norbert von Hellingrath as "the most German of Germans", Hölderlin was a key figure of German Romanticism; particularly due to his early association with and philosophical influence on Georg Wilhelm Friedrich Hegel and Friedrich Wilhelm Joseph Schelling, he was also an important thinker in the development of German Idealism.

[4:9:163] Oliver Wendell Holmes, Jr., (1841–1935) - For their contributions as an American jurist who served as an Associate Justice of the Supreme Court of the United States from 1902 to 1932, and as Acting Chief Justice of the United States in January–February 1930.

[4:9:164] Edwin Holt, (1873–1946) - For their contributions as a professor of philosophy and psychology at Harvard from 1901–1918.

[4:9:165] Henry Home, Lord Kames, (1696–1782) - For their contributions as a Scottish advocate, judge, philosopher, writer and agricultural improver; a central figure of the Scottish Enlightenment, a founder member of the Philosophical Society of Edinburgh, and active in the Select Society.

[4:9:166] Homer, (c. 700 BC) - For their contributions as a legendary author of the Iliad and the Odyssey, two epic poems that are the central works of ancient Greek literature.

[4:9:167] Richard Höningwald, (1875–1947) - For their contributions as a well-known philosopher belonging to the wider circle of neo-Kantianism.

[4:9:168] Sidney Hook, (1902–1989) - For their contributions as an American philosopher of the pragmatist school known for his contributions to the philosophy of history, the philosophy of education, political theory, and ethics.

[4:9:169] Richard Hooker, (1554–1600) - For their contributions as an English priest in the Church of England and an influential theologian; he was one of the most important English theologians of the sixteenth century.

[4:9:170] Max Horkheimer, (1895–1973) - For their contributions as a German philosopher and sociologist who was famous for his work in critical theory as a member of the 'Frankfurt School' of social research; Horkheimer addressed authoritarianism, militarism, economic disruption, environmental crisis, and the poverty of mass culture using the philosophy of history as a framework.

[4:9:171] Jennifer Hornsby, (born 1951) - For their contributions as a British philosopher with interests in the philosophies of mind, action, language, as well as feminist philosophy.

[4:9:172] Paul Horwich, (born 1947) - For their contributions as a British analytic philosopher at New York University, noted for his contributions to philosophy of science, philosophy of physics, the philosophy of language (especially truth, and meaning) and the interpretation of Wittgenstein's later philosophy.

[4:9:173] George Howison, (1834–1916) - For their contributions as an American philosopher who established the philosophy department at the University of California, Berkeley and held the position there of Mills Professor of Intellectual and Moral Philosophy and Civil Polity.

[4:9:174] Hsi K'ang, (223–262) - For their contributions as a Chinese writer, poet, Daoist philosopher, musician and alchemist of the Three Kingdoms period.

[4:9:175] Hsiung Shih-li, (1885–1968) - For their contributions as a modern Chinese philosopher whose major work *A New Treatise on Vijñaptimātra* (新唯識論, Xin Weishi Lun) is a Confucian critique of the Buddhist Vijñapti-mātra "consciousness-only" theory popularized in China by the Tang-dynasty pilgrim Xuanzang.

[4:9:176] Hsu Fu-kuan, (1903–1982) - For their contributions as a Chinese intellectual and historian who made notable contributions to Confucian studies; he is a leading member of

New Confucianism, a philosophical movement initiated by Xu's teacher and friend, Xiong Shili.

[4:9:177] Hsu Hsing, (c. 300 BC) - For their contributions as a Chinese philosopher and one of the most notable advocates of Agriculturalism, a political philosophy that advocated peasant utopian communalism and egalitarianism.

[4:9:178] Hu Hung (or Wu-Feng), (1100–1155) - For their contributions as the founder and expounder of the Hu school of Neo-Confucianism.

[4:9:179] Hu Shi, (1891–1962) - For their contributions as a Chinese philosopher, essayist and diplomat; Hu is widely recognised today as a key contributor to Chinese liberalism and language reform in his advocacy for the use of written vernacular Chinese.

[4:9:180] Huai Nun Tzu (or Liu An), (179-122 BC) - For their contributions as a Han dynasty Chinese prince and an advisor to his nephew, Emperor Wu of Han (武帝); he is best known for editing the (139 BC) Huainanzi compendium of Daoist, Confucianist, Buddhist and Legalist teachings and for supposedly inventing tofu.

[4:9:181] Huang Zongxi (or Huang Tsung-hsi), (1610–1695) - For their contributions as a Chinese naturalist, political theorist, philosopher, and soldier during the latter part of the Ming dynasty into the early part the Qing.

[4:9:182] Pierre Daniel Huet, (1630–1721) - For their contributions as a French churchman and scholar, editor of the Delphin Classics, founder of the Academie du Physique in Caen (1662-1672) and Bishop of Soissons from 1685 to 1689 and afterwards of Avranches.

[4:9:183] Friedrich von Hügel, (1852–1925) - For their contributions as an influential Austrian Roman Catholic layman, religious writer, Modernist theologian and Christian apologist.

[4:9:184] Hugh of St Victor, (c. 1078-1141) - For their contributions as a Saxon canon regular and a leading theologian and writer on mystical theology.

[4:9:185] Hui Shi, (4th century BC) - For their contributions as a Chinese philosopher during the Warring States period; he was a representative of the School of Names (Sophists or Dialecticians), and is famous for ten paradoxes about the relativity of time and space, for instance, "I set off for Yue (southeastern China) today and came there yesterday."

[4:9:186] Wilhelm von Humboldt, (1767–1835) - For their contributions as a Prussian philosopher, linguist, government functionary, diplomat, and founder of the Humboldt University of Berlin, which was named after him in 1949 (and also after his younger brother, Alexander von Humboldt, a naturalist).

[4:9:187] David Hume, (1711–1776) - For their contributions as a Scottish Enlightenment philosopher, historian, economist, and essayist, who is best known today for his highly influential system of philosophical empiricism, scepticism, and naturalism.

[4:9:188] Jan Hus, (1369–1415) - For their contributions as a Czech theologian, philosopher, master, dean, and rector of the Charles University in Prague who became a church reformer, an inspirer of Hussitism, a key predecessor to Protestantism and a seminal figure in the Bohemian Reformation.

[4:9:189] Edmund Husserl, (1859–1938) - For their contributions as a German philosopher who established the school of phenomenology; in his early work, he elaborated critiques of historicism and of psychologism in logic based on analyses of intentionality.

[4:9:190] Francis Hutcheson, (1694–1746) - For their contributions as an Irish philosopher born in Ulster to a family of Scottish Presbyterians who became known as one of the founding fathers of the Scottish Enlightenment; he is remembered for his book "A System of Moral Philosophy".

[4:9:191] Thomas Henry Huxley, (1825–1895) - For their contributions as an English biologist and anthropologist specialising in comparative anatomy; he is known as "Darwin's Bulldog" for his advocacy of Charles Darwin's theory of evolution.

[4:9:192] Christiaan Huygens, (1629–1695) - For their contributions as a Dutch physicist, mathematician, astronomer and inventor, who is widely regarded as one of the greatest scientists of all time and a major figure in the scientific revolution.

[4:9:193] Hypatia of Alexandria, (370–415) - For their contributions as a Hellenistic Neoplatonist philosopher, astronomer, and mathematician, who lived in Alexandria, Egypt, then part of the Eastern Roman Empire; she was a prominent thinker of the Neoplatonic school in Alexandria where she taught philosophy and astronomy.

[4:9:194] Jean Hyppolite, (1907–1968) - For their contributions as a French philosopher known for championing the work of Georg Wilhelm Friedrich Hegel, and other German philosophers, and educating some of France's most prominent post-war thinkers; his major works include Genesis and Structure of Hegel's Phenomenology of Spirit and Studies on Marx and Hegel.

[4:9:195] Iamblichus, (ca. 245 AD-ca. 325) - For their contributions as a Syrian Neoplatonist philosopher of Arab origin; he determined the direction that would later be taken by Neoplatonic philosophy; he was also the biographer of Pythagoras, a Greek mystic, philosopher and mathematician.

[4:9:196] Yahya ibn Adi, (893-974) - For their contributions as a Syriac Jacobite Christian philosopher, theologian and translator working in Arabic.

[4:9:197] Ibn Arabi, (1164–1240) - For their contributions as an Arab Andalusian Muslim scholar, mystic, poet, and philosopher, whose works have grown to be very influential beyond the Muslim world.

[4:9:198] Ibn ar-Rawandi, (c. 910) - For their contributions as an early skeptic of Islam and a critic of religion in general; in his early days, he was a Mu'tazilite scholar, but after rejecting the Mu'tazilite doctrine, he became a freethinker who repudiated Islam and revealed religion.

[4:9:199] Ibn Bajjah (or Avempace), (died 1138) - For their contributions as an Arab Andalusian polymath; his writings include works regarding astronomy, physics, and music, as well as philosophy, medicine, botany, and poetry.

[4:9:200] Ibn Daud (or Rabad I or Avendauth, or John of Spain), (1110–1180) - For their contributions as a Spanish-Jewish astronomer, historian, and philosopher.

[4:9:201] Abraham ibn Ezra, (1092/3-1167) - For their contributions as one of the most distinguished Jewish biblical commentators and philosophers of the Middle Ages.

[4:9:202] Moses ibn Ezra, (1070–1138) - For their contributions as a Jewish, Spanish philosopher, linguist, and poet.

[4:9:203] Ibn Falaquera, (1223–1290) - For their contributions as a Spanish Jewish philosopher and poet and commentator; a vast body of work is attributed to Falaquera, including encyclopedias of Arabic and Greek philosophies, maqamas, some 20,000 poetic verses, and commentaries on Maimonides' Guide to the Perplexed.

[4:9:204] Solomon Ibn Gabirol, (1021–1058) - For their contributions as an 11th-century Andalusian poet and Jewish philosopher with a Neo-Platonic bent; he published over a hundred poems, as well as works of biblical exegesis, philosophy, ethics and satire.

[4:9:205] Ibn Hazm, (994-1069) - For their contributions as an Andalusian poet, polymath, historian, jurist, philosopher, and theologian, born in Córdoba, present-day Spain; the Encyclopaedia of Islam refers to him as having been one of the leading thinkers of the Muslim world, and he is widely acknowledged as the father of comparative religious studies.

[4:9:206] Ibn Kammuna, (1215–1284) - For their contributions as a 13th-century Jewish physician and philosopher; his main works include a comparative treatise of the three Abrahamic religions, which includes an anti-Islam polemic, as well as a commentaries on Ibn Sina and as-Suhrawardi.

[4:9:207] Ibn Khaldun, (1332–1406) - For their contributions as a leading Tunisian Arab historiographer and historian; he is widely considered as a forerunner of the modern disciplines of historiography, sociology, economics, and demography.

[4:9:208] Ibn Masarra, (883-931) - For their contributions as an Andalusí Muslim ascetic and scholar; he is considered one of the first Sufis as well as one of the first philosophers of Al-Andalus.

[4:9:209] Ibn Miskawayh, (940-1030) - For their contributions as a Persian chancery official of the Buyid era, and philosopher and historian from Parandak, Iran; as a Neoplatonist, his influence on Islamic philosophy is primarily in the area of ethics; he was the author of the first major Islamic work on philosophical ethics entitled the Refinement of Morals.

[4:9:210] Bahya ibn Paquda, (1040–1110) - For their contributions as a Jewish philosopher and rabbi who lived at Zaragoza, Al-Andalus (now Spain) in the first half of the eleventh century.

[4:9:211] Ibn Sabin, (1217–1268) - For their contributions as an Arab Sufi philosopher, the last philosopher of the Andalus in the west land of Islamic world.

[4:9:212] Ibn Taymiya, (1263–1328) - For their contributions as a controversial medieval Sunni Muslim theologian, juriconsult, logician, and reformer; a member of the Hanbali school of jurisprudence founded by Ahmad ibn Hanbal.

[4:9:213] Samuel ibn Tibbon, (c. 1165 – 1232) - For their contributions as a Jewish philosopher and doctor who lived and worked in Provence, later part of France; he is best known for his translations of Jewish rabbinic literature from Arabic to Hebrew.

[4:9:214] Ibn Tufail, (1110–1185) - For their contributions as an Arab Andalusian Muslim polymath: a writer, novelist, Islamic philosopher, Islamic theologian, physician, astronomer, vizier, and court official; as a philosopher and novelist, he is most famous for writing the first philosophical novel, Hayy ibn Yaqhdhan.

[4:9:215] Joseph ibn Tzaddik, (c. 1149) - For their contributions as a Spanish rabbi, poet, and philosopher.

[4:9:216] Ivan Aleksandrovich Il'in, (1883–1954) - For their contributions as a Russian religious and political philosopher, White emigre publicist and an ideologue of the Russian All-Military Union.

[4:9:217] Evald Vassilievich Ilyenkov, (1924–1979) - For their contributions as a Marxist author and Soviet philosopher.

[4:9:218] Immanuel the Roman (c. 1270 – c. 1330) - For their contributions as an Italian-Jewish scholar and satirical poet.

[4:9:219] Roman Ingarden, (1893–1970) - For their contributions as a Polish philosopher who worked in phenomenology, ontology and aesthetics; before World War II, Ingarden

published his works mainly in the German language; during the war, he switched to Polish, and as a result of his major works in ontology went largely unnoticed by the world philosophical community.

[4:9:220] William Ralph Inge, (1860–1954) - For their contributions as an English author, Anglican priest, professor of divinity at Cambridge, and Dean of St Paul's Cathedral, which provided the appellation by which he was widely known, Dean Inge; he was nominated for the Nobel Prize in Literature three times.

[4:9:221] José Ingenieros, (1877–1925) - For their contributions as an Argentine physician, pharmacist, positivist philosopher and essayist.

[4:9:222] Nae Ionescu, (1890–1940) - For their contributions as a Romanian philosopher, logician, mathematician, professor, and journalist. Near the end of his career, he became known for his antisemitism and devotion to far right politics, in the years leading up to World War II.

[4:9:223] Muhammad Iqbal, (1877–1938) - For their contributions as a poet, philosopher and politician, as well as an academic, barrister and scholar in British India who is widely regarded as having inspired the Pakistan Movement; he is called the Spiritual Father of Pakistan; he is considered one of the most important figures in Urdu literature, with literary work in both Urdu and Persian.

[4:9:224] Luce Irigaray, (born 1930) - For their contributions as a Belgian-born French feminist, philosopher, linguist, psycholinguist, psychoanalyst and cultural theorist.

[4:9:225] Terence Irwin, (born 1947) - For their contributions as a scholar and philosopher specialising in ancient Greek philosophy and the history of ethics.

[4:9:226] Isocrates, (436–338 BC) - For their contributions as an ancient Greek rhetorician, was one of the ten Attic orators; among the most influential Greek rhetoricians of his time, Isocrates made many contributions to rhetoric and education through his teaching and written works.

[4:9:227] Isaac of Stella, (1105–1177) - For their contributions as a monk, theologian and philosopher.

[4:9:228] Isaac Israeli, (c. 850–950) - For their contributions as one of the foremost Jewish physicians and philosophers living in the Arab world of his time; he is regarded as the father of medieval Jewish Neoplatonism; his works, all written in Arabic and subsequently translated into Hebrew, Latin and Spanish, entered the medical curriculum of the early thirteenth-century universities in Medieval Europe and remained popular throughout the Middle Ages.

[4:9:229] Ito Jinsai, (1627–1705) - For their contributions as a Japanese Confucian philosopher and educator; he is considered to be one of the most influential Confucian scholars of seventeenth century Japan, and the Tokugawa period (1600–1868) generally, his teachings flourishing especially in Kyoto and the Kansai area through the final years of the Tokugawa shogunate.

[4:9:230] Vyacheslav Ivanovich Ivanov, (1866–1949) - For their contributions as a Russian poet and playwright associated with the Russian Symbolist movement; he was also a philosopher, translator, and literary critic.

Extolled Philosophers (Surnames “J, K, and L”)

[4:10:1] Frank Jackson, (born 1943) - For their contributions as an Australian analytic philosopher, currently Emeritus Professor and former Director of the Research School of Social Sciences at Australian National University; he was also a regular visiting professor of philosophy at Princeton University from 2007 through 2014.

[4:10:2] Friedrich Heinrich Jacobi, (1743–1819) - For their contributions as an influential German philosopher, literary figure, and socialite; he is notable for popularising nihilism, a term coined by Obereit in 1787, and promoting it as the prime fault of Enlightenment thought particularly in the philosophical systems of Baruch Spinoza, Immanuel Kant, Johann Fichte and Friedrich Schelling.

[4:10:3] James of Viterbo, (1255–1308) - For their contributions as an Italian Roman Catholic Augustinian friar and Scholastic theologian, who later went to hold a number of ecclesiastical posts.

[4:10:4] Henry James Sr., (1811–1882) - For their contributions as an American theologian and adherent of Swedenborgianism, also known for being the father of the philosopher William James, novelist Henry James, and diarist Alice James.

[4:10:5] William James, (1842–1910) - For their contributions as an American philosopher and psychologist, and the first educator to offer a psychology course in the United States. James was a leading thinker of the late nineteenth century, one of the most influential U.S. philosophers, and has been labelled the "Father of American psychology".

[4:10:6] Vladimir Jankélévitch, (1903–1985) - For their contributions as a French philosopher and musicologist.

[4:10:7] Karl Jaspers, (1883–1969) - For their contributions as a German-Swiss psychiatrist and philosopher who had a strong influence on modern theology, psychiatry, and philosophy; after being trained in and practicing psychiatry, Jaspers turned to philosophical inquiry and attempted to discover an innovative philosophical system.

[4:10:8] James Hopwood Jeans, (1877–1946) - For their contributions as an English physicist, astronomer and mathematician.

[4:10:9] Thomas Jefferson, (1743–1826) - For their contributions as an American statesman, diplomat, lawyer, architect, and Founding Father who served as the third president of the United States from 1801 to 1809; previously, he had served as the second vice president of the United States from 1797 to 1801; the principal author of the Declaration of Independence, Jefferson was a proponent of democracy, republicanism, and individual rights, motivating American colonists to break from the Kingdom of Great Britain and form a new nation; he produced formative documents and decisions at both the state and national level.

[4:10:10] Richard C. Jeffrey, (1926–2002) - For their contributions as an American philosopher, logician, and probability theorist; he is best known for developing and championing the philosophy of radical probabilism and the associated heuristic of probability kinematics, also known as Jeffrey conditioning.

[4:10:11] William Stanley Jevons, (1835–1882) - For their contributions as an English economist and logician.

[4:10:12] Rudolf von Jhering, (1818–1892) - For their contributions as a German jurist; he is best known for his 1872 book *Der Kampf ums Recht* (The Struggle for Law), as a legal scholar, and as the founder of a modern sociological and historical school of law.

[4:10:13] Jinul (or Chinul), (1158–1210) - For their contributions as a Korean monk of the Goryeo period, who is considered to be the most influential figure in the formation of Korean Seon (Zen) Buddhism; he is credited as the founder of the Jogye Order, by working to unify the disparate sects in Korean Buddhism into a cohesive organisation.

[4:10:14] Joachim of Fiore, (1135–1201) - For their contributions as an Italian theologian and the founder of the monastic order of San Giovanni in Fiore; later followers, inspired by his works in eschatology and historicist theories, are called Joachimites.

[4:10:15] Friedrich Jodl, (1849–1914) - For their contributions as a German philosopher and psychologist.

[4:10:16] John of Damascus, (c. 676-749) - For their contributions as a Syrian monk and priest.

[4:10:17] John of Jandun, (1280–1328) - For their contributions as a French philosopher, theologian, and political writer; Jandun is best known for his outspoken defence of Aristotelianism and his influence in the early Latin Averroist movement.

[4:10:18] John of La Rochelle, (1190–1245) - For their contributions as a French Franciscan and theologian.

[4:10:19] John of Mirecourt, (c. 1345) - For their contributions as a Cistercian scholastic philosopher of the fourteenth century.

[4:10:20] John of Paris, (1260–1306) - For their contributions as a French philosopher, theologian, and Dominican friar.

[4:10:21] John of Salisbury, (c. 1115 – 1180) - For their contributions as an English author, philosopher, educationalist, diplomat and bishop of Chartres.

[4:10:22] John of St. Thomas (or Jean Poincot), (1589–1644) - For their contributions as a Portuguese Dominican friar and Thomist theologian and philosopher.

[4:10:23] John of the Cross, (1542–1591) - For their contributions as a Carmelite friar and priest of Marrano origin, is a major figure of the Spanish Counter-Reformation, a mystic and Roman Catholic saint; he is one of thirty-six Doctors of the Church.

[4:10:24] Alexander Bryan Johnson, (1786–1867) - For their contributions as an American philosopher and banker.

[4:10:25] Samuel Johnson, (1649–1703) - For their contributions as an English clergyman and political writer, sometimes called "the Whig" to distinguish him from the author and lexicographer of the same name; he is one of the best known pamphlet writers who developed Whig resistance theory.

[4:10:26] Samuel Johnson, (1696–1772) - For their contributions as a clergyman, educator, linguist, encyclopedist, historian, and philosopher in colonial America; he was a major proponent of both Anglicanism and the philosophies of William Wollaston and George Berkeley in the colonies, founded and served as the first president of the Anglican King's College (renamed Columbia University following the American Revolutionary War), and was a key figure of the American Enlightenment.

[4:10:27] Samuel Johnson, (1709–1784) - For their contributions as an English writer who made lasting contributions to English literature as a poet, playwright, essayist, moralist, literary critic, biographer, editor, and lexicographer. He was a devout Anglican.

[4:10:28] William Ernest Johnson, (1858–1931) - For their contributions as a British philosopher and logician mainly remembered for his 3 volume Logic (which introduced the concept of exchangeability).

[4:10:29] Jørgen Jørgensen, (1894–1969) - For their contributions as a Danish philosopher and professor.

[4:10:30] Théodore Simon Jouffroy, (1796–1842) - For their contributions as a French philosopher.

[4:10:31] Judah ben Moses of Rome (or Judah Romano), (1292–1330) - For their contributions as an Italian Jewish philosopher and translator of the thirteen and fourteenth centuries.

[4:10:32] Carl Jung, (1875–1961) - For their contributions as a Swiss psychiatrist and psychoanalyst who founded analytical psychology.

[4:10:33] Ernst Jünger, (1895–1998) - For their contributions as a highly-decorated German soldier, author, and entomologist who became publicly known for his World War I memoir *Storm of Steel*.

[4:10:34] Joachim Jungius, (1587–1657) - For their contributions as a German mathematician, logician and philosopher of sciences.

[4:10:35] Justinian I, (483-565) - For their contributions as the Eastern Roman emperor from 527 to 565.

[4:10:36] Al-Juwayni, (1028–1085) - For their contributions as a Persian Sunni Shafi'i jurist and mutakallim theologian.

[4:10:37] Franz Kafka, (1883–1924) - For their contributions as a German-speaking Bohemian Jewish novelist and short-story writer, widely regarded as one of the major figures of 20th-century literature.

[4:10:38] Kaibara Ekiken, (1630–1740) - For their contributions as a Japanese Neo-Confucianist philosopher and botanist.

[4:10:39] Kang Youwei, (1858–1927) - For their contributions as a Chinese scholar, noted calligrapher and prominent political thinker and reformer of the late Qing dynasty.

[4:10:40] Immanuel Kant, (1724–1804) - For their contributions as an influential German philosopher in the Age of Enlightenment; in his doctrine of transcendental idealism, he argued that space, time, and causation are mere sensibilities; "things-in-themselves" exist, but their nature is unknowable.

[4:10:41] Kao Tzu (Gaozi), (c. 420 BC) - For their contributions as a Chinese philosopher during the Warring States period.

[4:10:42] David Kaplan, (born 1933) - For their contributions as the Hans Reichenbach Professor of Scientific Philosophy at the University of California, Los Angeles Department of Philosophy.

[4:10:43] Mordecai Kaplan, (1881–1983) - For their contributions as a rabbi, essayist and Jewish educator and the co-founder of Reconstructionist Judaism along with his son-in-law Ira Eisenstein.

[4:10:44] Nikolai Ivanovich Kareev, (1850–1931) - For their contributions as a Russian historian and philosopher, was educated at Moscow University, where he took his doctorate in history (1884); during the late 1870s and early 1880s he spent several years studying abroad.

[4:10:45] Lev Platonovich Karsavin, (1882–1952) - For their contributions as a Russian historian-medievalist and religious philosopher Lev Platonovich Karsavin was born in St. Petersburg, the son of a ballet dancer and master, and the brother of the famous ballerina Tamara Karsavina.

[4:10:46] Joseph Kaspi, (1279–1340) - For their contributions as a Provençal exegete, grammarian, and philosopher, apparently influenced by Averroës.

[4:10:47] Suzy Kassem, (born 1975) - For their contributions as an American author, writer, thinker and poet.

[4:10:48] Walter Kaufmann, (1921–1980) - For their contributions as a German-American philosopher, translator, and poet; a prolific author, he wrote extensively on a broad range of subjects, such as authenticity and death, moral philosophy and existentialism, theism and atheism, Christianity and Judaism, as well as philosophy and literature.

[4:10:49] Karl Kautsky, (1854–1938) - For their contributions as a Czech-Austrian philosopher, journalist, and Marxist theoretician; Kautsky was recognized as among the most authoritative promulgators of Orthodox Marxism after the death of Friedrich Engels in 1895 until the outbreak of World War I in 1914.

[4:10:50] Khedrup Gelek Pelzang, (1385–1438) - For their contributions as one of the main disciples of Je Tsongkhapa, whose reforms to Atiśa's Kadam tradition are considered the beginnings of the Gelug school of Tibetan Buddhism.

[4:10:51] Konstantin Kavelin, (1818–1885) - For their contributions as a Russian historian, jurist, and sociologist, sometimes called the chief architect of early Russian liberalism.

[4:10:52] Bartholomew Keckermann, (1571–1609) - For their contributions as a German writer, Calvinist theologian and philosopher; he is known for his Analytic Method.

[4:10:53] Hans Kelsen, (1881–1973) - For their contributions as an Austrian jurist, legal philosopher and political philosopher; he is author of the 1920 Austrian Constitution, which to a very large degree is still valid today.

[4:10:54] Norman Kemp Smith, (1872–1958) - For their contributions as a Scottish philosopher who was Professor of Psychology (1906–1914) and Philosophy (1914–1919) at Princeton University and was Professor of Logic and Metaphysics at the University of Edinburgh (1919–1945).

[4:10:55] Anthony Kenny, (born 1931) - For their contributions as an English philosopher whose interests lie in the philosophy of mind, ancient and scholastic philosophy, the philosophy of Wittgenstein and the philosophy of religion; with Peter Geach, he has made a significant contribution to Analytical Thomism, a movement whose aim is to present the thought of St. Thomas Aquinas in the style of analytic philosophy.

[4:10:56] Johannes Kepler, (1571–1630) - For their contributions as a German astronomer, mathematician, and astrologer; he is a key figure in the 17th-century scientific revolution, best known for his laws of planetary motion, and his books *Astronomia nova*, *Harmonices Mundi*, and *Epitome Astronomiae Copernicanae*; these works also provided one of the foundations for Newton's theory of universal gravitation.

[4:10:57] John Maynard Keynes, (1883–1946) - For their contributions as a British economist whose ideas fundamentally changed the theory and practice of macroeconomics and the economic policies of governments.

[4:10:58] Hermann Graf Keyserling, (1880–1946) - For their contributions as a Baltic German philosopher from the Keyserlingk family.

[4:10:59] Aleksey Khomyakov, (1804–1860) - For their contributions as a Russian theologian, philosopher, poet and amateur artist; he co-founded the Slavophile movement along with Ivan Kireyevsky, and he became one of its most distinguished theoreticians.

[4:10:60] Søren Kierkegaard, (1813–1855) - For their contributions as a Danish philosopher, theologian, poet, social critic and religious author who is widely considered to be the first existentialist philosopher; he wrote critical texts on organised religion, Christendom, morality, ethics, psychology, and the philosophy of religion, displaying a fondness for metaphor, irony and parables.

[4:10:61] Richard Kilvington, (1302–1361) - For their contributions as an English scholastic philosopher at the University of Oxford.

[4:10:62] Robert Kilwardby, (1215–1279) - For their contributions as an Archbishop of Canterbury in England and a cardinal; Kilwardby was the first member of a mendicant order to attain a high ecclesiastical office in the English Church.

[4:10:63] Jaegwon Kim, (born 1934) - For their contributions as a Korean-American philosopher who is now an emeritus professor at Brown University, but who also taught at several other leading American universities; he is best known for his work on mental causation, the mind-body problem and the metaphysics of supervenience and events; key themes in his work include; a rejection of Cartesian metaphysics, the limitations of strict psychophysical identity, supervenience, and the individuation of events.

[4:10:64] Al-Kindi, (801-873) - For their contributions as an Arab Muslim philosopher, polymath, mathematician, physician and musician; Al-Kindi was the first of the Muslim peripatetic philosophers, and is unanimously hailed as the "father of Arab philosophy" for his synthesis, adaptation and promotion of Greek and Hellenistic philosophy in the Muslim world.

[4:10:65] Martin Luther King, Jr., (1929–1968) - For their contributions as an American Baptist minister and activist who became the most visible spokesperson and leader in the civil rights movement from 1955 until his assassination in 1968.

[4:10:66] Ivan Kireevsky, (1806–1856) - For their contributions as a Russian literary critic and philosopher who, together with Aleksey Khomyakov, is credited as a co-founder of the Slavophile movement.

[4:10:67] Patricia Kitcher, (born 1948) - For their contributions as the Roberta and William Campbell Professor of Philosophy at Columbia University, widely known for her work on Immanuel Kant and on philosophy of psychology.

[4:10:68] Ludwig Klages, (1872–1956) - For their contributions as a German philosopher, psychologist and a theoretician in the field of handwriting analysis; he was nominated for the Nobel Prize in Literature.

[4:10:69] Heinrich von Kleist, (1777–1811) - For their contributions as a German poet, dramatist, novelist, short story writer and journalist.

[4:10:70] William Calvert Kneale, (1906–1990) - For their contributions as an English logician best known for his 1962 book *The Development of Logic*, a history of logic from its beginnings in Ancient Greece written with his wife Martha.

[4:10:71] Martin Knutzen, (1713–1751) - For their contributions as a German philosopher, a follower of Christian Wolff and teacher of Immanuel Kant, to whom he introduced the physics of Isaac Newton.

[4:10:72] Ko Hung, (4th century) - For their contributions as an Eastern Jin Dynasty scholar, and the author of *Essays on Chinese Characters*.

[4:10:73] Kurt Koffka, (1886–1941) - For their contributions as a German psychologist; he was born and educated in Berlin.

[4:10:74] Wolfgang Köhler, (1887–1967) - For their contributions as a German psychologist and phenomenologist who, like Max Wertheimer and Kurt Koffka, contributed to the creation of Gestalt psychology.

[4:10:75] Alexandre Kojève, (1902–1968) - For their contributions as a Russian-born French philosopher and statesman whose philosophical seminars had an immense influence on 20th-century French philosophy, particularly via his integration of Hegelian concepts into twentieth-century continental philosophy.

[4:10:76] Alejandro Korn (1860–1936) - For their contributions as an Argentine psychiatrist, philosopher, reformist and politician.

[4:10:77] Tadeusz Kotarbiński, (1886–1981) - For their contributions as a Polish philosopher, logician and ethicist.

[4:10:78] Alexandre Koyre, (1892–1964) - For their contributions as a French philosopher of Russian origin who wrote on the history and philosophy of science.

[4:10:79] Aleksei Aleksandrovich Kozlov, (1831–1901) - For their contributions as a Russian personalist philosopher, was the first major Russian exponent of a pluralistic idealism derived from Gottfried Wilhelm Leibniz.

[4:10:80] Karl Kraus, (1874–1936) - For their contributions as an Austrian writer and journalist, known as a satirist, essayist, aphorist, playwright and poet; he directed his satire at the press, German culture, and German and Austrian politics.

[4:10:81] Karl Christian Friedrich Krause (1781–1832) - For their contributions as a German philosopher, born at Eisenberg, in Saxe-Gotha-Altenburg; his philosophy, known as "Krausism", was very influential in Restoration Spain.

[4:10:82] Georg Kreisel, (born 1923) - For their contributions as an Austrian-born mathematical logician who studied and worked in Great Britain and America.

[4:10:83] Saul Kripke, (born 1940) - For their contributions as an American philosopher and logician.

[4:10:84] Julia Kristeva, (born 1941) - For their contributions as a Bulgarian-French philosopher, literary critic, semiotician, psychoanalyst, feminist, and, most recently, novelist, who has lived in France since the mid-1960s.

[4:10:85] Nachman Krochmal, (1785–1840) - For their contributions as a Jewish Galician philosopher, theologian, and historian.

[4:10:86] Leopold Kronecker, (1823–1891) - For their contributions as a German mathematician who worked on number theory, algebra and logic; he criticised Georg Cantor's work on set theory, and was quoted by Weber (1893) as having said, "God made the integers, all else is the work of man."

[4:10:87] Peter Kropotkin, (1842–1921) - For their contributions as a Russian activist, revolutionary, scientist, geographer and philosopher who advocated anarcho-communism.

[4:10:88] Felix Krueger, (1874–1948) - For their contributions as a German psychologist and professor at the University of Leipzig.

[4:10:89] Thomas Samuel Kuhn, (1922–1996) - For their contributions as an American philosopher of science whose 1962 book *The Structure of Scientific Revolutions* was

influential in both academic and popular circles, introducing the term paradigm shift, which has since become an English-language idiom.

[4:10:90] Kūkai, (774–835) - For their contributions as a Japanese Buddhist monk, civil servant, scholar, poet, and artist who founded the Esoteric Shingon or "mantra" school of Buddhism.

[4:10:91] Kuki Shūzō, (1888–1941) - For their contributions as a prominent Japanese academic, philosopher and university professor.

[4:10:92] Oswald Külpe, (1862–1915) - For their contributions as one of the structural psychologists of the late 19th and early 20th century.

[4:10:93] Kumazawa Banzan, (1619–1691) - For their contributions as an adherent of a branch of Neo-Confucianism called Yangmingism, who lived during the early Edo period.

[4:10:94] Kuo Hsiang (or Guoxiang), (c. 312) - For their contributions as credited with the first and most important revision of the text known as the Zhuangzi which, along with the Tao Te Ching, forms the textual and philosophical basis of the Taoist school of thought.

[4:10:95] Ernst Laas, (1837–1885) - For their contributions as a German positivist philosopher.

[4:10:96] Lucien Laberthonnière, (1860–1932) - For their contributions as a French theologian, philosopher and historian.

[4:10:97] Antonio Labriola, (1843–1904) - For their contributions as an Italian Marxist theoretician; although an academic philosopher and never an active member of any Marxist political party, his thought exerted influence on many political theorists in Italy during the early 20th century.

[4:10:98] Jean de La Bruyère, (1645–1696) - For their contributions as a French philosopher and moralist, who was noted for his satire.

[4:10:99] Jacques Lacan, (1901–1981) - For their contributions as a French psychoanalyst and psychiatrist who has been called "the most controversial psycho-analyst since Freud".

[4:10:100] Jules Lachelier, (1832–1918) - For their contributions as a French philosopher.

[4:10:101] Philippe Lacoue-Labarthe, (born 1940) - For their contributions as a French philosopher; he was also a literary critic and translator.

[4:10:102] Pierre Laffitte, (1823–1903) - For their contributions as a French positivist.

[4:10:103] Louis de La Forge, (1632–1666) - For their contributions as a French philosopher and expounded a doctrine of occasionalism.

[4:10:104] Imre Lakatos, (1922–1974) - For their contributions as a Hungarian philosopher of mathematics and science, known for his thesis of the fallibility of mathematics and its 'methodology of proofs and refutations' in its pre-axiomatic stages of development, and also for introducing the concept of the 'research programme' in his methodology of scientific research programmes.

[4:10:105] André Lalande, (1867–1964) - For their contributions as a French philosopher; in 1904 he was appointed professor of philosophy at the University of Paris.

[4:10:106] Jean-Baptiste Lamarck, (1744–1829) - For their contributions as a French naturalist; he was a soldier, biologist, and academic, and an early proponent of the idea that biological evolution occurred and proceeded in accordance with natural laws.

[4:10:107] Johann Heinrich Lambert, (1728–1777) - For their contributions as a Swiss polymath who made important contributions to the subjects of mathematics, physics (particularly optics), philosophy, astronomy and map projections.

[4:10:108] Hughes Felicité Robert de Lamennais, (1752–1854) - For their contributions as a French Catholic priest, philosopher and political theorist; he was one of the most influential intellectuals of Restoration France; Lamennais is considered the forerunner of liberal Catholicism and social Catholicism.

[4:10:109] Julien Offray de La Mettrie, (1709–1751) - For their contributions as a French physician and philosopher, and one of the earliest of the French materialists of the Enlightenment.

[4:10:110] François de La Mothe Le Vayer, (1588–1672) - For their contributions as a French writer who was known to use the pseudonym Orosius Tubero; he was admitted to the Académie française in 1639, and was the tutor of Louis XIV.

[4:10:111] Ludwig Landgrebe, (1902–1992) - For their contributions as an Austrian phenomenologist and Professor of philosophy.

[4:10:112] Friedrich Albert Lange, (1828–1875) - For their contributions as a German philosopher and sociologist.

[4:10:113] Susanne Langer, (1895–1985) - For their contributions as an American philosopher, writer, and educator and was well known for her theories on the influences of art on the mind; she was one of the first women in American history to achieve an academic career in philosophy and the first woman to be popularly and professionally recognised as an American philosopher.

[4:10:114] Lao Zi (or Lao Tzu), (4th century BC) - For their contributions as an ancient Chinese philosopher and writer; he is the reputed author of the Tao Te Ching, the founder of philosophical Taoism, and a deity in religious Taoism and traditional Chinese religions.

[4:10:115] Isaac La Peyrère, (1596–1676) - For their contributions as a Marrano French Millenarian theologian and formulator of the Pre-Adamite hypothesis.

[4:10:116] Pierre-Simon Laplace, (1749–1827) - For their contributions as a French scholar whose work was important to the development of engineering, mathematics, statistics, physics, astronomy, and philosophy.

[4:10:117] Ivan Ivanovich Lapshin, (1870–1952) - For their contributions as a Russian neo-Kantian philosopher, was born in Moscow and studied at the University of St. Petersburg under the leading Russian neo-Kantian, Aleksandr Vvedenskii.

[4:10:118] François de La Rochefoucauld, (1613–1680) - For their contributions as a noted French author of maxims and memoirs.

[4:10:119] Pierre Laromiguière, (1756–1837) - For their contributions as a French philosopher.

[4:10:120] Abdullah Laroui, (born 1935) - For their contributions as a Moroccan historian and novelist writing in Arabic and French; he is considered one of Morocco's leading intellectuals.

[4:10:121] Ferdinand Lassalle, (1825–1864) - For their contributions as a Prussian-German jurist, philosopher, socialist and political activist best remembered as the initiator of national-style state socialism in Germany as well as for coining the terms night-watchman state and iron law of wages.

[4:10:122] Johann Kaspar Lavater, (1741–1801) - For their contributions as a Swiss poet, writer, philosopher, physiognomist and theologian.

[4:10:123] Louis Lavelle, (1883–1951) - For their contributions as a French philosopher; his magnum opus, *La Dialectique de l'éternel présent* (1922), is a systematic metaphysical work.

[4:10:124] Antoine Lavoisier, (1743–1794) - For their contributions as a French nobleman and chemist who was central to the 18th-century chemical revolution and who had a large influence on both the history of chemistry and the history of biology; he is widely considered in popular literature as the "father of modern chemistry".

[4:10:125] Peter Lavrovitch Lavrov, (1823–1900) - For their contributions as a prominent Russian theorist of narodism, philosopher, publicist, revolutionary and sociologist.

[4:10:126] William Law, (1686–1761) - For their contributions as a Church of England priest who lost his position at Emmanuel College, Cambridge when his conscience would not allow him to take the required oath of allegiance to the first Hanoverian monarch, King George I.

[4:10:127] Jean Le Clerc, (1657–1737) - For their contributions as a Genevan theologian and biblical scholar; he was famous for promoting exegesis, or critical interpretation of the Bible, and was a radical of his age; he parted with Calvinism over his interpretations and left Geneva for that reason.

[4:10:128] Michèle Le Dœuff, (born 1948) - For their contributions as a French philosopher with a scholarly interest in the philosophy of Francis Bacon, and Sir Thomas More's utopianism.

[4:10:129] Henri Lefebvre, (1901–1991) - For their contributions as a French Marxist philosopher and sociologist, best known for pioneering the critique of everyday life, for introducing the concepts of the right to the city and the production of social space, and for his work on dialectics, alienation, and criticism of Stalinism, existentialism, and structuralism; in his prolific career, Lefebvre wrote more than sixty books and three hundred articles.

[4:10:130] Antoine Le Grand, (1629–1699) - For their contributions as a French Recollect and Cartesian philosopher.

[4:10:131] Keith Lehrer, (born 1936) - For their contributions as Regent's Professor emeritus of Philosophy at the University of Arizona and a Research Professor of Philosophy at the University of Miami in Florida, where he spends half of each academic year.

[4:10:132] Gottfried Leibniz, (1646–1716) - For their contributions as a prominent German polymath and philosopher in the history of mathematics and the history of philosophy; his most notable accomplishment was conceiving the ideas of differential and integral calculus, independently of Isaac Newton's contemporaneous developments.

[4:10:133] Yeshayahu Leibowitz, (1903–1994) - For their contributions as an Israeli Orthodox Jewish public intellectual and polymath; he was professor of biochemistry, organic chemistry, and neurophysiology at the Hebrew University of Jerusalem, as well as a prolific writer on Jewish thought and western philosophy.

[4:10:134] Jean-François Lyotard, (1924–1998) - For their contributions as a French philosopher, sociologist, and literary theorist; his interdisciplinary discourse spans such topics as epistemology and communication, the human body, modern art and postmodern art, literature and critical theory, music, film, time and memory, space, the city and landscape, the sublime, and the relation between aesthetics and politics.

[4:10:135] Leonardo da Vinci, (1452–1519) - For their contributions as an Italian polymath of the Renaissance whose areas of interest included invention, drawing, painting, sculpting, architecture, science, music, mathematics, engineering, literature, anatomy, geology, astronomy, botany, writing, history, and cartography; he has been variously called the father of palaeontology, ichnology, and architecture, and he is widely considered one of the greatest painters of all time.

[4:10:136] Konstantin Nikolaevich Leont'ev, (1831–1891) - For their contributions as a conservative tsarist and imperial monarchist Russian philosopher who advocated closer cultural ties between Russia and the East against what he believed to be the West's catastrophic egalitarian, utilitarian and revolutionary influences; he also advocated Russia's cultural and territorial expansion eastward to India, Tibet and China.

[4:10:137] Giacomo Leopardi, (1798–1837) - For their contributions as an Italian philosopher, poet, essayist, and philologist; he is considered the greatest Italian poet of the nineteenth century and one of the most important figures in the literature of the world, as well as one of the principal of literary romanticism; his constant reflection on existence and on the human condition - of sensuous and materialist inspiration - also makes him a deep philosopher.

[4:10:138] Jules Lequier, (1814–1862) - For their contributions as a French philosopher from Brittany.

[4:10:139] Pierre Leroux, (1798–1871) - For their contributions as a French philosopher and political economist.

[4:10:140] Edouard Louis Emmanuel Julien Le Roy, (1870–1954) - For their contributions as a French philosopher and mathematician.

[4:10:141] René Le Senne, (1882–1954) - For their contributions as a French idealist philosopher and psychologist.

[4:10:142] Stanisław Leśniewski, (1886–1939) - For their contributions as a Polish mathematician, philosopher and logician.

[4:10:143] Gotthold Ephraim Lessing, (1729–1781) - For their contributions as a German writer, philosopher, dramatist, publicist and art critic, and an outstanding representative of the Enlightenment era.

[4:10:144] Leucippus, (5th century BC) - For their contributions, as reported in some ancient sources, to have been a philosopher who was the earliest Greek to develop the theory of atomism—the idea that everything is composed entirely of various imperishable, indivisible elements called atoms.

[4:10:145] Emmanuel Levinas, (1906–1995) - For their contributions as a French philosopher of Lithuanian Jewish ancestry who is known for his work related to Jewish philosophy, existentialism, ethics, phenomenology and ontology.

[4:10:146] Claude Lévi-Strauss, (born 1908) - For their contributions as a Belgium-born French anthropologist and ethnologist whose work was key in the development of the theory of structuralism and structural anthropology.

[4:10:147] Lucien Lévy-Bruhl, (1857–1939) - For their contributions as a French scholar trained in philosophy, who made contributions to the budding fields of sociology and ethnology; his primary field of study involved primitive mentality.

[4:10:148] Kurt Lewin, (1890–1947) - For their contributions as a German-American psychologist, known as one of the modern pioneers of social, organisational, and applied psychology in the United States.

[4:10:149] Clarence Irving Lewis, (1883–1964) - For their contributions as an American academic philosopher and the founder of conceptual pragmatism; first a noted logician, he later branched into epistemology, and during the last 20 years of his life, he wrote much on ethics.

[4:10:150] C. S. Lewis, (1898–1963) - For their contributions as a British writer and lay theologian.

[4:10:151] David Kellogg Lewis, (1941–2001) - For their contributions as an American philosopher.

[4:10:152] Li Ao, (722-841) - For their contributions as a Chinese philosopher and prose writer of the Tang Dynasty.

[4:10:153] Liang Qichao (or Liang Ch'i-ch'ao), (1873–1929) - For their contributions as a Chinese scholar, journalist, philosopher, and reformist who lived during the late Qing dynasty and the early Republic of China; he inspired Chinese scholars with his writings and reform movements.

[4:10:154] Liang Sou-ming, (1893–1988) - For their contributions as a philosopher, teacher, and leader in the Rural Reconstruction Movement in the late Qing dynasty and early Republican eras of Chinese history.

[4:10:155] Georg Christoph Lichtenberg, (1742–1799) - For their contributions as a German physicist, satirist, and Anglophile; as a scientist, he was the first to hold a professorship explicitly dedicated to experimental physics in Germany.

[4:10:156] Arthur Liebert, (1878–1946) - For their contributions as a German philosopher; as a representative of the Marburg school he belonged to the neo-Kantianism.

[4:10:157] Otto Liebmann, (1840–1912) - For their contributions as a German neo-Kantian philosopher.

[4:10:158] Liezi (or Lieh Tzu), (c. 440 BC – c. 360 BC) - For their contributions as considered the author of the Daoist book Liezi.

[4:10:159] Linji Yixuan (or Lin Chi), (c. 810-867) - For their contributions as the founder of the Linji school of Chan Buddhism during Tang Dynasty China.

[4:10:160] Carl Linnaeus, (1707–1778) - For their contributions as a Swedish botanist, physician, and zoologist who formalised binomial nomenclature, the modern system of naming organisms; he is known as the "father of modern taxonomy".

[4:10:161] Theodor Lipps, (1851–1914) - For their contributions as a German philosopher, famed for his theory regarding aesthetics, creating the framework for the concept of *Einfühlung* (empathy), defined as, "projecting oneself onto the object of perception."

[4:10:162] Justus Lipsius, (1547–1606) - For their contributions as a Flemish philologist, philosopher and humanist; Lipsius wrote a series of works designed to revive ancient Stoicism in a form that would be compatible with Christianity.

[4:10:163] Émile Littré, (1801–1881) - For their contributions as a French lexicographer, freemason and philosopher, best known for his *Dictionnaire de la langue française*, commonly called "The Littré".

[4:10:164] Liu Shaoqi (or Liu Shao-ch'i), (1898–1969) - For their contributions as a Chinese revolutionary, politician, and theorist.

[4:10:165] Liu Tsung-chou (or Ch'i-shan), (1578–1645) - For their contributions as a Chinese philosopher.

[4:10:166] Genevieve Lloyd, (born 1941) - For their contributions as an Australian philosopher and feminist.

[4:10:167] Karl Nickerson Llywelyn, (1893–1962) - For their contributions as a prominent American jurisprudential scholar associated with the school of legal realism; The Journal of Legal Studies has identified Llewellyn as one of the twenty most cited American legal scholars of the 20th century.

[4:10:168] Ramon Llull, (1235–1315) - For their contributions as a mathematician, polymath, philosopher, logician, Franciscan tertiary and writer from the Kingdom of Majorca; he is credited with writing the first major work of Catalan literature.

[4:10:169] John Locke, (1632–1704) - For their contributions as an English philosopher and physician, widely regarded as one of the most influential of Enlightenment thinkers and commonly known as the "Father of Liberalism".

[4:10:170] Alfred Loisy, (1857–1940) - For their contributions as a French Roman Catholic priest, professor and theologian generally credited as a founder of biblical modernism in the Roman Catholic Church

[4:10:171] Peter Lombard, (c. 1100 – 1160) - For their contributions as a scholastic theologian, Bishop of Paris, and author of Four Books of Sentences, which became the standard textbook of theology, for which he earned the accolade Magister Sententiarum.

[4:10:172] Bernard Lonergan, (1904–1984) - For their contributions as a Canadian Jesuit priest, philosopher, and theologian, regarded by many as one of the most important thinkers of the 20th century.

[4:10:173] Pseudo-Longinus, (1st century) - For their contributions as an author of On the Sublime as a classic work of aesthetics.

[4:10:174] Leo Mikhailovich Lopatin, (1855–1920) - For their contributions as a Russian philosopher and former head of the Moscow Psychological Society until the formal liquidation of the society by the Soviet after the Revolution of 1917.

[4:10:175] Paul Lorenzen, (1915–1995) - For their contributions as a German philosopher and mathematician, founder of the Erlangen School (with Wilhelm Kamlah) and inventor of game semantics (with Kuno Lorenz).

[4:10:176] Aleksei Fedorovich Losev, (1893–1988) - For their contributions as a Russian philosopher, philologist and culturologist, one of the most prominent figures in Russian philosophical and religious thought of the 20th century.

[4:10:177] Nicholas Onufrievich Lossky, (1870–1965) - For their contributions as a Russian philosopher, representative of Russian idealism, intuitionist epistemology, personalism, libertarianism, ethics and axiology (value theory).

[4:10:178] Yuri Lotman, (1922–1993) - For their contributions as a prominent literary scholar, semiotician, and cultural historian, who worked at the University of Tartu; he was a member of the Estonian Academy of Sciences; he was the founder of the Tartu–Moscow Semiotic School; the number of his printed works exceeds 800 titles.

[4:10:179] Hermann Lotze, (1817–1881) - For their contributions as a German philosopher and logician; he also had a medical degree and was well versed in biology; he argued that if the physical world is governed by mechanical laws, relations and developments in the universe could be explained as the functioning of a world mind.

[4:10:180] Arthur O. Lovejoy, (1873–1962) - For their contributions as an American philosopher and intellectual historian, who founded the discipline known as the history of ideas with his book *The Great Chain of Being* (1936), on the topic of that name, which is regarded as 'probably the single most influential work in the history of ideas in the United States during the last half century'.

[4:10:181] John R. Lucas, (born 1929) - For their contributions as a British philosopher.

[4:10:182] Lucian, (c. 120–c. 180) - For their contributions as a Syrian satirist and rhetorician who is best known for his characteristic tongue-in-cheek style, with which he frequently ridiculed superstition, religious practices, and belief in the paranormal.

[4:10:183] Lucretius, (c. 99–55 BC) - For their contributions as a Roman poet and philosopher; his only known work is the philosophical poem *De rerum natura*, a didactic work about the tenets and philosophy of Epicureanism, and which is usually translated into English as *On the Nature of Things*.

[4:10:184] Lu Jiuyuan (or Lu Xiangshan, or Lu Chiu-yuan, or Tzu-ching, or Ts'un-chai), (1139–1193) - For their contributions as a Chinese philosopher and writer who founded the school of the universal mind, the second most influential Neo-Confucian school; he was a contemporary and the main rival of Zhu Xi.

[4:10:185] Georg Lukács, (1885–1971) - For their contributions as a Hungarian Marxist philosopher, aesthetician, literary historian, and critic; he was one of the founders of Western Marxism, an interpretive tradition that departed from the Marxist ideological orthodoxy of the Soviet Union; he developed the theory of reification, and contributed to Marxist theory with developments of Karl Marx's theory of class consciousness; he was also a philosopher of Leninism; he ideologically developed and organised Lenin's pragmatic revolutionary practices into the formal philosophy of vanguard-party revolution.

[4:10:186] Jan Łukasiewicz, (1878–1956) - For their contributions as a Polish logician and philosopher born in Lemberg, a city in the Galician kingdom of Austria-Hungary (now Lviv, Ukraine); his work centred on philosophical logic, mathematical logic, and history of logic; he thought in an innovative way about traditional propositional logic, the principle of non-contradiction and the law of excluded middle.

[4:10:187] Anatoliy Lunacharskiy, (1875–1933) - For their contributions as a Russian Marxist revolutionary and the first Bolshevik Soviet People's Commissar (Narkompros) responsible for Ministry and Education as well as active playwright, critic, essayist and journalist throughout his career.

[4:10:188] Martin Luther, (1483–1546) - For their contributions as a German professor of theology, composer, priest, monk, and a seminal figure in the Protestant Reformation.

[4:10:189] Rosa Luxemburg, (1871–1919) - For their contributions as a Polish Marxist theorist, philosopher, economist, anti-war activist and revolutionary socialist who became a naturalised German citizen at the age of 28.

[4:10:190] William Lycan, (born 1945) - For their contributions as an American philosopher and Professor Emeritus at University of North Carolina at Chapel Hill, where he was formerly the William Rand Kenan, Jr. Distinguished Professor.

Extolled Philosophers (Surnames “M, N, O, P, and Q”)

[4:11:1] Ernst Mach, (1838–1916) - For their contributions as an Austrian physicist and philosopher, noted for his contributions to physics such as study of shock waves.

[4:11:2] Niccolò Machiavelli, (1469–1527) - For their contributions as an Italian diplomat, politician, historian, philosopher, humanist, writer, playwright and poet of the Renaissance period.

[4:11:3] Alasdair MacIntyre, (born 1929) - For their contributions as a Scottish philosopher, primarily known for his contribution to moral and political philosophy, but also known for his work in history of philosophy and theology.

[4:11:4] John Leslie Mackie, (1917–1981) - For their contributions as an Australian philosopher; he made significant contributions to the philosophy of religion, metaphysics, and the philosophy of language, and is perhaps best known for his views on meta-ethics, especially his defence of moral scepticism.

[4:11:5] Madhava, (died 1386) - For their contributions as an Indian mathematician and astronomer from the town believed to be present-day Aloor, Irinjalakuda in Thrissur District), Kerala, India; he is considered the founder of the Kerala school of astronomy and mathematics.

[4:11:6] Shri Madhvacharya, (1238–1317) - For their contributions as a Hindu philosopher and the chief proponent of the Dvaita (dualism) school of Vedanta; Madhva called his philosophy Tatvavāda meaning "arguments from a realist viewpoint".

[4:11:7] Mahavira, (599-527 BC) - For their contributions as the twenty-fourth tirthankara (ford-maker and propagator of dharma) who revived Jainism; he expounded the spiritual, philosophical and ethical teachings of the previous tirthankaras from the remote pre-Vedic era.

[4:11:8] Benoît de Maillet, (1656–1738) - For their contributions as a well-travelled French diplomat and natural historian; he was French consul general at Cairo, and overseer in the Levant; he formulated an evolutionary hypothesis to explain the origin of the earth and its contents.

[4:11:9] Salomon Maimon (or Salomon ben Joshua), (1753–1800) - For their contributions as a philosopher born of Lithuanian Jewish parentage in the Grand Duchy of Lithuania, present-day Belarus.

[4:11:10] Abraham ben Moses Maimonides (or Abraham ben Maimon), (1186–1237) - For their contributions as the son of Maimonides who succeeded his father as Nagid of the Egyptian Jewish community.

[4:11:11] Maimonides (or Rambam), (1135–1204) - For their contributions as a medieval Sephardic Jewish philosopher who became one of the most prolific and influential Torah scholars of the Middle Ages; in his time, he was also a preeminent astronomer and physician.

[4:11:12] Maine de Biran, (1766–1824) - For their contributions as a French philosopher.

[4:11:13] John Major (or John Mair), (1467–1550) - For their contributions as a Scottish philosopher, theologian, and historian who was much admired in his day and was an acknowledged influence on all the great thinkers of the time; a very renowned teacher, his works were much collected and frequently republished across Europe

[4:11:14] Norman Malcolm, (1911–1990) - For their contributions as an American philosopher.

[4:11:15] Nicolas Malebranche, (1638–1715) - For their contributions as a French Oratorian priest and rationalist philosopher; in his works, he sought to synthesise the thought of St. Augustine and Descartes, in order to demonstrate the active role of God in every aspect of the world; Malebranche is best known for his doctrines of vision in God, occasionalism and ontologism.

[4:11:16] Ernst Mally, (1879–1944) - For their contributions as an Austrian philosopher affiliated with the so-called Graz School of phenomenological psychology; a pupil of Alexius Meinong, he was one of the founders of deontic logic and is mainly known for his contributions in that field of research.

[4:11:17] André Malraux, (1901–1976) - For their contributions as a French novelist, art theorist and Minister of Cultural Affairs.

[4:11:18] Thomas Malthus, (1766–1834) - For their contributions as an English cleric and scholar, influential in the fields of political economy and demography.

[4:11:19] Merab Mamardashvili, (1930–1990) - For their contributions as a Georgian philosopher.

[4:11:20] Bernard de Mandeville, (1670–1733) - For their contributions as an Anglo-Dutch philosopher, political economist and satirist.

[4:11:21] Mani, (3rd century) - For their contributions as the prophet and the founder of Manichaeism, a gnostic religion of late antiquity which was widespread but no longer prevalent by name

[4:11:22] Karl Mannheim, (1893–1947) - For their contributions as an influential German sociologist during the first half of the 20th century; he was a founding father of classical sociology, as well as idea of sociology of knowledge.

[4:11:23] Henry Longueville Mansel, (1820–1871) - For their contributions as an English philosopher and ecclesiastic.

[4:11:24] Anthony Quinton, (born 1925) - For their contributions as a British political and moral philosopher, metaphysician, and materialist philosopher of mind.

[4:11:25] Gabriel Marcel, (1887–1973) - For their contributions as a French philosopher, playwright, music critic and leading Christian existentialist; the author of over a dozen books and at least thirty plays, Marcel's work focused on the modern individual's struggle in a technologically dehumanising society.

[4:11:26] Marcion, (110-160) - For their contributions as an important figure in early Christianity; his theology rejected the deity described in the Hebrew Scriptures and in distinction affirmed the Father of Christ as the true God.

[4:11:27] Ruth Barcan Marcus, (1921–2012) - For their contributions as an American academic philosopher and logician best known for her work in modal and philosophical logic; she developed the first formal systems of quantified modal logic and in so doing introduced the schema or principle known as the Barcan formula.

[4:11:28] Herbert Marcuse, (1898–1979) - For their contributions as a German-American philosopher, sociologist, and political theorist, associated with the Frankfurt School of Critical Theory.

[4:11:29] Joseph Maréchal, (1878–1944) - For their contributions as a Belgian Jesuit priest, philosopher, theologian and psychologist; he taught at the Higher Institute of Philosophy of the University of Leuven and was the founder of the school of thought called transcendental Thomism, which attempted to merge the theological and philosophical thought of St. Thomas Aquinas with that of Immanuel Kant.

[4:11:30] Juan de Mariana, (1536–1624) - For their contributions as a Spanish Jesuit priest, Scholastic, historian, and member of the Monarchomachs.

[4:11:31] Julián Marías, (1914–2005) - For their contributions as a Spanish philosopher associated with the Generation of '36 movement.

[4:11:32] Jacques Maritain, (1882–1973) - For their contributions as a French Catholic philosopher. Raised Protestant, he was agnostic before converting to Catholicism in 1906. An author of more than 60 books, he helped to revive Thomas Aquinas for modern times, and was influential in the development and drafting of the Universal Declaration of Human Rights.

[4:11:33] Gaius Marius Victorinus, (4th century) - For their contributions as a Roman grammarian, rhetorician and Neoplatonic philosopher.

[4:11:34] Svetozar Marković, (1846–1875) - For their contributions as an influential Serbian political activist, literary critic and philosopher; he developed an activistic anthropological philosophy with a definite program of social change.

[4:11:35] Odo Marquard, (born 1928) - For their contributions as a German philosopher.

[4:11:36] Marsilius of Inghen, (1330–1396) - For their contributions as a medieval Dutch Scholastic philosopher who studied with Albert of Saxony and Nicole Oresme under Jean Buridan; he was Magister at the University of Paris as well as at the University of Heidelberg from 1386 to 1396.

[4:11:37] Marsilius of Padua (or Marsiglio or Marsilio dei Mainardine), (1270–1342) - For their contributions as an Italian scholar, trained in medicine, who practiced a variety of professions; he was also an important 14th-century political figure.

[4:11:38] Roger Marston, (1235–1303) - For their contributions as an English Franciscan scholastic philosopher and theologian.

[4:11:39] Charles B. Martin, (born 1924) - For their contributions as an Australian philosopher noted for work in metaphysics and the philosophy of mind.

[4:11:40] Harriet Martineau, (1802–1876) - For their contributions as a British social theorist and Whig writer, often cited as the first female sociologist.

[4:11:41] James Martineau, (1805–1900) - For their contributions as an English religious philosopher influential in the history of Unitarianism; for 45 years he was Professor of Mental and Moral Philosophy and Political Economy in Manchester New College, the principal training college for British Unitarianism.

[4:11:42] Piero Martinetti, (1872–1943) - For their contributions as an Italian philosopher; Martinetti was professor of theoretical and moral philosophy; he was one of the few university professors, as well as the only Italian academic philosopher, to refuse to swear an oath of allegiance to the Fascist Party.

[4:11:43] Anton Marty, (1847–1914) - For their contributions as a Swiss-born Austrian philosopher; he specialised in philosophy of language, philosophy of psychology and ontology.

[4:11:44] Marko Marulić, (1450–1524) - For their contributions as a Croatian national poet and Renaissance humanist, known as the Crown of the Croatian Medieval Age and the father of the Croatian Renaissance; he was also the first who defined and used the notion of psychology, which is today in current use.

[4:11:45] Karl Marx, (1818–1883) - For their contributions as a German philosopher, economist, historian, sociologist, political theorist, journalist and socialist revolutionary.

[4:11:46] Tomáš Masaryk, (1850–1937) - For their contributions as a Czechoslovak politician, statesman, sociologist and philosopher.

[4:11:47] Damaris Cudworth Masham, (1659–1708) - For their contributions as an English writer, philosopher, theologian, and advocate for women's education who is characterised as a proto-feminist.

[4:11:48] Cotton Mather, (1663–1728) - For their contributions as a New England Puritan minister, prolific author, and pamphleteer.

[4:11:49] Matthew of Aquasparta, (1238–1302) - For their contributions as an Italian Friar Minor and scholastic philosopher; he was elected Minister General of the Order.

[4:11:50] Pierre Louis Maupertuis, (1698–1759) - For their contributions as a French mathematician, philosopher and man of letters.

[4:11:51] Fritz Mauthner, (1849–1923) - For their contributions as an Austro-Hungarian novelist, theatre critic and satirist; he was exponent of philosophical skepticism derived from a critique of human knowledge and of philosophy of language.

[4:11:52] James Clerk Maxwell, (1831–1879) - For their contributions as a Scottish scientist in the field of mathematical physics; his most notable achievement was to formulate the classical theory of electromagnetic radiation, bringing together for the first time electricity, magnetism, and light as different manifestations of the same phenomenon.

[4:11:53] James McCosh, (1811–1894) - For their contributions as a prominent philosopher of the Scottish School of Common Sense.

[4:11:54] William McDougall, (1871–1938) - For their contributions as an early 20th century psychologist who spent the first part of his career in the United Kingdom and the latter part in the United States; he wrote a number of highly influential textbooks, and was particularly important in the development of the theory of instinct and of social psychology in the English-speaking world; he was an opponent of behaviourism and stands somewhat outside the mainstream of the development of Anglo-American psychological thought in the first half of the 20th century; but his work was very well-known and respected among lay people.

[4:11:55] John McDowell, (born 1942) - For their contributions as a South African philosopher, formerly a fellow of University College, Oxford and now University Professor at the University of Pittsburgh; although he has written extensively on metaphysics, epistemology, ancient philosophy, and meta-ethics, McDowell's most influential work has been in the philosophy of mind and philosophy of language.

[4:11:56] Evander Bradley McGilvary, (1864–1953) - For their contributions as an American philosophical scholar, born in Bangkok to American Presbyterian missionaries, the Rev. Daniel McGilvary and Mrs. Sophia McGilvary.

[4:11:57] Colin McGinn, (born 1950) - For their contributions as a British philosopher.

[4:11:58] John Ellis McTaggart, (1866–1925) - For their contributions as an idealist metaphysician. For most of his life McTaggart was a fellow and lecturer in philosophy at Trinity College, Cambridge; he was an exponent of the philosophy of Georg Wilhelm Friedrich Hegel and among the most notable of the British idealists.

[4:11:59] George Herbert Mead, (1863–1931) - For their contributions as an American philosopher, sociologist and psychologist, primarily affiliated with the University of Chicago, where he was one of several distinguished pragmatists; he is regarded as one of the founders of symbolic interactionism and of what has come to be referred to as the Chicago sociological tradition.

[4:11:60] Bartolomé de Medina, (1527–1580) - For their contributions as a Spanish theologian.

[4:11:61] Georg Friedrich Meier, (1718–1777) - For their contributions as a German philosopher and aesthetician.

[4:11:62] Friedrich Meinecke, (1862–1954) - For their contributions as a German historian.

[4:11:63] Alexius Meinong, (1853–1920) - For their contributions as an Austrian philosopher, a realist known for his unique ontology; he also made contributions to philosophy of mind and theory of value.

[4:11:64] Philipp Melanchthon, (1497–1560) - For their contributions as a German Lutheran reformer, collaborator with Martin Luther, the first systematic theologian of the Protestant Reformation, intellectual leader of the Lutheran Reformation, and an influential designer of educational systems; he stands next to Luther and John Calvin as a reformer, theologian, and moulder of Protestantism.

[4:11:65] Melissus of Samos, (late 5th century BC) - For their contributions as the third and last member of the ancient school of Eleatic philosophy, whose other members included Zeno and Parmenides.

[4:11:66] D. Hugh Mellor, (born 1938) - For their contributions as a British philosopher.

[4:11:67] Menasseh Ben Israel, (1604–1657) - For their contributions as a Portuguese rabbi, kabbalist, writer, diplomat, printer and publisher, founder of the first Hebrew printing press (named Emeth Meerets Titsma`h) in Amsterdam in 1626.

[4:11:68] Mencius (or Meng K'o or Meng-tzu or Mengzi), (372 – 289 BC) - For their contributions as a Chinese philosopher who has often been described as the "second Sage", that is after only Confucius himself.

[4:11:69] Gregor Mendel, (1822–1884) - For their contributions as a scientist, Augustinian friar and abbot of St. Thomas' Abbey in Brno, Margraviate of Moravia; Mendel was born in a German-speaking family in the Silesian part of the Austrian Empire (today's Czech Republic) and gained posthumous recognition as the founder of the modern science of genetics.

[4:11:70] Moses Mendelssohn, (1729–1786) - For their contributions as a German Jewish philosopher to whose ideas the Haskalah, the 'Jewish enlightenment' of the eighteenth and nineteenth centuries, is indebted.

[4:11:71] Désiré-Joseph Mercier, (1851–1926) - For their contributions as a Belgian cardinal of the Roman Catholic Church and a noted scholar.

[4:11:72] Maurice Merleau-Ponty, (1908–1961) - For their contributions as a French phenomenological philosopher, strongly influenced by Edmund Husserl and Martin Heidegger; the constitution of meaning in human experience was his main interest and he wrote on perception, art, and politics.

[4:11:73] Marin Mersenne, (1588–1648) - For their contributions as a French polymath, whose works touched a wide variety of fields.

[4:11:74] Jean Meslier, (1664–1729) - For their contributions as a French Catholic priest (abbé) who was discovered, upon his death, to have written a book-length philosophical essay promoting atheism and materialism; described by the author as his "testament" to his parishioners, the text criticises and denounces all religions.

[4:11:75] Judah Messer Leon, (c. 1425 – c. 1495) - For their contributions as an Italian rabbi, teacher, physician, and philosopher.

[4:11:76] Emile Meyerson, (1859–1933) - For their contributions as a Polish-born French epistemologist, chemist, and philosopher of science.

[4:11:77] Conyers Middleton, (1683–1750) - For their contributions as an English clergyman; mired in controversy and disputes, he was also considered one of the best stylists in English of his time.

[4:11:78] Nikolai Konstantinovich Mikhailovskii, (1842–1904) - For their contributions as a Russian literary critic, sociologist, writer on public affairs, and one of the theoreticians of the Narodniki movement.

[4:11:79] Miki Kiyoshi, (1897–1945) - For their contributions as a Japanese philosopher.

[4:11:80] Mikyo Dorje (or Mi bskyod rdo rje), (1507–1554) - For their contributions as the eighth Karmapa, head of the Kagyu school of Tibetan Buddhism.

[4:11:81] Gaston Milhaud, (1858–1918) - For their contributions as a French philosopher and historian of science.

[4:11:82] James Mill, (1773–1836) - For their contributions as a Scottish historian, economist, political theorist, and philosopher; he is counted among the founders of the Ricardian school of economics.

[4:11:83] John Stuart Mill, (1806–1873) - For their contributions as a British philosopher, political economist, and civil servant; one of the most influential thinkers in the history of classical liberalism, he contributed widely to social theory, political theory, and political economy.

[4:11:84] John Millar, (1735–1801) - For their contributions as a Scottish philosopher, historian and Regius Professor of Civil Law at the University of Glasgow from 1761 to 1800.

[4:11:85] Dickinson Miller, (1868–1963) - For their contributions as an American philosopher best known for his work in metaphysics and the philosophy of mind.

[4:11:86] Ruth Millikan, (born 1933) - For their contributions as the leading American philosopher of biology, psychology, and language who spent most of her career at the University of Connecticut.

[4:11:87] John Milton, (1608–1674) - For their contributions as an English poet, polemicist, man of letters, and civil servant for the Commonwealth of England under its Council of State and later under Oliver Cromwell.

[4:11:88] Minagawa Kien, (1734–1807) - For their contributions as a Japanese Confucianist and painter of the Nanga direction during the middle Edo period.

[4:11:89] Mir Damad (or Mir Mohammad Baqer Esterabadi), (died 1631) - For their contributions as an Iranian philosopher in the Neoplatonising Islamic Peripatetic traditions of Avicenna.

[4:11:90] Miura Baien, (1723–1789) - For their contributions as a Japanese philosopher of the Tokugawa era; a scholar often qualified as prolific original thinker in economy, interested in epistemology, he studied nature in a methodical way; he grounded his thought in Neo-Confucianism.

[4:11:91] Jacob Moleschott, (1822–1893) - For their contributions as a Dutch physiologist and writer on dietetics; he is known for his philosophical views in regard to scientific materialism.

[4:11:92] Luis de Molina, (1535–1600) - For their contributions as a Spanish Jesuit priest and scholastic, a staunch defender of free will in the controversy over human liberty and God's grace; his theology is known as Molinism.

[4:11:93] Enrique Molina Garmendia, (1871–1962) - For their contributions as a philosopher and a Chilean teacher; he was the promoter and the main founder of the University of Concepción.

[4:11:94] Lord Monboddo (or James Burnett), (1714–1799) - For their contributions as a Scottish judge, scholar of linguistic evolution, philosopher and deist; he is most famous today as a founder of modern comparative historical linguistics.

[4:11:95] Richard Montague, (1930–1971) - For their contributions as an American mathematician and philosopher.

[4:11:96] William Pepperell Montague, (1873–1953) - For their contributions as a philosopher of the New Realist school; Montague stressed the difference between his philosophical peers as adherents of either "objective" and "critical realism".

[4:11:97] Michel de Montaigne, (1533–1592) - For their contributions as one of the most significant philosophers of the French Renaissance, known for popularising the essay as a literary genre; his work is noted for its merging of casual anecdotes and autobiography with intellectual insight.

[4:11:98] Baron de Montesquieu, (1689–1755) - For their contributions as a French judge, man of letters, and political philosopher; he is famous for his articulation of the theory of separation of powers, which is implemented in many constitutions throughout the world.

[4:11:99] Edmund Montgomery, (1835–1911) - For their contributions as a Scottish-American philosopher, scientist and physician.

[4:11:100] G. E. Moore, (1873–1958) - For their contributions as an English philosopher.

[4:11:101] Henry More, (1614–1687) - For their contributions as an English philosopher of the Cambridge Platonist school.

[4:11:102] Thomas More, (1478–1535) - For their contributions as an English lawyer, social philosopher, author, statesman, and noted Renaissance humanist.

[4:11:103] C. Lloyd Morgan, (1852–1936) - For their contributions as a British ethologist and psychologist; he is remembered for his theory of emergent evolution, and for the

experimental approach to animal psychology now known as Morgan's Canon, a principle that played a major role in behaviourism, insisting that higher mental faculties should only be considered as explanations if lower faculties could not explain a behaviour.

[4:11:104] Lewis H. Morgan, (1818–1881) - For their contributions as a pioneering American anthropologist and social theorist who worked as a railroad lawyer; he is best known for his work on kinship and social structure, his theories of social evolution, and his ethnography of the Iroquois.

[4:11:105] Thomas Morgan, (Died 1743) - For their contributions as an English deist.

[4:11:106] Karl Philipp Moritz, (1756–1793) - For their contributions as a German author, editor and essayist of the Sturm und Drang, late enlightenment, and classicist periods, influencing early German Romanticism as well.

[4:11:107] Gaetano Mosca, (1858–1941) - For their contributions as an Italian political scientist, journalist and public servant; he is credited with developing the elite theory and the doctrine of the political class.

[4:11:108] Motoori Norinaga, (1730–1801) - For their contributions as a Japanese scholar of Kokugaku active during the Edo period; he is probably the best known and most prominent of all scholars in this tradition.

[4:11:109] Emmanuel Mounier, (1905–1950) - For their contributions as a French philosopher, theologian, teacher and essayist.

[4:11:110] Mou Tsung-san, (1909–1995) - For their contributions as a Chinese New Confucian philosopher.

[4:11:111] Mozi (or Mo Tzu, or Mo Ti, or Micius), (c. 470 – c. 390 BC) - For their contributions as a Chinese philosopher during the Hundred Schools of Thought period (early portion of the Warring States period of c.475–221 BC); a book named after him, the *Mozi*, contains material ascribed to him and his followers.

[4:11:112] David Ibn Merwan Al-Mukammas (or Daud Ibn Marwan al-Muqammas or David ha-Bavli), (died 937) - For their contributions as a philosopher and controversialist, the author of the earliest known Jewish philosophical work of the Middle Ages.

[4:11:113] Mulla Sadra, (1571–1640) - For their contributions as an Iranian Twelver Shi'a Islamic philosopher, theologian and 'Ālim who led the Iranian cultural renaissance in the 17th century.

[4:11:114] Iris Murdoch, (1919–1999) - For their contributions as a British novelist and philosopher; Murdoch is best known for her novels about good and evil, sexual relationships, morality, and the power of the unconscious.

[4:11:115] Muro Kyuso, (1658–1734) - For their contributions as a Neo-Confucian scholar and an official of the Tokugawa shogunate during the rule of Tokugawa Yoshimune; Muro was responsible for the reintroduction of orthodox neo-Confucianist thought into government and societal life, attempting to reverse the growth of unorthodox views that were becoming popular during this time.

[4:11:116] Arthur Edward Murphy, (1901–1962) - For their contributions as an American philosopher.

[4:11:117] Musonius Rufus, (1st century) - For their contributions as a Roman Stoic philosopher of the 1st century AD; he taught philosophy in Rome during the reign of Nero, as consequence of which he was sent into exile in 65 AD, only returning to Rome under Galba.

[4:11:118] Arne Næss, (1912–2009) - For their contributions as a Norwegian philosopher who coined the term "deep ecology" and was an important intellectual and inspirational figure within the environmental movement of the late twentieth century.

[4:11:119] Nagarjuna, (ca. 200 CE) - For their contributions as widely considered one of the most important Buddhist philosophers; along with his disciple Āryadeva, he is considered to be the founder of the Madhyamaka school of Mahāyāna Buddhism.

[4:11:120] Ernest Nagel, (1901–1985) - For their contributions as an American philosopher of science.

[4:11:121] Thomas Nagel, (born 1937) - For their contributions as an American philosopher and University Professor of Philosophy and Law Emeritus at New York University, where he taught from 1980 to 2016; his main areas of philosophical interest are philosophy of mind, political philosophy and ethics.

[4:11:122] Nahmanides, (1194–1270) - For their contributions as a leading medieval Jewish scholar, Sephardic rabbi, philosopher, physician, kabbalist, and biblical commentator.

[4:11:123] Jacques-André Naigeon, (1738–1810) - For their contributions as a French artist, atheist–materialist philosopher, editor and man of letters best known for his contributions to the Encyclopédie and for reworking Baron d'Holbach's and Diderot's manuscripts.

[4:11:124] Toju Nakae, (1608–1648) - For their contributions as a Japanese Confucian philosopher known as "the sage of Ōmi".

[4:11:125] Jean-Luc Nancy, (born 1940) - For their contributions as a French philosopher.

[4:11:126] Hossein Nasr, (born 1933) - For their contributions as an Iranian professor emeritus of Islamic studies at George Washington University, and an Islamic philosopher; he is the author of scholarly books and articles.

[4:11:127] Paul Gerhard Natorp, (1854–1924) - For their contributions as a German philosopher and educationalist, considered one of the co-founders of the Marburg school of neo-Kantianism; he was known as an authority on Plato.

[4:11:128] Alexander Neckham, (1157–1217) - For their contributions as an English scholar, teacher, theologian and abbot of Cirencester Abbey from 1213 until his death.

[4:11:129] Leonard Nelson, (1882–1927) - For their contributions as a German mathematician, philosopher, and socialist; he was part of the neo-Friesian school of neo-Kantianism.

[4:11:130] Nemesius of Emesa, (fl. c. 400) - For their contributions as a Christian philosopher, and the author of a treatise *De Natura Hominis* ("On Human Nature").

[4:11:131] John von Neumann, (1903–1957) - For their contributions as a Hungarian-American mathematician, physicist, computer scientist, and polymath.

[4:11:132] Otto Neurath, (1882–1945) - For their contributions as an Austrian philosopher, philosopher of science, sociologist, and political economist; before he fled his native country in 1934, Neurath was one of the leading figures of the Vienna Circle.

[4:11:133] John Henry Newman, (1801–1890) - For their contributions as a theologian and poet, first an Anglican priest and later a Catholic priest and cardinal, who was an important and controversial figure in the religious history of England in the 19th century.

[4:11:134] Isaac Newton, (1642–1727) - For their contributions as an English mathematician, physicist, astronomer, theologian, and author (described in his own day as a "natural philosopher") who is widely recognised as one of the most influential scientists of all time, and a key figure in the scientific revolution.

[4:11:135] Nichiren, (1222–1282) - For their contributions as a Japanese Buddhist priest who lived during the Kamakura period (1185–1333) and developed the teachings that are now considered Nichiren Buddhism, a branch school of Mahayana Buddhism.

[4:11:136] Nicholas of Autrecourt, (c. 1300 – 1369) - For their contributions as a French medieval philosopher and Scholastic theologian.

[4:11:137] Nicholas of Cusa, (1401–1464) - For their contributions as a German philosopher, theologian, jurist, and astronomer; one of the first German proponents of Renaissance humanism, he made spiritual and political contributions in European history; a notable example of this is his mystical or spiritual writings on "learned ignorance," as well as his

participation in power struggles between Rome and the German states of the Holy Roman Empire.

[4:11:138] Christoph Friedrich Nicolai, (1733–1811) - For their contributions as a German writer and bookseller.

[4:11:139] Pierre Nicole, (1625–1695) - For their contributions as one of the most distinguished of the French Jansenists.

[4:11:140] H. Richard Niebuhr, (1894–1962) - For their contributions as one of the most important Christian theological ethicists in 20th-century America, best known for his 1951 book *Christ and Culture* and his posthumously published book *The Responsible Self*.

[4:11:141] Reinhold Niebuhr, (1892–1971) - For their contributions as an American Reformed theologian, ethicist, commentator on politics and public affairs, and professor at Union Theological Seminary for more than 30 years; Niebuhr was one of America's leading public intellectuals for several decades of the 20th century and received the Presidential Medal of Freedom in 1964; a public theologian, he wrote and spoke frequently about the intersection of religion, politics, and public policy, with his most influential books including *Moral Man and Immoral Society* and *The Nature and Destiny of Man*.

[4:11:142] Friedrich Nietzsche, (1844–1900) - For their contributions as a German philosopher, cultural critic, composer, poet, philologist, and Latin and Greek scholar whose work has exerted a profound influence on modern intellectual history; he began his career as a classical philologist before turning to philosophy.

[4:11:143] Agostino Nifo, (1470–1538) - For their contributions as an Italian philosopher and commentator.

[4:11:144] Nishi Amane, (1829–1897) - For their contributions as a philosopher in Meiji period Japan who helped introduce Western philosophy into mainstream Japanese education.

[4:11:145] Nishida Kitaro, (1870–1945) - For their contributions as a prominent Japanese philosopher, founder of what has been called the Kyoto School of philosophy; he graduated from the University of Tokyo during the Meiji period in 1894 with a degree in philosophy.

[4:11:146] Nishitani Keiji, (1900–1990) - For their contributions as a Japanese philosopher of the Kyoto School and a disciple of Kitarō Nishida.

[4:11:147] Kwame Nkrumah, (1909–1972) - For their contributions as a Ghanaian politician and revolutionary.

[4:11:148] John Norris, (1657–1711) - For their contributions as an English theologian, philosopher and poet associated with the Cambridge Platonists.

[4:11:149] Novalis, (1772–1801) - For their contributions as a poet, author, mystic, and philosopher of Early German Romanticism.

[4:11:150] Robert Nozick, (1938–2001) - For their contributions as an American philosopher.

[4:11:151] Numenius of Apamea, (2nd century) - For their contributions as a Greek philosopher, who lived in Apamea in Syria and Rome, and flourished during the latter half of the 2nd century AD; he was a Neopythagorean and forerunner of the Neoplatonists.

[4:11:152] Martha Nussbaum, (born 1947) - For their contributions as an American philosopher and the current Ernst Freund Distinguished Service Professor of Law and Ethics at the University of Chicago, where she is jointly appointed in the law school and the philosophy department; she has a particular interest in ancient Greek and Roman philosophy, political philosophy, feminism, and ethics, including animal rights.

[4:11:153] Anders Nygren, (1890–1978) - For their contributions as a Swedish Lutheran theologian; he was professor of systematic theology at Lund University from 1924 and was elected Bishop of Lund in 1948 (emeritus 1958).

[4:11:154] Michael Oakeshott, (1901–1990) - For their contributions as an English philosopher and political theorist who wrote about philosophy of history, philosophy of religion, aesthetics, philosophy of education, and philosophy of law.

[4:11:155] William of Ockham, (c. 1285 – 1349) - For their contributions as an English Franciscan friar, scholastic philosopher, and theologian, who is believed to have been born in Ockham, a small village in Surrey; he is considered to be one of the major figures of medieval thought and was at the centre of the major intellectual and political controversies of the 14th century.

[4:11:156] Ogyū Sorai, (1666–1728) - For their contributions as a Japanese Confucian philosopher; he has been described as the most influential such scholar during the Tokugawa period; his primary area of study was in applying the teachings of Confucianism to government and social order; he responded to contemporary economic and political failings in Japan, as well as the culture of mercantilism and the dominance of old institutions that had become weak with extravagance; Sorai rejected the moralism of Song Confucianism and instead looked to the ancient works; he argued that allowing emotions to be expressed was important and nurtured Chinese literature in Japan for this reason; Sorai attracted a large following with his teachings and created the Sorai school, which would become an influential force in further Confucian scholarship in Japan.

[4:11:157] Lorenz Oken, (1779–1851) - For their contributions as a German naturalist, botanist, biologist, and ornithologist.

[4:11:158] Karl Olivecrona, (1897–1980) - For their contributions as a Swedish lawyer and legal philosopher.

[4:11:159] Peter Olivi, (1248–1298) - For their contributions as a Franciscan theologian who, although he died professing the faith of the Roman Catholic Church, became a controversial figure in the arguments surrounding poverty at the beginning of the 14th century.

[4:11:160] Olympiodorus the Younger, (495-570) - For their contributions as a Neoplatonist philosopher, astrologer and teacher who lived in the early years of the Byzantine Empire, after Justinian's Decree of 529 AD which closed Plato's Academy in Athens and other pagan schools.

[4:11:161] John Wood Oman, (1860–1939) - For their contributions as a British Presbyterian theologian.

[4:11:162] Onora O'Neill, (born 1941) - For their contributions as a philosopher and a crossbench member of the House of Lords.

[4:11:163] Nicole Oresme, (1320–1382) - For their contributions as a significant philosopher of the later Middle Ages; he wrote influential works on economics, mathematics, physics, astrology and astronomy, philosophy, and theology; was Bishop of Lisieux, a translator, a counselor of King Charles V of France, and probably one of the most original thinkers of 14th-century Europe.

[4:11:164] Origen of Alexandria, (c. 182-c. 251) - For their contributions as an early Christian scholar, ascetic, and theologian who was born and spent the first half of his career in Alexandria; he was a prolific writer who wrote roughly 2,000 treatises in multiple branches of theology, including textual criticism, biblical exegesis and biblical hermeneutics, homiletics, and spirituality; he was one of the most influential figures in early Christian theology, apologetics, and asceticism.

[4:11:165] Isaac Orobio de Castro, (1617–1687) - For their contributions as a Jewish philosopher, physician and religious apologist.

[4:11:166] Hans Christian Ørsted, (1777–1851) - For their contributions as a Danish physicist and chemist who discovered that electric currents create magnetic fields, which was the first connection found between electricity and magnetism; Oersted's law and the oersted (Oe) are named after him.

[4:11:167] José Ortega y Gasset, (1883–1955) - For their contributions as a Spanish philosopher and essayist; he worked during the first half of the 20th century, while Spain oscillated between monarchy, republicanism, and dictatorship; his philosophy has been characterised as a "philosophy of life" that "comprised a long-hidden beginning in a

pragmatist metaphysics inspired by William James, and with a general method from a realist phenomenology imitating Edmund Husserl, which served both his proto-existentialism (prior to Martin Heidegger's) and his realist historicism, which has been compared to both Wilhelm Dilthey and Benedetto Croce."

[4:11:168] Wilhelm Ostwald, (1853–1932) - For their contributions as a German chemist and philosopher.

[4:11:169] James Oswald, (1703–1793) - For their contributions as a minister of the Church of Scotland and a philosophical writer.

[4:11:170] Rudolf Otto, (1869–1937) - For their contributions as an eminent German Lutheran theologian, philosopher, and comparative religionist; he is regarded as one of the most influential scholars of religion in the early twentieth century and is best known for his concept of the numinous, a profound emotional experience he argued was at the heart of the world's religions.

[4:11:171] Richard Overton, (d. c. 1665) - For their contributions as an English pamphleteer and Leveller during the Civil War and Interregnum (England).

[4:11:172] Gwilyn Ellis Lane Owen, (1922–1982) - For their contributions as a British philosopher, concerned with the history of Ancient Greek philosophy.

[4:11:173] Thomas Paine, (1737–1809) - For their contributions as an English-born American political activist, philosopher, political theorist, and revolutionary; one of the Founding Fathers of the United States, he authored the two most influential pamphlets at the start of the American Revolution and inspired the patriots in 1776 to declare independence from Great Britain.

[4:11:174] Menyhért Palágyi, (1859–1924) - For their contributions as a Hungarian philosopher, mathematician, and physicist of Jewish descent (his original name was Silberstein).

[4:11:175] William Paley, (1743–1805) - For their contributions as an English clergyman, Christian apologist, philosopher, and utilitarian; he is best known for his natural theology exposition of the teleological argument for the existence of God in his work *Natural Theology or Evidences of the Existence and Attributes of the Deity*, which made use of the watchmaker analogy.

[4:11:176] Elihu Palmer, (1764–1806) - For their contributions as an author and advocate of deism in the early days of the United States.

[4:11:177] Panaetius, (c. 185 – c. 110 BC) - For their contributions as a Stoic philosopher.

[4:11:178] Wolfhart Pannenberg, (born 1928) - For their contributions as a German Lutheran theologian; he has made a number of significant contributions to modern theology, including his concept of history as a form of revelation centred on the resurrection of Christ, which has been widely debated in both Protestant and Catholic theology, as well as by non-Christian thinkers.

[4:11:179] David Papineau, (born 1947) - For their contributions as a British academic philosopher.

[4:11:180] Giovanni Papini, (1881–1956) - For their contributions as an Italian journalist, essayist, literary critic, poet, philosopher and writer.

[4:11:181] Paracelsus, (1493–1541) - For their contributions as a Swiss physician, alchemist, and astrologer of the German Renaissance.

[4:11:182] Vilfredo Pareto, (1848–1923) - For their contributions as an Italian engineer, sociologist, economist, political scientist, and philosopher; he made several important contributions to economics, particularly in the study of income distribution and in the analysis of individuals' choices; he was also responsible for popularising the use of the term "elite" in social analysis.

[4:11:183] Derek Parfit, (born 1942) - For their contributions as a British philosopher who specialised in personal identity, rationality, and ethics; he is widely considered one of the most important and influential moral philosophers of the late 20th and early 21st centuries.

[4:11:184] Theodore Parker, (1810–1860) - For their contributions as an American Transcendentalist and reforming minister of the Unitarian church; a reformer and abolitionist, his words and popular quotations would later inspire speeches by Abraham Lincoln and Martin Luther King, Jr.

[4:11:185] Parmenides, (5th century BC) - For their contributions as a pre-Socratic Greek philosopher from Elea in Magna Graecia (Greater Greece, which included Southern Italy); Parmenides has been considered the founder of metaphysics or ontology and has influenced the whole history of Western philosophy.

[4:11:186] Blaise Pascal, (1623–1662) - For their contributions as a French mathematician, physicist, inventor, writer and Catholic theologian.

[4:11:187] John Arthur Passmore, (1914–2004) - For their contributions as an Australian philosopher.

[4:11:188] Valentino Annibale Pastore, (1868–1956) - For their contributions as an Italian philosopher and logician.

[4:11:189] Patañjali, (2nd century BC) - For their contributions as the name of a renowned sage in India who is thought to be the author of a number of Sanskrit works.

[4:11:190] Walter Pater, (1839–1904) - For their contributions as an English essayist, literary and art critic, and fiction writer, regarded as one of the great stylists; his works on Renaissance subjects were popular but controversial, reflecting his lost belief in Christianity.

[4:11:191] Jan Patočka, (1907–1977) - For their contributions as a Czech philosopher; due to his contributions to phenomenology and the philosophy of history he is considered one of the most important philosophers of the 20th century.

[4:11:192] Francesco Patrizi da Cherso (or Franciscus Patritius) (1529–1597) - For their contributions as a philosopher and scientist from the Republic of Venice of Croatian descent; he was known as a defender of Platonism and an opponent of Aristotelianism.

[4:11:193] Akos Pauler, (1876–1933) - For their contributions as a Hungarian philosopher; he defended metaphysics against logical positivism; as part of this defence, he accounted for a method of determining truths alongside the deductive and inductive methods, one which he called reductive.

[4:11:194] Linus Pauling, (1901–1994) - For their contributions as an American chemist, biochemist, peace activist, author, educator, and husband of American human rights activist Ava Helen Pauling; he published more than 1,200 papers and books, of which about 850 dealt with scientific topics.

[4:11:195] Paul of Venice, (1369–1429) - For their contributions as a Catholic philosopher, theologian, logician and metaphysician of the Order of Saint Augustine.

[4:11:196] Friedrich Paulsen, (1846–1908) - For their contributions as a German Neo-Kantian philosopher and educator.

[4:11:197] Ivan Pavlov, (1849–1936) - For their contributions as a Russian physiologist known primarily for his work in classical conditioning.

[4:11:198] Christopher Peacocke, (born 1950) - For their contributions as a British philosopher known for his work in philosophy of mind and epistemology; his recent publications, in the field of epistemology, have defended a version of rationalism.

[4:11:199] Giuseppe Peano, (1858–1932) - For their contributions as an Italian mathematician and glottologist; the author of over 200 books and papers, he was a founder of mathematical logic and set theory, to which he contributed much notation.

[4:11:200] David Pears, (1921–2009) - For their contributions as a British philosopher renowned for his work on Ludwig Wittgenstein.

[4:11:201] Karl Pearson, (1857–1936) - For their contributions as an English mathematician and biostatistician; he has been credited with establishing the discipline of mathematical statistics.

[4:11:202] John Peckham, (1230–1292) - For their contributions as an Archbishop of Canterbury in the years 1279–1292.

[4:11:203] Benjamin Peirce, (1809–1880) - For their contributions as an American mathematician who taught at Harvard University for approximately 50 years; he made contributions to celestial mechanics, statistics, number theory, algebra, and the philosophy of mathematics.

[4:11:204] Charles Sanders Peirce, (1839–1914) - For their contributions as an American philosopher, logician, mathematician, and scientist who is sometimes known as "the father of pragmatism".

[4:11:205] Pelagius, (c. 360–c. 435) - For their contributions as a theologian of British origin who advocated free will and asceticism; he was accused by Augustine of Hippo and others of denying the need for divine aid in performing good works.

[4:11:206] William Penbygull, (died 1420) - For their contributions as a late medieval philosopher from Oxford, who is counted among the followers of John Wycliffe, the so-called "Oxford Realists".

[4:11:207] Thomas Percival, (1740–1804) - For their contributions as an English physician, health reformer, ethicist and author, best known for crafting perhaps the first modern code of medical ethics.

[4:11:208] Ralph Barton Perry, (1876–1957) - For their contributions as an American philosopher.

[4:11:209] Johann Heinrich Pestalozzi, (1746–1827) - For their contributions as a Swiss pedagogue and educational reformer who exemplified Romanticism in his approach.

[4:11:210] Peter of Auvergne, (13th century) - For their contributions as a French philosopher and theologian.

[4:11:211] Peter of Spain, (13th century; usually identified with Pope John XXI) - For their contributions as the author of the *Tractatus*, later known as the *Summulae Logicales*, an important medieval university textbook on Aristotelian logic.

[4:11:212] Richard Stanley Peters, (born 1919) - For their contributions as an English philosopher; his work belongs mainly to the areas of political theory, philosophical psychology, and philosophy of education.

[4:11:213] Petrarch, (1304–1374) - For their contributions as a scholar and poet of Renaissance Italy who was one of the earliest humanists; his rediscovery of Cicero's letters is often credited with inventing the 14th-century Renaissance.

[4:11:214] Leon Petrażycki, (1867–1931) - For their contributions as a Russian and Polish philosopher, legal scholar and sociologist; he is considered one of the important forerunners of the sociology of law.

[4:11:215] Joane Petrizi, (12th century) - For their contributions as a Georgian Neoplatonist philosopher of the 11th-12th century, active in the Byzantine Empire and Kingdom of Georgia, best known for his translations of Proclus, along with an extensive commentary.

[4:11:216] Branislav Petronijević, (1875–1954) - For their contributions as a Serbian philosopher and palaeontologist; his major work is the two-volume *Prinzipien der Metaphysik* (Principles of Metaphysics, Heidelberg, 1904–1911), in which he outlines his original metaphysical system – a synthesis of Baruch Spinoza's monism and Gottfried Leibniz's monadological pluralism into what he called "monopluralism".

[4:11:217] Petar II Petrović-Njegoš, (1813–1851) - For their contributions as a Prince-Bishop (vladika) of Montenegro, poet and philosopher whose works are widely considered some of the most important in Serbian and Montenegrin literature.

[4:11:218] Joseph Petzoldt, (1862–1929) - For their contributions as a German philosopher and supporter of empirio-criticism.

[4:11:219] Alexander Pfänder, (1870–1941) - For their contributions as a German philosopher who was a member of the Munich phenomenological school.

[4:11:220] Philip the Chancellor, (1160–1236) - For their contributions as a French theologian, Latin lyric poet, and possibly a composer.

[4:11:221] Philo Judaeus of Alexandria, (20 BC – 40 AD) - For their contributions as a Hellenistic Jewish philosopher who lived in Alexandria, in the Roman province of Egypt.

[4:11:222] Philo of Larissa, (1st century BC) - For their contributions as a Greek philosopher; he was a pupil of Clitomachus, whom he succeeded as head of the Academy.

[4:11:223] Philo the Dialectician, (c. 300 BC) - For their contributions as a dialectic philosopher of the Megarian school.

[4:11:224] Philodemus of Gadara, (1st century BC) - For their contributions as an Epicurean philosopher and poet; he studied under Zeno of Sidon in Athens, before moving to Rome, and then to Herculaneum.

[4:11:225] Philolaus of Croton, (c. 480-c. 405 BC) - For their contributions as a Greek Pythagorean and pre-Socratic philosopher; he argued that at the foundation of everything is the part played by the limiting and limitless, which combine together in a harmony.

[4:11:226] Philo of Megara, (300 BC c.) - For their contributions as a dialectic philosopher of the Megarian school.

[4:11:227] John Philoponus, (early 6th century) - For their contributions as a Byzantine Alexandrian philologist, Aristotelian commentator and Christian theologian, author of a considerable number of philosophical treatises and theological works; a rigorous, sometimes polemical writer and an original thinker who was controversial in his own time, John Philoponus broke from the Aristotelian–Neoplatonic tradition, questioning methodology and eventually leading to empiricism in the natural sciences.

[4:11:228] Jean Piaget, (1896–1980) - For their contributions as a Swiss psychologist known for his work on child development; Piaget's theory of cognitive development and epistemological view are together called "genetic epistemology".

[4:11:229] Giovanni Pico della Mirandola, (1463–1494) - For their contributions as an Italian Renaissance nobleman and philosopher; he is famed for the events of 1486, when, at the age of 23, he proposed to defend 900 theses on religion, philosophy, natural philosophy, and magic against all comers, for which he wrote the Oration on the Dignity of Man, which has been called the "Manifesto of the Renaissance", and a key text of Renaissance humanism and of what has been called the "Hermetic Reformation"; he was the founder of the tradition of Christian Kabbalah, a key tenet of early modern Western esotericism; the 900 Theses was the first printed book to be universally banned by the Church.

[4:11:230] Dimitri Pisarev, (1840–1868) - For their contributions as a radical Russian writer and social critic who, according to Georgi Plekhanov, "spent the best years of his life in a fortress".

[4:11:231] Max Planck, (1858–1947) - For their contributions as a German theoretical physicist whose discovery of energy quanta won him the Nobel Prize in Physics in 1918.

[4:11:232] Alvin Plantinga, (born 1932) - For their contributions as an American analytic philosopher who works primarily in the fields of philosophy of religion, epistemology (particularly on issues involving epistemic justification), and logic.

[4:11:233] Plato, (c. 427 BC – c. 347 BC) - For their contributions as an Athenian philosopher during the Classical period in Ancient Greece, founder of the Platonist school of thought, and the Academy, the first institution of higher learning in the Western world; he is widely considered the pivotal figure in the history of Ancient Greek and Western philosophy, along with his teacher, Socrates, and his most famous student, Aristotle.

[4:11:234] Georgi Plekhanov, (1856–1918) - For their contributions as a Russian revolutionary and a Marxist theoretician.

[4:11:235] Helmuth Plessner, (1892–1985) - For their contributions as a German philosopher and sociologist, and a primary advocate of "philosophical anthropology"

[4:11:236] Gemistus Pletho, (c. 1355 – c. 1452) - For their contributions as one of the most renowned philosophers of the late Byzantine era; he was a chief pioneer of the revival of Greek scholarship in Western Europe.

[4:11:237] Plotinus, (c. 204/5–270) - For their contributions as a major Greek-speaking philosopher of the ancient world.

[4:11:238] Gottfried Ploucquet, (1716–1790) - For their contributions as a German philosopher and logician; he was considered one of the most important philosophy and logic teachers of his time.

[4:11:239] Mestrius Plutarch of Chaeronia, (c. 45-c. 120) - For their contributions as a Greek biographer and essayist, known primarily for his Parallel Lives and Moralia; he is classified as a Middle Platonist.

[4:11:240] Henri Poincaré, (1854–1912) - For their contributions as a French mathematician, theoretical physicist, engineer, and philosopher of science; he is often described as a polymath, and in mathematics as "The Last Universalist," since he excelled in all fields of the discipline as it existed during his lifetime.

[4:11:241] Michael Polanyi, (1891–1976) - For their contributions as a Hungarian-British polymath, who made important theoretical contributions to physical chemistry, economics, and philosophy; he argued that positivism supplies a false account of knowing, which if taken seriously undermines humanity's highest achievements.

[4:11:242] Pietro Pomponazzi, (1462–1525) - For their contributions as an Italian philosopher.

[4:11:243] Alexander Pope, (1688–1744) - For their contributions as an 18th-century English poet; he is best known for his satirical verse, including Essay on Criticism, The Rape of the Lock and The Dunciad, and for his translation of Homer.

[4:11:244] Karl Popper, (1902–1994) - For their contributions as an Austrian philosopher and professor.

[4:11:245] Josef Popper-Lynkeus, (1838–1921) - For their contributions as an Austrian scholar, writer, and inventor.

[4:11:246] Porphyry, (c. 232–c. 304) - For their contributions as a Neoplatonic philosopher who was born in Tyre, in the Roman Empire; he edited and published the *Enneads*, the only collection of the work of his teacher Plotinus.

[4:11:247] Noah Porter, (1811–1892) - For their contributions as an American academic, philosopher, author, and lexicographer.

[4:11:248] Posidonius, (c. 135–51 BC) - For their contributions as a Greek Stoic philosopher, politician, astronomer, geographer, historian and teacher native to Apamea, Syria.

[4:11:249] Richard Posner, (born 1939) - For their contributions as an American jurist and economist.

[4:11:250] Emil Leon Post, (1897–1954) - For their contributions as an American mathematician and logician; he is best known for his work in the field that eventually became known as computability theory.

[4:11:251] Robert Joseph Pothier, (1699–1772) - For their contributions as a French jurist.

[4:11:252] Roscoe Pound, (1870–1964) - For their contributions as a distinguished American legal scholar and educator.

[4:11:253] Henry Habberley Price, (1899–1984) - For their contributions as a Welsh philosopher, known for his work on the philosophy of perception; he also wrote on parapsychology.

[4:11:254] Richard Price, (1723–1791) - For their contributions as a British moral philosopher, nonconformist preacher and mathematician; he was also a political pamphleteer, active in radical, republican, and liberal causes such as the American Revolution.

[4:11:255] Harold Arthur Prichard, (1871–1947) - For their contributions as an English philosopher.

[4:11:256] Joseph Priestley, (1733–1804) - For their contributions as an 18th-century English Separatist theologian, natural philosopher, chemist, innovative grammarian, multi-subject educator, and liberal political theorist who published over 150 works.

[4:11:257] Andrew Seth Pringle-Pattison, (1856–1931) - For their contributions as a Scottish philosopher.

[4:11:258] Arthur Prior, (1914–1969) - For their contributions as a noted logician and philosopher.

[4:11:259] Proclus, (412–487) - For their contributions as a Greek Neoplatonist philosopher, one of the last major classical philosophers (see Damascius); he set forth one of the most elaborate and fully developed systems of Neoplatonism; he stands near the end of the classical development of philosophy, and was very influential on Western medieval philosophy (Greek and Latin).

[4:11:260] Prodicus, (c. 450–399 BC) - For their contributions as a Greek philosopher, and part of the first generation of Sophists.

[4:11:261] Protagoras, (c. 481–420 BC) - For their contributions as a pre-Socratic Greek philosopher; he is numbered as one of the sophists by Plato.

[4:11:262] Pierre-Joseph Proudhon, (1809–1865) - For their contributions as a French politician and the founder of mutualist philosophy; he was the first person to declare himself an anarchist, using that term and is widely regarded as one of the ideology's most influential theorists.

[4:11:263] Marcel Proust, (1871–1922) - For their contributions as a French novelist, critic, and essayist.

[4:11:264] Pseudo-Dionysius the Areopagite, (5th century) - For their contributions as a Christian theologian and philosopher of the late 5th to early 6th century, who wrote a set of works known as the Corpus Areopagiticum or Corpus Dionysiacum.

[4:11:265] Pseudo-Grosseteste, (13th century) - For their contributions as the anonymous author of a Summa Philosophiae, written between 1265 and 1275.

[4:11:266] Ptolemy, (c. 85–c. 165) - For their contributions as a Greco-Roman mathematician, astronomer, geographer and astrologer.

[4:11:267] Samuel Pufendorf, (1632–1694) - For their contributions as a German jurist, political philosopher, economist and historian.

[4:11:268] Hilary Putnam, (born 1926) - For their contributions as an American philosopher, mathematician, and computer scientist, and a major figure in analytic philosophy in the second half of the 20th century; he made significant contributions to philosophy of mind, philosophy of language, philosophy of mathematics, and philosophy of science.

[4:11:269] Pyrrho, (c. 360–c. 270) - For their contributions as a Greek philosopher of Classical antiquity and is credited as being the first Greek skeptic philosopher and founder of Pyrrhonism.

[4:11:270] Pythagoras, (582 BC–496 BC) - For their contributions as an ancient Ionian Greek philosopher and the eponymous founder of Pythagoreanism.

[4:11:271] Pandurang Shastri Athavale, (1920–2003) - For their contributions as an Indian activist philosopher, spiritual leader, social revolutionary and religion reformist, who founded the Swadhyaya Parivar (Swadhyaya Family) in 1954.

[4:11:272] Ismael Quiles, (1906–1993) - For their contributions as a philosopher and priest of the Spanish Society of Jesus who developed his activity in Argentina.

[4:11:273] W. V. O. Quine, (1908–2000) - For their contributions as an American philosopher and logician in the analytic tradition.

Extolled Philosophers (Surnames “R, S, and T”)

[4:12:1] François Rabelais, (1493–1553) - For their contributions as a French Renaissance writer, physician, Renaissance humanist, monk and Greek scholar.

[4:12:2] Gustav Radbruch, (1878–1949) - For their contributions as a German legal scholar and politician.

[4:12:3] Janet Radcliffe Richards, (born 1944) - For their contributions as a British philosopher specialising in bioethics and feminism.

[4:12:4] Sarvepalli Radhakrishnan, (1888–1975) - For their contributions as an Indian philosopher and statesman who served as the first Vice President of India (1952–1962) and the second President of India (1962–1967).

[4:12:5] Assi Rahbani, (1923–1986) - For their contributions as a Lebanese composer, musician and producer.

[4:12:6] Karl Rahner, (1904–1984) - For their contributions as a German Jesuit priest and theologian.

[4:12:7] Ramanuja, (1017–1137) - For their contributions as an Indian theologian, philosopher, and one of the most important exponents of the Sri Vaishnavism tradition within Hinduism; his philosophical foundations for devotionalism were influential to the Bhakti movement.

[4:12:8] Frank P. Ramsey, (1903–1930) - For their contributions as a British philosopher, mathematician, and economist.

[4:12:9] Ian Thomas Ramsey, (1915–1972) - For their contributions as a British Anglican bishop and academic.

[4:12:10] Paul Ramsey, (1913–1988) - For their contributions as an American Christian ethicist of the 20th century.

[4:12:11] Petrus Ramus, (1515–1572) - For their contributions as an influential French humanist, logician, and educational reformer.

[4:12:12] Jacques Rancière, (born 1940) - For their contributions as a French philosopher.

[4:12:13] Ayn Rand, (1905–1982) - For their contributions as a Russian-American writer and philosopher.

[4:12:14] Hastings Rashdall, (1858–1924) - For their contributions as an English philosopher, theologian, and historian; he expounded a theory known as ideal utilitarianism, and he was a major historian of the universities of the Middle Ages.

[4:12:15] Felix Ravaisson-Mollien, (1813–1900) - For their contributions as a French philosopher and archaeologist.

[4:12:16] John Rawls, (1921–2002) - For their contributions as an American moral and political philosopher in the liberal tradition.

[4:12:17] John Ray, (1627–1705) - For their contributions as an English naturalist widely regarded as one of the earliest of the English parson-naturalists.

[4:12:18] Daniel Raymond, (1786–1849) - For their contributions as the first important political economist to appear in the United States.

[4:12:19] Joseph Raz, (born 1939) - For their contributions as an Israeli legal, moral and political philosopher; he is one of the most prominent advocates of legal positivism and is well known for his conception of perfectionist liberalism.

[4:12:20] Abu Bakr Muhammad ibn Zakariyya al-Razi (or Rhazes), (865-925) - For their contributions as a Persian polymath, physician, alchemist, philosopher, and important figure in the history of medicine. He also wrote on logic, astronomy and grammar.

[4:12:21] Fakhr al-Din al-Razi, (1149–1209) - For their contributions as a Sunni Muslim theologian and philosopher.

[4:12:22] Paul Ree, (1849–1901) - For their contributions as a German author and philosopher.

[4:12:23] Pierre-Sylvain Regis, (1632–1707) - For their contributions as a French Cartesian philosopher and a prominent critic of Spinoza.

[4:12:24] August Wilhelm Rehberg - For their contributions as a German philosopher.

[4:12:25] Wilhelm Reich, (1897–1957) - For their contributions as an Austrian doctor of medicine and psychoanalyst, a member of the second generation of analysts after Sigmund Freud.

[4:12:26] Hans Reichenbach, (1891–1953) - For their contributions as a leading philosopher of science, educator, and proponent of logical empiricism; he was influential in the areas of science, education, and of logical empiricism.

[4:12:27] Thomas Reid, (1710–1796) - For their contributions as a religiously trained Scottish philosopher.

[4:12:28] Hermann Samuel Reimarus, (1694–1768) - For their contributions as a German philosopher and writer of the Enlightenment who is remembered for his Deism, the doctrine that human reason can arrive at a knowledge of God and ethics from a study of nature and our own internal reality, thus eliminating the need for religions based on revelation; he denied the supernatural origin of Christianity, and was the first influential critic to investigate the historical Jesus.

[4:12:29] Adolf Reinach, (1883–1917) - For their contributions as a German philosopher, phenomenologist (from the Munich phenomenology school) and law theorist.

[4:12:30] Karl Leonhard Reinhold, (1757–1823) - For their contributions as an Austrian philosopher who helped to popularise the work of Immanuel Kant in the late 18th century.

[4:12:31] Karl Renner, (1870–1950) - For their contributions as an Austrian politician of the Socialist Party.

[4:12:32] Charles Bernard Renouvier, (1815–1903) - For their contributions as a French philosopher.

[4:12:33] Nicholas Rescher, (born 1928) - For their contributions as a German-American philosopher at the University of Pittsburgh.

[4:12:34] Gyeltsap Darma Rinchen, (1364–1432) - For their contributions as a prolific author and philosopher of epistemology.

[4:12:35] David Ricardo, (1772–1823) - For their contributions as a British political economist, one of the most influential of the classical economists.

[4:12:36] Richard of Middleton, (c. 1249 – 1306) - For their contributions as a member of the Franciscan Order, a theologian, and scholastic philosopher.

[4:12:37] Richard of St. Victor, (died 1173) - For their contributions as a Medieval Scottish philosopher and theologian and one of the most influential religious thinkers of his time.

[4:12:38] Richard Rufus of Cornwall (or Richardus Sophista) (1231–1259) - For their contributions as a Cornish Franciscan scholastic philosopher and theologian.

[4:12:39] I. A. Richards, (1893–1979) - For their contributions as an English educator, literary critic, and rhetorician whose work contributed to the foundations of the New Criticism, a formalist movement in literary theory, which emphasised the close reading of a literary text, especially poetry, in an effort to discover how a work of literature functions as a self-contained, self-referential aesthetic object.

[4:12:40] Radovan Richta, (1924–1983) - For their contributions as a Czech philosopher who coined the term technological evolution; a theory about how societies diminish physical labour by increasing mental labour.

[4:12:41] Heinrich Rickert, (1863–1936) - For their contributions as a German philosopher, one of the leading neo-Kantians.

[4:12:42] Paul Ricœur, (1913–2005) - For their contributions as a French philosopher best known for combining phenomenological description with hermeneutics.

[4:12:43] Bernhard Riemann, (1826–1866) - For their contributions as a German mathematician who made contributions to analysis, number theory, and differential geometry.

[4:12:44] R. R. Rockingham Gill - For their contributions as a lecturer of philosophy in logic.

[4:12:45] Jacques Rohault, (1617–1672) - For their contributions as a French philosopher, physicist and mathematician, and a follower of Cartesianism.

[4:12:46] Erwin Rohde, (1845–1898) - For their contributions as one of the great German classical scholars of the 19th century.

[4:12:47] Francisco Romero, (1891–1962) - For their contributions as a Latin American philosopher who spearheaded a reaction against positivism.

[4:12:48] Avital Ronell - For their contributions as an American academic who writes about continental philosophy, literary studies, psychoanalysis, feminist philosophy, political philosophy, and ethics.

[4:12:49] Richard Rorty, (1931–2007) - For their contributions as an American philosopher.

[4:12:50] Vasily Rozanov, (1856–1919) - For their contributions as one of the most controversial Russian writers and philosophers of the pre-revolutionary epoch.

[4:12:51] Roscelin of Compiègne, (c. 1050 – c. 1120) - For their contributions as a French philosopher and theologian, often regarded as the founder of nominalism.

[4:12:52] Johann Karl Friedrich Rosenkranz, (1805–1879) - For their contributions as a German philosopher and pedagogue.

[4:12:53] Franz Rosenzweig, (1886–1929) - For their contributions as a German Jewish theologian, philosopher, and translator.

[4:12:54] Antonio Rosmini-Serbati, (1797–1855) - For their contributions as an Italian Roman Catholic priest and philosopher.

[4:12:55] Alf Niels Christian Ross, (1899–1979) - For their contributions as a Danish legal and moral philosopher and scholar of international law; he is best known as one of the leading exponents of Scandinavian legal realism; he is known for Ross's paradox.

[4:12:56] William David Ross, (1877–1971) - For their contributions as a Scottish philosopher who is known for his work in ethics.

[4:12:57] Gian-Carlo Rota, (1932–1999) - For their contributions as an Italian-American mathematician and philosopher.

[4:12:58] Jean Jacques Rousseau, (1712–1778) - For their contributions as a Genevan philosopher, writer and composer.

[4:12:59] Claude Henri de Rouvroy, Comte de Saint-Simon, (1760–1825) - For their contributions as a French political and economic theorist and businessman whose thought played a substantial role in influencing politics, economics, sociology, and the philosophy of science.

[4:12:60] Joseph Rovin, (1918–2004) - For their contributions as a French philosopher and politician, and is considered a spiritual father of post-war Europe.

[4:12:61] Josiah Royce, (1865–1916) - For their contributions as an American objective idealist philosopher and the founder of American idealism.

[4:12:62] Pierre Paul Royer-Collard, (1763–1845) - For their contributions as a French statesman and philosopher, leader of the Doctrinaires group during the Bourbon Restoration (1814–1830).

[4:12:63] Vasily Rozanov, (1856–1919) - For their contributions as one of the most controversial Russian writers and philosophers of the pre-revolutionary epoch.

[4:12:64] Ruan Ji, (210-263) - For their contributions as a poet and musician who lived in the late Eastern Han Dynasty and Three Kingdoms period of Chinese history.

[4:12:65] Arnold Ruge, (1802–1880) - For their contributions as a German philosopher and political writer.

[4:12:66] Michael Ruse, (born 1940) - For their contributions as a British-born Canadian philosopher of science who specialises in the philosophy of biology and works on the relationship between science and religion, the creation–evolution controversy, and the demarcation problem within science.

[4:12:67] Bertrand Russell, (1872–1970) - For their contributions as a British philosopher, logician, mathematician, historian, writer, essayist, social critic, political activist, and Nobel laureate.

[4:12:68] Jan van Ruysbroek, (1293–1381) - For their contributions as one of the Flemish mystics.

[4:12:69] Gilbert Ryle, (1900–1976) - For their contributions as a British philosopher.

[4:12:70] Sandeep Rathaur, (born 1988) - For their contributions as an Indian philosopher.

[4:12:71] Saadia Gaon, (892-942) - For their contributions as a prominent rabbi, Jewish philosopher, and exegete of the Geonic period who was active in the Abbasid Caliphate.

[4:12:72] Mulla Hadi Sabzevari, (1797–1873) - For their contributions as a famous Iranian philosopher, mystic theologian and poet.

[4:12:73] William S. Sahakian, (1922–1986) - For their contributions as an Armenian-American philosopher.

[4:12:74] Mark Sainsbury, (born 1943) - For their contributions as a British philosopher who is Professor of Philosophy at the University of Texas, Austin; he is known for his work in philosophical logic, philosophy of language.

[4:12:75] Claude Henri de Rouvroy, Comte de Saint-Simon, (1760–1825) - For their contributions as a French political and economic theorist and businessman whose thought played a substantial role in influencing politics, economics, sociology, and the philosophy of science.

[4:12:76] Émile Saisset, (1814–1863) - For their contributions as a French philosopher.

[4:13:107] Xenophon, (427–355 BC) - For their contributions as an ancient Greek philosopher, historian, soldier, mercenary, and student of Socrates.

[4:13:108] Xun Zi (or Hsun Tzu), (c. 310-237 BC) - For their contributions as a Chinese Confucian philosopher and writer who lived during the Warring States period and contributed to the Hundred Schools of Thought.

[4:13:109] Yajnavalkya, (c. 1800 BC) - For their contributions as a Hindu Vedic sage.

[4:13:110] Yang Chu, (370–319 BC) - For their contributions as a Chinese philosopher during the Warring States period.

[4:13:111] Yang Xiong (or Yang Hsiung) (53 BC-AD 18) - For their contributions as a Chinese poet, philosopher, and politician of the Han dynasty known for his philosophical writings and fu poetry compositions.

[4:13:112] Yen Yuan (1635–1704) - For their contributions as the founder of a practical school of Confucianism to contrast with the more ethereal Neo-Confucianism that had been popular in China for the previous six centuries.

[4:13:113] Yi Hwang (or Toegye) (1501–1570) - For their contributions as one of the two most prominent Korean Confucian scholars of the Joseon Dynasty, the other being his younger contemporary Yi I (Yulgok).

[4:13:114] Yi I (or Yi Yulgok or Yi Yi) (1536–1584) - For their contributions as one of the two most prominent Korean Confucian scholars of the Joseon Dynasty, the other being his older contemporary, Yi Hwang (Toegye).

[4:13:115] Yi Kan (1677–1727) - For their contributions as a major Korean neo-Confucian thinker.

[4:13:116] Francis Parker Yockey, (1917–1960) - For their contributions as an American attorney, political philosopher, and polemicist best known for his neo-Spenglerian book *Imperium: The Philosophy of History and Politics*, published under the pen name Ulick Varange in 1948.

[4:13:117] Arthur M. Young, (1905–1995) - For their contributions as an American inventor, helicopter pioneer, cosmologist, philosopher, astrologer and author.

[4:13:118] Iris Marion Young, (1949–2006) - For their contributions as an American political theorist and feminist focused on the nature of justice and social difference.

[4:13:119] Jacopo Zabarella, (1533–1589) - For their contributions as an Italian Aristotelian philosopher and logician.

[4:13:120] Edward N. Zalta, (born 1952) - For their contributions as a senior research scholar at the Center for the Study of Language and Information.

[4:13:121] Peter Wessel Zapffe, (1899–1990) - For their contributions as a Norwegian metaphysician, author, lawyer and mountaineer; he is often noted for his philosophically pessimistic and fatalistic view of human existence.

[4:13:122] Zeami Motokiyo, (c. 1363–c. 1443) - For their contributions as a Japanese aesthetician, actor, and playwright.

[4:13:123] Eduard Zeller, (1814–1908) - For their contributions as a German philosopher and Protestant theologian of the Tübingen School of theology.

[4:13:124] Zeno of Citium, (333 BC–264 BC) - For their contributions as a Hellenistic philosopher of Phoenician origin from Citium, Cyprus.

[4:13:125] Zeno of Elea, (c. 495 BC–c. 430 BC) - For their contributions as a pre-Socratic Greek philosopher of Magna Graecia and a member of the Eleatic School founded by Parmenides.

[4:13:126] Zeno of Sidon, (1st century BC) - For their contributions as an Epicurean philosopher from the Phoenician city of Sidon.

[4:13:127] Zeno of Tarsus - For their contributions as a Stoic philosopher and the son of Dioscorides.

[4:13:128] Ernst Zermelo, (1871–1953) - For their contributions as a German logician and mathematician, whose work has major implications for the foundations of mathematics.

[4:13:129] Philip Zha - For their contributions as a philosopher who writes in both English and Chinese.

[4:13:130] Zhiyi (538–597) - For their contributions as traditionally listed as the fourth patriarch, but is generally considered the founder of the Tiantai tradition of Buddhism in China.

[4:13:131] Zhou Guoping - For their contribution as a modern Chinese author, poet, scholar, translator, philosopher, and research fellow at the Institute of Philosophy of the Chinese Academy of Social Sciences.

[4:13:132] Zhu Xi (or Chu Hsi), (1130–1200) - For their contributions as a Chinese historian, philosopher, politician, and writer of the Song dynasty.

[4:13:133] Zhuang Zi (or Chuang Tzu or Chuang Chou), (circa 300 BC) - For their contributions as an influential Chinese philosopher who lived around the 4th century BC during the Warring States period, a period corresponding to the summit of Chinese philosophy, the Hundred Schools of Thought.

[4:13:134] Slavoj Žižek, (1949-) - For their contributions as a Slovenian philosopher and sociologist, is a professor at the Institute for Sociology and Philosophy at the University of Ljubljana and international director of the Birkbeck Institute for the Humanities of the University of London; he works in subjects including continental philosophy, political theory, cultural studies, psychoanalysis, film criticism, Marxism, Hegelianism and theology.

[4:13:135] Florian Znaniecki, (1882–1958) - For their contributions as a Polish philosopher and sociologist who taught and wrote in Poland and in the United States.

[4:13:136] Zongmi, (780–841) - For their contributions as a Tang dynasty Buddhist scholar and bhikkhu, installed as fifth patriarch of the Huayan school as well as a patriarch of the Heze school of Southern Chan Buddhism.

[4:13:137] Zou Yan, (3rd century BC) - For their contributions as an ancient Chinese philosopher best known as the representative thinker of the Yin and Yang School (or School of Naturalists) during the Hundred Schools of Thought era in Chinese philosophy.

[4:13:138] Xavier Zubiri, (1889–1983) - For their contributions as a Spanish philosopher.

Extolled Astronomers (Surnames “A, B, and C”)

[4:14:1] Aryabhata (India, 476 — 550) - For their contributions as the first of the major mathematician-astronomers from the classical age of Indian mathematics and Indian astronomy.

[4:14:2] Marc Aaronson (USA, 1950 — 1987) - For their contributions as an American astronomer.

[4:14:3] Paul G. Abel (UK, 1979 —) - For their contributions as a British astronomer, mathematician, and author.

[4:14:4] George Ogden Abell (USA, 1927 — 1983) - For their contributions as a research astronomer, administrator, as a populariser of science and of education, and as a skeptic.

[4:14:5] Hiroshi Abe (Japan, 1958 —) - For their contributions as a Japanese amateur astronomer affiliated with the Yatsuka Observatory.

[4:14:6] Antonio Abetti (Italy, 1846 — 1928) - For their contributions as an Italian astronomer.

[4:14:7] Giorgio Abetti (Italy, 1882 — 1982) - For their contributions as an Italian solar astronomer.

[4:14:8] Charles Greeley Abbot (USA, 1872 — 1973) - For their contributions as an American astrophysicist and the fifth secretary of the Smithsonian Institution, serving from 1928 until 1944.

[4:14:9] Charles Hitchcock Adams (USA, 1868 — 1951) - For their contributions as a landscape photographer and environmentalist known for his black-and-white images of the American West.

[4:14:10] John Couch Adams (UK, 1819 — 1892) - For their contributions as a British mathematician and astronomer.

[4:14:11] Walter Sydney Adams (USA, 1876 — 1956) - For their contributions as an American astronomer.

[4:14:12] Saul Adelman (USA, 1944 —) - For their contributions as an astronomer at The Citadel's Physics Department in Charleston, South Carolina.

[4:14:13] Petrus Alphonsi (Spain, 1062 — 1110) - For their contributions as a Jewish Spanish physician, writer, astronomer, and polemicist, who converted to Christianity in 1106.

[4:14:14] Agrippa (Greece, unknown ca. 92) - For their contributions as a Greek astronomer.

[4:14:15] Paul Oswald Ahnert (Germany, 1897 — 1989) - For their contributions as a German astronomer.

[4:14:16] Eva Ahnert-Rohlf's (Germany, 1912 — 1954) - For their contributions as a German astronomer; she made important observations of variable stars.

[4:14:17] George Biddell Airy (UK, 1801 — 1892) - For their contributions as an English mathematician and astronomer, Astronomer Royal from 1835 to 1881; his many achievements include work on planetary orbits, measuring the mean density of the Earth, a method of solution of two-dimensional problems in solid mechanics and, in his role as Astronomer Royal, establishing Greenwich as the location of the prime meridian.

[4:14:18] Robert Aitken, (USA, 1864 — 1951) - For their contributions as an American astronomer.

[4:14:19] Makio Akiyama (Japan, 1950 —) - For their contributions as a Japanese astronomer affiliated with the Susono Observatory (886).

[4:14:20] Al Battani (Iraq, 850 — 929) - For their contributions as an Arab astronomer, astrologer, and mathematician.

[4:14:21] Heber Doust Curtis (USA, 1872 — 1942) - For their contributions as an American astronomer; he participated in 11 expeditions for the study of solar eclipses.

[4:14:22] Vladimir Aleksandrovich Albitzky (Russia, 1891 — 1952) - For their contributions as a Soviet/Russian astronomer and discoverer of minor planets.

[4:14:23] Albumasar (Persia, 787 — 886) - For their contributions as an early Persian Muslim astrologer, thought to be the greatest astrologer of the Abbasid court in Baghdad.

[4:14:24] George Alcock (UK, 1913 — 2000) - For their contributions as an English astronomer; he was one of the most successful visual discoverers of novae and comets.

[4:14:25] Harold Alden (USA, 1890 — 1964) - For their contributions as an American astronomer.

[4:14:26] Hannes Alfvén (Sweden, 1908 — 1995) - For their contributions as a Swedish electrical engineer, plasma physicist and winner of the 1970 Nobel Prize in Physics for his work on magnetohydrodynamics (MHD).

[4:14:27] Lawrence H. Aller (USA, 1913 — 2003) - For their contributions as an American astronomer.

[4:14:28] Abd Al-Rahman Al Sufi (Persia, 903 — 986) - For their contributions as a Persian astronomer.

[4:14:29] Viktor Amazaspovich Ambartsumian, (Armenia, 1912 — 1996) - For their contributions as a Soviet Armenian scientist, and one of the founders of theoretical astrophysics; he worked in the field of physics of stars and nebulae, stellar astronomy, dynamics of stellar systems and cosmogony of stars and galaxies, and contributed to mathematical physics.

[4:14:30] John August Anderson (USA, 1876 — 1959) - For their contributions as an American astronomer.

[4:14:31] Wilhelm Anderson (Estonia, 1880 — 1940) - For their contributions as a German-Estonian astrophysicist who studied the physical structure of the stars.

[4:14:32] Marie Henri Andoyer (France, 1862 — 1929) - For their contributions as a French astronomer and mathematician.

[4:14:33] Andronicus of Cyrrhus (Greece, unknown ca. 100 BC) - For their contributions as a Macedonian astronomer who flourished about 100 BC.

[4:14:34] Anders Jonas Ångström (Sweden, 1814 — 1874) - For their contributions as a Swedish physicist and one of the founders of the science of spectroscopy.

[4:14:35] Eugène Michel Antoniadi (Greece, France, 1870 — 1944) - For their contributions as a Greek astronomer.

[4:14:36] Masakatsu Aoki (Japan, 1957 —) - For their contributions as a Japanese amateur astronomer who operates from his private Aoki Astronomical Observatory (908) at Toyama, Toyama Prefecture, Japan.

[4:14:37] Petrus Apianus (Germany, 1495 — 1557) - For their contributions as a German humanist, known for his works in mathematics, astronomy and cartography.

[4:14:38] François Arago (France, 1786 — 1853) - For their contributions as a French mathematician, physicist, astronomer, freemason, supporter of the carbonari and politician.

[4:14:39] Masaru Arai (Japan, 1952 —) - For their contributions as a Japanese amateur astronomer and a discoverer of minor planets and comets.

[4:14:40] Hiroshi Araki (Japan) - For their contributions as a Japanese astronomer.

[4:14:41] Sylvain Arend (Belgium, 1902 — 1992) - For their contributions as a Belgian astronomer whose main interest was astrometry.

[4:14:42] Friedrich Wilhelm Argelander (Germany, 1799 — 1875) - For their contributions as a German astronomer; he is known for his determinations of stellar brightnesses, positions, and distances.

[4:14:43] Aristarchus of Samos (Greece, circa 310 BC — circa 230 BC) - For their contributions as an ancient Greek astronomer and mathematician who presented the first known heliocentric model that placed the Sun at the center of the known universe with the Earth revolving around it.

[4:14:44] Christoph Arnold (Germany, 1650 — 1695) - For their contributions as a German amateur astronomer.

[4:14:45] Halton Christian Arp (USA, 1927 — 2013) - For their contributions as an American astronomer.

[4:14:46] Svante Arrhenius (Sweden, 1859 — 1927) - For their contributions as a Swedish scientist; originally a physicist, but often referred to as a chemist, Arrhenius was one of the founders of the science of physical chemistry.

[4:14:47] Arzachel (Spain, 1028 — 1087) - For their contributions as an Arab Muslim instrument maker, astrologer, and the most important astronomer from the western part of the Islamic world.

[4:14:48] Asada Goryu (Japan, 1734 — 1799) - For their contributions as a Japanese astronomer who helped to introduce modern astronomical instruments and methods into Japan.

[4:14:49] Atsuo Asami (Japan) - For their contributions as a Japanese astronomer.

[4:14:50] Giuseppe Asclepi (Italy, 1706 — 1776) - For their contributions as an Italian astronomer and physician; he was a Jesuit and director of the observatory at the Collegio Romano.

[4:14:51] Joseph Ashbrook (USA, 1918 — 1980) - For their contributions as an American astronomer.

[4:14:52] Arthur Auwers (Germany, 1838 — 1915) - For their contributions as a German astronomer

[4:14:53] Adrien Auzout (France, 1622 — 1691) - For their contributions as a French astronomer.

- [4:14:54] David Axon (England, 1951 — 2012) - For their contributions as a British astrophysicist specialising in observations of active galactic nuclei.
- [4:14:55] Brahmagupta (India, 598 — 668 CE) - For their contributions as an Indian mathematician and astronomer.
- [4:14:56] Bhaskara I (India, 629 CE) - For their contributions as a 7th-century mathematician, who was the first to write numbers in the Hindu decimal system with a circle for the zero, and who gave a unique and remarkable rational approximation of the sine function in his commentary on Aryabhata's work.
- [4:14:57] Bhaskara II (India, 1114 — 1185) - For their contributions as an Indian mathematician and astronomer.
- [4:14:58] Walter Baade (Germany, 1893 — 1960) - For their contributions as a German astronomer who worked in the United States from 1931 to 1959.
- [4:14:59] Harold D. Babcock (USA, 1882 — 1968) - For their contributions as an American astronomer.
- [4:14:60] Horace W. Babcock (USA, 1912 — 2003) - For their contributions as an American astronomer.
- [4:14:61] Oskar Backlund (Sweden, 1846 — 1916) - For their contributions as a Swedish-Russian astronomer.
- [4:14:62] John N. Bahcall (USA, 1934 — 2005) - For their contributions as an American astrophysicist, best known for his contributions to the solar neutrino problem, the development of the Hubble Space Telescope and for his leadership and development of the Institute for Advanced Study in Princeton.
- [4:14:63] Yoshiaki Banno (Japan, 1952 — 1991) - For their contributions as a Japanese astronomer and co-discoverer of 4200 Shizukagozen, an asteroid of the main-belt.
- [4:14:64] Benjamin Baillaud (France, 1848 — 1934) - For their contributions as a French astronomer.
- [4:14:65] Jules Baillaud (France, 1876 — 1960) - For their contributions as a French astronomer.
- [4:14:66] Jean-Baptiste Baille (France, 1841 — 1918) - For their contributions as a professor of optics and acoustics.

[4:14:67] Jean Sylvain Bailly (France, 1736 — 1793) - For their contributions as a French astronomer, mathematician, freemason, and political leader of the early part of the French Revolution.

[4:14:68] Francis Baily (UK, 1774 — 1844) - For their contributions as an English astronomer; he is most famous for his observations of "Baily's beads" during an eclipse of the Sun.

[4:14:69] John Bainbridge (UK, 1582 — 1643) - For their contributions as an English astronomer and mathematician.

[4:14:70] John E. Baldwin (UK, 1934 —) - For their contributions as a British Astronomer who worked at the Cavendish Astrophysics Group from 1954.

[4:14:71] Sallie Baliunas (USA, 1953 —) - For their contributions as a retired astrophysicist.

[4:14:72] Zoltán Balog (Hungary/USA, 1972 —) - For their contributions as an astronomer with the Max Planck Institute for Astronomy in Heidelberg, Germany.

[4:14:73] Benjamin Banneker (USA, 1731 — 1806) - For their contributions as a free African-American almanac author, surveyor, naturalist, and farmer.

[4:14:74] Pietro Baracchi (Italy, Australia, 1851 — 1926) - For their contributions as an Italian-born astronomer, active in Australia and Government Astronomer of Victoria (Australia) 1900-15.

[4:14:75] Beatriz Barbuy (Brazil, 1950 —) - For their contributions as a Brazilian astrophysicist.

[4:14:76] Edward Emerson Barnard (USA, 1857 — 1923) - For their contributions as an American astronomer.

[4:14:77] Julius Bauschinger (France, 1860 — 1934) - For their contributions as a German astronomer.

[4:14:78] Johann Bayer (Germany, 1572 — 1625) - For their contributions as a German lawyer and uranographer (celestial cartographer).

[4:14:79] Antonín Bečvář (Slovakia, 1901 — 1965) - For their contributions as a Czech astronomer who was active in Slovakia.

[4:14:80] Wilhelm Beer (Germany, 1797 — 1850) - For their contributions as a banker and astronomer from Berlin, Prussia.

[4:14:81] Sergei Ivanovich Belyavsky (Russia, 1883 — 1953) - For their contributions as a Soviet/Russian astronomer and a discoverer of 36 numbered minor planets.

[4:14:82] Charles L. Bennett (USA, 1956 —) - For their contributions as an American observational astrophysicist.

[4:14:83] Jocelyn Bell Burnell (UK, 1943 —) - For their contributions as an astrophysicist from Northern Ireland who, as a postgraduate student, co-discovered the first radio pulsars in 1967.

[4:14:84] Friedrich Wilhelm Bessel (Germany, 1784 — 1846) - For their contributions as a German astronomer, mathematician, physicist and geodesist.

[4:14:85] Somnath Bharadwaj (India) - For their contributions as an Indian theoretical physicist who works on Theoretical Astrophysics and Cosmology.

[4:14:86] Wilhelm Freiherr von Biela (Austria, 1782 — 1856) - For their contributions as a German-Austrian military officer and amateur astronomer.

[4:14:87] Ludwig Biermann (Germany, 1907 — 1986) - For their contributions as a German astronomer, obtaining his Ph.D. from Göttingen University in 1932.

[4:14:88] Wolf Bickel (Germany) - For their contributions as a German amateur astronomer and a prolific discoverer of asteroids, observing at his private Bergisch Gladbach Observatory, Germany; he is the most successful German discoverer of minor planets.

[4:14:89] Guillaume Bigourdan (France, 1851 — 1932) - For their contributions as a French astronomer.

[4:14:90] James Binney (UK, 1950 —) - For their contributions as a British astrophysicist.

[4:14:91] Biruni, (Persia, 973 — 1048) - For their contributions as an Iranian scholar and polymath well versed in physics, mathematics, astronomy, and natural sciences, and also distinguished himself as a historian, chronologist and linguist.

[4:14:92] Gennady S. Bisnovatyi-Kogan (Russia, 1941 —) - For their contributions as a Russian astrophysicist best known for predicting binary radio pulsars.

[4:14:93] Adriaan Blaauw (Netherlands, 1914 — 2010) - For their contributions as a Dutch astronomer.

[4:14:94] Nathaniel Bliss (UK, 1700 — 1764) - For their contributions as an English astronomer of the 18th century, serving as Britain's fourth Astronomer Royal between 1762 and 1764.

[4:14:95] Johann Elert Bode (Germany, 1747 — 1826) - For their contributions as a German astronomer known for his reformulation and popularisation of the Titius–Bode law; Bode determined the orbit of Uranus and suggested the planet's name.

[4:14:96] Alfred Bohrmann (Germany, 1904 — 2000) - For their contributions as a German astronomer and discoverer of minor planets.

[4:14:97] Bart Bok (Netherlands, 1906 — 1983) - For their contributions as a Dutch-American astronomer, teacher, and lecturer.

[4:14:98] Charles Thomas Bolton (USA, 1943 —) - For their contributions as an American astronomer who was one of the first astronomers to present strong evidence of the existence of a stellar-mass black hole.

[4:14:99] John Gatenby Bolton (UK/Australia, 1922 — 1993) - For their contributions as a British-Australian astronomer.

[4:14:100] William Cranch Bond (USA, 1789 — 1859) - For their contributions as an American astronomer, and the first director of Harvard College Observatory.

[4:14:101] Alphonse Borrelly (France, 1842 — 1926) - For their contributions as a French astronomer.

[4:14:102] Rudjer Boskovich (Dalmatia, 1711 — 1787) - For their contributions to astronomy, but also extolled for his contributions to philosophy.

[4:14:103] Lewis Boss (USA, 1846 — 1912) - For their contributions as an American astronomer.

[4:14:104] Alexis Bouvard (France, 1767 — 1843) - For their contributions as a French astronomer; he is particularly noted for his careful observations of the irregularities in the motion of Uranus and his hypothesis of the existence of an eighth planet in the solar system.

[4:14:105] Rychard Bouwens (USA, 1972 —) - For their contributions as an associate professor at the University of Leiden.

[4:14:106] Edward L. G. Bowell (USA, 1943 —) - For their contributions as an American astronomer.

[4:14:107] Ira Sprague Bowen (USA, 1898 — 1973) - For their contributions as an American physicist and astronomer.

[4:14:108] Louis Boyer (France, 1901 — 1999) - For their contributions as a French astronomer who worked at the Algiers Observatory, North Africa, where he discovered 40 asteroids between 1930 and 1952.

[4:14:109] Brian J. Boyle (Scotland and Australia, 1960 —) - For their contributions as a Scottish astrophysicist based in Australia since 1996; his primary research interests are in the fields of quasars, active galaxies and cosmology.

[4:14:110] Ronald N. Bracewell (Australia, USA, 1921 — 2007) - For their contributions as the Lewis M. Terman Professor of Electrical Engineering of the Space, Telecommunications, and Radioscience Laboratory at Stanford University.

[4:14:111] James Bradley (UK, 1693 — 1762) - For their contributions as an English astronomer and priest who served as Astronomer Royal from 1742; he is best known for two fundamental discoveries in astronomy, the aberration of light (1725–1728), and the nutation of the Earth's axis (1728–1748).

[4:14:112] William A. Bradfield (New Zealand, Australia, 1927 — 2014) - For their contributions as a New Zealand-born Australian amateur astronomer, notable as a prolific amateur discoverer of comets; he gained a world record by discovering 18 comets, all of which bear his name as the sole discoverer.

[4:14:113] Tycho Brahe (Denmark, 1546 — 1601) - For their contributions as a Danish nobleman, astronomer, and writer known for his accurate and comprehensive astronomical and planetary observations.

[4:14:114] John Alfred Brashear (USA, 1840 — 1920) - For their contributions as an American astronomer and instrument builder.

[4:14:115] William Robert Brooks (USA, 1844 — 1922) - For their contributions as a British-born American astronomer, mainly noted as being one of the most prolific discoverers of new comets of all time, second only to Jean-Louis Pons.

[4:14:116] Theodor Brorsen (Denmark, 1819 — 1895) - For their contributions as a Danish astronomer and known for his discovery of five comets.

[4:14:117] Dirk Brouwer (Netherlands–USA, 1902 — 1966) - For their contributions as a Dutch-American astronomer.

[4:14:118] Ernest William Brown (UK, 1866 — 1938) - For their contributions as an English mathematician and astronomer, who spent the majority of his career working in the United States and became a naturalised American citizen in 1923.

[4:14:119] Michael (Mike) E. Brown (USA, 1965 —) - For their contributions as an American astronomer, who has been professor of planetary astronomy at the California Institute of Technology (Caltech) since 2003.

[4:14:120] Hermann Alexander Brück (Germany, 1905 — 2000) - For their contributions as a German-born astronomer who spent the great portion of his career in the United Kingdom.

[4:14:121] Gustavo Bruzual (Venezuela, 1949 —) - For their contributions as a Mexican astronomer.

[4:14:122] Ismael Bullialdus (France, 1605 — 1694) - For their contributions as a 17th-century French astronomer and mathematician who was also interested in history, theology, classical studies, and philology.

[4:14:123] Margaret Burbidge (UK, 1919 —) - For their contributions as a British-born American astrophysicist, noted for original research and holding many administrative posts, including Director of the Royal Greenwich Observatory.

[4:14:124] Robert Burnham, Jr. (USA, 1931 — 1993) - For their contributions as an American astronomer, best known for writing the classic three-volume Burnham's Celestial Handbook.

[4:14:125] Sherburne Wesley Burnham (USA, 1838 — 1921) - For their contributions as an American astronomer.

[4:14:126] Schelte J. Bus (USA, 1956 —) - For their contributions as an American astronomer and discoverer of minor planets at the Institute for Astronomy of the University of Hawaii and Deputy Director of NASA's Infrared Telescope Facility (IRTF) at the Mauna Kea Observatory in Hawaii, United States.

[4:14:127] Bimla Buti (India, 1933 —) - For their contributions as an Indian physicist and specialises in the field of plasma physics.

[4:14:128] William Wallace Campbell (USA, 1862 — 1938) - For their contributions as an American astronomer, and director of Lick Observatory from 1901 to 1930; he specialised in spectroscopy.

[4:14:129] Annie Jump Cannon (USA, 1863 — 1941) - For their contributions as an American astronomer whose cataloging work was instrumental in the development of contemporary stellar classification.

[4:14:130] Luigi Carnera (Italy, 1875 — 1962) - For their contributions as an Italian astronomer and mathematician.

[4:14:131] Edwin Francis Carpenter (USA, 1898 — 1963) - For their contributions as an American astronomer.

[4:14:132] James Carpenter (UK, 1840 — 1899) - For their contributions as a British astronomer at the Royal Observatory in Greenwich.

[4:14:133] Richard Christopher Carrington (UK, 1826 — 1875) - For their contributions as an English amateur astronomer whose 1859 astronomical observations demonstrated the existence of solar flares as well as suggesting their electrical influence upon the Earth and its aurorae; and whose 1863 records of sunspot observations revealed the differential rotation of the Sun.

[4:14:134] Sir John Carroll (UK, 1899 — 1974) - For their contributions as a British astronomer and physicist.

[4:14:135] César-François Cassini de Thury (France, 1714 — 1784) - For their contributions as a French astronomer and cartographer.

[4:14:136] Dominique, comte de Cassini (France, 1748 — 1845) - For their contributions as a French astronomer.

[4:14:137] Giovanni Domenico Cassini (France, 1625 — 1712) - For their contributions as an Italian (naturalised French) mathematician, astronomer and engineer.

[4:14:138] Jacques Cassini (France, 1677 — 1756) - For their contributions as a French astronomer.

[4:14:139] Bonaventura Cavalieri (Italy, 1598 — 1647) - For their contributions as an Italian mathematician and a Jesuit.

[4:14:140] Anders Celsius (Sweden, 1701 — 1744) - For their as a Swedish astronomer, physicist and mathematician.

[4:14:141] Vincenzo Cerulli (Italy, 1859 — 1927) - For their contributions as an Italian astronomer and founder of the Collurania-Teramo Observatory in Teramo, central Italy, where he was born.

[4:14:142] Jean Chacornac (France, 1823 — 1873) - For their contributions as a French astronomer and discoverer of a comet and several asteroids.

[4:14:143] James Challis (UK, 1803 — 1882) - For their contributions as an English clergyman, physicist and astronomer.

[4:14:144] Radha Gobinda Chandra (Bangladesh, India, 1878 — 1975) - For their contributions as a Bangladeshi-Indian astronomer.

[4:14:145] Subrahmanyan Chandrasekhar (India, USA, 1910 — 1995) - For their contributions as an Indian American astrophysicist who spent his professional life in the United States.

[4:14:146] Carl Charlier (Sweden, 1862 — 1934) - For their contributions as a Swedish astronomer.

[4:14:147] Auguste Charlois (France, 1864 — 1910) - For their contributions as a French astronomer who discovered 99 asteroids while working at the Nice Observatory in southeastern France.

[4:14:148] Lyudmila Ivanovna Chernykh (Russia/Ukraine) - For their contributions as a Russian-born Soviet astronomer, wife and colleague of Nikolai Stepanovich Chernykh, and a prolific discoverer of minor planets.

[4:14:149] Nikolai Stepanovich Chernykh (Russia/Ukraine, 1931 —) - For their contributions as a Russian-born Soviet astronomer and discoverer of minor planets and comets at the Crimean Astrophysical Observatory in Nauchnij, on the Crimean peninsula.

[4:14:150] James Christy (USA, 1938 —) - For their contributions as an American astronomer.

[4:14:151] Edwin Foster Coddington (USA, 1870 — 1950) - For their contributions as an American astronomer and discoverer of astronomical objects.

[4:14:152] Jérôme Eugène Coggia (France, 1849 — 1919) - For their contributions as a 19th-century French astronomer and discoverer of asteroids and comets.

[4:14:153] Josep Comas i Solà (Spain, 1868 — 1937) - For their contributions as a Spanish astronomer and discoverer of minor planets, comets and double stars.

[4:14:154] Andrew Ainslie Common (UK, 1841 — 1903) - For their contributions as an English amateur astronomer best known for his pioneering work in astrophotography.

[4:14:155] Guy Consolmagno (USA, 1952 —) - For their contributions as an American research astronomer, Jesuit religious brother, and Director of the Vatican Observatory, and President of the Vatican Observatory Foundation.

[4:14:156] Nicolaus Copernicus (1473 — 1543) - Also extolled for being a philosopher and here for his contributions as an astronomer.

[4:14:157] Corsono Carsono (Spain) - For their contributions as a Spanish astronomer of the fourteenth century.

[4:14:158] Janine Connes (France, 1934 —) - For their contributions as a French astronomer whose research led to the establishment of the Fourier transform infrared spectroscopy method.

[4:14:159] Pablo Cottenot (France) - For their contributions as a 19th-century French astronomer and discoverer of a minor planet.

[4:14:160] Heather Couper (UK, 1949 —) - For their contributions as a British astronomer, broadcaster and science populariser.

[4:14:161] Leopold Courvoisier (Switzerland, 1873 — 1955) - For their contributions as a Swiss astronomer.

[4:14:162] Arthur Edwin Covington (Canada, 1914 — 2001) - For their contributions as a Canadian physicist who made the first radio astronomy measurements in Canada.

[4:14:163] Philip Herbert Cowell (UK, 1870 — 1949) - For their contributions as a British astronomer.

[4:14:164] Thomas George Cowling (UK, 1906 — 1990) - For their contributions as an English astronomer.

[4:14:165] Andrew Claude de la Cherois Crommelin (UK, 1865 — 1939) - For their contributions as an astronomer of French and Huguenot descent.

[4:14:166] Luíz Cruls (Brazil, 1848 — 1908) - For their contributions as a Belgian-Brazilian astronomer and geodesist.

[4:14:167] James Cuffey (USA, 1911 — 1999) - For their contributions as an American astronomer.

[4:14:168] Florence Cushman (USA, 1860 — 1940) - For their contributions as an American astronomer at the Harvard College Observatory who worked on the Henry Draper Catalogue.

Extolled Astronomers (Surnames “D, E, F, and G”)

[4:15:1] Alexander Dalgarno (USA, 1928 —) - For their contributions as a British physicist who was a Phillips Professor of Astronomy at Harvard University.

[4:15:2] Jacques Eugène d'Allonville (France, 1671 — 1732) - For their contributions as a French astronomer and mathematician.

[4:15:3] Andre Louis Danjon (France, 1890 — 1967) - For their contributions as a French astronomer.

[4:15:4] Heinrich d'Arrest (Germany, 1822 — 1875) - For their contributions as a German astronomer.

[4:15:5] George Howard Darwin (UK, 1845 — 1912) - For their contributions as an English barrister and astronomer.

[4:15:6] Roger Davies (UK, 1954 —) - For their contributions as a British astronomer and cosmologist, one of the so-called Seven Samurai collaboration who discovered an apparent concentration of mass in the Universe called the Great Attractor.

[4:15:7] Leonardo da Vinci (Italy, 1452 — 1519) - Also extolled as a philosopher, and extolled here for his contributions to astronomy.

[4:15:8] William Rutter Dawes (UK, 1799 — 1868) - For their contributions as an English astronomer.

[4:15:9] Bernhard Dawson (Argentina, 1890 — 1960) - For their contributions as a U.S.-born Argentine astronomer.

[4:15:10] Leo de Ball (Germany, Austria, 1853 — 1916) - For their contributions as a German-Austrian astronomer.

[4:15:11] Henri Debehogne (Belgium, 1928 — 2007) - For their contributions as a Belgian astronomer and a prolific discoverer of minor planets.

[4:15:12] Annibale de Gasparis (Italy, 1819 — 1892) - For their contributions as an Italian astronomer.

[4:15:13] Jean Baptiste Joseph Delambre (France, 1749 — 1822) - For their contributions as a French mathematician and astronomer; he was also director of the Paris Observatory, and author of well-known books on the history of astronomy from ancient times to the 18th century.

[4:15:14] Charles-Eugène Delaunay (France, 1816 — 1872) - For their contributions as a French astronomer and mathematician; his lunar motion studies were important in advancing both the theory of planetary motion and mathematics.

[4:15:15] Eugène Joseph Delporte (Belgium, 1882 — 1955) - For their contributions as a Belgian astronomer.

[4:15:16] Audrey C. Delsanti (France, 1976 —) - For their contributions as a French astronomer and a discoverer of minor planets at ESO's La Silla Observatory in Chile.

[4:15:17] William Frederick Denning (UK, 1848 — 1931) - For their contributions as a British amateur astronomer who achieved considerable success without formal scientific training.

[4:15:18] Alíz Derekas (Hungary, 1977 —) - For their contributions as a Hungarian astronomer.

[4:15:19] Willem de Sitter (Netherlands, 1872 — 1934) - For their contributions as a Dutch mathematician, physicist, and astronomer.

[4:15:20] Henri-Alexandre Deslandres (France, 1853 — 1948) - For their contributions as a French astronomer, director of the Meudon and Paris Observatories, who carried out intensive studies on the behaviour of the atmosphere of the Sun.

[4:15:21] Alexander Nikolaevich Deutsch (Russia, 1900 — 1986) - For their contributions as a Soviet astronomer who worked at Pulkovo Observatory.

[4:15:22] Gérard de Vaucouleurs (France/USA, 1918 — 1995) - For their contributions as a French astronomer.

[4:15:23] Robert Dicke (USA, 1916 — 1997) - For their contributions as an American physicist who made important contributions to the fields of astrophysics, atomic physics, cosmology and gravity.

[4:15:24] Terence Dickinson (Canada, 1943 —) - For their contributions as a Canadian amateur astronomer and an accomplished astrophotographer.

[4:15:25] Thomas Digges (UK, 1546 — 1595) - For their contributions as an English mathematician and astronomer.

[4:15:26] Herbert Dingle (USA, 1890 — 1978) - For their contributions as an English physicist and natural philosopher, who served as president of the Royal Astronomical Society from 1951 to 1953.

[4:15:27] Andrea Di Paola (Italy, 1970 —) - For their contributions as an Italian astronomer and a discoverer of minor planets.

[4:15:28] Ewine van Dishoeck (Netherlands, 1955 —) - For their contributions as a Dutch astronomer and chemist.

[4:15:29] Giovanni Battista Donati (Italy, 1826 — 1873) - For their contributions as an Italian astronomer.

[4:15:30] Frank Drake (USA, 1930 —) - For their contributions as an American astronomer and astrophysicist.

[4:15:31] Henry Draper (USA, 1837 — 1882) - For their contributions as an American doctor and amateur astronomer; he is best known today as a pioneer of astrophotography.

[4:15:32] John Dreyer (Ireland, 1852 — 1926) - For their contributions as a Danish/British astronomer.

[4:15:33] Alexander D. Dubyago (Russia, 1903 — 1959) - For their contributions as a Soviet astronomer and expert in theoretical astrophysics.

[4:15:34] Dmitrij I. Dubyago (Russia, 1850 — 1918) - For their contributions as a Russian astronomer and expert in theoretical astrophysics, astrometry, and gravimetry.

[4:15:35] Jean C. B. Dufay (France, 1896 — 1967) - For their contributions as a French astronomer.

[4:15:36] Raymond Smith Dugan (USA, 1878 — 1940) - For their contributions as an American astronomer and discoverer of minor planets.

[4:15:37] James Dunlop (Scotland, 1793 — 1848) - For their contributions as a Scottish astronomer, noted for his work in Australia.

[4:15:38] Petar Đurković (Serbia, 1908 — 1981) - For their contributions as a Serbian astronomer known for discovering two asteroids in 1936 and 1940, respectively.

[4:15:39] Frank Watson Dyson (UK, 1868 — 1939) - For their contributions as an English astronomer and Astronomer Royal who is remembered today largely for introducing time signals ("pips") from Greenwich, England, and for the role he played in proving Einstein's theory of general relativity.

[4:15:40] Arthur Eddington (UK, 1882 — 1944) - For their contributions as an English astronomer, physicist, and mathematician of the early 20th century who did his greatest work in astrophysics.

[4:15:41] Frank K. Edmondson (USA, 1912 — 2008) - For their contributions as an American astronomer.

[4:15:42] Olin J. Eggen (USA, 1919 — 1998) - For their contributions as an American astronomer.

[4:15:43] David J. Eicher (USA, 1961 —) - For their contributions as an American editor, writer, and populariser of astronomy and space; he has been editor-in-chief of Astronomy magazine since 2002.

[4:15:44] Albert Einstein (Germany, 1879 — 1955) - Extolled also for his contributions to philosophy, and also extolled here for his contributions to astronomy.

[4:15:45] Eise Eisinga (Netherlands, 1744 — 1828) - For their contributions as a Dutch amateur astronomer who built the Eise Eisinga Planetarium in his house in Franeker, Dutch Republic; the orrery still exists and is the oldest functioning planetarium in the world.

[4:15:46] Eric Walter Elst (Belgium, 1936 —) - For their contributions as a Belgian astronomer at the Observatory at the Royal Observatory of Belgium in Uccle and a prolific discoverer of asteroids.

[4:15:47] Johann Franz Encke (Germany, 1791 — 1865) - For their contributions as a German astronomer; among his activities, he worked on the calculation of the periods of comets and asteroids, measured the distance from the earth to the sun, and made observations of the planet Saturn.

[4:15:48] Kin Endate (Japan, 1960 —) - For their contributions as a Japanese amateur astronomer who has discovered hundreds of asteroids, most of them in collaboration with Kazuro Watanabe, placing him among the most prolific discoverers of minor planets.

[4:15:49] Eratosthenes (Alexandria, 276 BC — 194 BC) - For their contributions as a Greek mathematician, geographer, poet, astronomer, and music theorist.

[4:15:50] Emil Ernst (Germany) - For their contributions as a German astronomer and discoverer of a minor planet.

[4:15:51] Ernest Esclangon (France, 1876 — 1954) - For their contributions as a French astronomer and mathematician.

[4:15:52] Fred Espenak (USA, 1953 —) - For their contributions as a now retired emeritus American astrophysicist.

[4:15:53] Larry W. Esposito (USA, 1951 —) - For their contributions as an American planetary astronomer and a professor at the Laboratory for Atmospheric and Space Physics, University of Colorado Boulder.

[4:15:54] Eudoxus (Cnidus, circa 408 BC — circa 355 BC) - Also extolled as a philosopher and here extolled as for his contributions to astronomy.

[4:15:55] Robert Evans (Australia, 1937 —) - For their contributions as a minister of the Uniting Church in Australia and an amateur astronomer who holds the record for visual discoveries of supernovae (42).

[4:15:56] David Fabricius (Netherlands, 1564 — 1617) - For their contributions as a German pastor who made two major discoveries in the early days of telescopic astronomy, jointly with his eldest son, Johannes Fabricius (1587–1615).

[4:15:57] Sandra M. Faber (USA, 1945 —) - For their contributions as an astrophysicist known for her research on the evolution of galaxies.

[4:15:58] Johannes Fabricius (Netherlands, 1587 — 1615) - For their contributions as a Frisian/German astronomer and a discoverer of sunspots (in 1610), independently of Galileo Galilei.

[4:15:59] Fearon Fallows (UK, 1789 — 1831) - For their contributions as an English astronomer.

[4:15:60] Hervé Faye (France, 1814 — 1902) - For their contributions as a French astronomer.

[4:15:61] Charles Fehrenbach (France, 1914 — 2008) - For their contributions as a French astronomer and member of the French Academy of Sciences.

[4:15:62] Farghani (Persia, 800 — 870) - For their contributions as an astronomer in the Abbasid court in Baghdad, and one of the most famous astronomers in the 9th century.

[4:15:63] James Ferguson (USA, 1797 — 1867) - For their contributions as a Scottish-born American astronomer and engineer, who made the first discovery of an asteroid from North America (31 Euphrosyne).

[4:15:64] Alex Filippenko (USA, 1958 —) - For their contributions as an American astrophysicist and professor of astronomy at the University of California, Berkeley.

[4:15:65] Erwin Finlay-Freundlich (Germany, 1885 — 1964) - For their contributions as a German astronomer.

[4:15:66] Axel Firsoff (UK, 1910 — 1981) - For their contributions as an amateur astronomer.

[4:15:67] Debra Fischer (United States) - For their contributions as a professor of astronomy at Yale University researching detection and characterisation of exoplanets.

[4:15:68] J. Richard Fisher (United States, 1943 —) - For their contributions as a scientist at the National Radio Astronomy Observatory at Charlottesville, VA.

[4:15:69] Camille Flammarion (France, 1842 — 1925) - For their contributions as a French astronomer and author; he was a prolific author of more than fifty titles, including popular science works about astronomy, several notable early science fiction novels, and works on psychical research and related topics.

[4:15:70] Gabrielle Renaudot Flammarion (France, 1867 — 1962) - For their contributions as a French astronomer.

[4:15:71] John Flamsteed (UK, 1646 — 1719) - For their contributions as an English astronomer and the first Astronomer Royal.

[4:15:72] Honoré Flaugergues (France, 1755 — 1835) - For their contributions as a French astronomer.

[4:15:73] Williamina Fleming (USA, 1857 — 1911) - For their contributions as a Scottish astronomer.

[4:15:74] Wilhelm Julius Foerster (Germany, 1832 — 1921) - For their contributions as a German astronomer.

[4:15:75] Alfred Fowler (UK, 1868 — 1940) - For their contributions as an English astronomer.

[4:15:76] William Alfred Fowler (USA, 1911 — 1995) - For their contributions as an American nuclear physicist, later astrophysicist, who, with Subrahmanyan Chandrasekhar won the 1983 Nobel Prize in Physics.

[4:15:77] Philip Fox (USA, 1878 — 1944) - For their contributions as an American astronomer.

[4:15:78] Andrew Fraknoi (USA, 1948 —) - For their contributions as a retired professor of astronomy recognised for his lifetime of work using everyday language to make astronomy more accessible and popular for both students and the general public.

[4:15:79] Joseph von Fraunhofer (Germany, 1787 — 1826) - For their contributions as a Bavarian physicist and optical lens manufacturer.

[4:15:80] Herbert Friedman (USA, 1916 — 2000) - For their contributions as an American pioneer in the application of sounding rockets to solar physics, aeronomy, and astronomy.

[4:15:81] Dirk D. Frimout (Belgium, 1941 —) - For their contributions as an astrophysicist for the European Space Agency.

[4:15:82] Edwin Brant Frost (USA, 1866 — 1935) - For their contributions as an American astronomer.

[4:15:83] Shigehisa Fujikawa (Japan) - For their contributions as a Japanese astronomer.

[4:15:84] Naoshi Fukushima (Japan, 1925 — 2003) - For their contributions as a Japanese physicist specialising in the near-Earth space environment.

[4:15:85] Kiichirō Furukawa (Japan) - For their contributions as a Japanese astronomer and discoverer of minor planets at the Tokyo Astronomical Observatory

[4:15:86] Toshimasa Furuta (Japan) - For their contributions as a Japanese astronomer and a prolific discoverer of asteroids.

[4:15:87] Bryan Gaensler (Australia, 1973 —) - For their contributions as an Australian astronomer and former Young Australian of the Year.

[4:15:88] Gan De (China, fl. 4th century BC) - For their contributions as a Chinese astronomer / astrologer.

[4:15:89] Julio Garavito Armero (Colombia, 1865 — 1920) - For their contributions as a Colombian astronomer.

[4:15:90] Gordon J. Garradd (Australia, 1959 —) - For their contributions as an Australian amateur astronomer and photographer.

[4:15:91] Ben Gascoigne (New Zealand, Australia, 1915 — 2010) - For their contributions as a New Zealand-born Australian optical astronomer and expert in photometry who played a leading role in the design and commissioning of Australia's largest optical telescope, the Anglo-Australian Telescope, which for a time was one of the world's most important astronomical facilities.

[4:15:92] Margaret Geller (United States, 1947) - For their contributions as an American astrophysicist at the Harvard–Smithsonian Center for Astrophysics.

[4:15:93] Gautama Siddha (China, fl. 8th century AD) - For their contributions as an astronomer, astrologer and compiler of Indian descent.

[4:15:94] Johann Gottfried Galle (Germany, 1812 — 1910) - For their contributions as a German astronomer from Radis, Germany, at the Berlin Observatory who, on 23 September 1846, with the assistance of student Heinrich Louis d'Arrest, was the first person to view the planet Neptune and know what he was looking at.

[4:15:95] George Gamow (Russia, USA, 1904 — 1968) - For their contributions as a Soviet-American theoretical physicist and cosmologist.

[4:15:96] Carl Friedrich Gauss (Germany, 1777 — 1855) - For their contributions as a German mathematician and physicist who made significant contributions to many fields in mathematics and sciences.

[4:15:97] Tom Gehrels (Netherlands, USA, 1925 —) - For their contributions as a Dutch-American astronomer, Professor of Planetary Sciences, and Astronomer at the University of Arizona, Tucson.

[4:15:98] Andrea M. Ghez (USA, 1965 —) - For their contributions as an American astronomer and professor in the Department of Physics and Astronomy at UCLA.

[4:15:99] Riccardo Giacconi (Italy, 1931 —) - For their contributions as an Italian-American Nobel Prize-winning astrophysicist who laid down the foundations of X-ray astronomy.

[4:15:100] Michel Giacobini (France, 1873 — 1938) - For their contributions as a French astronomer.

[4:15:101] Henry L. Giclas (USA, 1910 — 2007) - For their contributions as an American astronomer and a discoverer of minor planets and comets.

[4:15:102] David Gill (UK, 1843 — 1914) - For their contributions as a Scottish astronomer who is known for measuring astronomical distances, for astrophotography, and for geodesy.

[4:15:103] Ian Glass (Ireland/South Africa, 1939 —) - For their contributions as an infrared astronomer and scientific historian.

[4:15:104] Thomas Gold (USA, 1920 — 2004) - For their contributions as an Austrian-born astrophysicist, a professor of astronomy at Cornell University, a member of the U.S. National Academy of Sciences, and a Fellow of the Royal Society (London).

[4:15:105] Leo Goldberg (USA, 1913 — 1987) - For their contributions as an American astronomer who held professorships at Harvard and the University of Michigan and the directorships of several major observatories.

[4:15:106] Peter Goldreich (USA, 1939 —) - For their contributions as an American astrophysicist whose research focuses on celestial mechanics, planetary rings, helioseismology and neutron stars.

[4:15:107] Hermann Goldschmidt (Germany, 1802 — 1866) - For their contributions as a German-French astronomer and painter who spent much of his life in France.

[4:15:108] François Gonnessiat (France, 1856 — 1934) - For their contributions as a French astronomer, observer of comets and discoverer of two minor planets.

[4:15:109] John Goodricke (UK, 1764 — 1786) - For their contributions as an English amateur astronomer.

[4:15:110] Alyssa A. Goodman (USA, 1962 —) - For their contributions as the Robert Wheeler Willson Professor of Applied Astronomy at Harvard University, Research Associate of the Smithsonian Institution, and the founding director of the Harvard Initiative in Innovative Computing.

[4:15:111] Abu Sa'id Gorgani (Persia, 9th century) - For their contributions as a 9th-century Persian mathematician and astronomer.

[4:15:112] Paul Götz (Germany, 1883 — 1962) - For their contributions as a German astronomer and discoverer of 20 minor planets between 1903 and 1905.

[4:15:113] Benjamin Apthorp Gould (USA, 1824 — 1896) - For their contributions as a pioneering American astronomer.

[4:15:114] Andrew Graham (Ireland, 1815 — 1907) - For their contributions as an Irish astronomer, orbit computer and discoverer of the asteroid 9 Metis.

[4:15:115] Kathryn Aurora Gray (Canada, 2000 —) - For their contributions as a young Canadian astronomer.

[4:15:116] Charles Green (England, 1735 — 1771) - For their contributions as a British astronomer, noted for his assignment by the Royal Society in 1768 to the expedition sent to the Pacific Ocean in order to observe the transit of Venus aboard James Cook's Endeavour.

[4:15:117] Jesse Greenstein (USA, 1909 — 2002) - For their contributions as an American astronomer.

[4:15:118] John Grunsfeld (USA, 1956 —) - For their contributions as an American physicist and a former NASA astronaut.

[4:15:119] Jay U. Gunter (United States, 1911 — 1994) - For their contributions as an American pathologist and amateur astronomer.

[4:15:120] Alexander A. Gurshtein (Russia, 1937 —) - For their contributions as a Russian astronomer and historian of science.

[4:15:121] Bengt Gustafsson (Sweden, 1943 —) - For their contributions as a Swedish astronomer and emeritus professor in theoretical astrophysics at Uppsala University.

[4:15:122] Guo Shoujing (China, 1231 — 1316) - For their contributions as a Chinese astronomer, engineer, and mathematician.

[4:15:123] Alan Harvey Guth (USA, 1947 —) - For their contributions as an American theoretical physicist and cosmologist; Guth has researched elementary particle theory (and how particle theory is applicable to the early universe).

Extolled Astronomers (Surnames “H, I, J, K, and L”)

[4:16:1] Yusuke Hagihara (Japan, 1897 — 1979) - For their contributions as a Japanese astronomer noted for his contributions to celestial mechanics.

[4:16:2] Alan Hale (USA, 1958 —) - For their contributions as an American professional astronomer, best known for his co-discovery of Comet Hale–Bopp along with amateur astronomer Thomas Bopp.

[4:16:3] George Ellery Hale (USA, 1868 — 1938) - For their contributions as an American solar astronomer, best known for his discovery of magnetic fields in sunspots, and as the leader or key figure in the planning or construction of several world-leading telescopes.

[4:16:4] Asaph Hall (USA, 1829 — 1907) - For their contributions as an American astronomer who is most famous for having discovered the moons of Mars, Deimos and Phobos, in 1877.

[4:16:5] Edmond Halley (England, 1656 — 1742) - For their contributions as an English astronomer, geophysicist, mathematician, meteorologist, and physicist.

[4:16:6] Heidi Hammel (USA, 1960 —) - For their contributions as a planetary astronomer who has extensively studied Neptune and Uranus.

[4:16:7] Mario Hamuy (Chile) - For their contributions as a Chilean Astronomer and Professor of Astronomy at the University of Chile and Cerro Calan Observatory.

[4:16:8] Peter Andreas Hansen (Denmark, 1795 — 1874) - For their contributions as a Danish German astronomer.

[4:16:9] Abulfazl Harawi (Persia, 10th century) - For their contributions as a 10th-century astronomer from Rey, Persia who, along with al-Khujandi, studied under the patronage of the Buyid dynasty.

[4:16:10] Karl Ludwig Harding (Germany, 1765 — 1834) - For their contributions as a German astronomer, who discovered 3 Juno, the third asteroid of the main-belt in 1804.

[4:16:11] Thomas Hariot (UK, 1560 — 1621) - For their contributions as an English astronomer, mathematician, ethnographer and translator who made advances within the scientific field.

[4:16:12] Guillermo Haro (Mexico, 1913 — 1988) - For their contributions as a Mexican astronomer.

[4:16:13] Robert George Harrington (USA, 1904–1987) - For their contributions as an American astronomer who worked at Palomar Observatory.

[4:16:14] Robert Sutton Harrington (USA, 1942 — 1993) - For their contributions as an American astronomer who worked at the United States Naval Observatory (USNO).

[4:16:15] Edward Robert Harrison (UK/USA, 1917 — 2007) - For their contributions as a British astronomer and cosmologist, noted for his work about the increase of fluctuations in the expanding universe, for his explanation of Olbers' Paradox, and for his books on cosmology for lay readers.

[4:16:16] William Kenneth Hartmann (USA, 1939 —) - For their contributions as a planetary scientist, artist, author, and writer.

[4:16:17] Lisa Harvey-Smith (Australia, 1979 —) - For their contributions as a British-Australian astrophysicist, Australia's first Women in STEM Ambassador and Professor of Practice in Science Communication at the University of NSW.

[4:16:18] Takeo Hatanaka (Japan, 1914 — 1963) - For their contributions as a Japanese radio astronomer.

[4:16:19] Stephen Hawking (UK, 1942 —) - For their contributions as an English theoretical physicist, cosmologist, and author who was director of research at the Centre for Theoretical Cosmology at the University of Cambridge at the time of his death.

[4:16:20] Will Hay (UK, 1888 — 1949) - For their contributions as an English comedian, actor, author, film director and amateur astronomer who came to notice for his theatrical sketch as a jocular schoolmaster, known as Dr. Muffin.

[4:16:21] Chushiro Hayashi (Japan, 1920 — 2010) - For their contributions as a Japanese astrophysicist.

[4:16:22] Otto Hermann Leopold Heckmann (Germany, 1901 — 1983) - For their contributions as a German astronomer.

[4:16:23] Carl Heiles (USA, 1939 —) - For their contributions as an American astrophysicist noted for his contribution to the understanding of diffuse interstellar matter through observational radio astronomy.

[4:16:24] Joseph Helffrich (Germany, 1872 — 1971) - For their contributions as a German astronomer.

[4:16:25] Eleanor Helin (USA, 1932 — 2009) - For their contributions as an American astronomer.

[4:16:26] Maximilian Hell (Austria-Hungary, 1720 — 1792) - For their contributions as a Hungarian astronomer and an ordained Jesuit priest from the Kingdom of Hungary.

[4:16:27] Karl Ludwig Hencke (Germany, 1793 — 1866) - For their contributions as a German amateur astronomer and discoverer of minor planets.

[4:16:28] Thomas Henderson (Scotland, 1798 — 1844) - For their contributions as a Scottish astronomer and mathematician noted for being the first person to measure the distance to Alpha Centauri, the major component of the nearest stellar system to Earth, the first to determine the parallax of a fixed star, and for being the first Astronomer Royal for Scotland.

[4:16:29] Paul Henry (France, 1848 — 1905) - For their contributions as a French optician and astronomer working alongside his brother Prosper Henry.

[4:16:30] Prosper Henry (France, 1849 — 1903) - For their contributions as a French optician and astronomer working alongside his brother Paul Henry.

[4:16:31] Abraham bar Hiyya (Spanish Jewish), (1070 — 1136) - For their contributions as a Jewish mathematician, astronomer and philosopher.

[4:16:32] George Howard Herbig (USA, 1920 — 2013) - For their contributions as an American astronomer at the University of Hawaii Institute for Astronomy.

[4:16:33] Carl W. Hergenrother (USA, 1973 —) - For their contributions as an American astronomer and discoverer of minor planets and comets.

[4:16:34] Caroline Herschel (UK, 1750 — 1848) - For their contributions as a German astronomer, whose most significant contributions to astronomy were the discoveries of several comets, including the periodic comet 35P/Herschel–Rigollet, which bears her name.

[4:16:35] John Herschel (UK, 1792 — 1871) - Also extolled as a philosopher, but herein he is recognised for his contributions to astronomy.

[4:16:36] William Herschel (UK/Germany, 1738 — 1822) - For their contributions as a German-born British astronomer, composer and brother of fellow astronomer Caroline Herschel, with whom he worked.

[4:16:37] Ejnar Hertzsprung (Denmark, 1873 — 1967) - For their contributions as a Danish chemist and astronomer.

[4:16:38] Johannes Hevelius (Poland, 1611 — 1687) - For their contributions as a councillor and mayor of Danzig (Gdańsk), Kingdom of Poland.

[4:16:39] Antony Hewish (UK, 1924 —) - For their contributions as a British radio astronomer who won the Nobel Prize for Physics in 1974 (together with fellow radio-astronomer Martin Ryle) for his role in the discovery of pulsars.

[4:16:40] George William Hill (USA, 1838 — 1914) - For their contributions as an American astronomer and mathematician.

[4:16:41] John Russell Hind (UK, 1823 — 1895) - For their contributions as an English astronomer.

[4:16:42] Hipparchus (Nicaea, circa 190 BC — 120 BC) - For their contributions as a Greek astronomer, geographer, and mathematician; he is considered the founder of trigonometry but is most famous for his incidental discovery of precession of the equinoxes.

[4:16:43] Masanori Hirasawa (Japan) - For their contributions as a Japanese astronomer and a prolific discoverer of asteroids.

[4:16:44] Kiyotsugu Hirayama (Japan, 1874 — 1943) - For their contributions as a Japanese astronomer, best known for his discovery that many asteroid orbits were more similar to one another than chance would allow, leading to the concept of asteroid families, now called "Hirayama families" in his honour.

[4:16:45] Shin Hirayama (Japan, 1868 — 1945) - For their contributions as the first Japanese astronomer to discover an asteroid.

[4:16:46] Gustave-Adolphe Hirn (France, 1815 — 1890) - For their contributions as a French physicist, astronomer, mathematician and engineer who made important measurements of the mechanical equivalent of heat and contributions to the early development of thermodynamics.

[4:16:47] Sebastian von Hoerner (Germany), 1919 — 2003) - For their contributions as a German astrophysicist and radio astronomer.

[4:16:48] Cuno Hoffmeister (Germany, 1892 — 1968) - For their contributions as a German astronomer, observer and discoverer of variable stars, comets and minor planets, and founder of Sonneberg Observatory.

[4:16:49] Dorrit Hoffleit (USA, 1907 — 2007) - For their contributions as an American senior research astronomer at Yale University.

[4:16:50] Helen Sawyer Hogg (Canada, 1905 — 1993) - For their contributions as an astronomer noted for pioneering research into globular clusters and variable stars.

[4:16:51] Minoru Honda (Japan, 1917 — 1990) - For their contributions as a Japanese astronomer.

[4:16:52] Kamil Hornoch (Czech Republic, 1972 —) - For their contributions as a Czech amateur astronomer who discovered dozens of novae in nearby galaxies.

[4:16:53] Jeremiah Horrocks (UK, circa 1619 — 1641) - For their contributions as an English astronomer; he was the first person to demonstrate that the Moon moved around the Earth in an elliptical orbit; and he was the only person to predict the transit of Venus of 1639, an event which he and his friend William Crabtree were the only two people to observe and record.

[4:16:54] Cornelis Johannes van Houten (Netherlands, 1920 — 2002) - For their contributions as a Dutch astronomer.

[4:16:55] Ingrid van Houten-Groeneveld (Netherlands, 1921 — 2015) - For their contributions as a Dutch astronomer.

[4:16:56] Martin van den Hove (Netherlands, 1605 — 1639) - For their contributions as a Dutch astronomer and mathematician.

[4:16:57] Herbert Alonzo Howe (USA, 1858 – 1926) - For their contributions as an American astronomer and educator.

[4:16:58] Fred Hoyle (UK, 1915 — 2001) - For their contributions as an English astronomer who formulated the theory of stellar nucleosynthesis.

[4:16:59] Edwin Powell Hubble (USA, 1889 — 1953) - For their contributions as an American astronomer; he played a crucial role in establishing the fields of extragalactic astronomy and observational cosmology and is regarded as one of the most important astronomers of all time.

[4:16:60] William Huggins (UK, 1824 — 1910) - For their contributions as an English astronomer best known for his pioneering work in astronomical spectroscopy together with his wife Margaret Lindsay Huggins.

[4:16:61] Russell Alan Hulse (USA, 1950 —) - For their contributions as an American physicist and winner of the Nobel Prize in Physics.

[4:16:62] Hendrik Christoffel van de Hulst (Netherlands, 1918 — 2000) - For their contributions as a Dutch astronomer and mathematician.

[4:16:63] Milton Lasell Humason (USA, 1891 — 1972) - For their contributions as an American astronomer.

[4:16:64] Thomas John Hussey (England, 1792 — 1854) - For their contributions as an English clergyman and astronomer.

[4:16:65] Christiaan Huygens (Netherlands, 1629 — 1695) - For their contributions as a Dutch physicist, mathematician, astronomer and inventor, who is widely regarded as one of the greatest scientists of all time and a major figure in the scientific revolution.

[4:16:66] Yuji Hyakutake (Japan, 1950 — 2002) - For their contributions as a Japanese amateur astronomer who discovered Comet C/1996 B2, also known as Comet Hyakutake on January 31, 1996 while using 25×150 binoculars.

[4:16:67] Josef Allen Hynek (USA, 1910 — 1986) - For their contributions as an American astronomer, professor, and ufologist.

[4:16:68] Christopher Hansteen (Norway, 1784 — 1873) - For their contributions as a Norwegian geophysicist, astronomer and physicist, best known for his mapping of Earth's magnetic field.

[4:16:69] Icko Iben, Jr. (USA, 1931 —) - For their contributions as an American astronomer and a Distinguished Professor at the University of Illinois at Urbana-Champaign.

[4:16:70] Kaoru Ikeya (Japan, 1943 —) - For their contributions as a Japanese amateur astronomer who discovered a number of comets.

[4:16:71] Chris Impey (UK/USA, 1956 —) - For their contributions as a British astronomer, educator, and author.

[4:16:72] Robert Thorburn Ayton Innes (Scotland/South Africa, 1861 — 1933) - For their contributions as a Scottish astronomer best known for discovering Proxima Centauri in 1915, and numerous binary stars.

[4:16:73] Shigeru Inoda (Japan) - For their contributions as a Japanese ophthalmologist, surgeon and amateur astronomer.

[4:16:74] Jamal Nazrul Islam (Bangladesh, 1939 — 2013) - For their contributions as a Bangladeshi mathematical physicist and cosmologist.

[4:16:75] Edward Israel (USA, 1859 — 1884) - For their contributions as an astronomer and Polar explorer.

[4:16:76] Iwahashi Zenbei (Japan, 1756 — 1811) - For their contributions as a Japanese scientist and optician.

[4:16:77] Masayuki Iwamoto (Japan) - For their contributions as a Japanese astronomer.

[4:16:78] Shun-ei Izumikawa (Japan) - For their contributions as a Japanese astronomer.

[4:16:79] Cyril V. Jackson (South Africa, 1903 — 1988) - For their contributions as a South African astronomer.

[4:16:80] Pierre Jules César Janssen (France, 1824 — 1907) - For their contributions as a French astronomer.

[4:16:81] James Jeans (UK, 1877 — 1946) - For their contributions as an English physicist, astronomer and mathematician.

[4:16:82] Benjamin Jekhowsky (Russia/France/Algeria, 1881 — 1953) - For their contributions as a Russian–French astronomer, born in Saint-Petersburg in a noble family of a Russian railroad official.

[4:16:83] Louise Freeland Jenkins (USA, 1888 — 1970) - For their contributions as an American astronomer who compiled a valuable catalogue of stars within 10 parsecs of the sun, as well as editing the 3rd edition of the Yale Bright Star Catalogue.

[4:16:84] David C. Jewitt (UK, 1958 —) - For their contributions as an English astronomer.

[4:16:85] Jiao Bingzhen (China, 1689 — 1726) - For their contributions as a native of Jining, Shandong who became a noted painter and astronomer.

[4:16:86] John A. Johnson (USA) - For their contributions as an American astrophysicist and professor of astronomy at Harvard.

[4:16:87] Alfred Harrison Joy (USA, 1882 — 1973) - For their contributions as an astronomer best known for his work on stellar distances, the radial motion of stars, and variable stars.

[4:16:88] Vinod Johri (India, 1935 —) - For their contributions as an Indian astrophysicist.

[4:16:89] Ali Kuşçu (Türkiye, 1403 — 1474) - For their contributions as an astronomer, mathematician and physicist originally from Samarkand, who settled in the Ottoman Empire some time before 1472.

[4:16:90] Tetsuo Kagawa (Japan) - For their contributions as a Japanese astronomer, staff member at the Gekko Observatory and discoverer of asteroids.

[4:16:91] Franz Kaiser (Germany, 1891 — 1962) - For their contributions as a German astronomer.

[4:16:92] Kiyotaka Kanai (Japan, 1951 —) - For their contributions as a Japanese amateur astronomer, observer of variable stars, discoverer of comet C/1970 B1, and co-discoverer of the main-belt asteroid 7752 Otauchunokai, named after the Ota Uchuno Kai group, an amateur astronomers' club at Ōta city, of which he is a member of.

[4:16:93] Hiroshi Kaneda (Japan, 1953 —) - For their contributions as a Japanese astronomer and discoverer of minor planets from Sapporo, in the northernmost prefecture of Japan.

[4:16:94] Henry Kandrup (USA, 1955 — 2003) - For their contributions as an American astrophysicist and professor at the University of Florida, Gainesville; his major contributions were in the areas of galaxy dynamics and plasma physics.

[4:16:95] Jacobus Kapteyn (Netherlands, 1851 — 1922) - For their contributions as a Dutch astronomer.

[4:16:96] Lyudmila Karachkina (Ukraine, 1948 —) - For their contributions as a Ukrainian astronomer and discoverer of minor planets.

[4:16:97] Ghiyath al-Kashi (Persia, 1380 — 1429) - For their contributions as a Persian astronomer and mathematician.

[4:16:98] Jeffrey Owen Katz (USA, 1960 —) - For their contributions as an American scientist best known for his pivotal contribution to the field of factor analysis and his development of innovative AI (artificial intelligence) tools.

[4:16:99] Karlis Kaufmanis (Latvia/USA, 1910 — 2003) - For their contributions as a Latvian-American astronomer.

[4:16:100] Kōyō Kawanishi (Japan, 1959 —) - For their contributions as a Japanese dentist, amateur astronomer and discoverer of 13 minor planets.

[4:16:101] Nobuhiro Kawasato (Japan) - For their contributions as a Japanese astronomer credited by the Minor Planet Center with the discovery of 105 asteroids.

[4:16:102] James Edward Keeler (USA, 1857 — 1900) - For their contributions as an American astronomer; he was an early observer of what are called galaxies using photography, as well as the first to show observationally that the rings of Saturn do not rotate as a solid body.

[4:16:103] Paul Kempf (Germany, 1856 — 1920) - For their contributions as a German astronomer.

[4:16:104] Johannes Kepler (Germany, 1571 — 1630) - Also extolled for his contributions to philosophy, but is here extolled for being an astronomer.

[4:16:105] Omar Khayyám (Persia, 1048 — 1131) - For their contributions as a Persian mathematician, astronomer, and poet.

[4:16:106] Al-Khujandi (Persia, 10th century) - For their contributions as a Central Asian astronomer and mathematician who lived in the late 10th century and helped build an observatory, near the city of Ray (near today's Tehran), in Iran.

[4:16:107] Muhammad ibn Mūsā al-Khwārizmī, (Persia, 780 — 850) - For their contributions as a Persian scholar who produced works in mathematics, astronomy, and geography under the patronage of the Caliph Al-Ma'mun of the Abbasid Caliphate.

[4:16:108] Kidinnu (Babylon, 4th century BC ; d. 330 BC?) - For their contributions as a Chaldean astronomer and mathematician.

[4:16:109] Hisashi Kimura (Japan, 1870 — 1943) - For their contributions as a Japanese astronomer.

[4:16:110] Maria Margarethe Kirch (Germany, 1670 — 1720) - For their contributions as a German astronomer, and one of the first famous astronomers of her period due to her writings on the conjunction of the sun with Saturn, Venus, and Jupiter in 1709 and 1712 respectively.

[4:16:111] Daniel Kirkwood (USA, 1814 — 1895) - For their contributions as an American astronomer.

[4:16:112] Robert Kirshner (USA, 1949 —) - For their contributions as an American astronomer.

[4:16:113] Minoru Kizawa (Japan, 1947 —) - For their contributions as a Japanese astronomer and discoverer of minor planets.

[4:16:114] Ernst Friedrich Wilhelm Klinkerfues (Germany, 1827 — 1884) - For their contributions as a German astronomer and meteorologist.

[4:16:115] Viktor Knorre (Russia, 1840 — 1919) - For their contributions as a Russian astronomer of German ethnic origin.

[4:16:116] Takao Kobayashi (Japan, 1961 —) - For their contributions as a Japanese amateur astronomer and an outstanding discoverer of minor planets who currently works at the Ōizumi Observatory.

[4:16:117] Toru Kobayashi (Japan) - For their contributions as a Japanese astronomer.

[4:16:118] Luboš Kohoutek (1935 —) - For their contributions as a Czech astronomer and a discoverer of minor planets and comets, including Comet Kohoutek which was visible to the naked eye in 1973.

[4:16:119] Masahiro Koishikawa (Japan, 1952 —) - For their contributions as a Japanese astronomer.

[4:16:120] Nobuhisa Kojima (Japan, 1933 —) - For their contributions as a Japanese astronomer.

[4:16:121] Takuo Kojima (Japan) - For their contributions as a Japanese amateur astronomer and discoverer of minor planets.

[4:16:122] Yoji Kondo (Japan, 1933 —) - For their contributions as a Japanese-born American astrophysicist who also wrote science fiction under the pseudonym Eric Kotani.

[4:16:123] Zdeněk Kopal (Czech Republic, UK, USA, 1914 — 1993) - For their contributions as a Czech astronomer who mainly worked in England.

[4:16:124] August Kopff (Germany, 1882 — 1960) - For their contributions as a German astronomer and discoverer of several comets and asteroids.

[4:16:125] Korado Korlević (Croatia, 1958 —) - For their contributions as a Croatian teacher and prolific amateur astronomer, who ranks among the world's top 20 discoverers of minor planets.

[4:16:126] Hiroki Kosai (Japan, 1933 —) - For their contributions as a Japanese astronomer with the Kiso Observatory.

[4:16:127] Charles T. Kowal (USA, 1940 —) - For their contributions as an American astronomer known for his observations and discoveries in the Solar System.

[4:16:128] Robert Kraft (USA, 1927 —) - For their contributions as an American astronomer; he performed pioneering work on Cepheid variables, stellar rotation, novae, and the chemical evolution of the Milky Way.

[4:16:129] Ľubor Kresák (Slovakia, 1927 — 1994) - For their contributions as a Slovak astronomer.

[4:16:130] Heinrich Kreutz (Germany, 1854 — 1927) - For their contributions as a German astronomer, most notable for his studies of the orbits of several sungrazing comets, which revealed that they were all related objects, produced when a very large sun-grazing comet fragmented several hundred years previously.

[4:16:131] Kazuo Kubokawa (Japan, 1903 — 1943) - For their contributions as a Japanese astronomer, who, together with astronomer Okuro Oikawa, co-discovered the Mars-crosser asteroid 1139 Atami in 1929.

- [4:16:132] Marc Kuchner (USA, 1972 —) - For their contributions as an American astrophysicist, a staff member at NASA's Goddard Space Flight Center (GSFC) known for work on images and imaging of disks and exoplanets
- [4:16:133] Gerard Kuiper (Netherlands, USA, 1905 — 1973) - For their contributions as a Dutch–American astronomer, planetary scientist, selenographer, author and professor.
- [4:16:134] Donald Kurtz (1948 —) - For their contributions as an astronomer known for his research into asteroseismology.
- [4:16:135] Reiki Kushida (Japan) - For their contributions as a Japanese amateur astronomer, and a discoverer of supernovas.
- [4:16:136] Yoshio Kushida (Japan, 1957 —) - For their contributions as a Japanese seismologist, amateur astronomer and a discoverer of minor planets and comets.
- [4:16:137] György Kulin (Austria-Hungary, 1905 — 1989) - For their contributions as a Hungarian astronomer and discoverer of minor planets.
- [4:16:138] Lagadha (India, 1st millennium BCE) - For their contributions as the author of one of the earliest known as Indian texts on astronomy and astrology.
- [4:16:139] Nicolas Louis de Lacaille (France, 1713 — 1762) - For their contributions as a French astronomer who named 15 out of the 88 constellations.
- [4:16:140] Claes-Ingvar Lagerkvist (Sweden, 1944 —) - For their contributions as a Swedish astronomer at the Uppsala Astronomical Observatory.
- [4:16:141] Joseph-Louis Lagrange (France, 1736 — 1813) - For their contributions as an Italian Enlightenment Era mathematician and astronomer.
- [4:16:142] Jérôme Lalande (France, 1732 — 1807) - For their contributions as a French astronomer, freemason and writer.
- [4:16:143] Johann Heinrich Lambert (France, Germany, 1728 — 1777) - For their contributions as a Swiss polymath who made important contributions to the subjects of mathematics, physics (particularly optics), philosophy, astronomy and map projections.
- [4:16:144] David J. Lane (Canada, 1983 —) - For their contributions as a Canadian astronomer at Saint Mary's University, the past president of the Royal Astronomical Society of Canada, director of the Burke-Gaffney astronomical observatory, owner of the Abbey-Ridge Observatory, and creator of the planetarium software entitled the Earth Centered Universe.

[4:16:145] Andrew E. Lange (United States, 1957 — 2010) - For their contributions as an astrophysicist and Goldberger Professor of Physics at the California Institute of Technology in Pasadena, California.

[4:16:146] Samuel Pierpont Langley (USA, 1834 — 1906) - For their contributions as an American astronomer, physicist, inventor of the bolometer and aviation pioneer.

[4:16:147] Pierre-Simon Laplace (France, 1749 — 1827) - Also extolled for being a philosopher, but here extolled for his contributions to astronomy.

[4:16:148] William Lassell (UK, 1799 — 1880) - For their contributions as an English merchant and astronomer.

[4:16:149] Joseph Jean Pierre Laurent (France, fl. 1858) - For their contributions as a French amateur astronomer and chemist who discovered the asteroid 51 Nemausa in 1858, for which he was a recipient of the Lalande Prize awarded by the French Academy of Sciences.

[4:16:150] Henrietta Swan Leavitt (USA, 1868 — 1921) - For their contributions as an American astronomer.

[4:16:151] Typhoon Lee (USA, Taiwan) - For their contributions as an astrophysicist and geochemist at Academia Sinica, Taiwan, where he specialises in isotope geochemistry and nuclear astrophysics.

[4:16:152] Guillaume Le Gentil (France, 1725 — 1792) - For their contributions as a French astronomer who discovered several nebulae and was appointed to the Royal Academy of Sciences.

[4:16:153] Georges Lemaître (Belgium, 1894 — 1966) - For their contributions as a Jesuit trained Belgian Roman Catholic priest, mathematician, astronomer, and professor of physics at the Catholic University of Louvain.

[4:16:154] Pierre Lemonnier (France, 1715 — 1799) - For their contributions as a French astronomer, a Professor of Physics and Philosophy at the Collège d'Harcourt (University of Paris), and a member of the French Academy of Sciences.

[4:16:155] Frederick C. Leonard (USA, 1896 — 1960) - For their contributions as an American astronomer.

[4:16:156] Armin Leuschner (Germany, 1868 — 1953) - For their contributions as an American astronomer and educator.

- [4:16:157] Geraint Lewis (Australia, 1969 —) - For their contributions as a Welsh astrophysicist, who is best known for his work on dark energy, gravitational lensing and galactic cannibalism.
- [4:16:158] Urbain Le Verrier (France, 1811 — 1877) - For their contributions as a French astronomer and mathematician who specialised in celestial mechanics and is best known for predicting the existence and position of Neptune using only mathematics.
- [4:16:159] Li Fan (China, fl. 1st century AD) - For their contributions as a Chinese astronomer during the Han Dynasty (202 BC-220 AD).
- [4:16:160] Bertil Lindblad (Sweden, 1895 — 1965) - For their contributions as a Swedish astronomer.
- [4:16:161] Adolph Friedrich Lindemann (Germany/UK, 1846 — 1927) - For their contributions as a British engineer, businessman, and amateur astronomer of German origin.
- [4:16:162] Chris Lintott (UK, 1980 —) - For their contributions as a Professor of Astrophysics in the Department of Physics at the University of Oxford.
- [4:16:163] Joseph Johann Littrow (Austria, 1781 — 1840) - For their contributions as an Austrian astronomer.
- [4:16:164] Karl L. Littrow (Austria, 1811 — 1877) - For their contributions as an Austrian astronomer.
- [4:16:165] Liu Xin (China, fl. 1st century AD) - For their contributions as a Chinese astronomer, historian, librarian and politician during the Western Han Dynasty (206 BCE – 9 CE) and Xin Dynasty (9 – 23 CE).
- [4:16:166] Joseph Lockyer (UK, 1836 — 1920) - For their contributions as an English scientist and astronomer.
- [4:16:167] Avi Loeb (Israel, USA, 1962 —) - For their contributions as an American theoretical physicist who works on astrophysics and cosmology.
- [4:16:168] Maurice Loewy (Austria/France, 1833 — 1907) - For their contributions as a French astronomer.
- [4:16:169] Christian Sørensen Longomontanus (Denmark, 1562 — 1647) - For their contributions as a Danish astronomer.

[4:16:170] Percival Lowell (USA, 1855 — 1916) - For their contributions as an American businessman, author, mathematician, and astronomer who fuelled speculation that there were canals on Mars.

[4:16:171] Ángel López (Spain, 1955 —) - For their contributions as a Spanish astronomer.

[4:16:172] Álvaro López-García (Spain) - For their contributions as a Spanish astronomer, professor of astronomy at University of Valencia and director of the Valencia University Observatory.

[4:16:173] John William Lubbock (UK, 1803 — 1865) - For their contributions as an English banker, barrister, mathematician and astronomer.

[4:16:174] Knut Lundmark (Sweden, 1889 — 1958) - For their contributions as a Swedish astronomer, professor of astronomy and head of the observatory at Lund University from 1929 to 1955.

[4:16:175] Robert Luther (Germany, 1822 — 1900) - For their contributions as a German astronomer.

[4:16:176] Lupitus of Barcelona (Spain) - For their contributions as an astronomer in late 10th century Barcelona, then part of the Marca Hispanica between Islamic Al-Andalus and Christian France.

[4:16:177] Jane Luu (South Vietnam, USA 1965 —) - For their contributions as a Vietnamese American astronomer.

[4:16:178] Willem Luyten (Dutch East Indies, Netherlands, 1899 — 1994) - For their contributions as a Dutch-American astronomer.

[4:16:179] Donald Lynden-Bell (UK, 1935 —) - For their contributions as a British theoretical astrophysicist; he was the first to determine that galaxies contain supermassive black holes at their centres, and that such black holes power quasars.

[4:16:180] Andrew Lyne - (UK, 1942) - For their contributions as a British physicist.

[4:16:181] Bernard Lyot (France, 1897 — 1952) - For their contributions as a French astronomer.

Extolled Astronomers (Surnames “M, N, O, P, and Q”)

[4:17:1] Mahendra Suri (India, 14th century CE) - For their contributions as a 14th century Jain astronomer who wrote the Yantraraja, the first Indian treatise on the astrolabe.

[4:17:2] Ma Yize (China, 910 — 1005) - For their contributions as a Muslim Hui Chinese astronomer and astronomer who worked as the chief official of the astronomical observatory for the Song dynasty.

[4:17:3] Adriaan van Maanen (USA, 1884 — 1946) - For their contributions as a Dutch–American astronomer.

[4:17:4] George Parker, 2nd Earl of Macclesfield (UK, c. 1697 — 1764) - For their contributions as an English peer and astronomer.

[4:17:5] Amy Mainzer (USA, 1974 —) - For their contributions as an American astronomer, specialising in astrophysical instrumentation and infrared astronomy.

[4:17:6] Steve Mandel (USA) - For their contributions as an amateur astronomer and astrophotographer.

[4:17:7] Geoff Marcy (USA, 1954 —) - For their contributions as an American astronomer.

[4:17:8] Simon Marius (Germany, 1573 — 1624) - For their contributions as a German astronomer.

[4:17:9] Brian G. Marsden (USA, 1937 — 2010) - For their contributions as a British astronomer and the longtime director of the Minor Planet Center (MPC) at the Harvard-Smithsonian Center for Astrophysics.

[4:17:10] Albert Marth (Germany, 1828 — 1897) - For their contributions as a German astronomer who worked in England and Ireland.

[4:17:11] Nevil Maskelyne (UK, 1732 — 1811) - For their contributions as the fifth British Astronomer Royal.

[4:17:12] Charles Mason (UK, USA, 1730 — 1787) - For their contributions as an English astronomer who made significant contributions to 18th-century science and American history, particularly through his involvement with the survey of the Mason–Dixon line, which came to mark the border between Maryland and Pennsylvania (1764–1768).

[4:17:13] John C. Mather (USA, 1946 —) - For their contributions as an American astrophysicist, cosmologist and Nobel Prize in Physics laureate for his work on the Cosmic Background Explorer Satellite (COBE) with George Smoot.

[4:17:14] Janet Akyüz Mattei (Turkey, USA, 1943 — 2004) - For their contributions as a Turkish-American astronomer who was the director of the American Association of Variable Star Observers (AAVSO) from 1973 to 2004.

[4:17:15] Edward Walter Maunder (UK, 1851 — 1928) - For their contributions as a British astronomer best remembered for his study of sunspots and the solar magnetic cycle that led to his identification of the period from 1645 to 1715 that is now known as the Maunder Minimum.

[4:17:16] Pierre Louis Maupertuis (France, 1698 — 1759) - Also extolled as a philosopher, but herein extolled for his contributions to astronomy.

[4:17:17] Alain Maury (France, 1958 —) - For their contributions as a French astronomer.

[4:17:18] Matthew Fontaine Maury (USA, 1806 — 1873) - For their contributions as an American astronomer, United States Navy officer, historian, oceanographer, meteorologist, cartographer, author, geologist, and educator.

[4:17:19] Brian May (UK, 1947 —) - For their contributions as an English musician, singer, songwriter and astrophysicist.

[4:17:20] Cornell Mayer (USA, 1922 — 2005) - For their contributions as a radio astronomer, who was the first to accurately measure the temperature of Venus by measuring the planet's thermal radiation.

[4:17:21] Tobias Mayer (Germany, 1723 — 1762) - For their contributions as a German astronomer famous for his studies of the Moon.

[4:17:22] Michel Mayor (Switzerland, 1942 —) - For their contributions as a Swiss astrophysicist and professor emeritus at the University of Geneva's Department of Astronomy.

[4:17:23] Christopher McKee (USA, 1942 —) - For their contributions as an American astrophysicist.

[4:17:24] Robert S. McMillan (USA) - For their contributions as an astronomer at the University of Arizona, and heads the Spacewatch project, which studies minor planets.

[4:17:25] William H. McCrea (UK, 1904 — 1999) - For their contributions as an English astronomer and mathematician.

[4:17:26] Bruce A. McIntosh (Canada, 1929 —) - For their contributions as a Canadian astrophysicist.

[4:17:27] Robert H. McNaught (Australia) - For their contributions as a Scottish-Australian astronomer at the Research School of Astronomy and Astrophysics of the Australian National University (ANU).

[4:17:28] Pierre Méchain (France, 1744 — 1804) - For their contributions as a French astronomer and surveyor who, with Charles Messier, was a major contributor to the early study of deep sky objects and comets.

[4:17:29] Thebe Medupe (South Africa) - For their contributions as a South African astrophysicist and founding director of Astronomy Africa.

[4:17:30] Karen Jean Meech (USA) - For their contributions as an American astronomer at the Institute for Astronomy in the University of Hawaii.

[4:17:31] Aden Baker Meinel (USA, 1922 —) - For their contributions as an American astronomer.

[4:17:32] Fulvio Melia (USA, 1956 —) - For their contributions as an Italian-American astrophysicist, cosmologist and author.

[4:17:33] Philibert Jacques Melotte (UK, 1880 — 1961) - For their contributions as a British astronomer.

[4:17:34] Paul Willard Merrill (USA, 1887 — 1961) - For their contributions as an American astronomer whose specialty was spectroscopy.

[4:17:35] David Merritt (USA) - For their contributions as an American astrophysicist and professor at the Rochester Institute of Technology in Rochester, New York.

[4:17:36] Charles Messier (France, 1730 — 1817) - For their contributions as a French astronomer most notable for publishing an astronomical catalogue consisting of 110 nebulae and star clusters, which came to be known as the Messier objects.

[4:17:37] Joel Hastings Metcalf (USA, 1866 — 1925) - For their contributions as an American astronomer, humanitarian and minister.

[4:17:38] Andreas Gerasimos Michalitsianos (USA, 1947 — 1997) - For their contributions as a Greek-American astronomer and a NASA astrophysicist, also known and published as Andrew G. Michalitsianos.

[4:17:39] John Michell (UK, 1724 — 1793) - For their contributions as an English natural philosopher and clergyman who provided pioneering insights in a wide range of scientific fields, including astronomy, geology, optics, and gravitation.

[4:17:40] Elia Millosevich (Italy, 1848 — 1919) - For their contributions as an Italian astronomer.

[4:17:41] Edward Arthur Milne (UK, 1896 — 1950) - For their contributions as a British astrophysicist and mathematician.

[4:17:42] Rudolph Minkowski (Germany, 1895 — 1976) - For their contributions as a German-American astronomer.

[4:17:43] Marcel Gilles Jozef Minnaert (Belgium, Netherlands, 1893 — 1970) - For their contributions as a Dutch astronomer of Belgian origin.

[4:17:44] Maria Mitchell (USA, 1818 — 1889) - For their contributions as an American astronomer, who in 1847 by using a telescope, discovered a comet, which as a result became known as "Miss Mitchell's Comet."

[4:17:45] Seidai Miyasaka (Japan, 1955 —) - For their contributions as a Japanese astronomer.

[4:17:46] Yoshikane Mizuno (Japan) - For their contributions as a Japanese astronomer and co-discoverer of asteroids.

[4:17:47] August Ferdinand Möbius (Germany, 1790 — 1868) - For their contributions as a German mathematician and theoretical astronomer.

[4:17:48] Anthony Moffat (Canada) - For their contributions as an emeritus professor of astronomy at the Université de Montréal in Montreal, Quebec, Canada.

[4:17:49] Johan Maurits Mohr (Netherlands, 1716 — 1775) - For their contributions as a Dutch-German pastor who studied at Groningen University from 1733 and settled in Batavia (Dutch East Indies) in 1737.

[4:17:50] Samuel Molyneux (UK, 1689 — 1728) - For their contributions as an amateur astronomer and politician who sat in the British House of Commons between 1715 and 1728 and in the Irish House of Commons from 1727 to 1728.

[4:17:51] Geminiano Montanari (Italy, 1633 — 1687) - For their contributions as an Italian astronomer, lens-maker, and proponent of the experimental approach to science.

[4:17:52] Patrick Moore (UK, 1923 — 2012) - For their contributions as an English amateur astronomer who attained prominent status in that field as a writer, researcher, radio commentator and television presenter.

[4:17:53] William Wilson Morgan (USA, 1906 — 1994) - For their contributions as an American astronomer and astrophysicist.

[4:17:54] Hiroshi Mori (Japan, 1958 —) - For their contributions as a Japanese amateur astronomer and discoverer of minor planets.

[4:17:55] Amédée Mouchez (France, 1821 — 1892) - For their contributions as a French naval officer who became director of the Paris Observatory and launched the ill-fated Carte du Ciel project in 1887.

[4:17:56] Antonín Mrkos (Czech Republic, 1918 — 1996) - For their contributions as a Czech astronomer.

[4:17:57] Jean Mueller (USA, 1950 —) - For their contributions as an American astronomer and discoverer of comets, minor planets, and a large number of supernovas at the U.S. Palomar Observatory in California.

[4:17:58] Masaru Mukai (Japan, 1949 —) - For their contributions as a Japanese astronomer.

[4:17:59] Johannes Müller (Germany, 1436 — 1476) - For their contributions as a German astronomer.

[4:17:60] Harutaro Murakami (Japan, 1872 — 1947) - For their contributions as a Japanese physicist and astronomer.

[4:17:61] Osamu Muramatsu (Japan, 1949 —) - For their contributions as a Japanese astronomer and discoverer of asteroids and comets.

[4:17:62] bin Musa, Ahmad (Persia, 805 — 873) - For their contributions as a 9th-century Persian scholar alongside his two brothers.

[4:17:63] bin Musa, Hasan (Persia, 810 — 873) - For their contributions as a 9th-century Persian scholar alongside his two brothers.

[4:17:64] bin Musa, Muhammad (Persia, (800 — 873) - For their contributions as a 9th-century Persian scholar alongside his two brothers.

[4:17:65] Nils Mustelin (Finland, 1931 — 2004) - For their contributions as a Finnish professor of physics, noted astronomer, and popular skeptic.

[4:17:66] Nilakantha Somayaji (India, 1444 – 1544) - For their contributions as a major mathematician and astronomer of the Kerala school of astronomy and mathematics in India.

[4:17:67] Valentin Naboth (Germany, Italy, 1523 — 1593) - For their contributions as a German mathematician, astronomer and astrologer.

[4:17:68] Naburimannu (Babylonia, sometime between 6th century BC and 2nd century BC) - For their contributions as a Chaldean astronomer and mathematician.

[4:17:69] Takeshi Nagata (Japan, 1913 — 1991) - For their contributions as a Japanese geophysicist who studied geomagnetism.

[4:17:70] Ahmad Nahavandi (Persia, 7th-8th century) - For their contributions as a Persian astronomer of the 8th and 9th centuries.

[4:17:71] Akimasa Nakamura (Japan, 1961 —) - For their contributions as a Japanese astronomer; he is a prolific observer of asteroids and comets, as well as a discoverer of minor planets.

[4:17:72] Syuichi Nakano (Japan, 1947 —) - For their contributions as a Japanese astronomer; he specialises in the study of comets.

[4:17:73] Jayant Narlikar (India, 1938 —) - For their contributions as an Indian astrophysicist.

[4:17:74] Naubakht (Persia, d. 776) - For their contributions as a Persian astrologer.

[4:17:75] David Naylor (Canada) - For their contributions as a Canadian physician, medical researcher and former president of the University of Toronto.

[4:17:76] Al-fadl ibn Naubakht (Persia, 8th century) - For their contributions as an 8th-century Persian scholar at the court of the Caliph Harun al-Rashid.

[4:17:77] Otto Neugebauer (Germany, USA, 1899 — 1990) - For their contributions as an Austrian American mathematician and historian of science who became known for his research on the history of astronomy and the other exact sciences in antiquity and into the Middle Ages.

[4:17:78] Grigoriy Nikolaevich Neujmin (Russia, 1886 — 1946) - For their contributions as a Georgian–Russian astronomer.

[4:17:79] Simon Newcomb (USA, 1835 — 1909) - For their contributions as a Canadian–American astronomer, applied mathematician and autodidactic polymath, who was Professor of Mathematics in the U.S. Navy and at Johns Hopkins.

[4:17:80] Isaac Newton (UK, 1643 — 1727) - Extolled here for his major contributions to astronomy, but also extolled elsewhere for his contributions as a philosopher.

[4:17:81] Seth Barnes Nicholson (USA, 1891 — 1963) - For their contributions as an American astronomer.

[4:17:82] Albertus Antonie Nijland (Netherlands, 1868 — 1936) - For their contributions as a Dutch astronomer.

[4:17:83] Tsuneo Niijima (Japan) - For their contributions as a Japanese astronomer.

[4:17:84] Peter Nilson (Sweden, 1937 — 1998) - For their contributions as a Swedish astronomer and novelist.

[4:17:85] Hōei Nojiri (Japan, 1885 — 1977) - For their contributions as a Japanese essayist and astronomer.

[4:17:86] Jaime Nomen (Spain) - For their contributions as a Spanish oral and maxillofacial surgeon, amateur astronomer and discoverer of numerous minor planets.

[4:17:87] Toshiro Nomura (Japan, 1954 —) - For their contributions as a Japanese astronomer and co-discoverer of 13 asteroids with astronomers Kōyō Kawanishi and Matsuo Sugano.

[4:17:88] Knut Jørgen Røed Ødegaard (Norway, 1966 —) - For their contributions as a Norwegian astronomer formerly employed as a media contact at the University of Oslo's Institute of Theoretical Astrophysics.

[4:17:89] Okuro Oikawa (Japan, 1896 — 1970) - For their contributions as a Japanese astronomer and discoverer of minor planets.

[4:17:90] Tarmo Oja (Sweden) - For their contributions as a professor in astronomy at Uppsala University who studies galactic structure and variable stars.

[4:17:91] Tomimaru Okuni (Japan, 1931 —) - For their contributions as a Japanese amateur astronomer and a discoverer of minor planets.

[4:17:92] Nicolaus Olahus (Hungarian, 1493 — 1568) - For their contributions as the Archbishop of Esztergom, Primate of Hungary, and a distinguished Roman Catholic prelate, humanist and historiographer.

[4:17:93] Heinrich Wilhelm Matthäus Olbers (Germany, 1758 — 1840) - For their contributions as a German physician and astronomer.

[4:17:94] Gerard O'Neill (USA, 1927 — 1992) - For their contributions as an American physicist and space activist.

[4:17:95] Jan Hendrik Oort (Netherlands, 1900 — 1992) - For their contributions as a Dutch astronomer who made significant contributions to the understanding of the Milky Way and who was a pioneer in the field of radio astronomy.

[4:17:96] Pieter Oosterhoff (Netherlands, 1904 — 1978) - For their contributions as a Dutch astronomer.

[4:17:97] Ernst Öpik (Estonia, Ireland, 1893 — 1985) - For their contributions as an Estonian astronomer and astrophysicist who spent the second half of his career (1948–1981) at the Armagh Observatory in Northern Ireland.

[4:17:98] José Luis Ortiz Moreno (Spain) - For their contributions as a Spanish astronomer, and former Vicedirector of Technology at the Instituto de Astrofísica de Andalucía (IAA), Spain.

[4:17:99] Yoshiaki Oshima (Japan) - For their contributions as a Japanese astronomer at Gekko Observatory and prolific discoverer of 61 asteroids.

[4:17:100] Donald Edward Osterbrock (USA, 1924 — 2007) - For their contributions as an American astronomer, best known for his work on star formation and on the history of astronomy.

[4:17:101] Liisi Oterma (Finland, 1915 — 2001) - For their contributions as a Finnish astronomer, the first woman to get a Ph.D. degree in astronomy in Finland.

[4:17:102] Satoru Otomo (Japan, 1957 —) - For their contributions as a Japanese dentist, amateur astronomer and a discoverer of minor planets.

[4:17:103] Jean Abraham Chrétien Oudemans (Netherlands, 1827 — 1906) - For their contributions as a Dutch astronomer.

[4:17:104] Rafael Pacheco (Spain) - For their contributions as a Spanish astronomer of Catalan origin and a prolific discoverer of asteroids, credited by the Minor Planet Center with the discovery of numerous minor planets.

[4:17:105] Bohdan Paczyński (Poland, 1940 — 2007) - For their contributions as a Polish astronomer notable in the theory of the stellar evolution, accretion discs, and gamma ray bursts.

[4:17:106] Ľudmila Pajdušáková (Slovakia, 1916 — 1979) - For their contributions as a Slovak astronomer.

[4:17:107] Johann Palisa (Austria, 1848 — 1925) - For their contributions as an Austrian astronomer.

[4:17:108] Johann Palitzsch (Germany, 1723 — 1788) - For their contributions as a German astronomer who became famous for recovering Comet 1P/Halley (better known as Halley's Comet) on Christmas Day, 1758.

[4:17:109] Anton Pannekoek (Netherlands, 1873 — 1960) - For their contributions as a Dutch astronomer, Marxist theorist, and social revolutionary.

[4:17:110] Eugene Parker (USA, 1927 —) - For their contributions as an American solar astrophysicist who—in the mid-1950s—developed the theory of the supersonic solar wind and predicted the Parker spiral shape of the solar magnetic field in the outer solar system.

[4:17:111] George Parker, 2nd Earl of Macclesfield (UK, c. 1697 — 1764) - For their contributions as an English peer and astronomer.

[4:17:112] William Parsons, Lord Rosse (Ireland, 1800 — 1867) - For their contributions as an Anglo-Irish astronomer who had several telescopes built.

[4:17:113] André Patry (France, 1902 — 1960) - For their contributions as a French astronomer and discoverer of 9 minor planets in the late 1930s.

[4:17:114] Cecilia Payne-Gaposchkin (UK, USA, 1900 — 1979) - For their contributions as a British-born American astronomer and astrophysicist who proposed in her 1925 doctoral thesis that stars were composed primarily of hydrogen and helium.

[4:17:115] Ruby Payne-Scott (Australia, 1912 — 1981) - For their contributions as an Australian pioneer in radiophysics and radio astronomy, and was the first female radio astronomer.

[4:17:116] James Peebles (Canada, USA, 1935 —) - For their contributions as a Canadian-American physicist and theoretical cosmologist who is currently the Albert Einstein Professor Emeritus of Science at Princeton University.

[4:17:117] Manuel Peimbert (Mexico, 1941 —) - For their contributions as a Mexican astronomer and a faculty member at the National Autonomous University of Mexico (UNAM).

[4:17:118] Leslie Copus Peltier (USA, 1900 — 1980) - For their contributions as an American amateur astronomer and discoverer of several comets and novae, once described as "the world's greatest non-professional astronomer" by Harlow Shapley.

[4:17:119] Roger Penrose (UK, 1931 —) - For their contributions as an English mathematical physicist, mathematician and philosopher of science.

[4:17:120] Arno Penzias (USA, Germany, 1933 —) - For their contributions as an American physicist, radio astronomer and Nobel laureate in physics who is co-discoverer of the cosmic microwave background radiation along with Robert Woodrow Wilson, which helped establish the Big Bang theory of cosmology.

[4:17:121] Saul Perlmutter (USA) - For their contributions as a U.S. astrophysicist at the Lawrence Berkeley National Laboratory and a professor of physics at the University of California, Berkeley.

[4:17:122] Charles Dillon Perrine (USA, Argentina, 1867 — 1951) - For their contributions as an American astronomer living in Argentina. He won the Lalande Prize in 1897.

[4:17:123] Henri Joseph Anastase Perrotin (France, 1845 — 1904) - For their contributions as a French astronomer and a discoverer of minor planets.

[4:17:124] Christian Heinrich Friedrich Peters (Germany, USA, 1813 — 1890) - For their contributions as a German–American university teacher and astronomer at the Litchfield Observatory of Hamilton College, New York, and a pioneer in the study and visual discovery of asteroids.

[4:17:125] George Henry Peters (USA, 1863 — 1947) - For their contributions as a US astronomer and a discoverer of minor planets.

[4:17:126] Mark M. Phillips (USA, 1951 —) - For their contributions as an American astronomer who works on the observational studies of all classes of supernovae.

[4:17:127] Giuseppe Piazzi (Italy, 1746 — 1826) - For their contributions as an Italian Catholic priest of the Theatine order, mathematician, and astronomer.

[4:17:128] Edward Charles Pickering (USA, 1846 — 1919) - For their contributions as an American astronomer and physicist and the older brother of William Henry Pickering.

[4:17:129] William Henry Pickering (USA, 1858 — 1938) - For their contributions as an American astronomer.

[4:17:130] Maynard Pittendreigh (USA, 1954 —) - For their contributions as an astronomer, writer and an ordained minister in the Presbyterian Church (USA).

[4:17:131] Phil Plait (USA) - For their contributions as an American astronomer, skeptic, writer and popular science blogger.

[4:17:132] Giovanni Antonio Amedeo Plana (Italy, 1781 — 1864) - For their contributions as an Italian astronomer and mathematician.

[4:17:133] Petrus Plancius (Netherlands, 1552 — 1622) - For their contributions as a Dutch-Flemish astronomer, cartographer and clergyman.

[4:17:134] John Stanley Plaskett (Canada, 1865 — 1941) - For their contributions as a Canadian astronomer.

[4:17:135] Norman Robert Pogson (UK, 1829 — 1891) - For their contributions as an English astronomer who worked in India at the Madras observatory; he discovered several minor planets and made observations on comets.

[4:17:136] Christian Pollas (France) - For their contributions as a French astronomer and a discoverer of minor planets and an observer of supernovae.

[4:17:137] John Pond (England, 1767 — 1836) - For their contributions as a renowned English astronomer who became the sixth Astronomer Royal, serving from 1811 to 1835.

[4:17:138] Jean-Louis Pons (France, 1761 — 1831) - For their contributions as a French astronomer.

[4:17:139] Carolyn Porco (USA, 1953 —) - For their contributions as an American planetary scientist who explores the outer solar system, beginning with her imaging work on the Voyager missions to Jupiter, Saturn, Uranus and Neptune in the 1980s.

[4:17:140] Vladimír Porubčan (Slovakia, 1940 —) - For their contributions as a Slovak astronomer.

[4:17:141] Charles Pritchard (UK, 1808 — 1893) - For their contributions as a British astronomer, clergyman, and educational reformer.

[4:17:142] Richard Proctor (England, 1837 — 1888) - For their contributions as an English astronomer.

[4:17:143] Ptolemy of Alexandria (Roman Egypt, circa 85 — 165) - Also extolled for his contributions as a philosopher, but herein extolled as an astronomer.

[4:17:144] Pierre Puiseux (France, 1855 — 1928) - For their contributions as a French astronomer.

[4:17:145] Georg Purbach (Germany, 1423 — 1461) - For their contributions as an Austrian astronomer, mathematician and instrument maker, best known for his streamlined presentation of Ptolemaic astronomy in the *Theoricae Novae Planetarum*.

[4:17:146] Pythagoras of Samos (580 BC — 500 BC) - Also extolled for being a philosopher, but herein extolled for his contributions to astronomy.

[4:17:147] Paris Pişmiş (1911 — 1999) - For their contributions as an Armenian-Mexican astronomer.

[4:17:148] Adolphe Quetelet (Belgium, 1796 — 1874) - For their contributions as a Belgian astronomer, mathematician, statistician and sociologist.

[4:17:149] Ali Qushji (Ottoman Empire, 1403 — 1474) - For their contributions as an astronomer, mathematician and physicist originally from Samarkand, who settled in the Ottoman Empire some time before 1472.

[4:17:150] M. Shahid Qureshi (Pakistan) - For their contributions as a Pakistani astrophysicist and a renowned astronomer.

Extolled Astronomers (Surnames “R, S, and T”)

[4:18:1] David Lincoln Rabinowitz (USA, 1960 —) - For their contributions as an American astronomer, discoverer of minor planets and researcher at Yale University.

[4:18:2] Grote Reber (USA, 1911 — 2002) - For their contributions as an American pioneer of radio astronomy, which combined his interests in amateur radio and amateur astronomy.

[4:18:3] Martin Rees (UK, 1942 —) - For their contributions as a British cosmologist and astrophysicist.

[4:18:4] Hubert Reeves (CA, 1932 —) - For their contributions as a French Canadian astrophysicist and populariser of science.

[4:18:5] Regiomontanus (Johannes Müller) (Germany, 1436 — 1476) - For their contributions as a mathematician and astronomer of the German Renaissance.

[4:18:6] Julius Reichelt (Germany, 1637 — 1717) - For their contributions as a German mathematician and astronomer who may have set up the first observatory in the city of Strasbourg.

[4:18:7] Erasmus Reinhold (Prussia, Germany, 1511 — 1553) - For their contributions as a German astronomer and mathematician, considered to be the most influential astronomical pedagogue of his generation.

[4:18:8] Karl Reinmuth (Germany, 1892 — 1979) - For their contributions as a German astronomer and a prolific discoverer of 395 minor planets.

[4:18:9] Pieter Johannes van Rhijn (Netherlands, 1886 — 1960) - For their contributions as a Dutch astronomer.

[4:18:10] Giovanni Battista Riccioli (Italy, 1598 — 1671) - For their contributions as an Italian astronomer and a Catholic priest in the Jesuit order.

[4:18:11] Jean Richer (France, 1630 — 1696) - For their contributions as a French astronomer and assistant (élève astronome) at The French Academy of Sciences, under the direction of Giovanni Domenico Cassini.

[4:18:12] Adam Riess (USA) - For their contributions as an American astrophysicist and Bloomberg Distinguished Professor at Johns Hopkins University and the Space Telescope Science Institute and is known for his research in using supernovae as cosmological probes.

[4:18:13] Fernand Rigaux (Belgium) - For their contributions as a Belgian astronomer and observer of variable stars, minor planets and comets at the Royal Observatory at Uccle, Belgium.

[4:18:14] George Willis Ritchey (USA, 1864 — 1945) - For their contributions as an American optician and telescope maker and astronomer.

[4:18:15] David Rittenhouse (USA, 1732 — 1796) - For their contributions as an American astronomer, inventor, clockmaker, mathematician, surveyor, scientific instrument craftsman, and public official.

[4:18:16] Hans-Walter Rix (Germany, 1964 —) - For their contributions as a German astronomer and director of the Max Planck Institute for Astronomy in Heidelberg.

[4:18:17] Arjen Roelofs (Netherlands, 1754 — 1824) - For their contributions as a Dutch astronomer.

[4:18:18] Elizabeth Roemer (USA, 1929 —) - For their contributions as an American astronomer whose research interests centred on comets and asteroids.

[4:18:19] Roger of Hereford (England) (c. 1176 — 1198) - For their contributions as a medieval English astronomer.

[4:18:20] Ole Christensen Rømer (Denmark, 1644 — 1710) - For their contributions as a Danish astronomer who, in 1676, made the first quantitative measurements of the speed of light.

[4:18:21] Otto A. Rosenberger (Germany, 1800 — 1890) - For their contributions as a Baltic German astronomer.

[4:18:22] Svein Rosseland (Norway, 1894 — 1985) - For their contributions as a Norwegian astrophysicist and a pioneer in the field of theoretical astrophysics.

[4:18:23] Bruno Rossi (Italy, 1905 — 1993) - For their contributions as an Italian experimental physicist.

[4:18:24] Vera Rubin (USA, 1928 —) - For their contributions as an American astronomer who pioneered work on galaxy rotation rates.

[4:18:25] Henry Chamberlain Russell (Australia, 1836 — 1907) - For their contributions as an Australian astronomer and meteorologist.

[4:18:26] Henry Norris Russell (USA, 1877 — 1957) - For their contributions as an American astronomer.

[4:18:27] Martin Ryle (UK, 1918 — 1984) - For their contributions as an English radio astronomer who developed revolutionary radio telescope systems (see e.g. aperture synthesis) and used them for accurate location and imaging of weak radio sources.

[4:18:28] Sir Edward Sabine (Ireland, 1788 — 1883) - For their contributions as an Irish astronomer, geophysicist, ornithologist, explorer, soldier and the 30th president of the Royal Society.

[4:18:29] Carl Sagan (USA, 1934 — 1996) - For their contributions as an American astronomer, cosmologist, astrophysicist, astrobiologist, author, science populariser, and science communicator in astronomy and other natural sciences.

[4:18:30] Megh Nad Saha (India, 1893 – 1956) - For their contributions as an Indian astrophysicist best known for his development of the Saha ionisation equation, used to describe chemical and physical conditions in stars.

[4:18:31] Edwin Ernest Salpeter (Austria, Australia, USA, 1924 — 2008) - For their contributions as an Austrian–Australian–American astrophysicist.

[4:18:32] Allan Rex Sandage (USA, 1926 — 2010) - For their contributions as an American astronomer.

[4:18:33] Hendricus Gerardus van de Sande Bakhuyzen (Netherlands, 1838 — 1923) - For their contributions as a Dutch astronomer.

[4:18:34] Wallace Leslie William Sargent (UK, USA, 1935 — 2012) - For their contributions as a British-born American astronomer.

[4:18:35] Anneila Sargent (UK, USA, 1942 —) - For their contributions as a Scottish–American astronomer, who specialises in star formation.

[4:18:36] Naoto Sato (Japan, 1953 —) - For their contributions as a Japanese amateur astronomer, discoverer of minor planets, and, by profession, a junior high school science teacher.

[4:18:37] Alexandre Schaumasse (France, 1882 — 1958) - For their contributions as a French astronomer and discoverer of comets and minor planets.

[4:18:38] Giovanni Schiaparelli (Italy, 1835— 1910) - For their contributions as an Italian astronomer and science historian.

[4:18:39] Frank Schlesinger (USA, 1871 — 1943) - For their contributions as an American astronomer.

[4:18:40] Bernhard Schmidt (Estonia, Sweden, Germany, 1879 — 1935) - For their contributions as a German optician.

[4:18:41] Brian P. Schmidt (USA) - For their contributions as the Vice-Chancellor of the Australian National University (ANU).

[4:18:42] Maarten Schmidt (Netherlands, 1929 —) - For their contributions as a Dutch astronomer who measured the distances of quasars.

[4:18:43] Robert Schommer (USA, 1946 — 2001) - For their contributions as an American observational astronomer.

[4:18:44] Johann Hieronymus Schröter (Germany, 1745 — 1816) - For their contributions as a German astronomer.

[4:18:45] Lipót Schulhof (Hungary, 1847—1921) - For their contributions as a Hungarian-Jewish astronomer.

[4:18:46] Heinrich Christian Schumacher (Germany, 1780 — 1850) - For their contributions as a German-Danish astronomer and mathematician.

[4:18:47] Hans-Emil Schuster (Germany, 1934 —) - For their contributions as a German astronomer and a discoverer of minor planets and comets.

[4:18:48] Samuel Heinrich Schwabe (Germany, 1789 — 1875) - For their contributions as a German astronomer remembered for his work on sunspots.

[4:18:49] Karl Schwarzschild (Germany, 1873 — 1916) - For their contributions as a German physicist and astronomer.

[4:18:50] Martin Schwarzschild (Germany, USA, 1912 — 1997) - For their contributions as a German-born American astrophysicist.

[4:18:51] Friedrich Karl Arnold Schwassmann (Germany, 1870 — 1964) - For their contributions as a German astronomer and a discoverer of 22 minor planets and 4 comets, who worked at AOP in Potsdam and at Bergedorf Observatory in Hamburg.

[4:18:52] James Vernon Scotti (USA, 1960 —) - For their contributions as an American astronomer.

[4:18:53] Frederick Hanley Seares (USA, 1873 — 1964) - For their contributions as an American astronomer.

[4:18:54] George Mary Searle (USA, 1839 — 1918) - For their contributions as an American astronomer and Catholic priest.

[4:18:55] Angelo Secchi (Italy, 1818 — 1878) - For their contributions as an Italian astronomer.

[4:18:56] Sadao Sei (Japan) - For their contributions as a Japanese astronomer who discovered an asteroid in 1983.

[4:18:57] Waltraut Seitter (Germany, 1930 — 2007) - For their contributions as a German astronomer.

[4:18:58] Tsutomu Seki (Japan, 1930 —) - For their contributions as a Japanese astronomer and discoverer of minor planets and comets.

[4:18:59] Carl Keenan Seyfert (USA, 1911 — 1960) - For their contributions as an American astronomer.

[4:18:60] Grigory Abramovich Shajn (Russia, 1892 — 1956) - For their contributions as a Soviet/Russian astronomer.

[4:18:61] Pelageya Fedorovna Shajn (Russia, 1894 — 1956) - For their contributions as a Russian astronomer in the Soviet Union and the first woman to discover a minor planet at the Simeiz Observatory in 1928.

[4:18:62] Harlow Shapley (USA, 1885 — 1972) - For their contributions as an American scientist, head of the Harvard College Observatory (1921–1952), and political activist during the latter New Deal and Fair Deal.

[4:18:63] Richard Sheepshanks (UK, 1794 — 1855) - For their contributions as an English astronomer.

[4:18:64] Shen Kuo (China, 1031 — 1095) - For their contributions as a Han Chinese polymathic scientist and statesman of the Song dynasty (960–1279).

[4:18:65] Shi Shen (China, fl. 4th century BC) - For their contributions as a Chinese astronomer and contemporary of Gan De.

[4:18:66] Shibukawa Shunkai (Japan, 1639 — 1715) - For their contributions as a Japanese scholar, go player and the first official astronomer appointed of the Edo period.

[4:18:67] Yoshisada Shimizu (Japan) - For their contributions as a Japanese amateur astronomer and a prolific discoverer of hundreds of asteroids since 1993.

[4:18:68] Shinzo Shinjo (Japan, 1873 — 1938) - For their contributions as a Japanese academic, physicist, astronomer and president of Kyoto University.

[4:18:69] Qutb eddin Shirazi (Persia, 1236 — 1311) - For their contributions as a 13th-century Iranian polymath and poet who made contributions to astronomy, mathematics, medicine, physics, music theory, philosophy and Sufism.

[4:18:70] Iosif Samuilovich Shklovsky (Russia, 1916 — 1985) - For their contributions as a Soviet astronomer and astrophysicist.

[4:18:71] Carolyn Jean Spellmann Shoemaker (USA, 1929 —) - For their contributions as an American astronomer and is a co-discoverer of Comet Shoemaker–Levy 9.

[4:18:72] Eugene Merle Shoemaker (USA, 1928 — 1997) - For their contributions as an American geologist and one of the founders of the field of planetary science.

[4:18:73] Willem de Sitter (Netherlands, 1872 — 1934) - For their contributions as a Dutch mathematician, physicist, and astronomer.

[4:18:74] Charlotte Moore Sitterly (USA, 1898 — 1990) - For their contributions as an American astronomer.

[4:18:75] Brian A. Skiff (USA) - For their contributions as an American astronomer noted for discovering numerous asteroids and a number of comets.

[4:18:76] John Francis Skjellerup (Australia, South Africa, 1875 — 1952) - For their contributions as an Australian who spent about a decade working as a telegraphist in South Africa, and was an astronomer.

[4:18:77] Vesto Melvin Slipher (USA, 1875 — 1969) - For their contributions as an American astronomer who performed the first measurements of radial velocities for galaxies; he noticed redshifts providing the first empirical basis for the expansion of the universe.

[4:18:78] Tamara Mikhaylovna Smirnova (Russia, 1918 —) - For their contributions as a Soviet/Russian astronomer and a discoverer of minor planets and comets.

[4:18:79] George Smoot (USA, 1945 —) - For their contributions as an American astrophysicist, cosmologist, and a Nobel laureate.

[4:18:80] William Henry Smyth (UK, 1788 — 1865) - For their contributions as a Royal Navy officer, hydrographer, astronomer and numismatist.

[4:18:81] Willebrord Snel van Royen (Snellius) (Netherlands, 1580 — 1626) - For their contributions as a Dutch astronomer and mathematician.

[4:18:82] Mary Fairfax Somerville (UK, 1780 — 1872) - For their contributions as a Scottish science writer and polymath.

[4:18:83] Sir James South (UK, 1785 — 1867) - For their contributions as a British astronomer.

[4:18:84] Sir Harold Spencer Jones (UK, 1890 — 1960) - For their contributions as an English astronomer.

[4:18:85] Lyman Spitzer (USA, 1914 — 1997) - For their contributions as an American theoretical physicist, astronomer and mountaineer.

[4:18:86] Friederich Wilhelm Gustav Spörer (Germany, 1822 — 1895) - For their contributions as a German astronomer.

[4:18:87] Rainer Spurzem (Germany, 1956 —) - For their contributions as a German astronomer at the Astronomisches Rechen-Institut.

[4:18:88] Anton Staus (Germany, 1872 — 1955) - For their contributions as a German astronomer.

[4:18:89] Joel Stebbins (USA, 1878 — 1966) - For their contributions as an American astronomer who pioneered photoelectric photometry in astronomy.

[4:18:90] Johan Stein (Netherlands, 1871 — 1951) - For their contributions as a Dutch astronomer and a member of the Society of Jesus.

[4:18:91] Karl August von Steinheil, (Germany, 1801 — 1870) - For their contributions as a German physicist, inventor, engineer and astronomer.

[4:18:92] Édouard Stephan (France, 1837 — 1923) - For their contributions as a French astronomer.

[4:18:93] Charles Bruce Stephenson (USA, 1929 – 2001) - For their contributions as an American astronomer.

[4:18:94] David J. Stevenson (New Zealand, 1948 —) - For their contributions as a professor of planetary science at Caltech.

[4:18:95] Edward James Stone (1831 — 1897) - For their contributions as an English astronomer.

[4:18:96] F. J. M. Stratton (UK, 1881 — 1960) - For their contributions as a British astrophysicist.

[4:18:97] Bengt Georg Daniel Strömberg (Denmark, 1908 — 1987) - For their contributions as a Danish astronomer and astrophysicist.

[4:18:98] Friedrich Georg Wilhelm (von) Struve (Germany, Russia, 1793 — 1864) - For their contributions as a German-Russian astronomer and geodesist from the famous Struve family.

[4:18:99] Karl Hermann Struve (Russia, Germany, 1854 — 1920) - For their contributions as a Russian astronomer.

[4:18:100] Gustav Wilhelm Ludwig Struve (Russia, 1858 — 1920) - For their contributions as a Baltic German astronomer, part of the famous Baltic German Struve family.

[4:18:101] Otto Struve (Russia, USA, 1897 — 1963) - For their contributions as a Russian-American astronomer.

[4:18:102] Otto Wilhelm (von) Struve (Russia, 1819 — 1905) - For their contributions as a Baltic German astronomer.

[4:18:103] Su Song (China, 1020—1101) - For their contributions as a renowned Hokkien polymath who was described as a scientist, mathematician, statesman, astronomer, cartographer, horologist, medical doctor, pharmacologist, mineralogist, zoologist, botanist, mechanical and architectural engineer, poet, antiquarian, and ambassador of the Song Dynasty (960–1279).

[4:18:104] Matsuo Sugano (Japan) - For their contributions as a Japanese astronomer.

[4:18:105] Atsushi Sugie (Japan) - For their contributions as a Japanese astronomer and a discoverer of minor planets.

[4:18:106] Nicholas Suntzeff (USA, 1952 —) - For their contributions as an American University Distinguished Professor and holds the Mitchell/Heep/Munnerlyn Chair of Observational Astronomy in the Department of Physics & Astronomy at Texas A&M University where he is Director of the Astronomy Program.

[4:18:107] Rashid Alievich Sunyaev (Uzbekistan, Russia, Germany, 1943 —) - For their contributions as a Soviet and Russian astrophysicist of Tatar descent.

[4:18:108] Shohei Suzuki (Japan) - For their contributions as a Japanese astronomer and a discoverer of minor planets.

[4:18:109] Lewis A. Swift (USA, 1820 — 1913) - For their contributions as an American astronomer who discovered 13 comets and 1,248 previously uncatalogued nebulae.

[4:18:110] Frédéric Sy (France) - For their contributions as a French astronomer and a discoverer of minor planets.

[4:18:111] Samad Rizvi (Pakistan, 1924 — 2009) - For their contributions as an Indian-Pakistani physicist.

[4:18:112] Akihiko Tago (Japan, 1932 —) - For their contributions as a Japanese amateur astronomer.

[4:18:113] Atsushi Takahashi (Japan) - For their contributions as a Japanese amateur astronomer and discoverer of minor planets.

[4:18:114] Kesao Takamizawa (Japan, 1952 —) - For their contributions as a Japanese astronomer and entomologist.

[4:18:115] Jill Tarter (USA, 1944 —) - For their contributions as an American astronomer best known for her work on the search for extraterrestrial intelligence (SETI).

[4:18:116] Joseph Hooton Taylor Jr. (USA, 1941 —) - For their contributions as an American astrophysicist and Nobel Prize in Physics laureate for his discovery with Russell Alan Hulse of a "new type of pulsar, a discovery that has opened up new possibilities for the study of gravitation."

[4:18:117] John Tebbutt (Australia, 1834 — 1916) - For their contributions as an Australian astronomer, famous for discovering the "Great Comet of 1861".

[4:18:118] Ernst Wilhelm Leberecht Tempel (Germany, 1821 — 1889) - For their contributions as a German astronomer who worked in Marseille until the outbreak of the Franco-Prussian War in 1870, then later moved to Italy.

[4:18:119] Thabit ibn Qurra (Iraq, 826 — 901) - For their contributions as a Arab Sabian mathematician, physician, astronomer, and translator.

[4:18:120] Thorvald Nicolai Thiele (Denmark, 1838 — 1910) - For their contributions as a Danish astronomer and director of the Copenhagen Observatory.

[4:18:121] Louis Thollon (France, 1829 — 1887) - For their contributions as a French astronomer.

[4:18:122] Norman G. Thomas (USA) - For their contributions as an American astronomer and discoverer of minor planets.

[4:18:123] John Thome (USA, Argentina, 1843 — 1908) - For their contributions as an American-Argentine astronomer.

[4:18:124] Kip Stephen Thorne (USA, 1940 —) - For their contributions as an American theoretical physicist and Nobel laureate, known for his contributions in gravitational physics and astrophysics.

[4:18:125] Friedrich Tietjen (Germany, 1834 — 1895) - For their contributions as a German astronomer.

[4:18:126] Beatrice Muriel Hill Tinsley (New Zealand, USA, 1941 — 1981) - For their contributions as a British-born New Zealand astronomer and cosmologist whose research made fundamental contributions to the astronomical understanding of how galaxies evolve, grow and die.

[4:18:127] François Félix Tisserand (France, 1845 — 1896) - For their contributions as a French astronomer.

[4:18:128] Johann Daniel Titius (Germany, 1729 — 1796) - For their contributions as a German astronomer and a professor at Wittenberg.

[4:18:129] Yasuo Tanaka (Japan) - For their contributions as a Japanese astrophysicist and a member of the Japan Academy.

[4:18:130] Clyde W. Tombaugh (USA, 1906 — 1997) - For their contributions as an American astronomer; he discovered Pluto in 1930, the first object to be discovered in what would later be identified as the Kuiper belt.

[4:18:131] Kōichirō Tomita (Japan, 1925 — 2006) - For their contributions as a Japanese astronomer, discoverer of minor planets and comets.

[4:18:132] Richard Tousey (USA, 1908 — 1997) - For their contributions as an American astronomer.

[4:18:133] Charles Townes (USA) - For their contributions as an American physicist and inventor of the maser.

[4:18:134] Virginia Trimble (USA) - For their contributions as an American astronomer specialising in the structure and evolution of stars and galaxies, and the history of astronomy.

[4:18:135] Chad Trujillo (USA, 1973 —) - For their contributions as an American astronomer, discoverer of minor planets and the co-discoverer of Eris, the most massive dwarf planet known in the Solar System.

[4:18:136] Robert Julius Trumpler (USA, 1886 — 1956) - For their contributions as a Swiss-American astronomer.

[4:18:137] R. Brent Tully (USA) - For their contributions as an astronomer at the Institute for Astronomy in Honolulu, Hawaii.

[4:18:138] Herbert Hall Turner (England, 1861 — 1930) - For their contributions as a British astronomer and seismologist.

[4:18:139] Nasir al-Din Tusi (Persia, 1201 — 1274) - For their contributions as a Persian polymath, architect, philosopher, physician, scientist, and theologian.

[4:18:140] Horace Parnell Tuttle (USA, 1839 — 1923) - For their contributions as an American astronomer.

[4:18:141] Neil deGrasse Tyson (USA, 1958 —) - For their contributions as an American astrophysicist, author, and science communicator.

Extolled Astronomers (Surnames “U, V, W, X, Y, and Z”)

[4:19:1] Seiji Ueda (Japan, 1952 —) - For their contributions as a Japanese astronomer; he is a prolific discoverer of minor planets.

[4:19:2] Ulugh Beg (Persia, 1394 — 1449) - For their contributions as a Timurid Sultan as well as an astronomer and mathematician.

[4:19:3] Antonio de Ulloa (Spain), (1716 — 1795) - For their contributions as a Spanish general of the navy, explorer, scientist, author, astronomer, colonial administrator and the first Spanish governor of Louisiana.

[4:19:4] Albrecht Unsöld (Germany, 1905 — 1995) - For their contributions as a German astrophysicist known for his contributions to spectroscopic analysis of stellar atmospheres.

[4:19:5] Takeshi Urata (Japan) - For their contributions as a Japanese astronomer.

[4:19:6] Mu’ayyad al-Din al-Urdi (Persia d. 1266) - For their contributions as a medieval Arab astronomer and geometer.

[4:19:7] Fumiaki Uto (Japan) - For their contributions as a Japanese amateur astronomer and a discoverer of minor planets.

[4:19:8] Yrjö Väisälä (Finland, 1891 — 1971) - For their contributions as a Finnish astronomer and physicist.

[4:19:9] Benjamin Valz (France, 1787 — 1867) - For their contributions as a French astronomer.

[4:19:10] James Van Allen (USA, 1914 — 2006) - For their contributions as an American space scientist at the University of Iowa.

[4:19:11] George Van Biesbroeck (Belgium, USA, 1880 — 1974) - For their contributions as a Belgian–American astronomer.

[4:19:12] Fritz Zwicky (Switzerland, USA, 1898 — 1974) - For their contributions as a Swiss astronomer.

[4:19:13] Peter van de Kamp (USA, 1901 — 1995) - For their contributions as a Dutch astronomer who lived in the United States most of his life.

[4:19:14] Sidney van den Bergh (Canada, 1929 —) - For their contributions as a retired Canadian astronomer.

[4:19:15] Zu Chongzhi (China, 429 — 500) - For their contributions as a Chinese astronomer, mathematician, politician, inventor, and writer during the Liu Song and Southern Qi dynasties.

[4:19:16] Felix Ziegel (Soviet Union, 1920 — 1988) - For their contributions as a Soviet researcher, Doctor of Science and docent of Cosmology at the Moscow Aviation Institute, author of more than forty popular books on astronomy and space exploration, generally regarded as a founder of Russian ufology.

[4:19:17] Hendrik van Gent (Netherlands, South Africa, 1900 — 1947) - For their contributions as a Dutch astronomer.

[4:19:18] Yvon Villarceau (France, 1813 — 1883) - For their contributions as a French astronomer, mathematician, and engineer.

[4:19:19] Julie Vinter Hansen (Denmark), 1890 — 1960) - For their contributions as a Danish astronomer.

[4:19:20] Hermann Carl Vogel (Germany, 1841 — 1907) - For their contributions as a German astrophysicist.

[4:19:21] Zdeňka Vávrová (Czech Republic or Slovakia) - For their contributions as a Czech astronomer.

[4:19:22] Philippe Véron (France, 1939 —) - For their contributions as a French astronomer.

[4:19:23] Frank Washington Very (USA, 1852 — 1927) - For their contributions as a U.S. astronomer, astrophysicist, and meteorologist.

[4:19:24] George Wallerstein (1930 —) - For their contributions as a United States astronomer who researches the chemical composition of stellar atmospheres.

[4:19:25] William Wales (UK, ca. 1734 — 1798) - For their contributions as a British mathematician and astronomer who sailed with Captain Cook on two voyages of discovery.

[4:19:26] Dennis Walsh (UK, 1933 — 2005) - For their contributions as an English astronomer.

[4:19:27] Qingde Wang (USA/China) - For their contributions as a professor of astronomy at the University of Massachusetts Amherst.

[4:19:28] Kazuro Watanabe (Japan, 1955 —) - For their contributions as a Japanese amateur astronomer and prolific discoverer of minor planets.

[4:19:29] James Craig Watson (USA, 1838 — 1880) - For their contributions as a Canadian-American astronomer, discoverer of comets and minor planets, director of the Ann Arbor Observatory, and awarded with the Lalande Prize in 1869.

[4:19:30] Edmund Weaver (UK, 1663 — 1748) - For their contributions as an English astronomer and land surveyor.

[4:19:31] Kim Weaver (USA, 1969 —) - For their contributions as an American astrophysics astronomer and professor.

[4:19:32] Thomas William Webb (UK, 1807 — 1885) - For their contributions as a British astronomer.

[4:19:33] Rachel Webster (Australia, 1951 —) - For their contributions as an Australian astrophysicist who became the second female professor of physics in Australia; her main focus areas are extragalactic astronomy and cosmology; she researches black holes and the first stars of the universe.

[4:19:34] Alfred Lothar Wegener (Germany, 1880 — 1930) - For their contributions as a German polar researcher, geophysicist and meteorologist.

[4:19:35] Gary A. Wegner (USA, 1944 —) - For their contributions as an American astronomer, the endowed Leede '49 Professor of Physics and Astronomy at Dartmouth College, and recipient of the Alexander Von Humboldt Prize.

[4:19:36] Wei Pu (China, fl. 11th century) - For their contributions as an 11th-century Chinese astronomer of the Song Dynasty (960-1279 AD).

[4:19:37] Karl von Weizsäcker (Germany, 1912 — 2007) - For their contributions as a German physicist and philosopher.

[4:19:38] Godefroy Wendelin (Belgium, 1580 — 1667) - For their contributions as a Flemish astronomer.

[4:19:39] Richard M. West (Denmark, 1941 —) - For their contributions as a Danish astronomer and discoverer of astronomical objects with a long career at the European Southern Observatory (ESO) and at the International Astronomical Union (IAU).

[4:19:40] Gart Westerhout (Netherlands, USA, 1927 — 2012) - For their contributions as a Dutch-American astronomer.

[4:19:41] Bengt Westerlund (Sweden, 1921 — 2008) - For their contributions as a Swedish astronomer who specialised in observational astronomy.

[4:19:42] J. G. Westphal (Germany) - For their contributions as a German astronomer and mathematician.

[4:19:43] Johann Heinrich Westphal (Germany, Italy, 1794 — 1831) - For their contributions as a German astronomer.

[4:19:44] George Wetherill (1925 — 2006) - For their contributions as the Director Emeritus, Department of Terrestrial Magnetism, Carnegie Institution of Washington, DC, USA.

[4:19:45] John Archibald Wheeler (USA, 1911 — 2008) - For their contributions as an American theoretical physicist.

[4:19:46] Fred Lawrence Whipple (USA, 1906 — 2004) - For their contributions as an American astronomer, who worked at the Harvard College Observatory for over 70 years.

[4:19:47] Albert Whitford (USA, 1905 — 2002) - For their contributions as an American physicist and astronomer.

[4:19:48] Mary Watson Whitney (USA, 1847 – 1921) - For their contributions as an American astronomer and for 22 years the head of the Vassar Observatory where 102 scientific papers were published under her guidance.

[4:19:49] Chandra Wickramasinghe (UK, 1939 —) - For their contributions as a Sri Lankan-born British mathematician, astronomer and astrobiologist of Sinhalese ethnicity.

[4:19:50] Paul Wild (Switzerland, 1925 — 2014) - For their contributions as a Swiss astronomer and director of the Astronomical Institute of the University of Bern, who discovered numerous comets, asteroids and supernovae.

[4:19:51] Olin C. Wilson (USA, 1909 — 1994) - For their contributions as an American astronomer best known for his work as a stellar spectroscopist.

[4:19:52] Robert Wilson (USA, 1936 —) - For their contributions as an American astronomer who, along with Arno Allan Penzias, discovered cosmic microwave background radiation (CMB) in 1964.

[4:19:53] Rogier Windhorst (USA, 1955 —) - For their contributions as an astronomer and a professor of physics and astronomy at Arizona State University.

[4:19:54] John Winthrop (Massachusetts Bay Colony, 1714 — 1779) - For their contributions as the 2nd Hollis Professor of Mathematics and Natural Philosophy in Harvard College; he was a distinguished mathematician, physicist and astronomer.

[4:19:55] Friedrich August Theodor Winnecke (Germany, 1835 — 1897) - For their contributions as a German astronomer.

[4:19:56] Carl Wirtanen (USA, 1910 — 1990) - For their contributions as an American astronomer and discoverer of comets and minor planets who worked at Lick Observatory.

[4:19:57] Jack Wisdom (USA) - For their contributions as a Professor of Planetary Sciences at the Massachusetts Institute of Technology.

[4:19:58] Gustav Witt (Germany, 1866 — 1946) - For their contributions as a German astronomer and discoverer of two asteroids who worked at the Berlin Urania Observatory, a popular observatory of the Urania astronomical association of Berlin.

[4:19:59] Maximilian Wolf (Germany, 1863 — 1932) - For their contributions as a German astronomer and a pioneer in the field of astrophotography.

[4:19:60] Aleksander Wolszczan (Poland, 1946 —) - For their contributions as a Polish astronomer; he is the co-discoverer of the first extrasolar planets and pulsar planets.

[4:19:61] Richard van der Riet Woolley (UK, 1906 — 1986) - For their contributions as an English astronomer who became Astronomer Royal.

[4:19:62] Thomas Wright (UK, 1711 — 1786) - For their contributions as an English astronomer, mathematician, instrument maker, architect and garden designer; he was the first to describe the shape of the Milky Way and to speculate that faint nebulae were distant galaxies.

[4:19:63] Issei Yamamoto (Japan, 1889 — 1959) - For their contributions as a Japanese astronomer.

[4:19:64] Masayuki Yanai (Japan, 1959 —) - For their contributions as a Japanese astronomer; he is a prolific co-discoverer of minor planets.

[4:19:65] Yi Xing (China, 683 — 727) - For their contributions as a Chinese astronomer, mathematician, mechanical engineer and Buddhist monk of the Tang dynasty (618–907).

[4:19:66] Anne Sewell Young (USA, 1871 – 1961) - For their contributions as an American astronomer.

[4:19:67] Charles Augustus Young (USA, 1834 — 1908) - For their contributions as one of the foremost solar spectroscopist astronomers in the United States.

[4:19:68] James Whitney Young (USA, 1941 —) - For their contributions as an American astronomer who worked in the field of asteroid research.

[4:19:69] Judith Young (USA, 1952 — 2014) - For their contributions as an American physicist, astronomer, and educator.

[4:19:70] Franz Xaver von Zach (Germany, 1753 — 1832) - For their contributions as a Hungarian astronomer.

[4:19:71] Abraham Zacuto (Spain/Portugal, 1450 — 1510) - For their contributions as a Spanish astronomer, astrologer, mathematician, rabbi and historian who served as Royal Astronomer to King John II of Portugal.

[4:19:72] John Zarnecki (UK, 1949) - For their contributions as an English space science professor and researcher.

[4:19:73] Yakov Borisovich Zel'dovich (USSR, 1914 — 1987) - For their contributions as a Soviet physicist, who is known for his prolific contributions in cosmology and the physics of thermonuclear and hydrodynamical phenomena.

[4:19:74] Zhang Daqing (China, 1969 —) - For their contributions as a Chinese amateur astronomer.

[4:19:75] Zhang Heng (China, 78 — 139) - For their contributions as a Han Chinese polymath from Nanyang who lived during the Han dynasty.

[4:19:76] Zhang Yuzhe (China, 1902 — 1986) - For their contributions as a Chinese astronomer and director of the Purple Mountain Observatory who is widely regarded as the father of modern Chinese astronomy.

[4:19:77] Lyudmila Vasil'evna Zhuravleva (Russia, Ukraine, —) - For their contributions as a Soviet, Russian and Ukrainian astronomer, who worked at the Crimean Astrophysical Observatory in Nauchnij, where she discovered 213 minor planets.

[4:19:78] Alexander N. Vyssotsky (Russia, USA, 1888 — 1973) - For their contributions as a Russian-American astronomer.

[4:19:79] Emma Vyssotsky (USA, 1894 — 1975) - For their contributions as an American astronomer.

[4:19:80] Arno Arthur Wachmann (Germany, 1902 — 1990) - For their contributions as a German astronomer and discoverer of comets and minor planets.

[4:19:81] Abul Wáfa (Persia, 940 — 997-8) - For their contributions as a Persian mathematician and astronomer who worked in Baghdad.

[4:19:82] Walcher of Malvern (England, d. 1135) - For their contributions as a noted astronomer, astrologer and mathematician.

Extolled Cosmologists

[4:20:1] Tom Abel (1970–) - For their contributions as studying primordial star formation.

[4:20:2] Roberto Abraham (1965–) - For their contributions as studying the shapes of early galaxies.

[4:20:3] Hannes Alfvén (1908–1995) - For their contributions as theorising that galactic magnetic fields could be generated by plasma currents.

[4:20:4] Ralph A. Alpher (1921–2007) - Argued that observed proportions of hydrogen and helium in the universe could be explained by the big bang model, predicted cosmic background radiation.

[4:20:5] Aristarchus of Samos (310–230 BC) - Early proponent of heliocentrism.

[4:20:6] Aristotle (circa 384–322 BC) - Posited a geocentric cosmology that was widely accepted for many centuries.

[4:20:7] Aryabhata (476–550) - Described a geocentric model with slow and fast epicycles.

[4:20:8] Ja'far ibn Muhammad Abu Ma'shar al-Balkhi (787–886) - Conveyed Aristotle's theories from Persia to Europe.

[4:20:9] James M. Bardeen (1939–) - Studied the mathematics of black holes and of vacua under general relativity.

[4:20:10] John D. Barrow (1952–) - Popularised the anthropic cosmological principle.

[4:20:11] Charles L. Bennett (1956–) - Studied the large-scale structure of the universe by mapping irregularities in microwave background radiation.

[4:20:12] Orfeu Bertolami (1959–) - Studied the cosmological constant, inflation, dark energy-dark matter unification and interaction, alternative gravity theories.

[4:20:13] Somnath Bharadwaj - Studied large-scale structure formation.

[4:20:14] James Binney (1950–) - Studied galactic dynamics and supernova disruption of galactic gasses.

[4:20:15] Martin Bojowald (1973–) - Studied loop quantum gravity and established loop quantum cosmology.

[4:20:16] Hermann Bondi (1919–2005) - Developed the steady-state model.

- [4:20:17] Tycho Brahe (1546–1601) - Promoted a geo-heliocentric system of epicycles.
- [4:20:18] Robert Brandenberger (1956–) - Formulated the theory of string gas cosmology, with colleague Cumrun Vafa, and developed cosmological perturbation theory.
- [4:20:19] Bernard J. Carr - Promoted the anthropic principle, studied primordial black holes.
- [4:20:20] Sean M. Carroll (1966–) - Researched dark energy, general relativity, and spontaneous inflation.
- [4:20:21] Gennady V. Chibisov (1946–2008) - Origin of cosmological density perturbations from quantum fluctuations.
- [4:20:22] Peter Coles (1963–) - Modelled galactic clustering and authored several cosmology books.
- [4:20:23] C. B. Collins - Used the anthropic principle to solve the flatness problem.
- [4:20:24] Asantha Cooray (1973–) - Studied dark energy, halo models of large structure, and cosmic microwave radiation.
- [4:20:25] Nicolaus Copernicus (1473–1543) - Formulated a heliocentric cosmology.
- [4:20:26] Paul Davies (1946–) - Developed a vacuum model that explains microwave background fluctuation, studies time's arrow, and has written many popular-press books.
- [4:20:27] Marc Davis (astronomer) (1947–) - Was lead astronomer of a survey of 50,000 high-redshift galaxies.
- [4:20:28] Avishai Dekel (1951–) - Studied galaxy formation and large scale structure in dark matter-dark energy dominated universes.
- [4:20:29] Robert H. Dicke (1916–1997) - Measured background radiation, used an early version of the anthropic principle to relate the gravitational constant to the age of the universe.
- [4:20:30] Mike J. Disney (1937–) - Discovered low surface brightness galaxies.
- [4:20:31] Jürgen Ehlers (1929–2008) - Described gravitational lensing and studied the mathematical implications of an isotropic microwave background.
- [4:20:32] Jaan Einasto (1929–) - Studied structure in the large-scale distribution of superclusters of galaxies, early proponent of dark matter.

[4:20:33] Albert Einstein (1879–1955) - Introduced general relativity and the cosmological constant.

[4:20:34] George F. R. Ellis (1939–) - Theorised a cylindrical steady-state universe with a naked singularity as recycling mechanism.

[4:20:35] Richard S. Ellis (1950–) - Used gravitational lensing and high-redshift supernovae to study the origin of galaxies, large scale structure, and dark matter.

[4:20:36] Sandra M. Faber (1944–) - Discovered the Great Attractor, a supercluster-scale gravitational anomaly; co-inventor of the theory of cold dark matter.

[4:20:37] Carlos S. Frenk (1951–) - Studied cosmic structure formation.

[4:20:38] Alexander Friedmann (1888–1925) - Discovered the expanding-universe solution to general relativity.

[4:20:39] George Gamow (1904–1968) - Argued that observed proportions of hydrogen and helium in the universe could be explained by the big bang model, modelled the mass and radius of primordial galaxies.

[4:20:40] Margaret J. Geller (1947–) - Discovered the Great Wall, a superstructure-scale filament of galaxies.

[4:20:41] Thomas Gold (1920–2004) - Proposed the steady-state theory.

[4:20:42] Gerson Goldhaber (1924–) - Used supernova observations to measure the energy density of the universe.

[4:20:43] J. Richard Gott (1947–) - Proposed the use of cosmic strings for time travel.

[4:20:44] Alan Guth (1947–) - Explained the isotropy of the universe by theorising a phase of exponential inflation soon after the big bang.

[4:20:45] Stephen W. Hawking (1942–2018) - Described singularities in general relativity and developed singularity-free models of the big bang; predicted primordial black holes.

[4:20:46] Charles W. Hellaby - Described models of general relativity with non-constant metric signature.

[4:20:47] Michał Heller (1936–) - Researched non-commutative approaches to quantum relativity.

[4:20:48] Robert C. Herman (1914–1997) - Predicted the background radiation temperature.

- [4:20:49] Lars Hernquist - Studied galaxy formation and evolution.
- [4:20:50] Honorius Augustodunensis (–1151) - Wrote a popular encyclopedia of cosmology, geography, and world history.
- [4:20:51] Hanns Hörbiger (1860–1931) - Formulated a pseudoscientific theory of ice as the basic substance of all cosmic processes.
- [4:20:52] Fred Hoyle (1915–2001) - Promoted the steady state theory, used the anthropic principle to explain the energy levels of carbon nuclei.
- [4:20:53] Edwin P. Hubble (1889–1953) - Demonstrated the existence of other galaxies and confirmed the relation between redshift and distance.
- [4:20:54] John P. Huchra (1948–2010) - Discovered the Great Wall, a superstructure-scale filament of galaxies.
- [4:20:55] Jamal Nazrul Islam (1939–2013) - Published seven books on Cosmology.
- [4:20:56] Ronald Kantowski - Discovered spatially homogeneous but anisotropic solutions to general relativity.
- [4:20:57] Johannes Kepler (1571–1630) - Pioneered heliocentrism, discovered elliptical planetary motion, attempted to explain heavenly motions through physical causes.
- [4:20:58] Isaak Markovich Khalatnikov (1919–) - Conjectured an oscillatory model with an essential singularity for the evolution of the universe.
- [4:20:59] Tom W. B. Kibble (1932–) - Introduced the concept of cosmic strings.
- [4:20:60] Robert Kirshner (1949–) - Discovered the Boötes void, a large region sparsely populated with galaxies, and wrote a popular book on cosmology.
- [4:20:61] Edward Kolb - Studied big bang cosmology including the emergence of baryons and dark matter, and wrote a popular textbook on cosmology.
- [4:20:62] Lawrence M. Krauss (1954–) - Author of popular science books on cosmology including *A Universe from Nothing*.
- [4:20:63] Ofer Lahav (1959–) - Studied dark matter and dark energy.
- [4:20:64] Tod R. Lauer (1957–) - Catalogued massive black holes at galaxy centres and correlated their mass with other properties of the galaxies' structures.

- [4:20:65] Georges Henri Lemaître (1894–1966) - Proposed the big bang theory and the distance-redshift relation.
- [4:20:66] Janna Levin (1967–) - Seeks evidence for a bounded universe of nontrivial topology.
- [4:20:67] Andrew R. Liddle (1965–) - Studied inflationary models, wrote two books on inflation and primordial inhomogeneities.
- [4:20:68] Evgeny M. Lifshitz (1915–1985) - Conjectured an oscillatory model with an essential singularity for the evolution of the universe.
- [4:20:69] Andrei Linde (1948–) - Pioneered inflationary models and proposed eternal chaotic inflation of universes from the false vacuum.
- [4:20:70] Abraham Loeb (1962–) - Researched primordial stars, primordial black holes, quasars, reionization, gravitational lensing, and gamma-ray bursts.
- [4:20:71] David H. Lyth - Studied particle cosmology, wrote two books on inflation and primordial inhomogeneities.
- [4:20:72] João Magueijo (1967–) - Proposed much faster speeds of light in the young universe as an alternative explanation to inflation for its homogeneity.
- [4:20:73] Richard Massey (1977–) - Mapped dark matter in the universe.
- [4:20:74] Charles W. Misner (1932–) - Studied solutions to general relativity including the mixmaster universe and Misner space, wrote influential text on gravitation.
- [4:20:75] John Moffat (1932–) - Proposed much faster speeds of light in the young universe, developed antisymmetric theories of gravity.
- [4:20:76] Lauro Moscardini - Modelled galaxy clustering in the early universe.
- [4:20:77] Anupam Mazumdar (1972-) - Showed existence of a non-singular cosmological and blackhole solution, within ghost free infinite derivative theories of gravity.
- [4:20:78] Jayant Narlikar (1938–) - Promoted steady state theories.
- [4:20:79] Isaac Newton (1642–1727) - Formulated the law of universal gravitation and supported the heliocentric model.
- [4:20:80] György Paál (1934-1992) - In the late 1950s studied the quasar and galaxy cluster distributions, in 1970 from redshift quantisation came up with the idea that the Universe might have nontrivial topological structure.

[4:20:81] Thanu Padmanabhan (1957–) - Studied quantum gravity and quantum cosmology.

[4:20:82] Leonard Parker - Established the study of quantum field theory within general relativity.

[4:20:83] P. James E. Peebles (1935–) - Predicted cosmic background radiation, contributed to structure theory, developed models that avoid dark matter.

[4:20:84] Roger Penrose (1931–) - Linked singularities to gravitational collapse, conjectured the nonexistence of naked singularities, and used gravitational entropy to explain homogeneity.

[4:20:85] Arno Penzias (1933–) - Was the first to observe the cosmic background radiation.

[4:20:86] Saul Perlmutter (1959–) - Used supernova observations to measure the expansion of the universe.

[4:20:87] Mark M. Phillips (1951–) - Used supernova observations to discover acceleration in the expansion of the universe, calibrated the supernova distance scale.

[4:20:88] Joel Primack (1945–) - Co-invented the theory of cold dark matter.

[4:20:89] Ptolemy (90–168) - Wrote the only surviving ancient text on astronomy, conjectured a model of the universe as a set of nested spheres with epicycles.

[4:20:90] Ali Qushji (1403–1474) - Challenged Aristotelian physics, in particular presenting empirical evidence against a stationary Earth, and may have influenced Copernicus.

[4:20:91] Martin Rees (1942–) - Proposed that quasars are powered by black holes, disproved steady state by studying distribution of quasars.

[4:20:92] Yoel Rephaeli - Used the distortion of the cosmic background by high-energy electrons to infer the existence of galaxy clusters.

[4:20:93] Adam Riess (1969–) - Found evidence in supernova data that the expansion of the universe is accelerating and confirming dark energy models.

[4:20:94] Wolfgang Rindler (1924–) - Coined the phrase "event horizon", Rindler Coordinates, and popularised the use of spinors (with Roger Penrose).

[4:20:95] Howard P. Robertson (1903–1961) - Solved the two-body problem in an approximation to general relativity, developed the standard model of general relativity.

[4:20:96] Vera Rubin (1928–2016) - Discovered discrepancies in galactic rotation rates leading to the theory of dark matter.

[4:20:97] Rainer K. Sachs (1932–) - Discovered gravitationally induced redshifts in the cosmic background radiation.

[4:20:98] Carl Sagan (1934–1996) - For his contributions as a prominent American astronomer.

[4:20:99] Allan Sandage (1936–2010) - Set the cosmological distance scale and accurately estimated the speed of expansion of the universe.

[4:20:100] Brian P. Schmidt (1967–) - Used supernova data to measure the acceleration in the expansion of the universe.

[4:20:101] David N. Schramm (1945–1997) - Was an expert on big bang theory and an early proponent of dark matter.

[4:20:102] Dennis W. Sciama (1926–1999) - Studied many aspects of cosmology and supervised many other leading cosmologists.

[4:20:103] Irving Segal (1918–1998) - Created chronogeometric cosmology with alternative solution of the redshift problem.

[4:20:104] Seleucus of Seleucia (fl. c. 150 BC) - Used tidal observations to support a heliocentric model.

[4:20:105] Roman Ulrich Sexl (1939–1986) - Developed an ether-based theory of absolute simultaneity that is mathematically equivalent to special relativity.

[4:20:106] Al-Sijzi (c. 945–1020) - Invented an astrolabe based on heliocentric principles.

[4:20:107] Joseph Silk (1942–) - Explained the homogeneity of the early universe using photon diffusion damping.

[4:20:108] Willem de Sitter (1872–1934) - Developed a theory of dark matter with Einstein, found an expanding matterless solution to general relativity.

[4:20:109] Lee Smolin (1955–) - Studied quantum gravity, popularised a theory of cosmological natural selection.

[4:20:110] George F. Smoot (1945–) - Used Cosmic Background Explorer Satellite to measure the temperature and anisotropy of the early universe.

[4:20:111] David N. Spergel (1961–) - Used Wilkinson Microwave Anisotropy Probe satellite to measure the temperature and anisotropy of the early universe.

[4:20:112] Paul Steinhardt (1952–) - Pioneered inflationary cosmology, introduced first example of eternal inflation, introduced quintessential dark energy, introduced the concept of strongly self-interacting dark matter, studied brane cosmology and cyclic models of the universe.

[4:20:113] Abd al-Rahman al-Sufi (903–986) - Identified the large Magellanic cloud and made the first recorded observation of the Andromeda galaxy.

[4:20:114] Nicholas B. Suntzeff (1952–) - Used supernova observations to discover acceleration in the expansion of the universe, calibrated the supernova distance scale.

[4:20:115] Rashid Sunyaev (1943–) - Developed a theory of density fluctuations in the early universe, described how to use cosmic background distortion to observe large-scale density fluctuations.

[4:20:116] Alex Szalay (1949–) - Was working on structure formation in a neutrino-dominated universe, biased galaxy formation in a cold dark matter dominated universe and computing the power spectrum in hot, cold and warm dark matter dominated universes.

[4:20:117] Max Tegmark (1967–) - Determined the parameters of the lambda-cold dark matter model using Sloan Survey data, studied mathematical models of multiverses.

[4:20:118] William G. Tifft - Theorised that galactic redshifts are quantised.

[4:20:119] Beatrice Tinsley (1941–1981) - Researched galactic evolution, the creation of lightweight elements, and accelerated expansion of the universe.

[4:20:120] Frank J. Tipler (1947–) - Proved that time travel requires singularities, promoted the anthropic principle.

[4:20:121] Richard C. Tolman (1881–1948) - Showed that the cosmic background keeps a black-body profile as the universe expands.

[4:20:122] Trinh Xuan Thuan (1948–) - Researched galaxy formation and evolution.

[4:20:123] Mark Trodden (1968–) - Studied cosmological implications of topological defects in field theories.

[4:20:124] Michael S. Turner (1949–) - Coined the term dark energy.

[4:20:125] Neil Turok (1958–) - Predicted correlations between polarisation and temperature anisotropy in the cosmic background, explained the big bang as a brane collision.

[4:20:126] Henry Tye (1947–) - Proposed brane-antibrane interactions as a cause of inflation.

[4:20:127] Alexander Vilenkin (1949–) - Showed that eternal inflation is generic, studied cosmic strings, theorised the creation of the universe from quantum fluctuations.

[4:20:128] Robert M. Wald (1947–) - Wrote a popular textbook on general relativity, studied the thermodynamics of black holes and created an axiomatic formulation of quantum field theory in curved spacetime.

[4:20:129] Arthur Geoffrey Walker (1909–2001) - Developed the standard model of general relativity and studied the mathematics of relativistic reference frames.

[4:20:130] David Wands - Studied inflation, superstrings, and density perturbations in the early universe.

[4:20:131] Yun Wang (1964–) - Uses supernova and galactic redshift data to probe dark energy.

[4:20:132] Jeffrey Weeks (1956–) - Used cosmic background patterns to determine the topology of the universe.

[4:20:133] Simon D. White (1951–) - Studied galaxy formation in the lambda-cold dark matter model.

[4:20:134] David Todd Wilkinson (1935–2002) - Used satellite probes to measure the cosmic background radiation.

[4:20:135] Edward L. Wright (1947–) - Promoted big bang theories, studied the effect of dust absorption on measurements of the cosmic background.

[4:20:136] Yakov Borisovich Zel'dovich (1914–1987) - Used accretion disks of massive black holes to explain quasars, predicted Compton scattering of the cosmic background.

[4:20:137] Fritz Zwicky (1898–1974) - Along with Walter Baade coined the term "supernova", contributions in understanding neutron stars, supernovae as standard candles, gravitational lensing, and dark matter.

Extolled Astronauts

- [4:21:1] Joseph M. Acaba (1967-) — STS-119, Soyuz TMA-04M
- [4:21:2] Loren Acton (1936—) STS-51-F
- [4:21:3] Mike Adams (1930–1967) — X-15. Died during space flight
- [4:21:4] James Adamson (1946-) — STS-28, STS-43
- [4:21:5] Viktor M. Afanasyev — Soyuz TM-11, Soyuz TM-18, Soyuz TM-29, Soyuz TM-33/32
- [4:21:6] Aydyn Aimbetov — Soyuz TMA-18M
- [4:21:7] Thomas Akers — STS-41, STS-49, STS-61, STS-79
- [4:21:8] Vladimir Aksyonov — Soyuz 22, Soyuz T-2
- [4:21:9] Buzz Aldrin — Gemini 12, Apollo 11
- [4:21:10] Aleksandar Panayotov Aleksandrov — Soyuz TM-5
- [4:21:11] Aleksandr Pavlovich Aleksandrov — Soyuz T-9, Soyuz TM-3
- [4:21:12] Andrew M. Allen — STS-46, STS-62, STS-75
- [4:21:13] Joseph P. Allen — STS-5, STS-51-A
- [4:21:14] Scott Altman — STS-90, STS-106, STS-109, STS-125
- [4:21:15] William Anders — Apollo 8
- [4:21:16] Clayton Anderson — STS-117/120, STS-131
- [4:21:17] Michael P. Anderson, (1959–2003) — STS-89, STS-107. Died in the Space Shuttle Columbia in 2003.
- [4:21:18] Dominic A. Antonelli — STS-119, STS-132
- [4:21:19] Jerome Apt — STS-37, STS-47, STS-59, STS-79
- [4:21:20] Lee Archambault — STS-117, STS-119

- [4:21:21] Neil Armstrong (1930–2012) — Gemini 8, Apollo 11. First person to walk on the Moon.
- [4:21:22] Richard R. Arnold — STS-119
- [4:21:23] Anatoly Artsebarsky — Soyuz TM-12
- [4:21:24] Yuri Artyukhin (1930–1998) — Soyuz 14
- [4:21:25] Jeffrey Ashby — STS-93, STS-100, STS-112
- [4:21:26] Oleg Atkov — Soyuz T-10/11
- [4:21:27] Toktar Aubakirov — Soyuz TM-13/12
- [4:21:28] Sergei Avdeyev — Soyuz TM-15, Soyuz TM-22
- [4:21:29] James P. Bagian, M.D. — STS-29, STS-40
- [4:21:30] Ellen S. Baker — STS-34, STS-50, STS-71
- [4:21:31] Michael Baker — STS-43, STS-52, STS-68, STS-81
- [4:21:32] Aleksandr Balandin — Soyuz TM-9
- [4:21:33] Michael R. Barratt, M.D. — Soyuz TMA-14, STS-133
- [4:21:34] Kayla Barron — No flights.
- [4:21:35] Daniel Barry — STS-72, STS-96, STS-105
- [4:21:36] John-David F. Bartoe — STS-51-F
- [4:21:37] Charlie Bassett (1931–1966) — No flights. Originally assigned to Gemini 9.
- [4:21:38] Yuri Baturin — Soyuz TM-28/27, Soyuz TM-32/31
- [4:21:39] Patrick Baudry — STS-51-G
- [4:21:40] Alan Bean — Apollo 12, Skylab 3
- [4:21:41] Robert L. Behnken — STS-123, STS-130
- [4:21:42] Ivan Bella — Soyuz TM-29/28

- [4:21:43] Pavel Belyayev (1925–1970) — Voskhod 2
- [4:21:44] Georgi Beregovoi (1921–1995) — Soyuz 3
- [4:21:45] Anatoli Berezovoy (1942–2014) — Soyuz T-5/7
- [4:21:46] Brian Binnie — SpaceShipOne flight 17P
- [4:21:47] John Blaha — STS-29, STS-33, STS-43, STS-58, STS-79/81
- [4:21:48] Michael J. Bloomfield — STS-86, STS-97, STS-110
- [4:21:49] Guion Bluford — STS-8, STS-61-A, STS-39, STS-53
- [4:21:50] Karol Bobko — STS-6, STS-51-D, STS-51-J
- [4:21:51] Eric A. Boe — STS-126, STS-133
- [4:21:52] Charles Bolden— STS-61-C, STS-31, STS-45, STS-60
- [4:21:53] Roberta Bondar — STS-42
- [4:21:54] Valentin Bondarenko (1937–1961) - no flights. Died in fire while training in pure oxygen (three weeks before Gagarin's flight).
- [4:21:55] Andrei Borisenko — Soyuz TMA-21
- [4:21:56] Frank Borman — Gemini 7, Apollo 8
- [4:21:57] Stephen G. Bowen — STS-126, STS-132, STS-133
- [4:21:58] Kenneth Bowersox — STS-50, STS-61, STS-73, STS-82, STS-113/Soyuz TMA-1
- [4:21:59] Charles E. Brady, Jr., M.D. (1951–2006) — STS-78
- [4:21:60] Vance Brand — Apollo-Soyuz Test Project, STS-5, STS-41-B, STS-35
- [4:21:61] Daniel Brandenstein — STS-8, STS-51-G, STS-32, STS-49
- [4:21:62] Randolph Bresnik – STS-129
- [4:21:63] Roy Bridges — STS-51-F
- [4:21:64] Curtis Brown — STS-47, STS-66, STS-77, STS-85, STS-95, STS-103

[4:21:65] David M. Brown (1956–2003) — STS-107. Died on the Columbia.

[4:21:66] Mark Brown — STS-28, STS-48

[4:21:67] James Buchli — STS-51-C, STS-61-A, STS-29, STS-48

[4:21:68] Jay C. Buckey, M.D. — STS-90

[4:21:69] Nikolai Budarin — STS-71/Soyuz TM-21, Soyuz TM-27, STS-113/Soyuz TMA-1

[4:21:70] John S. Bull (1934–2008) — No flights.

[4:21:71] Daniel Burbank — STS-106, STS-115, Soyuz TMA-22

[4:21:72] Daniel Bursch — STS-51, STS-68, STS-77, STS-108/111

[4:21:73] Valery Bykovsky — Vostok 5, Soyuz 22, Soyuz 31/29

[4:21:74] Robert D. Cabana — STS-41, STS-53, STS-65, STS-88

[4:21:75] Yvonne Cagle, M.D. Symbol venus.svg — No flights.

[4:21:76] Fernando Caldeiro (1958–2009) — No flights.

[4:21:77] Charles Camarda — STS-114

[4:21:78] Kenneth D. Cameron — STS-37, STS-56, STS-74

[4:21:79] Zena Cardman Symbol venus.svg — No flights.

[4:21:80] Duane G. Carey — STS-109

[4:21:81] Scott Carpenter (1925-2013) — Mercury 7

[4:21:82] Gerald P. Carr — Skylab 4

[4:21:83] Sonny Carter, M.D. (1947–1991) — STS-33

[4:21:84] John Casper — STS-36, STS-54, STS-62, STS-77

[4:21:85] Josh Cassada — No flights.

[4:21:86] Christopher Cassidy — STS-127

[4:21:87] Robert J. Cenker — STS-61-C

- [4:21:88] Eugene Cernan (1934-2017) — Gemini 9A, Apollo 10, Apollo 17
- [4:21:89] Roger B. Chaffee (1935–1967) Died in the fire in Apollo 1
- [4:21:90] Gregory Chamitoff — STS-124/126, STS-134
- [4:21:91] Franklin Chang-Diaz — STS-61-C, STS-34, STS-46, STS-60, STS-75, STS-91, STS-111
- [4:21:92] Philip K. Chapman — No flights
- [4:21:93] Raja Chari — No flights
- [4:21:94] Kalpana Chawla (1961–2003) — STS-87, STS-107. Died on the crash of the Columbia.
- [4:21:95] Maurizio Cheli — STS-75
- [4:21:96] Chen Dong — Shenzhou 11.
- [4:21:97] Chen Quan — No flights. Backup for Shenzhou 7.
- [4:21:98] Leroy Chiao — STS-65, STS-72, STS-92, Soyuz TMA-5
- [4:21:99] Kevin P. Chilton — STS-49, STS-59, STS-76
- [4:21:100] Jean-Loup Chrétien — Soyuz T-6, Soyuz TM-7/6, STS-86
- [4:21:101] Laurel B. Clark, M.D.  (1961–2003) — STS-107. Died on the crash of the Columbia.
- [4:21:102] Mary L. Cleave  — STS-61-B, STS-30
- [4:21:103] Jean-François Clervoy, EAC — STS-66, STS-84, STS-103
- [4:21:104] Michael R. Clifford — STS-53, STS-59, STS-76
- [4:21:105] Michael Coats — STS-41-D, STS-29, STS-39
- [4:21:106] Kenneth Cockrell — STS-56, STS-69, STS-80, STS-98, STS-111
- [4:21:107] Catherine Coleman — STS-73, STS-93, Soyuz TMA-20
- [4:21:108] Eileen Collins — STS-63, STS-84, STS-93, STS-114

- [4:21:109] Michael Collins — Gemini 10, Apollo 11
- [4:21:110] Charles "Pete" Conrad, (1930–1999) — Gemini 5, Gemini 11, Apollo 12, Skylab 2
- [4:21:111] Gordon Cooper (1927–2004) — Mercury 9, Gemini 5
- [4:21:112] Richard O. Covey — STS-51-I, STS-26, STS-38, STS-61
- [4:21:113] Timothy Creamer — Soyuz TMA-17
- [4:21:114] John O. Creighton — STS-51-G, STS-36, STS-48
- [4:21:115] Robert Crippen — STS-1, STS-7, STS-41-C, STS-41-G
- [4:21:116] Samantha Cristoforetti — Soyuz TMA-15M
- [4:21:117] Roger K. Crouch — STS-83, STS-94
- [4:21:118] Frank L. Culbertson, Jr. — STS-38, STS-51, STS-105/108
- [4:21:119] Walter Cunningham — Apollo 7
- [4:21:120] Robert Curbeam — STS-85, STS-98, STS-116
- [4:21:121] Nancy J. Currie — STS-57, STS-70, STS-88, STS-109
- [4:21:122] Bill Dana — X-15 flights 174 and 197
- [4:21:123] Nancy Jan Davis — STS-47, STS-60, STS-85
- [4:21:124] Lawrence J. DeLucas — STS-50
- [4:21:125] Frank De Winne — Soyuz TMA-1/TM-34, Soyuz TMA-15
- [4:21:126] Vladimir N. Dezhurov — Soyuz TM-21/STS-71
- [4:21:127] Georgi Dobrovolski (1928–1971) — Soyuz 11 Died on reentry.
- [4:21:128] Takao Doi — STS-87, STS-123
- [4:21:129] Matthew Dominick — No flights.
- [4:21:130] B. Alvin Drew — STS-118, STS-133

- [4:21:131] Brian Duffy — STS-45, STS-57, STS-72, STS-92
- [4:21:132] Charles Duke — Apollo 16
- [4:21:133] Bonnie J. Dunbar — STS-61-A, STS-32, STS-50, STS-71, STS-89
- [4:21:134] Pedro Duque — STS-95, Soyuz TMA-3/2
- [4:21:135] Samuel T. Durrance — STS-35, STS-67
- [4:21:136] James Dutton — STS-131
- [4:21:137] Lev Dyomin (1926–1998) — Soyuz 15
- [4:21:138] Tracy Caldwell Dyson— STS-118, Soyuz TMA-18
- [4:21:139] Vladimir Dzhanibekov — Soyuz 27/26, Soyuz 39, Soyuz T-6, Soyuz T-12, Soyuz T-13
- [4:21:140] Joe Edwards — STS-89
- [4:21:141] Donn F. Eisele (1930–1987) — Apollo 7
- [4:21:142] Anthony W. England — STS-51-F
- [4:21:143] Joe H. Engle — X-15 flights 138, 143, and 153, STS-2, STS-51-I
- [4:21:144] Jeanette J. Epps — No flights.
- [4:21:145] Ronald Evans (1933–1990) — Apollo 17
- [4:21:146] Reinhold Ewald — Soyuz TM-25/24
- [4:21:147] Léopold Eyharts, EAC — Soyuz TM-27/26, STS-122/123
- [4:21:148] John Fabian — STS-7, STS-51-G
- [4:21:149] Muhammed Faris — Soyuz TM-3/2
- [4:21:150] Bertalan Farkas — Soyuz 36/35
- [4:21:151] Jean-Jacques Favier — STS-78
- [4:21:152] Fei Junlong — Shenzhou 6

[4:21:153] Konstantin Feoktistov (1926–2009) — Voskhod 1

[4:21:154] Christopher Ferguson — STS-115, STS-126, STS-135

[4:21:155] Martin J. Fettman — STS-58

[4:21:156] Andrew J. Feustel — STS-125, STS-134

[4:21:157] Anatoly Filipchenko — Soyuz 7, Soyuz 16

[4:21:158] Michael Fincke — Soyuz TMA-4, Soyuz TMA-13, STS-134

[4:21:159] John L. Finley (1935–2006) — No flights. Trained for the MOL program.

[4:21:160] Anna Lee Fisher, M.D. — STS-51-A

[4:21:161] William Frederick Fisher, M.D. — STS-51-I

[4:21:162] Klaus-Dietrich Flade — Soyuz TM-14/13

[4:21:163] Michael Foale — STS-45, STS-56, STS-63, STS-84/86, STS-103, Soyuz TMA-3

[4:21:164] Kevin A. Ford — STS-128, Soyuz TMA-06M

[4:21:165] Michael Foreman — STS-123, STS-129

[4:21:166] Patrick Forrester — STS-105, STS-117, STS-128

[4:21:167] Michael Fossum — STS-121, STS-124, Soyuz TMA-02M

[4:21:168] Ted Freeman (1930–1964) — No flights.

[4:21:169] Stephen Frick — STS-110, STS-122

[4:21:170] Dirk Frimout — STS-45

[4:21:171] Christer Fuglesang — STS-116, STS-128

[4:21:172] Charles Fullerton (1936-2013) — STS-3, STS-51-F

[4:21:173] Reinhard Furrer (1940–1995) — STS-61-A

[4:21:174] Satoshi Furukawa — Soyuz TMA-02M

[4:21:175] F. Drew Gaffney, M.D. — STS-40

- [4:21:176] Yuri Gagarin (1934–1968) — Vostok 1. First person in space.
- [4:21:177] Ronald Garan — STS-124, Soyuz TMA-21
- [4:21:178] Dale Gardner (1948–2014) — STS-8, STS-51-A
- [4:21:179] Guy Gardner — STS-27, STS-35
- [4:21:180] Marc Garneau — STS-41-G, STS-77, STS-97
- [4:21:181] Owen Garriott — Skylab 3, STS-9
- [4:21:182] Charles Gemar — STS-38, STS-48, STS-62
- [4:21:183] Michael Gernhardt — STS-69, STS-83, STS-94, STS-104
- [4:21:184] Alexander Gerst — Soyuz TMA-13M
- [4:21:185] Edward Gibson — Skylab 4
- [4:21:186] Robert L. Gibson — STS-41-B, STS-61-C, STS-27, STS-47, STS-71
- [4:21:187] Yuri Gidzenko — Soyuz TM-22, Soyuz TM-31/STS-102, Soyuz TM-34/Soyuz TM-33
- [4:21:188] Ed Givens (1930–1967) — No flights. NASA group 5.
- [4:21:189] Yuri Glazkov (1939–2008) — Soyuz 24
- [4:21:190] John Glenn (1921–2016) — Mercury 6, STS-95
- [4:21:191] Victor Glover — No flights.
- [4:21:192] Linda Godwin — STS-37, STS-59, STS-76, STS-108
- [4:21:193] Michael T. Good — STS-125, STS-132
- [4:21:194] Viktor Gorbatko — Soyuz 7, Soyuz 24, Soyuz 37/36
- [4:21:195] Richard Gordon (1929–2017) — Gemini 11, Apollo 12
- [4:21:196] Dominic Gorie — STS-91, STS-99, STS-108, STS-123
- [4:21:197] Ronald Grabe — STS-51-J, STS-30, STS-42, STS-57

- [4:21:198] Duane Graveline, M.D. (1931–2016) — No flights.
- [4:21:199] Georgi Grechko (1931–2017) — Soyuz 17, Soyuz 26/27, Soyuz T-14/13
- [4:21:200] Frederick Gregory — STS-51-B, STS-33, STS-44
- [4:21:201] William Gregory — STS-67
- [4:21:202] David Griggs (1939–1989) — STS-51-D
- [4:21:203] Virgil I. "Gus" Grissom (1926–1967) — Mercury-Redstone 4, Gemini 3. Died in the Apollo 1 fire.
- [4:21:204] John Grunsfeld — STS-67, STS-81, STS-103, STS-109, STS-125
- [4:21:205] Aleksei Gubarev — Soyuz 17, Soyuz 28
- [4:21:206] Umberto Guidoni — STS-75, STS-100
- [4:21:207] Jügderdemidiin Gürragchaa — Soyuz 39
- [4:21:208] Sidney Gutierrez — STS-40, STS-59
- [4:21:209] Chris Hadfield — STS-74, STS-100, Expedition 34, Expedition 35, Soyuz TMA-07M
- [4:21:210] Nick Hague — No flights.
- [4:21:211] Claudie Haigneré , EAC — Soyuz TM-24/23, Soyuz TM-33/32
- [4:21:212] Jean-Pierre Haigneré, EAC — Soyuz TM-17/16, Soyuz TM-29

[4:21:513] United States John "Jack" Swigert (1931–1982) — Apollo 13

[4:21:514] Cuba Arnaldo Tamayo Méndez — Soyuz 38

[4:21:515] United States Daniel Tani — STS-108, STS-120/122

[4:21:516] United States Joseph Tanner — STS-66, STS-82, STS-97, STS-115

- [4:21:517] Russia Evgeny Tarelkin — Soyuz TMA-06M
- [4:21:518] United States James M. Taylor (1930–1970) — No flights. Assigned to MOL project.
- [4:21:519] Soviet Union Valentina Tereshkova — Vostok 6. First woman in space.
- [4:21:520] United States Norman Thagard, M.D. — STS-7, STS-51-B, STS-30, STS-42, Soyuz TM-21/STS-71
- [4:21:521] Germany Gerhard Thiele — STS-99
- [4:21:522] Canada Robert Thirsk, M.D. — STS-78, Soyuz TMA-15
- [4:21:523] Australia United States Andrew Thomas — STS-77, STS-89/91, STS-102, STS-114
- [4:21:524] United States Donald Thomas — STS-65, STS-70, STS-83, STS-94
- [4:21:525] United States Stephen Thorne (1953–1986) — No flights. Died before completing NASA astronaut training.
- [4:21:526] United States Kathryn Thornton  — STS-33, STS-49, STS-61, STS-73
- [4:21:527] United States William E. Thornton, M.D. — STS-8, STS-51-B
- [4:21:528] United States Pierre Thuot — STS-36, STS-49, STS-62
- [4:21:529] Soviet Union Gherman Titov (1935–2000) — Vostok 2
- [4:21:530] Soviet Union Russia Vladimir Titov — Soyuz T-8, Soyuz TM-4/6, STS-63, STS-86
- [4:21:531] France Michel Tognini, EAC — Soyuz TM-15/14, STS-93
- [4:21:532] Russia Valery Tokarev — STS-96, Soyuz TMA-7
- [4:21:533] Russia Sergei Treshchov — STS-111/113
- [4:21:534] United States Eugene Trinh — STS-50
- [4:21:535] United States Richard Truly — STS-2, STS-8
- [4:21:536] Iceland Canada Bjarni Tryggvason — STS-85
- [4:21:537] Russia Vasili Tsibliyev — Soyuz TM-17, Soyuz TM-25

[4:21:538] Russia Mikhail Tyurin — STS-105/108, Soyuz TMA-9, Soyuz TMA-11M

[4:21:539] Russia Yury Usachov — Soyuz TM-18, Soyuz TM-23, STS-101, STS-102/STS-105

[4:21:540] Netherlands United States Lodewijk van den Berg — STS-51-B

[4:21:541] United States James "Ox" van Hoften — STS-41-C, STS-51-I

[4:21:542] Soviet Union Vladimir Vasyutin (1952–2002) — Soyuz T-14

[4:21:543] United States Charles Veach (1944–1995) — STS-39, STS-52

[4:21:544] Austria Franz Viehböck — Soyuz TM-13/12

[4:21:545] Soviet Union Russia Alexander Viktorenko — Soyuz TM-3/2, Soyuz TM-8, Soyuz TM-14, Soyuz TM-20

[4:21:546] Russia Pavel Vinogradov — Soyuz TM-26, Soyuz TMA-8

[4:21:547] United States Terry Virts — STS-130, Soyuz TMA-15M

[4:21:548] Italy Roberto Vittori — Soyuz 34/33, Soyuz TMA-6/5, STS-134

[4:21:549] Soviet Union Igor Volk — Soyuz T-12

[4:21:550] Soviet Union Russia Alexander Volkov — Soyuz T-14, Soyuz TM-7, Soyuz TM-13

[4:21:551] Russia Sergey Volkov — Soyuz TMA-12, Soyuz TMA-02M, Soyuz TMA-18M

[4:21:552] Soviet Union Vladislav Volkov (1935–1971) — Soyuz 7, Soyuz 11. Died on Soyuz 11.

[4:21:553] Soviet Union Boris Volynov — Soyuz 5, Soyuz 21

[4:21:554] United States James Voss — STS-44, STS-53, STS-69, STS-101, STS-102/105

[4:21:555] United States Janice Voss  (1956-2012) — STS-57, STS-63, STS-83, STS-94, STS-99

[4:21:556] Japan Koichi Wakata — STS-72, STS-92, STS-119/127, Soyuz TMA-11M

[4:21:557] United States Rex Walheim — STS-110, STS-122, STS-135

[4:21:558] United States Charles D. Walker — STS-41-D, STS-51-D, STS-61-B

[4:21:559] United States David M. Walker (1944–2001) — STS-51-A, STS-30, STS-53, STS-69

[4:21:560] United States Joseph A. Walker (1921–1966) — X-15 flights 77, 90, and 91.

[4:21:561] United States Shannon Walker — Soyuz TMA-19

[4:21:562] Germany Ulrich Walter — STS-55

[4:21:563] United States Carl Walz — STS-51, STS-65, STS-79, STS-108/111

[4:21:564] United States Taylor Wang — STS-51-B

[4:21:565] China Wang Yaping — Shenzhou 10

[4:21:566] United States Jessica Watkins — No flights.

[4:21:567] United States Mary Weber — STS-70, STS-101

[4:21:568] United States Paul Weitz — Skylab 2, STS-6

[4:21:569] United States James Wetherbee — STS-32, STS-52, STS-63, STS-86, STS-102, STS-113

[4:21:570] United States Douglas Wheelock — STS-120, Soyuz TMA-19

[4:21:571] United States Ed White (1930–1967) — Gemini 4. Died in the Apollo 1 fire.

[4:21:572] United States Robert Michael White — X-15 flight 62

[4:21:573] United States Peggy Whitson — STS-111 / 113, Soyuz TMA-11

[4:21:574] United States Terrence Wilcutt — STS-68, STS-79, STS-89, STS-106

[4:21:575] United States Clifton "C.C." Williams (1932–1967) — No flights. Died in a training accident.

[4:21:576] Canada Dafydd Williams, M.D. — STS-90, STS-118

[4:21:577] United States Donald Williams (1942–2016) — STS-51-D, STS-34

[4:21:578] United States Jeffrey Williams — STS-101, Soyuz TMA-8, Soyuz TMA-16

[4:21:579] United States Sunita "Sunni" Williams — STS-116/117, Soyuz TMA-05M

- [4:21:580] United States Barry Wilmore – STS-129, Soyuz TMA-14M
- [4:21:581] United States Stephanie Wilson — STS-121, STS-120, STS-131
- [4:21:582] United States Gregory R. Wiseman – Soyuz TMA-13M
- [4:21:583] United States Peter Wisoff — STS-57, STS-68, STS-81, STS-92
- [4:21:584] United States David Wolf, M.D. — STS-58, STS-86/89, STS-112, STS-127
- [4:21:585] United States Neil Woodward — No flights.
- [4:21:586] United States Alfred Worden — Apollo 15
- [4:21:587] Japan Naoko Yamazaki — STS-131
- [4:21:588] China Yang Liwei — Shenzhou 5
- [4:21:589] Soviet Union Boris Yegorov, M.D. (1937–1994) — Voskhod 1
- [4:21:590] Soviet Union Aleksei Yeliseyev — Soyuz 5/4, Soyuz 8, Soyuz 10
- [4:21:591] South Korea Yi So-yeon  — Soyuz TMA-12/11
- [4:21:592] United States John Young (1930—2018) — Gemini 3, Gemini 10, Apollo 10, Apollo 16, STS-1, STS-9
- [4:21:593] Japan Kimiya Yui — Soyuz TMA-17M
- [4:21:594] Russia Fyodor Yurchikhin — STS-112, Soyuz TMA-10, Soyuz TMA-19, Soyuz TMA-09M
- [4:21:595] Russia Sergei Zalyotin – Soyuz TM-30, Soyuz TMA-1/TM-34
- [4:21:596] United States George D. Zamka — STS-120, STS-130
- [4:21:597] China Zhai Zhigang — Shenzhou 7
- [4:21:598] China Zhang Xiaoguang — Shenzhou 10
- [4:21:599] Soviet Union Vitaliy Zholobov — Soyuz 21
- [4:21:600] Soviet Union Vyacheslav Zudov — Soyuz 23

Extolled Inventors (Surnames “A – M”)

[4:22:1] The following inventors are extolled not due to what they have invented, but that they have demonstrated varied amount of initiative, entrepreneurial determination, and creativity to make what they have invented to become a success in its own sphere and it is that quality in people that is being extolled with this list; alphabetically, the first extolled inventor is Vitaly Abalakov (1906–1986), Russia – camming devices, Abalakov thread (or V-thread) gearless ice climbing anchor

[4:22:2] Ernst Karl Abbe (1840–1905), Germany – Condenser (microscope), apochromatic lens, refractometer

[4:22:3] Hovannes Adamian (1879–1932), USSR/Russia – tricolor principle of the color television

[4:22:4] Samuel W. Alderson (1914–2005), USA – Crash test dummy

[4:22:5] Alexandre Alexeieff (1901–1982) Russia/France – Pinscreen animation (with his wife Claire Parker)

[4:22:6] Rostislav Alexeyev (1916–1980), Russia/USSR – Ekranoplan

[4:22:7] Randi Altschul (born 1960), USA – Disposable cellphone

[4:22:8] Bruce Ames (born 1928), USA – Ames test (Cell biology)

[4:22:9] Giovanni Battista Amici (1786–1863), Italy – Dipleidoscope, Amici prism

[4:22:10] Hal Anger (1920–2005), USA – a.o. Well counter (radioactivity measurements), gamma camera

[4:22:11] Anders Knutsson Ångström (1888–1981), Sweden – Pyranometer

[4:22:12] Ottomar Anschütz (1846–1907), Germany – single-curtain focal-plane shutter, electrotachyscope

[4:22:13] Hermann Anschütz-Kaempfe (1872–1931), Germany – Gyrocompass

[4:22:14] Virginia Apgar (1909–1974), USA – Apgar score (for newborn babies)

[4:22:15] Nicolas Appert (1749–1841), France – canning (food preservation) using glass bottles, see also Peter Durand

[4:22:16] Archimedes (c. 287–212 BC), Greece – Archimedes' screw

- [4:22:17] Guido of Arezzo (c. 991–c. 1033), Italy – Guidonian hand, musical notation, see also staff (music)
- [4:22:18] Ami Argand (1750–1803), France – Argand lamp
- [4:22:19] William George Armstrong (1810–1900), UK – hydraulic accumulator
- [4:22:20] John Vincent Atanasoff (1903–1995), Bulgaria/USA – digital computer
- [4:22:21] Charles Babbage (1791–1871), UK – Analytical engine (semi-automatic)
- [4:22:22] Tabitha Babbit (1779–1853), USA – Saw mill circular saw
- [4:22:23] Victor Babeş (1854–1926) Romania – Babesia, the founder of serum therapy
- [4:22:24] Leo Baekeland (1863–1944), Belgian–American – Velox photographic paper and Bakelite
- [4:22:25] Ralph H. Baer (1922–2014), German born American – video game console
- [4:22:26] Adolf von Baeyer (1835–1917), Germany – a.o. Fluorescein, synthetic Indigo dye, Phenolphthalein
- [4:22:27] John Logie Baird (1888–1946), Scotland – an electromechanical television, electronic color television
- [4:22:28] Abi Bakr of Isfahan (c. 1235), Persia/Iran – mechanical geared astrolabe with lunisolar calendar
- [4:22:29] George Ballas (1925–2011), USA – String trimmer
- [4:22:30] Vladimir Baranov-Rossine (1888–1944), Russia/France – Optophonic Piano
- [4:22:31] John Barber (1734–1801), UK – gas turbine
- [4:22:32] John Bardeen (1908–1991), USA – co-inventor of the transistor
- [4:22:33] Vladimir Barmin (1909–1993), Russia – first rocket launch complex (spaceport)
- [4:22:34] Anthony R. Barringer (1925–2009), Canada/USA – INPUT (Induced Pulse Transient) airborne electromagnetic system
- [4:22:35] Earl W. Bascom (1906–1995), Canada/USA – rodeo bucking chute (1916 and 1919), rodeo bronc saddle (1922), rodeo bareback rigging (1924), rodeo riding chaps (1926)

- [4:22:36] Nikolay Basov (1922–2001), Russia – co-inventor of laser and maser
- [4:22:37] Émile Baudot (1845–1903), France – Baudot code
- [4:22:38] Eugen Baumann (1846–1896), Germany – PVC
- [4:22:39] Trevor Baylis (1937–2018), UK – a wind-up radio
- [4:22:40] Maria Beasley (1847–1904), USA – barrel-hooping machine, improved life raft
- [4:22:41] Francis Beaufort (1774–1857), Ireland/UK – Beaufort scale, Beaufort cipher
- [4:22:42] Arnold O. Beckman (1900–2004), USA – electric pH meter
- [4:22:43] Vladimir Bekhterev (1857–1927), Russia – Bekhterev's Mixture
- [4:22:44] Josip Belušić (1847–?), Croatia – electric speedometer
- [4:22:45] Alexander Graham Bell (1847–1922), UK, Canada, and USA – telephone
- [4:22:46] Nikolay Benardos (1842–1905), Russian Empire – arc welding (specifically carbon arc welding, the first arc welding method)
- [4:22:47] Ruth R. Benerito (1916–2013), USA – a.o. Permanent press (no-iron clothing)
- [4:22:48] Miriam Benjamin (1861–1947), Washington, D.C. – Gong and signal chair (adopted by House of Representatives and precursor to flight attendant signal system)
- [4:22:49] William R. Bennett Jr. (1930–2008), together with Ali Javan (1926–), USA/Iran – Gas laser (Helium-Neon)
- [4:22:50] Melitta Bentz (1873–1950), Germany – paper Coffee filter
- [4:22:51] Karl Benz (1844–1929), Germany – the petrol-powered automobile
- [4:22:52] Hans Berger (1873–1941), Germany – first human EEG and its development
- [4:22:53] Friedrich Bergius (1884–1949), Germany – Bergius process (synthetic fuel from coal)
- [4:22:54] Emile Berliner (1851–1929), Germany and USA – the disc record gramophone
- [4:22:55] Tim Berners-Lee (born 1955), UK – with Robert Cailliau, the World Wide Web
- [4:22:56] Marcellin Berthelot (1827–1907), France – Berthelot's reagent (chemistry)

- [4:22:57] Max Bielschowsky (1869–1940), Germany – Bielschowsky stain (histology)
- [4:22:58] Alfred Binet (1857–1911), France – with his student Théodore Simon (1872–1961), first practical Intelligence test
- [4:22:59] Lucio Bini (1908–1964), together with Ugo Cerletti (1877–1963), Italy – Electroconvulsive therapy
- [4:22:60] Gerd Binnig (born 1947), with Christoph Gerber, Calvin Quate and Heinrich Rohrer, Germany/Switzerland/USA – Atomic force microscope and Scanning tunneling microscope
- [4:22:61] Clarence Birdseye (1886–1956), USA – Flash freezing
- [4:22:62] László Bíró (1899–1985), Hungary – Ballpoint pen
- [4:22:63] Thor Bjørklund (1889–1975), Norway – Cheese slicer
- [4:22:64] J. Stuart Blackton (1875–1941), USA – Stop-motion film
- [4:22:65] Otto Blathy (1860–1939), Hungary – co-inventor of the transformer, wattmeter, alternating current (AC) and turbogenerator
- [4:22:66] John Blenkinsop (1783–1831), UK – Blenkinsop rack railway system
- [4:22:67] Charles K. Bliss (1897–1985), Austro-Hungary / Australia – Blissymbols
- [4:22:68] Katharine B. Blodgett (1898–1979), UK – nonreflective glass
- [4:22:69] Alan Blumlein (1903–1942), UK – stereo
- [4:22:70] David Boggs (born 1950), USA – Ethernet
- [4:22:71] Nils Bohlin (1920–2002), Sweden – the three-point seat belt
- [4:22:72] Charlie Booth (1903–2008), Australia – Starting blocks
- [4:22:73] Sam Born (1891–1959), Russia/USA – lollipop-making machine
- [4:22:74] Jagdish Chandra Bose (1858–1937), India – Crescograph
- [4:22:75] Matthew Piers Watt Boulton (1820–1894), UK – aileron
- [4:22:76] Seth Boyden (1788–1870), USA – nail-making machine

[4:22:77] Herbert Boyer (born 1936), together with Paul Berg (1926–), and Stanley Norman Cohen (1935–), USA – created first Genetically modified organism

[4:22:78] Willard Boyle (1924–2011), together with George E. Smith (1930–), USA – Charge-coupled device (CCD)

[4:22:79] Hugh Bradner (1915–2008), USA – Wetsuit

[4:22:80] Louis Braille (1809–1852), France – Braille writing system, Braille musical notation

[4:22:81] Jacques E. Brandenberger (1872–1954), Switzerland – Cellophane

[4:22:82] Édouard Branly (1844–1940), France – Coherer

[4:22:83] Charles F. Brannock (1903–1992), USA – Brannock Device (shoe size)

[4:22:84] Walter Houser Brattain (1902–1987), USA – co-inventor of the transistor

[4:22:85] Karl Ferdinand Braun (1850–1918), Germany – cathode-ray tube oscilloscope

[4:22:86] David Brewster (1781–1868), United Kingdom – Kaleidoscope

[4:22:87] Rachel Fuller Brown (1898–1980), USA – Nystatin, the world's first antifungal antibiotic

[4:22:88] William C. Brown (1916–1999), USA – Crossed-field amplifier

[4:22:89] Marie Van Brittan Brown (1922–1999), USA – home security system

[4:22:90] Friedrich Wilhelm Gustav Bruhn (1853–1927), Germany – Taximeter

[4:22:91] Nikolay Brusentsov (1925–2014), USSR, Russia – ternary computer (Setun)

[4:22:92] Dudley Allen Buck (1927–1959), USA – a.o. Cryotron, content-addressable memory

[4:22:93] Edwin Beard Budding (1795–1846), UK – lawnmower

[4:22:94] Gersh Budker (1918–1977), Russia – electron cooling, co-inventor of collider

[4:22:95] Robert Bunsen (1811–1899), Germany – Bunsen burner

[4:22:96] Henry Burden (1791–1871) Scotland and USA – Horseshoe machine, first usable iron railroad spike

- [4:22:97] Robert Cailliau (born 1947), Belgium – with Tim Berners-Lee, the World Wide Web
- [4:22:98] Nicholas Callan (1799–1864), Ireland – a.o. Induction coil
- [4:22:99] Tullio Campagnolo (1901–1983), Italy – Quick release skewer
- [4:22:100] Charles Cantor (born 1942), USA – Pulsed-field gel electrophoresis (molecular biology)
- [4:22:101] Mario Ramberg Capecchi (born 1937), together with Sir Martin John Evans (born 1941), and Oliver Smithies (born 1925), USA – Gene targeting
- [4:22:102] Arturo Caprotti (1881–1938), Italy – Caprotti valve gear
- [4:22:103] Gerolamo Cardano (1501–1576), Italy – a.o. Cardan grille (cryptography)
- [4:22:104] Chester Carlson (1906–1968), USA – Xerographic copier
- [4:22:105] Wallace Carothers (1896–1937), USA – Nylon and Neoprene (together with Arnold Collins)
- [4:22:106] Antonio Benedetto Carpano (1764–1815), Italy – Vermouth
- [4:22:107] Giovanni Caselli (1815–1891), Italy/France – Pantelegraph
- [4:22:108] George Cayley (1773–1857), UK – tension-spoke wheels
- [4:22:109] Anders Celsius (1701–1744), Sweden – Celsius temperature scale
- [4:22:110] Vint Cerf (born 1943), together with Bob Kahn (1938–), USA – Internet Protocol (IP)
- [4:22:111] Ugo Cerletti (1877–1963), together with Lucio Bini (1908–1964), Italy – Electroconvulsive therapy
- [4:22:112] Charles Chamberland (1851–1908), France – Chamberland filter
- [4:22:113] Min Chueh Chang (1908–1991), together with Gregory Goodwin Pincus (1903–1967), USA/China – Combined oral contraceptive pill
- [4:22:114] Thomas Chang (born 1933), Canada/China – Artificial cell
- [4:22:115] Emmett Chapman (born 1936), US – Chapman Stick

- [4:22:116] Claude Chappe (1763–1805), France – Semaphore line
- [4:22:117] David Chaum (born 1955), USA – a.o. Digital signatures, ecash
- [4:22:118] Vladimir Chelomey (1914–1984), USSR– first space station (Salyut)
- [4:22:119] Pavel Cherenkov (1904–1990), USSR – Cherenkov detector
- [4:22:120] Evgeniy Chertovsky (born 1902-Unknown), Russia – pressure suit
- [4:22:121] Ward Christensen (born 1945), USA – Bulletin board system
- [4:22:122] Ole Kirk Christiansen (1891–1958), Denmark – creator of Lego
- [4:22:123] Samuel Hunter Christie (1784–1865), UK – Wheatstone bridge
- [4:22:124] Juan de la Cierva (1895–1936), Spain – the autogyro
- [4:22:125] Leland Clark (1918–2005), USA – Clark electrode (medicine)
- [4:22:126] Georges Claude (1870–1960), France – neon lamp
- [4:22:127] Henri Marie Coandă (1886–1972), Romania – Coandă effect
- [4:22:128] Josephine Cochrane (1839–1913), USA – dishwasher
- [4:22:129] Christopher Cockerell (1910–1999), UK – Hovercraft
- [4:22:130] Aeneas Coffey (1780–1852), Ireland – Coffey still
- [4:22:131] Sir Henry Cole (1808–1882), UK – Christmas card
- [4:22:132] Sir William Congreve (1772–1828), UK - Congreve rocket
- [4:22:133] George Constantinescu (1881–1965), Romania – creator of the theory of sonics, a new branch of continuum mechanics
- [4:22:134] Albert Coons (1912–1978), USA – Immunofluorescence (microscopy)
- [4:22:135] Martin Cooper (born 1928), USA — Mobile phone
- [4:22:136] Harry Coover (1917–2011), USA – Super Glue
- [4:22:137] Lloyd Groff Copeman (1865–1956), USA – Electric stove

- [4:22:138] Cornelis Corneliszoon (1550–1607), The Netherlands – wind powered sawmill
- [4:22:139] Alexander Coucoulas (born 1933), USA – Thermosonic bonding
- [4:22:140] Wallace H. Coulter (1913–1998), USA – Coulter principle
- [4:22:141] Jacques Cousteau (1910–1997), France – co-inventor of the aqualung and the Nikonos underwater camera
- [4:22:142] John "Jack" Higson Cover Jr. (1920–2009), USA – Taser
- [4:22:143] William Crookes (1832–1919), UK – Crookes radiometer, Crookes tube
- [4:22:144] Bartolomeo Cristofori (1655–1731), Italy – piano
- [4:22:145] S. Scott Crump (inv. c. 1989), USA – a.o. Fused deposition modeling
- [4:22:146] Nicolas-Joseph Cugnot (1725–1804), France – first steam-powered road vehicle
- [4:22:147] William Cullen (1710–1790), UK – first artificial refrigerator
- [4:22:148] Jan Czochralski (1885–1953), Poland / Germany – Czochralski process (crystal growth)
- [4:22:149] Nils Gustaf Dalén (1869–1937), Sweden – AGA cooker, Dalén light, Agamassan, Sun valve for lighthouses and buoys
- [4:22:150] John Frederic Daniell (1790–1845), United Kingdom – Daniel cell
- [4:22:151] Corradino D'Ascanio (1891–1981), Italy – Vespa scooter
- [4:22:152] Leonardo da Vinci (1452–1519), Italy – helicopter, tank, parachute
- [4:22:153] Jacob Davis (1868–1908), USA – Riveted jeans
- [4:22:154] Humphry Davy (1778–1829), UK – Davy miners lamp
- [4:22:155] Joseph Day (1855–1946), UK – the crankcase-compression two-stroke engine
- [4:22:156] Lee DeForest (1873–1961), USA – Phonofilm, triode
- [4:22:157] Fe del Mundo (1911–2011), Philippines – non-electric incubator
- [4:22:158] Yuri Nikolaevich Denisyuk (1927–2006), Russia – 3D holography

- [4:22:159] Robert H. Dennard (born 1932), USA– Dynamic random-access memory (DRAM)
- [4:22:160] Miksa Deri (1854–1938), Hungary – co-inventor of an improved closed-core transformer
- [4:22:161] James Dewar (1842–1923), UK – Thermos flask
- [4:22:162] Aleksandr Dianin (1851–1918), Russia – Bisphenol A, Dianin's compound
- [4:22:163] William Kennedy Laurie Dickson (1860–1935), UK – motion picture camera
- [4:22:164] Philip Diehl (1847–1913), USA – Ceiling fan
- [4:22:165] Rudolf Diesel (1858–1913), Germany – Diesel engine
- [4:22:166] William H. Dobbie (1943–2004), United States – Dobbie Eye
- [4:22:167] Johann Wolfgang Döbereiner (1780–1849), Germany – Döbereiner's lamp (chemistry)
- [4:22:168] Toshitada Doi (born 1943), Japan, together with Joop Sinjou, Netherlands – Compact disc
- [4:22:169] Ray Dolby (1933–2013), USA – Dolby noise-reduction system
- [4:22:170] Gene Dolgoff (born 1950), USA – LCD projector
- [4:22:171] Mikhail Dolivo-Dobrovolsky (1862–1919), Poland/Russia – three-phase electric power
- [4:22:172] Marion O'Brien Donovan (1917–1998), USA – Waterproof diaper
- [4:22:173] Hub van Doorne (1900–1979), Netherlands, Variomatic continuously variable transmission
- [4:22:174] John Thompson Dorrance (1873–1930), USA – Condensed soup
- [4:22:175] Amanda Minnie Douglas (1831–1916), writer and inventor (portable folding mosquito net frame)
- [4:22:176] Charles Dow (1851–1902), USA – Dow Jones Industrial Average
- [4:22:177] Mulalo Doyoyo (born 1970), South Africa/USA – Cenocell – cementless concrete

- [4:22:178] Anastase Dragomir (1896–1966), Romania – Ejection seat
- [4:22:179] Karl Drais (1785–1851), Germany – dandy horse, Draisine
- [4:22:180] Richard Drew (1899–1980), USA – Masking tape
- [4:22:181] John Boyd Dunlop (1840–1921), UK – first practical pneumatic tyre
- [4:22:182] Cyril Duquet (1841–1922), Canada – Telephone handset
- [4:22:183] Alexey Dushkin (1904–1977), Russia – deep column station
- [4:22:184] James Dyson (born 1947), UK – Dual Cyclone bagless vacuum cleaner, incorporating the principles of cyclonic separation.
- [4:22:185] George Eastman (1854–1932), USA – roll film
- [4:22:186] J. Presper Eckert (1919–1995), USA – ENIAC – the first general purpose programmable digital computer
- [4:22:187] Thomas Alva Edison (1847–1931), USA – phonograph, commercially practical light bulb, stock ticker, ticker-tape machine etc.
- [4:22:188] Pehr Victor Edman (1916–1977), Sweden – Edman degradation for Protein sequencing
- [4:22:189] Sir Robert Geoffrey Edwards (1925–2013), United Kingdom – In vitro fertilisation
- [4:22:190] Ellen Eglin (1849–c. 1890), USA – Clothes wringer
- [4:22:191] Brendan Eich (born 1961), USA – JavaScript (programming language)
- [4:22:192] Willem Einthoven (1860–1927), The Netherlands – the electrocardiogram
- [4:22:193] Benjamin Eisenstadt (1906–1996), USA – a.o. Sugar packet
- [4:22:194] Paul Eisler (1907–1992), Austria/USA – Printed circuit board (electronics)
- [4:22:195] Giorgi Eliava (1892–1937), together with Félix d'Herelle (1873–1949), France / Georgia – Phage therapy
- [4:22:196] Ivan Elmanov, Russia – first monorail (horse-drawn)

- [4:22:197] Rune Elmqvist (1906–1996), Sweden – implantable pacemaker
- [4:22:198] John Haven Emerson (1906–1997), USA – iron lung
- [4:22:199] Douglas Engelbart (1925–2013), USA – the computer mouse
- [4:22:200] John Ericsson (1803–1889), Sweden – the two screw-propeller
- [4:22:201] Lars Magnus Ericsson (1846–1926), Sweden – the handheld micro telephone
- [4:22:202] Emil Erlenmeyer (1825–1909), Germany – Erlenmeyer flask
- [4:22:203] Sir Martin John Evans (born 1941), together with Mario Ramberg Capecchi (born 1937), and Oliver Smithies (1925–2017), USA – Knockout mouse, Gene targeting
- [4:22:204] Ole Evinrude (1877–1934), Norway – outboard motor
- [4:22:205] Charles Fabry (1867–1945), together with Alfred Perot (1863–1925), France – Fabry–Pérot interferometer (physics)
- [4:22:206] Samuel Face (1923–2001), USA – concrete flatness/levelness technology; Lightning Switch
- [4:22:207] Federico Faggin (born 1941), Italy – microprocessor
- [4:22:208] Daniel Gabriel Fahrenheit (1686–1736), The Netherlands – Fahrenheit temperature scale, Mercury-in-glass thermometer
- [4:22:209] Michael Faraday (1791–1867), UK – electric transformer, electric motor
- [4:22:210] Johann Maria Farina (1685–1766), Germany; Eau de Cologne
- [4:22:211] Myra Juliet Farrell (1878–1957), Australia – stitchless button, Press stud
- [4:22:212] Philo Farnsworth (1906–1971), USA – a.o. electronic television
- [4:22:213] Muhammad al-Fazari (d. 796/806), Persia – astrolabe
- [4:22:214] John Bennett Fenn (1917–2010), USA – Electrospray ionization
- [4:22:215] Henry John Horstman Fenton (1854–1929), UK – Fenton's reagent (chemistry)
- [4:22:216] James Fergason (1934–2008), USA – improved liquid crystal display
- [4:22:217] Enrico Fermi (1901–1954), Italy – nuclear reactor

- [4:22:218] Humberto Fernández Morán (1924–1999), Venezuela – Diamond scalpel, Ultra microtome
- [4:22:219] Michele Ferrero (1925–2015), Italy – Kinder Surprise = Kinder Eggs, Nutella
- [4:22:220] Bran Ferren (born 1953), USA – Pinch-to-zoom (multi-touch), together with Daniel Hillis
- [4:22:221] Reginald Fessenden (1866–1932), Canada – two-way radio
- [4:22:222] Robert Feulgen (1884–1955), Germany – Feulgen stain (histology)
- [4:22:223] Adolf Gaston Eugen Fick (1829–1901), Germany – contact lens
- [4:22:224] Abbas Ibn Firnas (Armen Firman) (810–887), Al-Andalus – artificial wings, fused quartz and silica glass, metronome
- [4:22:225] Artur Fischer (1919–2016) Germany – fasteners including fischertechnik.
- [4:22:226] Franz Joseph Emil Fischer (1877–1947), together with Hans Schrader (1921–2012), Germany – Fischer assay (oil yield test)
- [4:22:227] Franz Joseph Emil Fischer (1877–1947), together with Hans Tropsch (1889–1935), Germany – Fischer–Tropsch process (refinery process)
- [4:22:228] Gerhard Fischer (1899–1988), Germany/USA – hand-held metal detector
- [4:22:229] Paul C. Fisher (1913–2006), USA – Space Pen
- [4:22:230] Alexander Fleming (1881–1955), Scotland – Penicillin
- [4:22:231] John Ambrose Fleming (1848–1945), UK – Vacuum diode
- [4:22:232] Sandford Fleming (1827–1915), Canada – Universal Standard Time
- [4:22:233] Nicolas Florine (1891–1972), Georgia/Russia/Belgium – first tandem rotor helicopter to fly freely
- [4:22:234] Tommy Flowers (1905–1998), UK – Colossus an early electronic computer
- [4:22:235] Thomas J. Fogarty (born 1934), USA – Embolectomy catheter (medicine)
- [4:22:236] Enrico Forlanini (1848–1930), Italy – Steam helicopter, hydrofoil, Forlanini airships

- [4:22:237] Eric Fossum (born 1957), USA – intra-pixel charge transfer in CMOS image sensors
- [4:22:238] Jean Bernard Léon Foucault (1819–1868), France – Foucault pendulum, gyroscope, eddy current
- [4:22:239] Benoît Fourneyron (1802–1867), France – water turbine
- [4:22:240] John Fowler (1826–1864), UK – steam-driven ploughing engine
- [4:22:241] Benjamin Franklin (1706–1790), USA – the pointed lightning rod conductor, bifocal glasses, the Franklin stove, the glass harmonica
- [4:22:242] Herman Frasch (1851–1914), Germany / USA – Frasch process (petrochemistry), Paraffin wax purification
- [4:22:243] Ian Hector Frazer (born 1953), together with Jian Zhou (1957–1999), USA/China – HPV vaccine against cervical cancer
- [4:22:244] Augustin-Jean Fresnel (1788–1827), France – Fresnel lens
- [4:22:245] William Friese-Greene (1855–1921), UK – cinematography
- [4:22:246] Julius Fromm (1883–1945), Germany – first seamless Condom
- [4:22:247] Arthur Fry (born 1931), USA – Post-it note
- [4:22:248] Buckminster Fuller (1895–1983), USA – geodesic dome
- [4:22:249] Robert Fulton (1765–1815), United States – first commercially successful steamboat, first practical submarine
- [4:22:250] Ivan Fyodorov (c. 1510–1583), Russia/Poland–Lithuania – invented multibarreled mortar, introduced printing in Russia
- [4:22:251] Svyatoslav Fyodorov (1927–2000), Russia – radial keratotomy
- [4:22:252] Vladimir Fyodorov (1874–1966), Russia – Fedorov Avtomat (first self-loading battle rifle, arguably the first assault rifle)
- [4:22:253] Dennis Gabor (1900–1979), Hungarian-British – holography
- [4:22:254] Boris Borisovich Galitzine (1862–1916), Russia – electromagnetic seismograph

- [4:22:255] Joseph G. Gall (born 1928), USA – In situ hybridization (cell biology)
- [4:22:256] Alfred William Gallagher (1911–1990), New Zealand – Electric fence for farmers
- [4:22:257] Dmitri Garbuzov (1940–2006), Russia/USA – continuous-wave-operating diode lasers (together with Zhores Alferov), high-power diode lasers
- [4:22:258] Elmer R. Gates (1859–1923), USA – foam fire extinguisher, electric loom mechanisms, magnetic & diamagnetic separators, educational toy ("box & blocks")
- [4:22:259] Richard J. Gatling (1818–1903), USA – wheat drill, first successful machine gun
- [4:22:260] Georgy Gause (1910–1986), Russia – gramicidin S, neomycin, lincomycin and other antibiotics
- [4:22:261] E. K. Gauzen, Russia – three bolt equipment (early diving costume)
- [4:22:262] Norman Gaylord (1923–2007), USA – rigid gas-permeable contact lens
- [4:22:263] Karl-Hermann Geib (1908–1949), Germany / USSR – Girdler sulfide process
- [4:22:264] Hans Wilhelm Geiger (1882–1945), Germany – Geiger counter
- [4:22:265] Andrey Geim (born 1958), Russia/United Kingdom – graphene
- [4:22:266] Nestor Genko (1839–1904), Russia – Genko's Forest Belt (the first large-scale windbreak system)
- [4:22:267] Christoph Gerber (?–), with Calvin Quate (1923–), and with Gerd Binnig (1947–), Germany/USA/Switzerland – Atomic force microscope
- [4:22:268] Friedrich Clemens Gerke (1801–1888), Germany – current international Morse code
- [4:22:269] David Gestetner (1854–1939), Austria-Hungary / UK – a.o. Gestetner copier
- [4:22:270] Alberto Gianni (1891–1930), Italy – Torretta butoscopica
- [4:22:271] John Heysham Gibbon (1903–1973), USA – Heart-lung machine
- [4:22:272] Gustav Giemsa (1867–1948), Germany – Giemsa stain (histology)
- [4:22:273] Adolph Giesl-Gieslingen (1903–1992), Austria – Giesl ejector
- [4:22:274] Henri Giffard (1825–1882), France – powered airship, injector

- [4:22:275] Donald A. Glaser (1926–2013), USA – Bubble chamber
- [4:22:276] C. W. Fuller (inv. 1953), USA – Gilhoolie
- [4:22:277] Valentyn Glushko (1908–1989), Russia – hypergolic propellant, electric propulsion, Soviet rocket engines (including world's most powerful liquid-fuel rocket engine RD-170)
- [4:22:278] Heinrich Göbel (1818–1893), Germany – incandescent lamp
- [4:22:279] Leonid Gobyato (1875–1915), Russia – man-portable mortar
- [4:22:280] Robert Goddard (1882–1945), USA – liquid fuel rocket
- [4:22:281] Sam Golden (1915–1997), together with Leonard Bocour (1910–1993), USA – Acrylic paint
- [4:22:282] Peter Carl Goldmark (1906–1977), Hungary – vinyl record (LP), CBS color television
- [4:22:283] Camillo Golgi (1843–1926), Italy – Golgi's method (histology)
- [4:22:284] György Gömöri (1904–1957), Hungary / USA– Gömöri trichrome stain, Gömöri methenamine silver stain (histology)
- [4:22:285] Charles Goodyear (1800–1860), USA – vulcanization of rubber
- [4:22:286] Robert W. Gore (born 1937), United States – Gore-Tex
- [4:22:287] Igor Gorynin (1926–2015), Russia – weldable titanium alloys, high strength aluminium alloys, radiation-hardened steels
- [4:22:288] James Gosling (born 1955), USA – Java (programming language)
- [4:22:289] Gordon Gould (1920–2005), USA – Laser, see also Theodore Maiman
- [4:22:290] Richard Hall Gower (1768–1833), UK – ship's hull and rigging
- [4:22:291] Boris Grabovsky (1901–1966), Russia – cathode commutator, an early electronic TV pickup tube
- [4:22:292] Bette Nesmith Graham (1924–1980), USA – Correction fluid, Liquid Paper

- [4:22:293] Hans Christian Gram (1853–1938), Denmark / Germany – Gram staining (histology)
- [4:22:294] Zénobe Gramme (1826–1901), Belgium/France – Gramme dynamo
- [4:22:295] Temple Grandin (born 1947), Inventor of the squeeze machine and humane abattoirs.
- [4:22:296] Michael Grätzel (born 1944), Germany/Switzerland– a.o. Dye-sensitized solar cell
- [4:22:297] James Henry Greathead (1844–1896), South Africa – tunnel boring machine, tunnelling shield technique
- [4:22:298] Chester Greenwood (1858–1937), USA – thermal earmuffs
- [4:22:299] Lori Greiner (born 1969), USA – Silver Safekeeper anti-tarnish lining (jewelry organizers) and multiple consumer products, 120 US and foreign patents
- [4:22:300] James Gregory (1638–1675), Scotland – Gregorian telescope
- [4:22:301] Charles Leiper Grigg (1868–1940), USA – 7 Up
- [4:22:302] William Robert Grove (1811–1896), Wales – fuel cell
- [4:22:303] Gustav Guanella (1909–1982), Switzerland – DSSS, Guanella-Balun
- [4:22:304] Otto von Guericke (1602–1686), Germany – vacuum pump, manometer, dasymeter
- [4:22:305] Joseph-Ignace Guillotin (1738–1814), France – Guillotine
- [4:22:306] Mikhail Gurevich (1893–1976), Russia – MiG-series fighter aircraft, including world's most produced jet aircraft MiG-15 and most produced supersonic aircraft MiG-21 (together with Artem Mikoyan)
- [4:22:307] Goldsworthy Gurney (1793–1875), England – Gurney Stove
- [4:22:308] Bartolomeu de Gusmão (1685–1724), Brazil – early air balloons
- [4:22:309] Johann Gutenberg (c. 1398–1468), Germany – movable type printing press
- [4:22:310] Samuel Guthrie (physician) (1782–1848), USA – discovered chloroform
- [4:22:311] Fritz Haber (1868–1934), Germany – Haber process (ammonia synthesis)

- [4:22:312] John Hadley (1682–1744), UK – Octant
- [4:22:313] Waldemar Haffkine (1860–1930), Russia/Switzerland – first anti-cholera and anti-plague vaccines
- [4:22:314] Gunther von Hagens (born 1945), Germany – whole body Plastination
- [4:22:315] Charles Hall (1863–1914), USA – aluminum production
- [4:22:316] Robert N. Hall (1919–2016), USA – a.o. Semiconductor laser
- [4:22:317] Tracy Hall (1919–2008), USA – synthetic diamond
- [4:22:318] Richard Hamming (1915–1998), USA – Hamming code
- [4:22:319] John Hays Hammond Jr. (1888–1965), USA – radio control
- [4:22:320] Ruth Handler (1916–2002), USA – Barbie doll
- [4:22:321] James Hargreaves (1720–1778), UK – spinning jenny
- [4:22:322] John Harington (1561–1612), UK – the flush toilet
- [4:22:323] William Snow Harris (1791–1867), United Kingdom – much improved naval Lightning rods
- [4:22:324] John Harrison (1693–1776), UK – marine chronometer
- [4:22:325] Ross Granville Harrison (1870–1959), USA – first successful animal Tissue culture, Cell culture
- [4:22:326] Kazuo Hashimoto (died 1995), Japan – a.o. Caller-ID, answering machine
- [4:22:327] Victor Hasselblad (1906–1978), Sweden – invented the 6 x 6 cm single-lens reflex camera
- [4:22:328] Ibn al-Haytham (Alhazen) (965–1039), Iraq – camera obscura, pinhole camera, magnifying glass
- [4:22:329] Zheng He (1371–1433), China – Chinese treasure ship
- [4:22:330] George H. Heilmeyer (1936–2014), USA – liquid crystal display (LCD)
- [4:22:331] Henry Heimlich (1920–2016), USA – Heimlich maneuver

- [4:22:332] Robert A. Heinlein (1907–1988), USA – waterbed
- [4:22:333] Jozef Karol Hell (1713–1789), Slovakia – the water pillar
- [4:22:334] Rudolf Hell (1901–2002), Germany – the Hellschreiber
- [4:22:335] Hermann von Helmholtz (1821–1894), Germany – Helmholtz pitch notation, Helmholtz resonator, ophthalmoscope
- [4:22:336] Greg Henderson (inventor) (born 1965), California, USA – hoverboard, Magnetic field architecture, SAFE Building System
- [4:22:337] Zhang Heng (78–139), China – Seismometer, first hydraulic-powered armillary sphere
- [4:22:338] Beulah Louise Henry (1887–1973), USA – bobbin-free sewing machine, vacuum ice cream freezer
- [4:22:339] Charles H. Henry (born 1937), USA – Quantum well laser
- [4:22:340] Joseph Henry (1797–1878), Scotland/USA – electromagnetic relay
- [4:22:341] Félix d'Herelle (1873–1949), together with Giorgi Eliava (1892–1937), France / Georgia – Phage therapy
- [4:22:342] Heron (c. 10–70), Roman Egypt – usually credited with invention of the aeolipile, although it may have been described a century earlier
- [4:22:343] John Herschel (1792–1871), UK – photographic fixer (hypo), actinometer
- [4:22:344] Harry Houdini (1874–1926) USA Flight Time Illusion
- [4:22:345] Heinrich Hertz (1857–1894), Germany – radio telegraphy, electromagnetic radiation
- [4:22:346] Ephraim Hertzano (around 1950), Roumania / Israel – Rummikub
- [4:22:347] Lasse Hessel (born 1940), Denmark – Female condom
- [4:22:348] George de Hevesy (1885–1966), Hungary – radioactive tracer
- [4:22:349] Ronald Price Hickman (1932–2011), USA – designed the original Lotus Elan, the Lotus Elan +2 and the Lotus Europa, as well as the Black & Decker Workmate

- [4:22:350] Rowland Hill (1795–1879), UK – postage stamp
- [4:22:351] Maurice Hilleman (1919–2005) – vaccines against childhood diseases
- [4:22:352] Tanaka Hisashige (1799–1881), Japan – Myriad year clock
- [4:22:353] Ted Hoff (born 1937), USA – microprocessor
- [4:22:354] Felix Hoffmann (Bayer) (1868–1949), Germany – Aspirin
- [4:22:355] Albert Hofmann (1906–2008), Switzerland – LSD
- [4:22:356] Kotaro Honda (1870–1954), Japan – KS steel
- [4:22:357] Huang Hongjia (born 1924), China – Single-mode optical fiber.
- [4:22:358] Herman Hollerith (1860–1929), USA – recording data on a machine readable medium, tabulator, punched cards
- [4:22:359] Nick Holonyak (born 1928), USA – LED (Light Emitting Diode)
- [4:22:360] Norman Holter (1914–1983), USA – Holter monitor
- [4:22:361] Robert Hooke (1635–1703), UK – balance wheel, iris diaphragm, acoustic telephone
- [4:22:362] Erna Schneider Hoover (born 1926), USA – computerized telephone switching system
- [4:22:363] Grace Murray Hopper (1906–1992), USA – Compiler
- [4:22:364] Frank Hornby (1863–1936), UK – invented Meccano
- [4:22:365] Jimmy Hotz (born 1953), USA – Hotz MIDI Translator, Atari Hotz Box
- [4:22:366] Royal Earl House (1814–1895), USA – first Printing telegraph
- [4:22:367] Coenraad Johannes van Houten (1801–1887), Netherlands – cocoa powder, cacao butter, chocolate milk
- [4:22:368] Elias Howe (1819–1867), USA – sewing machine
- [4:22:369] David Edward Hughes (1831–1900), UK
- [4:22:370] Chuck Hull (born 1939), USA – 3D printer

- [4:22:371] Miller Reese Hutchison (1876–1944), USA – a.o. Klaxon, electric hearing aid
- [4:22:372] Christiaan Huygens (1629–1695), Netherlands – pendulum clock
- [4:22:373] John Wesley Hyatt (1837–1920), USA – celluloid manufacturing
- [4:22:374] Gavriil Ilizarov (1921–1992), Russia – Ilizarov apparatus, external fixation, distraction osteogenesis
- [4:22:375] Mamoru Imura (born 1948), Japan – RFIQin (automatic cooking device)
- [4:22:376] Daisuke Inoue (born 1940), Japan – Karaoke machine
- [4:22:377] János Irinyi (1817–1895), Hungary – noiseless match
- [4:22:378] Ub Iwerks (1901–1971), U. S. – Multiplane camera for animation
- [4:22:379] Moritz von Jacobi (1801–1874), Germany / Russia – electrotyping, electric boat
- [4:22:380] Rudolf Jaenisch (born 1942), Germany / USA – first Genetically modified mouse
- [4:22:381] Karl Guthe Jansky (1905–1950), USA – radio telescope
- [4:22:382] Karl Jatho (1873–1933), Germany – aeroplane
- [4:22:383] Ali Javan (1926–2016), together with William R. Bennett Jr. (1930–2008), Iran / USA – Gas laser (Helium-Neon)
- [4:22:384] Al-Jazari (1136–1206), Iraq – crank-driven and hydropowered saqiya chain pump, crank-driven screw and screw pump, elephant clock, weight-driven clock, weight-driven pump, reciprocating piston suction pump, geared and hydropowered water supply system, programmable humanoid robots, robotics, hand washing automata, flush mechanism, lamination, static balancing, paper model, sand casting, molding sand, intermittency, linkage
- [4:22:385] Ibn Al-Jazzar (Algizar) (895–979), Tunisia – sexual dysfunction and erectile dysfunction treatment drugs
- [4:22:386] Ányos Jedlik (1800–1898), Hungary – Jedlik dynamo
- [4:22:387] Alec John Jeffreys (born 1950), United Kingdom – DNA profiling (forensics)
- [4:22:388] Charles Francis Jenkins (1867–1934) – television and movie projector (Phantoscope)

- [4:22:389] Steve Jobs (1955–2011), USA – Apple Macintosh computer, iPod, iPhone, iPad and other devices and software operating systems and applications.
- [4:22:390] Amos Edward Joel Jr. (1918–2008) USA – electrical engineer, known for several contributions and over seventy patents related to telecommunications switching systems
- [4:22:391] Carl Edvard Johansson (1864–1943), Sweden – Gauge blocks
- [4:22:392] Johan Petter Johansson (1853–1943), Sweden – Pipe wrench and adjustable spanner
- [4:22:393] Reynold B. Johnson (1906–1998), USA – Hard disk drive
- [4:22:394] Philipp von Jolly (1809–1884), Germany – Jolly balance
- [4:22:395] Scott A. Jones (born 1960), USA – created one of the most successful versions of voicemail as well as ChaCha Search, a human-assisted internet search engine
- [4:22:396] Tom Parry Jones (1935–2013), United Kingdom – first electronic Breathalyzer
- [4:22:397] Assen Jordanoff (1896–1967), Bulgaria – airbag
- [4:22:398] Anatol Josepho (1894–1980), patented the first coin-operated photo booth called the "Photomaton" in 1925.
- [4:22:399] Marjorie Joyner (1896–1994), USA – Permanent wave machine
- [4:22:400] Whitcomb Judson (1836–1909), USA – zipper
- [4:22:401] Percy Lavon Julian (1899–1975), USA – chemical synthesis of medicinal drugs from plants
- [4:22:402] Ma Jun (fl. 220–265), China – south-pointing chariot (see differential gear), mechanical puppet theater, chain pumps, improved silk looms
- [4:22:403] Mikhail Kalashnikov (1919–2013), Russia – AK-47 and AK-74 assault rifles (the most produced ever)
- [4:22:404] Bob Kahn (born 1938), together with Vint Cerf (born 1943), USA – Internet Protocol (TCP/IP)
- [4:22:405] Dawon Kahng (1931–1992), South Korea, together with Simon Sze (born 1936), Taiwan/USA – Floating-gate MOSFET

- [4:22:406] Dean Kamen (born 1951), USA – Invented the Segway HT scooter and the IBOT Mobility Device
- [4:22:407] Heike Kamerlingh Onnes (1853–1926), Netherlands – liquid helium
- [4:22:408] Nikolay Kamov (1902–1973), Russia – armored battle autogyro, Ka-series coaxial rotor helicopters
- [4:22:409] Pyotr Kapitsa (1894–1984), Russia – first ultrastrong magnetic field creating techniques, basic low-temperature physics inventions
- [4:22:410] Georgii Karpechenko (1899–1941), Russia – rabbage (the first ever non-sterile hybrid obtained through the crossbreeding)
- [4:22:411] Jamshīd al-Kāshī (c. 1380–1429), Persia/Iran – plate of conjunctions, analog planetary computer
- [4:22:412] Yevgeny Kaspersky (born 1965), Russia – Kaspersky Anti-Virus, Kaspersky Internet Security, Kaspersky Mobile Security anti-virus products
- [4:22:413] Andrew Kay (1919–2014), USA – Digital voltmeter
- [4:22:414] Adolphe Kégresse (1879–1943), France/Russia – Kégresse track (first half-track and first off-road vehicle with continuous track), dual clutch transmission
- [4:22:415] Carl D. Keith (1920–2008), together with John J. Mooney (c. 1928–), USA – three way catalytic converter
- [4:22:416] Mstislav Keldysh (1911–1978), Latvia/Russia – co-developer of Sputnik 1 (the first artificial satellite) together with Korolyov and Tikhonravov
- [4:22:417] John Harvey Kellogg (1852–1943), cornflake breakfasts
- [4:22:418] John G. Kemeny (1926–1992), together with Thomas E. Kurtz (born 1928), Hungary/USA – BASIC (programming language)
- [4:22:419] Alexander Kemurdzhian (1921–2003), Russia – first space exploration rover (Lunokhod)
- [4:22:420] Mary Beatrice Davidson Kenner (1912–2006), USA – sanitary belt
- [4:22:421] William Saville-Kent (1845–1908), UK/Australia – Pearl culture, see also Mikimoto Kōkichi

- [4:22:422] Kerim Kerimov (1917–2003), Azerbaijan and Russia – co-developer of human spaceflight, space dock, space station
- [4:22:423] Charles F. Kettering (1876–1958), USA – invented automobile self-starter ignition, Freon ethyl gasoline and more
- [4:22:424] Fazlur Khan (1929–1982), Bangladesh – structural systems for high-rise skyscrapers
- [4:22:425] Yulii Khariton (1904–1996), Russia – chief designer of the Soviet atomic bomb, co-developer of the Tsar Bomb
- [4:22:426] Anatoly Kharlampiev (1906–1979), Russia – Sambo (martial art)
- [4:22:427] Al-Khazini (fl.1115–1130), Persia/Iran – hydrostatic balance
- [4:22:428] Konstantin Khrenov (1894–1984), Russia – underwater welding
- [4:22:429] Abu-Mahmud al-Khujandi (c. 940–1000), Persia/Iran – astronomical sextant
- [4:22:430] Muhammad ibn Mūsā al-Khwārizmī (Algoritmi) (c. 780-850), Persia/Iran – modern algebra, mural instrument, horary quadrant, Sine quadrant, shadow square
- [4:22:431] Marcel Kiepač (1894-1915), Croatia – dynamo, maritime compass that indicates north regardless of the presence of iron or magnetic forces
- [4:22:432] Erhard Kietz (1909–1982), Germany & USA. – signal improvements for video transmissions
- [4:22:433] Jack Kilby (1923–2005), USA – patented the first integrated circuit
- [4:22:434] Al-Kindi (Alkindus) (801–873), Iraq/Yemen – unambiguously described the distillation of wine in the 9th century, cryptanalysis, frequency analysis
- [4:22:435] Petrus Jacobus Kipp (1808–1864), The Netherlands – Kipp's apparatus (chemistry)
- [4:22:436] Steve Kirsch (born 1956), USA – Optical mouse
- [4:22:437] Fritz Klatt (1880–1934), Germany – vinyl chloride, forerunner to polyvinyl chloride
- [4:22:438] Yves Klein (1928–1962), France – International Klein Blue

- [4:22:439] Margaret E. Knight (1838–1914), USA – machine that completely constructs box-bottom brown paper bags
- [4:22:440] Tom Knight (? –), USA – BioBricks (synthetic biology)
- [4:22:441] Ivan Knunyants (1906–1990), Armenia/Russia – capron, Nylon 6, polyamide-6
- [4:22:442] Robert Koch (1843–1910), Germany – method for culturing bacteria on solid media
- [4:22:443] Willem Johan Kolff (1911–2009), Netherlands – artificial kidney hemodialysis machine
- [4:22:444] Rudolf Kompfner (1909–1977), USA – Traveling-wave tube
- [4:22:445] Konstantin Konstantinov (1817 or 1819–1871), Russia – device for measuring flight speed of projectiles, ballistic rocket pendulum, launch pad, rocket-making machine
- [4:22:446] Sergey Korolyov (1907–1966), USSR – first successful intercontinental ballistic missile (R-7 Semyorka), R-7 rocket family, Sputniks (including the first Earth-orbiting artificial satellite), Vostok program (including the first human spaceflight)
- [4:22:447] Nikolai Korotkov (1874–1920), Russian empire – auscultatory technique for blood pressure measurement
- [4:22:448] Semen Korsakov (1787–1853), Russian Empire – punched card for information storage
- [4:22:449] Mikhail Koshkin (1898–1940), Russia – T-34 medium tank, the best and most produced tank of World War II
- [4:22:450] Ognjeslav Kostović (1851–1916), Serbia/Russia – arborite (high-strength plywood, an early plastic)
- [4:22:451] Gleb Kotelnikov (1872–1944), Russia – knapsack parachute, drogue parachute
- [4:22:452] William Justin Kroll (1889–1973), Luxemburg/USA – Kroll process
- [4:22:453] Alexei Krylov (1863–1945), Russia – gyroscopic damping of ships
- [4:22:454] Ivan Kulibin (1735–1818), Russia – egg-shaped clock, candle searchlight, elevator using screw mechanisms, a self-rolling carriage featuring a flywheel, brake, gear box, and bearing, an early optical telegraph

- [4:22:455] Shen Kuo (1031–1095), China – improved gnomon, armillary sphere, clepsydra, and sighting tube
- [4:22:456] Igor Kurchatov (1903–1960), Russia – first nuclear power plant, first nuclear reactors for submarines and surface ships
- [4:22:457] Thomas E. Kurtz (born 1928), together with John G. Kemeny (1926–1992), USA / Hungary – BASIC (programming language)
- [4:22:458] Raymond Kurzweil (born 1948), Optical character recognition; flatbed scanner
- [4:22:459] Ken Kutaragi (born 1950), Japan – PlayStation
- [4:22:460] Stephanie Kwolek (1923–2014), USA – Kevlar
- [4:22:461] John Howard Kyan (1774–1850), Ireland – The process of Kyanization used for wood preservation
- [4:22:462] Dmitry Lachinov (1842–1902), Russia – mercury pump, economizer for electricity consumption, electrical insulation tester, optical dynamometer, photometer, electrolyser
- [4:22:463] René Laennec (1781–1826), France – stethoscope
- [4:22:464] Georges Lakhovsky (1869–1942), Russia/USA – Multiple Wave Oscillator
- [4:22:465] Hedy Lamarr (1913–2000), Austria and USA – Spread spectrum radio
- [4:22:466] Edwin H. Land (1909–1991), USA – Polaroid polarizing filters and the Land Camera
- [4:22:467] Samuel P. Langley (1834–1906), USA – bolometer
- [4:22:468] Alexander Nikolayevich Lodygin (1847–1923), Russia – incandescent lamp
- [4:22:469] Irving Langmuir (1851–1957), USA – gas filled incandescent light bulb, hydrogen welding
- [4:22:470] Norm Larsen (1923–1970), USA – a.o. WD-40
- [4:22:471] Lewis Latimer (1848–1928), USA – improved carbon-filament light bulb
- [4:22:472] Gustav de Laval (1845–1913), Sweden – invented the milk separator and the milking machine

- [4:22:473] Semyon Lavochkin (1900–1960), Russia – La-series aircraft, first operational surface-to-air missile S-25 Berkut
- [4:22:474] John Bennet Lawes (1814–1900), UK – superphosphate or chemical fertiliser
- [4:22:475] Ernest Orlando Lawrence (1901–1958), USA – Cyclotron
- [4:22:476] Nikolai Lebedenko, Russia – Tsar Tank, the largest armoured vehicle in history
- [4:22:477] Sergei Lebedev (1874–1934), Russia – commercially viable synthetic rubber
- [4:22:478] William Lee (1563–1614), UK – Stocking frame knitting machine
- [4:22:479] Antoni van Leeuwenhoek (1632–1723), The Netherlands – development of the microscope
- [4:22:480] Jerome H. Lemelson (1923–1997), USA – Inventions in the fields in which he patented make possible, wholly or in part, innovations like automated warehouses, industrial robots, cordless telephones, fax machines, videocassette recorders, camcorders, and the magnetic tape drive used in Sony's Walkman tape players.
- [4:22:481] Jean-Joseph Etienne Lenoir (1822–1900), Belgium – internal combustion engine, motorboat
- [4:22:482] Giacomo da Lentini (13th Century), Italy – Sonnet
- [4:22:483] R. G. LeTourneau (1888–1969), USA – electric wheel, motor scraper, mobile oil drilling platform, bulldozer, cable control unit for scrapers
- [4:22:484] Rasmus Lerdorf (born 1968), Greenland/Canada – PHP (programming language)
- [4:22:485] Willard Frank Libby (1908–1980), USA – radiocarbon dating
- [4:22:486] Justus von Liebig (1803–1873), Germany – nitrogen-based fertiliser
- [4:22:487] Hon Lik (born 1951), Chinese. electronic cigarette
- [4:22:488] Otto Lilienthal (1848–1896), Germany – hang glider
- [4:22:489] Lin Yutang (1895–1976), China/USA – Chinese language typewriter
- [4:22:490] Charles Lindbergh (1902–1974), USA – organ perfusion pump

- [4:22:491] Frans Wilhelm Lindqvist (1862–1931), Sweden – Kerosene stove operated by compressed air
- [4:22:492] Carl Linnaeus (1707–1778), Sweden – formal Binomial nomenclature for living organisms, *Horologium Florae*
- [4:22:493] Hans Lippershey (1570–1619), The Netherlands – associated with the appearance of the telescope
- [4:22:494] Jonas Ferdinand Gabriel Lippmann (1845–1921), France – Lippmann plate, Integral imaging, Lippmann electrometer
- [4:22:495] Lisitsyn brothers, Ivan Fyodorovich and Nazar Fyodorovich, Russia – samovar (the first documented makers)
- [4:22:496] William Howard Livens (1889–1964), UK – chemical warfare – Livens Projector
- [4:22:497] Eduard Locher (1840–1910), Switzerland – Locher rack railway system
- [4:22:498] Alexander Lodygin (1847–1923), Russia – electrical filament, incandescent light bulb with tungsten filament
- [4:22:499] Mikhail Lomonosov (1711–1765), Russia – night vision telescope, off-axis reflecting telescope, coaxial rotor, re-invented smalt
- [4:22:500] Yury Lomonosov (1876–1952), Russia/United Kingdom – first successful mainline diesel locomotive
- [4:22:501] Aleksandr Loran (1849 – after 1911), Russia – fire fighting foam, foam extinguisher
- [4:22:502] Oleg Losev (1903–1942), Russia – light-emitting diode, crystadine
- [4:22:503] Archibald Low (1882–1956), Britain – Pioneer of radio guidance systems
- [4:22:504] Gleb Lozino-Lozinskiy (1909–2001), Russia – Buran (spacecraft), Spiral project
- [4:22:505] Ignacy Łukasiewicz (1822–1882), Poland – Kerosene lamp
- [4:22:506] Auguste and Louis Lumière (1862–1954 and 1864–1948, resp.), France – Cinématographe
- [4:22:507] Cai Lun, 蔡倫 (50–121 AD), China – paper

[4:22:508] Giovanni Luppis or Ivan Vukić (1813–1875), Austrian Empire (ethnic Croatian, from Rijeka) – self-propelled torpedo

[4:22:509] Richard F. Lyon (born 1952), USA – Optical mouse

[4:22:510] Arkhip Lyulka (1908–1984), Russia – first double jet turbofan engine, other Soviet aircraft engines

[4:22:511] Charles Macintosh (1766–1843), Scotland – waterproof raincoat, life vest

[4:22:512] Theodore Maiman (1927–2007), USA – Laser, see also Gordon Gould

[4:22:513] Ahmed Majan (born 1963), UAE – instrumented racehorse saddle and others

[4:22:514] Aleksandr Makarov, Russia/Germany – Orbitrap mass spectrometer

[4:22:515] Stepan Makarov (1849–1904), Russia – Icebreaker Yermak, the first true icebreaker able to ride over and crush pack ice

[4:22:516] Victor Makeev (1924–1985), Russia – first submarine-launched ballistic missile

[4:22:517] Nestor Makhno (1888–1934), Ukraine/Russia – tachanka

[4:22:518] Dmitri Dmitrievich Maksutov (1896–1964), Russia – Maksutov telescope

[4:22:519] Annie Malone (1869–1957), USA – Cosmetics for African American women

[4:22:520] Sergey Malutin (1859–1937), Russia – designed the first matryoshka doll (together with Vasily Zvyozdochkin)

[4:22:521] Al-Ma'mun (786–833), Iraq – singing bird automata, terrestrial globe

[4:22:522] Boris Mamyrin (1919–2007), Russia – reflectron (ion mirror)

[4:22:523] George William Manby (1765–1854), UK – Fire extinguisher

[4:22:524] Joy Mangano (born 1956), USA – household appliances

[4:22:525] Charles Mantoux (1877–1947), France – Mantoux test (tuberculosis)

[4:22:526] Guglielmo Marconi (1874–1937), Italy – radio telegraphy

[4:22:527] Gheorghe Marinescu (1863–1938), Romania – the first science films in the world in the neurology clinic in Bucharest (1898–1901)

- [4:22:528] Sylvester Marsh (1803–1884), USA – Marsh rack railway system
- [4:22:529] Konosuke Matsushita (1894–1989), Japan – a.o. battery-powered Bicycle lighting
- [4:22:530] Taqi al-Din Muhammad ibn Ma'ruf (1526–1585), Syria/Egypt/Turkey – steam turbine, six-cylinder 'Monobloc' suction pump, framed sextant
- [4:22:531] John Landis Mason (1826–1902), USA – Mason jars
- [4:22:532] Fujio Masuoka (born 1943), Japan – Flash memory
- [4:22:533] John W. Mauchly (1907–1980), USA – ENIAC – the first general purpose programmable digital computer
- [4:22:534] Henry Maudslay (1771–1831), UK – screw-cutting lathe, bench micrometer
- [4:22:535] Hiram Maxim (1840–1916), USA born, UK – First self-powered machine gun
- [4:22:536] James Clerk Maxwell (1831–1879) and Thomas Sutton, Scotland – color photography
- [4:22:537] Stanley Mazor (born 1941), USA – microprocessor
- [4:22:538] John Loudon McAdam (1756–1836), Scotland – improved "macadam" road surface
- [4:22:539] Elijah McCoy (1843–1929), Canada – Displacement lubricator
- [4:22:540] Nicholas McKay Sr. (1920–2014), USA – Lint roller
- [4:22:541] James McLurkin (born 1972), USA – Ant robotics (robotics)
- [4:22:542] Ilya Ilyich Mechnikov (1845–1916), Russia – probiotics
- [4:22:543] Hippolyte Mège-Mouriès (1817–1880), France – margarine
- [4:22:544] Mordecai Meierowitz (born c. 1925), Roumania / Israel – Mastermind (board game)
- [4:22:545] Dmitri Mendeleev (1834–1907), Russia – Periodic table, pycnometer, pyrocollodion
- [4:22:546] George de Mestral (1907–1990), Switzerland – Velcro
- [4:22:547] Robert Metcalfe (born 1946), USA – Ethernet

- [4:22:548] Antonio Meucci (1808–1889), Italy/USA – a.o. various early telephones, a hygrometer, a milk test
- [4:22:549] Édouard Michelin (1859–1940), France – pneumatic tire
- [4:22:550] Anthony Michell (1870–1959), Australia – tilting pad thrust bearing, crankless engine
- [4:22:551] Artem Mikoyan (1905–1970), Armenia/Russia – MiG-series fighter aircraft, including world's most produced jet aircraft MiG-15 and most produced supersonic aircraft MiG-2
- [4:22:552] Alexander Mikulin (1895–1985), Russia – Mikulin AM-34 and other Soviet aircraft engines, co-developer of the Tsar Tank
- [4:22:553] Mikhail Mil (1909–1970), Russia – Mi-series helicopter aircraft, including Mil Mi-8 (the world's most-produced helicopter) and Mil Mi-12 (the world's largest helicopter)
- [4:22:554] David L. Mills (born 1938), USA – a.o. Fuzzball router, Network Time Protocol
- [4:22:555] Marvin Minsky (1927–2016), USA – a.o. Confocal microscopy
- [4:22:556] Tokushichi Mishima (1893–1975), Japan – MKM magnetic steel
- [4:22:557] Pavel Molchanov (1893–1941), Russia – Radiosonde
- [4:22:558] Jules Montenier (1895–1962), USA – Anti-perspirant deodorant
- [4:22:559] Montgolfier brothers (1740–1810) and (1745–1799), France – hot air balloon
- [4:22:560] John J. Montgomery (1858–1911), USA – heavier-than-air gliders
- [4:22:561] Narcis Monturiol i Estarriol (1819–1885), Spain – steam powered submarine
- [4:22:562] Robert Moog (1934–2005), USA – the Moog synthesiser
- [4:22:563] John J. Mooney (born 1929), together with Carl D. Keith (1920–2008), USA – three way catalytic converter
- [4:22:564] Roland Moreno (1945–2012), France – inventor of the smart card
- [4:22:565] Samuel Morey (1762–1843), USA – internal combustion engine
- [4:22:566] Garrett A. Morgan (1877–1963), USA – inventor of the smoke hood

- [4:22:567] Alexander Morozov (1904–1979), Russia – T-54/55 (the most produced tank in history), co-developer of T-34
- [4:22:568] Walter Frederick Morrison (1920–2010), USA – Flying disc
- [4:22:569] William Morrison (dentist) (1860–1926), USA – a.o. Cotton candy machine
- [4:22:570] Samuel Morse (1791–1872), USA – early Morse code, see also Morse Code controversy
- [4:22:571] Sergei Ivanovich Mosin (1849–1902), Russia – Mosin–Nagant rifle
- [4:22:572] Motorins, Ivan Feodorovich (1660s–1735) and his son Mikhail Ivanovich (?–1750), Russia – Tsar Bell
- [4:22:573] Vera Mukhina (1889–1953), Russia – welded sculpture
- [4:22:574] Kary Mullis (born 1944), USA – PCR
- [4:22:575] Fe del Mundo (1911–2011), The Philippines – medical incubator made out of bamboo for use in rural communities without electrical power
- [4:22:576] Colin Murdoch (1929–2008), New Zealand – a.o. Tranquillizer gun, disposable hypodermic syringe
- [4:22:577] William Murdoch (1754–1839), Scotland – Gas lighting
- [4:22:578] Jozef Murgas (1864–1929), Slovakia – inventor of the wireless telegraph (forerunner of the radio)
- [4:22:579] Evgeny Murzin (1914–1970), Russia – ANS synthesizer
- [4:22:580] Banū Mūsā brothers, Muhammad (c. 800–873), Ahmad (803–873), Al-Hasan (810–873), Iraq – mechanical trick devices, hurricane lamp, self-trimming and self-feeding lamp, gas mask, clamshell grab, fail-safe system, mechanical musical instrument, automatic flute player, programmable machine
- [4:22:581] Elon Musk (born 1971)
- [4:22:582] Pieter van Musschenbroek (1692–1761), Netherlands – Leyden jar, pyrometer
- [4:22:583] Walton Musser (1909–1998), USA – Harmonic drive gear
- [4:22:584] Eadweard Muybridge (1830–1904), UK – motion picture

Extolled Inventors (Surnames “N – Z”)

- [4:23:1] Georgi Nadjakov (1896–1981), Bulgaria
- [4:23:2] Alexander Nadiradze (1914–1987), Georgia/Russia – first mobile ICBM (RT-21 Temp 2S), first reliable mobile ICBM (RT-2PM Topol)
- [4:23:3] Nagai Nagayoshi (1844–1929), Japan – Methamphetamine
- [4:23:4] James Naismith (1861–1939), Canadian born, USA – invented basketball and American football helmet
- [4:23:5] Yoshiro Nakamatsu (born 1928), Japan – "PyonPyon" spring shoes, digital watch, CinemaScope, armchair "Cerebrex", sauce pump, taxicab meter
- [4:23:6] Shuji Nakamura (born 1954), Japan – Blue laser
- [4:23:7] John Napier (1550–1617), Scotland – logarithms
- [4:23:8] Andrey Nartov (1683–1756), Russia – first lathe with a mechanic cutting tool-supporting carriage and a set of gears, fast-fire battery on a rotating disc, screw mechanism for changing the artillery fire angle, gauge-boring lathe for cannon-making, early telescopic sight
- [4:23:9] James Nasmyth (1808–1890), Scotland – steam hammer
- [4:23:10] Giulio Natta (1903–1979), together with Karl Ziegler (1898–1973), Italy/Germany – Ziegler–Natta catalyst
- [4:23:11] Nebuchadnezzar II (634–562 BC), Iraq (Mesopotamia) – screw, screw pump
- [4:23:12] Erwin Neher (born 1944), together with Bert Sakmann (1942–), Germany – Patch clamp technique
- [4:23:13] Ted Nelson (born 1937), USA – Hypertext, Hypermedia
- [4:23:14] Sergey Nepobedimiy (1921–2014), Russia – first supersonic anti-tank guided missile Sturm, other Soviet rocket weaponry
- [4:23:15] Karl Nessler (1872–1951), Germany/USA – a.o. Permanent wave machine, artificial eyebrows
- [4:23:16] Bernard de Neumann (born 1943), United Kingdom – massively parallel self-configuring multi-processor

- [4:23:17] John von Neumann (1903–1957), Hungary – Von Neumann computer architecture
- [4:23:18] Isaac Newton (1642–1727), UK – reflecting telescope (which reduces chromatic aberration)
- [4:23:19] Miguel Nicolelis (born 1961), Brazil – Brain-machine interfaces
- [4:23:20] Joseph Nicephore Niépce (1765–1833), France – photography
- [4:23:21] Nikolai Nikitin (1907–1973), Russia – prestressed concrete with wire ropes structure (Ostankino Tower), Nikitin-Travush 4000 project (precursor to X-Seed 4000)
- [4:23:22] Paul Gottlieb Nipkow (1860–1940), Germany – Nipkow disk
- [4:23:23] Jun-Ichi Nishizawa (born 1926), Japan – Optical communication system, SIT / SITH (Static Induction Transistor / Thyristor), Laser diode, PIN diode
- [4:23:24] Alfred Nobel (1833–1896), Sweden – dynamite
- [4:23:25] Ludvig Nobel (1831–1888), Sweden/Russia – first successful oil tanker
- [4:23:26] Emmy Noether (1882–1935), Germany, groundbreaking contributions to abstract algebra and theoretical physics; Noether's Theorem
- [4:23:27] Jean-Antoine Nollet (1700–1770), France – Electroscope
- [4:23:28] Wilhelm Normann (1870–1939), Germany – Hydrogenation of fats
- [4:23:29] Carl Richard Nyberg (1858–1939), Sweden – the blowtorch
- [4:23:30] Aaron D. O'Connell (born 1981), USA – first Quantum machine
- [4:23:31] Joseph John O'Connell (1861–1959), USA - number of inventions relating to telephony and electrical engineering
- [4:23:32] Theophil Wilgodt Odhner (1845–1903), Sweden/Russia – the Odhner Arithmometer, a mechanical calculator
- [4:23:33] Paul Offit (born 1951), United States, along with Fred Clark and Stanley Plotkin, invented a pentavalent Rotavirus vaccine
- [4:23:34] Jarkko Oikarinen (born 1967), Finland – Internet Relay Chat (IRC)
- [4:23:35] Katsuhiko Okamoto (?–), Japan – Okamoto Cubes = modifications of Rubik's Cube

- [4:23:36] Ransom Eli Olds (1864–1950), United States – Assembly line
- [4:23:37] Lucien Olivier (1838–1883), Belgium or France / Russia – Russian salad (Olivier salad)
- [4:23:38] Gerard K. O'Neill (1927–1992), USA – Storage ring (physics)
- [4:23:39] J. Robert Oppenheimer (1904–1967), United States – Atomic bomb
- [4:23:40] Edward Otho Cresap Ord II (1858–1923) American – weapon sights & mining
- [4:23:41] Hans Christian Ørsted (1777–1851), Denmark – electromagnetism, aluminium
- [4:23:42] Elisha Otis (1811–1861), USA – safety system for elevators
- [4:23:43] William Oughtred (1575–1660), UK – slide rule
- [4:23:44] Arogyaswami Paulraj (born 1944), India/USA – MIMO
- [4:23:45] Antonio Pacinotti (1841–1912), Italy – Pacinotti dynamo
- [4:23:46] Larry Page (born 1973), USA – with Sergey Brin invented Google web search engine
- [4:23:47] William Painter (1838–1906), UK/USA – a.o. Crown cork, Bottle opener
- [4:23:48] Alexey Pajitnov (born 1956), Russia/USA – Tetris
- [4:23:49] Julio Palmaz (born 1945), Argentina – balloon-expandable, stent
- [4:23:50] Helge Palmcrantz (1842–1880), Sweden – the multi-barrel, lever-actuated, machine gun
- [4:23:51] Daniel David Palmer (1845–1913), Canada – chiropractic
- [4:23:52] Luigi Palmieri (1807–1896), Italy – seismometer
- [4:23:53] Frank Pantridge (1916–2004), Ireland – Portable defibrillator
- [4:23:54] Georgios Papanikolaou (1883–1962), Greece / USA – Papanicolaou stain, Pap test = Pap smear
- [4:23:55] Philip M. Parker (born 1960), USA – computer automated book authoring

- [4:23:56] Alexander Parkes (1831–1890), UK – celluloid
- [4:23:57] Forrest Parry (1921–2005), USA – Magnetic stripe card
- [4:23:58] Charles Algernon Parsons (1854–1931), British – steam turbine
- [4:23:59] Spede Pasanen (1930–2001), Finland – a.o. ski jumping sling, boat ski
- [4:23:60] Blaise Pascal (1623–1662), France – Pascal's calculator
- [4:23:61] Gustaf Erik Pasch (1788–1862), Sweden – safety match
- [4:23:62] Dimitar Paskov (1914–1986), Bulgaria – Galantamine
- [4:23:63] C. Kumar N. Patel (born 1938), India/USA – Carbon dioxide laser
- [4:23:64] Les Paul (1915–2009), USA – multitrack recording
- [4:23:65] Andreas Pavel (born 1945), Brazil – audio devices
- [4:23:66] Ivan Pavlov (1849–1936), Russia, – classical conditioning
- [4:23:67] Floyd Paxton (1918–1975), USA – a.o. Bread clip
- [4:23:68] John Pemberton (1831–1888), USA – Coca-Cola
- [4:23:69] Slavoljub Eduard Penkala (1871–1922), Croatia – mechanical pencil
- [4:23:70] William Henry Perkin (1838–1907), United Kingdom – first synthetic organic chemical dye Mauveine
- [4:23:71] Henry Perky (1843–1906), USA – shredded wheat
- [4:23:72] Alfred Perot (1863–1925), together with Charles Fabry (1867–1945), France – Fabry–Pérot interferometer (physics)
- [4:23:73] Stephen Perry, UK (fl. 19th century) – rubber band
- [4:23:74] Aurel Persu (1890–1977), Romania – first aerodynamic car, aluminum body with wheels included under the body, 1922
- [4:23:75] Vladimir Petlyakov (1891–1942), Russia – heavy bomber
- [4:23:76] Julius Richard Petri (1852–1921), Germany – Petri dish

- [4:23:77] Peter Petroff (1919–2004), Bulgaria – digital wrist watch, heart monitor, weather instruments
- [4:23:78] Fritz Pfelemer (1881–1945), Germany – magnetic tape
- [4:23:79] Auguste Piccard (1884–1962), Switzerland – Bathyscaphe
- [4:23:80] Gregory Goodwin Pincus (1903–1967), together with Min Chueh Chang (1908–1991), USA/China – Combined oral contraceptive pill
- [4:23:81] Nikolay Ivanovich Pirogov (1810–1881), Russia – early use of ether as anaesthetic, first anaesthesia in a field operation, various kinds of surgical operations
- [4:23:82] Fyodor Pirotsky (1845–1898), Russia – electric tram
- [4:23:83] Arthur Pitney (1871–1933), United States – postage meter
- [4:23:84] Hippolyte Pixii (1808–1835), France – Pixii dynamo
- [4:23:85] Joseph Plateau (1801–1883), Belgium – phenakistiscope (stroboscope)
- [4:23:86] Baltzar von Platen (1898–1984), Sweden – gas absorption refrigerator
- [4:23:87] James Leonard Plimpton (1828–1911), USA – rollerskates
- [4:23:88] Ivan Plotnikov (1902–1995), Russia – kirza leather
- [4:23:89] Roy Plunkett (1910–1994), United States – Teflon
- [4:23:90] Petrache Poenaru (1799–1875), Romania – fountain pen
- [4:23:91] Christopher Polhem (1661–1751), Sweden – Padlock
- [4:23:92] Nikolai Polikarpov (1892–1944), Russia – Po-series aircraft, including Polikarpov Po-2 Kukuruznik (world's most produced biplane)
- [4:23:93] Eugene Polley (1915–2012), United States – wireless remote control (with Robert Adler)
- [4:23:94] Ivan Polzunov (1728–1766), Russia – first two-cylinder steam engine
- [4:23:95] Mikhail Pomortsev (1851–1916), Russia – nephoscope
- [4:23:96] Olivia Poole (1889–1975), USA, – the Jolly Jumper baby harness

- [4:23:97] Alexander Popov (1859–1906), Russia – radio pioneer, created a radio receiver that worked as a lightning detector
- [4:23:98] Nikolay Popov (1931–2008), Russia – first fully gas turbine main battle tank (T-80)
- [4:23:99] Josef Popper (1838–1921), Austria- discovered the transmission of power by electricity
- [4:23:100] Aleksandr Porokhovschikov (1892–1941), Russia – Vezdekhod (the first prototype tank, or tankette, and the first caterpillar amphibious ATV)
- [4:23:101] Ignazio Porro (1801–1875), Italy – Porro prism, strip camera
- [4:23:102] Valdemar Poulsen (1869–1942), Denmark – magnetic wire recorder, arc converter
- [4:23:103] Joseph Priestley (1733–1804), UK – soda water
- [4:23:104] Alexander Prokofieff de Seversky (1894–1974), Russia/United States of America – first gyroscopically stabilized bombsight, ionocraft, also developed air-to-air refuelling
- [4:23:105] Alexander Prokhorov (1916–2002), Russia – co-inventor of laser and maser
- [4:23:106] Petro Prokopovych (1775–1850), Russian Empire – early beehive frame, queen excluder and other beekeeping novelties
- [4:23:107] Sergey Prokudin-Gorsky (1863–1944), Russia/France – early colour photography method based on three colour channels, also colour film slides and colour motion pictures
- [4:23:108] Mark Publicover (born 1958), USA – First affordable trampoline safety net enclosure
- [4:23:109] George Pullman (1831–1897), USA – Pullman sleep wagon
- [4:23:110] Michael I. Pupin (1858–1935), Serbia – pupinization (loading coils), tunable oscillator
- [4:23:111] Tivadar Puskas (1844–1893), Hungary – telephone exchange
- [4:23:112] Calvin Quate (1923–), with Gerd Binnig (1947–), and with Christoph Gerber (?–), USA/Germany/Switzerland – Atomic force microscope
- [4:23:113] Adolphe Quetelet (1796–1874), France/Belgium – Body mass index (BMI)
- [4:23:114] Jacob Rabinow (1910–1999), USA – a.o. Magnetic particle clutch, various Phonograph-related patents

- [4:23:115] John Goffe Rand (1801–1873), USA – Tube (container)
- [4:23:116] Muhammad ibn Zakarīya Rāzi (Rhazes) (865–965), Persia/Iran – distillation and extraction methods, sulfuric acid and hydrochloric acid, soap kerosene, kerosene lamp, chemotherapy, sodium hydroxide
- [4:23:117] Alec Reeves (1902–1971), UK – Pulse-code modulation
- [4:23:118] Karl von Reichenbach (1788–1869), Germany – paraffin, creosote oil, phenol
- [4:23:119] Tadeus Reichstein (1897–1996), Poland/Switzerland – Reichstein process (industrial vitamin C synthesis)
- [4:23:120] Ira Remsen (1846–1927), USA – saccharin
- [4:23:121] Ralf Reski (born 1958), Germany – Moss bioreactor 1998
- [4:23:122] Josef Ressel (1793–1857), Czechoslovakia – ship propeller
- [4:23:123] Ri Sung-gi (1905–1996), North Korea – Vinylon
- [4:23:124] Charles Francis Richter (1900–1985), USA – Richter magnitude scale
- [4:23:125] Adolph Rickenbacker (1886–1976), Switzerland – Electric guitar
- [4:23:126] Hyman George Rickover (1900–1986), USA – Nuclear submarine
- [4:23:127] Niklaus Riggenbach (1817–1899), Switzerland – Riggenbach rack railway system, Counter-pressure brake
- [4:23:128] Dennis Ritchie (1941–2011), USA – C (programming language)
- [4:23:129] Gilles de Roberval (1602–1675), France – Roberval balance
- [4:23:130] John Roebuck (1718–1794) UK – lead chamber process for sulfuric acid synthesis
- [4:23:131] Francis Rogallo (1912–2009), USA – Rogallo wing
- [4:23:132] Heinrich Rohrer (1933–2013), together with Gerd Binnig (1947–), Switzerland/Germany – Scanning tunneling microscope
- [4:23:133] Peter I the Great (Pyotr Alexeyevich Romanov), Tsar and Emperor of Russia (1672–1725), Russia – decimal currency, yacht club, sounding line with separating plummet (sounding weight probe)

- [4:23:134] Pranoti Nagarkar-Israni, India - Rotimatic
- [4:23:135] Wilhelm Conrad Röntgen (1845–1923), Germany – the X-ray machine
- [4:23:136] Ida Rosenthal (1886–1973), Belarus/Russia/United States – Bra (Maidenform), the standard of cup sizes, nursing bra, full-figured bra, the first seamed uplift bra (all with her husband William)
- [4:23:138] Sidney Rosenthal (1907–1979), USA – Magic Marker
- [4:23:139] Eugene Roshal (born 1972), Russia – FAR file manager, RAR file format, WinRAR file archiver
- [4:23:140] Boris Rosing (1869–1933), Russia – CRT television (first television system using CRT on the receiving side)
- [4:23:141] Guido van Rossum (born 1956), The Netherlands – Python (programming language)
- [4:23:142] Jean-François Pilâtre de Rozier (1754–1785), France – Rozière balloon
- [4:23:143] Ernő Rubik (born 1944), Hungary – Rubik's Cube, Rubik's Magic and Rubik's Clock
- [4:23:144] Ernst Ruska (1906–1988), Germany – electron microscope
- [4:23:145] Albert Bruce Sabin (1906–1993), USA – oral Polio vaccine
- [4:23:146] Alexander Sablukov (1783–1857), Russia – centrifugal fan
- [4:23:147] Şerafeddin Sabuncuoğlu (1385–1468), Turkey – illustrated surgical atlas
- [4:23:148] Gilles Saint-Hilaire (born 1948), Canada – Quasiturbine, Qurbine
- [4:23:149] Andrei Sakharov (1921–1989), Russia – invented explosively pumped flux compression generator, co-developed the Tsar Bomb and tokamak
- [4:23:150] Jonas Edward Salk (1914–1995), USA – injection Polio vaccine
- [4:23:151] Franz San Galli (1824–1908), Poland/Russia (Italian and German descent) – radiator, central heating
- [4:23:152] Frederick Sanger (1918–2013), USA – Sanger sequencing (= DNA sequencing)

- [4:23:153] Larry Sanger (born 1968), together with Jimmy Wales, USA – Wikipedia
- [4:23:154] Yoshiyuki Sankai (c. 1957–), Japan – Robotic exoskeleton for motion support (medicine)
- [4:23:155] Alberto Santos-Dumont (1873–1932), Brazil – non-rigid airship and airplane
- [4:23:156] Arthur William Savage (1857–1938) – radial tires, gun magazines, Savage Model 99 lever action rifle
- [4:23:157] Thomas Savery (1650–1715), UK – steam engine
- [4:23:158] Adolphe Sax (1814–1894), Belgium – saxophone
- [4:23:159] Vincent Joseph Schaefer (1906–1993), USA – a.o. Cloud seeding by dry ice
- [4:23:160] Bela Schick (1877–1967), Hungary – diphtheria test
- [4:23:161] Hugo Schiff (1834–1915), Germany – Schiff test (histology)
- [4:23:162] Pavel Schilling (1786–1837), Estonia/Russia – first electromagnetic telegraph, mine with an electric fuse
- [4:23:163] Gilmore Schjeldahl (1912–2002), USA – Airsickness bag
- [4:23:164] Hubert Schlafly (1919–2011), USA – Teleprompter = Autocue
- [4:23:165] Wilhelm Schlenk (1879–1943), Germany – Schlenk flask (chemistry)
- [4:23:166] Bernhard Schmidt (1879–1935), Estonia/Germany – Schmidt camera
- [4:23:167] Otto Schmitt (1913–1998), USA – Schmitt trigger (electronics)
- [4:23:168] Christian Schnabel (1878–1936), German – simplistic food cutleries
- [4:23:169] Kees A. Schouhamer Immink (born 1946), Netherlands – Major contributor to development of Compact Disc
- [4:23:170] August Schrader (1807–1894), USA – Schrader valve for Pneumatic tire
- [4:23:171] David Schwarz (1852–1897), Croatia, – rigid ship, later called Zeppelin
- [4:23:172] Raymond Scott (1908–1994), USA — inventor and developer of electronic music technology

- [4:23:173] Marc Seguin (1786–1875), France – wire-cable suspension bridge
- [4:23:174] Hanaoka Seishū (1760–1835), Japan – General anaesthetic
- [4:23:175] Ted Selker (inv. 1987), USA – Pointing stick
- [4:23:176] Sennacherib (705–681 BC), Iraq (Mesopotamia) – screw pump
- [4:23:177] Léon Serpollet (1858–1907), France – Flash boiler, Gardner-Serpollet steam car
- [4:23:178] Iwan Serrurier (1878–1953), Netherlands/USA – inventor of the Moviola for film editing
- [4:23:179] Mark Serrurier (1904–1988), USA – Serrurier truss for Optical telescopes
- [4:23:180] Gerhard Sessler (born 1931), Germany – foil electret microphone, silicon microphone
- [4:23:181] Guy Severin (1926–2008), Russia – extra-vehicular activity supporting system
- [4:23:182] Ed Seymour (inv. c. 1949), USA – Aerosol paint
- [4:23:183] Leonty Shamshurenkov (1687–1758), Russia – first self-propelling carriage (a precursor to both bicycle and automobile), projects of an original odometer and self-propelling sledge
- [4:23:184] Ibn al-Shatir (1304–1375), Syria – "jewel box" device which combined a compass with a universal sundial
- [4:23:185] Bi Sheng (Chinese: 畢昇) (c. 990–1051), China – clay movable type printing
- [4:23:186] Murasaki Shikibu (c. 973–1025), Japan – psychological novel
- [4:23:187] Pyotr Shilovsky (1871–1957), Russia/United Kingdom – gyrocar
- [4:23:188] Masatoshi Shima (born 1943), Japan – microprocessor
- [4:23:189] Fathullah Shirazi (c. 1582), Mughal India – early volley gun
- [4:23:190] Joseph Shivers (1920–2014), USA – Spandex
- [4:23:191] William Bradford Shockley (1910–1989), USA – co-inventor of transistor
- [4:23:192] Henry Shrapnel (1761–1842), UK – Shrapnel shell ammunition

- [4:23:193] Vladimir Shukhov (1853–1939), Russia – thermal cracking (Shukhov cracking process), thin-shell structure, tensile structure, hyperboloid structure, gridshell, oil pipeline, cylindrical oil depot
- [4:23:194] Sheikh Muszaphar Shukor (born 1972), Malaysia – cell growth in outer space, crystallization of proteins and microbes in space
- [4:23:195] Augustus Siebe (1788–1872), Germany/UK – Inventor of the standard diving dress
- [4:23:196] Sir William Siemens (1823–1883), Germany – regenerative furnace
- [4:23:197] Werner von Siemens (1816–1892), Germany – a.o. electric elevator, Electromote (= first trolleybus), an early Dynamo
- [4:23:198] Al-Sijzi (c. 945–1020), Persia/Iran – heliocentric astrolabe
- [4:23:199] Igor Sikorsky (1889–1972), Russia/USA – first four-engine fixed-wing aircraft (Rusky Vityaz), first airliner and purpose-designed bomber (Ilya Muromets), helicopter, Sikorsky-series helicopters
- [4:23:200] Bernard Silver (1924–1963), together with Norman Joseph Woodland (1921–2012), USA – Barcode
- [4:23:201] Kia Silverbrook (born 1958), Australia – Memjet printer, world's most prolific inventor
- [4:23:202] Vladimir Simonov (born 1935), Russia – APS Underwater Assault Rifle, SPP-1 underwater pistol
- [4:23:203] Charles Simonyi (born 1948), Hungary – Hungarian notation
- [4:23:204] Ibn Sina (Avicenna) (980–1037), Persia/Iran – steam distillation, essential oil, pharmacopoeia, clinical pharmacology, clinical trial, randomized controlled trial, quarantine, cancer surgery, cancer therapy, pharmacotherapy, phytotherapy, Hindiba, *Taxus baccata* L, calcium channel blocker
- [4:23:205] Isaac Singer (1811–1875), USA – sewing machine
- [4:23:206] B. F. Skinner (1904–1990), USA – Operant conditioning chamber
- [4:23:207] Nikolay Slavyanov (1854–1897), Russia – shielded metal arc welding
- [4:23:208] Alexander Smakula (1900–1983), Ukraine/Russia/USA – anti-reflective coating

- [4:23:209] Michael Smith (1932–2000), USA – Site-directed mutagenesis (molecular biology)
- [4:23:210] Oliver Smithies (1925–2017), together with Sir Martin John Evans (born 1941), and Mario Ramberg Capecchi (born 1937), USA – Knockout mouse, Gene targeting
- [4:23:211] Yefim Smolin, Russia – table-glass (stakan granyonyi)
- [4:23:212] Friedrich Soennecken (1848–1919), Germany – Ring binder, Hole punch
- [4:23:213] Su Song (1020–1101), China – first chain drive
- [4:23:214] Marin Soljačić (born 1974), Croatia – Resonant inductive coupling
- [4:23:215] Edwin Southern (born 1938), USA – Southern blot (molecular biology)
- [4:23:216] Alfred P. Southwick (1826–1898), USA – Electric chair
- [4:23:217] Igor Spassky (born 1926), Russia – Sea Launch platform
- [4:23:218] Percy Spencer (1894–1970), USA – microwave oven
- [4:23:219] Elmer Ambrose Sperry (1860–1930), USA – gyroscope-guided automatic pilot
- [4:23:220] Lyman Spitzer (1914–1997), USA – Stellarator (physics)
- [4:23:221] Bhargav Sri Prakash (born 1977), India/USA – Learnification platform at FriendsLearn, Virtual Reality System, electromagnetic collision avoidance system, OBD based in-vehicle powertrain performance measurement, rate based driver controls for drive by wire systems
- [4:23:222] Ladislav Starevich (1882–1965), Russia/France – puppet animation, live-action/ animated film
- [4:23:223] Gary Starkweather (born 1938), USA – laser printer, color management
- [4:23:224] Boris Stechkin (1891–1969), Russia – co-developer of Sikorsky Ilya Muromets and Tsar Tank, developer of Soviet heat and aircraft engines
- [4:23:225] George Stephenson (1781–1848), UK – steam railway
- [4:23:226] Simon Stevin (1548–1620), Netherlands – land yacht
- [4:23:227] Andreas Stihl (1896–1973), Switzerland / Germany – Electric chain saw
- [4:23:228] Reverend Dr Robert Stirling (1790–1878), Scotland – Stirling engine

- [4:23:229] Aurel Stodola (1859–1942), Slovakia – gas turbines
- [4:23:230] Aleksandr Stoletov (1839–1896), Russia – first solar cell based on the outer photoelectric effect
- [4:23:231] Levi Strauss (1829–1902), USA – blue jeans
- [4:23:232] John Stringfellow (1799–1883), UK – aerial steam carriage
- [4:23:233] Bjarne Stroustrup (born 1950), Denmark – C++ (programming language)
- [4:23:234] Almon Strowger (1839–1902), USA – automatic telephone exchange
- [4:23:235] Emil Strub (1858–1909), Switzerland – Strub rack railway system
- [4:23:236] Abd al-Rahman al-Sufi (Azophi) (903–986), Persia/Iran – timekeeping astrolabe, navigational astrolabe, surveying astrolabe
- [4:23:237] Kyota Sugimoto (1882–1972), Japan – Japanese language typewriter
- [4:23:238] Mutsuo Sugiura (1918–1986), Japan – Esophagogastroduodenoscope
- [4:23:239] Pavel Sukhoi (1895–1975), Russia – Su-series fighter aircraft
- [4:23:240] Simon Sunatori (born 1959), Canada – inventor of MagneScribe and Magic Spicer
- [4:23:241] Sushruta (600 BC), Vedic India – inventor of Plastic Surgery, Cataract Surgery, Rhinoplasty
- [4:23:242] Theodor Svedberg (1884–1971), Sweden – Analytical ultracentrifuge
- [4:23:243] Joseph Swan (1828–1914), UK – Incandescent light bulb
- [4:23:244] Robert Swanson (1905–1994), Canada – Invented and developed the first multi-chime air horn for use with diesel locomotives
- [4:23:245] Remi Swierczek (born 1958), Poland – Inventor of Music Identification System and the Mico Changer (coin hopper and dispenser used in casinos)
- [4:23:246] Andrei Sychra (c.1773/76–1850), Lithuania/Russia, Czech descent – Russian seven-string guitar

- [4:23:247] Vladimir Syromyatnikov (1933–2006), Russia – Androgynous Peripheral Attach System and other spacecraft docking mechanisms
- [4:23:248] Simon Sze (born 1936), Taiwan/USA, together with Dawon Kahng (1931–1992), South Korea – Floating-gate MOSFET
- [4:23:249] Leó Szilárd (1898–1964), Hungary/USA – Co-developed the atomic bomb, patented the nuclear reactor, catalyst of the Manhattan Project
- [4:23:250] Muhammad Salih Tahtawi (fl.1659–1660), Mughal India – seamless globe and celestial globe
- [4:23:251] Gyula Takátsy (1914–1980), Hungary – first Microtiter plate
- [4:23:252] Esther Takeuchi (born 1953) – holds more than 150 US-patents, the largest number for any woman in the United States
- [4:23:253] Igor Tamm (1895–1971), Russia – co-developer of tokamak
- [4:23:254] Ching W. Tang (born 1947), Hong Kong/USA, together with Steven Van Slyke, USA – OLED
- [4:23:255] Mardi bin Ali al-Tarsusi (c. 1187), Middle East – counterweight trebuchet, mangonel
- [4:23:256] Gustav Tauschek (1899–1945), Austria – Drum memory
- [4:23:257] Kenyon Taylor (inv. 1961), USA – Flip-disc display
- [4:23:258] Bernard Tellegen (1900–1990), Netherlands – pentode
- [4:23:259] Edward Teller (1908–2003), Hungary – hydrogen bomb
- [4:23:260] Eli Terry (1772–1852)
- [4:23:261] Nikola Tesla (1856–1943), Croatia/Serbia – induction motor, high-voltage / high-frequency power experiments, the transmission of electrical power
- [4:23:262] Léon Theremin (1896–1993), Russia – theremin, interlace, burglar alarm, terpsitone, Rhythmicon (first drum machine), The Thing (listening device)
- [4:23:263] Charles Xavier Thomas de Colmar (1785–1870), France – Arithmometer
- [4:23:264] Elihu Thomson (1853–1937), UK, USA – Prolific inventor, Arc lamp and many others

- [4:23:265] William Thomson, 1st Baron Kelvin (1824–1907), United Kingdom – Kelvin absolute temperature scale
- [4:23:266] Eric Tigerstedt (1887–1925), Finland – Sound-on-film, triode vacuum tube
- [4:23:267] Kalman Tihanyi (1897–1947), Hungary – co-inventor of cathode ray tube and iconoscope
- [4:23:268] Mikhail Tikhonravov (1900–1974), Russia – co-developer of Sputnik 1 (the first artificial satellite) together with Korolyov and Keldysh, designer of further Sputniks
- [4:23:269] Gavriil Adrianovich Tikhov (1875–1960), Russia – feathering spectrograph
- [4:23:270] Benjamin Chew Tilghman (1821–1897), USA – sandblasting
- [4:23:271] Fedor Tokarev (1871–1968), Russia – TT-33 semiautomatic handgun and SVT-40 self-loading rifle
- [4:23:272] Ray Tomlinson (inv. 1971), USA – First inter-computer email
- [4:23:273] Evangelista Torricelli (1608–1647), Italy – barometer
- [4:23:274] Alfred Traeger (1895–1980), Australia – Pedal radio
- [4:23:275] Richard Trevithick (1771–1833), UK – high-pressure steam engine, first full-scale steam locomotive
- [4:23:276] Franc Trkman (1903–1978), Slovenia – electrical switches, accessories for opening windows
- [4:23:277] Hans Tropsch (1889–1935), together with Franz Joseph Emil Fischer (1877–1947), Germany – Fischer–Tropsch process (refinery process)
- [4:23:278] Yuri Trutnev (born 1927), Russia – co-developer of the Tsar Bomb
- [4:23:279] Roger Y. Tsien (1952–2016), together with Osamu Shimomura (born 1928) and Martin Chalfie (born 1947), USA – Discovery and development of Green fluorescent protein
- [4:23:280] Konstantin Tsiolkovsky (1857–1935), Russia – spaceflight
- [4:23:281] Mikhail Tsvet (1872–1919), Russia – chromatography (specifically adsorption chromatography, the first chromatography method)

- [4:23:282] Alexei Tupolev (1925–2001), Russia – the Tupolev Tu-144 (first supersonic passenger jet)
- [4:23:283] Andrei Tupolev (1888–1972), Russia – turboprop powered long-range airliner (Tupolev Tu-114), turboprop strategic bomber (Tupolev Tu-95)
- [4:23:284] Nasīr al-Dīn al-Tūsī (1201–1274), Persia/ Iran – observatory, Tusi-couple
- [4:23:285] Sharaf al-Dīn al-Tūsī (1135–1213), Persia/ Iran – linear astrolabe
- [4:23:286] Shintaro Uda (1869–1976), together with Hidetsugu Yagi (1886–1976), Japan – Yagi-Uda antenna
- [4:23:287] Lewis Urry (1927–2004), Canada – long-lasting alkaline battery
- [4:23:288] Tomislav Uzelac, Croatia – first successful MP3 player, AMP
- [4:23:289] Ira Van Gieson (1866–1913), USA – Van Gieson's stain (histology)
- [4:23:290] Theophilus Van Kannel (1841–1919), United States – revolving door (1888)
- [4:23:291] Vladimir Veksler (1907–1966), Russia – synchrophasotron, co-inventor of synchrotron
- [4:23:292] John Venn (1834–1923), UK – Venn diagram (1881)
- [4:23:293] Auguste Victor Louis Verneuil (1856–1913), France – Verneuil process (crystal growth)
- [4:23:294] Pierre Vernier (1580–1637), France – Vernier scale (1631)
- [4:23:295] Lucien Vidi (1805–1866), France – Barograph
- [4:23:296] Edgar Villchur (1917–2011), USA – a.o. Acoustic suspension (loudspeaker)
- [4:23:297] Artturi Ilmari Virtanen (1895–1973), Finland – a.o. AIV fodder
- [4:23:298] Alessandro Volta (1745–1827), Italy – battery, see also Voltaic pile
- [4:23:299] Bernard Vonnegut (1914–1997), together with Henry Chessin, and Richard E. Passarelli Jr., USA – a.o. Cloud seeding by silver iodide
- [4:23:300] Ivan Vučetić (1858–1925), Croatia – Method of fingerprint classification

- [4:23:301] Paul Walden (1863–1957), Latvia/Russia/Germany – Walden inversion, Ethylammonium nitrate (the first room temperature ionic liquid)
- [4:23:302] Jimmy Wales (born 1966), together with Larry Sanger, USA – Wikipedia
- [4:23:303] Madam C.J. Walker (1867–1919), USA – beauty and hair products for African American women
- [4:23:304] Barnes Wallis (1887–1979), UK – bouncing bomb
- [4:23:305] Ruth Graves Wakefield (1903–1977), USA – chocolate chip cookie
- [4:23:306] Frederick Walton (c. 1834–1928), UK – Linoleum
- [4:23:307] Aldred Scott Warthin (1866–1931), together with Allen Chronister Starry (1890–1973), USA – Warthin–Starry stain (histology)
- [4:23:308] Robert Watson-Watt (1892–1973), Scotland – microwave radar
- [4:23:309] James Watt (1736–1819), Scotland – improved Steam engine
- [4:23:310] Thomas Wedgwood (1771–1805), UK – first (not permanent) photograph
- [4:23:311] Carl Auer von Welsbach (1858–1929), Austria – Gas mantle, ferrocium
- [4:23:312] Jonas Wenström (1855–1893), Sweden – three-phase electrical power
- [4:23:313] George Westinghouse (1846–1914), USA – Air brake (rail)
- [4:23:314] Charles Wheatstone (1802–1875), UK – a.o. concertina, stereoscope, microphone, Playfair cipher, pseudoscope, dynamo
- [4:23:315] Richard T. Whitcomb (1921–2009), USA – Supercritical airfoil, Winglet
- [4:23:316] Eli Whitney (1765–1825), USA – the cotton gin
- [4:23:317] Frank Whittle (1907–1996), UK – co-inventor of the jet engine
- [4:23:318] Otto Wichterle (1913–1989), Czechoslovakia – soft contact lens
- [4:23:319] Norman Wilkinson (1878–1971), UK – Dazzle camouflage
- [4:23:320] Charles Thomson Rees Wilson (1869–1959), UK – Cloud chamber
- [4:23:321] Paul Winchell (1922–2005), USA – the artificial heart

- [4:23:322] Sergei Winogradsky (1856–1953), Russia / USSR – Winogradsky column for culturing microorganisms
- [4:23:323] Niklaus Wirth (born 1934), Switzerland – Pascal (programming language)
- [4:23:324] Baldwin Wood (1879–1956), USA – high volume pump
- [4:23:325] Norman Joseph Woodland (1921–2012), together with Bernard Silver (1924–1963), USA – Barcode
- [4:23:326] Granville Woods (1856–1910), USA – the Synchronous Multiplex Railway Telegraph
- [4:23:327] James Homer Wright (1869–1928), USA – Wright's stain (histology)
- [4:23:328] Wright brothers, Orville (1871–1948) and Wilbur (1867–1912) – USA – powered airplane
- [4:23:329] Arthur Wynne (1862–1945), UK – creator of crossword puzzle
- [4:23:330] Yi Xing (683–727), China – astronomical clock
- [4:23:331] Pavel Yablochkov (1847–1894), Russia – Yablochkov candle (first commercially viable electric carbon arc lamp)
- [4:23:332] Hidetsugu Yagi (1886–1976), together with Shintaro Uda (1896–1976), Japan – Yagi-Uda antenna
- [4:23:333] Alexander Yakovlev (1906–1989), Russia – Yak-series aircraft, including Yakovlev Yak-40 (the first regional jet)
- [4:23:334] Linus Yale Jr. (1821–1868), USA – cylinder lock
- [4:23:335] Linus Yale Sr. (1797–1858), USA Penetomas – pin tumbler lock
- [4:23:336] Shunpei Yamazaki (born 1942), Japan – patents in a.o. computer science and solid-state physics, see List of prolific inventors
- [4:23:337] Gazi Yasargil (born 1925), Turkey – Microneurosurgery
- [4:23:338] Ryōichi Yazu (1878–1908), Japan – Yazu Arithmometer
- [4:23:339] Gunpei Yokoi (1941–1997), Japan – Game Boy

- [4:23:340] Arthur M. Young (1905–1995), USA – the Bell Helicopter
- [4:23:341] Vladimir Yourkevitch (1885–1964), Russia/France/USA – ship hull design
- [4:23:342] Tu Youyou (born 1930), China – Artemisinin
- [4:23:343] Sergei Yudin (1891–1954), Russia – cadaveric blood transfusion and other medical operations
- [4:23:344] Muhammad Yunus (born 1940), Bangladesh – microcredit, microfinance
- [4:23:345] Abu Yusuf Yaqub (c. 1274), Morocco/Spain – siege cannon
- [4:23:346] Abraham Albert Yuzpe (inv. c. 1974), USA – Yuzpe regimen (= form of Emergency contraception)
- [4:23:347] Abu al-Qasim al-Zahrawi (Abulcasis) (936–1013), Islamic Spain – catgut surgical suture, various surgical instruments and dental devices
- [4:23:348] Frank Zamboni (1901–1988), USA – Ice resurfacers
- [4:23:349] Giuseppe Zamboni (1776–1846), Italy – Zamboni pile (early battery)
- [4:23:350] Ludwik Łazarz Zamenhof (1859–1917), Russia/Poland – Esperanto
- [4:23:351] Walter Zapp (1905–2003), Latvia/Estonia/Germany – Minox (subminiature camera)
- [4:23:352] Abū Ishāq Ibrāhīm al-Zarqālī (Arzachel) (1028–1087), Islamic Spain – almanac, equatorium, universal astrolabe
- [4:23:353] Yevgeny Zavoisky (1907–1976), Russia – EPR spectroscopy, co-developer of NMR spectroscopy
- [4:23:354] Nikolay Zelinsky (1861–1953), Russia – the first effective filtering coal gas mask in the world
- [4:23:355] Ferdinand von Zeppelin (1838–1917), Germany – Zeppelin
- [4:23:356] Frits Zernike (1888–1966), The Netherlands – Phase contrast microscope
- [4:23:357] Tang Zhongming (1897–1980), China – internal combustion engine powered by charcoal

[4:23:358] Jian Zhou (1957–1999), together with Ian Hector Frazer (1953–), China/USA – HPV vaccine against cervical cancer

[4:23:359] Nikolai Zhukovsky (1847–1921), Russia – an early wind tunnel, co-developer of the Tsar Tank

[4:23:360] Karl Ziegler (1898–1973), together with Giulio Natta (1903–1979), Germany/Italy – Ziegler–Natta catalyst

[4:23:361] Franz Ziehl (1857–1926), together with Friedrich Neelsen (1854–1898), Germany – Ziehl–Neelsen stain (histology)

[4:23:362] Konrad Zuse (1910–1995), Germany – invented the first programmable general-purpose computer

[4:23:363] Vasily Zvyozdochkin (1876–1956), Russia – matryoshka doll (together with Sergey Malyutin)

[4:23:364] Vladimir Zworykin (1889–1982), Russia/USA – Iconoscope, kinescope.

Extolled Explorers (Surnames “A – M”)

[4:24:1] This discourse lists explorers that are extolled according to the following format; explorer name (nationality, active century); place discovered/explored; and the first entry of which is Antonio de Abreu (Portuguese, 16th century); Indonesia.

[4:24:2] William Adams (English, 17th century); Japan.

[4:24:3] Charles Albanel (French, 17th century); Canada.

[4:24:4] Afonso de Albuquerque (Portuguese, 16th century); Asia.

[4:24:5] Buzz Aldrin (American, 20th century); The Moon.

[4:24:6] Pêro de Alenquer (Portuguese; 15th/16th century); Indian Ocean.

[4:24:7] Alexander the Great (Greek (Macedonian), 4th BC); Indus River, Hindu Kush.

[4:24:8] Jean Alfonse (João Afonso) (Portuguese-French, 15th/16th century); Indian Ocean, Southeast Asia, possibly Australia; Brazil, North America.

[4:24:9] Benedict Allen (English, 20th/21st centuries); various.

[4:24:10] Diego de Almagro (Spanish, 16th century); Peru, Chile.

[4:24:11] László Almásy (Hungarian, 19th/20th century); Africa.

[4:24:12] Francisco de Almeida (Portuguese, 16th century); India.

[4:24:13] Lourenço de Almeida (Portuguese, 16th century); Sri Lanka, India.

[4:24:14] Pedro de Alvarado (Spanish, 16th century); Mexico, Guatemala, Honduras.

[4:24:15] Francisco Álvares (Portuguese, 16th century); Ethiopia.

[4:24:16] Gonçalo Álvares (Portuguese, 15th century); Gough Island, Namibia.

[4:24:17] Jorge Álvares (Portuguese, 16th century); China.

[4:24:18] Roald Amundsen (Norwegian, 20th century); South Pole, Antarctica, Northwest Passage.

[4:24:19] José Alberto de Oliveira Anchieta (Portuguese, 19th century); Gough Island.

[4:24:20] Charles John Andersson (Swedish, 19th century); Southern Africa.

- [4:24:21] António de Andrade (Portuguese, 16th/17th century); India, Tibet.
- [4:24:22] Fernão Pires de Andrade (Portuguese, 15th century); Ming China.
- [4:24:23] Salomon August Andrée (Swedish, 19th century); Arctic.
- [4:24:24] Roy Chapman Andrews (American, 20th century); China, Mongolia.
- [4:24:25] Juan Bautista de Anza (Spanish, 18th century); California.
- [4:24:26] Dominick Arduin (French, 20th/21st centuries); North Pole.
- [4:24:27] Henryk Arctowski (Polish, 20th century); Antarctic, South America.
- [4:24:28] Neil Armstrong (American, 20th century); The Moon.
- [4:24:29] Ingólfur Arnarson (Norse, 9th century); Iceland.
- [4:24:30] Vladimir Arsenyev (Russian, 20th century); Far East.
- [4:24:31] Pêro de Ataíde (Portuguese, 16th/17th centuries); Indian Ocean.
- [4:24:32] Vasco de Ataíde (Portuguese, 16th/17th centuries); India, Tibet.
- [4:24:33] Vladimir Atlasov (Siberian Cossack, 17th century); Kamchatka Peninsula.
- [4:24:34] François Xavier Aubry (French Canadian, 19th century); American Southwest.
- [4:24:35] Väinö Auer (Finnish, 20th century); Tierra del Fuego and Patagonia.
- [4:24:36] Pedro Menéndez de Avilés (Spanish, 16th century); Florida.
- [4:24:37] Juan de Ayala (Spanish, 18th century); California.
- [4:24:38] Lucas Vázquez de Ayllón (Spanish, 16th century); South Carolina.
- [4:24:39] Diogo de Azambuja (Portuguese, 15th century); West African coast.
- [4:24:40] George Back (English, 19th century); Canadian Arctic kha.
- [4:24:41] William Baffin (English, 17th century); Northwest Passage.
- [4:24:42] Samuel Baker (English, 19th century); Africa.

[4:24:43] Vasco Núñez de Balboa (Spanish, 16th century); Panama, 'discovered' the Pacific Ocean.

[4:24:44] Robert Ballard (American, 20th century); Deep sea wrecks, Titanic.

[4:24:45] Ann Bancroft (American, 20th/21st centuries); Arctic, Antarctic

[4:24:46] Joseph Banks (English, 18th century); Newfoundland and Labrador, South Pacific.

[4:24:47] Hong Bao (Chinese, 15th century); South Asia, Southeast Asia, Middle East, East African coast.

[4:24:48] Giosafat Barbaro (Italian, 15th century); Black Sea, Near East.

[4:24:49] Duarte Barbosa (Portuguese, 15th/16th centuries); Indian Ocean, 1st circumnavigation.

[4:24:50] Pêro de Barcelos (Portuguese, 15th/16th centuries); North America.

[4:24:51] Afonso Gonçalves Baldaia (Portuguese, 15th century); Western Sahara.

[4:24:52] Jeanne Baré (French, 18th/19th centuries); Pacific Ocean.

[4:24:53] Willem Barentsz (Dutch, 16th century); Northeast Passage, Novaya Zemlya, Svalbard.

[4:24:54] Heinrich Barth (German, 19th century); Central and northern Africa.

[4:24:55] Robert Bartlett (Newfoundlander, 20th century); Arctic.

[4:24:56] George Bass (English, 18th century); Australia, Tasmania.

[4:24:57] Henry Walter Bates (English, 19th century); Amazon basin.

[4:24:58] Abu Abdullah Muhammad Ibn Battuta (Marinid, 14th century); Africa, Central Asia, China, Europe, Indian subcontinent, Middle East, Russia, Southeast Asia.

[4:24:59] Nicolas Baudin (French, 18th century); Australia.

[4:24:60] James Beckwourth (American, 19th century); Sierra Nevada (U.S.).

[4:24:61] William Beebe (American, 20th century); Deep sea.

[4:24:62] Pyotr Beketov (Russian, 17th century); Siberia.

[4:24:63] Gertrude Bell (English, 19th/20th centuries); Greater Syria, Mesopotamia, Asia Minor, Arabia.

[4:24:64] Fabian Gottlieb von Bellingshausen (Baltic German, 19th century); Antarctica.

[4:24:65] Joseph René Bellot (French, 19th century); Arctic.

[4:24:66] Móric Benyovszky (Hungarian, 18th century); northern Pacific Ocean.

[4:24:67] Vitus Bering (Danish, 18th century); Northern Pacific Ocean, Bering Strait, Alaska (North America).

- [4:25:187] Vandino and Ugolino Vivaldi (Italian, 13th century); Africa, in a failed attempt to reach India.
- [4:25:188] Sebastián Vizcaíno (Spanish, 16th century); Northwest Pacific, California Coast.
- [4:25:189] Willem de Vlamingh (Dutch, 17th century); Southwest Australian coast.
- [4:25:190] Maarten Gerritsz Vries (Dutch, 17th century); Northwest Pacific (Hokkaido, Sakhalin).
- [4:25:191] Lionel Wafer (Welsh, 17th century); Malay Archipelago, Isthmus of Panama.
- [4:25:192] Jean-Frédéric Waldeck (French, 19th century); Mesoamerica (Mayan remains).
- [4:25:193] Thomas Walker (American, 18th century); Eastern United States.
- [4:25:194] Gino Watkins (English, 20th century); East Greenland & Labrador.
- [4:25:195] Langdon Warner (American, 20th century); The Silk Road.
- [4:25:196] Alfred Wegener (German, 20th century); Greenland.
- [4:25:197] John White (English, 15th century); Roanoke Island.
- [4:25:198] Jim Whittaker (American, 20th century); Mount Everest, Antarctica.
- [4:25:199] Frederick Whymper (English, 19th century); Alaska, Kamchatka, Yukon.
- [4:25:200] Charles Wilkes (American, 19th century); Pacific Ocean.
- [4:25:201] Edward Adrian Wilson (English, 19th/20th centuries); Antarctica.
- [4:25:202] Ernest Henry Wilson (English, 19th/20th centuries); East Asia, East Africa, Central and South America, Australia, New Zealand.
- [4:25:203] James Wilson (British, 18th century); Pacific Islands.
- [4:25:204] Thomas Braidwood Wilson (Scottish-Australian, 19th century); Australia.

- [4:25:205] Harry de Windt (French, 19th/20th centuries); Eurasia.
- [4:25:206] Fanny Bullock Workman (American, 19th/20th centuries); Himalaya.
- [4:25:207] Ferdinand von Wrangel (Baltic German, 19th century); Northern Russia.
- [4:25:208] Xuanzang (Chinese, 7th century); Indian subcontinent, Central Asia.
- [4:25:209] John Young (Scottish-English, 18th century); Hawaii.
- [4:25:210] Sir Francis Younghusband (British, 19th/20th centuries); Central Asia.
- [4:25:211] João Gonçalves Zarco (Portuguese, 15th century); Madeira Islands.
- [4:25:212] Gonzalo García Zorro (Spanish, 16th century); Colombia.

The Divergences of Centricity

[4:26:1] Sometimes to the layman's perspective, the differences between religions can be difficult to decipher, but I see that the most efficient way to distinguish between them is found in what they centre themselves on; this means what the religion or philosophy focuses itself on in relation to the majority of its beliefs and the fundamental elements of its belief system.

[4:26:2] Religious and philosophical traditions all share a common characteristic of centricities that formulate the undercurrents of those traditions and although these centricities may not be openly or widely spoken of, they are existent sometimes quite plainly and other times quite obscurely.

[4:26:3] There exists a collection of centricities that I can identify which can be used to categorise religions, philosophies, and ideologies into separate spaces that defines their very structures and approaches to almost all subjects; it is these centricities upon the traditions in question are oriented and it is these centricities that command the direction of the religion, philosophy, or ideology when faced with a topic.

[4:26:4] From its very core, the philosophy of Astronism distinguishes and establish itself by the notion of a centricity that holds such a fundamental position as part of the thematic foundations of the philosophy that it remains one of the philosophy's core tenets; this is of course known as the tenet of cosmocentricity.

[4:26:5] Cosmocentricity, or cosmocentrism, is considered by me as Cometan, and therefore is considered in Cometanism, to be inseparable from Astronism as they form two sides of the same coin.

[4:26:6] Cosmocentrism is considered to be a universal tenet of Astronism, meaning that to all forms of Astronic philosophy and religion, and to all those whom identify as part of Astronism, are considered to be automatic understanders of cosmocentricity and its importance to whichever form of Astronic belief or tradition that they are adhered.

[4:26:7] Another major form of centricity is that which is known as theocentricism or theocentrism which is characterised by

[4:26:8] In addition, there are smaller forms of centricity including ecocentrism, biocentrism, sentiocentrism, ethnocentrism, and technocentrism, each of which presents an alternative centricity to which a philosophy, a religion, or an ideology may be oriented around and through debate and contemplation, Astronism itself may be found to demonstrate pockets of association to some of these other forms of centricity.

[4:26:9] The instance in which a system of thought holds multiple developments of centricity is to be known as polycentrism, or polycentricity instead of monocentricity, or

monocentrism, the former of which is expected to be much more common and realistic in the reality of a thought system than that of the latter.

[4:26:10] However, it is also held by myself that a thought system will always have a superior centricity, as it shall be referred to, in contrast to an inferior centricity; in the case of Astronism, its superior centricity is of course cosmocentrism while its inferior centricities may include technocentrism, sentiocentrism, and ecocentrism depending upon the specific perspective taken of Astronism.

[4:26:11] This is also because different pockets of belief orientations and collectivities within the philosophy of Astronism may hold stronger orientations towards alternative centricities than in other parts of Astronism, or when considering Astronism as a whole.

[4:26:12] One of the major areas of distinguishment for Astronists is their adherence to cosmocentrism which truly does inform their beliefs regarding the majority of subjects within philosophy and theology, hence why it is considered as part of The Seven Tenets of Association.

[4:26:13] Astronism defines itself from some of the other major religions and philosophies through its disassociation with both anthropocentrism and geocentrism which it considers to be pernicious and regressive, yet deeply instilled undercurrents of belief that continue to frame the Abrahamic worldview in addition to theocentricism itself.

[4:26:14] By this notion, Astronism's perception of Abrahamic religions is that they hold a tridimensionality, or a tricentricity; a triad of centricities that govern the Abrahamic worldview and order which includes theocentrism/theocentricism which is the centrality of God, anthropocentrism which is the centrality of humanity, and geocentrism which is the centrality of The Earth; each of these perceptions on centricity is closely associated with notions of significance, sacredness, and a wider importance of the entity or concept to the justification of the belief system itself.

[4:26:15] Alternatively, and in contrast, Astronism can be understood in this same context as very monodimensional or that it holds a monocentric view or a monocentricity when it comes to the case of centricities as it is primarily and majoratively dedicated to cosmocentricity which by its very nature automatically disregards theocentricity, anthropocentricity, and geocentricity simultaneously and on different levels with the first of these less disregarded than the latter too with which cosmocentric thought and wider Astronism as a whole hold particular contentions with.

[4:26:16] The contentions of Astronists towards anthropocentricity and geocentricity can be found in some of the most basic arguments for cosmocentrism and there exists a fervent rejection of both of these centricities in particular from the Astronist viewpoint which has of course been pioneered by myself as Cometan and therefore there exists a very clearly defined opposition to anthropocentric and geocentric worldviews within Cometanism as

two centricities are collectively regarded to be two of the most regressive belief undercurrents that have stemmed from the Abrahamic religions.

[4:26:17] This entails focus on humanity as a specially chosen and in some beliefs, the only created sentient species by God; a focus on The Earth as a specially chosen planet for the residence of this specially created and chosen exclusively sentient species; these views are at the core of the three Abrahamic religions of Judaism, Christianity, and Islam and although they may not be preached plainly and openly, they exist as belief undercurrents that needn't be preached due to their engrainment into these three religious traditions.

[4:26:18] Furthermore, these views can only accurately be described as entirely non-Astronic in their orientations; I will say it now that anthropocentrism and geocentrism stand as the pillars of all that is not Astronic and all that is not cosmocentric.

—

[4:26:19] Astronism is a non-theistic organised philosophy founded by Cometan in the 21st century which emphasises contemplation on and devotion towards The Cosmos, known as the belief of cosmocentrism, and as a result, its beliefs are not focused or dependent upon the existence of a God, debatably making it non-theistic in its primary orientation.

[4:26:20] However, the question of Astronism's theological orientation continues to ignite debate due to the large variety of beliefs that it's able to encompass, hence it may also be described as transtheistic, or panentheistic.

[4:26:21] Astronism is a panentheistic organised philosophy founded by Cometan in the treatise known as the Omnidoxy which uniquely emphasises belief in life on other planets, devotion towards celestial bodies as direct manifestations of divinity, and affirms that it is humanity's solemn destiny as a species granted with sentience to explore outer space.

[4:26:22] Astronism is a transtheistic new religion founded by Cometan in the over one million word long philosophic treatise known as the Omnidoxy.

[4:26:23] Astronism's large collection of cosmically-themed ideas are based around a person's freedom from dogmatic belief (termed in Astronism as manumissionism) which has traditionally structured upon submission to a higher power in exchange for entry into the afterlife (termed in Astronism as submissionism).

[4:26:24] Instead, Astronism proclaims superiority in a philosophical approach by accepting all belief orientations as long as they are logically and rationally justifiable by their adherents.

[4:26:25] As well as this, the centralisation of The Cosmos as a person's primary source of intellectual, spiritual, and religious fulfilment, known as the belief of cosmocentrism, is the foundational belief of Astronism which inform's the organised philosophy's overall theme.

[4:26:26] Astronism is a new religious movement founded by Cometan at the beginning of the 21st century in the philosophical treatise titled the Omnidoxy.

[4:26:27] Astronism's theology is based around three schools of thought which it introduces as naturalism, transcensionism, and transtellationism.

[4:26:28] The naturalist school rejects all supernatural beliefs in relation to theology, and therefore denies the existence of an afterlife although denominations of the school are in continuous debate about the existence of an all-powerful creator God; this is because naturalism does not consider the existence of an afterlife to be a prerequisite for the existence of God.

[4:26:29] The transcensionist school also denies the existence of an afterlife which therefore rejects traditional beliefs regarding religious morality to make way for a new understanding of humanity's wider existential purpose, to which the existence of an afterlife has traditionally been intertwined.

[4:26:30] Alternatively, the school states that humanity holds a solemn duty to explore the countless planets of the universe is proclaimed to be fulfilment enough in providing meaning to a person's individual life as well as being intertwined to become the primary existential purpose of humanity as a whole.

[4:26:31] The final of the three schools is the transtellationist school which encompasses all supernatural beliefs of the Astronist tradition, the primary one of which is transtellationism, also known as astranthropy; the belief that a person's soul will transmigrate to the stars upon their corporeal passing.

[4:26:32] Astronism is a religion founded by the philosopher Cometan in the treatise known as the Omnidoxy which believes in the existence of sentient life on planets other than the Earth, the solemnity of space exploration to humanity's existential purpose, and the centralisation of The Cosmos to become our primary source of spiritual, religious, and intellectual fulfilment.

[4:26:33] Cometan is a philosopher, author, poet, and entrepreneur upon whose writings contemplations and beliefs, Astronism was founded.

[4:26:34] The Omnidoxy is the philosophical treatise upon which Astronism was founded by Cometan in the early 21st century.

[4:26:35] Cometan is a mononymous title self-ascribed to the founder of Astronism, Brandon Taylorian (b. 1998) during the founding years of the organised philosophy.

[4:26:36] Cometan is the central figure of Astronism and the individual whom the beliefs and ideas forming the religion are solely attributed.

[4:26:37] Cometan is the founder of the Astronist religion.

[4:26:38] Xīng-tzu is the colloquial name for the religious founder, Cometan, amongst Chinese-speaking people and literally translates to mean “starmaster”.

—

[4:26:39] Rejoice for those who transtellate into The Cosmos; morn them do not, miss them do not for their path is as unique as your own and no two paths are destined to coincide forever.

[4:26:40] You must accept that when their path diverges away from your own that you cannot change, nor should you wish to change such inevitabilities of cosmic nature.

[4:26:41] In this cosmic life, you should soon learn to love that which occurs to you, even if it is not as you had desired or idealised it, for all that does happen is the way of The Cosmos and that what be.

Introduction to Xentology

[5:1:1] Our ambition is all we are.

[5:1:2] Ambition is a force from within, given to us by our belief of divine source and its what moulds us, pushes us and binds us to that which we love and hold dear to our hearts.

[5:1:3] Then, it is ambition that gives us the energy to do good deed and that which guides us to make what is isn't and what isn't is.

[5:1:4] Whether one believes that the force of ambition was given to them by divine source or not, one thing undeniable is that it embodies who you are.

[5:1:5] It is what you were, what you are and what you hope to be for ambition is all that drives us forward; for ambition is love and is that which gives us hope, joy and direction in our lives.

[5:1:6] Use your ambitions to the betterment of others around you just as much as bettering oneself and others shall do the same.

[5:1:7] It is, however, the action of using one's ambitions for betterment and not detriment that define one's morality and good soul.

[5:1:8] Make the decision you feel is of good nature and do not do a disservice to that which you have been gifted for if one defies one's ambitions, one defies oneself and one defies The Divine.

[5:1:9] Make that which you are gifted the seed of your life and use your gift in good way to the betterment of peoples and the establishment of morality.

[5:1:10] Mix your faith with your ambition to formulate the right path to satisfy your faith and soul.

[5:1:11] Use not your ambitions in a manner of destruction.

[5:1:12] Use not your ambitions in a manner of pride.

[5:1:13] Use not your ambitions in a manner of petulance for partaking in these such actions will no doubt count as a disservice to oneself, your gift and your gift-bearer.

[5:1:14] One must have patience if one plans to use ambition in a way of goodness for the way of darkness will appear before you often, but one will know when to turn away from

the dark path and one will know when, where and how to seek the path of goodness; the path of light.

[5:1:15] If you do not have patience, you will not see the good path and will take the one of evil.

[5:1:16] Love back those surrounding you who wish only to aid in your ambitions, but let them know of your circumstance and tell them to have patience also.

[5:1:17] It is important to share that you will not ever be alone in ambition for the divine has and always will create others of ambition similar to you, yet distinct from oneself.

[5:1:18] Be mindful of those around that hold a gift like you and encourage them to use it to the betterment of peoples, not for detriment.

[5:1:19] Be mindful also that you shall not think of the other's gift and feel jealousy, but in good deed and moral, feel strength by acting together for betterment as ambitions are not only about one, but all and how one may be of service to all by using that wondrous gift.

[5:1:20] That which cannot be known by those of worthiness not, is that which the one of divinity commands and only those of worthiness judged by divinity will stand a chance of knowing; becoming one of enlightenment.

[5:1:21] It is enlightenment that guides each individual toward their destined path and the divine has unique enlightenment for each one, yet possesses common goal, morality and reward.

[5:1:22] Genuine enlightenment may only come from one source; that of true divinity yet enlightenment for the individual may appear in any form, but it is that individual that must decide whether the enlightenment before them has divine source or not.

[5:1:23] Taking the path of enlightenment from that of anything but divine source reflects upon the morality of the individual and presents not their fault, but the fault of their teachers.

[5:1:24] Stands, enlightenment does, as the connection between a worthy individual and that of divine source yet what one does with their enlightenment reflects upon their own morality.

[5:1:25] If you are of enlightenment worthiness then you must use such knowledge for the progression of humanity and for the betterment of peoples and all those you meet.

[5:1:26] If you are confronted with the Crossroads of Enlightenment, decide which, by comparing the content of the enlightenment using your faith and your morality and whichever aligns with both these two entities is your divine path of enlightenment.

[5:1:27] Remember, though, that neither road could be that of divine source and oppositely, both could be that of divine source and if that is so, then both must be chosen for the process of crossroad convergence to initiate.

[5:1:28] Your divine path of enlightenment, whatever form it may take, will allow oneself to become a better version of oneself and with the marriage of morality, mission and motivation, oneself will learn about how their individual enlightenment can be used for the betterment of peoples and the furtherance of all.

[5:1:29] One must use one's faith and morality as the tools of guidance for the disciples of darkness will appear to you and will tempt you to fall.

[5:1:30] It is, however, part of your path of enlightenment to have strength to resist such temptations and to rise honourable above the darkness surrounding and to rejoin with the divine waiting for you.

[5:1:31] This can only be achieved through the foresightful preparation and mustering of strength coupled with the action of implementation in order to highlight the darkness and eradicate such tempts yet remembering they will return, for the arrogance and ignorance of one will lead to the downfall of one's enlightenment.

[5:1:32] The path of enlightenment shows itself only to few of worthiness yet those who never receive its challenging greatness shall not harbour feelings of jealousy or lose faith in divinity; they must accept the path of enlightenment is not their destiny.

The Study of Ambition

(Aspology)

[5:2:1] Within the inclusive discipline of xentology which deals with the combined studies of the nature of ambition and enlightenment, I, as Cometan, shall now introduce that which shall henceforth be termed as the discipline of study of aspology which pertains to the study, philosophical contemplation, and discussion of all aspects of ambition.

[5:2:2] This includes the conceptual elements of ambition, the diversity of its meaning, the different ways in which it may be manifested physically, as well as the multitude of ways in which people may approach formulating, achieving, and later reflecting on their ambitions.

[5:2:3] Therefore, the breadth and depth of aspological study becomes one of immensity when all these components of study are combined with their central theme focusing on gaining a defined understanding of the nature of ambition.

[5:2:4] As we continue on in this discourse, I shall formulate a philosophy of ambition that is herein quantified according to Cometanic principles that remain synonymous with Astronist/ Astronic principles.

[5:2:5] My philosophy of ambition shall share themes that also reside within the rest of The Philosophy of Astronism, particularly those of a cosmic nature, and it also remains of importance to mention the centrality of ambition, provided in any discussion of the nature of Cometanic love, for mutual ambition is considered to be the driving force of lifelong love.

[5:2:6] This in turn provides ambition with a place of high importance for wider Astronist ethics and even in the entire Astronist worldview, for ambition is considered to be the driving force of the majority of the elements of every person's life which also pertains to the reason as to why ambition, in conjunction with enlightenment, is provided with its own inclusive discipline and its own disquisition within The Omnidoxy.

[5:2:7] Resting at the heart of The Philosophy of Astronism is a distinct longing for all that is cosmic in character, in nature, and in theme for this is the essence of cosmocentric thought upon which Astronism is predicated and it is this distinct longing that is metamorphosed into that which shall henceforth be known as stellition, the state of stellity, or simply known as cosmic ambition.

[5:2:8] When we take to the study of religions, philosophies, ideologies, and all other types of thought systems, we consider their purposes and feelings galvanised with the followers of such systems for the specific goals, themes, and prophecies of that system of thought.

[5:2:9] Astronism is no different in this sense and in fact, the focus on the galvanisation of feelings towards purpose, goals, theme, and prophecy are essential to the development of The Philosophy of Astronism and encapsulated within this galvanisation process is that which is herein termed as stellition.

[5:2:10] As directly influenced by cosmocentricity, stellition is the emotional and practical element of the philosophical, spiritual, and intellectual formation of cosmocentricity.

[5:2:11] Stellition, as cosmic ambition, is the manifestation of ambition through the inspiration granted by cosmocentricity.

[5:2:12] To be in a state of stellity is to be cosmically inspired and to hold ambitions in which The Cosmos holds either a physical and practical role, or a philosophical, spiritual, intellectual, or emotional role, and so the vastness of stellity and the circumstances that form stellity demonstrates this to be a unique and certainly, a personal experience.

[5:2:13] Arguably, it is stellity, or the practice of stellition, that form the basis of extraomnidoxical formulations of Astronism because without cosmic ambition, and the realisation of what cosmic ambition is and what it means for those whom practice and embrace it, the essence of Astronism would perhaps be lost due to a lack of clarity with regards to how individuals are supposed to feed their inner enthusiasms for the beliefs, concepts, and notions forming Astronism.

[5:2:14] Importantly, the terms of stellity and stellition, as aforeinferred hold a distinct difference from one another for the latter pertains to a conscious and intentional effort to pursue cosmic ambition while the former pertains to an unintentional, unforeseen, and somewhat more natural and pure pursuit of cosmic ambition into such a position one is placed rather than placing themselves into such a position.

[5:2:15] Approaches to the practice of stellition are encompassed within the study of aspology and reside under the auspices of that which is to be henceforth appellated as Stellitive Methodology which focuses on the different stages of stellition, or cosmic ambition, the different methods that may be utilised to achieve stellitive ambitions, and thirdly, the different ways in which a person may reflect upon their ambitions after their achievement of such ambitions; these stages considered collectively are to be henceforth known as the Stellitive Process.

[5:2:16] The first of the stages of the Stellitive Process is to be appellated as Stellitive Realisation which encapsulates the entire process of how, why, when, where, with whom, and for whom one may embark upon discovering their ambitions and come to the realisation of their ambitions.

[5:2:17] To preface our discussion, however, it remains important to note that this portion of the discourse is considering and focusing on stellition and stellitive ambition rather than general ambition and so the different methods and approaches to stellition are

considered through the scope of an Astronist philosophical theme, but the methods outlined herein may easily be transferred to non-stellitive circumstances in order for these methods to be utilised in general non-Astronist contexts of ambition realisation.

[5:2:18] I can now herein confirm that within the auspices of Stellitive Realisation, there does arise twenty different instances of this form of ambition realisation which shall be introduced herein and further explored post-omnidoxically.

[5:2:19] The first of these is that which shall be known as purnition, or to be in a state of purnity, which pertains to the instance in which a person naturally and unintentionally finds something that they either immediately hold ambitions for, or that they find enthusiasm for over a gradual period, or due to the occurrence of an event that changes their outlook of that in subject.

[5:2:20] Secondly, that which will be referred to as the process of preniton, or to be in a state of prenit, shall refer to the instance in which a person intentionally and strategically embarks upon the discovery of their ambition rather than waiting for their realisation to naturally occur.

[5:2:21] As the third form of Stellitive Realisation, that which is to be henceforth referred to as conition, or to be in a state of conity, pertains to the instance in which a person latches onto and finds enthusiasm in other people's ambitions and makes the achievement of these ambitions their own, typically characteristic of a person in love or holding close relations with the person holding the ambition.

[5:2:22] That which is to be henceforth referred to as antition, or the state of antity, pertains to the instance in which a person finds their ambitions through opposing another person's ambitions which expected to be commonly found in the spheres of philosophy, religion, and ideology.

[5:2:23] Enition, or the state of enity, is the instance in which one person's ambitions are inspired and founded upon another's achievements and ambitions such as when a person creates something and another person's creation is dependent upon that.

[5:2:24] The sixth form of Stellitive Realisation is exiton, or the state of exity, is to henceforth pertain to the instance in which a person's ambitions are predicated upon the unfinished ambitions of a person that has died who was either a relation, a friend, or they did not know them personally.

[5:2:25] Seventhly, that which shall be henceforth referred to as forition, or the state of fority is the instance in which a person's ambitions are dependent upon the actions of others for them to be realised.

[5:2:26] Homition, to be in a state of homity, refers to the instance in which a person's ambitions almost exactly resemble those of another persons.

[5:2:27] Interition, or to be in a state of interity, refers to the instance in which two people realise their ambitions simultaneously and carry out the accomplishment of their ambitions together.

[5:2:28] The instance in which a person holds a multitude of ambitions which are usually interconnected, hold similar themes, and there is usually a few ambitions of central importance; this instance is to be henceforth referred to as hyperition, or to be in a state of hyperity.

[5:2:29] Macrition, or to be in a state of macrity, is the eleventh form of Stellitive Realisation and is to refer to the instance in which a person's ambitions are large in comparison to another person's ambitions, or in comparison to an earlier period in their own life.

[5:2:30] The twelfth form of Stellitive Realisation is that which is to be known as micrition, or to be in a state of micrity pertains to the instance in which a person's ambitions are small in comparison to another person's ambitions, or in comparison to an earlier period in their own life.

[5:2:31] The process of unition, or to be in a state of unerity is to be in reference to the instance in which a person holds only one singular ambition that is not ornamented with any others, unlike the instance of hyperition, or hyperity.

[5:2:32] Anition, or to be in a state of anity, shall henceforth refer to the instance in which a person holds no particular ambitions throughout their life (circumanition/circumanity) or during a period in their life (nanition/nanity)

[5:2:33] The instance in which a person is ambitious about everything that they come across, they see potential in everything for them to be ambitious about, and also that they apply an encompassing approach to the nature of ambition as a wholly encapsulating way of life rather than a singular concept shall be henceforth termed as the process of omnition, or for one to be in a state of omnity.

[5:2:34] Paranition, also termed as paranity is to be in pertainment to the instance in which two people's ambitions are similar and so a competition arises between them to see who accomplishes their ambitions quicker, or in a superior way.

[5:2:35] The instance in which a person loses enthusiasm for their ambitions, but later regains their zeal after a period of time away or after the occurrence of an event that triggers their enthusiasm; renition, or the state of renity, is what this instance shall be referred to as post-omnidoxically.

[5:2:36] Semition, or to be in a state of semity, shall henceforth infer the instance in which a person's ambitions are only half realised, or are knowingly only partly understood.

[5:2:37] The nineteenth form of Stellitive Realisation is herein termed as suprition, or to be in a state of suprity which shall refer to the instance in which a person realises their ambitions through the accomplishment of their previous ambitions.

[5:2:38] The twentieth and final form of Stellitive Realisation is to be henceforth referred to as triniton, or the state of trity pertains to the instance in which a person holds three main ambitions that they prioritise their achievement of rather than attempting to prioritising their achievement of more than three ambitions at once.

[5:2:39] Stellitive Accomplishment is the appellation that encompasses the entire process of how a people conducts their achievement of their ambitions which is considered to be highly dependent upon the unique circumstances of the individual's ambitions, the extent to which they work hard, the quality of work they produce, the people they know etc.

[5:2:40] In order to formulate a general framework for understanding the deeply complex and convoluted process of Stellitive Accomplishment, I shall, as Cometan, herein assign new terms to the different stages of the Stellitive Accomplishment process so as to organise the process and provide a relatable set of ideas that remain applicable to the wide range of circumstances that are characteristic of the Stellitive Accomplishment process and include the following seventeen ideas that can be considered elements of ambition.

[5:2:40a] How hard a person works.

[5:2:40b] The extent of their knowledge about the topic of their ambition.

[5:2:40c] The quality of the work they produce.

[5:2:40d] The people they know that hold abilities to help them achieve their ambitions.

[5:2:40e] The location in which they reside which pertains to the notion that individuals that live in clusters or in places where their industry or topic of interest is popular or where there are many opportunities to excess towards their ambitions will be more likely to succeed.

[5:2:40f] The time period in which they attempt to achieve their ambitions.

[5:2:40g] The extent to which they allow others to influence their decisions.

[5:2:40h] The extent to which they are emotionally, financially, mentally, and physically committed to achievement of their ambition.

[5:2:40i] The extent to which they are able to keep track of their progress duration their achievement of their ambition.

[5:2:40j] The elements of their personality, especially whether they are logical, organised, positive, committed, or motivated.

[5:2:40k] The extent to which they are good at categorising and arranging their ambitions.

[5:2:40l] The extent of their accountability, responsibility, sensibility, and maturity.

[5:2:40m] The extent of their willing to revisit and revise their ambitions.

[5:2:40n] The extent to which they are able to be distracted.

[5:2:40o] The extent to which they hold consistency in their words, actions, and thoughts.

[5:2:40p] The extent to which they allow their ambitions as they themselves grow (known as the process or occurrence of aspoma).

[5:2:40q] The extent to which a person celebrates their successes rather than only focusing on their mistakes, failures, and disappointments.

[5:2:41] The third and final element of stellation is the process appellationed as Stellitive Reflection which involves the process of reflecting on the way in which one realised and later accomplished their ambitions, the efficiency of the methods they employed to achieve their ambitions, and whether they would reutilise those methods again for similar or different ambitions through analysis and comparison between the applicability of alternative methods.

[5:2:42] I shall now formulate a framework for how one may reflect upon their ambitions and the different methods of reflectivity in order to improve upon one's own realisation and accomplishment of their future ambitions which pertains to the entirety of the purpose of Stellitive Reflection, of which the following four elements are integral parts.

[5:2:42a] The overall efficiency of methods utilised including in terms of finance, temporality, vitality (energy-wise), emotionality, and imaginational.

[5:2:42b] The extent to which one was able to enjoy other aspects of their lives in parallel to the achievement of their ambitions.

[5:2:42c] Repeatability of the method utilised.

[5:2:42d] Does the outcome of the method utilised match the original or foremost ambition of the individual or group which shall be henceforth referred to as resemblance.

[5:2:43] The discovery of the nature of ambition is considered to be codependent upon both philosophical notions about ambition as well as psychological theories in relation to

human ambition and how the human mind works in relation to desire, social constructs, expectations, and disappointments.

[5:2:44] A strong ambition is predicated on a couple of different either independent or codependent elements, the first of which is a feeling from within that something outside of oneself and something bigger than oneself singularly is out of place in the world and is in requirement to be repaired.

[5:2:45] The second of which is markedly more spiritual in nature though nonetheless powerful and pertains to a feeling that one's ambitions are motivated and directed by divine appointment rather than simply anthropic imagination and suggests that ambition holds a directly divine component that very few other entities within The Cosmos possess.

[5:2:46] Cosmic ambition is the fundamental way and driving force in which an individual may philosophise about because The Cosmos.

[5:2:47] Ambition and purpose are fundamentally intertwined; they rely upon each other; they are symbolic of each other's presence and in this same way, they are also symbiotic; philosophers of the Astronist Tradition are reliant upon their own unique cosmic ambition, or stellity, to contribute ideas to the tradition.

[5:2:48] Do people do anything it's because they have an ambition to do so and so they require something into which such They place their ambitions and for people who will practice the philosophy of Astronism, the entity in which they place their ambitions is the wholeness of The Cosmos and all that it does encapsulate, including themselves.

[5:2:49] And so what we need to do is develop cosmic ambition as a feeling in order to develop cosmic philosophy.

[5:2:50] All humans rely on emotion to motivate their actions and often, it is the emotions that we expect to feel upon the completion or achievement of something that drive our ambitions and so therefore, it remains imperative that Astronism continues to galvanise emotion during its development, the exemplification of this is through the development of cosmic devotion and characteristically philosophical feelings/emotions.

[5:2:51] Stellity encompasses that driving force within all those whom consider Astronism to be the philosophy of their adherence, or at least a system of thought into which they able to place their ideas and utilise for their personal achievement and betterment.

[5:2:52] Without stellity, or stellition, we must ask ourselves of how and why and with what reason must we, should we, or could we follow, practice, exemplify, and contribution to the furtherance of Astronism.

[5:2:53] Of course, the Astronist Tradition teaches and considers ambition to be unique by its core nature; that the nature of ambition is fundamentally predicated on the belief

orientation that is central to the Astronist philosophical tradition itself which is unquitarianism; that no two people hold the exact same ambitions due to their uniqueness in personality, experience, imagination, and vision.

[5:2:54] That which is to be henceforth known as surpassion pertains to the quality of being able to think beyond oneself, to think beyond the current time and to think beyond the present circumstances; essentially, the ability to think beyond presentness.

—

[5:2:55] A slave I am to that which has given me my ambition.

[5:2:56] A philosopher am I, but the world seems not to know what one of those is anymore.

[5:2:57] My task is not only to bring philosophy to the world, but it is also to identify who a philosopher is.

[5:2:58] My ambition will either be the death of me, or it will be my greatest liberator.

[5:2:59] I postulate that the sole characteristic of a philosopher is ambition.

[5:2:60] Without ambition, a philosopher becomes a lunatic for ambition is the driving and guiding internal force within all of us that leads us to the place we are destined to be.

[5:2:61] It is only ambition that connects the philosopher between his/her world and the reality of the world itself.

[5:2:62] Ambition is the channel through which the identity of a philosopher is forged.

[5:2:63] A philosopher is dependent upon ambition for the realisation of the world they hold in their mind and heart.

[5:2:64] Ambition is much like the stars for although it may fade during the daylight hours, it is during the night when it is the most robust.

[5:2:65] I see the strength of a philosopher flow through their ability to imagine, their daring to pursue their ambitions, and their

[5:2:66] Ambition is considered to be formulated according to three strengths; strength in desire; strength in belief; and strength in action.

[5:2:67] I have had a vocation since I was fifteen years old; it controlled me, it moulded me, it nearly killed me, but it too liberated me.

[5:2:68] I see a vocation to be a hyper form of ambition.

[5:2:69] To have a vocation for one's life is the greatest of all gifts that your creator could have bestowed upon you.

[5:2:70] I see that we all hold our own unique vocations, but it is whether we first realise them and secondly commit to them that separates those of ordinariness and those of extraordinariness.

[5:2:71] To vocate to something is to allow oneself to be consumed by its cause.

[5:2:72] The life of one whom vocates themselves may be tough, penniless, and without much material reward, but they are never alone for they always have that to which they have vocated themselves.

[5:2:73] The vocation will let you know when it has been completed rather than the other way around.

[5:2:74] I cannot commit for I am already committed.

[5:2:75] Vocation is not for the weak; it is for the fearless and the visionaries.

[5:2:76] It is true that love comes at a price and that is no different for when one holds a vocation for they sacrifice their life for that which they love.

[5:2:77] Ambition is a feeling while vocation is one's commitment to that feeling.

[5:2:78] My life's vocation is calling me; it's voice is growing louder and louder the longer I ignore it.

[5:2:79] Determination is a product of ambition for it remains the extent to which one possesses strength in their ambitions.

[5:2:80] Determination and motivation are herein considered to be two component parts forming ambition; determination is the purpose one upholds and it is that upon which their ambition is perched; motivation comprises on the individual reasons which on a daily basis remind us of our determination to success in the purpose of our ambition.

[5:2:81] I consider the nature of ambition to be two-pronged in function and three-pronged in the degrees of intensity, the latter of which directly impacts the nature of the functionality of the former, but of course, the nature of the latter is that of fluctuation while the nature of the former is predicated upon what is injected into the functional instruments of determination and motivation.

[5:2:82] Determination and motivation work cyclically and symbiotically with one another for the driving of the ambition around which they orbit as the functionality of ambition.

[5:2:83] Meanwhile, the degrees of intensity of ambition follow the scale of whim to career to vocation, of course the latter of which is the most increased in its intensity.

[5:2:84] The definition of initiative involves being able to make decisions independently and decisively and the nature of one's initiative is predicated upon their individuality, their ability to understand purpose and consequences, as well as their overall visionary characteristic.

[5:2:85] Intention and ambition are intertwined forevermore for intention pertains to one's understanding of what their ambitions are in objective reality; one's intention for their ambitions strikes at the heart of one's own personal aims within one's ambition after the separation of the two conceptually.

[5:2:86] What is a dream and what is an ambition? A dream consists of a series of ideations, imageries, sensations, and hazy consequences and end results which may, or may equally not transform into an ambition which consists of a conscious actionable effort to pursue the cause presented in one's dreams; this process of transformation takes place according to an unquantifiable percentage in which the will of destiny and one's own actions are the two factors in the transformative process of a dream into an ambition which itself, in especially circumstances, may metamorphose into a vocation depending on the ambition's intensity.

[5:2:87] Ambition is not cosmical in its nature as it has no limitation which pertains to my belief that there is a divinical aspect present within our cosmical existence; I consider ambition, inspiration, and imagination as direct products of The Divine.

[5:2:88] A feature of ambition is hardship and even more so if the intensity of that ambition raises further to become a vocation; the greater the intensity of the dream, the greater potency and frequency do the hardships occur.

[5:2:89] The role of hope in the context of ambition is one of centrality despite the fact that it is often forgotten; hope is applied when circumstances in the pursuit of the cause determining and motivating the ambition are not occurring according that which has been envisioned and planned as a reactionary mechanism to initially reassure us that although our ambitions may be temporarily faltered, they will be achieved and one's knowledge and experience will be helped for this temporary falter; hope is therefore ultimately reactive rather than proactive, but hope remains the necessary precursor to reattempt or re-strategising how the cause at the heart of one's ambition is to be achieved at a future stage.

[5:2:90] There is no end to true ambition for a person who appreciates the central role of ambition in the progression of each and every individual's unique lives.

[5:2:91] Here, we touch upon another symbiotic connection for ambition which is progression, of which ambition is the absolutely necessary precursor for progression cannot occur without first ambition having taken hold and been developed.

[5:2:92] Objectives in the context of the contemplation of ambition are understood as key structuring stages with particular associated functions that work to the achievement of the overall ambitional cause, as it shall henceforth be known.

The Study of Enlightenment (Illuminology)

[5:3:1] That which is herein introduced as illuminology shall henceforth refer to the study of enlightenment in the context of philosophy, the applicability of enlightenment, what enlightenment means for different philosophies, whether enlightenment is achievable feat, or whether enlightenment is just a concept that is to be used to motivate the masses.

[5:3:2] The definition of enlightenment in the context of Astronism is synonymous with the achievement of cosmosis; enlightenment in Astronism is considered to be an achievable feat more than just an abstract concept; enlightenment is an ongoing process for a collective humanity to achievable rather than a single individual, thus pertaining against to the collectivistic nature of Astronism in contrast to the individualistic nature of other religions like Buddhism, Christianity, and Islam; instead, enlightenment is considered to be achieved by humanity as a whole through the exploration of The Cosmos and subsequent achievement of cosmosis; our intellectual, spiritual, and physical proximation to The Cosmos.

[5:3:3] Philosophical enlightenment, as distinguished from religious enlightenment, refers to a form of enlightenment in which only logical and rational ideas and thoughts prevail; there are no supernatural occurrences to the body upon reaching a particular state of mind and there are no other transformations into infinities of any kind in the context of philosophical enlightenment for this type of enlightenment is bound by reason and logic.

[5:3:4] Philosophical insight shall henceforth refer to the explore of non-philosophical topics using instruments of study and tools of philosophy such as logic, rationality, ethics, theories of knowledge, ontology, and many others; it is philosophical insight which pertains to the applicability of philosophy and philosophical instruments to the wider area of subjects and this of course has already occurred in many instances, but for philosophy to reascend as it believe should and will, then this needs to occur again and with greater abundance.

[5:3:5] There does exist seven Forms of Enlightenment which can be considered as different ways in which enlightenment can either be interpreted or seven ways in which enlightenment really does manifest itself in the world.

[5:3:6] Self-enlightenment (or Internal Enlightenment) is a form of enlightenment presupposed on the notion that it is oneself that can achieve enlightenment for oneself therefore enlightenment cannot come from an external source to oneself; it must come from within; there must be a spark there within oneself and as part of one's destiny that allows them to have the inspiration and grasp the opportunities to achieve enlightenment, an example of this are the personal inspirations that I, as Cometan, experienced; these can be classified as primary example of self-enlightenment for they came from within.

[5:3:7] Outer Enlightenment (or External Enlightenment) is a form of enlightenment that is presupposed on the opposite notion that enlightenment comes from outside of oneself, but also, adjoined to this notion is the notion that enlightenment of others is the best way to enlighten oneself.

[5:3:8] Societal Enlightenment is a form of enlightenment figured on the notion that enlightenment for wider society is the superior form of enlightenment and the form of enlightenment that will lead to one's own self-enlightenment, especially defined as enlightening those people whom one does not know; you will notice that this is the most important form of enlightenment after self-enlightenment because it falls in alignment with the ideas of contributionism and the collectivist nature of Astronism having been founded upon the belief of transcensionism.

[5:3:9] Cosmic Enlightenment is the form of enlightenment that is perceived and believed to be plentiful in The Cosmos and is considered to be the most enriching form of enlightenment, especially for Astronists due to the belief of transcensionism; cosmic enlightenment includes both a spiritual, intellectual, and physical form of connection with The Cosmos through which enlightenment is achieved and subsequent forms of which are enknowledge and betterment.

[5:3:10] Universal Enlightenment is the form of enlightenment that some Astronists believe is abundant as part of The Universe and derivable in micro forms within The Cosmos, an example of which is an oblivion; a black hole is sometimes considered to hold universal enlightenment or a connection to The Universe beyond The Cosmos due to its incomprehensibility and its stark differentiation to all other cosmic entities.

[5:3:11] Divine Enlightenment is the form of enlightenment that is to be considered, by some Astronists, to be derivable in The Cosmos due the interpenetrative nature of The Divine.

[5:3:12] Human Enlightenment is the enlightenment of humanity in its entirety; human enlightenment is considered to be a vast area of contemplation for illuminologists because the enlightenment of humanity as a collectivity will be essential to the achievement of our transcension; enlightenment continues to be a key element to the achievement and nature of transcension, hence it is provided with its own area of philosophical study in the form of illuminology.

[5:3:13] Intellectual enlightenment, commonly known in Astronism as enknowledge, refers to one's achievement of enlightenment through one's acquisition of knowledge; knowledge is considered to be the greater freer; the greatest enlightener; it is for this reason that knowledge of The Cosmos is positioned centrally as one of the most important proximators to The Cosmos.

[5:3:14] An enlightener and enlightenress are people (male and female respectively) that are considered by the Astronist Tradition to be granted with the ability to provide one or more of any of these different types of enlightenment.

[5:3:15] Alternatively, an enlightenee refers to a person or even an object that is somehow enlightened by any one of these forms of enlightenment.

[5:3:16] The main proponents of enlightenment from the Astronist perspective are knowledge, perception, and exploration; the greater abundances of these, the greater the extent of enlightenment that is achievable.

[5:3:17] The term enlightenment holds a significance role for Astronist philosophy, especially so in the naming of various denominations of Astronism throughout the world as directly from the word enlightenment or from a derived term such as light or knowledge; with this, we understand that the concept of enlightenment holds a particularly important nominal purpose for Astronism due to enlightenment remaining integral to the concept and achievement of cosmosis.

[5:3:18] The Astronist Tradition argues that the only way to Human Enlightenment is through cosmic enlightenment or cosmosis, and the only way to cosmic enlightenment is through the exploration, enknowledge, and most pivotally, one's experience of The Cosmos.

[5:3:19] Experience is essential to cosmosis because to experience something is to know and understand something far better than to simply be told of it or to learn of it through enknowledge either being by taught or being self-taught; essentially, cosmic experience refers to a necessary ingredient for cosmosis and be considered synonymous with cosmic exploration, yet the term also encompasses a wider area of elements than just exploration alone for also included as part of this is cosmic discovery, cosmic enknowledge, and cosmic settlement and civilisation.

[5:3:20] That which I herein introduced as the Enlightenment Cosmology refers to a new cosmology incorporating enlightenment in which The Big Bang is considered as the one and only true enlightenment and that The Big Bang is the one and only source of knowledge.

[5:3:21] Enlightenment is not physical light, but rather, metaphorical light that shines upon something or someone for greater understanding of the topic in question and in the Enlightenment Cosmology, The Big Bang is the brightest and most important of all lights; as part of the Enlightenment Cosmology, The Big Bang is considered to be the one true and principal source of all knowledge and therefore aligns with the beliefs of Astronism in that The Cosmos is the direct result of the occurrence of The Big Bang so therefore study and exploration of The Cosmos will lead to our proximation to The Big Bang and subsequently, our quest for knowledge will be fulfilled.

[5:3:22] That which shall henceforth be informally termed as the act of shedding, and officially referred to as to incontinuate, or incontinuation is to refer to the process of the Institutional removal of a belief orientation from Astronism due to the decided fact that it has become irrelevant, or no longer of alignment within Astronism or with the principles of the Philosophical Spirit.

[5:3:23] An example of which for the former reason is the expected inevitable removal of the belief orientation of sentientism from being a central concept of Astronism after the discovery of multiple instances of sentient life beyond The Earth.

[5:3:24] In this particular case, sentientism would of course remain a belief of Astronists, but instead of being designated as a subject of belief, it would instead be designated as a proven fact and truth.

[5:3:25] This would render sentientism into a state of incontinuity which pertains to something that was once a central element to a philosophy, a religion, an ideology, or something other movement, but due to the proving of such as fact, the momentum and purpose of the need to promote it as a belief is therefore removed due to the proof of its existence as once believed.

[5:3:26] The process of shedding is considered to be a positive process of the de-emphasis of belief orientation while that which is to be henceforth known as deromation is considered to be negative as that is associated with the removal of a concept or belief orientation from the auspices of The Philosophy of Astronism that is considered to be offensive, no longer ethically upstanding, no longer in alignment with the ideas and values of The Philosophy, or no longer holding relevance due to its disapproval.

[5:3:27] The illogicality of atheism; Astronism follows the notion of logic that for something to be created it must have a creator and so the notion that atheism follows which is that for something to exist, it needn't have a creator is considered illogical.

[5:3:28] The Invaluability of Astronism is associated with the belief orientation of invaluationism, the notion that due to the nature of Astronism, it remains exempt from all forms of valuation and therefore opposes the attempts of the notion of conceptual value from placing a value to Astronism in its entirety and its component elements while the belief orientation of valuationism stands in support of such attempts.

—

[5:3:29] There are various instances in the study of The Cosmos to become enlightenment, especially so with surprising facts about The Cosmos which are herein Astronised and in turned into a new form of conceptuality that is to be henceforth known as a verity.

[5:3:30] A verity shall stand alongside other conceptals of Astronism including theories, notions, belief orientations, concepts, superstition and others; a verity, in the context of

Astronism, is a notion that has verifiably been proven true and is therefore the most superior of all conceptual types; exploration and expansion of verities is the driving force of enlightenment; it is of enlightenment which I speak when I speak of verities.

[5:3:31] For example, it is the belief of Astronism that sentientism as a notion will soon transfer into becoming a verity due to the fact that as a subsequence of the Humanic Exploration of The Cosmos, sentient life beyond The Earth will be discovered, hence cause that which is to be known as a conceptual shift which is when a conceptual type is changed; by this notion, sentientism will become a verity rather than a belief orientation, hence further solidifying one of the core tenets of Astronism as a proven fact whilst will inevitably further bolster the legitimacy of Astronism.

[5:3:32] There will always exist a tradition verity within Astronism due to the prominent form of Astronism that is to be known as Scientific Astronism which understands and interprets Astronism only through verities rather than through any other type of conceptual.

[5:3:33] Hence, it is important for us to list some astronomical verities as part of this discourse and it is also important to name them in order to provide them with an Astronic identity because although verities are not often named, it is important for the Astronic tradition to name verities so that they achieve greater dissemination.

[5:3:34] The first of such verities to introduce herein, bearing in mind that this discourse certainly will not cover all the existential verities and that verity naming will also need to extensively occur post-omnidoxically, pertains to when one looks into the night sky, one is looking back in time

[5:3:35] This phenomenon is caused due to the time it has taken for the light to have to travel from the object to one's eye, for example, Vega is 25 light years away so the light left Vega 25 years ago while Betelgeuse is 640 light years away so the light that you see glowing from Betelgeuse is 640 years old; this verity is to be henceforth known in Astronist circles as retroscopy or is more colloquially referred to as the starlight enigma or the starlight paradox; this is expected to be something that will surprise and intrigue the masses about The Cosmos and can be something that Astronists frequently speak about.

[5:3:36] Certain telescopes allow us to look back in time to billions of years in the past which allows us to see as far back as just 400 million years after the Big Bang itself; this ability is to be known as extroscopy and is considered a verity by the Astronist Tradition.

[5:3:37] The Big Bang can be watched on your television through the cosmic background radiation which is the afterglow and heat of the Big Bang; when an old television is not tuned to a station you can visibly see a black and white fuzz and clacking white noise; this is caused by cosmic background radiation which this phenomenon is to be henceforth referred to as optogeny and is considered a verity by the Astronist Tradition.

[5:3:38] Sagittarius B is a giant cloud of alcohol 26,000 light years away from The Earth and contains trillions of litres of vinyl alcohol; this is a verity of the Astronist Tradition.

[5:3:39] The largest known diamond in the galaxy is a diamond star; it's the compressed heart of an old star that was once bright like our Sun but has since faded and shrunk; this is a verity of the Astronist Tradition.

[5:3:40] It takes 225 million years for our Sun to travel around The Milky Way; this is a verity of the Astronist Tradition which is to be henceforth known as circumrotationism.

[5:3:41] The largest mountain in the Solar System is on Mars and is called Olympus Mons; this is a verity recognised by the Astronist Tradition.

[5:3:42] That which is herein named as uranism refers to the fact that Uranus rotates on its side in relation to The Sun which causes seasons to be extremely long; each pole experiences summer sunlight which lasts for 42 years and its winter is a period of 42 year darkness; this is a verity in the Astronist Tradition.

[5:3:43] A diurnal paradox, or either referred to as the Venusian paradox or the Mercurian paradox depending on which planet is referenced, refers to the verity that Venus is the slowest rotating planet in The Solar System, it takes longer for it to fully rotate than it does to complete one orbit around The Sun; therefore, a Venusian day lasts longer than a Venusian year; a similar scenario constitute's Mercury's orbit and rotation.

[5:3:44] Neutronism is the term for a verity concerning neutron stars and how they are the fastest spinning objects known in The Cosmos, the fastest one of which has an equator spinning at 24% the speed of light which is over 70,000 km per second.

[5:3:45] Part of neutronism is that which will be known as neutronic density which refers to the verity that a spoonful of a neutron star weighs about a billion ton.

[5:3:46] The Milky Way is on a collision course with the Andromeda galaxy which is a verity that is recognised by the Astronist Tradition.

[5:3:47] If you unraveled all of the DNA in your body, it would span 34 billion miles thus it would reach Pluto and back six times over; this verity is to be henceforth known as the DNA Paradox.

[5:3:48] Voyager 1 spacecraft is currently the most distant human-made object from The Earth and it captured the most distant photography of The Earth to date; this is a verity which is recognised and disseminated by the Astronist Tradition.

[5:3:49] There are over 400 billion stars in The Milky Way; this is a verity which shall be henceforth known to be part of fertilism.

[5:3:50] It is probable that there are approximately 500 millions in The Milky Way capable of supporting life; again, this verity is part of a collection of verities under the banner of the name, fertilism.

[5:3:51] There are at least 2 trillion galaxies in The Observable Cosmos; again, another verity which comes under the banner of fertilism.

[5:3:52] The human brain is the most complex object in the known universe; a hundred billion neurons, a quadrillion connections; this specific type of fertilism is to be known as cerebral fertilism.

[5:3:53] We are all made from stardust; every element found on The Earth was created in the burning core of a star; this verity is to be henceforth known as astration which also relates to the practices of astration, also known as Astration which will be explored in a latter discourse as part of this disquisition.

[5:3:54] Each year the Moon moves 3.8 cm away from the Earth; this could case The Earth to become unstable in its own rotation; this verity is considered recognised by the Astronist Tradition.

[5:3:55] The Sun makes up 99% of the mass in The Solar System and could hold 1.3 million Earths inside it; this verity is part of fertilism.

[5:3:56] Approximately 275 million new stars are born in The Cosmos each day equating to about 100 billion each year; this verity is part of fertilism.

[5:3:57] Amino acids taste like raspberries and smelling like rum and these exist at the centre of our galaxy; this is a verity which is supported and disseminated by the Astronist Tradition.

[5:3:58] The Earth is 93 million miles from The Sun; this verity is part of fertilism.

[5:3:59] The Milky Way rotates at about 250 kilometres per second and completes a revolution every 200 million years; this verity is again part of fertilism.

[5:3:60] The last time The Milky Way completed one revolution, the earliest dinosaurs were roaming The Earth; this verity is another one which is part of fertilism.

[5:3:61] Everything within The Cosmos is in continuous motion; this is a verity which is supported by the Astronist Tradition.

[5:3:62] The Cosmos is about 93 billion light years in diameter; this verity is a significant part of fertilism.

[5:3:63] UY Scuti is the presently known largest star in The Cosmos; again, this is a verity which is part of fertilism.

[5:3:64] All the planets, stars, and galaxies that can be seen today constitute just 4% of The Cosmos; the remaining 96% is made of dark matter and dark energy; this known as the verity of Dark Illusion.

[5:3:65] That which shall be henceforth known as The Gliese Paradox is a planet that is covered in ice, but the ice is so hot that it emits steam; this is a recognised verity.

[5:3:66] The brightest objects in The Cosmos are quasars; this is a verity recognised by the Astronist Tradition.

[5:3:67] The Milky Way galaxy has a total of five spiral arms; this is a fertilist verity which is recognised by the Astronist Tradition.

[5:3:68] There is a planet 63 light years from The Earth which has winds of 5,500 mph blowing droplets of glass rain; this is to be known as the Vitreous Mystery.

[5:3:69] It would take 100,000 years to travel across The Milky Way, even at light speed; this is part of fertilism.

[5:3:70] It will take Voyager 2 more than 296,000 years to pass Sirius, the brightest star in our night sky; this is a verity that is part of fertilism.

[5:3:71] The background temperature of outer space is -260 degrees celsius; this is part of fertilism.

[5:3:72] The closest galaxy to The Milky Way is Andromeda which measures 140,000 light years across and is 2.5 million light years away from The Earth; again, a verity which is part of fertilism.

[5:3:73] Space is completely silent due to the fact that sound needs an atmosphere to travel through; the biggest, most awe-inspiring exploding star doesn't make a sound in reality; this is to be called the Spacial Silence Phenomena.

[5:3:74] The Cosmos is not only expanding, but it is accelerating in its expansion; this to be known as the Cosmic Peripheral Expansion Mystery.

[5:3:75] There are more stars in the universe than grains of sand on all the beaches on Earth; this is a common verity which is to be utilised by Astronists commonplace and should be a conversation starter especially in the context of disbelievers or the ignorant masses about the grandness and vastity of The Cosmos and therefore its subsequent importance to us; this is to be known as The Sand Paradox and more officially referred to as grandularism.

[5:3:76] The Earth is approximately 4.5 billion years old; this is a verity which will form part of fertilism.

Terminological Discourse

[5:4:1] It remains important to note that it has always been important to the development of The Omnidoxy to say that the terminologies, structures, organisations, and identities of past philosophies, and even religious traditions, has held a huge impact over The Omnidoxy which I considered to be a natural occurrence for any document that is as large as The Omnidoxy.

[5:4:2] Despite the fact that The Omnidoxy founds a brand new philosophy and philosophical tradition, and despite the fact that within it, entirely original concepts, beliefs, theories, and schools of thought are introduced, there are many aspects that shall remain unspecified that have been influenced by past philosophies and religious traditions.

[5:4:3] This is stated in a sense of pride to acknowledge that The Omnidoxy is created and founds the philosophy of Astronism in the sensing of building up what has already existed prior to it, but consider what existed prior in a new and original way; this can be considered the progression of ideas.

[5:4:4] The best of original ideas come from unoriginal origins for there exists no original origin for an idea, especially in the present time for it remains impossible for any person not to be in some way influenced by ideas that preceded them; it is the way of things, it is the nature of ideas, and it remains integral to our development of ideas, movements, and thought traditions as philosophers.

[5:4:5] In this discourse, a plethora of neological terms shall be introduced that cover a huge variety of meanings far beyond that of the remit for The Pentadoxy, yet this discourse remains firmly affixed herein; these terms are herein inspired by a wide range of pre-Astronist sources of inspiration including from previous philosophies and religious traditions.

[5:4:6] However, the neologisms coined in this discourse are completely original in the sense of their own ideas for they have all been formed by their applications to the context of Astronist Philosophy which formulates their originality despite the fact that they remain inspired by pre-Astronist sources.

[5:4:7] As is expected for any terminological discourse like this, the chosen style of writing for the majority of this discourse is aligned to definitionism, and so the first of these neologisms is that which shall be known as an abbrevian, or a person holding abbrevianship.

[5:4:8] An abbrevian is a preparer and officiator of a document published by The Institution of The Philosophy of Astronism, especially a New Concept Development (NCD) document.

[5:4:9] Abjuration is the act enacted by The Institution of The Philosophy of Astronism of renouncing a concept, theory, belief orientation, or school of thought that it was previously aligned with, or that itself created, either omnidoxically by Cometan, post-omnidoxically by Cometan, or a non-Cometanic author.

[5:4:10] Along this same train of thought, that which is to be henceforth known as a receivant is a person that accepts an NCD published by The Institution of The Philosophy of Astronism.

[5:4:11] Additionally, an objectant is a person that objects against an NCD published by The Institution of The Philosophy of Astronism meanwhile that which is to be referred to as a disreceivant is a person that had initially accepted an NCD published by The Institution of The Philosophy of Astronism, but later objects to it.

[5:4:12] A projectant is a person that had initially objected an NCD published by The Institution of The Philosophy of Astronism, but later accepts, or receives it.

[5:4:13] Reddication, or to reddicate in Astronist Philosophy refers to the adaptation of a text to suit altered circumstances from the original circumstances in which the text was written, most commonly used in reference to alterations made of The Omnidoxy.

[5:4:14] In Astronist Philosophy, the ruminative life is contrasted with the remunerative life, relating to the lifestyle and mentality specific to a person that spends the majority of their time thinking deeply about issues and questions beyond that of material worth or economic value; a philosopher's enquiry.

[5:4:15] Additionally, in Astronist Philosophy, remunerative life is contrasted with the ruminative life, relating to the lifestyle and mentality specific to a person that spends the majority of their time thinking of ways to generate material wealth and economic value for themselves and those around them; an economist's enquiry.

[5:4:16] Vowership, in padronology, refers to the obligatory role of a padron to ceremonially appoint their proceeding padron after their preceding padron has been appointed by The Institution of The Philosophy of Astronism.

[5:4:17] Of course, exemptions stand due to the sudden death of a padron, or in the case of the abdication or forced dismissal of the preceding padron in which this right of padronic appointment is removed.

[5:4:18] A vower or voweress, or a person that has achieved vowerhood, is vowerlike, or is vowerly refers to a former padron and a title only appointed if they did not abdicate or were not forcibly dismissed by The Institution; essentially, only appointed through via a dignified succession.

[5:4:19] Proactive devotion, in cosmic devotion and devotology, refers to the kind of devotion characterised by a person's arrangement of their achievements, the justification of their ideas, the practice of autochurning emotions and thoughts after situations have occurred, and is also identified by the practice of soliloquation.

[5:4:20] Essentially, proactive devotion is telling The Cosmos of something rather than asking The Cosmos for something which is characteristic of reactive devotion.

[5:4:21] That which shall henceforth be referred to soliloquation, to soliloquate, or to be a soliloquator in the context of devotology and cosmic devotion involves the act of talking to oneself aloud during the enactment of one's devotion, and is especially associated with proactive devotion rather than reactive devotion, the latter of which is characterised by devotion via internal thoughts without vocality.

[5:4:22] Oppositely, that which shall be henceforth known as reactive devotion in cosmic devotion and devotology refers to the other kind of devotional practice characterised by a person asking The Cosmos for something, or for some help in some situation that one has been forced into, and is characterised by internal thoughts of devotion known as intraquation rather than soliloquation which is vocal devotion that is characteristic of proactive devotion.

[5:4:23] To conduct the act of autochurning in cosmic devotion and devotology involves the practice of repeating scenarios in one's mind and soliloquating about them, especially so as to reassure oneself of one's own opinions of the scenarios that have occurred, and is characterised within proactive devotional practices.

[5:4:24] In the discipline of naology, that which is to be henceforth known as antement relates to the first three year's revenue of a sopharial building after its official founding, considered to be the formative years towards its official establishment and is used as a means to determine whether it is able to financially fund itself.

[5:4:25] That which is to be known as the title of the master of cosmos originating from within Astronist Philosophy refers to a person whose knowledge of astronomy, cosmology, theology, and philosophy combined has allowed them to write and published extensive works on this combination of subjects.

[5:4:26] Furthermore, that which is to be henceforth termed as the Cometanic Age is the period in history in which Cometan was alive, especially in relation to the events and creative works leading towards the development and establishment of the Astronist philosophical tradition during that time.

[5:4:27] In close association with the topic of the Cometanic Age is that which shall be henceforth known as cometanic succession collectively relates to the creative works, authors, philosophers, and events taking place within a decade of Cometan's death.

[5:4:28] Meanwhile, that which is to be henceforth termed as cometanicity refers to the extent to which a writer or philosopher bears the qualities traditionally attributed to the personality and writing style of Cometan.

[5:4:29] Vapidic Era is a reascensionist term relating to a period in the history of philosophy just prior to the founding and development of the Astronist philosophical tradition often attributed to the middle of the twentieth century to the first decade of the twenty-first century in which philosophy had been professionalised and philosophers held no societal influence and a limited cultural and social contribution.

[5:4:30] These are conservative estimates for the extent to which the Vapidic Era stretches back with some other proclamations stating that the Vapidic Era began with the death of Marx in 1883 which is omnidoxically held to be the official beginning of the Vapidic Era up until 2013 when the Astronist philosophical tradition was first founded by Cometan.

[5:4:31] In the context of naology, a person that is referred to as a pristinian is employed to ensure the cleanliness of a sopharium or a collection of sophariums is kept to a high standard.

[5:4:32] Moving across to the context of the discipline of omnidoxicology, that which is to be termed as omniolatory refers to an excessive authority provided to the literal words of The Omnidoxy, especially beyond Cometanic and Institutional standards of authority.

[5:4:33] The branch of omnidoxicology that is to be henceforth known as omnidoxical philosophy, or omnisophy primarily deals with two major areas.

[5:4:34] Firstly, it remains concerned with the relationship between the writings within The Omnidoxy herein and the reascensionist understanding of what philosophy shall become.

[5:4:35] Secondly, it deals with the accurate description of philosophical concepts derived from The Omnidoxy, especially comparisons between accuracy of descriptions of Astronist philosophical concepts.

[5:4:36] Omnidoxical translations are translations of The Omnidoxy in its entirety, or the translation of a single disquisition, discourse, or even a single insentensation.

[5:4:37] It is important to note that the nature of omnidoxical translations is that they are considered by the Astronist Tradition and The Institution to only be interpretations of The Omnidoxy rather than exact replicas of the original text for the official original language of The Omnidoxy shall always remain English.

[5:4:38] As we continued to introduce terms for omnidoxicology, that which shall henceforth known as the belief orientation of originalism refers to one's belief that The Omnidoxy must only be read in the English language for a person to truly have been considered to have read The Omnidoxy.

[5:4:39] Meanwhile, that which shall henceforth termed as lingualism in the context of omnidoxicology refers to the belief orientation holding that The Omnidoxy can be read in different languages other than English and that a person can still truly understand the text and can still be considered to have read The Omnidoxy whilst still recognising English as the primary and superior language that one should read The Omnidoxy in.

[5:4:40] Alternatively, that which is to be known as polylingualism in omnidoxicology involves the belief orientation holding that it does not matter which language a person reads The Omnidoxy in as long as the translation is as accurate to the original as possible and therefore this orientation does not provide any special superiority to English in the reading of The Omnidoxy which does therefore depart from the Astronist Tradition's orientation on this matter.

[5:4:41] That which is to be termed as omnidoxical accuracy is studied within the context of omnidoxical philosophy, or omnisophy as it is also referred to, and involves the measurement of the accuracy of descriptions of philosophical concepts, especially those of considerable complexity with the omnisophers in this scenario being to compare the differences in how concepts, belief orientations, theories, and other philosophical elements are conveyed.

[5:4:42] The term of omnisopher has been mentioned in the previous insentensation and refers to a specific type of omnidoxicologist dealing in omnisophy, or this title may more broadly relate to a non-Astronist philosopher that focuses on studying The Omnidoxy from a neutral perspective, or an Astronist philosopher with a considerable dependence upon The Omnidoxy and its specific wordings for the justification of their conceptual contributions to The Philosophy of Astronism, or wider Astronist philosophy.

[5:4:43] That which is to be known as sophoginaria, sophogination, or a sophoginarium is a term originating from within naology that refers to a group of individuals gathered for some reason within a sopharium, typically for a lecture, or to be guided around the building.

[5:4:44] Meanwhile, the term that is to be henceforth referred to as a hypersophoginaria in the context of naology involves the total number of people that have entered a particular sopharium on any given day and is used by sopharial managers to demonstrate a sopharium's ability to attract visitors.

[5:4:45] In the context of occurrology, that which is to be henceforth known as a philosophers' camp, also termed as camping philosophy, refers to the practice in Astronist philosophy of organising a camping trip with friends, family, fellow philosophers, or one that is organised for the public to participate in.

[5:4:46] This is organised with the sole purpose of encouraging philosophical debates that continue throughout the night set around a campfire and can be classified as an informal

philosophical debate, but also as an Astronic philosophical practice or event, hence its inclusion within occurrology.

[5:4:47] That which is termed as an informal debate, also known as an extrainstitutional debate, refers to one of the two forms of philosophical debates in Astronist philosophy and argumentology, the other being formal, that is typically characterised by it being held in places other than debating halls, sophariums, or any place that isn't hired or officially organised.

[5:4:48] Therefore not subject to the Institutionally prescribed protocols for philosophical debating which are contained within Institutional law.

[5:4:49] Informal debates are most likely to take place in the privacy of one's home, in public places that are not strictly philosophically related, such as restaurants or parks, or in establishments that are owned by The Institution like a philosophers' garden, but are not subject to the Institutional protocols for debatement.

[5:4:50] Alternatively, that which is to be henceforth termed as a formal debate, also known as an Institutional debate, is the second of the two forms of philosophical debate, the other being informal, that is typically characterised by it being held in a debating hall, a sopharium, or a hired room in which official debatable protocol that is Institutionally prescribed must be followed.

[5:4:51] Formal debates are also often recorded for publication and public spectatorship is allowed which differs the nature of formal debates from those of an informal nature.

[5:4:52] A sophory is a term first introduced within The Omnidoxy, as are the majority of the terms in this discourse, which refers to a group of friends formed purely by their passion for philosophy, typically due to the fact that they hold differing views and are able to hold good debates when together.

[5:4:53] Circumcosmocentrism is the belief held in different facets classified as an interpreted orientation predicting that with the transcension of humanity there will come a time when humanity, whose circumnavigation of The Cosmos both exploratively, philosophically, and mentally, will lead to the achievement of a transcendent humanity whom know of all things within The Cosmos and are therefore transcendent from it and superior to it; it is important to note that this belief orientation is not shared within the Astronist Tradition.

[5:4:54] That which is to be henceforth termed as an interpreted orientation remains distinct from a belief orientation itself and instead refers to an organised set of beliefs that are not explicitly outlined by The Omnidoxy, but are nonetheless easily interpretable from the writings within The Omnidoxy, the first example of which is circumcosmocentrism.

[5:4:55] An androny is a philosophical debate in which only males are allowed as part of the practice of disolition meanwhile a gynony is a term relating to a philosophical debate in which only females are allowed as part of the practice of disolition.

[5:4:56] The aforementioned term of disolition refers to the practice condemned by The Institution of The Philosophy of Astronism in which a philosophical debate is held wherein only females or males can attend for this does not conform to Institutional law and philosophical debatory protocols and principles.

[5:4:57] That which shall be henceforth termed as a extolliary refers to a book chronicling the lives, and especially the artistic journeys of Astronist philosophers.

[5:4:58] In a similar topic, that which is to be henceforth termed as a commendition refers to a type of ceremony held by The Institution of The Philosophy of Astronism biennially to commemorate particular philosophers identified as having contributed to the development of the Astronist philosophical tradition in some form.

[5:4:59] A term that is first herein introduced is that which is to be known as an omnidance which is to henceforth refer to a type of concordance specific to The Omnidoxy in which an alphabetical list is created of words in The Omnidoxy giving, for each appearance of a word, its location according to its associated indexa, and a brief context of its usage.

[5:4:60] The first omnidance is to be written post-omnidoxically by Cometan and it is to be titled as The Cometanic Omnidance.

[5:4:61] An attentment pertains to an agreement between The Institution of The Philosophy of Astronism and a non-philosophical body, especially a governmental one, on the resolution of a matter of vital concern to both parties.

[5:4:62] The notion that is to be henceforth referred to as disfractionism involves the belief that because Astronism exists as a philosophy in which disagreeing arguments with what is Traditionally held are welcomed in alignment with the principles of the Philosophical Spirit, that there is no need and no ability for schisms to occur that divide The Philosophy.

[5:4:63] Only in the context of Institutional Authority could schisms truly occur as it is herein stated with omnidoxical authority.

[5:4:64] Essentially, the notion that because The Philosophy of Astronism is not dogmatic by its nature and has held many differing belief orientations within it since its inception within The Omnidoxy, that it is indivisible in philosophical terms and so only in Institutional dissociation is it divisible.

[5:4:65] The indivisibility of Astronism is also another distinguishing characteristic made between the nature of philosophy and that of religion.

[5:4:66] That which is to be henceforth referred to as the term optillumination in Astronist Philosophy refers to the complex act of being able to express philosophical ideas through the use of sign language for the purpose of educating and astronising to those with impaired hearing.

[5:4:67] Additionally, that which is to be henceforth termed as proquinity, to proquine, to proquinate, or to be a proquinator, or proquiness, and also referred to as philosophic enunciation, involves the quality of being able to clearly express complex philosophical theories and concepts to those without particular knowledge or training in understanding such concepts.

[5:4:68] In the context of the study of philosophical demographics, that which is to be known as an insignificant philosophy refers to a philosophy that claims below 1% of the total populous as its adherents meanwhile that which is to be categorised as a minority philosophy pertains to a philosophy attaining between 1% and 10% of the total populous as its adherents.

[5:4:69] A significant minority philosophy pertains to a philosophy that holds adherence of between 10% and 30% of the total population meanwhile the next largest categorisation is that of a prominent philosophy which claims between 30% and 50% of the total population of either a municipality, region, province, country, or group of countries.

[5:4:70] Finally, the two largest categorisation are those termed as a dominant philosophy, which claims adherence from between 50% and 95% of the total populous meanwhile that which is termed as a totality philosophy claims adherence from more than 95% of the total populous; these categorisations are expected to be popularly used by philosophical demographers alongside other forms of adherence measurement and methodologies.

[5:4:71] That which is to be henceforth termed as a repostary refers to a question proposed to The Institution of The Philosophy of Astronism querying some element of its philosophy meanwhile that which is henceforth to be known as copostary is the answer provided in response to a repostary directed towards The Institution of The Philosophy of Astronism that queries some element of its philosophy.

[5:4:72] That which is to be henceforth known as the process of sophication refers to one's personal transformation of becoming a philosopher according to three different dimensions; by appellation, by character, and by ambition, all of which are considered to be necessities for a person's true attainment of their philosophership.

[5:4:73] The term that shall be known as retropodia in its plural sense, a retropodiary, or a retropodium refers to the lists of names of past Astronists that have in some way contributed to the furtherance of Astronism, its principles, or those of philosophy in general, especially in reference to and in alignment with the Philosophical Spirit.

[5:4:74] Retropodiaries are often created with short biographies for each individual which are to be known as prosopiaries and can be submitted to The Institution of The Philosophy of Astronism for their inclusion within a retropodiary either before the subject has become deceased or afterwards according to the person's wishes or the wishes of their family after they have passed.

[5:4:75] Retropodiaries are herein stated to be categorised tridimensionally, meaning that there can exist national retropodiaries, which is a retropodiary according to nationality, and contributive retropodiaries, which is a type of retropodiary characterised according to the type of contributions that the person made.

[5:4:76] Finally, theoretical retropodiaries, which are most commonly used for those with multiple philosophical contributions and categorises individuals according to the area of the philosophy to which they contributed primarily.

[5:4:77] If they contributed to multiple areas, then a short overview of their contributions may be provided in the appropriate slot in each retropodiary that focuses on that area of philosophy.

[5:4:78] A person may be included in a multitude of all three of these types of retropodiaries throughout their life and after their death as long as each entry is not repetitive of that which has already been detailed in a previous entry; each entry into a retropodiary must be original and not speak at length of that which has already been written of the subject in a previous retropodiary.

[5:4:79] That which is to be henceforth known as errography refers to the study and correction of the semantic and grammatical errors found in the original version of The Omnidoxy, and when studying copied versions of The Omnidoxy, this area of study also includes omnidoxical dittography and omnidoxical haplography.

[5:4:80] That which is to be henceforth termed as sopharialism, and may also be termed as naologicism, refers to a depreciatory point of view directed towards someone's approach to Astronism and primarily involves the notion that they allow the interests of the sopharial leadership, to which they are regular visitors, to overbear their understanding of Astronism itself.

[5:4:81] Essentially, the notion that a person concerns themselves too heavily with the beliefs and interests of their local or national sophariality rather than concerning themselves with the betterment and expansion of their knowledge and understanding of Astronism as a distinct entity from naological polity and affairs.

[5:4:82] The version of this depreciatory viewpoint when applied in relation to The Institution of The Philosophy of Astronism is to be henceforth known as hyperinstitutionalism which is an excessive and overbearing concern with the policies and general affairs of The Institution of The Philosophy of Astronism in such a way that overly

influences a person's understanding of and approach to their practice and belief in Astronism.

[5:4:83] This term is expected to be most regularly appointed by those whom follow anti-Institutionism towards those whom are followers of Institutionism.

[5:4:84] That which is to be henceforth termed and referred to as an omnidoxy involves an uttered or enunciated version of The Omnidoxy in contrast to the inomnidoxy which is the written or inscribed version of The Omnidoxy which is obviously the original form of The Omnidoxy herein.

[5:4:85] The notion of the existence of eclecticism in Astronism is expected to be topic of interest for many post-omnidoxically with The Philosophy of Astronism, due to its wide-ranging and encopistic nature, can also be seen as eclectic by its identity due to the fact that even within the Astronist Tradition, there are belief orientations and concepts that are combined together that would not necessarily have been combined together pre-Astronistically.

[5:4:86] This forms a strong tradition of eclecticism within the foundations of Astronist philosophy that is no doubt further influenced by its adherence to the principles of the Philosophical Spirit.

[5:4:87] That which is to be henceforth known as encopism relates to the nature and characteristic of philosophy which The Philosophy of Astronism is considered to emulate that involves how it is able to adhere to a traditional view, namely the Astronist Tradition, but remain acceptable to differing and opposed elements that still remain classified within The Philosophy of Astronism as valid concepts, theories, and belief orientation despite their difference or opposition to the Traditional understanding.

[5:4:88] This is not considered to be demonstrated in religions due to their dogma and is therefore considered to be a prominent example of holding philosophical identity, especially one that exists in alignment to the Philosophical Spirit.

[5:4:89] Empostary is a term herein introduced that is to relate to a formal letter delivered to all the Institutional or Institutionally-aligned sophariums of a given area usually in relation to some announcement, change in policy, or addition to policy.

[5:4:90] Also, that which is herein introduced as the term of episcription collectively relates to all the non-omnidoxical works that reside within The Grand Centrality, the main one of which is the Astronist Methodology.

[5:4:91] To surnationalise refers to the instance in which a government gains full or partial (deuterosurnationalise) control of the naological polity of all sophariums residing on its territory, both those owned privately and Institutionally.

[5:4:92] The associated belief orientation of surnationalism in the context of naological polity involves one's support for the mass implementation of surnationalisation or deuterossurnationalisation (deuterossurnationalism).

[5:4:93] Respectivism, as it is to be henceforth known, refers to the view that The Institution of The Philosophy of Astronism and by extension, all the sophariums it presides over, or is in a state of association with, should remain completely separate from the controlling powers of the state, governmental policies and agendas, and governmental oversight of The Institution's operations.

[5:4:94] Cointention, as it shall be henceforth known, relates to the occurrence in which the government of a country and The Institution of The Philosophy of Astronism formulate an official bond beyond the recognition of the latter by the former so as to suggest that the former will help promote or provide funds to the latter, however, this is not to be confused with the instance of a state philosophy.

[5:4:95] Oppositely, that which is to be henceforth known as disintention relates to the occurrence in which the government of a country and The Institution of The Philosophy of Astronism once held a mutual state of cointention, but this has officially be changed to a state of disintention, either mutually or one-sidedly, due to a divergence in the ambitions and intentions expressed by either side.

[5:4:96] Essentially, this relates to a distancing in relation between a government and The Institution of The Philosophy of Astronism, especially after closer relations had been shared, but this does not equate to a disrecognition of The Philosophy of Astronism by the government.

[5:4:97] A paromnium refers to a book in which two or more of the disquisitions of The Omnidoxy are included but not all twelve of the disquisitions that make up The Omnidoxy, usually found in commercial settings so as to combine two or more shorter disquisitions into one physical text despite their philosophical and theoretical separation.

[5:4:98] Paromniums can therefore be found in a multitude of different combinations of the omnidoxical disquisitions.

[5:4:99] That which is to be henceforth known as an exemplinarian, or a follower of exemeplinarianism refers to the anti-religious or anti-founderist fundamentalist belief orientation holding that no Earthly or human proclamation of something can ever be considered beyond that of an example rather than the actuality of what is said.

[5:4:100] An example of which would be the rejection of the entireties of Christianity, Islam, and Buddhism by the notion that the founding figures of these religions held no actual divine revelations or special connections with something, someone, or somewhere beyond their own physical, natural, and biological selves, but were instead simply

exemplars of what are termed The Four F's including fortitude, fortune, forefathership, and fortification.

[5:4:101] That which shall henceforth be termed as supramogenesis is to refer to the official act undertaken by The Institution of The Philosophy of Astronism of apologising or professing sorrow publicly for a tragedy either involving The Institution directly, one of its employers/volunteers/sopharial leaders, or one of its followers.

[5:4:102] The Three Philosophical Elements, as they shall henceforth be collectively appellated, involve the three components describing the nature of philosophy according to the Astronist Tradition which are to include the elements of proposition, justification, and acceptance, each of which are considered to emanate the true nature of philosophy in accordance to the principles of the Philosophical Spirit.

[5:4:103] Propianism, as it shall henceforth be termed, relates to the belief orientation that one's philosophicality/philosophicity should and will primarily come as inspired from outside of their temporal bodies and minds rather than from their mind through imagination.

[5:4:104] Alternatively, that which shall be known as autopropianism henceforth pertains to the belief orientation holding that one's philosophicality/philosophicity should and will primarily come from within oneself rather than from worldly expositions such as those found in art, architecture, and other inspiratory elements.

[5:4:105] In relation to character in Astronism, The Philosophy is aligned with unquitarianism which states that every animate and inanimate entity in existence holds a unique character, or set of qualities that formulate its identity and that these characteristics are in constantly changing unique combinations dependent upon both on our external and internal experiences which differs from other philosophical and religious outlooks on the topic of characteristics, their nature, and their motionalities.

[5:4:106] That which is to be henceforth known as crisis philosophy refers to the form of philosophical contemplation and study, as well as the form of organised philosophy that arises prior, during, and after the occurrence of a major societal crisis.

[5:4:107] As well as this, the study of such occurrences historically, especially regarding how said crisis impacted upon the philosophical outlooks, the popularity of certain beliefs, and the ways in which those beliefs are practiced and their concepts are voiced; in this instance, crisis holds both a positive and negative meaning.

[5:4:108] That which is to be henceforth known as majoritarianism is to be used in a range of different contexts and denotes the instance in which something is governed or is believed mutually by the majority, known as the ruling majority.

[5:4:109] Minoritarianism, as it shall be known, is to be used in a range of different instances denoting when something is governed or is believed mutually by the minority rather than the majority, known as the ruling minority.

[5:4:110] Furthermore, that which is to be henceforth known as directarianism is a form of Institutional governance in which members of the governing body of The Institution of The Philosophy of Astronism are rotationally provided with the title of director quarterly whose main role consists of the reduction of bureaucracy by attempting to complete accords with opposing members as well as to

[5:4:111] Codirectorship, also known as codirectarianism, refers to the form of Institutional governance in which two directors are appointed quarterly with the role of the reduction of bureaucracy.

[5:4:112] Additionally, similitarianism is a form of governance in which members from traditionally opposing parties formulate Associations of Similarity so as to progress policymaking and to reduce bureaucracy.

[5:4:113] Finally, that which shall be known as mediatarianism, is a form of Institutional governance in which there are a greater number of mediators between two opposing sides than there are members in either of the opposing sides; essentially, the instance in which the mediators form the majority while the extremators form the minority.

[5:4:114] Dispensational cosmism, as being first introduced within Astronist cosmology, refers to the belief orientation holding that the infinite amount of cosmoses within The Omniverse as part of The Universe exist as economies or functional dispensations of The Divine put into function for the purpose of existence alone for there is not considered to be a need for the purpose of existence as is demonstrated in The Omnidoxo, existence is forever superior to non-existence.

[5:4:115] The appellation that is to be henceforth referred to as Polydimensionality of Existential Purpose refers to the instance in which Astronism proposes that the micropurpose of humanity is to achieve transcension but the macropurpose, which is the purpose of The Cosmos, and the creative ability of The Divine, or the existence of The Cosmos and The Universe without the creatorship of The Divine, is considered to be a much larger question, hence forming the Polydimensionality of Existential Purpose, or the Degrees of Existentiality as it may also be termed.

[5:4:116] Cosmontism is the notion that we can have a direct knowledge of The Divine through our observation, interaction, and exploration of The Cosmos, its progeny, and its phenomena as directed through Astronism.

[5:4:117] Foreunderstanding, as it shall henceforth be known in the context of omnidoxicology, shall refer to the principle holding that any omnidoxical exegesis must only be conducted once the exegetist has acquired an understanding the authorial,

chronological, and circumstantial context in which The Omnidoxo was written so as to allow this contextualisation to formulate a more accurate exegesis of the text.

[5:4:118] That which is to be known as proritualism refers to the belief orientation holding that The Philosophy of Astronism should consist of rituals meanwhile antiritualism refers to the belief orientation holding that The Philosophy of Astronism should not consist of rituals.

[5:4:119] Cosmonomy is a hypothetical form of government wherein a civilisation is governed across a multiplanetary network of planetary governments which are accountable to a central government on one of the planets as part of the cosmonomy.

[5:4:120] Astrodicry, inspired by the pre-Astronist term of theodicy, is to be known as an area of contemplation within Cosmic Philosophy dealing with the justification for the fundamental goodness of cosmic progeny and phenomena, as well as the multitude of questions surrounding why there exists evil in The Cosmos, the purpose of evil, the true nature of evil, perceptions of evil, as well as dealing with the existence of suffering and why suffering must occur within The Cosmos as part of a natural dichotomy.

[5:4:121] Cosmodicy, as it is to be known, refers to attempts to justify the fundamental goodness of the universe, and an anthropodicy attempts to justify the goodness of humanity.

[5:4:122] Additionally, sophodicy involves the area of contemplation within Astronist metaphilosophy involving the question of the rationale for the existence of evil, the role that evil plays within the natural world as part of dichotomy with goodness, the justification for the inherent goodness of philosophy as a positive force in the world, and therefore also justifies the righteousness of philosophers.

[5:4:123] Sopho- (prefix) is a combining form first introduced herein omnidoxically relating to philosophy or philosophers while the term of wonderness is the condition or quality of being in or experiencing wonderment and finally, that which is to be known as a ferevont is a portable form of a vont which simultaneously introduces the new prefix of fere- meaning that which is portable or movable.

[5:4:124] Fideism is considered to be existent within The Philosophy of Astronism involving the notion that knowledge depends on faith or revelation due to the incapacity for our minds to comprehend anything involving divine or extracosmical matters, or even cosmical matters themselves, such as the vast distances and sizes of progeny and phenomena in The Cosmos which largely remain incomprehensible for the human to truly understand and therefore an Astronist fideist would argue that both faith and revelation are required in order for us to gain knowledge of The Cosmos itself let alone The Universe and The Divine beyond.

[5:4:125] That which is to be henceforth known as an anament refers to a collection of insentensations selected from within The Omnidoxy and compiled to form a new book.

[5:4:126] Anamental works are usually compiled so as to justify one's interpretation or the postulation of their belief orientations by providing insentensations from The Omnidoxy that either directly or indirectly support their ideas.

[5:4:127] Essentially, an anament is a way for a post-omnidoxical author to use The Omnidoxy herein in such a way that allows them to justify their ideas through the careful compilation of insentensations that support their ideas.

[5:4:128] The anament is the physical work that is produced while the act of anamenting or anamentation refers to the process of collecting such insentensations for such a purpose.

[5:4:129] Presentationism is the belief orientation holding that one's adherence of The Philosophy of Astronism should be regularly, confidently, and publicly expressed, more so than in private settings.

[5:4:130] Furthermore, confidentialism is the belief orientation holding that one's adherence of The Philosophy of Astronism should be more privately expressed rather than publicly exhibited.

[5:4:131] In naology, a prodant is a person that regularly visits many different sophariums rather than the same sopharium.

[5:4:132] In naology, a merodant is a person that regularly visits their local sopharium and very rarely visits any other.

[5:4:133] In naology, a cerodant is a person that does not regularly visit any sophariums, but nonetheless identifies as an Astronist.

[5:4:134] Celestology is to be henceforth known as the discipline of study dealing with the lives of celestants, or celebrated Astronists as they may be colloquially referred to including what they did to become celebrated as well as the general procedures involved in becoming a celestant.

[5:4:135] It is important to note that celestology should not be confused with celestography which pertains to the writing of works dedicated to chronicling the lives of celestants, or celebrated Astronists.

[5:4:136] That which is to be known as an antesentensation refers to the first insentensation of a discourse or disquisition meanwhile a finosentensation is the last insentensation of a discourse or disquisition which also firstly introduces the prefix of fino- which is a combining form relating to that which is last in a series, or the final part of something.

[5:4:137] The term herein introduced as a compliment of philosophy in the context of verontology refers to a non-theoretical and therefore a physical manifestation of adherence to Astronism, including practices, festivals, and other events rather than beliefs, concepts, and other conceptual manifestations of adherence to Astronism which are to be collectively known and referred to as the indispensables of philosophy.

[5:4:138] A veron is a general term for a compliment of philosophy, especially an event associated with Astronist practices and that which is to be referred to as veroncy pertains to the collective term relating to the entire series of practices, events, festivals, and other compliments of philosophy that form the verontic side of Astronism.

[5:4:139] That which is to be henceforth known as the discipline of verontology, also alternatively referred to as verontics pertains to the study of the compliments of philosophy, mainly the practices, events, festivals, commemorations etc. that form the verontic year.

[5:4:140] A verontic year is the calendar year as determined according to verontic events, or compliments of philosophy.

[5:4:141] That which is a heriturge, is heriurgic, or heriurgical refers to the owner of a stately home, or other historic house or estate that is officially aligned with Astronism and therefore allows for The Institution of The Philosophy of Astronism to utilise their estate for events and other public displays of the philosophy.

[5:4:142] Ultracosmism is to henceforth involve the belief orientation that holds a pertinent place within the Astronist Tradition's understanding and worldview stating that only that which is cosmical can truly be known to exist in contrast to that which is universal or that which is divinical in nature is to be applied both internally towards concepts and beliefs orientations within Astronism, but also applied externally towards both philosophical and religious traditions either of a theistic, atheistic, or non-theistic theology.

[5:4:143] Invitical is a type of invite in the form of a level delivered to a notable philosopher asking for his attendance at a debatement at a particular sopharium on some specified date whereas a revitical is the response that a philosopher provides to the sender of an invitical outlining whether they are able to attend the debatement to which they have been invited.

[5:4:144] Diurnal practition relates to practices undertaken in the name of Astronism during daylight/daytime hours meanwhile a nocturnal practition relates to practices undertaken in the name of Astronism during nighttime hours.

[5:4:145] Astral practition relates to practices undertaken in the name of Astronism during astral hours only which are times during which the stars are either entirely visible or partly visible.

[5:4:146] A shortened form of The Omnidoxy which only includes insentensations classified as part of the writing style of rhapsodicism is to be henceforth known as an omniary.

[5:4:147] A shortened form of The Omnidoxy which only includes insentensations classified as part of the writing style of definitionalism is to be henceforth known as an omnidera.

[5:4:148] Finally, an omniment is a shortened form of The Omnidoxy which only includes insentensations classified as part of the writing style of explorationalism.

[5:4:149] A motional veron pertains to dates for events associated with Astronism that move every year meanwhile a static veron involves dates for events associated with Astronism that stay on the same date every year as part of the discipline of study of verontology.

[5:4:150] Curocant is a person that expresses hesitation in the way they profess their adherence to Astronism, especially publicly, but also to friends and family members.

[5:4:151] Standards of The Philosophy, as it is to be henceforthly appellated, collectively relates to the four officially omnidoxically ascribed adjectives for The Philosophy of Astronism to be told as the 'original, justified, transcismic and Cometanic' philosophy.

[5:4:152] That which is to be henceforth known as occasionalism refers to the philosophical theory of the relation of mind to matter which denies that finite things have efficient causality and postulates that God always intervenes to bring about a change in matter when a change occurs in mind and vice versa.

[5:4:153] The Astronist Tradition is in full opposition to occasionalism for it is held that The Divine plays no such intercessional role in the specific events occurring within The Cosmos and it is this view that is to be henceforth known as autodeterminism, or as innocasionalism.

[5:4:154] That which is known and appellated as Ontological Argument is a classical argument for God's existence holding that the concept of God entails the real existence of God.

[5:4:155] There exists an opposition to this in Astronism and this to be henceforth known as paracosmism which states that such which exists beyond the bounds of The Cosmos cannot be described or ascribed by that which resides within The Cosmos due to The Cosmic Limitation Principle and is therefore distinguished from the aforeintroduced belief orientation of ultracosmism.

[5:4:156] Pertaining to the belief orientation holding that The Divine does exist within The Cosmos is to be henceforth known as intranism which is therefore opposed to transtheism

and in favour of panentheism, but the oppositism to intranism is disintranism which pertains to the belief orientation holding that The Divine does not exist within The Cosmos which is itself opposed to panentheism and in favour of transtheism.

[5:4:157] This leads to one of the foremost topics for debatabation and contemplation post-omnidoxically which is to be henceforth appellated and referred to as The Panentheist-Transtheist Dichotomy/Debate which pertains to the rift that is considered to exist within The Philosophy of Astronism regarding The Philosophy's adherence to either panentheism or transtheism.

[5:4:158] The question of whether Astronism truly is panentheistic in orientation, or transtheistic is fundamental to the general theological understanding of Astronism and the role of The Divine within the Astronist cosmology which holds consequences for a variety of other subjects within Astronist philosophical study, hence demonstrating its importance as an area of contemplation and study.

[5:4:159] Padronalia is the branch of padronology dealing with the policies and principles regulating the public and private life of the padron.

[5:4:160] To be incepetic refers to an alternative name referring to a philosopher active during the Cometanic Age of the history of Astronist philosophy.

[5:4:161] The appellation of The Ways of Astronism in the context of the study of the Forms of Astronism collectively relating to three characters of The Philosophy of Astronism, or ways in which The Philosophy may act in society depending upon the nature and circumstances of the society, as well as the ambitions and relations of The Institution of The Philosophy of Astronism in that society and includes Obtrusive Astronism, Unobtrusive Astronism, and Nonobtrusive Astronism which lessen in their degrees of aggressiveness respectively.

[5:4:162] A planetan, derived from the word planeta pre-Astronistally meaning wanderer, relates to a traveller or drifter that is adhered to Astronism whereas that which is termed as a varan pertains to a homeless person who is adhered to Astronism.

[5:4:163] The Metasophium is the hall of fame for philosophers, theologians, ideologists, and religious leaders that is herein omnidoxically introduced and shall be established by The Institution of The Philosophy of Astronism as an unbiased institute for the extollation of philosophers, theologians, ideologists, and religious leaders that provides them with a platform for popular culture and mass media attention.

[5:4:164] That which is termed as a metasophian is a deceased philosopher that is remembered long after their death for the contributions not only to the field of philosophy, but also to wider society which is often manifested by their entry into The Metasophium as well as the erection of statues commemorating their contributions, as well as their

addition to become extolled which is an especial practice in the Astronist philosophical tradition.

[5:4:165] That which shall henceforth be known and herein founded as celestialism, also known as the Cosmic era, or the Cosmic age is to relate to the artistic, literary, musical, intellectual, industrial, commercial, cultural, religious, social, and philosophical movement that originated in England during the second decade of the twenty-first century shortly proceeding the founding of the Astronist philosophical tradition, particularly the philosophy of Astronism.

[5:4:166] Celestialism is characterised by its emphasis on the role of astronomy and space exploration in the cultural, industrial, and spiritual spheres of human civilisation with a particular focus on the artistic depiction of astronomically-related subjects; essentially, celestialism can be considered the movement which holds its roots in the principles of cosmocentricity and astronocentricity.

[5:4:167] Celestialism is considered to reach its climax during the initiation and full establishment of the Humanic Exploration of The Cosmos during which celestialism is considered to be the pioneer of unquitarianism, sentientism, and most of all, both civilisational and personal transcension, especially with regards to its influence of artists across mediums including music, literature, philosophy, and art and how the depiction of astronomical and cosmical subjects across these mediums will see a rise under celestialism.

[5:4:168] Unquitarian values shall take reign under the movement of celestialism as well as the glorification of both The Cosmos, its progeny, and its phenomena as the primary subjects of human rational devotion and faith as products of nature as well as the centrality of the role of philosophy in human society, especially above that of religion despite continued respect for religious devotion, faith, and practice.

[5:4:169] Celestialism is expected to be a direct product of the widespread dissemination of the philosophy of Astronism throughout the world, the reorientation of human societies towards philosophy and religion rather than materialism and wealth accumulation as the sole motivators of human productivity and societal progression.

[5:4:170] Celestialism is therefore expected to occur in direct reaction to the overbearing rigidity of human society and its focus on the material rather than the spiritual, the natural, the conceptual, and the supernatural albeit celestialism promoting a rationality with its particular thematic focus on astronomy and the real natural phenomena of space.

[5:4:171] Additionally, celestialism is expected to be the successor to the movement of postmodernism with its embodiment most strongly seen in the visual arts, music, and literature, but also holding a major impact on the role of religion, education, the social sciences, as well as the scientific study of astronomy as a separate entity from its philosophical form.

[5:4:172] Celestialism is also expected to hold a significant and complex effect on politics, with celestialist thinkers influencing liberalism, radicalism, conservatism and nationalism along with forms of populism.

[5:4:173] The celestialist movement is also considered to initiate an immense shift and reprioritisation of emotion which will be redirected to astronomical observation and practice as a newly centralised source of aesthetic and spiritual knowledge placing emphasis on such emotions and experiences Astronistically introduced as wonderment, cosmicity, astrance, and philosophicality amongst others especially in relation to that which is experienced in one's personal and societal interaction with the beauty that is The Cosmos.

[5:4:174] It will see the elevation of cosmic art, social and cultural redirection towards the philosophical rather than the purely materialistic driven by the focus on conceptual value rather than material value as propounded by the philosophy of Astronism.

[5:4:175] Considered the middleground of Enlightenment rationalism, as demonstrated by the astronomical theme of the movement, and conversely the deep spirituality and faithfulness of medievalism with the transcensionist narrative and purpose driving all its functions.

[5:4:176] As that which heralds the Cosmic Age, celestialism will become the pioneer of a cosmic-scale of thinking in which humanity's focus is not placed on the relationships between humans, the affairs of nations, or the histories of religions, but is instead placed on the cultivation of a greater relationship between individuals and societies towards The Cosmos as it is understood to be an animate, motional, and emotional entity.

[5:4:177] Furthermore, celestialism places ample value on the notion of transcension, both personally and collectively, the latter of which means in terms of society, or civilisationally, as a form of paraspirituality, which is a combination of actual and rational observation and experience alongside spiritual, mystical, religious and psychological transcendency rather than values upheld in the materialistic worldview which are purely concerned with monetary accumulation, economic growth, and personal possessions.

[5:4:178] Celestialism, due to its cross-societal nature affecting many different facets of human civilisation, is expected to hold significant impacts not only on the ontology and future of religion in the face of philosophical reascension, but also on the role of ideology and cultivation of brand new ideological movements affecting national, global, and multiplanetary politics with the first of such movements being the emergence of the Space Movement, also known as spacism which is first introduced and manifested in The Astronist Methodology.

[5:4:179] The occurrence of celestialism is expected to be the greatest social, cultural, political, and intellectual manifestation of the principles, ideas, and general philosophy of Astronism though the latter is not considered to be dependent upon the former for

Astronism will far outlive the occurrence of celestialism as a movement though of course the exact periods in which celestialism will initiate and end are not to be predicted herein.

[5:4:180] Celestialism assigns a high value to the use of technology on the achievement of personal and civilisational transcension, which can be interpreted as its support for various different elements of transhumanism, coupled with it placing a major importance on environmentalism, especially regarding the preservation of The Cosmos, its progeny, and phenomena as some of its utmost concerns.

[5:4:181] Celestialism is also expected to assign a high value to the achievements of transcension, especially so amongst artists whose creations are believed to raise the transcensionality of human society; the different methods, experiences, and concepts of transcension, both personally and collectively are of particular concern.

[5:4:182] One of the most pertinent elements of the movement of celestialism involves the reorientation of people's consideration for the cultivation of the mind through both knowledge, philosophicality (contemplation and debate), and transcension as well as the cultivation of the body through exercise, technological enhancements, and the purity of one's consumption, especially so in equal measure for the latter is considered to be presently more emphasised than the former.

[5:4:183] Celestialism promotes individual and collective imagination and its physical application, astronomical observation, and the subsequent personal and interpersonal experiences shared towards, from, and within The Cosmos as wholly spiritual, mystical, animate, and creative entity.

[5:4:184] The celestialist movement's Zeitgeist, or the Spirit of the Cosmic Age, as it may also be appellated, is herein pronounced to be an era in which humanity's eyes are opened to a world beyond that in which they do and have always be limited to residing within both mentally and physically and this New New World of which I speak is that of The Cosmos which will take humanity an eternity to explore and to fully comprehend.

[5:4:185] Celestialism can be considered to incorporate both the two polar opposite movements of Realism and Romanticism into its own worldview with an equal split between its romanticisation of space and space exploration as a mystical experience and The Cosmos as a mystical entity meanwhile also demonstrating Realism by its focus on the realities of space exploration, space technology, astronavigation, and philosophies and methods involving multiplanetary colonisation and living in space.

[5:4:186] The extent to which celestialism, as a movement, will stretch chronologically is of course without prediction herein, but it can be logically guessed that after the initiation of the Humanic Exploration of The Cosmos and the establishment of a multiplanetary humanity, celestialism will inevitably decline with a new form of the movement perhaps emerging afterwards to suit the newly formed challenges arising after the establishment of a multiplanetary humanic civilisation.

[5:4:187] That which shall henceforth be known as practice, experience, and emotion of astrance, or astrancing, as practised, experienced, or felt by an astrancer, and also known as one's consultation of the stars, is a private cosmic devotional act resembling that of prayer which is characterised by a person's one-to-one communication between with stars as the manifestation of God, or in atheistic belief, a subject to place one's worries, fears, and desires to when one is troubled or when one wishes to make a request or give thanks to The Cosmos for something fortunate.

[5:4:188] That which shall henceforth be termed as seminalism is to pertain to the belief orientation holding that The Omnidoxy will strongly influence non-Astronist philosophies and religious traditions that emerge after its publication and establishment as the primary treatise of the philosophy of Astronism and the wider Astronist philosophical tradition; the term seminalism is to be used to encompass all of the different instances in which this omnidoxical form of influence will happen.

[5:4:189] On a related topic to seminalism, that which shall henceforth be known as Monodoxism, a follower of which may be known as either Monodoxian, a Monodoxarian, or a Monodoxist refers to the belief that The Monodoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Monodoxy as the most important of The Omnidoxy.

[5:4:190] That which shall henceforth be known as Duodoxism, a follower of which may be known as either Duodoxian, a Duodoxarian, or a Duodoxist refers to the belief that The Duodoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Duodoxy as the most important of The Omnidoxy.

[5:4:191] That which shall henceforth be known as Tridoxism, a follower of which may be known as either Tridoxian, a Tridoxarian, or a Tridoxist refers to the belief that The Tridoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Tridoxy as the most important of The Omnidoxy.

[5:4:192] That which shall henceforth be known as Tetradoxism, a follower of which may be known as either Tetradoxian, a Tetradoxarian, or a Tetradoxist refers to the belief that The Tetradoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Tetradoxy as the most important of The Omnidoxy.

[5:4:193] That which shall henceforth be known as Pentadoxism, a follower of which may be known as either Pentadoxian, a Pentadoxarian, or a Pentadoxist refers to the belief that The Pentadoxy holds a greater authority or superiority over all the other eleven

disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Pentadoxy as the most important of The Omnidoxy.

[5:4:194] That which shall henceforth be known as Hexadoxism, a follower of which may be known as either Hexadoxian, a Hexadoxarian, or a Hexadoxist refers to the belief that The Hexadoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Hexadoxy as the most important of The Omnidoxy.

[5:4:195] That which shall henceforth be known as Septidoxism, a follower of which may be known as either Septidoxian, a Septidoxarian, or a Septidoxist refers to the belief that The Septidoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Septidoxy as the most important of The Omnidoxy.

[5:4:196] That which shall henceforth be known as Octadoxism, a follower of which may be known as either Octadoxian, a Octadoxarian, or a Octadoxist refers to the belief that The Octadoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Octadoxy as the most important of The Omnidoxy.

[5:4:197] That which shall henceforth be known as Nonodoxism, a follower of which may be known as either Nonodoxian, a Nonodoxarian, or a Nonodoxist refers to the belief that The Nonodoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Nonodoxy as the most important of The Omnidoxy.

[5:4:198] That which shall henceforth be known as Decadoxism, a follower of which may be known as either Decadoxian, a Decadoxarian, or a Decadoxist refers to the belief that The Decadoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Decadoxy as the most important of The Omnidoxy.

[5:4:199] That which shall henceforth be known as Hendecadoxism, a follower of which may be known as either Hendecadoxian, a Hendecadoxarian, or a Hendecadoxist refers to the belief that The Hendecadoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive attention and reverence is paid to The Hendecadoxy as the most important of The Omnidoxy.

[5:4:200] That which shall henceforth be known as Dodecadoxism, a follower of which may be known as either Dodecadoxian, a Dodecadoxarian, or a Dodecadoxist refers to the belief that The Dodecadoxy holds a greater authority or superiority over all the other eleven disquisitions culminating in The Omnidoxy, especially in such a way that excessive

attention and reverence is paid to The Dodecadoxy as the most important of The Omnidoxy.

[5:4:201] I shall now introduce the translated appellations for The Monodoxy which are to be utilised primarily in a commercial context while the appellation of The Monodoxy shall remain the scholarly, academic, and official appellation for the text.

[5:4:202] Afrikaans - Monokosmiese

[5:4:203] Albanian - Monotraktat

[5:4:204] Amharic - Monododi / Monodokisī

[5:4:205] Arabic - Ahadiakitab / Monomuqala

[5:4:206] Armenian - Monoadaran / Miadzulut'yun

[5:4:207] Azerbaijani - Monodoksi / Monodoksiya

[5:4:208] Basque - Monokosmiko

[5:4:209] Belarusian - Monotraktat

[5:4:210] Bengali - Manōḍaksi / Monograntha

[5:4:211] Bosnian - Monorasprava

[5:4:212] Bulgarian - Monodoksi

[5:4:213] Catalan - Monotractat / Monodoxí

[5:4:214] Cebuano - Monokasulatan

[5:4:215] Chinese - Dān shēng dào

[5:4:216] Corsican - Monucè

[5:4:217] Croatian - Monorasprava

[5:4:218] Czech - Monopojednání

[5:4:219] Danish - Monoafhandling

[5:4:220] Dutch - Monoverhandeling

[5:4:221] English - Monodoxy (this is also the worldwide literary name/spelling for the text and is to be used in all scholarly works and other writings when pertaining to the text, but not in all forms of advertising)

[5:4:222] Esperanto - Monodoxio

[5:4:223] Estonian - Monodoksü

[5:4:224] Filipino - Monoaklat

[5:4:225] Finnish - Monominulle

[5:4:226] French - Monotraité / l'Monodoxy / Monodoxique

[5:4:227] Galician - Monodoxio

[5:4:228] Georgian - Monodoksia

[5:4:229] German - Monodoxy

[5:4:230] Greek - Monodóxi

[5:4:231] Gujarati - Monomanē / Mōnōḍōksikala

[5:4:232] Haitian Creole - Monodoks

[5:4:233] Hausa - Monorubutun / Daidai

[5:4:234] Hawaiian - Monokiko'o

[5:4:235] Hebrew - מוֹדוֹקְסִיָּה

[5:4:236] Hindi - Monodoksee

[5:4:237] Hmong - Sib Ceg

[5:4:238] Hungarian - Mononekem

[5:4:239] Icelandic - Monodoxý

[5:4:240] Igbo - Mononima

[5:4:241] Indonesian and Javanese - Monorisalah / Monodoksi

[5:4:242] Irish - Monodom

[5:4:1411] Central Asian and Eastern European countries as an alternative form of spelling - Dodecadoksi

[5:4:1412] General alternative spelling form not specific to a language but widely used - Dodecadoxi

[5:4:1413] That which shall henceforth be termed and herein introduced as International Philosophy Week, also the International Week of Philosophy, is to relate to an entire week in which organisations, governments, education institutions, individuals, and companies focus their publications, social media posts, activities, and events in some may focusing on philosophy and philosophers in general, or on particular philosophical traditions, concepts, or disciplines of study in order to commemorate the role of philosophers in society and to also reinforce the societal position of philosophy through the use of mass media public relations; The Institution of The Philosophy of Astronism is to own the copyright for the International Philosophy Week and is expected to lead this week-long commemoration.

[5:4:1414] The redefinition of the word philosopher is essential to the establishment of the reascensionist movement and by the perspective of Astronist philosophy, a philosopher is to be defined in the following way:

[5:4:1415] Furthermore, in a similar fashion, the redefinition of the word philosophy is also essential to the reascensionist movement is to be defined in Astronist context as the following:

[5:4:1416] That which shall henceforth be known as the process of reidentification, also known as the process of the pluralisation of religious and philosophical belief is to henceforth refer to the predicted process in which human adherence to religious and philosophical systems of belief will, after the further occurrence of globalisation and especially after the Humanic Exploration of The Cosmos, diversify and systems of belief will no longer be associated with a certain nationality, race, sexual orientation, language, or other social identifiers.

[5:4:1417] Thanatology is the branch of eschatology dealing specifically with the various beliefs surrounding what happens when sentient beings and non-sentient beings die, especially regarding the Astronist understanding of the afterlife and the nature of death.

[5:4:1418] Even though the discipline of study of thanatology is strictly categorised with rhemnology and is therefore extensively addressed within The Nonodoxy, here I shall explore the different approaches of the afterlife and categorise these according to the five major belief traditions of Abrahamic, Dharmic, Spiritualistic and Pagan, Sinospheric and Astronic in a way that comprehensively categorises the many ideas regarding the afterlife what happens to either sentient beings or non-sentient beings, or both.

[5:4:1419] Abrahamic tradition

[5:4:1419a] Soul conservation is considered to be the central structure for the morality systems of different traditions within the Abrahamic categorisation.

[5:4:1419b] Heaven and hell is also another central predication for Abrahamic religions, particularly due to its importance for the structuring of the end states of a morality system.

[5:4:1419c] Limbo is a less widespread notion than the previous two as it exists only within certain forms of Christian belief, yet this does demonstrate a sense of unquity and does still remain a prominent addition to the entire Abrahamic thanatological tradition.

[5:4:1419d] Purgatory is similar to that which has been previously mentioned, yet remains even more particular for it is only present within Catholic Christian beliefs.

[5:4:1419e] The notion of the occurrence of an armageddon or apocalypse is another frequently appearing staple of different forms of Abrahamic religious traditions yet its occurrence in the thanatologies of other traditions is much less frequent.

[5:4:1419f] Universalism is considered part of Abrahamic thanatologies due to its focus on the notion of the existence of souls and the belief that all souls will saved, despite the fact that this opposes many different doctrines within Abrahamic traditions of religion; it is the focus on the existence, characteristics, and movements of the soul that are considered to make this particular belief one of an Abrahamic nature.

[5:4:1420] Dharmic tradition is distinct from the Abrahamic tradition, the latter of which is considered to include: Judaism, Christianity, Islam, Yazdânism, Samaritanism, Druzism, Bábism, the Bahá'í Faith, and Rastafarianism.

[5:4:1420a] Reincarnation is a fundamental belief within the vast majority of Dharmic traditions with the origins of the concept of reincarnation residing within the Dharmic tradition of philosophies and religions which presents a true uniqueness.

[5:4:1420b] Nirvana, or the notion of the attainment of enlightenment, is again a concept that is both unique to the Dharmic traditions and is also fundamental to the structure of their thanatologies.

[5:4:1420c] This is the same for the notion of the karmic cycle which links the morality systems of many Dharmic religions and philosophies to their corresponding thanatologies.

[5:4:1420d] The thanatology of godly or divine mergence is unique to Sikhism in which Sikhs hope to become one with God which makes their thanatology distinct from those within the Dharmic tradition as well as outside of that particular tradition.

[5:4:1420e] Within the Dharmic tradition of religions and philosophies would include the following: Hinduism, Buddhism, Jainism, and Sikhism.

[5:4:1421] The Sinospheric tradition, also less accurately referred to as the Taoic tradition, the former of which holds a wider encompassment than the latter; the Sinospheric tradition encompasses the religions and philosophies that originated from within East Asian countries and includes the following: Confucianism, Taoism, Shintoism, Chinese folk religion (including folk salvationism), Korean shamanism, Yiguandao, Tiandism, Miledadao, Zailiism, Xuanyuanism, Vietnamese folk religion, Mongolian shamanism, Caodaism, Hoahaoism, Chondoism, and Bon.

[5:4:1421a] Three Suns (Chinese folk religion and shamanism)

[5:4:1421b] Messianism (Taoist)

[5:4:1421c] The achievement of Ren as transcendence from selfishness (Confucian)

[5:4:1421d] Yomi (Shinto)

[5:4:1422] The Spiritualistic and Paganic tradition is amalgamated herein despite the fact that these two forms of religion and philosophy have held distinct histories and formations, however, they are nevertheless combined herein and include the following: Spiritualism, Spiritism, Neopaganism, Wicca, Druidism, Haitian Vodou, Hoodoo, Umbanda, African mythologies, and Mesoamerican religions.

[5:4:1422a] Active communication with the dead through mediumship is a hallmark of Spiritist belief and is essential to the formation of the doctrines of Spiritism which therefore places thanatological concepts and beliefs at the heart of Spiritism.

[5:4:1422b] The seven realms thanatology which is known as the Law of Progress within the Spiritist and Spiritualist traditions is also another prominent form of belief regarding death and the afterlife within Spiritist and Spiritualist doctrines.

[5:4:1422c] Astrological thanatology which was developed by Edgar Cayce also presents another largely unique form of thanatology and beliefs regarding death and the afterlife which are herein classified as part of the Spiritualistic and Paganic tradition.

[5:4:1422d] The Summerland is the central thanatology for the pagan tradition of Wicca which holds its own beliefs regarding the cycles of death, the role of death, and the nature of the afterlife.

[5:4:1422e] Finally, the concept of reincarnation does play a role within the Wiccan tradition, but it is therefore classified as a hemiunique because the concept of reincarnation doesn't hold its originations within the Wiccan tradition and therefore its existence within Wicca can be considered a variation of the original concept of reincarnation which of course holds its origins within the Vedic religion which later became Hinduism as affirmed earlier in this discourse.

[5:4:1423] The Astronic/Astronist tradition is introduced within The Omnidoxy and of course Astronism the founding of this tradition; Astronism remains the primary philosophy of this tradition and is the most prominent former of the unique that make the Astronic/Astronist tradition distinct from the other long and well-established traditions that have been previously outlined during this discourse.

[5:4:1423a] The concept in transtellation, and its associated belief orientation of transtellationism, is one that precedes the development of Astronism as a notion, but has become formally codified as a belief orientation during the development of Astronism, hence its categorisation as part of the Astronic tradition in this context; this particular term only pertains to the transmittance of only a sentient being's body, and sometimes their soul depending upon the individual's orientation, to the stars, or The Cosmos in general beyond the confinements of The Earth; transtellation is considered to be the final and greatest of all corporeal, mental, and spiritual releases and it remains a form of personal transcension that all of us eventually go through.

[5:4:1423b] There exists three forms of transtellation introduced within The Omnidoxy, the first of which is to be henceforth known as anthropotranstellation which pertains to the belief that only humans can experience transtellation after their death rather than any sentient being (which is held within the general form of transtellationism).

[5:4:1423c] Theriotranstellation is the second branch of transtellation and is characterised by the notion that non-sentients only or both non-sentients and sentients can experience transtellation meanwhile that which shall be henceforth known protranstellation, or protranstellationism, pertains to one's belief that they will become one and experience transtellation with a specific cosmic progeny or phenomena upon their death rather than the stars or The Cosmos in a general sense; there exists two dimensions to transtellationist thought that can be identified herein, the first of which is intranstellationism and the second of which being exotranstellationism; this type of bidimensionality can be applied to all other instances of thanatology, however, it shall forever remain known that the notion was first introduced herein as part of discussions regarding transtellationism.

[5:4:1423d] The term of transtellationism is considered by the Astronist Tradition to encompass any type of belief that one holds that after their corporeal death that they will in some way interact with The Cosmos physically or spiritually and so therefore, transtellationism can be considered to encompass a large body of different belief orientations rather than a singular belief of a person's physical transmigration or the transmigration of their soul to the stars or The Cosmos with the majority of such belief orientations within the transtellationist tradition holding a naturalistic atmosphere which aptly leads us to the topic of the next insentensation.

[5:4:1423e] The second branch of the Astronic approach to thanatology is that which shall be known as naturalism, or naturalisation, which is considered to be non-theistic or atheistic by default, but the Astronist Tradition firmly upholds and herein introduces that which shall be henceforth known as theistic naturalism which notionises the existence of a creator God, but denies the existence of an afterlife.

[5:4:1423f] Naturalism can be described beyond that of being a thanatology and can instead be considered as an entire worldview which is predicated on the notion that only natural phenomena exist and that it is natural phenomena that should be used to explain the world around us and the questions we have, especially regarding pertinent theological topics such as the notion of the existence of an afterlife; this points to the reason for the default non-theistic and atheistic orientation of the naturalistic worldview.

[5:4:1423g] Cosmonaturalism, or cosmic naturalism and that of gaian naturalism are considered to be two more closely connected branches of naturalism in addition to the three already introduced, the former of which pertains to the belief that after one's death, they will become part of The Cosmos metaphorically rather than physically or spiritually (as is believed in the transtellationist branch) and the latter of which upholds the belief that upon one's death, they will become one with The Earth only through the biodegradation of their body into the soil of The Earth as their final contribution to The Earth and wider nature which is herein classified as being pre-Astronic in its origins for it is closely associated with certain Pagan beliefs, however, it is categorised herein as part of naturalism which is itself part of the Astronic tradition.

[5:4:1423h] Before I introduce the final major branch of the Astronic tradition's approach to thanatology, I must introduce that which shall henceforth be termed as mind conservation which is meant to stand in direct contrast to that of soul conservation; the tradition of concern for the position and state of the soul is one that has arisen and has become entrenched with the expansion of Christianity globally; however, due to the dubiousness regarding the true existence of the soul, the philosophy of Astronism instead focuses its attention on the conservation of the mind and subsequently structures its system of morality around the notion that the mind is something should be conserved to secure the occurrence of one's personal transcension which, when considered collectively with every other person's personal transcension, will hold impacts on humanity's ability to complete its own transcension; that which deals with mind conservation in Astronism to be henceforth referred to as Astration, or Astronation within which there exists its own variety of schools of thought and many different practices in order to conserve and maintain one's mind throughout one's life and one's transcension at the end of their life, and the humanic transcension thereafter.

[5:4:1423i] The transcensionist thanatology is another major branch of the wider Astronic thanatology and addresses death through the lens of the belief of transcensionism and therefore considers death to be a form of individual and personal transcensionism and as a display of one's uniqueness.

[5:4:1423j] From the transcensionist view in thanatology, death is considered a person's final contribution to the wider humanic transcension as is believed within transcensionism; a person's death demonstrates their ultimate personal corporeal end after which they will transcend in our minds and from which their legacy can then only continue to contribute to humanic transcension on behalf of them as persons distinct from their legacy, their achievements, and their creations.

[5:4:1423k] From this, we can therefore understand that there exists three major branches to Astronic tradition's approach to the question of death and the afterlife including the transtellationist branch, the naturalistic branch, and the transcensionistic branch, each within which there resides a plethora of different belief orientations both herein omnidoxically introduced, but also there are predicted to be many orientations post-omnidoxically introduced which will greatly contribute to these three established branches; the role of mind conservation amongst these three branches is that it flows between all three of them and holds an important role within each.

[5:4:1424] That which shall henceforth be known as action-based thanatology which refers to any thanatology based upon the actions committed by an individual for which they will either be rewarded or they will be punished.

[5:4:1425] In turn, this formulates a system of morality by consequence and is also therefore associated with a ritualistic thanatology in which certain practices are provided with a greater importance over others.

[5:4:1426] Alternatively, that which will be known as the choice-based thanatology shall be in relation to any thanatology in which individuals are able to choose what happens to them and is a thanatology that is considered derived from by yet remains distinct to the previously introduced action-based thanatology.

[5:4:1427] Finally, that which shall be known as a prescriptive-based thanatology refers to a type of thanatology in which individuals, neither sentient nor non-sentient, neither have knowledge of what will happen to them after they die, nor are they able to influence what happens to them in anyway and so therefore rejects any type of action-based or choice-based approach.

[5:4:1428] This type of thanatology is to be most associated with the Astronic tradition, especially regarding naturalism, but it does not remain limited to the naturalistic thanatology.

[5:4:1429] That which is to be henceforth known as the discipline of study and subject of sophography, studied by sophographers, and of which the term sophographic, or sophographical pertains to, shall henceforth refer to the study of the structures, authors, and chronologies of philosophical treatises and their comparisons to one another across different periods in history.

[5:4:1430] The study of the policies, laws, and regulations governing The Institution of The Philosophy of Astronism and the instruments and procedures in which those regulations and principles are exercised onto a number of different subjects shall be henceforth known as the discipline of study of Institutonics.

[5:4:1431] So as to establish The Institution of The Philosophy of Astronism in such a way that it does hold authority of The Philosophy of Astronism as a continual reaffirmation of its role of proprietorship herein introduced is that which shall be known as Institutional Law which collectively refers to the policies, protocols, principles and padronic edicts forming and maintaining the governance of The Institution of The Philosophy of Astronism and shall be entirely encapsulated within The Original Codification of Institutional Law which is to be published post-omnidoxically.

[5:4:1432] That which is to be henceforth referred to as an omnigete pertains to a person who professionally interprets The Omnidoxy and writes commentaries on such interpretations.

[5:4:1433] That which is to be used as -isy is a suffix combining form relating to a conceptual portion of something, especially a segment of a philosophy, or another theoretical system, the first examples of which are herein ascribed and include pedisy and idisy.

[5:4:1434] Additionally, as it has just been mentioned, that which is to be known as a pedisy relates to the entirety of the teachings of Astronist Philosophy, especially its

principles, beliefs, values, and tenets in contrast to the study of its concepts, notions, and theories.

[5:4:1435] A pedician is a person that studies the teachings of Astronist Philosophy in contrast to the latterintroduced idician meanwhile a metapedician is a person that is to study the structure of the teachings within Astronist Philosophy and the ways in which they are presented for enknowledgement and dissemination, especially regarding questions of what the best way to present teachings is so as to create the largest amount of promulgation.

[5:4:1436] That which is to be known as an idisy relates to the entirety of the body of concepts, notions, and theories within Astronist Philosophy in contrast to the philosophical tradition's principles, beliefs, values, and tenets and therefore a person that is to be referred to as an idician is a person that studies the concepts of Astronist Philosophy in contrast with the previously introduced person known as pedician whom studies the teachings of Astronist Philosophy as distinct from the concepts.

[5:4:1437] Therefore, a person that is to be known as a metaidician, or more commonly referred to as a metadician is a person that studies the structure of the concepts within Astronist Philosophy and the ways in which they are presented for enknowledgement and dissemination, especially regarding questions of what the best way to present concepts, notions, and theories is so as to create the largest amount of promulgation, understanding, and clarity of what those concepts actually mean.

[5:4:1438] A tetradium is a term herein introduced that is to collectively relate to the four arts of philosophy, astronomy, theology, and rhetoric as they are so considered by Astronist philosophy and when the subject of ideology is included in this list, the term is then to become known as pentadium.

[5:4:1439] That which shall henceforth be known as decimanism is to refer to the belief orientation held by some in Astronism that they should conduct some kind of cosmic devotion, philosophisation, or astronomical observation at least every ten days.

[5:4:1440] That which is to be henceforth known as a uniment, or may also be referred to as a unimental, unimentation, or a unimon refers to the exercise conducted in phrontisteries in which, once a month, the teacher holds a meeting for students to prepare questions for and during which a debate shall ensue, especially on questions of theology, philosophy, astronomy, cosmology, politics, ideology, and other related subjects.

[5:4:1441] This is done so as to ignite the Philosophical Spirit within young people and to encourage them to contemplate the greatest of subjects and to generally feel comfortable in the setting of a debate.

[5:4:1442] That which shall be known as the realist argument for Astronism, or realism in Astronism refers to the notion that The Philosophy of Astronism is primarily based upon

and rooted in justified notions and sober facts rather than symbolic myths, divine revelation, and unjustified proclamations.

[5:4:1443] This is largely due to the tenet of cosmocentricity which focuses on The Cosmos, its progeny, and its phenomena as the central subjects of Astronic belief and practice which is argued to make Astronism based in realism.

[5:4:1444] That which shall henceforth be known as recipienism is to refer to the belief orientation notionising that after continued astrance is practiced towards The Cosmos in general or one or more of its progeny or phenomena, that a person will eventually be provided with personal inspiration from The Cosmos which will alleviate them from their current predicament as direct consequence of their practice of astrance.

[5:4:1445] Regenance, which may also be termed as cosmoregenence, is to henceforth refer to the instance in which a person believes they have been spiritually and intellectually reborn after their continued enknowledgement of, observation of, devotion to, and belief in The Cosmos as it is presented in Astronism.

[5:4:1446] That which will henceforth be referred to as to endonise, and also known as endonism, endosy, or the process endonisation is derived from pre-Astronist religious origins and refers to a period of days or weeks spent in voluntary isolation and is to be occupied with astronomical observation, philosophisation, meditation, extensive hiking in remote regions, conducting the practice of autochurning, and writing and honing one's philosophical theories and thoughts.

[5:4:1447] An endosy is considered to be the ultimate act for a philosopher, or a follower of Astronism to undertake, however, there remains no obligations to when, how often, where, in what circumstances, or the length of such an endonisation, or endosy.

[5:4:1448] That which shall henceforth be known as uniuquicism, or also known as uniuquial philosophy, is to be pertained to as an alternative to the long-standing system of scholarly inquiry known as scholasticism and should be considered as directly inspired by uniuquitarianism, or uniuquitarian philosophy.

[5:4:1449] Uniuquicism is a method of scholarly inquiry which proceeds by way of investigating and deriving the unique elements of both modern and premodern texts of a philosophical, ideological, legal, or theological subject.

[5:4:1450] This is done so as to create a list of unique notions, structures, concepts, disciplines or textual features of each text within a subject which are then compounded together in order to demonstrate that which shall be known as a Chronology of Uniquity which is a timeline of the introduction of the unique conceptals of a subject.

[5:4:1451] Unlike scholasticism whose ultimate goal is to achieve the realisation of singular fundamental truths by the listing of contradictions from various texts, uniuquicism

considers the nature of knowledge to be ultimately motional and that bodies of knowledge follow a timeline in which unique notions are contributed which are not considered to destruct previous notions, but may the introduction of such new notions may cause the devaluation of previous notions.

[5:4:1452] The goal of the scholarly inquiries made in the name of uniuquicism is to create a chronology in which unique concepts and notions are attributed as instruments to a body of knowledge in order to demonstrate how that particular body of knowledge has developed over time, how certain unique concepts from that body knowledge have influenced other bodies, and the formation of predictions regarding how a body of knowledge will contributed to new unique notions in the future.

[5:4:1453] The uniuquial method follows the procedure in which it first draws up lists of the most prominent and influential texts within a body of knowledge, then derives from these the most unique notions, beliefs, and other forms of conceptuality; many branches of uniuquicism are expected to be developed post-omnidoxically in relation to how the most prominent and influential texts may be chosen and particularly how a person practicing uniuquicism is able to efficiently identify unique notions and other conceptuels from a text, usually according to different sets of criteria.

[5:4:1454] The extent of the uniuquity of each conceptual is then to be measured, thus attaining what the uniuquicians, whom are those scholars which practice uniuquicism, consider to be the most important elements of a body of knowledge after which the Chronology of Uniuquity for that body of knowledge is to be formed; uniuquicism only places importance on the unique concepts of a system of thought in the study of different philosophies and religions and therefore only considers such thought traditions through the extent of the abundance of the uniuquials within that tradition; a thought tradition that is predicated upon concepts and belief orientations that are not uniuquials is not considered to be a valid thought tradition if it claims one trueness; a tradition formed on hemiuquials is not a favourable tradition.

[5:4:1455] Uniuquicism is fundamentally predicated on the notion that the unique notions of any philosophy, body of knowledge, or thought system are the most important factors that define that collectivity of conceptuels and that the derivation of such unique conceptuels is fundamental to the investigation of the nature, structure, and features of that conceptual collectivity, especially regarding in which position that collectivity is presently resided in relation to its past positions of development, and most importantly, how that conceptual collectivity will develop henceforth towards it future developmental positions.

[5:4:1456] That which shall be henceforth termed as a hemiuquial is a type of concept that does not hold true uniuquity for a particular body of knowledge or system of thought due to the fact that the notion had existed prior to its introduction into a particular body of knowledge or system of thought and is instead characterised by it being a variation of a previously existing concept, hence the fact that it holds hemiuquity rather than full

uniquity for the variation itself is unique yet the fundamental notion from which it is derived does not remain unique.

[5:4:1457] Uniquicism can be understood as the form of scholarly inquiry which instead of attempting to define a one inner truth to all things like scholasticism is rather focused on the identification, definition, and arrangement of uniuquials, or unique concepts.

[5:4:1458] These are considered the hallmarks of different systems of thought, movements, and bodies of knowledge including the chronology of such uniuquials and the formation of predictions of how new uniuquials will arrive in the future to transform the body of knowledge or thought system in question; uniuquicism will therefore undermine or entirely devaluate certain religious, philosophical, and ideological traditions that do not present uniuquity, especially so as it determines those traditions with less uniuquials to be inferior to those traditions with high abundances of uniuquials; uniuquials are also not to be confused with nominalities which are concepts that hold uniuquity, but only in their names/ appellations rather than their conceptual structures and features.

[5:4:1459] A branch of uniuquicism is that which shall be henceforth known as textual uniuquicism which notionises that each time a person interprets a text, there is a unique outcome of their understanding of that text.

[5:4:1460] Similarly to scholasticism, uniuquicism will hold many branches which shall be known as uniuquial schools, each of which will different methodologies for the application of the uniuquial form of scholarly inquiry; uniuquicism is of course introduced herein, however, its branches of methodology are expected to arise over time across the course of the inquiry's application and so these branches shall arise post-omnidoxically.

[5:4:1461] That which shall henceforth be appellated as the Eight Conferments of The Cosmos involves eight abilities that are considered to be the most important of abilities for a person following Astronism according to the Astronist Tradition; these abilities are expected to be mastered by those whom follow Astronism and are expected to be developed and enhanced across the time that a person is part of Astronism; the extent of a person's astronity is directly related to these Eight Conferments which further demonstrates their importance and also closely relates to the notions and area of study surrounding the personality or character of a person that identifies as an Astronist.

[5:4:1462] These shall always include the following: our ability to observe The Cosmos, our ability to enknowledge ourselves about The Cosmos, our ability to devote to The Cosmos, our ability to believe in The Cosmos, our ability to contemplate about The Cosmos, our ability to explore The Cosmos, our ability to conduct astrance to The Cosmos, and our inability to wholly comprehend The Cosmos.

[5:4:1463] For in our full comprehension of something, we lose an essence of mystery, superior, and transcendence of The Cosmos and so therefore that which is to be henceforth termed as inholism is a belief orientation held by the Astronist Tradition that no sentient

either collectively/civilisationally and certainly not individually, shall ever fully comprehend the entirety of The Cosmos.

[5:4:1464] This is set to contrast with the belief orientation of proholism which can be considered a form of transhumanism when it is applied to human sentience in part and it notionises that either humanity as a civilisation, or another sentient civilisation will eventually hold a complete comprehension of the entirety of The Cosmos.

[5:4:1465] Finally, that which is to be known as supraholism notionises that an individual being will one day achieve a complete understanding of The Cosmos as an extension to the notion that a civilisation will.

[5:4:1466] Another important term to now construct and herein introduce that which shall be known as cosmosolidianism, also known as Astronist solidianism, the pre-Milletic belief orientation of justification by faith alone applied to Astronist philosophy, particularly beliefs regarding the ontologies of The Cosmos, The Universe, The Divine, and other unproven existences and entities.

[5:4:1467] Additionally, that which is to be henceforth known as cosmosolipsism is to refer to the belief orientation opposed to by the Astronist Tradition holding that The Cosmos, its progeny, and its phenomena are entirely illusory and that all is real is one's own existential self and this belief orientation can be considered as an extreme form of cosmodenialism.

[5:4:1468] That which is to be referred to as a dorusy, or is to be described as dorusic, is to be henceforth understood as a technical term used to relating to a philosophical, theological, or ideological treatise written in the Astronist tradition and according to insentence, the first of such is The Omnidoxy.

[5:4:1469] The term omnidoxical commerciality is to henceforth refer to the study and branch of omnidoxicology dealing with the different ways in which The Institution of The Philosophy of Astronism and another authorised publisher make The Omnidoxy commercially accessible and viable, as well as the study of the differences between the commercial forms of The Omnidoxy and its original academic or scholarly form and so therefore the question of omnidoxical commerciality is expected to be a popular branch of study within omnidoxicology as it directly pertains to the marketability of The Omnidoxy as a product and the extent to which it is publishable as a founding philosophical treatise.

[5:4:1470] That which shall be henceforth referred to as Cometanic criticism is a branch of Cometanics dealing with the criticism of the authorial ability, identity, and consistency of the personhood of Cometan, especially regarding his monauthoriality of The Omnidoxy, but it is also not limited to this as its study is considered to widen the more works that are penned by Cometan.

[5:4:1471] That which shall henceforth be known and herein introduced as replacement logic, and also known as the replacement argument, replacement philosophy, or

replacement theology refers to the notion that with the founding of Astronism, there has come a philosophy that is able to replace those of pre-Astronist origin due to the superiority, modernity, and future-thinking characteristics of Astronism in comparison to pre-Astronist systems of thought, whether these be philosophical or religious in their natures.

[5:4:1472] That which shall be henceforth referred to as philosophical toleration is a term herein first introduced: of one organised philosophy, pertaining to the extent of its toleration of other philosophies, or simply contradicting viewpoints to one's own in a philosophical, theological, or ideological setting, which is not consideration to be in full alignment with the Philosophical Spirit for it is considered to only reside in partial alignment due to the fact that toleration is not considered to hold authenticity meanwhile only acceptance is considered to hold authenticity.

[5:4:1473] Alternatively, philosophical acceptance pertains to one organised philosophy and the extent of its acceptance of other philosophies or philosophers, especially those of contradicting views to those held with the philosophy, which is considered to be in full alignment with the values set forth by the Philosophical Spirit and is considered to be ultimately superior to philosophical toleration due to its greater perceived sense of authenticity.

[5:4:1474] The term sophical relates to the appellation of Sophism when capitalised, but when uncapitalised, shall henceforth relate to a pamphlet issued in order to further a specific philosophical belief orientation within Astronism, especially as part of the marketing of a newly developed concept or belief orientation.

[5:4:1475] That which shall be henceforth referred to as Astrodonianism is the belief orientation holding that the extent of a child's philosophicality and their ability to connect with The Cosmos, enknowledge themselves of The Cosmos, and to achieve endotranscension is dependent upon the extent of such qualities in their parents which are considered to hold the responsibility to bestow such qualities upon their children in a way that is equally persuasive though also non-intrusive or not forceful.

[5:4:1476] Those whom are to be referred to as triumphant contributors are those individuals whom are noted with furthering space exploration and subsequently the Humanic Exploration of The Cosmos, but not for philosophical reasons related to the belief in transcensionism as is principally expounded by Astronism.

[5:4:1477] Ultrapadronism is a term herein established that is to refer to the belief orientation in favour of the centralisation of the authority and influence of the sitting padron, especially over national and local naological autonomies and in the context of New Concept Development and in the changing of Institutional orientations.

[5:4:1478] A Cometanic visitation is to henceforth refer to the instance in which Cometan visits a sopharium or another Institutional building for the purposes of a meeting, debatement, conference, or another event, either publicly held or private.

[5:4:1479] That which is to be known as the World Astronist Association, abbreviated to the WAA, is herein first introduced and shall therefore be post-omnidoxically established as a charitable body dedicated to the organisation of debataions, the funding of phrontisteries, and the spreading of Astronism as part of its three-pronged mission of debatement, education, and promulgation respectively and is to be a wholly owned arm of The Institution of The Philosophy of Astronism.

[5:4:1480] That which shall be henceforth referred to as removalism in the context of argumentology is to pertain to the principle holding that for a philosophical or theological debate to be conducted in propriety then all debaters must remove notions of sacrilege from their vocabularies which also involves the removal of their individual personal emotions regarding the sanctity of topics.

[5:4:1481] This does not mean to suggest the removal of all emotions for enthusiasm and passion are emotions that are considered to greatly enhance a person's ability to debate, but removalism instead upholds that the removal of any notions of sanctity or emotions that disallow speaking of sensitive topics is the only way to conduct a logical, rational, and justified philosophical or theological debate.

[5:4:1482] Additionally, however, a person may have a debate about why a topic is to be considered sacred, but they must not be offended when a person does not share their belief in the sanctity of that topic.

[5:4:1483] Essentially, removalism works towards the removal of sanctity from arguments as it is considered to place obstacles in the way of the achievement of argumental justification which is the ultimate goal of a philosophical debatement.

[5:4:1484] If a person is constantly being offended by the different opinions of others towards topics that they themselves deem to be sacred then the ability of that debate to develop beyond basic arguments is inhibited.

[5:4:1485] Crucially, removalism works towards the removal of notions of offence from debataions which is closely associated with topics of sanctity, or those topics which may not be debated due to religious adherence, in order to enhance the quality of the debatement.

[5:4:1486] That which is to be introduced as the term of proactivism means to support the notion of choosing what one believes rather than being told what to believe which is termed as reactivism which is associated with religious dogmatism.

[5:4:1487] The Proactive-Reactive Dichotomy in the Astronist philosophical tradition. The proactivist approach is considered to be the essence of philosophy and the Philosophical Spirit while the reactivist approach is considered to be the essence of religion.

[5:4:1488] The Proactive-Reactive Dichotomy is considered to be one of the primary manifestations of the difference between religions and philosophies.

[5:4:1489] That which will be termed as nephonic observation is a type of astronomical observation in which the observer creates a momentary constellation through a gap or thin layer in a cloud formation.

[5:4:1490] The Philosophical Spirit states that no real philosophy should ever claim that it is the one true philosophy and so herein developed is that which shall be henceforth known as nonproclamationism which is aligned with this view.

[5:4:1491] However, that which opposes this is proclamationism which states that a philosophy is able to state its one trueness over other philosophies if its system can be neutrally considered to be superior in logic and justification which is to be known as justified superiority.

[5:4:1492] However, nonproclamationism should not be confused with the pre-Astronist term of indifferentism which states that no religion or philosophy is superior to another for it is instead held in nonproclamationist thought that a philosophy is able to be superior to another in its rationality, logic, and justification.

[5:4:1493] Despite this, it cannot proclaim that it is the one true philosophy above all others and still be in alignment with the principles of the Philosophical Spirit.

[5:4:1494] The notion of Astronism as a form of escapism is a notion that is considered to be agreed to by the Astronist Tradition as herein omnidoxically authorised which is agreed to because the entire premise of Astronism is based upon transcension from our present selves into something greater which is a form of escape.

[5:4:1495] To observe the vastness of The Cosmos and relate this directly to one's beliefs is herein considered to be the most powerful form of escapism that there is which demonstrates the core strength of Astronism as a philosophy for people to join and enjoy their lives as adherents of it.

[5:4:1496] We are able to equate sentience with religiosity and philosophicality for we see no non-sentient beings practicing religions, nor do we see them contemplating philosophical ideas for such demonstrations of intellectuality are only presently understood to be conceivable by those species of sentience.

[5:4:1497] Astronism denotes particular reverence for the natural, as manifested by its creation and adherence to the concept of cosmocentricity, thus making it a philosophy

meanwhile a religion denotes reverence for the supernatural which demonstrates another small facet of distinction between the nature of a religion and that of a philosophy.

[5:4:1498] The extent to which a person grants philosophy control over aspects of their life is to be referred to as that person's sophicity; a person's sophicity is considered to be entirely of their own personal determination with external influences holding merely a persuasive role rather than an imposing one.

[5:4:1499] The entirety of the Astronist philosophical tradition is opposed to that which is known as dialectical materialism which is the notion that it is not ideas that motivate social change, but it is instead material economic factors, hence Astronist philosophy is opposed to the foundations of Marxism.

[5:4:1500] That which is to be described and categorised as a universalised philosophy refers to a philosophy which strives towards the greatest extent of promulgation possible, such as Astronism.

[5:4:1501] However, this is contrasted with that which is described and categorised as an omitive, or an omitic philosophy which is an organised philosophy that holds not desire to actively promulgate its ideas beyond the community from within which it was founded, and is closely associated with other similar forms of philosophy, including ethnic philosophies, national philosophies, and tribal philosophies.

[5:4:1502] That which is to be henceforth referred to as societal philosophy pertains to a form of philosophy considered to be both a middleground between social philosophy and political philosophy and a combination of the two that considers the societal institutions, political structures, behavioural trends, and cultural cornerstones in an amalgamation about the state of society and the extent of the happiness, ability, capacity, faith, and philosophicality of its citizens.

[5:4:1503] The term bisophic is to henceforth refer to a philosophy or religion that allows for its adherents to be adherents of other philosophies and religions simultaneously.

[5:4:1504] Bisophicity, also known as bisophicality, or as the term philosophical mutuality, is to refer to the state and quality in which a philosophy or religion accepts its adherents who are also adhered to another philosophy or religion.

[5:4:1505] According to the principles of the Philosophical Spirit, bisophicity is considered to be the utmost signifier of something holding a philosophical nature, therefore, religions are less likely to hold bisophicity as part of its character.

[5:4:1506] The related term of bisophism is to henceforth refer to the belief orientation upheld as one of the principal values of the Philosophical Spirit stating that a true philosophy should always welcome its adherents in the spirit of bisophicity.

[5:4:1507] This means that its adherents should be granted permission to adhere to other philosophies and religions simultaneously as long as the philosophies and religions in question do also abide by the principle of bisophicity.

[5:4:1508] Throughout much of human history, concern for the preservation of one's soul has been provided with the utmost importance for the majority of humanity while instead the Astronist tradition and understanding promotes the conservation of one's mind, of which there coexists three intertwined, yet ontologically separate components.

[5:4:1509] One's philosophicality, which represents one's ability to resemble values that are philosophical in their nature, one's intellectuality which represents one's ability to enknowledge oneself and others, and one's mysticality which represents one's faith, one's ability to believe, and one's capacity to understand are five values that are ultimately upheld by the Philosophical Spirit and are considered to be hallmarks of the philosophical, pillars of that which is progressive, and endotranscendental by its nature.

[5:4:1510] Astration is the system of practice that is to be utilised within the Astronist tradition of philosophy in order to achieve this conservation of the mind that is promoted herein, but it is to be latterdiscussed at length in this discourse.

[5:4:1511] To finish the longest discourse in The Omnidoxy, I shall now briefly return to the context of the scholarly inquiry first introduced herein as uniuquicism and how, by the application of this form of inquiry to religions and philosophies by the Astronist Tradition, we can derive that there does only exist two titles for a religion or a philosophy, either of being a uniuquitic or a hemiuquitic.

[5:4:1512] To achieve the title of being uniuquitic religion or philosophy is considered to be the greatest of all titles to be achieved by any one religion or philosophy according to uniuquistic principles and investigative practices.

[5:4:1513] This is considered as such because a religion or philosophy that is uniuquitic is predicated on notions and concepts that are truly unique with the inception of that philosophy or religion (uniuquials) rather than concepts and notions that are not unique, both their ornamentations have been changed in terms of their title, their place of origin, and the cultural aspects which their ideas manifest into and are influenced by.

[5:4:1514] Uniuquicists are expected to determine which religions, philosophies, and ideologies truly are uniuquitic or hemiuquitic by their natures so as to superior certain traditions over others.

[5:4:1515] Despite the fact that uniuquicism places greater importance and superiority in the religions and philosophies that are predicated on uniuquials, the Astronist Tradition does acknowledge the argument that hemiuquical philosophies and religions still hold merit for hemiuquical traditions have held a huge impact on the development philosophical and religious traditions.

[5:4:1516] It is by the development of the concept of philosophical uniqueness that the originality of Astronism is promoted for its central concepts of cosmocentricity, reascensionism, and transcensionism along with many others, and even the formulation of belief in the existence of sentient beings as manifested by the orientation of sentientism, demonstrates prowess of Astronism to attain the title of being unique philosophy.

[5:4:1517] That which is to be henceforth known as philosophic enterprise, promotion refers to the process in which a philosophy is managed by an Institution and is managed in such a way that it becomes self-funding; essentially, the realisation and materialisation of a philosophy's conceptual value.

[5:4:1518] Proprietorism refers to the belief that The Institution of The Philosophy of Astronism, as the vested proprietor of The Philosophy, should hold ultimate authority over changes made to The Philosophy and should be left to manage The Philosophy in whichever way The Institution deems appropriate due to their ultimate role of proprietorship.

[5:4:1519] The term phulular relates to that which is a means to achieve income but not directly from one's core interests or ambitions; therefore, a phulular career is one's job or career that is distinct from their actual ambitions or passions and is primarily followed in order to attain an income.

[5:4:1520] Alternatively, the term vocular relates to that which is one's true ambition or desired state in contrast to ; therefore, that which shall henceforth be termed as a vocular career refers to a person's achievement of the state of vocularity which is when they are able to support themselves by their ambitions, passions, and their true vocation.

[5:4:1521] Finally, that which shall henceforth be known as the Three Word Model refers to the marketing model introduced within the Omnidoxy herein advocating for the extreme concentration of one's message into three words, or three separate entities that encompass a product and is especially applicable to the context of a philosophy or a religion

[5:4:1522] In an Astronist philosophical context, the three words are Astronism, Cometan, and Omnidoxy as the philosophy, its founder, and its explainer respectively.

General Sopharial Visitation Protocol

[5:5:1] In general terms, dogs are not considered to be accepted within sopharium buildings, especially not those with delicate flooring or those displaying ornate antiques, astronomical instruments, and other valuable items; however, the allowance of dogs to enter sopharium is something that is to be judged by the sopharium owner if The Institution does not own the sopharium.

[5:5:2] First aid must always be available within the office of a sopharium building due to the that it is open to public, therefore, it is a legal requirement to have a first aid kit somewhere onsite.

[5:5:3] Photography and video for personal use are permitted both inside and outside sophariums in a general sense unless a specific sopharium management or owners explicitly state that they do not wish to have footage taken inside or outside of their sopharium.

[5:5:4] Permission for commercial photography and video must be obtained by the owners of the particular sopharium that is intended to be shot and depending on who is the owner of the sopharium, charges may or may not apply; for all Institutionally-owned sophariums, charges will apply which are set by the individual sopharium's management team.

[5:5:5] Pushchairs are generally permitted within sophariums according to The Institution's guidelines, however, individual sopharium owners may not allow them due to the greater change of them pushing over ornaments or astronomical instruments.

[5:5:6] Depending upon the extent to which a sopharium has been suitably fitted for visitors, there may be toilets and baby-changing facilities available.

[5:5:7] The extent to which a sopharium holds a capacity for visitors to park their cars is depending upon two factors; the extent of suitability that a sopharium holds with respect to visitor accessibility and the extent of land that is owned by the sopharium.

[5:5:8] In some cases, a sopharium may have many steps and uneven surfaces, especially if a sopharium has a long history, or was a building before it was converted to become a dedicated sopharium; to combat this and to work towards the accessibility of sophariums for as many visitors as possible, some sopharium management teams may decide to install lifts and escalators into sophariums depending upon the historical prominence of the structure of the sopharium.

[5:5:9] Some sophariums also feature gardens which causes more concern for the accessibility of certain areas.

[5:5:10] Finally, sophariums should present their opening times both of their official website and on all other communications representing the individual sophariums.

[5:5:11] Additionally, it is imperative in the Institutional protocol outlined herein within The Omnidoxy that all sophariums owned by The Institution are obligated to be open for public visitation at least once a week and that sophariums not Institutionally owned are also obligated to be open at least twice a month as part of general sopharial protocol unless the governmental laws of the nation in which the sopharium resides suggest something different than what has been outlined herein.

The Transpersonal Identity of Astronism

[5:6:1] The notion that Astronism holds a deeply transpersonal nature is a notion supported by the Astronist Tradition for if the transpersonal pertains to all that which resides beyond the level of the psyche and the mundaneness of the material world, the Astronism certainly is transpersonal by both its nature, theme, and applicative character.

[5:6:2] The notion of Astronism as a transpersonal philosophy, or one whose philosophical foundations are based upon transpersonal notions, concepts, beliefs, and experiences is expected to be a smaller xentological area of contemplation though one of significance no less for the discussion of the transpersonality of Astronism presents an integral contribution to the discussion of the character of Astronism as a whole.

[5:6:3] The argument for the transpersonal identity of Astronism is encapsulated by the notion of the theme of Astronism which is cosmocentricity and reascensionism, the former of which remains exemplified by Astronism's emphasis on the position and role of The Cosmos to its theological, philosophical, and theoretical basis while the latter of which is exemplified by Astronism's emphasis on its identity as a philosophy, as well as the return, reinstitutionalisation, and reascension of philosophy and philosophers into society.

[5:6:4] The cosmocentric theme of Astronism demonstrates a physical on a literal, rational, and logical otherworldliness that of course remains beyond that of the planet upon which humanity presently singularly resides while the reascensionist theme of Astronism demonstrates a focus on the conceptual rather than the material; a focus on that which cannot be seen but can still be known and therefore a focus on that which resides beyond our senses, but still remains to be toyed with by our minds.

[5:6:5] Transpersonality has been described as the sense of identity as an extension beyond the individual or personal to encompass wider aspects of humankind, life, psyche or cosmos; this definition is definitively in alignment with the values of Astronism which is especially manifested by its belief in transcensionism which is entirely predicated on the notion of one's self-transcendence as well as the transcendence of wider humanity into The Cosmos by the amalgamation of mass self-transcendences.

[5:6:6] Therefore I, as Cometan, not only believe Astronism to be transpersonal in its identity, I also believe Astronism to be a hallmark of transpersonality in the context of a thought system and to add further to this, I do postulate that Astronism is the first truly, completely and fundamentally transpersonal philosophy.

[5:6:7] Due to the fact that the practices associated with The Philosophy of Astronism are almost entirely centred on the theme of Astronism which is that of The Cosmos, the practices of The Philosophy are therefore also considered to be entirely predicated on transpersonality for it is by the practices of Astronism that one yearns to transcend themselves through their observation of The Cosmos, the contemplation and

philosophisation of it, their debatation of all the most wondrous of ideas, as well as the joint conservation and enknowledgegement of their minds.

The Grand Precepts of Astration

[5:7:1] That which is herein introduced as astration, which may also be known as Astration, shall henceforth refer to a tradition of practices and loosely connected beliefs regarding one's personal proximation with The Cosmos.

[5:7:2] Astration is therefore distinguished from much of the collectivist orientations that define Astronism due to the core belief of transcensionism which encourages collective beliefs about transcension, but instead, astration focuses on our individualistic proximations to The Cosmos and our personal connection to The Cosmos which is believed to be heightened through a combination of different practices and beliefs which are categorised into three distinct schools that are herein omnidoxically mentioned, but of course, as all else in motional Astronism, these schools will be added to and they will inevitably and grandly diversify as a subsequence of the three schools founded herein.

[5:7:3] Astration is the Astronist spiritual, physical and intellectual discipline involving the practices of meditation, the acquisition and sharpening of knowledge, and the application and impartation of that knowledge in the surrounding world, with the ultimate goal of mastering that knowledge in order to achieve corporeal cosmosis.

[5:7:4] Cosmosis is the Astronist belief in the occurrence of one's union with The Cosmos after one's corporeal passing, but in the context of astration, it is believed that cosmosis can be achieved whilst one is still alive and it is the goal of astrational beliefs and practices to achieve this form of cosmosis known as corporeal cosmosis.

[5:7:5] Corporeal cosmosis is fundamentally predicated upon the notion that cosmosis is certainly achievable during our lifetimes although necro-cosmosis, as general cosmosis may also be referred to, especially by astrationists, is still considered to be the ultimate form of cosmosis.

[5:7:6] Those following the idea of corporeal cosmosis, also known as corporealists, may also believe that cosmosis is achievable a multitude of times throughout our lifetime and that necro-cosmosis is the ultimate experience of cosmosis after which there are no other experiences of cosmosis.

[5:7:7] That which is herein introduced as corporealism is the belief structure forming the undercurrent of astration; it principally upholds that death is not our own achievable chance to reach cosmosis and therefore does not solely equate cosmosis as a process tied to our bodily decompositions.

[5:7:8] Additionally, corporealism affirms that through the practices of the different schools of astration our unions with The Cosmos will each be intensified and also, that our achievement of cosmosis is split into intellectual, physical, and spiritual categories, hence developing the three different schools or methods of astration as a result.

[5:7:9] The Conservation of The Mind rather than the conservation of the soul is the most important principle held as part of astrational practices and beliefs; astration can be considered as the homeopathic tradition present within Astronism as it stands in support of non-medicinal remedies for ailments.

[5:7:10] That which is herein appellated as phrenia refers to The School of Intellectuality within astration and is structured by the system of beliefs and practices that is to be henceforth known as phrenicism.

[5:7:11] That which is herein appellated as somatia refers to The School of Physicality and is fundamentally predicated upon the belief system and set of practices known as somatism.

[5:7:12] Numinia is the third and final of the three schools of astration which are herein omnidoxically introduced and shall also be known as The School of Spirituality and is integrally predicated upon the belief systems of numinism and their associated practices.

[5:7:13] Millë'ism is a collective term for the group of philosophies, mainly derived from Astronism, which are specifically used and practiced by The Millë Order, and are distinct from Astronism in their interpretation, and conduct, and include Astration, Cosmosism, Astronomism, and a vast range of other practices and philosophies.

[5:7:14] Millë or Millë'ism is herein founded as the monastic tradition within Astronism, although Millë'ism will present a different form of monasticism; a new modern form of monasticism poised for the future of commitment in a uniquely philosophic way.

[5:7:15] Millë will be a tradition of monasticism with a strict observance of Astronism through a filtration of asceticism; those of The Millë Order will be the most ardent of explorers of The Cosmos; they will commit their lives to space exploration and cosmic enknowledge; they will be devoted to Astronism and its ambitions for total human transcension.

[5:7:16] Knowledge Accumulation is the building up one's literature through the acquisition and collection of books; this may also be known as bibliomassing and is considered to be an important practice within phrenicism or the phrenia school of astration.

[5:7:17] Somatia is The School of Physicality and the first of the astrational schools that are to be herein introduced and it may also be termed as the somatic school; it structured under the belief system of somatism, or somaticism.

[5:7:18] Central practices here within somatism are those of stargazing, astronomical observation and all other physical acts involving cosmic progeny and phenomena that require physical action to pursue or complete them.

[5:7:19] Medicinals within the context of somatism refers to the collection and/or consumption of substances and plants that are considered to hold healing powers; although wider Astronism may not support notions of nature remedy and the healing powers of certain substances and herbs, somatism remains a supporter of such notions.

[5:7:20] Homeopathy is also another important part of the practices and beliefs of somatism with regards to the healing of the sick and the remedying of ailments; somatism is a supporter of homeopathic approaches to the remedying of illnesses.

[5:7:21] Vulnerary medicine is another branch of medicinal practices which are supported by somatism due to the believed healing powers of certain drugs, plants, and other substances to resolve the diseases found in wounds and other skin-level lesions.

[5:7:22] Meditation, yoga and posturing, especially so in the forms of iyengar and pranayama, are to be similarly prioritised within somatism due to their importance in controlling bodily functions, particularly those which can hold a significant effect over our mental stabilities; in somatism, it is about controlling the physical in order to influence the mental and the spiritual as subsequences of the former.

[5:7:23] Zen and the related practices of meditation and intuition are therefore also important to somatism, thus we can witness here how somatism is very much influenced by a mixture of both Eastern and Western spiritual systems and forms of physical practice.

[5:7:24] Demulcents are also to be used as part of somatistic practices to remedying irritations and inflammations especially those which come from natural rather than synthetic substances; one of the main characteristics of somatism is that it advocates for the use of natural remedies.

[5:7:25] Not to be confused with the aforeintroduced, that which is herein announced and spelt as Millé refers to the tradition of practices regarding combat and defence within somatism which are to be developed post-omnidoxically, but will of course forever hold omnidoxical foundings; in somatism, the principle of defence is one of the utmost importance due to defence being the protection of the bodily self from bodily others.

[5:7:26] Self-discipline, like in the context of other schools of astration, is also important to the somatic school of astration, but of course, in the physical sense; the reduction of temptations, the discipline of one's gluttony, and the preservation of one's body for the betterment of one's health are all reasons why self-discipline in the context of our physical selves is essential.

[5:7:27] Millé will become the combat and defence tradition of countries which do not presently encompassing a tradition of this kind; they will be encouraged to understand how to encourage in physical combat in order to improve themselves physically, mentally, and intellectually.

[5:7:28] Millé, as the combative tradition within Astronism, encompasses many of the principles espoused elsewhere within the somatic school of astration with self-discipline and diet being two of the main element of Millé that are integrally linked to somatism.

[5:7:29] Diet is of course central to the somatic school with the notion of what we eat being what we are; there is no more important physical influence than what we consume or what we don't; hence, it is essential to somatism that what we eat is integral to how we achieve cosmosis due to the fact that bodily preservation is central to cosmosis according to somatism.

[5:7:30] Consumption and activity synchronisation refers to the practice of coordinating the way in which we consume with the way in which we are physically active.

[5:7:31] Natural remedies and vitamins, as aforementioned, are supported as part of somatistic belief with synthetic medicine not being emphasised as much as the importance of naturally-extracted forms of medicine.

[5:7:32] Physiology and its study is essential to the development of somatist belief because with a greater understanding of the functions of the body will come an even ability to control such bodily functions in order to extract from them the most beneficial means to improve our bodily functions through both enknowledge and practice.

[5:7:32a] That which is to be henceforth appellated as The Flushing Lustration shall refer to a popular practice within somatism which advocates for the flushing out of the body as a form of detoxification; the rinsing out of the body through different means, all of which are identified below.

[5:7:32b] Excretion is the first of these techniques of Flushing Lustration and of course involves the elimination of our waste matter as a form of cleansing and detoxification.

[5:7:32c] Detoxification refers to the second of the techniques of Flushing Lustration and involves any type of method in which the body is starved of something to understand its importance to the body, the most obvious example of which is through the practice of fasting.

[5:7:32d] Hydration in this context refers to one's extensive drinking of water; water is considered to be the greatest form of detoxification for the body and is so extensive hydration is considered as an important form of Flushing Lustration.

[5:7:32e] Breathing control is fundamental to certain aspects of Eastern religious practices connected with meditation and is an important form of Flushing Lustration with both physical, spiritual, and mental aftereffects.

[5:7:32f] The stomach is one of the most important influencers of bodily function and can hold mental effects too; therefore, posturing the stomach is important to somatic practices

with different posturing techniques holding the ability to influence our state of physical balance.

[5:7:32g] Perspiration is categorised as another important form of Flushing Lustration as perspiration of the sweat glands is another way of releasing, rinsing, and cleansing our bodies.

[5:7:32h] Horripilation is considered to be one of the minor forms of Flushing Lustration with the experience of coldness being considered as a form of cleansing.

[5:7:32i] Hydrocryonics shall henceforth refer to the practice of placing one's hands under a tap running cold water for an extended period of time; hydrocryonics is considered to be a form of cleansing for parts of the body that are rinsed under cold water or those which are immersed into cold water.

[5:7:32j] Balneonics refers to the practice of bathing in therapeutic medicines which is considered to be a superior form of bodily cleansing and lustration.

[5:7:33] The two most fundamental physical pains are heat and cold; practices of somatism are focused on channeling pain by focusing on it in order to withstand it which is to be henceforth known as transmosis.

[5:7:34] Therapations is the category within the somatic school of astration that focuses on different therapies to achieve bodily enhancement and to also achieve the ambitions of astration.

[5:7:34a] Music therapy is the common form of therapation in which the practitioner listens to music in order to sooth their minds and their bodies, especially the latter through dancing and other actions.

[5:7:34b] Lightness therapy is the opposite of the latterintroduced darkness therapy and maintains that exposure to lightness is the greatest form of physical enhancement.

[5:7:34c] Darkness therapy refers to the therapation technique of keeping in places of darkness so that when they do decide to enter places of lightness, they appreciate lightness much more than if they are in places of lightness at the majority of times.

[5:7:34d] Cosmic therapy refers to the widespread therapation that is arguably at the centre of Astronist practices which focuses on the notion that astronomical observations and practices hold a physical, spiritual, intellectual, and mental healing power, especially if one's cosmosis is improved.

[5:7:34e] Imagination therapy is a form of therapation focused on the notion that through active and consistent imagination, this will result in improved physical, mental,

intellectual, and spiritual capability and capacity; this is imagination as a motivator for overall improvement.

[5:7:34f] Aromatherapy is an important form of therapy from somatist practices as it combines the importance of natural medicines and remedies and involves the application of such substances to our body.

[5:7:34g] Blinding therapy refers to the therapy of making one's temporarily blind in order to appreciate one's ability to see; it is often those without sight that can see most clearly for they are not distracted by the visual noise of the world and through blinding therapy, we cannot appreciate this as fact.

[5:7:34h] Nerve therapy refers to the technique of therapy in which the different clusters of nerves or nerve sensory points on the body are focused on as part of physical exercises and bodily evaluations and compressions in order to alleviate tension and to demonstrate stimulation from the existent nerves.

[5:7:34i] Consumption therapy refers to a form of therapy focused on the consumption of organic foods only which may also be known as organicism, or the organic consumption principle; this is a dietary principle which is heavily supported within somatism due to the emphasis on natural remedies and the importance deriving our strength from natural substances and products.

[5:7:34j] Recollection therapy involves a kind of therapy in which the practitioner intentionally displays opportunities for the person experiencing the therapy to recollect old memories, especially those which have been forgotten as a form of self-connection, or reconnection to the self.

[5:7:34k] Decipherment therapy, in close relation to the practices and beliefs of intellection, involves the practice of working out puzzles, codes, and conducting brain training activities in order to develop one's mind in relation to one's body; decipherment therapy is also an important element of phrenism, or the physical school of astration which makes decipherment therapy a cross-school therapy.

[5:7:34l] Repetition therapy relates to the practice of intellection and involves the therapy of repeating actions and ideas that bring us happiness and that the more we repeat such ideas and actions the greater the connection we will feel to both ourselves and The Cosmos because when we are happier, we are more accessible to opportunities and the ideations that form in our minds.

[5:7:34m] Ventilation therapy is the practice of ventilating one's body through a series of different practices all geared towards aerating one's body through both the clothes we wear, the substances we rub into our skin, and the environments in which we put our bodies.

[5:7:34n] Pyrotherapy is the mode of therapatation in which a person's body temperature is intentionally raised through exercising in order to detoxify their body as part of a Flushing Lustration technique.

[5:7:34o] Cooling therapy is the practice of intentionally increasing one's body heat only to feel the sensation of cooling the body down using a number of different methods, either by moving into a different environment or by placing certain cooling substances on the skin; this cooling effect is considered to be an important to form of bodily therapeutics.

[5:7:34p] Endurance therapy is a type of therapatation in which a person conducts practices and activities that are purposefully created to test their endurance abilities, the improvement of which is considered to be an important proximator to The Cosmos as endurance will be a fundamental necessary characteristic for the conduct of the Humanic Exploration of The Cosmos.

[5:7:34q] Divination therapy is a mode of therapatation in which a person enacts different forms of divination systems as a significant proximator to The Cosmos; the many different divinations systems are to be utilised for the purpose of cosmic union, especially those forms of divination which hold an astronomical theme.

[5:7:34r] Psychotherapy is of course related to the phrenist belief system with it being centred intellectuality, or the mind rather than the body or the spirit; the application of psychiatry to the treatment of mental diseases is something that remains an important element of therapatation.

[5:7:34s] Digestion therapy is the mode of therapatation which states that digestion is an essential function related to happiness and important part of connecting our bodies with our mind and our spirit and subsequently, our connection with The Cosmos.

[5:7:34t] The benefits and importances of perspiration have already been discussed as part of the practices of the somatic school, but here I introduce perspiration therapy which involves a series of practices surrounding perspiring as a form of detoxification of the body.

[5:7:34u] Cryotherapy is the use of extremely cold substances as a form of therapatation or bodily release, an example of which is cryonics which is believed to be an essential practice for the practical success of space exploration therefore the use of cryonic functions is an important practice within somatism.

[5:7:35] That which is appellated as phrenia is The School of Intellectuality and is structured by the belief system of phrenism, also known as phrenicism which of course focuses on the intellectual elements of our connection with The Cosmos rather than the physical or the spiritual.

[5:7:36] Enknowledgement of The Cosmos through cosmology and astronomy, purchasing of books about astronomy, stargazing practice, and explanations of different cosmic progeny and phenomena.

[5:7:37] That which is herein introduced as the practice and belief of intellection is an epistemological notion stating that challenging our minds is the most important form of enknowledgement and therefore, a good proximator to The Cosmos, an example of which is through decipherment theory.

[5:7:38] The Disburdening of The Mind refers to the practice as part of phrenism in which a person detoxifies or releases their mind from the noise and clutter that builds up in their mind over time; this can include the renouncement of supposed obligations, the writing down of things to remember; mind disburdening is considered to be an important part of becoming mindful and being ready for enknowledgement.

[5:7:39] Mind Organisation refers to the practice within phrenism which states that not only is The Disburdening of The Mind important, but the second phase proceeding this is to organise what is left in one's mind into conceptual categories for better execution of what remains; organising one's mind is key to greater enknowledgement because one's mind will feel the freedom to take in new knowledge.

[5:7:40] Mind Cleansing refers to an amalgamated process combining both mind organisation and mind disburdening in which a person manages to release their mind from all burdens through forgetting about all obligations and things to remember; this option is considered more extreme than the combination of the previous two options because it advocates for forgetting rather than for disburdening and reorganising.

[5:7:41] Serenity of The Mind, or mind serenity is the supposed mental state that one is able to achieve after they have put into practice some of these processes and techniques, and after they have challenged their minds through intellection; the best state to begin enknowledgement is when one mind is in a state of serenity because one's mind is, in that moment, ready and open to the reception of large strains of knowledge which their mind is able to immerse.

[5:7:42] Intellectual Synchronisation, similar to spiritual synchronisation, refers to the practice in which two people share deep intellectual discourse about a particular subject which they share knowledge about; the two individuals become intellectually matched to one another as they share further knowledge and challenge one another's viewpoints and their knowledge extent; this leads to the achievement of intellection through the synchronisation of the intellect and is considered an immensely important practice within phrenism.

[5:7:43] The synchronisation of the intellect is also expected to be an important practice for all philosophers to regularly exercise with different individuals because it allows the

philosopher to expand their minds through deep intellectual interaction; mind expansion remains the most important function for philosophers to achieve.

[5:7:44] Creation Therapy is a long-term form of mental therapy and stimulation, that is best described as a lifestyle, whereby someone continues to create that whichever they enjoy in order to form their happiness, contentment, and enthusiasm; creation therapy, or ideationism as it may also be called, is considered to be closely associated with contributionism and the connects creation and ideation with happiness, purpose, and societal contribution.

[5:7:45] Learning is a fundamental and integral part of phrenism, especially so the learning we do about subjects that will form part of our ideations; learning, and to see the result of learning through direct ideation, is an immensely important element of phrenism, or the intellectual school of astration; therefore, it isn't just learning alone that is deemed important, instead, it is learning which directly leads to ideation and subsequent contribution that is considered with the most significance.

[5:7:46] A focus on the interplay between learning and the practice of what has been learned is another important part of the principles of phrenism; not only is an important subsequence of learning to create and contribute, but it is also to practice what has been learned and apply that to the surrounding world to test its theoreticity which refers to the extent to which a theory is practically successful when applied.

[5:7:47] Breaks between the acquisition of knowledge are important also in order to provide our mind time to digest the knowledge already acquired; we must challenge and push our minds, but we must push our minds too far in the acquisition of knowledge because this will, in the end, damage the quality of the knowledge acquired for sometimes the principles of quality over quantity should be applied.

[5:7:48] Consistent reevaluation of successes and the overcoming of challenges is an important intellectual practice within phrenism because the constant reevaluation of what one has acquired in terms of their knowledge and how that can be applied to themselves and the surrounding world as a part of a test of its theoreticity is important to grasp an understanding of the quality of the knowledge acquired.

[5:7:49] Self-efficacy refers to the belief in one's capabilities to achieve an intended result; belief in oneself and the power and effectuation of one's own mind is an essential part of phrenist belief.

[5:7:50] This is considered to be largely due to the fact that phrenism is majoratively individualistic due to the nature of the mind and its unique functions from every other person; this makes the application of phrenism to oneself a very unique, individual, and person experience.

[5:7:51] Being open to all opportunities for the acquisition of new skills and knowledge is another hallmark of phrenism, or phrenicism because being narrow and without insight to see the potential of that which is presented before oneself is demonstrative of one's lack of knowledge and one's lack of an ability to truly see the world around them; they are not seeing for they are instead knowing without knowledge of what they see.

[5:7:52] The qualities of perseverance and patience are integral during the process of grasping non-instantaneous rewards and understanding that rewards are often not those which come easiest, for such things are often in disguise as rewards and their falsehoods will soon be shown.

[5:7:53] Sleeping, exercising, and nutrition all lead to a successful learning experience which is part of our achievement of physical wellbeing which is considered integral to the successful achievement of the practices of intellection and imagination.

[5:7:54] Confidence, patience, and perseverance all lead to a successful learning experience which pertains to the importance of psychological wellbeing to the success of one's ability to conduct ideations and to truly connect with their intellect and to utilise their imagination to their fullest of potentialities.

[5:7:55] Financial security, stability, and assurance all lead to a successful learning experience which is to be known as financial wellbeing; this is believed because when a person is financially unstable or insecure or even overly financially concerned, they will spend the majority of their time thinking about that topic rather than being able to create and think of new ideas; finances can quickly stifle creativity, but we mustn't let this occur; do what you have to do to become financially stable so that your mind can be released from such strains so as to let it focus on its function of ideation.

[5:7:56] That which is herein introduced as the term Numinia is the appellation provided for the segment of astration associated with the beliefs and practices of numinism which may also be known as The School of Spirituality in contrast with the aforeintroduced schools of physicality and intellectuality.

[5:7:57] Precognition plays an assured role within numinism because the numinists understand a greater proximity with The Cosmos corresponds to one's ability to hold foreknowledge of events as an example of extrasensory perception; in this way, cosmic union is considered to enhance our sensory abilities with a direct influence over our capacity for knowledge; this also proximates numinism as a kind of transhumanist system of beliefs and practices due to the notion that cosmosis holds the ability to extend our physical, mental, and intellectual capabilities.

[5:7:58] That which is known as the act or condition of surety exists as another important element to numinism because to hold surety is to prioritise one's undertaking of a performance that another is supposed to undertake; it is an important part of the spiritual development of numinists to come closer to cosmosis to fill in the gaps made by others as

part of society; if one person does not give to the poor then it is the numinist way to give double in order to fill in the void create by that other person; this translates into a large task for numinists to undertake, but I does provide them with existential meaning and purpose and allows for the balance of society to be maintained; it is due to this act and condition of surety that those following numinism are also colloquially referred to as gap-fillers.

[5:7:59] Self-discipline is a fundamental practice within the numinist school of astration due to the fact that a high amount and quality of spirituality has always traditionally be linked with a person's ability to discipline themselves; self-discipline is integral to our ability to reach cosmosis as it is believed in numinism for without self-discipline there is no restraint and no awareness of who we really and what may be damaging our spirits to be good, just, and reasonable.

[5:7:60] Harmony is another essential element to the approach taken by numinists to understand the way to corporeal cosmosis; harmony of our thoughts, harmony of our actions, and harmony with others are just three of the ways in which harmony can be applied to all instances of life; harmoniousness is considered to be the most important to understanding cosmosis from the numinist perspective because The Cosmos itself is considered to be the most reachable superior resemblance of harmony in the sense of its harmonious functions hence our reflections of such harmony individually demonstrates our proximity to The Cosmos.

[5:7:61] Emotional Embracement is a significance element of numinism and is central to the emotional segment of our spiritual selves due to the fact that emotions are fundamental to spirituality; Emotional Embracement involves the practice of loving emotions of all kinds whether they are painful or joyful; Emotional Embracement is not only the acceptance of our own emotions, but is also the welcoming of others emotions which are considered to hold enhancing abilities in regards to our own emotions; it is this network of sharing emotions that the numinists believe will lead to a greater chance of achieving corporeal cosmosis.

[5:7:62] The Act of Gratitude consists another significant portion of numinist belief about our achievement of corporeal cosmosis; gratitude of others beingness and others actions, crucially not only those which benefit ourselves, is a practice which is considered to be a great enhancer of our ability to pursue cosmosis during our corporeal lives.

[5:7:63] Spiritual Synchronisation refers to the practice of simultaneously embracing spirituality with one another; synchronisation, in the context of spirituality, refers to when two people share their spiritual experiences, emotions, and beliefs with one another in an intense discussion, or heart-to-heart; synchronisation refers to when two people are in close understanding of each other's spiritualities; spiritual synchronisation is the coming together or the simultanation of two people's spiritual experiences, beliefs, and ideas.

[5:7:64] The Finding of Faith is imperative to the achievement of corporeal cosmosis from the perspective of numinism because faith is fundamental to confidence, the realisation of emotions, and can be fixated in such a way that knowledge is prioritised in faith to enhance the knowledge attained.

[5:7:65] That which is herein introduced and to be henceforth termed as astrationism refers to the belief notion that astration is the superior way of achieving cosmosis and is the superior form of Astronist physical, intellectual and spiritual enhancement; whenever the suffix of -ism is used, there will always imply a sense of superiority for Astronism professes the superiority of astronomy and The Cosmos for religious belief and knowledge whilst ideologies such as communism, socialism, and conservatism similarly profess their own superiorities.

[5:7:66] It is important to note that this nature of superiority derived from the etymology of the suffix -ism still remains in alignment with the principles of the Philosophical Spirit because superiority does not denote extermination of all other viewpoints which would be considered a violation of the Philosophical Spirit; although Astronism considers itself to be the superior form of religious and philosophical belief, it continues to see the value in other systems and traditions; superiority and valuation can and do coexist within Astronism.

[5:7:67] Externality and internality are dichotomised terms that are also important to numinism because the spiritual is exists both externally in the actions we conduct, the attitude we emit and the words we speak, but crucially, the spiritual is also the internal, the invisible, the untouchable; for a follower of the numinist astration school, it is the balanced exploration of these two opposing forms of spirituality that must be undertaken.

[5:7:68] Astronist Mysticism is bound to play a fundamental role in the development of astrational beliefs and techniques, especially so as part of the numinist school due to the fact Astronist Mysticism is one of only a few segments of Astronism than provides any type of significance or existential relevance to the cultivation soul.

[5:7:69] Astronist Mysticism, as a separated and more widely encompassing segment of Astronism, holds similar goals to the practices and beliefs of astration, most importantly seeking to achieve cosmosis during our lifetime rather than as a consequence of our death as is believed in wider Astronism.

[5:7:70] In numinism, Astronism is to be portrayed as the superior connector between our spiritual and religious needs to that of astronomy, cosmology, and The Cosmos.

—

[5:7:71] The term for a model of a celestial body to which a person may pray or devote themselves as a representative form of the celestial body itself that it resembles should be herein introduced as a cosmorama.

[5:7:72] Similarly, that which will be referred to as an astroma pertains to a similar figurine or object of devotion and veneration, but instead refers specifically to a piece of astronomical equipment or some form of vehicle used for space exploration towards which a person may venerate.

—

[5:7:73] On the topic of the structure of time:

[5:7:73a] Abrahamic - Linear

[5:7:73b] Dharmic - Cyclical

[5:7:73c] Astronic - Cosmically linear, Universally infinite

[5:7:74] On the topic of the nature of God:

[5:7:74a] Abrahamic - One god

[5:7:74b] Dharmic - One Supreme God (Hinduism/Sikhism), God-like State (Jainism), No God (Buddhism)

[5:7:74c] Astronic - Interpenetrative force called The Divine

[5:7:75] On the topic of God's residence:

[5:7:75a] Abrahamic - Heaven

[5:7:75b] Dharmic - Everywhere

[5:7:75c] Astronic - Interpenetrative state / God is The Universe overseeing the cosmoses

[5:7:76] On the topic of the circumstances of how we are born:

[5:7:76a] Abrahamic - Concept of sin, Born into sin (Christianity)

[5:7:76b] Dharmic - Concept of Karma, Born divine

[5:7:76c] Astronic - Concept of uniqueness, Born uniquely with individual destinies contributing to a collective destiny

[5:7:77] On the topic of the role of scripture:

[5:7:77a] Abrahamic - Adherence to scripture

[5:7:77b] Dharmic - Scripture as guidance

[5:7:77c] Astronic - Scripture as a contributor to knowledge only

[5:7:78] On the topic of how to know God:

[5:7:78a] Abrahamic - Divine revelation to prophets

[5:7:78b] Dharmic - Personal experience of divinity

[5:7:78c] Astronic - Our individual contributions to the collective destiny of space exploration

[5:7:79] On the topic of whether there exists one lifetime or many:

[5:7:79a] Abrahamic - One lifetime, afterlife

[5:7:79b] Dharmic - Reincarnation

[5:7:79c] Astronic - One lifetime, no afterlife

[5:7:80] On the topic of how did we become humans?

[5:7:80a] Abrahamic - God created humans

[5:7:80b] Dharmic - Evolution, Hindu/Sikh via God, Buddhist/Jain via nature

[5:7:80c] Astronic - Evolution, created by stardust as products of The Cosmos

[5:7:81] On the topic of the importance of history:

[5:7:81a] Abrahamic - Emphasis on history

[5:7:81b] Dharmic - Emphasis on ideas

[5:7:81c] Astronic - Emphasis on ideation or belief creation

[5:7:82] On the topic of the unity of people:

[5:7:82a] Abrahamic - Through religion

[5:7:82b] Dharmic - Through existence

[5:7:82c] Astronic - Through exploration of space

[5:7:83] On the topic of conversion:

[5:7:83a] Abrahamic - Formal conversion process

[5:7:83b] Dharmic - No formal conversion process

[5:7:83c] Astronic - No formal conversion process

[5:7:84] On the topic of the ultimate destination for humans:

[5:7:84a] Abrahamic - Heaven or hell

[5:7:84b] Dharmic - Enlightenment and God

[5:7:84c] Astronic - Cosmosis (becoming One with The Cosmos)

—

[5:7:85] Those who believe they have problems have no true problems at all.

[5:7:86] Blind are we to the plights of those around us for we have become so introspective that we see nothing of importance outside of ourselves and our own wellbeing.

The Grand Journals of Philosophies & Ideologies

[5:8:1] The discourse of The Grand Journals of Philosophies & Ideologies cumulates all philosophical, ideological and literary theories created by myself as Cometan before I began to write The Omnidoxy and so these ideas found within this discourse can be uniquely considered Cometanic and Astronist although they do remain pre-omnidoxical due to the time of their creations.

[5:8:2] All philosophies, ideologies and literary theories in The Grand Journals are hereby verified to be the sole works of Cometan with the year of origination of the oldest of these philosophies, ideologies and literary theories being the year of two thousand and thirteen when I was fifteen years old.

[5:8:3] This discourse provides the world with an insight into the very first beliefs, theories, and concepts that I created during and directly after I founded The Philosophy of Astronism, of which these are both of a philosophical, ideological, and literary nature and of course their creations occurred before the writing of The Omnidoxy officially began which occurred when I was seventeen years of age.

[5:8:4] The following is provided as a direct abstract of the preface of The Grand Journals: "The year of writing The Grand Journals is the year of two thousand and fourteen, but it is noted here within the preface that these works will be added to through time and so too will the addition of new entries be inevitable by the author of The Grand Journals, Cometan."

[5:8:5] With the inclusion of The Grand Journals herein, I demonstrate the importance of the pre-omnidoxical foundations of The Philosophy of Astronism and the fact that The Grand Journals is an Astronist philosophical document that predates The Omnidoxy; the relationship between The Grand Journals and The Omnidoxy as two documents of Astronist philosophy should also be of interest for omnidoxicologists as well as the nature of the status of The Grand Journals and its contents.

[5:8:6] Despite the fact that the contents of The Grand Journals has been integrated with The Omnidoxy herein as part of this xentological disquisition, the contents of The Grand Journals which will fulfil the rest of the space of this discourse shall always remain pre-omnidoxical by its nature; it is also important to note that many of the policy-related entries in The Grand Journals will form as fundamental elements of the post-omnidoxical development of Institutional Law in The Original Codification of Institutional Law which I will monauthorially write post-omnidoxically; furthermore, The Grand Journals are largely focused on the development of Astronist literary theories rather than being solely focused on the development of the Astronist philosophical tradition which is of course the main purpose for the creation of The Omnidoxy.

[5:8:7] The pre-omnidoxicality of the contents of The Grand Journals does not mean to say that such contents is superior to that of The Omnidoxy and nor does it mean to say that

because The Grand Journals has been integrated within The Omnidoxy that its contents is assumed to be omnidoxical in its origin; the nature of The Grand Journals is Astronist in orientation, Cometanic in authorship, and pre-omnidoxical in its chronology; furthermore, it is important to note that omnidoxical triumphs pre-omnidoxicality in the context of the applicability of definitions as some definitions within The Grand Journals are not in alignment with the definitions provided for the same terms within The Omnidoxy; essentially, that which we are able to derive from The Grand Journals is the journey upon which I have embarked since the age of fifteen; I enjoy to show the progressions in my ideas and by including the pre-omnidoxical work of The Grand Journals into The Omnidoxy itself, I am achieving this directly with the ability for readers to compare my pre-omnidoxical thoughts with those of thoughts of an omnidoxical nature and origination; also, notice the use of the term of ideology in relation to Astronism which demonstrates my own process of development for how I understood Astronism to be which it of course further developed into a philosophy and therefore it would be appellated and associated as such.

[5:8:8] Another clue to the pre-omnidoxical nature of The Grand Journals is the generality and simplicity of the theories presented within it; the fact that the majority of them do not lead to an ultimatum unlike those within The Omnidoxy within which every since concept, theory, and belief orientation holds a pertinent position in the development of The Philosophy of Astronism; furthermore, another sign of the pre-omnidoxicality of The Grand Journals is the absence of certain terms created within The Omnidoxy; I have changed nothing of what was in The Grand Journals and so from this insentensation onwards, exempting the indexas, you will be reading The Grand Journals which is essential structured upon definitionalism despite the fact that definitionalism as a style of writing had not yet been created by myself when The Grand Journals were written for definitionalism as a style began with The Omnidoxy.

[5:8:9] Abstinencism - the ideology taken upon by someone to not partake in something they deem as immoral, an indulgence, distraction or an action that defies their faith.

[5:8:10] Academic Distribution - the distribution of any Astronist product or message throughout the academic institutions of a nation.

[5:8:10a] Also, the process of making any Astronist literary work an obligatory text within the education syllabus of a nation.

[5:8:11] Acceptism - inspired by Astronism, the ideology of Acceptism is the state at which one has fulfilled The Principles of Acceptance and practices its teachings in all circumstances; mainly to accept all without judgement.

[5:8:12] Achievism - the ideology of one who prioritises their achievements above all else.

[5:8:13] Additionism - the process of a policy being added to or enhanced by others.

[5:8:14] Administrationism - the policy bolstered by The People's Constitutional Company of Jesse Millette, stating the importance of a complex network of administrative personnel and departments in order to achieve the company's success globally and too, stresses the importance of a tall employment structure.

[5:8:15] Advancism - the futurological philosophy of believing that the human race must advance towards competence in cosmic expansion or else humanity will not survive.

[5:8:16] Africentrism - the belief that Africa will be the centre of the world economy in the future, mainly due to the continent's geographical positioning and size, its rapidly growing population and the growing economies on the African continent.

[5:8:16a] Also, the process of a business focusing its main operations toward Africa or African peoples.

[5:8:17] Afrism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of the development of Africa.

[5:8:18] Alternatism - inspired by Astronist Lore, the Mystological idea that within the same period of time either in the same world or not, two differing stories or events can take place involving the same characters.

[5:8:19] Anti-Astronism - to be set against the ideas of Astronism to the point at which one believes Astronistic ideas are dangerous to the world.

[5:8:20] Anti-Populationism - a real-world ideology, anti-populationism is the idea that there should be a definitive limitation to the population of humans on Earth or in The Universe.

[5:8:21] Anti-Preventionism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the company's eternal duty of advocating against and enforcing the cessation of the practices of Preventionism.

[5:8:22] Archaic Resurgency - the process of an archaic word regaining popular usage.

[5:8:23] Astralcentrism - the astronomical model and philosophical thought that places stars at the centre of Cosmic Philosophy and upholds the belief that understanding stars, their formation and origins, is the best way to understanding the universe.

[5:8:24] Astralism - the branch of Cosmic Philosophy dealing with the stars, their formation, their origins and their deaths with the goal of further understanding and imaging the possibilities of the universe.

[5:8:25] Astrography - the scientific study of mapping interstellar space, planetary systems, galactic regions, sectors and subsections, as well as the locations and variations of natural and artificial phenomenon in the galaxy.

[5:8:26] Astronomism - the set of beliefs that holds Astronomy and the observation of the cosmos as the most efficient way of gaining knowledge, thus champions the increased construction of observatories worldwide and emphasises observatories as central hubs in society.

[5:8:27] Atrocitism - the ideology that one must act wickedly and cruelly in order to obtain their goal.

[5:8:28] Beneficialism - the broad policy championed by The People's Constitutional Company of Jesse Millette, stating that the company shall, under constitutional law, undertake operations of beneficiality to The People's Constitutional Company of Jesse Millette and for the betterment of peoples.

[5:8:29] Canonisationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, referring to the necessity of the declaration of Astronist works to be of canonicity or non-canonicity.

[5:8:30] Cataclysmicmism - the prophetic philosophy stating that humanity will violently destroy itself, but not without the human elites saving themselves in order to live on.

[5:8:31] Categorisationism - the policy championed by The People's Constitutional Company of Jesse Millette, stating the importance of the categorisation of all operations, subsidiaries, works and policies of The People's Constitutional Company of Jesse Millette.

[5:8:32] Celestial Iconism - the literary theory/feature expressed throughout Astronist works that uses celestial or cosmic entities in such a way that iconises their features, especially in regards to Astronist Symbology and the definitions given to certain celestial objects in Astronist literary fiction.

[5:8:33] Celestialism - the belief that planetary bodies, cosmic entities and galaxies have a closer connection to The Divine above that of humans due to the concept of Consequencism.

[5:8:34] Centralisationism - an ideology often championed by The People's Constitutional Company of Jesse Millette, Centralisationism is the act, in business or within an organisation, of centralising operations into one giant entity.

[5:8:34a] In centralisationism, there can be local or national scale operations, but they are often dictated to by the large centralised entity.

[5:8:34b] The specific policy adopted by Millette Education stating that all education systems should be centralised and managed by one entity.

[5:8:35] Challengism - the ideology of one who prioritises finding and completing challenges above all else.

[5:8:36] The ideology of one who priorities the questioning or challenging of establishments, bureaucracies and religious authorities.

[5:8:37] Civicism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance both local, regional and national civic duties for the furtherance and betterment of peoples and the nation.

[5:8:38] Commodificationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the necessary continuity of the commodification of education in as many nations as possible in order to ensure the continuing stability of education systems.

[5:8:39] Compassism - the idea that one must have progressing knowledge in order to obtain direction in their life.

[5:8:40] Confederationism - the belief that the governing system and the structural order of a confederation is the most efficient, democratic and uncorrupt way of establishing a nation.

[5:8:41] Concentricism - the belief that the concentricity of planetary systems and galaxies possesses the fundamental components of the order of the cosmos, and can thus lead to the understanding of the order and origins of the universe.

[5:8:42] Concernism - the ideology of feeling concern for one's life and existence for one feels they are in jeopardy.

[5:8:43] Concretism - the belief that one's ideas must become real and the process of that.

[5:8:44] Confederalism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of confederacies and the encouragement of the establishment of strong confederacies unified by a shared goal.

[5:8:45] Congregational Distribution - the distribution of any Astronist product or message throughout the religious institutions and congregations of a nation.

[5:8:46] Consequencism - the theory that all existing entities originate from The Divine, but places cosmic entities as more divine than the products as consequences of those entities.

[5:8:46a] For example, The Universe is a product of The Divine, The Milky Way is a product of The Universe, The Solar System is a product of The Milky Way and the Earth is a product of The Solar System, and so, humanity is a product of the Earth.

[5:8:46b] This places humanity as the fifth generation of consequence from The Divine, thus the concept of Consequencism would stipulate that humanity's divine connection is much weaker and more distant than that of The Milky Way or The Universe itself.

[5:8:46c] Therefore, the further away from the originator, the weaker and the more indivine the entity is.

[5:8:47] Containmentism - the process of containing any entity, especially a religion or ideology, within a certain geographical area or people group.

[5:8:48] Controlism - the ideology of continuously and consciously controlling one's actions and feelings in all situations and circumstances.

[5:8:49] Convergism - part of Significism, the theological idea that humans will meet their god or creator when they die.

[5:8:50] Cosmic Colonisationism - the branch of Cosmic Philosophy dealing with the potential colonisation of celestial objects and holding the belief that it is humanity's destiny to colonise The Cosmos.

[5:8:51] Cosmic Omenism - the literary theory/feature expressed throughout Astronist works that uses cosmic or celestial entities as a way to represent a good or bad future in a literary format.

[5:8:52] Cosmic Philosophy - a broad and newfound branch of philosophy encompassing all philosophy, thought and idea about the creation, origin, future and mechanisms of The Cosmos and humanity's role in The Cosmos and the universe as a wider entity.

[5:8:52a] Cosmic Philosophy is influenced by The Ideology of Astronism and other Astronist philosophical thoughts, as well as providing the foundations for other branches of cosmic concentrated philosophies.

[5:8:53] Cosmic Tokens - a literary theory/feature first consciously expressed throughout The Original Jesse Millette Series that uses cosmic or celestial entities as representational tools in a literary format.

[5:8:54] Cosmocentrism - the astronomical model and philosophical system of thought that places the Earth and The Solar System as an insignificant celestial component to The Cosmos.

[5:8:55] Cosmosism - inspired by Astronism, the philosophy and ideology of Cosmosism encompasses all thought and philosophy that has extraterrestrial and celestial objects as its setting, focus or raises them to a divine status.

[5:8:55a] One feels a closeness to The Principles of Cosmic Exploration and holds the idea that humans belong in the extraterrestrial and must explore the cosmic world to gain further knowledge of divine entities.

[5:8:56] Cosmotheology - theology founded on the observation, understanding, and exploration of The Cosmos.

[5:8:57] Cyclicism - the viewpoint that all existing entities do so in cycles, and that it is these cyclical patterns that can offer great, and unrivalled revelations about the nature of The Cosmos, The Universe, and The Divine.

[5:8:58] Destinism - the set of beliefs that the concept of destiny is the only true connection between humanity and humanity's creator and places further emphasis on the ideas of destiny.

[5:8:59] Deviantism - the ideology of one who consciously deviates from the normalities or accepted standards in their society or community.

[5:8:60] Diagramology - the specific study of diagrams throughout Astronist visual arts in order to uncover further understandings.

[5:8:61] Differentiationism - part of Astronist Representationism and Astronist Collectivism, is the differential representation of Astronist works or characters, especially the non-canonical versions of the characters, or adapted versions of the characters to suit certain markets.

[5:8:62] Digital Dominance - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of the Jesse Millette brand retaining the highest influence throughout digital platforms.

[5:8:63] Disseminationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette stipulating the emphasis of spreading the ideals, philosophy and values of the company to the widest reaches of the world.

[5:8:64] Distributionism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the necessary continuity of the distribution of all Astronist works, operations and philosophies.

[5:8:65] Divergism - the theological idea that a human being's destiny is entwined with their god for a time, yet a time does come when the destiny of the human being separates from their god's and goes in a different direction.

[5:8:66] Diversism - the state in which one needs others of difference around them in order to function to the best of their abilities.

[5:8:67] Divine Extremism - the belief that all that is human-made cannot be of direct divinity or universality, including religion, society, and even the alphabetical and numerical systems.

[5:8:68] Divinitism - the study and belief that there exist varying degrees of divinity within all entities, and that is the ultimate goal of humanity to seek, learn, and understand the nature and the origins of divinity.

[5:8:69] Documentationism - the prolific documentation of the various different aspects of one's life.

[5:8:70] Doomism - the prophetic philosophy stating that either humanity will completely destroy itself or an unstoppable cosmic force will destroy all history of humanity.

[5:8:71] Doubtism - the ideology that one is conscious of their doubtful thoughts and can practice the art of suppressing doubtful thoughts.

[5:8:72] Duology - part of Astronist Collectivism, the representation of Astronist characters in the formation of a duo.

[5:8:73] Duo-Astronism - the Ideology of Astronism as a conjoined theory to another.

[5:8:74] Echoism - the process of two policies either being parallel to each other, entwined with each other or integral to each other's success.

[5:8:75] Educationism - the policy championed by The People's Constitutional Company of Jesse Millette, stating the necessity of the inclusion of education or scholastic characteristics in Astronist propaganda.

[5:8:76] Educentrism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the encouragement of governments to spend the highest percentage of their expenditure on education, especially over military and healthcare.

[5:8:76a] A newfound philosophy underpinning the principles of education governance, management, and the positioning of education at the centre of society.

[5:8:77] Ellenism - distinctive features, characteristics, traits and way of thinking relating to that of the fictional character, Ellena Chadwell.

[5:8:78] Encompassism - the idea that one's knowledge surrounds and holds them from within and so, one without knowledge lacks this relationship.

[5:8:79] Energism - the process of taking, storing and selling a customer's energy from specialised gyms to use as energy, especially when referring to the company, Energology.

[5:8:80] Enlightenmentism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that one who implements their faith, their morality and The Ideology of Astronism into their mindset, will understand true enlightenment and knowledge and thus, will become the best versions of themselves.

[5:8:81] Eternal Intimacy - the philosophical and theological theory that as long as one is with their partner, they don't care about being with God or anyone else, for eternity.

[5:8:82] Exonerationism - the policy championed by The People's Constitutional Company of Jesse Millette, pardoning the company from fault due to the company's advancements in global education, stewardship and the abolition of poverty.

[5:8:83] Figurativism - the belief that the majority of entities hold only figurative messages and meanings, especially regarding religious figures and icons.

[5:8:84] Foreignism - the understanding, acceptance and welcoming of foreign cultures, traditions and faiths, yet not to the point at which one loses their own cultures, traditions and faiths.

[5:8:85] Formationism - part of Astronist Collectivism, the idea that all Astronist entities have a formational structure.

[5:8:86] Fraternalism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette in some regions of the world, stating the importance of fraternal relations and the propagation of the strong bond between male Astronist characters.

[5:8:87] Freevision - the two-pronged concept holding firstly that the ambitions of people in the form of visions for the progression of humanity in the future should be held in the highest regard as they are the innovators pushing humanic society toward a more prosperous future.

[5:8:87a] Secondly, it stipulates that the knowledge of the cosmos and all entities beyond Earth should be of central focus and it is the strengthening, widening and deepening of humanity's vision of the universe that will lead to the greatest advancements in knowledge, technology and divine understanding.

[5:8:88] Futurological Retrospectism - the ideology of retrospecting from the viewpoint of a person's perspective in the future.

[5:8:89] Galacticism - inspired by Astronism, the philosophy and ideology of Galacticism encompasses all thought and philosophy that has extraterrestrial and celestial objects as its setting or focus.

[5:8:89a] One feels a closeness to The Principles of Cosmic Exploration and holds the idea that humans belong in the extraterrestrial and must explore the galaxies.

[5:8:90] Genderneutrism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that Astronist characters and the Jesse Millette brand as a whole, should adopt gender-neutral ideas in the majority of promotional operations, especially those targeted at children.

[5:8:91] Globalisationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of the globalisation of the operations and propaganda of The People's Constitutional Company of Jesse Millette.

[5:8:91a] The specific policy adopted by Millette Education stating that every human should have an education.

[5:8:92] Governmental Distribution - the distribution of any Astronist product or message by support of a nation's government.

[5:8:93] Harrietism - distinctive features, characteristics, traits and way of thinking relating to that of the fictional character, Harriet Millette.

[5:8:94] Hard & Soft Policy - part of Categorisationism, the categorisation of the policies of The People's Constitutional Company of Jesse Millette, between policy that must be abided by under all circumstances (hard) and policy that can be dismissed under certain circumstances (soft) with governmental, constitutional and directorial allowance.

[5:8:94a] The categorisations of policy can be found in The Grand Constitution of The People's Constitutional Company of Jesse Millette.

[5:8:95] Hyperhumanism - categorising a living being as more advanced than a human.

[5:8:96] Iconism - the representation of Astronist characters as other iconographical characters.

[5:8:97] Ignorancism - the ideology that humans are ignorant to their place in the universe and the true amount of knowledge humanity really has, which is often deemed as minimal.

[5:8:98] Imagocentrism - a branch of Imaginism, the concept that imagination is central to the evolution, development, and advancement of humanity, and it is the act of imagining that separates humanity from other living beings.

[5:8:99] Imaginism - the set of beliefs and practices that position one's imagination as their purest connection to The Divine, and through those practices, develop the imagination with the ultimate goal of allowing one's imagination to guide oneself through sensation, horripilation, envisionment, and understanding.

[5:8:100] Impartialism - the policy championed by The People's Constitutional Company of Jesse Millette, stating that The People's Constitutional Company of Jesse Millette must stay impartial in all conflicts, except when a clear majority of the population favours a particular side.

[5:8:101] Importationism - the policy of a government to encourage foreigners to come to one's nation to pay for better quality or cheaper healthcare, education or another finite service due to their home nation not providing them with a suitable service of the same kind.

[5:8:102] Ingratiationism - the policy championed by The People's Constitutional Company of Jesse Millette, stating that the company should encourage the courting of nations regarded as having significant cultural, political and monetary influence and importance.

[5:8:103] Initiationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of supporting the re-establishment of strong, unified states under a majority people group, usually initiated by revolution or referendum.

[5:8:104] Insignificism - the philosophical and futurological idea, inspired by The Philosophy of Astronism, that humanity's place in the universe is anything but significant and it is only this belief that will ensure the furtherance of humanity due to humanity's current egotistical tendencies.

[5:8:105] Integrationism - the policy championed by The People's Constitutional Company of Jesse Millette, stating the importance of persuading a people group to emigrate to a newfound state establishment with a majority of their people group.

[5:8:106] Interpretationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, expressing the encouragement of the receiver of a message, artwork, character or propaganda piece to relate it to themselves and to express their unique interpretation of the work.

[5:8:107] Intersectism - contrasting Intertwinism, the theological idea that humanity's and god's paths cross only during conception and so, once a human is born, that human will never encounter god again, even after death.

[5:8:108] Intertwinism - contrasting Intersectism, the theological idea that a human being's path is forever entwined with that of their god; both before, during and after life.

[5:8:109] Inverted Maniacalism - using wild, unpredictable and violent thoughts to justify the intimidation of any opponent in any field of competition, yet these thoughts do not translate to actions.

[5:8:110] Jesseism - distinctive features, characteristics, traits and way of thinking relating to that of the fictional character, Jesse Millette.

[5:8:111] Justificationism - the policy championed by The People's Constitutional Company of Jesse Millette, stating that The Leadership must exert excessive justification of the company's actions as actions for the greater good or betterment of peoples, especially when the company's actions are considered illegitimate, yet not unconstitutional, by external or internal organisations or committees.

[5:8:112] Linkism - the idea stating that all Astronist entities do interconnect and that it is these connections that form the foundations of all Astronist philosophy and thought, as well as further establishing the solidarity of The People's Constitutional Company of Jesse Millette.

[5:8:113] Literary Morphism - the gradual transition of a character or place over the course of a story or a set of stories.

[5:8:114] Maniacalism - using wild, unpredictable or violent behaviour to intimidate any opponent in any field of competition.

[5:8:115] Martianism - the branch of Cosmic Philosophy dealing with the planet of Mars, its origins, formation and potentiality for human colonisation.

[5:8:116] Masonism - the philosophy created by Brandon Taylorian, Masonism is the revolutionary philosophy underpinning the values, principles and ideology of The Order of Freemasonry from the 21st century onwards.

[5:8:117] Maternalism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that the creation of The People's Constitutional Company of Jesse Millette was birthed by the destiny of the universe, or simply, The Mother Universe.

[5:8:117a] The term of the idea used to described some female Astronist characters, such as Ellena Chadwell and Madelyn Hurst, Jesse's canonical mother in Astronist Mystology and the Astronist Timeline.

[5:8:117b] The policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of the diversification of the roles of women in modern society and the support for female unification.

[5:8:118] Metropolism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, encouraging the majority of the population to migrate to the largest urban developments, especially the capital city.

[5:8:119] Astronist Alchemy - the branch of Astronology dealing with the study of the mixation of Astronist philosophical thought and Alchemy.

[5:8:120] Astronist Assimilationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the idea that individuals do have varying levels of relationships and understandings between them and Astronist characters and entities, ranging from a personal relationship to a human relationship, and would usually include influences from one's personality, culture, faith, philosophy, society in which one resides and their nationality, ethnicity, ambitions and their humanity.

[5:8:121] Astronist Collectivism - the different formations in which Astronist characters are represented in Astronist literature, propaganda and imagery.

[5:8:122] Astronist Cosmocentrism - the Astronist theory of placing The Cosmos at the centre of all thought, philosophy and faith.

[5:8:123] Astronist Egalitarianism - a strain of philosophical and political ideology championed by The People's Constitutional Company of Jesse Millette, stating that all people should be initially determined as equal, but it is what they do, how they act and what they achieve that distinguishes them from others; not their class, race, religion, ethnicity, family status or location of birth.

[5:8:123a] This ideology has been widely implemented into the Astronist Education System and the majority of other Astronist political theories as well as the majority of the operations of The People's Constitutional Company of Jesse Millette.

[5:8:124] Astronist Elementalism - the representation and connection between Astronist characters and elemental formations.

[5:8:125] Astronist Expansionism - the philosophy championed by The People's Constitutional Company of Jesse Millette, stating that all operations of The People's Constitutional Company of Jesse Millette and its philosophies, values and conduct should expand eternally in all dimensions, directions and disciplines.

[5:8:126] Astronist Interpenetrationism - the broad idea that Astronist works, characters, philosophies and theories should and can always be mixed with other external ideas, philosophies and theories.

[5:8:127] Astronist Lexicology - the particular form, meaning and behaviour of words within Astronology, Astronist literary works, The Ideology of Astronism or the documents and dogma created by The People's Constitutional Company of Jesse Millette.

[5:8:128] Astronist Macrocosm - the perspective theory of viewing any Astronist entity as a part as opposed to viewing it as a whole.

[5:8:129] Astronist Microcosm - the perspective theory of viewing any Astronist entity as a whole as opposed to viewing it as a part.

[5:8:130] Astronist Mysticism - the branch of Astronology dealing with the study of the mixation of Astronist philosophical thought and Mysticism.

[5:8:131] Astronist Pastoralism - the representation of Astronist characters in pastoral settings.

[5:8:132] Astronist Phraseology - the particular modes of expression and implementation of Astronology, Astronism, Astronist literary works or the operations of The People's Constitutional Company of Jesse Millette.

[5:8:133] Astronist Policy - the set of policies championed and propagated throughout the operations of The People's Constitutional Company of Jesse Millette.

[5:8:134] Astronist Progressivism - the advocacy of the progression of a entity under Astronist ideology or management.

[5:8:135] Astronist Representationism - the broad policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that Astronist characters can be represented in standard, differential and mixed forms.

[5:8:136] Astronist Stansationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, referring to the position that the company takes in the event of a crisis, dispute or conflict.

[5:8:137] Astronist Terminology - the body of terms used within the subject of Astronology, Astronist literary works, The Ideology of Astronism, or by The People's Constitutional Company of Jesse Millette.

[5:8:138] Astronist Theosophy - the fusion of The Ideology of Astronism and a separate set of beliefs, usually those of a religion or cult.

[5:8:139] Astronist Universalism - inspired by Reformed Universalism, the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that Astronist philosophy and ideology are universally coherent and that in order for an individual to gain further knowledge, they must think in universal terms or in terms of the spectrum of the universe, not just Earthly terms.

[5:8:140] Astronism - the central theological and ideological philosophy first outlined by Cometan in The Grand Centrality of The Philosophy of Astronism, and the philosophy upon which The People's Constitutional Company of Jesse Millette is constructed and operates, and of which the five main Astronist characters, are the first and purest representations.

[5:8:141] Mixationism - part of Astronist Representationism and Astronist Collectivism, is the presentation of Astronist characters, especially in advertisements, that uses a mixture of standard and differential Astronist representations.

[5:8:142] Mono-Astronism - The Ideology of Astronism as a single entity, unconnected to any other.

[5:8:143] Monopolism - the policy of the encouragement of governments to allow monopolies in their nation.

[5:8:143a] The policy championed by The People's Constitutional Company of Jesse Millette, stating the company should encourage governments to allow The People's Constitutional Company of Jesse Millette to operate a natural monopoly in the education sector.

[5:8:144] Multiversism - the theological and philosophical idea that there are multiple universes either within our own or outside our own.

[5:8:145] Musicism - the process of using music as a means of inspiration, especially when utilised in propaganda.

[5:8:146] Mystology - a collection of Astronist stories, especially those with a mystical or cosmological setting, theme or character.

[5:8:147] National Compliancy of Integration - the policy championed by The People's Constitutional Company of Jesse Millette, stating that it is the universal objective of The People's Constitutional Company of Jesse Millette to integrate its brands, characters, products and literatures into the cultures, values, beliefs and policies of the ruling governments of nations for the betterment of the nations and the peoples within those nations.

[5:8:148] National Individualism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the emphasis on conducting business operations in nations individually, rather by region or continent and detailing the distinct operations of the company in each individual nation.

[5:8:149] Negativism - the actions and beliefs of someone who actively and openly adverstes The Ideology of Astronism or the operations of The People's Constitutional Company of Jesse Millette.

[5:8:150] Non-Convergism - part of Insignificism, the theological idea that humans will not meet their god or creator when they die and especially views Convergism as presumptive and egotistical.

[5:8:151] Nonsensical Poeticism - a form of poetry that has no clear meaning or makes no sense to oneself.

[5:8:152] Oblivionism - the ideological and psychological belief that oneself will be forgotten forever if one does not achieve their goals and become famous from them.

[5:8:153] Oligopolism - the policy of the encouragement of governments to allow oligopolies in their nation.

[5:8:154] Oliverism - distinctive features, characteristics, traits and way of thinking relating to that of the fictional character, Oliver Mehler.

[5:8:155] Omenism - the prophetic representation of an object to imply a good or bad future.

[5:8:156] Omninationism - the Astronist business philosophy of regarding every nation with its own unique level of importance to The Company, and striving for a presence in every nation and region in the world.

[5:8:157] Open Commerce - the theory of time not dictating commerce.

[5:8:157a] Encouraging businesses to stay open twenty four hours a day, seven days a week.

[5:8:157b] The political policy promoted to encourage incessant commerce.

[5:8:158] Open Urbanisation - the theory of total urbanisation whereby all populations live within cities and rural areas are kept untouched.

[5:8:158a] Encouraging the total population of a nation to migrate into urban areas.

[5:8:158b] The political policy promoted to encourage the expansion of urbanisation.

[5:8:159] Panopticism - the Astronist theological idea of seeing the whole of existence in one view, usually a position only taken by God, or the most holy of beings.

[5:8:160] Paternalism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that the nurture and protection of The People's Constitutional Company of Jesse Millette is done so by the Jesse Millette character, usually referred to as The People's Father or The Astronist Father.

[5:8:160a] The term of the idea used to describe male Astronist characters

[5:8:160b] The policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the importance of the diversification of the roles of men in modern society and the support for male unification.

[5:8:161] Philosophical Multilateralism - a theory stating the idea that multiple philosophies can work together in conjunction in order to create a more cohesive philosophy.

[5:8:162] Phoenixism - distinctive features, characteristics, traits and way of thinking relating to that of the destinal fictional character, Phoenix-Oliver Millette.

[5:8:163] Pictorialism - the propagational policy of The People's Constitutional Company of Jesse Millette to portray propaganda through pictures and illustrations.

[5:8:164] Populationism - a real-world ideology championed by The People's Constitutional Company of Jesse Millette, stating the idea that there can never be enough humans either on the Earth or in The Universe.

[5:8:165] The policy championed and propagated by The People's Constitutional Company of Jesse Millette in some areas of the world, stating that the people's majority opinion supersedes the opinion of the government or political party in power, thus placing the highest importance to public referendums.

[5:8:166] Preservism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that people's traditions, cultures and ideologies must be preserved.

[5:8:167] Preventionism - the oppressive actions of an individual, a government or a group that prevents someone from obtaining a wider education of a range of subjects.

[5:8:168] Principlism - the following of a set of clearly marked principles, in contrast to following a narrative-based and convoluted religious text.

[5:8:169] Procreationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the encouragement of increasing procreation amongst all peoples of all nations.

[5:8:170] Professionalism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, encouraging peoples to not only focus on their career, but too, focus on attaining professional status.

[5:8:171] Progressionism - the futurological philosophy of believing that the human race must progress towards a future of knowledge, cosmic expansion and advancements in artificial intelligence in order to sustain itself and to progress to a more prosperous future.

[5:8:172] Quad-Astronism - The Ideology of Astronism as a theory conjoined to three others.

[5:8:173] Quadology - part of Astronist Collectivism, the representation of Astronist characters in the formation of a quad.

[5:8:174] Quint-Astronism - The Ideology of Astronism as a theory conjoined to four others.

[5:8:175] Quintology - part of Astronist Collectivism, the representation of Astronist characters in the formation of a quint.

[5:8:176] Reflectionism - the consequences of one event reflected in terms of another.

[5:8:177] Reformed Universalism - the ideology stating that one must think in universal terms or in terms of the spectrum of the universe in order to gain further knowledge and that one who thinks in just Earthly terms is ultimately inferior.

[5:8:178] Regulationism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, referring to the self-imposed regulatory procedures undertaken by both internal and external entities to control and manage the monopolistic necessities of some operations of The People's Constitutional Company of Jesse Millette in certain nations.

[5:8:179] Removalism - the action of removing one's own desires, motivations and biases from all decision-making scenarios which often pertains to neutral removalism.

[5:8:179a] Extreme removalism refers to the removal of oneself completely from any scenario to the point at which oneself hasn't any input and nor do they believe involving themselves to be morally decent.

[5:8:180] Retrospectism - the instance of one looking back on something, especially their past life, in order to gain more knowledge or to remind themselves of their own experiences in order to apply that to the circumstance of the present moment.

[5:8:181] Rewardism - a real-world ideology relating to the subconscious desire for reward when completing a task.

[5:8:182] Saviourism - the representation of Astronist characters as saviours of humanity and The Cosmos.

[5:8:183] Scholarism - putting the importance of scholarly knowledge before all else.

[5:8:184] Scopism - the ideological theory propagated by The People's Constitutional Company of Jesse Millette, promoting the progression towards obtaining the fullest knowledge of a subject that one can with the resources available to them.

[5:8:185] Securism - the psychological ideology that one is compelled to surround themselves with different forms of security, for example, financial security and social security, in order to make themselves feel secure and if they do not have enough securities around them in different forms, they feel extremely insecure.

[5:8:186] Segmentationism - the action of dividing an entity into several different segments in order to better understand it.

[5:8:187] Significism - the philosophical and futurological idea that humanity's place in The Universe is significant and it is only this belief that will ensure the furtherance of humanity.

[5:8:188] Signology - the specific study of Astronist characters by the directions they face, the signs they make and the expressions they exert throughout Astronist visual art5s in order to uncover further understandings.

[5:8:189] Sociocentrism - putting the needs and interests of society as a whole at the centre of one's decision-making.

[5:8:190] Solarism - the branch of Cosmic Philosophy dealing with the Sun, its origins, formation and eventual destruction, as well as its role as the sustainer of life on Earth.

[5:8:191] Solitology - part of Astronist Collectivism, the representation of Astronist characters in a solitary formation.

[5:8:192] Sororitism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette in some parts of the world, stating the importance of strengthened relations between young females and the propagation of strong bonds between female Astronist characters.

[5:8:193] Souvenirism - the literary technique of using souvenirs to symbolise certain events, stories, people or places.

[5:8:194] Sponsorism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating the encouragement of the construction and establishment of sponsorships by the company, especially regarding sponsored hospitals, medical facilities, observatories and research stations.

[5:8:195] Stabilitism - the policy championed by The People's Constitutional Company of Jesse Millette, stating the emphasis of conducting operations with intermediaries, companies, governments and organisations that can prove themselves to be stable entities.

[5:8:196] Stance of Beneficiality - part of Astronist Stansationism, the position of The People's Constitutional Company of Jesse Millette with the reasoning of receiving beneficiality by taking a particular side in a conflict or dispute.

[5:8:197] Stance of Humanity - part of Astronist Stansationism, the position of The People's Constitutional Company of Jesse Millette against entities proven to violate basic human rights and to support humanitarian operations.

[5:8:198] Stance of Neutrality - part of Astronist Stansationism, the neutral position of The People's Constitutional Company of Jesse Millette during a conflict or dispute, especially when there isn't a clear majority on either side of the argument.

[5:8:199] Standardisationism - part of Astronist Representationism and Astronist Collectivism, is the standardised representation of Astronist works or characters, especially the canonically described versions of the characters.

[5:8:200] Standardised Linguisticism - the gradual unification of world languages so to represent large portions of populations.

[5:8:201] Statuism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, for the construction of elaborate iconographical figures in public areas to denote an ideology, philosophy or belief.

[5:8:202] Subhumanism - categorising a living being as less advanced than a human.

[5:8:203] Superiorism - the ideology of an entity believing itself to be superior over both its associates and its enemies in all possible forms.

[5:8:204] Synchronism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stating that the operations of the company are centrally synchronised for coherence and clarity.

[5:8:205] Taylorianism - the overarching term given to the personalised theological, philosophical, ideological and political ideas, thoughts and theories expressed and expounded by author, philosopher and Founder, First Chairman and Constitutional Leader of The People's Constitutional Company of Jesse Millette, Brandon Taylorian.

[5:8:206] The Advanced Human - a futurological philosophy stating that humans will one day progress to a point of advancement that they no longer resemble the current human embodiment.

[5:8:207] The Confident Individual - one who is conscious of their confidence and works to build and progress it in all directions whether that be a detriment to others or not.

[5:8:208] The Inner Star & The Outer Star - the theory that within humans is a uniqueness of divine degree which is described as The Inner Star and all celestial objects have this same divine degree and are described as The Outer Star.

[5:8:209] Theological Parallelism - the idea that human beings live and die forever in parallel with their god or creator, yet do never encounter their god or creator.

[5:8:210] The Quintessence of Domesticity - a real-world ideology stating the different components that make up a traditionalist idea of a domestic life.

[5:8:211] The Theory of the Circle - the theory that business as a practice is simply a relentless circle of producing, selling and purchasing with a monotonous upkeep.

[5:8:212] The Theory of the Sphere - the theory inspired by The Theory of the Circle, yet taking it in a further dimension by holding the idea that business is not so flat as implied so in The Theory of the Circle.

[5:8:212a] The Theory of the Sphere argues that business as a practice is relentless and monotonous, but it is the external, internal and multidimensional factors, obstacles and circumstance of operation that contribute a real-world view of the relentless business landscape, not merely producing, selling and purchasing.

[5:8:213] Too Vital To Fail - the policy championed by The People's Constitutional Company of Jesse Millette stipulating that its operations, especially those regarding education, should become so deeply interconnected with the economic, political, cultural and social foundations of nations that its collapse would result in the subsequent collapse of a nation's education system, thus leading to other major issues in the nation's domestic and international profile.

[5:8:214] Totalisationism - viewing entities in their total, accumulated state, not as divisions.

[5:8:214a] The representation of Astronist characters in their totalised states.

[5:8:215] Totalism - the financial action of combining an entity's total wealth, both of financial and non-financial funds.

[5:8:216] Transparentism - the business philosophy established, championed and propagated by The People's Constitutional Company of Jesse Millette, stating that all dimensions, operations and personnel of the company are to be completely transparent to the public and thus, must inform all peoples of all operations.

[5:8:217] Tri-Astronism - The Ideology of Astronism as a theory conjoined to two others.

[5:8:218] Triology - Part of Astronist Collectivism, the representation of Astronist characters in the formation of a trio.

[5:8:219] Triviality of Domesticity - a real-world ideology stating that domestic life is both unappealing and stagnating and offers little to the person partaking in it.

[5:8:220] Typificationism - the idea that despite the vastness of the representation of Astronist characters and brands, distinctive similarities are repeatedly portrayed and are associated with particular characters in order to emphasise continuity.

[5:8:221] Unificationism - the process by which one unifies all in the name of a common cause, often represented in Astronist propaganda.

[5:8:222] Vanguardism - the policy championed and propagated by The People's Constitutional Company of Jesse Millette, encouraging groups of people to research and develop new ideas and technologies for the betterment of peoples and of which they will become accredited to.

[5:8:223] Versatilitism - the theory adopting the idea that Astronist characters are versatile to the differences of cultures and customs of the world.

[5:8:224] Versionism - the idea stating that all Astronist entities have endless variations, especially with regards to Astronist characters.

[5:8:225] Virtualism - the futurological idea that humanity will become more virtual than physical.

[5:8:226] Visionism - the process of envisioning what one must do and the subsequent fulfilment of that vision.

[5:8:227] Worldism - the idea that different entities have their own encompassing worlds.

[5:8:228] Zarism - distinctive features, characteristics, traits and way of thinking relating to that of the fictional character, Zara Litchford.

Ghenology

The Astronic Ontology

[6:1:1] One of the main objectives of one's study and contemplation of philosophy and philosophical subjects is to explore and discover more about ourselves; whom we are as individuals, whom we are collectively, whom we are to ourselves, and whom we are to others.

[6:1:2] The establishment of the pre-Astronist discipline of philosophy known as ontology paves the way to allow philosophers to embrace the study of the nature of being and in the Astronist context, pertains to the wider term of one's existentiality.

[6:1:3] The objectives of the Astronic tradition of philosophy therefore do also align with the main objectives of wider philosophy for Astronism and Astronists are held to seek the improvement of the knowledge and understanding we hold about ourselves as individuals, ourselves collectively, and ourselves as perceived by those whom we know and those whom we do not, especially so in relation to our destiny to explore The Cosmos.

[6:1:4] It is only prudent and natural, therefore, that a new tradition of ontological study and contemplation is founded in parallel to the founding of the Astronic philosophical tradition because with the founding of this new tradition of philosophy has come, as demonstrated by the immense size of the Omnidoxy alone, a plethora of new approaches to interpreting and understanding existence and it is these new Astronic approaches that must be applied to the context of the discipline of ontology.

[6:1:5] Ontologists task themselves with the contemplation of the nature of being in an attempt to understand in higher and more diverse ways the fundamentals of being, what it means to be or not to be, how one is characterised as being, whether being is truly knowable, in addition to many other deeply philosophical questions.

[6:1:6] I, herein, can be quoted as labelling ontology as the most philosophical of philosophical subjects for to me as Cometan, other than cosmology, there is no more profound area of contemplation that is markedly philosophical than the study of the nature of our own being, beingness and non-being.

[6:1:7] Of course, with the development of the Astronic approach to ontology comes the injection of the Astronic theme of astronomy fused with cosmology and philosophy tied to questions of existentiality, many of which have already been referred to and somewhat explored in the first disquisition of the Monodoxy as part of the inclusive discipline of compendology.

[6:1:8] One of the most interesting facets of contemplation for Astronists regarding ontology should be the nature of being of The Cosmos as a whole as well as its progeny and phenomena individually.

[6:1:9] How do the celestials exist and by which means do they exist? Do they coexist through interdependence or is the nature of their being codependent or perhaps it is instead an independent nature; here, we touch upon the three identified existential natures of interdependence, codependence, and independence, the study and discussion of which are important to the development of the Astronic tradition of ontology; it is imperative to say that independence is an ontological nature that is only reserved for those beings that hold divinity, therefore, anything within The Cosmos cannot be considered independent, even The Cosmos itself in accordance with the Astronist cosmology.

[6:1:10] One of the most interesting to consider ontology is to perceive it metaphilosophically as it exists in relation to other established branches of philosophy, primarily including metaphysics and epistemology.

[6:1:11] The ways in which those three long-established branches of philosophic study interact with one another yet remain distinct from each other by the nature and wording of the questions they explore is fascinating to me.

[6:1:12] It is important for me to note here, for I believe I have not yet spoken of this elsewhere in the entirety of the Omnidoxy, that it remains one of the foremost responsibilities of Astronic philosophers to apply Astronistally originating disciplines of study to pre-Astronist branches of philosophy which I consider to be essential to the further creation of plethoras of new beliefs, ideas, and other conceptals.

[6:1:13] This process of the application of an Astronist discipline to a non-Astronist discipline in this way is to be henceforth referred to as interlation, or to interlate, an example of which would be the application of the Astronist compendological discipline of study of omnology to the context of ontology to create questions such as whether the future and fate of the expansion of The Cosmos in The Universe will hold directly impacts on our own individual and collectively existentialities?

[6:1:14] Is the nature of being of that whichever we reside within directly connected to the distinct beings that reside within it or do they exist independently?

[6:1:15] By posing that question, we begin to explore the nature of existential interactions and interconnections between The Cosmos and the individual ontologies of each human person within The Cosmos.

[6:1:16] By this singular example, it is easily seen how there exists a vibrant applicability of cosmic philosophy, particularly compendological disciplines of study with pre-Astronist branches of philosophy; I am excited to see a bright and idea-filled future derived from the practice of interlation.

[6:1:17] In the context of the Astronic philosophical tradition, the depth of a philosophical discussion or treatise is measured by this process of interlation that is herein introduced for the greater and more intertwined the level of interlation is, the more in-depth and profound the philosophical discussion is considered to be.

[6:1:18] Presently, we have only spoken of singular interlation, in which one Astronist discipline of study is applied to a non-Astronist or pre-Astronist discipline of study, however, as part of the deepening of our philosophical discussions, there are herein introduced the possibility of the application of ten different Astronist disciplines of study to a non-Astronist/pre-Astronist discipline of study simultaneously within the same discussion, essay, or treatise.

[6:1:19] These include the following ranging from two up to ten, beyond which there is not presently introduced a term, but an eleventh or twelfth interlation could potentially occur: dyinterlation, trinterlation, tetrinterlation, quinterlation, hexinterlation, septinterlation, octinterlation, noninterlation, and decinterlation.

[6:1:20] Therefore, to interlate is expected to be an important practice within the context of Astronic philosophy for to conduct this practice means to philosophise on levels higher and deeper than without interlation, such discussions would not be able to reach peak complexity.

[6:1:21] Oppositely, that which is to be henceforth referred to as intralation pertains to the process in which an Astronist discipline of study is applied to another Astronistally originating discipline of study as part of the formation of an argument, but similarly to interlation, the following terminological versions of intralation including dyintralation, trinralation, tetralation, quinralation, hextralation, septralation, octralation, nontralation, and decintralation.

[6:1:22] That which is herein introduced as Astronist ontology is characterised by a particular focus on the nature of the being of The Cosmos, its progeny, and its phenomena.

[6:1:23] The nature of being in the context of Astronist Philosophy is fundamentally intertwined with the nature, functionalities, and formation of the Astronist cosmology and is also predicated by the Cosmic Limitation Principle and the wider general nature of The Cosmos as the existence in which we reside as human beings.

[6:1:24] Therefore, the Astronist cosmology can be said to pervade and form the structures upon which Astronist ontology is built.

[6:1:25] To develop a specific ontology for Astronism is not just a case of describing a particular viewpoint of being, but it is instead to form notions and orientations about what beingness is and therefore we understand that the Astronist ontology is a multiplicity of

ways to understand the nature of being and beingness which is known as a polyothic approach.

[6:1:26] This is rather than one systemised understanding of the subject, as is characterised by the Astronist approach to cosmology which is to be henceforth known as the monothic approach while a two-pronged approach is to be known as duothic and a three-pronged approach is to be henceforth known as triothic.

[6:1:27] The less and less amounts of approaches that exist, the more and more dogmatic the system of thought's approach to the subject becomes and this describes yet another distinction between a philosophy and a religion.

[6:1:28] A philosophy will generally hold a duothic, triothic, or ideally a polyothic approach to all subjects with only some foundational elements of the philosophical system of thought existing monothically.

[6:1:29] Oppositely, a religion is characterised by a monothic interpretation of all the subjects it addresses, especially when a religion is institutionalised in accordance to a dogma; a singular version of events while a philosophy holds a multitude of versions of events.

[6:1:30] A philosophy is majoratively polyothic while a religion is majoratively monothic and it is in this distinction that we see the differences in the nature of being of philosophies and religions which demonstrates the applicability of ontology to metaphilosophy.

[6:1:31] The Astronist ontology remains inherent of and intrinsic to the Astronist cosmology for the former is tasked with posing questions on the nature of being as interpreted by the latter.

[6:1:32] One of the essential words that is introduced by the Astronist approach to ontology is that which shall be henceforth known as beingness which pertains to the instance and characteristics of one's being rather than their existential being; beingness is even more emphasised in study of the Astronist ontology than the word being itself.

[6:1:33] Also importantly studied as part of the Astronist ontology is the nature of becoming; from this, we can understand that from the Astronist ontological point of view, there is a tridimensionality presented about the nature of being which is exemplified through three similar yet distinct terms; being, beingness, and becoming.

[6:1:34] The coming into being of an entity, or the mutability and transition of that beingness into another beingness is what can be defined as becoming.

[6:1:35] Becoming, as distinct from being, is rampant throughout The Cosmos and in fact, becomingness, as it is understood in this context, remains a fundamental element of the nature of The Cosmos for cosmic entities are becoming (or transitioning in their

beingnesses) continuously due to the transient nature of cosmic existence and this is considered to also be occurring in every other Cosmos as part of The Omniverse in The Universe.

[6:1:36] However, due to the encompassing nature of The Universe, some may think that The Universe cannot become, but this is incorrect according to the Astronist cosmology as stated herein.

[6:1:37] This is because even though The Universe is infinite, it isn't divinely all-encompassing and transcendent and so it can still become because it has the capacity to become anything due to its infiniteness for it isn't already everything like The Divine and so The Universe is in a constant state of becoming like The Cosmos.

[6:1:38] This constant state of becoming is to be known as contation and the belief orientation that is herein introduced as contationism pertains to the belief that everything in existence through the temporality of its existence is undergoing a transformation of becoming; everything in existence is transitioning from one beingness to another, thus in a consistent state of becoming.

[6:1:39] For The Divine, there exists no becoming or becomingness nature because The Divine is already everything and therefore it does not become anything else; this is considered to be one of the fundamental ontological differences between The Universe and The Divine; although you may think that to become something denotes rejection of The Universe's infiniteness it does not because The Universe has the ability to become anything while The Cosmos does not; The Divine already is everything, The Universe has the infinite nature to become everything, and The Cosmos has the limited nature not become everything.

[6:1:40] The Divine can be described as becomingness itself for it is from which everything became rather than it itself becoming anything; if you are already everything you needn't become anything; by this notion, the infinite nature of The Universe remains intact whilst also distinguishing its nature from that of the divine nature of The Divine.

[6:1:41] As part of the Astronic approach to ontology, it is essential that I develop a new approach to ontological understanding and this new system of belief and interpretation is to be henceforth known as unquitarianism; unquitarianism is an ontological understanding of existence in which every single composite and collective entity in existence throughout all cosmoses and all temporalities is considered to be unique; unquitarianism affirms our unique ontologies with varying levels of which categories of entities are considered to hold unquity demonstrate different schools of thought or branches of unquitarianism.

[6:1:42] Up until the introduction and presentation of unquitarianism within The Omnidoxy herein, the world, its leaders, and its most prominent of thinkers have all attempted to categorise, group, associate, and assimilate individuals with other

individuals and despite the practicalities and benefits of organising humanity in such a way of unification, the unquitarian worldview and ontological understanding of humans is oriented upon an entirely different course.

[6:1:43] In the general, or standard unquitarian ontological understanding expressed by the Astronist Tradition, each and every being of sentience holds a unquity to their beingness which remains inescapable, undeniable, destinal and ultimately consequential to their purpose, contributions, and exchanges throughout their lives.

[6:1:44] From the poor living on the streets to the rich living in their mansions to the orphaned children living without love and the children remaining ignorant of their freedoms and gifts of just having parents to one woman diagnosed with cancer and another woman without any ills at all; we all hold a unquity and we can see this throughout the world around us.

[6:1:45] Despite the categories we place one another within simply for purposes of social organisation and association, unquitarianism maintains that we only all hold one commonality which is our own unquities and to consider the world through associations and categorisations of sentient individuals is considered to be a practical and shallow element of ontological understanding with a superior understanding residing in focusing on our uniquenesses from one another as demonstrators of ultimate sentient diversity.

[6:1:46] The systems and constructs of social organisation that have been created through the development of human civilisation are not considered to be natural by any account and from the unquitarian perspective, the only natural form of our association to one another is our uniqueness.

[6:1:47] The notion of sentient unquity is ultimately demonstrated by the pre-Astronist saying that we are all born alone and that we die alone.

[6:1:48] From the unquitarian interpretation of this saying, it is understood that we are born unique and we die unique from another other person that has lived before us, lived with and alongside, or shall live after us.

[6:1:49] The fact that we hold our own birthdate and time and location and hold our own death date and time and location is the ultimate practical demonstrator of the notion of our unquity from any other existential being beyond ourselves which is ultimately connected to the construct of our personal beingness.

[6:1:50] By this notion, unquitarianism attempts to forsake the engrained system of categorisation according to a multitude of different parameters for societal organisational purposes.

[6:1:51] However, it remains important to note that unquitarianism is ultimately predicated on the notion that no sentient being is either equal or unequal to another, but

that they are instead unique from one another as a majorly divergent understanding of our ontology which shall herein characterise the entirety of the Astronist approach to ontology.

[6:1:52] Uniquitarianism also propounds that there exists far more many unique elements forming our beingnesses than those which could be classed as similarities or commonalities.

[6:1:53] The Uniquitarian Principle states that if each of us is unique from one another then no sentient being can ever be equal to another; uniquitarianism does not strive towards equality, but instead strives towards the realisation and recognition of uniqueness; that we are not equal to one another, but that we are unique from one another in all ways with similarities of course existing, though in every similarity, our uniquenesses are still considered to clearly reside.

[6:1:54] There are also introduced herein two major belief orientations known as both linearism and cyclicalism, or as the appellation of The Linear-Cyclical Dichotomy, pertains to an area of contemplation and study for ontologists regarding the nature of being as something that is either linear or cyclical by its nature which is an area of contemplation that can be applied to anything, especially so importantly to a metaphilosophical context.

[6:1:55] It is stated herein that the philosophy of Astronism sides with linearism in the context of The Cosmos and therefore notionises that The Cosmos is ultimately trajected according to a linearity rather than a cyclicity, that The Cosmos is fixated on a course which it will eventually see out and end as a result; however, in the context of wider existentiality, on universal and divine plains, Astronism sides with neither linearity nor cyclicity and sees both as inferior to which will be latterexplained, but herein introduced as transtemporalism.

[6:1:56] The nature of the structure and existentiality of The Cosmos is considered to be one of linearity rather than cyclicity which therefore informs the position held by Astronism on this topic; this diverges from philosophies such as Buddhism which is firmly cyclicalist by its orientation which is an orientation held by other philosophies and religions and the following several insentensations will cover how each major philosophy and religion is applied to this dichotomy.

[6:1:57] Confucianism does not seem to hold a clearly defined understanding of the structure of time and therefore does not seem to side either with linearism or cyclicalism, however, wider Chinese philosophy is more commonly associated with a cyclical understanding of existence.

[6:1:58] Shinto is based on the central notion of the existence of kami rather than reincarnation which makes Shinto more closely associated with linearism, but again, its true allegiance is not as clearly distinguished as in the Dharmic faiths.

[6:1:59] Taoism is notably cyclic in its temporal and cosmological understanding with the universe considered to be in a constant state of recreation which orients Taoism away from the ideas held about existence in Astronism.

[6:1:60] Hinduism is structured on the notion of cyclicalism which informs its entire religious traditions, as well as its contributions to ethics, cosmology, and ontology.

[6:1:61] This remains the same for the other Dharmic religion of Jainism which also holds a cyclical understanding of time and beingness.

[6:1:62] Sikhism is also fixated around the notion of the cyclical structure of existence and considers union with an Ultimate Reality to be the superior function for escaping reincarnation.

[6:1:63] Christianity is firmly linear in its understanding of existence with temporality considered in accordance to the events and prophetic beliefs held about Christ and its Second Coming, as well as the linear nature of cosmology which God holds dominion over.

[6:1:64] Islam, as a further contribution to Abrahamic faith, also considers its cosmology according to a linear narrative rather than a cyclical one and therefore naturally shares its understanding with both Christianity and Judaism.

[6:1:65] Judaism is much the same as its two descendants and also considered existence according to a linear narrative of events which will one day resolve the universe rather than being predicated upon a cyclical understanding as is held in the Dharmic faiths.

[6:1:66] As we now move on from addressing other religious and philosophical traditions, to provide an argument as to why Astronism follows neither linearism nor cyclicalism is primarily manifested in transtemporalism; essentially, Astronism considers the nature of The Cosmos to be linear, but considers the nature of The Universe and The Divine and all other extracosmical realms and existences to be transtemporal meaning that existence is predicated upon cosmicality and extracosmicality, the former of which is bound by time and follows temporality, two branches of which are linearity and cyclicity, while the latter is not bound by time and is therefore transtemporal; beyond the boundaries of the existence of time; therefore, Astronism considers cosmicality through linearity and extracosmicality through transtemporality.

[6:1:67] Another important segment of study within the Astronist approach to ontology is that which is to be henceforth referred to as Cometanic existentialism, or also known as Cometanic existentiality.

[6:1:68] Cometanic existentialism concerns itself with the contemplation of our existences in the here and now and in the cosmic realm rather than being concerned with extracosmical occurrences and laws which, despite the fact that they may have an

unknowable effect over us, they continue to be separated from us due to our own cosmic nature; cometic existentialism states that because cosmic and extracosmic accessibility is one-way on the part of extracosmic entities and beings, that we needn't be entirely concerned with the extracosmic, but should be intensely concerned with the cosmic.

[6:1:69] Also fundamental to the study of ontology in the Astronic tradition is the nature and existence of purpose which is considered to be fundamentally associated with the nature of beingness, the ability to be, our ability to become, and the nature of what it means to be as one thing and not something else which is totally associated with notions of identiture.

[6:1:70] Love purpose refers to the contemplation of the purpose of love in the world; in many religions, the emotion of love is provided as a central theme and although in Astronism, love is loved and the contemplation of love is valued, love as an emotion is not provided with the same gravity as it is in other religions and belief systems; instead, in Astronism, a specific type of love is prioritised, namely dutifulness which is manifested as contribution; dutiful is considered to be a form of love in Astronism and is translated as our individual and collective duty to explore and enknowledge ourselves of the glorious wonders of The Cosmos as a duty which is driven by love, though not singularly by that emotion; emotions important to Astronism include admiration, wonderment, vigilance, ecstasy, awe, acceptance, and confidence although the philosophisation about the purpose of love is territorialised as a type of philosophical contemplation specifically within the discipline of ontology due to the fact that love remains a central part of our beingnesses as generally the most important emotion.

[6:1:71] Survival purpose refers to the contemplation of the purpose of survival that exists as a fundamental part of our beingness and is arguably one of the most important motivational factors regarding why we exert change upon ourselves to become something different; it is because we want to survive, or we want an idealised version of ourselves to survive physically, but also conceptually and perceptually in the minds of others; the ontological approach to philosophisation of survival and the nature of survivability (the extent to which a person considers survival important to their beingness) is predicated upon discovering why survival or keeping in ontological harmony or ontological existence is so important to the achievement of securing one's beingness and one's ability to become.

[6:1:72] Accumulative purpose refers to the notion that our ontologies are based upon an accumulation of qualities, experiences, desires, disgusts, needs, and external influences which all accumulate to form what we describe in Astronism as our beingness, essentially the characteristics, roles and qualities which form who we are and what make us unique from others; these can be categorised under the heading of attributive uniqueness which includes all forms of uniqueness that form through characteristics and qualities and are largely motional and it is these which drive our beingnesses to be motional or transient in their nature; however, there does exist other categories of uniqueness including temporal uniqueness (the notion that we are born at a specific unique point in time that no other entity

shares with us), genetic uniqueness (the notion that our genetics are form of a unique combination of genes that no other entity shares), and physical uniqueness to name just a few (this states that we hold uniqueness in the physical space that we take up and that no other entity can emulate our physical space where we stand and exist in); the first two of these unique categories are largely non-transient, or are fixed as they are while our physical uniqueness and attributive uniqueness are motional or transient by their nature.

[6:1:73] Furthermore, perhaps we can best understand the nature of being, beingness, and becoming through the terminology of change; because we reside according to the dimensionalities of The Cosmos, we are able to appropriate everything to change or unchange; the notion that ontology can be formulated upon transience or permanence; entities and beings and events in The Cosmos experience a constant stream of changes and all that we consider permanent is actually still transient in its nature for there exists nothing of permanence in The Cosmos; this is the Astronist understanding of cosmic existentiality; something permanent from our perspective is not permanent from the perspective of The Cosmos itself; we can logically state that all is transient within The Cosmos because The Cosmos itself is transient by its own nature and therefore all else within it will resemble such a nature.

[6:1:74] Dispurpose and nonpurpose are also important terms to the study of ontology with the former introduced herein as relating to when we person rejects their perceived existential purpose and forges their own new purpose as a result; the latter of these pertains to when the beingness of a person holds no perceived purpose because such a person doesn't hold the ability to forge their purpose and neither have they been provided with a purpose by some external entity, whether that be another person or an organisation or institution.

[6:1:75] Procreative purpose refers to the contemplative study regarding the existential purpose of humanity to survive through acts of procreation as a form of being and becoming and as an extension of our beingness.

[6:1:76] Existence is a statement about something and holds many different branches and types, namely conceptual existence, of which all things that can and are thought of as well as all things that are in physical existence fall into in addition to physical existence, of which only physically manifested entities hold a place in such a category; beyond these, there are different levels of existence, the most prominent of which to Astronism include cosmic existence, universal existence, and divine or divinical existence in accordance with the Astronist cosmology.

[6:1:77] Identiture refers to the way in which we would describe ourselves and others according to the attributions and reputations that we exert as a portrayal of who we are and who we wish to become.

[6:1:78] Identiture is the most transient element of ourselves for there exists no other more consistently changing element of a person than their identity; identity and identiture are

immense topics of contemplative depth that I simply do not hold the amount of insentations to cover in the depth they require, however, I state here that my exploration of identiture shall remain one of my most prominent areas of study and philosophisation.

[6:1:79] Individuality is not as extreme a word than that of unquity and it does not hold the same ontological implications as the term unquity does, hence, it does not hold as much relevance in Astronism as that of unquity; individuality is distinguished from unquity in that the latter pertains to our existential uniqueness temporally, genetically, characteristically, intellectually, and physically while our individuality comprises of a less potent collection of such elements and most crucially, individuality is also not provide with a connection to beingness, or our ontological state while our unquity is; individuality is formed on what makes us distinct from others but such qualities are likely to be shared by others elsewhere while unquity is formed on those elements of us that make us unique and ontologically distinct rather than attributively distinct.

[6:1:80] Originality is another ontological term involving the notion that although we may share the same qualities as others, the way in which we come to resemble such qualities is original to us, or is unique to us; originality pertains not to what but to how such qualities have come about for a person and states that every quality of ourselves and taken a journey to become as it resembled in us; unquity and individuality therefore pertain to what, but originality pertains to how so in an ontological discussion and contemplation.

[6:1:81] Being cosmic means to be fundamentally limited, both physically, temporally, mentally, and ultimately, existentially limited or otherwise without the ability to be truly permanent; to be cosmic, which is what we as humans are as we exist within The Cosmos, means to be transient by our nature, it means to be limited, and it means to be finite; this is our ontological reality and all we are doing with the notions of our being, beingness and becoming is that we are moving around in a limited space of potentiality in an attempt to survive.

[6:1:82] Beginningness or inceptionality refers to the study and philosophical contemplation of the nature of the beginning of an entity's being as an entirety or pertaining to the beginning of just one of its beingnesses; the beginning of beingness is becoming.

[6:1:83] Endingness or peripheration refers to the study and philosophical contemplation of the nature of the ending of an entity's being as an entirety or pertaining to the ending of just one of its beingnesses; the ending of beingness is becoming something else.

[6:1:84] Cosmicals and universals are defined from one another according to the nature of what can be described as cosmic and that which can be described as universal, the former of which denotes a finite nature while the latter an infinite nature; cosmicals and universals are two groupings of conceptuality, the first of which pertains to conceptals that derivate a limited nature such as finiteness, mortality, temporariness and so forth

while the second of which pertains to conceptals that advocate or describe an unlimited nature such as infiniteness, permanence, immortality, and so forth.

[6:1:85] Divinicals on the other hand are the third category of conceptuality within Astronism and pertain to conceptals that expound notions of divinity such as totality, independence, all-encompassing, omnireativity, and transtemporality.

[6:1:86] It is through these three conceptual categories that the Astronist tradition perceives existences as a form of existential categorisation; cosmicals, universals, and divinicals are all formulate the conceptual structure of existence for Astronists.

[6:1:87] Bodiness refers to the fact of an entity's beingness involving their physicality; their physicality is predicated upon their body and their body is an essential segment of a person's beingness; bodiness is the extent to which a person's body influences their beingness, but mindness refers to the extent to which a person's mind influences their beingness.

[6:1:88] Cosmicness is limited rather than linear or cyclical; just because something is linear does not mean that it is finite and cyclicity is a form of temporal infiniteness so the essential Astronism understanding of cosmology is that we are limited, transient, and motional; it is through these three functions that Astronism considers time and being.

[6:1:89] Soulness is the supposed third portion of a person's beingness in relation to their soul; the elements of a person that are unseen, but neither are they mental or intellectual for those elements are covered by the term mindness.

[6:1:90] The Cosmic Centre pertains to the idea that The Cosmos is at the centre of all being within The Cosmos; everything that exists within The Cosmos is centred on The Cosmos for its own existence; this may also be referred to as cosmic dependency for it expounds the notion that due to our residence within The Cosmos we are dependent upon it.

[6:1:91] The Cosmic Centre is to be often considered an assumption within Astronism rather than an actual belief orientation due to notion of the limited nature of The Cosmos as a fundament of Astronist belief.

[6:1:92] What can be said to exist? According to the Astronist understanding, everything that be perceived or conceptualised can be considered to exist, however, in Astronism, that which is known as Unknown Existence refers to all things that have not yet been conceptualised and cannot be perceived, but we cannot know of those things in specificity; we can know is that they do not exist, but that they could come into existence.

[6:1:93] What is a thing? Pertained to as an entity in the Astronic ontology, a thing is a word which encompasses both objects and conceptals; a thing, therefore, can either be objective or it can be abstract.

[6:1:94] Into what categories, if any, can we sort existing things? As lattermentioned also, we can categorise existing things either as objects or as conceptualls and these are the two fundamental categories of cosmic existence.

[6:1:95] What are the meanings of being? The meaning of beingness is fundamentally predicated upon the meaning of The Cosmos itself because beingness, to us, is being cosmic in our nature; underscoring everything we know about ontology and all contemplations about ontology, nobody, and I mean nobody can ever tell us why we are here and nobody can demonstrate to us the meaning of our being.

[6:1:96] To know the meaning of something like The Cosmos is to have an understanding of The Cosmos in its entirety; we do not have this and hence, we cannot ever know why we are here; all I can provide you with are some ideas or postulations about why we might be here, but I do not know and I will never know the answer to this question for it is the greatest of all questions in my opinion.

[6:1:97] What is the essence of something? The essence of a thing, either an object or a concept, refers to the web of qualities, which themselves may be objective or conceptual, that form what a thing is; crucially though, whatever the nature of the thing is, it must abide by its categorisation.

[6:1:98] Therefore, no part of a human cannot hold the possibility of immortality due to the cosmic nature of us, neither can souls exist for souls denote such immortality which defies our own nature, neither are we independent of anything for such a quality is divinical; whatever is cosmic holds a set of cosmic essences, whatever is universal holds a set of universal essences, and The Divine holds a set of divinical essences.

[6:1:99] The cosmic nature is made up of quantitiveness and qualitiveness; the former of which pertains to the objective amount of things and the latter of which pertains to the subjective standard of something; the quality and quantity terms are the next of the fundamentals proceeding objects and concepts.

[6:1:100] The next of the fundamentals of cosmic nature pertains to where something is because the first fundamental is what, the second is how, and the third is where.

[6:1:101] The question of where something is pertains to an importance within The Cosmos because objectivity according to where something is is fundamental to cosmic nature, hence pertaining to physical uniqueness.

[6:1:102] Is existence a property? Yes, according to my thoughts and the beliefs of Astronism, existence is a property that can be lost and will inevitably be lost to us both on a physical level and on a conceptual level; both animate and inanimate entities are considered to hold existential property meaning that existence is something that is possessed and therefore can be lost rather than something that is a staple of being.

[6:1:103] Is existence a genus or general class that is simply divided up by specific differences? Existence be divided into the physical and the conceptual as well as the cosmic, the universal, and the divinical.

[6:1:104] Which entities, if any, are fundamental? There is only one fundamental entity within The Cosmos and that is the force of gravity; gravity is the absoluteness of The Cosmos for The Cosmos is dependent upon gravity for its existence hence gravity is the only fundamental.

[6:1:105] Are all entities objects? Yes, everything within The Cosmos, even gravity itself is considered to be an object for an object, in Astronism, is something that you can perceive directly through one of our five senses or you can perceive it indirectly through the effects of its existence as gravity because we can physically see and feel the effects of gravity which is gravity itself even though it arguably doesn't physically manifested itself; therefore, in The Cosmos, fundamentally, there are objects and there are concepts; all entities are objects and all abstracts are conceptals.

[6:1:106] How do the properties of an object relate to the object itself? The properties of the object are the object itself and although they should not be separated from the object itself because if those properties were not to exist then neither would the object exist.

[6:1:107] That which is herein introduced as the discipline for the study of belief in the context of philosophy pertains to positology and the exploration of this shall take place post-omnidoxically.

[6:1:108] Categories of being in Astronism which approaches this ontological subject via the construction of ontological extremities and ontological middlegrounds as they are to be known.

[6:1:109] The categories of being that we shall use are majoratively Aristotelian in their original usage with some additions.

[6:1:110] The two ontological extremities have, of course, a bipolarity.

[6:1:111] That which is the larger, greater, or more abundant extremity in whatever sense is to be known as the prodrast while the smaller, lesser, or fewer extremity in whatever sense shall be henceforth known as the predrast with the middleground forming the balance between the two.

[6:1:112] A static version, in which the universe displays a constant fullness and diversity, and a temporalised version, in which fullness and diversity gradually increase over time; the Astronist Tradition agrees with this notion and both versions of it.

[6:1:113] Orthogenesis is the biological hypothesis that organisms have an innate tendency to evolve in a definite direction towards some goal (teleology) due to some internal

mechanism or "driving force"; the Astronist Tradition agrees with this notion on a philosophical and principle-based level.

[6:1:114] Cosmoemergence refers to the application of emergence in the context of ontology to The Cosmos, particularly its progeny and phenomena in order to derive notions about the ontology of The Cosmos and its "ontological progression"; the notion that The Cosmos has just "been" as it is, but that it has "become" what it is.

[6:1:115] Epiphenomenon in cosmic philosophy, or also known as cosmoepiphenomenon, or cosmoepiphenomena refers to an actional or emotional product of a person's observance of a cosmic phenomenon, such as wonderment or excitement and the actions and expressions associated with such emotions.

[6:1:116] Cosmophilosophical is a term which shall relate to cosmic philosophy.

[6:1:117] Cosmophilosophical extension, or extensionism refers to the notion that The Cosmos is in constant extension of its own metaphysical and ontological being both internally (intraextension) (through the growth and expansion of entities residing within it) as well as externally (extraextension) (through its own accelerating expansion of it as a whole entity).

[6:1:118] Metament refers to the tendency of a regular person, but especially a philosopher, to focus on the meta natures of topics, such as metaphilosophy, metacosmos, and others.

[6:1:119] Privation is existing without definitive qualities, therefore calling one's beingness into question.

[6:1:120] Philosophical ontology refers to the beingness of a philosophy.

[6:1:121] Ideological ontology refers to the beingness of an ideology.

[6:1:122] Interpellation refers to bringing into being an idea, or set of systemised ideas (ideology), for the purpose of achieving something for the subject or by the subject; a religion or philosophy can be considered an interpellation and therefore Astronism can be considered as an interpellation.

[6:1:123] Intension is a connotation by word, phrase, or symbol; the intension of a word is usually manifested by its definition and a comprehension is a collection of such intensions (mutually understood qualities).

[6:1:124] Ontological freedom is expected to be both a prerological and ghenological concept.

[6:1:125] Real freedom; this shall expand upon notions of negative freedom by incorporating not simply institutional or other constraints on a person's choices, but also the requirements of physical reality, resources and personal capacity.

[6:1:126] To have real freedom, according to Van Parjis, an individual must; 1. not be prevented from acting on their will (i.e. they must have traditional negative freedom); 2. possess the resources or capacities actually to carry out their will.

[6:1:127] Mereotopology is a branch of metaphysics and ontology dealing with the relations among wholes, parts, parts of parts, the boundaries between parts, and the different beingnesses of those parts and wholes.

[6:1:128] Meontology refers to the study of non-being, disbeingness, abeingness, or more generally the study of nothingness and remains a fundamental of ontological study.

[6:1:129] To apply to the Astronist cosmology, the inability for there to be a state of nothingness in The Cosmos due to the Cosmic Limitation Principle which is, in this case, reversed to suggest that there must always be something in every existential dimension of The Cosmos, hence the creation of The Betwixity which is itself not nothingness.

[6:1:130] Voids do not hold a disbeing nature, but are instead devoid of existential physicality, or hold little matter due to the greater dispersement of matter in the area that forms a void.

[6:1:131] Nothingness can only occur outside of The Cosmos as part of The Universe, but also The Divine is nothingness as well because it is also everything and if something is to be everything then it must also be nothing.

[6:1:132] Cosmological inherence, in the context of Astronist cosmology, refers to the notion extending from the belief orientation of palingenism that The Cosmos inherits qualities, elements, and proportions from The Cosmos that once existed before it in the same place.

[6:1:133] Interconnectionism, in Astronist cosmology, is the notion that the different Cosmoses of The Omniverse in The Universe actively transmit and communicate new states of matter, proportions, elements, and other discoveries between one another for their mutual extensions.

[6:1:134] More generally, the notion that each Cosmos of The Omniverse are connected and actively communicate with one another is to be referred to as interconnectionism.

[6:1:135] Haecceitism refers to the belief that entities can be have haecceity (individual essence) as a set of qualities that are essential to it and distinguish it from everything else, thus creating unique ontologies, or beingnesses.

[6:1:136] Therefore, the Astronist Tradition agrees with this notion as it aligns with the ideas of the Astronist cosmology.

[6:1:137] Onticality is the state of an entity existing physically, factually, and objectively rather than conceptually, speculatively, and subjectively which is to be known as subtic, subticity, or to exist in subticality.

[6:1:138] Externalism argues that the conscious mind is not only the result of what is going on inside the nervous system (or the brain), but also what occurs or exists outside the subject.

[6:1:139] Energeticism refers to the physical view that energy is the fundamental element in all physical change and the notion of the existence and the term energy are also to be studied as part of ontological philosophisations.

[6:1:140] The Astronist ontological view agrees that energy is fundamental to physical change but it rejects the notion that energy is fundamental to physical beingness or existence because energy is considered to be a functionality of bodily beingness rather than existential beingness.

[6:1:141] Cognitive ontology is the Astronist approach to this branch of ontology supports the notion of what it terms as linguisticism which is the ascription of all human-made topics, concepts, and theories as dependent upon language and semantics rather considers subjects such as mathematics, psychology, and others as just different languages pertaining to the realities that hold biases for human cognition.

[6:1:142] Therefore, their accuracy can neither be determined nor verified because the limitations of human perception and knowledge renders all that humans conceptualise to be either false or “not true”.

[6:1:143] This is essentially done in order to superiorise the subject of philosophy above all others and specifically relates to the ontology of the cognition of humans which, due to the Cosmic Limitation Principle, is fundamentally limited and therefore cannot ever be said to be a “true truth”.

[6:1:144] Being-in-itself (autocreation) is the state in which one entity is not dependent upon another entity for its existence or which has not come into existence from another entity.

[6:1:145] Ontological realism refers to the idea that facts are “out there” just waiting to be discovered and although the Astronist concurs with this viewpoint, it intends to add that which shall be known as ontological hyperrealism.

[6:1:146] Ontological hyperrealism notionises that even though facts are waiting to be discovered, there are limitations to what can be discovered due to the Cosmic Limitation Principle.

[6:1:147] Therefore, doubts are raised about the extent of the accuracy of the discoverable facts for some truths are unreachable by that which exists within The Cosmos.

[6:1:148] Derived from this, it is expected that for some post-omnidoxical philosophers, the Cosmic Limitation Principle will be reappellated to the Cosmic Limitation Problem as it may be considered a greater creator of obstacles in the development of notions than existing simple as a principle, but the Astronist Tradition notably opposes such a reappellation.

[6:1:149] Metaontology refers to a branch of ontology dealing with the investigation of what is being asked when we ask what is beingness, what we do hope to derive from the study of ontology, and what conclusions we can hope to come to about beingness from ontological enquiries.

[6:1:150] Ontotheology (Divine ontology or divinontology) refers to the nature of the beingness of The Divine from the Astronist cosmology; divinontology can be considered a cross-disciplinary discipline of study as it stretches across divinology and ontology.

[6:1:151] Philosophical poet, in poeticism, refers to the employment of poetic styles, devices, and forms to convey and parcel philosophical concepts, notions, and theories without explicitly writing of them, like in a definitionalistic approach.

[6:1:152] Nonfoundationalism or antifoundationalism refers to a pre-Astronist ism that, when applied to an Astronist philosophical or ideological context, pertains to any rejection of a foundational element of either a theory, belief orientation, or notion.

[6:1:153] Cosmomaximalism refers to the ontological notion that one of The Cosmos of The Omniverse in The Universe of the Astronist cosmology is the largest possible without being infinite and in such a Cosmos, anything which does exist shall do so in a maximised state rather than a proportional, ordinary, or minimal state.

[6:1:154] Ontological priority refers to whereby one entity is prior to another in being in terms of chronology.

[6:1:155] Ontological postority refers to whereby one entity is after another entity in being in terms of chronology.

[6:1:156] Ontological superiority refers to whereby one entity holds prevalence in being in terms of proportion.

[6:1:157] Ontological inferiority refers to whereby one entity holds impivalence in being in terms of proportion.

[6:1:158] Creativism or Cometanic hedonism is considered to prioritise the achievement of ontological security through contributions to the world in order to generate meaning for one's life and creativism considers itself to hold the most efficient way of achieving ontological security; a stable mental state derived from a sense of continuity in regard to the events in one's life.

[6:1:159] Metaphysical naturalism refers to a philosophical worldview, which holds that there is nothing but natural elements, principles, and relations of the kind studied by the natural sciences and therefore rejects the supernatural concepts and explanations that are part of many religions.

[6:1:160] The Astronist Tradition aligns with this notion of metaphysical naturalism for it considers its cosmology to be naturalistic in orientation as it does not rely upon supernatural concepts (such as reincarnation, resurrection, heaven and hell, angels, and extrasensory perceptions etc.) for its cosmology to function.

[6:1:161] This is because The Cosmos is a natural entity and The Universe and The Divine are not supernatural claims, but are instead logical extensions of The Cosmos, especially so in the ambiguous way in which they are described and discussed.

[6:1:162] A supernatural proclamation would be to proclaim that The Divine specifically intercedes with the world as religious traditions have proclaimed about their Gods, but there exists no such specific notions in Astronism despite their existing some concepts which reside within Astronist mysticism that pertain to particular intercessions of The Divine such as through personal inspiration and other ambiguous notions.

[6:1:163] Ultimately, however, The Philosophy of Astronism holds a predominantly and distinctly naturalistic orientation, especially so for immense focus that it presses upon cosmocentricity which could also be termed as derivation of naturocentricity.

[6:1:164] Astronism as a form of religious naturalism pertains to the notion that Astronism is a form of religious naturalism remains suspicious to the Astronist Tradition with the use of the term "religious" which is why the Tradition herein proposes an alternative term that is to be known as philosophical naturalism.

[6:1:165] However, the essential premise of the notion remains the same; that Astronism is an infusion of a religiophilosophical thinking with a naturalistic foundation and predication through the designation of feelings and concerns (such as wonderment, devotion etc.).

[6:1:166] As well as the organisation of a worldview that is based on the phenomena of the natural world and its orders, patterns, and elements.

[6:1:167] Organised philosophies must remain plural by their natures for unlike religions, organised philosophies are forever changing and exist not as singular entities with characteristics just of philosophies alone, but as borrowing elements of religions, ideologies, spiritualities, and more.

[6:1:168] Astronistically originating theories and belief orientations are herein introduced to explore ontological study further and deeper sense.

[6:1:169] Daseinism, from the German dasein, refers to the belief orientation holding that beingness is distinguishable from presence for they are not considered to be semantic equivalents for the former pertains to the existence of something in some place, time, and relation while the Astronist Tradition holds that the latter pertains to the existence of something in a necessarily proximate capacity.

[6:1:170] Essentially, close to something else in place, time, and relation; beingness can therefore pertain to the existence of an entity without any particular orientation of place, time, and relation, but the presence of something demonstrates its place, time, and relation to something else.

[6:1:171] Secondly, that which is to be known as to be pentadimensional, or the belief orientation of pentadimensionalism pertains to the notion held by the Astronist cosmology that each existing entity holds five distinct parts or persistences that are symbiotically mutable through the existence of the entity in subject.

[6:1:172] These five distinct parts, known as “contributors to essence” include an entity’s mind (consciousness/beingness), proportions (dimensionality), residence (existentiality - where is it), mutability (the extent of its changes over time), and an entity’s relationality (what, where, and how it is in relation to another entity).

[6:1:173] Vesselism, in Astronist ontology, refers to the belief orientation holding that the mind is the ultimate determiner of one’s beingness and that our bodies are merely vessels for the mind.

[6:1:174] It is particularly characterised by its superiorisation of the mind over the importance or existence of the soul and also proclamations that which is to be known as omnimentality/omnimentalism.

[6:1:175] Omnimentalism notionises that all entities in existence have minds and therefore broadens the idea about what a mind is.

[6:1:176] Herein listed are different ontological genesisises, each of which pertains to the way in which being and beingnesses are formed.

[6:1:177] Cosmogenesis pertains to the formation of beingness from within The Cosmos as a product of The Cosmos; the gaining of one's beingness directly from The Cosmos rather than from some other source within The Cosmos; deriving one's beingness and orienting one's beingness around The Cosmos is fundamental to Astronist belief.

[6:1:178] Universogenesis pertains to the formation of beingness from The Universe which, due to the Cosmic Limitation Principle, only The Cosmos as a whole and all the other infinite amounts of cosmoses of The Universe as wholes are able to formulate their beingnesses upon due to the fact that they are directly existing within The Universe which is sustained by The Divine.

[6:1:179] Other forms of ontological genesis include divinogenesis, chaogenesis, mytrogenesis (Mytra), morphogenesis, sentientogenesis, progenogenesis (progeny within The Cosmos), phenomenogenesis (phenomena within The Cosmos), monogenesis, duogenesis, triogenesis, polygenesis (more than three genesisises), paragenesis, and ontogenesis.

[6:1:180] As part of Astronist Cosmology, the essential belief is that to find out more about ourselves, we must enknowledge ourselves about The Cosmos and its progeny and phenomena (known as cosmophysitism) in order to achieve that which is to be known as transcension, the study of which actually resides within prerology and specifically, amnology as part of the study of freedom.

[6:1:181] Essentially, all that is known about The Cosmos must originate from within The Cosmos due to our own perceptual limitations; this supported by the Astronist Tradition.

[6:1:182] This is in opposition to notions that suggest that by understanding more about ourselves personally, we can find out more about The Cosmos which is to be henceforth known as egophysitism or anthropophysitism.

Uniquitarian Philosophy, Ontations & Ontometry

[6:2:1] The employment of uniquitarianism shall now be implemented in order to determine a brand new approach characterised by its origins within the Astronist philosophical tradition and can be used to

[6:2:2] Ontouniquitarianism, also known as uniquitarian ontology, or more generally known as uniquitarian philosophy, or the uniquitarian approach to ontology essentially posits that all of reality and its composite parts, both physical, metaphysical, and perceptual are unique according to the parameters of physical appearance, molecular structure, chronology, proximity, and location.

[6:2:3] Further to this, the analysis of a subject should be conducted with the intention of discovering and securing an understanding of the unique elements of the entity in subject rather than compartmentalising the composite elements of the entity for analysis, or by categorising entities into different constructed unities for the purpose of deriving their natures by the comparison of entities within such categories.

[6:2:4] Ontouniquitarianism differs from process philosophy because it posits that all entities do not just become or change, but instead form new unique realities whenever

[6:2:5] Ontouniquitarianism splits reality down into subseconds and notionises that every action formulates a new reality that is completely distinct from the reality of the previous subsecond.

[6:2:6] Ontouniquitarianism posits that if a change occurs, the person or object that the change has occurred to has caused a new reality which means that every action/decision/change that is made holds effects for the physical, metaphysical, and perceptual reality.

[6:2:7] The aftereffects of these actions/decisions/changes to be henceforth known as ontations.

[6:2:8] The severity of the change causes a greater ontation in the surrounding reality, thus forming a new unique reality after every change/decision/action is made.

[6:2:9] The effect to that new reality on the physical, metaphysical, and perceptual reality of others is to be henceforth known as the extent of an ontation's perexity.

[6:2:10] It is the perexity of an ontation that is fundamental understanding the extent of the consequences that each decision/action/change holds for other realities.

[6:2:11] The notion and process known as retransformation, or to retransform rests at the heart of the uniquitarian approach to ontological contemplations and involves the notion that whenever something changes, it is transformed into a new unique reality and so, its

substance has fundamentally changed (neutral), progressed (positive), or regressed (negative).

[6:2:12] Retransformation therefore ultimately upholds the notion that every change in reality forms a new unique reality in which the substance of the entities and the environment involved in such a reality have changed as part of a two-pronged activity that forms the entire process of retransformation.

[6:2:13] The notion of retransformation is fundamental to understanding the unquitarian understanding of the nature of change and its effects on the entities and on the environment in which it occurs.

[6:2:14] Furthermore, retransformation is the singlemost important distinguisher between unquitarian philosophy and process philosophy for the latter focuses on change as the cornerstone of reality which is itself dependent upon the process of change while the former is of course focusing on change as a retransformative occurrence for the substance of the entity that the change has occurred to rather than a process of change or to remain static as is considered in classical ontology.

[6:2:15] Therefore, the process of change identified within process philosophy is distinguished from that of retransformation by the notion that retransformation is not a process, but an occurrence in and of itself that could well occur again after another subsecond has passed while the process of change that is identified in process philosophy is of much greater longevity.

[6:2:16] That which is to be henceforth known as autontation refers to the notion that one's own decisions/actions/changes will automatically effect one's own reality by default and therefore without choice for oneself to be effected.

[6:2:17] That which is to be henceforth known as hyperontation refers to the notion that depending upon the perexity of the ontation, another's reality (whether that be a person or an inanimate object) may not always be effected by a decision/action/change made by oneself.

[6:2:18] The ontounquitarian view of reality is based upon sequences of subseconds that make up a series of events for which each subsecond holds a quality known as unquity which denotes total uniqueness, separation, and independence from all other events, entities, and realities of every other subsecond that exists.

[6:2:19] Ontounquitarianism, or the unquitarian approach to ontology, considers each and every entity in reality to be constantly retransforming the reality around itself environmentally and the realities of other animate entities, usually people, as well as their perceptions of reality which also retransform during this activity.

[6:2:20] But one must be asking oneself how process philosophy differs from that of unquitarian philosophy as the former of these emphasises becoming and changing rather than static being.

[6:2:21] To distinguish the two, process philosophy focuses on the idea that those which terms as actual occasions, or actual entities, which are momentary events are at their core self-determining, experiential, and internally related to one another.

[6:2:22] Meanwhile ontouniquitarianism, as the ontological branch of wider unquitarianism, which itself is a major characteristic of Astronist thinking, focuses on the notion that every entity in existence is neither an enduring material static substance (as is held within groups opposing process philosophy), nor are such entities enduring a process of continuous change, or becoming yet remaining (as is held in process philosophy) for they are instead retransforming through every

[6:2:23] The forms of philosophy that argue that change is illusory which was held by Parmenides or that it is accidental which was argued by Aristotle stand in opposition to process philosophy as this form of philosophy considers change as reality, but to go far beyond even this, unquitarian philosophy considers change (an event or occurrence) to be substantially retransforming of reality rather than being reality itself.

[6:2:24] The unquitarian view upholds the notion that events and occurrences in reality fundamentally change the substance of reality each time they occur which forms new uniqueness realities through ontations which themselves hold different degrees of influence (known as perexity) as to the extent that they change the reality them and the extent to which they change the source from which they are emitted.

[6:2:25] Ontouniquitarianism considers the being of a human as an incomprehensible amount of subseconds, each of which hold the potentiality of that human being to be unique and therefore fundamentally, ontouniquitarianism upholds that reality is not just itself change as is held in process philosophy, but that it is itself uniqueness.

[6:2:26] This viewpoint posits that change itself is also uniquely changing for the instruments, influences, and entities of the impact of change are entirely unique from all other instances of change that are exemplifiable.

[6:2:27] Classical model of change: change is illusory or accidental.

[6:2:28] Process philosophy model of change: change is reality.

[6:2:29] Unquitarian model of change: change and reality are both existentially unique.

[6:2:30] By this notion, unquitarianism postulates that change itself is subject to uniqueness which means that all that does change is itself unique, but that the different instances of change are also unique in and of themselves.

[6:2:31] Further to this, it also postulates that it is only the designation of the unique parts of change and of the unique parts of entities that have themselves changed that will uncover answers with regards to the true natures of entities and how and why they change and what the nature of change itself is.

[6:2:32] Uniquitarian philosophy typically addresses large questions and philosophical problems according to the idea that each and every concept and its application must be considered in its own individually unique terms of conceptualisation and application.

[6:2:33] Therefore, uniquitarian philosophy opposes the use of comparisons as it deems them not to be useful in determining the present subject at hand and the use of comparisons undermines the uniqueness of the subject.

[6:2:34] For this reason, uniquitarian philosophy is opposed to continental philosophy, but it is also opposed to analytic philosophy by the notion that it does not attempt to reduce subjects into their composite parts during their analysis.

[6:2:35] Instead, the uniquitarian approach to the consideration of a subject or problem would be to understand the elements that make it unique as the first step of its contemplation with the second step involving a consideration of the elements of it that may be shared or relatable to other entities as part of a process of categorisation.

[6:2:36] These unique and relatable elements of the entity should always remain separated from one another during a uniquitarian analysis and the relatable parts should be further categorised according to whether they exist as intrinsic or extrinsic parts of the entity in subject.

[6:2:37] The unique elements of the entity in subject should be primarily used in order to derive conclusions and make delineations about the nature of the entity or to solve the issue at hand.

[6:2:38] Meanwhile, the intrinsic and extrinsic relatable elements would be used in order to either proximate or disproximate the entity from certain other entities in order to form its own identity.

[6:2:39] This is because by ruling out how an entity holds proximity or disproximity from another entity, this is a strong determiner of the entity's own individual identity with the end goal being to delineate an entity according to its unique elements only.

[6:2:40] Essentially, the ultimate goal of the uniquitarian approach is to derive the unique elements of entities in order to formulate their overall identity/nature.

[6:2:41] The unique elements of entities are emphasised to the highest degree as they are seen as the ultimate determiners of an entity's nature, or the answers to a problem.

[6:2:42] Even within the categorisation of an entity's relatable intrinsic or extrinsic elements, the view of unquitarianism is that such an entity will still hold a unique place within such a category despite the fact that it shares certain intrinsic or extrinsic elements with other entities.

[6:2:43] The focus is entirely placed on finding the unique elements of the entity in subject and prioritising our consideration of those elements in order to determine the nature of something, or in order to consider the formulation of an answer to an issue.

[6:2:44] It is this unquitarian approach to the consideration of all subjects in order to derive conclusions about their natures that distinguishes the Astronist tradition of analysis from all others.

[6:2:45] This is because this tradition of philosophy is predicated on the Uniquity Principle which upholds the notion that all that does exist does so by unique measure and means and therefore the discovery of the unique elements of something and why and how those elements are unique allows us to determine the nature of any subject whether than subject is physical or conceptual.

[6:2:46] There is a distinct characteristic of individuality within unquitarianism for if everything is unique then everything must hold unique elements within it, but also a sense of universality by the notion that to think in unquitarian terms means to consider all entities as unique from one another which demonstrates a countless (though not infinite) diversity throughout existence.

[6:2:47] Through the categorisation of entities, as is the continental approach, through the unity of entities, we lose a sense of diversity which is an essential element to universality.

[6:2:48] Meanwhile, through the reduction of the parts of such entities, as is the analytic approach, that is not believed to be far enough in the demonstration of the true diversity of cosmic existence for the parts analysed by analytic philosophy still continue to be categorised and so the uniqueness of the different elements is largely overlooked which points to the reason as to why unquitarianism has been formed herein and is therefore flagshipged by the Astronist Tradition as one of its prominentmost concepts.

[6:2:49] To shortly digress from the ontological topic, that which shall henceforth be known as the tiritional and promulgative action of flagshipging refers to when the Astronist Tradition and/or The Institution of The Philosophy of Astronism intentionally prioritises the mass public visibility of a particular concept or element of The Philosophy due to the present strength of its relevance for wider society or due to its role as a major distinguishing factor between The Philosophy of Astronism and other forms of philosophy and their approaches.

[6:2:50] Furthermore, uniqueness posits that no two entities demonstrate total uniqueness with one another and so the definition of unique elements of entities is made a priority for the uniqueness approach which is markedly distinct from that of both the continental and analytic philosophical approaches.

[6:2:51] Continental philosophy would typically involve addressing large questions in a synthetic or integrative way, and consider particular issues to be 'parts of the larger unities' and as properly understood and dealt with only when fitted into those unities.

[6:2:52] Meanwhile, analytic philosophy tries to solve fairly delineated philosophical problems by reducing them to their parts and to the relations in which these parts stand.

[6:2:53] So analytic philosophy concerns with analysis, hence the appellation provided to it, which involves the separation of the parts of something in order to study its composite elements in an attempt to understand whatever it is in its entirety.

[6:2:54] Whereas continental philosophy is concerned with synthesis involving the comparison of large encompassing concepts with others in order to determine a greater understanding of that which is being compared, examples of which include the synthesis of modernity with history, individuals with society, and speculation with application.

[6:2:55] A branch of uniqueness is that which is to be henceforth known as hyperuniqueness which posits that because every entity, every instance of an entity, and every instance of change of such entities is unique then all entities must not hold the same origination, but must instead hold unique originations.

[6:2:56] Hyperuniqueness is adhered to by myself as Cometan and is therefore also adhered to by the Astronist Tradition because it suggests there is a distinct heterogeneity of existence which the Astronist Tradition fundamentally supports even despite its belief in The Divine as the ultimatum of creation.

[6:2:57] Hyperuniqueness posits the argument that because all entities and all the instances of those entities are unique then it would be illogical to notionise that the origination of those entities is not itself unique which means that each entity in existence must ultimately hold, an extracosmical, universal, and divine, an heterogeneous origination.

[6:2:58] Due to the fact that the Astronist Tradition supports the notion of the heterogeneity of existence, this does not mean to say that it sides in direct alignment with ideas such as polytheism for although such an idea is respect and does hold certain discussional value within the Astronist philosophical tradition, this is not a view held by the Astronist Tradition itself.

[6:2:59] Instead the Astronist Tradition's support for the heterogeneity of existence is influenced by its panentheistic and its transtheistic foundations which, by notionising the

homogeneity of existential origination, both the ideas of panentheism and transtheism are fundamentally undermined for that which is monistic cannot also be panentheistic or transtheistic for there is a certain cosmical to monism and the related belief orientation of monotheism.

[6:2:60] Such ideas are very well received by humanity due to their distinct simplicities, but to notionise that the nature of divinity is monistic is far too cosmical, or non-divinical in its terminology, for the Astronist Tradition to agree or align itself with, hence the justification for its alignment with the heterogeneity of existence rather than the homogeneity of existence.

[6:2:61] This is because to be transtheistic or panentheistic in orientation is to appreciate the uniqueness, infiniteness, transcendency, and diversity of that which is the ultimate causality of existence and being so by this notion, monism, dualism, or any other numerical or quantifiable manifestation or notion of divinity is ultimately cosmical by its nature.

[6:2:62] Therefore, for the Astronist Tradition to uphold transtheism, or panentheism is for it to move away from the ideas of monism, dualism, and polytheism by opting for theological orientations that instead of being numerically based are instead existent beyond such cosmic measurements.

[6:2:63] Returning to the previous example of Socrates changing and becoming ill, the uniquitarian, or ontouniquitarian viewpoint here is that the substance of Socrates has retransformed and fundamentally changed (manifested by his appearance, his internal body, his abilities etc.) upon him becoming ill, and subsequently, a brand new reality has come into existence for Socrates and (depending on the perexity) those people or objects or environments surrounding him that are effected by the ontations of him becoming ill.

[6:2:64] To understand ontations, imagine a busy high street in a city with thousands of people walking and going about their business, each person with their own separate physical existences, metaphysical realities, and perceptions of those realities.

[6:2:65] But then imagine an old man suddenly collapses in the street and subsequently causes a young man to fall over to the floor.

[6:2:66] This event, due to its location, its close proximity to thousands of other realities due to the concentration of such realities (known as contality, while diluted realities are known as being in a state of discontality), and the timing during which it occurred causes large ontations with a small to medium perexity.

[6:2:67] Now, the old man has experienced here autontation because he was the cause of the occurrence and so he automatically emits ontations and is effected by those ontations with the next individual reality, the young man, being the second most effected individual reality by the emitted ontations.

[6:2:68] Ontations can be imagined as like the shockwaves emitted when an earthquake occurs, but unlike actual shockwaves, ontations are selective of how they impact others and the surrounding environment and also, the effect that ontations hold on other people's realities can also be managed by those people (which is to be henceforth known as contication/to conticate).

[6:2:69] If we imagine this occurrence again for a moment, the old man has just collapsed thus emitting ontations which are first perceived visually by onlookers both in proximity and disproximity.

[6:2:70] This notion is included because a person further away across the street may well have seen the old man collapsing even before those whom hold a closer physical proximity to the old man.

[6:2:71] This instance is to be henceforth known as teleontation which pertains to when an ontation reaches a person of greater distance from the source quicker than a person closer in proximity to the source.

[6:2:72] The old man, all the while emitting ontations, collapses onto a younger man who is then not only receiving the ontations of the old man, but has also started to emit ontations of his own as caused by the ontations emitted by the old man.

[6:2:73] This pertains to an instance that is to be henceforth known as ontofacience, and therefore may be described as ontofacient.

[6:2:74] In ontouniquitarian terms, the old man in this instance would be labeled the ontogin because he remains the source of the ontations emitted meanwhile every other person in the scenario would be henceforth labeled as recegins because they all collectively receive the ontations emitted by the old man.

[6:2:75] However, the young man onto which the old man collapsed would have his own label of the deuterogin because he was the second most ontated person in the scenario after the old man himself.

[6:2:76] Continue imagining this event unfolding, the old man crashes to the floor after causing the young man to fall, but at this moment, a middle-aged man immediately comes to the aid of the old man.

[6:2:77] This is known as ontational acceleration, or superontation, because the middle-aged man helping has immediately heightened his own ontality, or his receiveance of the ontations emitted by the old man as he turns from an onlooker to a helper.

[6:2:78] The instance in which the roles of people change in a scenario with a subsequent effect on the level of their ontations they receive (their ontality) is to be henceforth known

as transontation and in this instance of course, as aforementioned, the middle-aged man that was, a subsecond ago, an onlooker has now become a helper.

[6:2:79] In this moment, he made his own decision to change his role and subsequently changed the level of his own ontality.

[6:2:80] When a person intentionally changes their own ontality, usually for ethical/moral reasons or because it is in their personality to conduct such actions, this is to be henceforth known as the process of prontation.

[6:2:81] This is because the person changing their ontality held the choice to not change and to keep their ontality to a minimum as an onlooker while general forms of ontational acceleration, known as preontations, are not chosen.

[6:2:82] This is because certain individuals are forced into raising their ontality due to the natural reflexes present in their moral compass which force their ontality to rise without them deciding to make it rise by their own accord.

[6:2:83] However, that which is to be known antiontation, or antiontationism, holds the idea and belief that no ontations are forced upon any person and that every person holds a choice to reduce their ontality, or to remove their ontality completely even in the most extreme of situations.

[6:2:84] An example of such would be the singular witness of the old man collapsing at night in the alternative scenario, antiontationists would now notionise that the lone witness, despite the social moral connotations surrounding their decision to help the old man, they continue to hold the capacity to decide not to help him and are therefore never forced into raising their ontality.

[6:2:85] However, the opposing argument to this, and the argument which I and therefore the Astronist Tradition hold alignment with, is to be henceforth known as ontationism which notionises that every person holds a limit to their own ability to make decisions, especially in extreme cases.

[6:2:86] This involves the instance in which an uncontrollable, natural reflux sets in when an event occurs before our eyes to help the person or people that have been involved or hurt in such an event.

[6:2:87] This is considered to be without regard for the increase of our own ontality, or without thought for our own morality if we do or do not help the person involved in the event which could itself be considered as a form of altruistic thinking.

[6:2:88] This particular discussion is to be henceforth known as the Antiontational Debate and is expected to be further vigorously debated post-omnidoxically beyond its introduction herein.

[6:2:89] Returning to our original scenario, in this moment of ontational acceleration, or superontation, the middle-aged man has experienced a great rise in his ontality which subsequently causes him to emit his own ontations.

[6:2:90] This instance would then label him, as the final of these types of labels as the trigin, as the third highest person of ontality in the scenario, after which all other individuals are considered recegins, even those of fourth or fifth highest ontalities.

[6:2:91] In order to succeed in ontational analysis, or ontoanalysis, we must slow down events just beyond the point at which they halt altogether and divide them into those which are to be henceforth known subseconds.

[6:2:92] Subseconds are the moments between seconds in which many ontations may be emitted and it is these that are used to measure ontations in ontometry and equate to time in relation to ontational analysis.

[6:2:93] However, it is the onlookers of this event that are also of great interest to us in understanding how ontations work and they mix with individual people's personalities, their individual realities and circumstances, as well as their perceptions of the event itself.

[6:2:94] For example, out of the thousands of people on the high street that witnessed this event, many hundreds watched the event unfold, however, they did not allow themselves to get involved in helping the old man or the young man.

[6:2:95] Instead, these people continued about their business which is typically due to the fact that they can see other individuals tending to the old man and the young man so they feel they needn't become involved.

[6:2:96] When this occurs, this is to be henceforth known as a misontation because an ontation has reached that person as emitted by the old man and the young man, but they have conticated that ontation by not involving themselves further in the event beyond their own witness of the event.

[6:2:97] Now, some individuals would carry out with their day, perhaps tell others of their witness of this event (which are to be henceforth known as nanontations), but the next day, they wouldn't think about the event again (this is still considered a misontation).

[6:2:98] Meanwhile, another person may have been traumatised by their witness of the old man collapsing in such a way that they display anxiety for other people or members of their family who they think may be vulnerable to collapse or that person may just continue to think about what happened for an extensive amount of time after the event.

[6:2:99] This instance is to be henceforth known as a pseudontation because the person feeling this initially displayed signs of misontation while actually, the event hold a greater ontation over them than they initially considered.

[6:2:100] Some other people that witnessed this event may well have seen the event, but in order to conticate the effects of the ontations emitted, they ignored the event and perhaps pretended not even to see the event itself.

[6:2:101] This is to be henceforth known as an instance of nontation because the effects of the ontation has not been allowed to take effect over such individuals due to their own contication.

[6:2:102] Ontations are highly affected by changes (even if they are slight changes) in the circumstances of the event and so they are sensitive entities.

[6:2:103] This is because if this same event of an old man collapsing occurred while he was alone at night on an empty street, the immediate impact of the ontations he emitted by his collapse would have been much less (which are to be known as microntations) than in the original scenario which would be classified as those which shall be known as macrontations.

[6:2:104] When we change scenarios like this conceptually and the impact of the ontations changes as a result, this is to be henceforth known as ontational interstice, or interontation because this is used to measure and to make comparisons of the differences between ontations depending upon different changes in circumstance.

[6:2:105] This is part of that which shall be henceforth known as ontometry which is itself a branch of Astronist ontology which is set to deal with the measurement of ontations through the use of ontometers.

[6:2:106] Ontometrists are also herein and henceforth tasked with understanding how and why different people in a scenario will also hold unique levels of ontality (individual perexity) which is essentially due to the Uniquitarian Principle that all of reality and even component element of reality are unique even when such a reality is ontated by the same ontogin.

[6:2:107] If we change the circumstances of this event again and we place in the collapsing old man still on a street at night, but we instead include a single person walking on the other side of the street to the old man as the single witness of his collapse, we change the ontational scenario completely.

[6:2:108] In the original scenario, the ontations emitted by the old man were diluted across a large amount of people due to the concentration of such people.

[6:2:109] This phenomena is to be henceforth known as concentrative dilution which is when ontations are diluted due to a greater concentration of the recegins that are receiving such ontations.

[6:2:110] However, in this new scenario, the single person on the other side of the street from the old man is receiving all of the ontations that he is omitting which would put this singular person into the category of a hyperegin because they are receiving all of the ontations that the old man is emitting.

[6:2:111] From this change in circumstances, we can see why unquitarrians ontologically perceive the way we do regarding the world because we understand that ontations are occurring.

[6:2:112] Of course, in the explore of what ontations are, there is an element of ethics that must be applied which holds complications for the practice of contication.

[6:2:113] For example, if we return to the person who witnessed the old man collapsing in this street around thousands of people and this person witnessed, but chose to ignore the event, we would then make a judgement about their morality.

[6:2:114] However, due to the fact that concentrative dilution has occurred in the original scenario, the extent to which we are able to make a judgement on the morality of that individual is clouded due to their argument that many other individuals were tending to the man.

[6:2:115] Furthermore, if that same scenario, of a witness ignoring the old man collapsing occurred due to their practice of contication in the scenario of the old man collapsing at night with only one witness, the judgement of their morality would hold much graver ontations than the initial ontations emitted by the old man's collapse.

[6:2:116] These types of ontations are to be henceforth known as metaontations which are the judgements, perceptions, and opinions placed onto those individuals that hold ontations during an event, but are not actually effected by the event itself and in certain events, are expected to greatly outweigh the actual perexity of the ontations emitted during the event itself.

[6:2:117] Interestingly, this forms a correlation between the level of ontation and the level of judgement thereafter; a person with a higher level of ontational reception holds greater metaontations as a direct result which are most commonly manifested by ethical judgements and opinions about the person's actions.

[6:2:118] Additionally, we must not forget the inclusion of logic and rationality as the involvement of these two other philosophical instruments into our consideration of ontounquitarrian ideas formulates another dimension of decision that stands in parallel application to that of ethics itself.

[6:2:119] These are known as extraontations, or ontational parameters because they exist in separation from the influences of ontations and they reside within every sentient being's mind which is arguably what describes ourselves as sentient in the initiality.

[6:2:120] Logic, rationality, and our morality, or ethics determine our decisions in situations which subsequently changes the circumstances of ourselves in that scenario as well as changing the scenario itself.

[6:2:121] In our minds, we can now imagine a type of tennis match of sorts in which ontations are emitted to a recegin and depending on the logicity, rationality, and morality of that recegin and their own intentions and experiences, they can either submit to such ontations (which is to be henceforth known as the action of capontication) and take action by involving themselves in the event further, thus raising their own ontality.

[6:2:122] Alternatively, they hold the option of practicing contication in which they do not involve themselves in the event and their ontality either stays the same or reduces in proportion.

[6:2:123] This entire process occurs uniquely between the ontogin and each individual recegin and is to be henceforth known as ontocontinuation.

[6:2:124] With the involvement of ethics in this ontouniquitarian discussion, we demonstrate how this particular element of ontological study is transdisciplinary, or cross-disciplinary by its nature.

[6:2:125] The unique changes in substance that I spoke of at the beginning of this ontouniquitarian discussion and what other ontologists speak of are perhaps most manifested and hold greater longevity in their perceptual forms for events that do involve us often pass by quickly.

[6:2:126] However, the perceptions we then hold of reality are sometimes effected for the rest of our lives due to that single event which would of course demonstrate a huge scale of ontality for individuals and perexity when placed in relation to the ontation(s) itself and how it has held an effect of a multitude of recegins rather than how those recegins have been effected.

[6:2:127] Therefore, we have now gained an understanding of how and why ontations are central to the unquitarian ontological view and how they are the defining element of the unquitarian way of philosophy from that of process philosophy, continental philosophy, and analytical philosophy.

[6:2:128] The metaphysicality of ontations points to their ability to be understand in ways that transcend our present physicality for we must imagine ontations occurring all around

us as we go throughout our lives, but it is also important to note that the nature of ontations should not be narrowed by the scenario presented herein.

[6:2:129] Of course, the scenario present herein demonstrated a clear example of how ontations function, but ontations hold a diversity about them and of course, a uniqueness that makes their natures synonymous with the unquitarian ontological understanding.

[6:2:130] An example of the diversity of ontations is in the many forms that they make take; for example, in this scenario used in this discourse, the ontations were emitted through physicality and visualisation by the old man collapsing in front of those thousands of people on the high street.

[6:2:131] However, ontations can also form themselves as any type of communication, including words spoken, words written, or through gesture which hold different types of ontational reception from that of the old man collapsing scenario.

[6:2:132] This is because ontations are fundamentally intertwined with our perceptions and therefore, our senses; in the scenario used in this discourse, we spoke only of the visual ontations presented which is to be known as optontation, but there exists four other forms of ontation.

[6:2:133] The first of these is to be henceforth known as olfontation which is when ontations are emitted through smell and are therefore perceived through a person's nostrils while the second of these is to be henceforth known as gustontation which is when ontations are emitted through taste and are therefore perceived through a person's taste buds in their mouth.

[6:2:134] The third of these is to be henceforth known as haptontation which is when ontations are emitted only when a person touches the ontogin and so ontations are limited in this way because they can only be emitted through physical proximity and physical interactivity.

[6:2:135] The fourth of these additional forms of ontational transmission and perception is to be henceforth known as sontation, or as audiontation which is when ontations are emitted through sounds and are therefore perceived through a person's ears.

[6:2:136] Of course, optontation is expected to be the most common of all the transmitters of ontations and the most easy to understand when in an educative setting which pertains to the reason for my focus on optontation during this discourse.

[6:2:137] However, it remains important to say that the other forms of ontational transmission and perception that have just been introduced herein hold unique natures from that of optontation.

[6:2:138] Therefore, they require their own individual discussions in order to explore their natures as different forms of ontation hold differences in their transmission speeds, their immediate impacts on the surrounding environment (their perexities), and the general extent of their effectiveness on the ontalities of individuals.

[6:2:139] Despite this, the basic principles laid out in the discussion herein are applicable to all of the forms of ontational transmission and perception which doesn't undermine their unquities, but instead points to a shared nature between each of them as they still remain forms of ontation.

[6:2:140] Process philosophy (the ontology of becoming or processism) identifies metaphysical reality with change. In opposition to the classical model of change as illusory (as argued by Parmenides) or accidental (as argued by Aristotle), process philosophy regards change as the cornerstone of reality; the cornerstone of being thought of as becoming.

[6:2:141] This insentensation shall include a list of alternative variations of ontation including ambiontation/amphiontation, anteontation, apontation, circumontation, contraontation/counterontation, co-ontation, benontation (an ontation that results in good actions by the recegin that received the ontation), deontation, diontation (when two of a person's senses are receiving ontations).

[6:2:142] Furthermore, other variations of ontation include disontation, emontation, epiontation, euontation (an ontation that occurs, but is considered socially normal so no person reacts and ontalities generally remain to a minimum), exontation, foreontation, homontation, imontation (meaning not), inontation (meaning into), infraontation, and intraontation (another term for interontation, or ontational interstice).

[6:2:143] Further variations of ontation include the following: isontation, malontation/dysontation (an ontation that results in bad actions by the recegin that received the ontation), midontation, monontation (when just one of a person's senses are receiving ontations), multiontation/polyontation, omniontation, overontation (when ontations are emitted, but are done so falsely in order to increase the ontalities of people around them in order to fulfil some intention, usually one of malice or deception).

[6:2:144] The final segment of ontational variations include panontation, paraontation, periontation, postontation, quinontation (when all five of a person's senses are receiving ontations), reontation, retrontation (meaning backwards), semiontation/hemiontation, subontation/hypontation, synontation, tetraontation (when four a person's senses are receiving ontations), thermontation (a form of haptontation), triontation (when three of a person's senses are receiving ontations), and ultraontation (when a single person thinks they are receiving more ontations than they actually and cannot think rationally, logically, or morally as a result).

The Philosophy of Perception

[6:3:1] Astronist perception - definition - designated by and revolving around one's perception, the group's perception, and the sentient perception of The Cosmos and also revolves around cosmocentricity - with the intention of all of humanity and wider sentient beings of becoming aware of The Cosmos.

[6:3:2] The development of one's ability to see, hear, and become aware of The Cosmos on a personal level.

[6:3:3] This can be considered the most defining element of the Astronist approach to perception and Astronist perception as considered through the scope of The Cosmos and philosophy as two separate, yet interconnected subjects according to the Astronist Tradition.

[6:3:4] The Astronist Tradition intends to usher in a new perception for humanity to take of its role an entirety of humans towards The Cosmos as well as a person's individual perception of The Cosmos and their individual role within it.

[6:3:5] The perception of humanity outside of itself (extraperception) and the perception of humanity of itself (intrapercception) shall change.

[6:3:6] Astronist or Astronic perception can be considered synonymous with the terms cosmic perception and cosmic perspective which means to take the perspective of The Cosmos on all accounts and in different cases.

[6:3:7] Humanity within The Cosmos, The Cosmos within The Universe, heliocentrism, and of course the staple belief of cosmocentrism, or cosmocentricity are all hallmarks of the Astronic approach to understanding perception.

[6:3:8] Perception centred on The Cosmos for greater contexts, but only anthropic perception for smaller contexts; we cannot apply an anthropic perception to cosmical affairs.

[6:3:9] Humanity in relation to The Cosmos; Human-to-Cosmos.

[6:3:10] The Cosmos in relation to Humanity; Cosmos-to-Human.

[6:3:11] Humanity in relation to The Universe; Human-to-Universe.

[6:3:12] The Universe in relation to Humanity; Universe-to-Human.

[6:3:13] Humanity in relation to The Divine; Human-to-Divine.

[6:3:14] The Divine in relation to Humanity; Divine-to-Human.

[6:3:15] Astronist phenomenology, also known as Cosmic phenomenology, focuses on the experience and consciousness of The Cosmos and its own progeny and phenomena as the primary consideration of human interaction with experience rather being, the latter of which is of concern within ontological study, as aforesaid.

[6:3:16] Herein formed is a system of phenomenology that is applicable to the theme of the Astronist philosophical tradition which is that of a cosmical appearance and characteristic.

[6:3:17] The lifeworld in the Astronist phenomenology - the world that each one of us lives in and according to the unquitarian understanding of phenomenology, due to the unquity of our substances, our own experiences also hold unquity and therefore each lifeworld is a unique perceptuality.

[6:3:18] In the Astronist, or cosmic phenomenology, the nature of sentient observation of The Cosmos is contemplated and this is because presently, cosmic observation is the primary mode of experience and interaction between humanity and The Cosmos for only a very few selective individuals known as astronauts have been granted the grace to leave the terrestrial world and enjoy the cosmic one.

[6:3:19] That which is known as telecosmosis refers to one's limitation of their ability to perceive The Cosmos through observation from The Earth or another planet alone which is forced upon the vast majority of humanity and is considered herein to be a terrible burden that only through transcension would we be able to alleviate ourselves from it.

[6:3:20] Our experience of The Cosmos is presently confined through its observation which means that we are dependent upon our visual sense in order to perceive and therefore experience it therefore causing widespread telecosmosis.

[6:3:21] The ultimate form of cosmic experience is considered to be that which shall be known as proxicosmosis which involves experiencing The Cosmos through its physical exploration as a form of proximated perception rather than distanced perception through observation.

[6:3:22] Proxicosmosis is considered to only be achievable through the completion of transcension for proxicosmosis is considered to be the ultimate desirable state for humanity as a sentient species.

[6:3:23] The achievement of proxicosmosis involves bringing humanity and The Cosmos closer together both physically, philosophically, and perceptually which can be considered the purpose of the development of transcensionism and the ultimate goal of the philosophy of Astronism as also fundamentally manifested by the tenet of cosmocentricity.

[6:3:24] It is herein proclaimed as a core aspect of Astronism that there exists a pandemic of telecosmicosis for humanity which has both allowed us to wonderment upon The Cosmos, but has also created a perceptual barrier between The Cosmos and ourselves.

[6:3:25] That which shall be known as procosmicosis states that humanity will forever be in a state of telecosmicosis and that the further we physically explore The Cosmos, the amount of things we realise that we do not know about The Cosmos will increase which create further telecosmicosis for us.

[6:3:26] Procosmicosis is also expected to be exemplified through our exploration of The Cosmos for upon leaving the terrestrial world of The Earth and entering the cosmic world of space, the stars, and the galaxies, we will understand that upon our entry into this cosmic world, its incomprehensibly immense depth and the true distances of the stars we had once observed in The Earth's night sky which may cause a greater sense of telecosmicosis than ever before.

[6:3:27] Essentially, this exemplification of procosmicosis notionises that humanity is presently cosmically ignorant and that only after the Humanic Exploration of The Cosmos has been initiated and we begin to physically explore The Cosmos will we truly understand the disproximities of the celestials.

[6:3:28] Therefore, we notionise herein that ignorance is bliss and this formulates an understanding that humanity is presently involved in a circumstance in which it is characterised by a distinct cosmic ignorance, but humanity continues to hold the opportunity to achieve transcension.

[6:3:29] This is despite the fact that even after the initiation of the Humanic Exploration of The Cosmos, humanity's subordination in comparison to its knowledge and exploratory extent of The Cosmos and the actual extent of The Cosmos will still remain affirmed which may be considered a pessimistic outlook, but this is considered to be the nature of humanity's correct position in the hierarchy of The Cosmos rather than the superiority that it is provided with in other philosophical and religious traditions.

Philosophic Strategy

[6:4:1] Philosophic Strategy is a crossdisciplinary area of study concerned with the different ways of strategising how an organised philosophy can be created, developed, disseminated, and societally implemented in order to achieve the greatest extent of followership.

[6:4:2] The attainment of the highest levels of loyal followership is considered to be the ultimate goal of philosophic strategy.

[6:4:3] Philosophic strategy is also concerned with how an organised philosophy should consider other organised philosophies, and how an organised philosophy can and should interact without religions, ideologies, and other types of thought systems in order to achieve greater followership.

[6:4:4] Astronic theory is the primary and founding branch of philosophic strategy that is specifically concerned with the initial and continuous development of a strategy for The Philosophy of Astronism, also known as Astronism.

[6:4:5] With the development of Philosophic Strategy as a crossdisciplinary area of study, we further contribute to the overall establishment of Astronist metaphilosophy as Philosophic Strategy introduces many new terms regarding the nature of philosophy and its place and role about its implementation into a society and the actions associated with such a process.

[6:4:6] The consideration of philosophy and the promulgation of philosophy through the scope of strategy.

[6:4:7] The strategic positioning of a philosophy is fundamental to how a philosophy is to be demonstrated and presented into the world; the positioning of a philosophy

[6:4:8] Astronos refers to the principle holding that Astronism must always hold a sense of pride about its originality and distinction from other forms of philosophy, especially due to the fact that its founding directly resulted in the founding of an entire philosophical tradition.

[6:4:9] Astronos is the primary aspect of the philosophical personality of Astronism.

[6:4:10] Philosophical personality is the set of characteristics associated with a particular philosophy as formed over a long period of time according to the operations and general identity of the philosophy and is split into two forms; endopersonality and exopersonality.

[6:4:11] Endopersonality is how the propertied institution of a philosophy, the followers of a philosophy, and the partners and supporters of a philosophy perceive the philosophical

personality of that philosophy or how they intend the personality of that philosophy to be perceived as distinguished from exopersonality.

[6:4:12] Exopersonality is how different groups external to a philosophy and its proprieted institution perceive the personality of that philosophy, especially as a measure of the difference between how it a philosophy is perceived externally to how the philosophy's personality is intended to be perceived by its proprieted institution.

[6:4:13] The extent of the difference between the endopersonality and the exopersonality of a philosophy is measured according to that which is to be known as contrarence, or contrarency.

[6:4:14] Considerations must be taken of values, goals, resources (money etc.), capabilities, structure, faculty, institutions, and processes.

[6:4:15] Throughout the foundations of the Astronist philosophical tradition, a policy of disproximation has been at its core in relation to the topic of the military and any associated topics and concepts due to the issue of the inapronymity between the primary appellation of Millettism and the terms of military and militarism.

[6:4:16] However, within the discipline of Philosophic Strategy, this policy of disproximation is excused due to the fact that Philosophic Strategy and subsequently, Astronic Theory, is openly and directly derived and inspired by forms of strategy used in the context of the military and warfare, but of course applied to the context of the creation, establishment, tirition, and promulgation of a philosophy.

[6:4:17] It is important to preface our discourse on Philosophic Strategy with the notion that philosophic strategists consider the development and subsequent dissemination of a philosophy as a battlefield that proprieted institution of that philosophy must tactically navigate for successful gains in followership and societal entrenchment.

[6:4:18] Although this way of considering the organisation of philosophy is not explicitly referred to in promulgation theory, tiritology, and other disciplines of study that deal with philosophical dissemination, it is implicitly expressed which is considered to be due to the key element of the personality of Astronism.

[6:4:19] This is to be known as astronos which prioritises the organised philosophy to hold strength and continuity in message and a distinct conviction in the disseminatory operations of the philosophy as managed by its proprieted institution.

[6:4:20] Considered as part of the discipline of study of Philosophic Strategy is the study of the ontology of Astronism itself; the study of the nature of being, the beingness, and the becoming of Astronism is integrally linked to the practicalities involved with the study of Philosophic Strategy.

[6:4:21] It is herein considered to be the responsibility of the propertied institution of an organised philosophy that it develops a distinct theoretical approach to Philosophic Strategy which is manifested in the context of Astronism by Astronic Theory.

[6:4:22] Not only this, but an organised philosophy is not considered to be an organised philosophy if its propertied institution does not hold this type of distinct theoretical approach to the development of its own contributions to Philosophic Strategy.

[6:4:23] The theoretical approach developed by a propertied institution to represent an organised philosophy collectively involves its overall strategy and within this strategy, philosophic tactics are suggested for the securement of the objectives outlined as part of the overall strategy so tactics reside within strategy and provide particular recommendations for the execution of the strategy.

[6:4:24] Philosophic Strategy and particularly the distinct theoretical approach for a select organised philosophy is considered to be one of the primary manifested differentiators between an organised philosophy and an unorganised philosophy.

[6:4:25] A philosophy such as Buddhism, as an example of the latter, developed and was disseminated through a matter of chance as its ripeness for dissemination coincided with the proliferation of the routes and peoples interacting as part of the silk road which was not strategically planned by Buddhism as it does not hold a propertied institution due to its unorganised nature.

[6:4:26] Dissimilarly, Astronism is considered to be the first organised philosophy as the majority of its interactions with the world, its routes to dissemination, and its methods of implementation are distinctly planned and strategised by its propertied Institution rather than left to chance.

[6:4:27] A way to understand this simply is that an unorganised philosophy's dissemination is left to chance according to the course of historical events while an organised philosophy's dissemination is strategised, planned, and proceeded upon according to a strategy and is therefore never left completely to chance.

[6:4:28] Philosophic Strategy can be herein defined as the art of the application of suggested tactics in order to fulfil the end goals of policy with adaptation of such tactics taking a necessary element to the overall success of the strategy which must remain flexible to the variances in external circumstances.

[6:4:29] One may consider the attribution of the concepts of warfare and the battlefield to the organisation of a philosophy to be inappropriate to the very nature of philosophy itself, but the Astronist Tradition justifies its creation of Philosophic Strategy as a necessary fixture to the development of organised philosophy as a categorisation of philosophy.

[6:4:30] Herein, it is insisted that without Philosophic Strategy, the strategising elements of tiritology and promulgative theory are without practical applicability and organisational implementability which further pertains to the crossdisciplinarity of Philosophic Strategy as an essential aspect of the discipline's founding.

[6:4:31] Philosophic Strategy utilises theories and concepts from both tiritology and promulgative theory in the development of specific theoretical approaches to philosophic strategising.

[6:4:32] It is, therefore, considered to be a combination of tiritology, promulgative theory, and parenic policy, the latter of which involves the diplomatic relations as well as the non-promulgative and the non-tiritive elements of the operations of The Institution of The Philosophy of Astronism.

[6:4:33] Philosophic Strategy is also essentially the employment of different resources for the achievement of greater followership and the end goal of Philosophic Strategy and the disciplines of tiritology and promulgative theory remain identical.

[6:4:34] Philosophic Strategy, however, employs a broader set of resources including diplomatic, informational, organisational, economic, financial, and cultural routes for the achievement of the end goals that are prioritised by the organised philosophy's proprieted institution.

[6:4:35] Philosophic Strategy is also distinguished from tiritology and promulgative theory by its focus on other organised philosophies and non-philosophical systems of thought such as religions and ideologies and how such other systems may form as obstacles to the establishment of one's organised philosophy and its dissemination for the achievement of greater levels of followership.

[6:4:36] Philosophic Strategy involves the utility of people, equipment, and information to achieve that which is to be known as predomination which involves gaining supremacy of those which are considered to be obstacles to philosophy,

[6:4:37] This may involve the specific rivals of an organised philosophy with the reduction of such rival's opportunities and intentions, as well as a reduction in their abilities to place obstacles in the way of an organised philosophy being another primary goal of Philosophic Strategy; the limitation and minimisation of the obstacles to philosophy.

[6:4:38] Predominationism is therefore the central theory of Philosophic Strategy, especially in relation to studies of ideological and philosophic rivalry as this belief orientation holds that the predominance of an organised philosophy over those other entities that may seek to place obstacles before it so that the likelihood of the attainment of its goals are reduced is a natural and justified goal on behalf of the organised philosophy.

[6:4:39] This is especially one that is being targeted by external entities and that the utilisation of strategies from Philosophic Strategy and its crossdisciplinary associates such as tiritology, parenology, and promulgative theory is the most assured way of overcoming such obstacles, their causers, and their .

[6:4:40] Philosophic Strategy is certainly geopolitical in its nature whilst also being founded upon the theories and concepts from non-political strategy, such as those employed during games like backgammon and poker.

[6:4:41] There is certainly a strong psychological element to Philosophic Strategy as inspired by general theories on strategy which are dependent upon understanding different human psychologies for their own success; this is to be further explored and experimented upon by psychologists rather than philosophers post-omnidoxically.

[6:4:42] Philosophic Strategy can be split into four branches, the first one of which we have already considered which is philosophic tactics, the second of which is to be known as philosophic logistics.

[6:4:43] Philosophic logistics involves the maintenance of the resources of a philosophical institution so that it remains best positioned to achieve the objectives of its strategy while the third branch is the theoretical approach employed by a particular organised philosophy, the first and most prominent example of which is of course Astronic Theory.

[6:4:44] The final branch is strategic doctrine which involves the creation of a conceptual framework that sits within Philosophic Strategy and that can be used to inform particular theoretical approaches to Philosophic Strategy.

[6:4:45] To further define philosophic strategy from philosophic tactics is to point out that the former of which deals with distance, time, circumstances, and forces on a large scale, both chronologically across many years, as well as multinationally across many different societies.

[6:4:46] Dissimilarly, though still connected, is philosophic tactics which are notably small scale and involve the disposition of fewer considerations as their chronologies are much shorter, the geographies to which they are applied are much smaller, and the circumstances that they address are much more specific.

[6:4:47] Essentially, tactics deal with individual issues as products of the wider strategy which is concerned with the overall issue that remains the consistent purpose and message of the entire campaign to spread the beliefs, practices, and general awareness of the existence of the philosophy of Astronism.

[6:4:48] The grand strategy of a nation, or a coalition of nations is considered to be directly influenced by the shared ideological, religious, or philosophical foundations of that nation or nations.

[6:4:49] This is grand strategy as a product of the postulation of the identity of a nation which is directly formed by the goals and orientations of that nation on political, economic, and cultural issues, thus leading to the commonality argument.

[6:4:50] The commonality argument suggests that for the majority of human history, collectivities of humans, whether they be tribal, ethnic, national, ideological, or religious, are fundamentally predicated on the protection of their own group from those considered to be outsiders and even people that have assimilated to the identity of the group, but hold origins outside of it remain dubious and suspicious by those whom hold their origins purely within said group.

[6:4:51] The toleration argument proceeds that of the commonality era and it is the toleration era that human civilisations in certain countries and pockets of societies are moving into, albeit it slowly, involves toleration of those entering one's country, or society from a society that is considered to be foreign.

[6:4:52] However, toleration in this sense does not necessarily involve interaction with those foreign individuals and neither does it involve the exploration of these individual's identities, the challenging of their views, and the subsequent justification of the views of these individuals; I see this presently in occurrence in the society in which I do hold residence.

[6:4:53] Finally, the acceptance argument, which is considered to be the postcursor of the toleration era, notionises that the ultimate state of the maturity and sophistication of human civility is dependent upon the ability of human societies to not only tolerate different ethnic, national, ideological, and religious identities, but to accept and embrace them, but to also continue to challenge them in accordance with the principles of the Philosophical Spirit.

[6:4:54] It is for this reason that the philosophy of Astronism aligns itself with the acceptance argument for to accept, embrace and challenge rationalities and identities of others is philosophic at its core.

[6:4:55] The grand strategy of a philosophy in the context of Philosophic Strategy pertains to the purpose of the philosophy itself practically rather than philosophically or ideologically.

[6:4:56] The Astronist Tradition argues that the practical purpose of all organised philosophies, and therefore the grand strategies of all organised philosophies, are fundamentally directed towards increasing the followership of the organised philosophy under one's proprietorship.

[6:4:57] Meanwhile, more specific elements of a philosophy's grand strategy may be directly inspired by the conceptual and theological foundations of the philosophy with

Astronism's grand strategy being inextricably linked to the initiation and execution of the Humanic Exploration of The Cosmos as informed by its theology, eschatology, and destinology of transcensionism.

[6:4:58] Philosophic Strategy, and the concepts within it, are to be explored post-omnidoxically while this discourse of the Omnidoxy shall instead focus on the foundational introduction of Astronic Theory for which the Omnidoxy, as the founding text of Astronism/Astronism, is primarily concerned.

[6:4:59] Astronic theory is simply vast; it encompasses such a huge variety of applications, implementations, and practicalities with regards to the physical manifestation of the philosophy of Astronism that few other disciplines of study can compare it within the auspices of Astronist Philosophy.

[6:4:60] Astronic theory firstly encompasses the sanitologically addressed topics of promulgation and promulgative theory which, as distinguished from tirition and tiritive theory, are focused on the use of commercial tactics to spread and help fund the philosophy of Astronism.

[6:4:61] Meanwhile, tiritive methods are also encompassed within Astronic theory which includes all methods similarly utilised by religions but instead utilised by philosophies in a philosophic way such as the use of missionaries, art depictions, relics, and other symbolic representations of the philosophy.

[6:4:62] Elemental to Astronic theory in conjunction with naology is sopharial construction which is a key part of the process of tirition and it is within these buildings and structures that promulgative methods can then be applied.

[6:4:63] Corporate partnerships are again a key element to Astronic theory that uniquely sits in between promulgative methodology and tiritive methodology for they are part and parcel of both forms of philosophic dissemination; forming partnerships with companies of all sizes whose businesses coincide well with the identity and brand of the philosophy of Astronism is crucial for the securement of funding prospects and sponsorship deals.

[6:4:64] Parenic relations is another major segment of Astronic theory and formulates the third of three methodologies, the other two of course comprising of promulgation and tirition, and while the third comprises of parenation, or parenic relations; the relationships fostered by The Institution with governments and governmental bodies and organisations will become fundamental to the top-level and Institutional identity of Astronism; parenic relations, although considered a distinct methodology of dissemination in its own right, does hold closer tendencies towards the tiritive methodology than the promulgative.

[6:4:65] That which is to be known as nocturnal practice pertains to the practicing of the philosophy Astronism in private homes at night rather than in diurnal times which is an element that is studied as part of Astronic theory and is closely related to forms of

persecution directed towards those whom follow Astronism and is synonymous with the Form of Astronism known as Underground Astronism.

[6:4:66] For a branch of Astronic theory in the far future, those which will be known as federational partnerships pertains to the partnerships of the Astronist Federation considered as a state in and of itself and although I shall not speak much further on a topic that is much further in the future, perhaps even beyond my own lifetime, it does continue to be important to categorise the development of federational partnerships as a branch of Astronic theoretical study.

[6:4:67] That which shall be henceforth referred to as naological coordination pertains to the identification and pinpointing of sophariums on a map of various different scales from nationwide to village as well as to municipality scales; naological coordination is considered to be a practice as part of naological visualisation which involves the representation of sophariums for various different reasons, both commercial and educational.

[6:4:68] That which shall be henceforth referred to as cartographic followership pertains to the practice of colour coding maps according to the percentage or number of followers of Astronism in different regions, villages, and municipalities, or across larger scales for the comparison of populations between areas so are to form conclusions about where to promulgate and tirit more than others.

[6:4:69] The belief orientation to be known as cohesionism shall encompass the notion and principle that followers and supporters of Astronism, especially when faced by institutional obstacles and adversities, who are fighting for a cause that is fundamental to their own freedom to philosophise should be supported in their effects by followers that reside elsewhere and whom are not facing such adversities.

[6:4:70] Proactively helping their fellow adherents of The Philosophy shall subsequently form a stronger sense of The Astrosa which is the worldwide community of the followers of Astronism/Astronism.

[6:4:71] A sense of cohesion is felt and demonstrate more openly and strongly depending upon the religion or philosophy in subject with some religions, in particular Islam and Judaism, holding stronger cohesion than Christians as a general observation.

[6:4:72] Cohesionism's primary purpose is the attempt to ignite and maintain morale amongst followers of Astronism in regions in which followers and supporters are persecuted and to remind such persecuted people that there exists a worldwide community known as The Astrosa that is supportive of their struggle due to the commonality in their philosophicality.

[6:4:73] A major element of promulgative methodology is media influence; the media is either a philosophy's greatest ally or its worst enemy; we have seen instances in the past

and the present of the power of the media to point the thoughts, opinions, and perceptions of the masses about a particular religion or philosophy to turn in one direction rather than another; the philosophy of Astronism and The Institution hold respect for the media as a collectivity and positive media relations must always be maintained for the powerful ally of the media is well understood.

[6:4:74] The use of media to promulgate The Philosophy is central to Astronic Theory as the media is considered to be the most powerful force for the influencing of millions on a subject in today's present world despite the saturation of information.

[6:4:75] Therefore, the development of a distinct Astronic Media Strategy is essential post-omnidoxically by the relevant department of The Institution.

[6:4:76] Influencee nations pertains to the practice of the targeting of nations that hold discontentment with their established system of thought, or ones that hold a plurality of thought systems and introducing Astronism as another alternative is another important element to Astronic Theory as part of the tiritive methodology.

[6:4:77] Social media as a form of promulgative methodology; the use of social media is perhaps the most important of all the elements of the Astronic Theory for greater followership as it latches onto a relatively new and constantly evolving technology that remains the most powerful of all mediums for the dissemination of ideas quickly and globally; social media remains the first platform through Astronism was disseminated during its first years of existence after its founding.

[6:4:78] That which is to be henceforth known as influentialism shall pertain to the tactic of spreading Astronism to the most elite members of a society first which considered to be the most effective way for the establishment of The Philosophy with its spread to the masses taking place later on according to the influentialist line of thought and method.

[6:4:79] In opposition to the orientation of influentialism, that which shall be known as plebeianism pertains to the tactic notionising that Astronism should be spread to the common people of a country first before the elites whom should be taught of Astronism at a later stage once a sizeable proportion of the masses are adhered to The Philosophy.

[6:4:80] That which is to be known as synchronism shall henceforth relate to the notion that a person can be an adherent of both a religion and that which is designated as a philosophy or an organised philosophy at the same time without need for conversion from one to the other.

[6:4:81] This is a view that is propounded by the Astronist Tradition and formulates that which is to be known as the Philosophy-Religion Relationship unlike in a Religion-Religion Relationship whereby most religions notionise that which is to be known as serinism.

[6:4:82] This can be considered as part of the tiritive methodology of dissemination as part of Astronic theory, but it also remains an primary aspect of the Astronist approach to metaphilosophy.

[6:4:83] Serinism pertains to the notion that if a person wants to become part of a philosophy/religion, they must renounce the philosophy/religion to which they are already adhered for them to be accepted within the new philosophy/religion that they wish to join.

[6:4:84] This view is rejected by the Astronist Tradition but, as aforementioned, it is upheld by the majority of religious traditions though it is considered to be aphilosophical by its nature and therefore neither in alignment with the Philosophical Spirit and nor can this belief be considered philosophic by its form or nature.

[6:4:85] State sponsorship pertains to a tiritive method of dissemination involving the instance in which a philosophy receives the approval and financial support of a government which is considered to be the ultimate cementation of a philosophy's establishment in a country.

[6:4:86] However, state sponsorship, depending upon the influence of Institutional leaders and the circumstances that the government and its country is in, is expected to occur at a variety of different times and triggered by a number of different factors which can change the nature of the sponsorship and its longevity entirely.

[6:4:87] That which is herein introduced as catalism shall pertain to the belief orientation holding that a philosophy's promulgation, tirition, parenation, dissemination, and establishment in a country must be conduced by various different catalysts rather than be left to chance.

[6:4:88] This is characteristic of an organised philosophy according to the Astronist Tradition rather than an unorganised philosophy for in the case of Astronism, it is the purpose of The Institution to guide, protect, and manage the manifestations of Astronism in all societies as well as to carefully trigger different methods, or catalysts, for the purpose of the dissemination of The Philosophy.

[6:4:89] Alternatively, that which is to be known as noncatalism shall pertain to the belief that a philosophy's promulgation, tirition, parenation, dissemination, and establishment in a country must be conduced by the natural spread of the philosophy's ideas through individuals rather than through catalysts and planned strategies.

[6:4:90] This is characteristic of an unorganised philosophy according to the Astronist Tradition and would render the solemn role vested in The Institution during the founding of Astronism to be without purpose, hence the Astronist Tradition is not aligned with noncatalism, but it continues to respect those philosophies, even within the Astronist

philosophical tradition that arise and wish to remain unorganised and without Institutional management, guidance, and strategy.

[6:4:91] Alternatively, that which is to be known as autocatalism shall refer to the belief holding that by initially following catalism for the promulgation, dissemination, and establishment of an organised philosophy, that by doing this first, a snowball or domino effect will be created whereby the organised philosophy's followership will grow without constant need for The Institution to doctor that growth.

[6:4:92] Essentially, therefore, the autocatalist method firstly states that a catalist approach must be implemented and after which, the noncatalist approach must thereafter be applied and only thereafter.

[6:4:93] Strategic doctrine pertains to the fundamental elements of strategy that every strategist for whichever subject must ask themselves and be able to answer and now I shall apply such questions to the context of Astronism.

[6:4:94] What does the service perceive itself to be? Who are we? The service provided by Astronism is tridimensional by its nature, or threefold in essence; Astronism is a philosophy which means that the service provided is intellectual by means of enknowledgegement or the impartation of knowledge; secondly, it is spiritual by the means of cosmic devotional practices, beliefs regarding destiny, the afterlife, and humanity's collective purpose as well as our individual purposes; thirdly, it is material by means of the creation of products and items that hold some resemblance or significance to the beliefs and identity of the philosophy of Astronism.

[6:4:95] What is our mission? What do we do? The mission of the founding and subsequent establishment and dissemination of the philosophy of Astronism is to provide humanity with a greater sense of purpose that stretches beyond materialism yet does not stray into the odd and unbelievable realms of the supernatural; Astronism can be considered the middleground between meaningless materialism and obsessive and inapplicable supernaturalism; it remains its solemn mission to provide humanity with the choice to become part of its philosophical tradition as an alternative to others that may not suit the modern day thinker and believer.

[6:4:96] How is the mission to be carried out? How do we do that? The mission of Astronism is to be conducted practically through the main three facets of Astronic theory with the goal of maximised dissemination, namely including promulgative, tiritive, and parenic methodologies.

[6:4:97] As part of Astronic theory, a series of questions will need to be answered in order to develop a coherent strategy; how has the mission been carried out in the past? How was that done in the past?

[6:4:98] What is the organisation's business or interest?

- [6:4:99] What is considered "value" to the customer or constituency?
- [6:4:100] Which products and services should be included or excluded from the portfolio of offerings?
- [6:4:101] What is the geographic scope of the organisation?
- [6:4:102] What differentiates the organisation from its competitors in the eyes of customers and other stakeholders?
- [6:4:103] Which skills and resources should be developed within the organisation?
- [6:4:104] Considerations and judgements made within strategic doctrine should also include:
- [6:4:105] The attainability of information and knowledge.
- [6:4:106] The instruments, equipment, funding and other resources at The Institution's disposal.
- [6:4:107] The geographic mobility of The Institution and its operations.
- [6:4:108] The comparisons of supportership in different geographical areas to aid the proposed strategy.
- [6:4:109] The capabilities of obstaclers and rivals and their threat to the overall strategy.
- [6:4:110] The capability of the proprieted Institution in a particular country or region to realistically achieve the objectives as derived by the previous five considerations.
- [6:4:111] Also considered within strategic doctrine are a number of different states that, when applied to an organised philosophy, are considered to derive its overall capabilities, success, and mobility.
- [6:4:112] Its ability to continue to operate and further develops the foundations of both Philosophic Strategy and Astronic Theory as the application of each of these terms is directed towards strategising an organised philosophy's position and it is such terms as these that are to be referred to as extentuals.
- [6:4:113] Vulnerability is the extent to which an organised philosophy is in danger of being attacked, damaged, or otherwise harmed (either populationally or reputationally) by external entities or by the environment or the present circumstances.

[6:4:114] The following list of extents that should also be applied to the context of Astronic theory include survivability, sustainability, inexorability (the quality of Astronism and its proprieted Institution to never concede to rivals whom intend to destroy Astronism), flexibility, mobility, availability, impenetrability, and demonstrability.

[6:4:115] Transferability refers to the ability of a strategy applied to one circumstance for it to be applied to another and still retain its success.

[6:4:116] Further extents to apply to the context of philosophic strategy include maintainability, reconcilability, approachability, imponderability, employability, predictability, extractability, intractability, inheritability, alterability, dispensability, deliverability, and recoverability.

[6:4:117] Another set of extents to be applied to philosophic strategy include inseparability, performability, manipulability, salvageability, justifiability, assimilability, enforceability, polarisability, preventability, presentability, accountability, retrievability, conceivability, and preservability.

[6:4:118] Affordability, expandability, dependability, replicability, manageability, changeability, remediability, modifiability, integrability, comparability, attainability, profitability (in the sense of followers rather than money), penetrability, perdurability, and measurability comprising another segment of extents to be applied to context of philosophic strategy.

[6:4:119] A further segment includes repeatability, patentability/protectability (meaning the extent to which the strategy can be protected from being used by other entities as well as the extent to which the product, service, and conceptuals of the philosophy can be protected), exportability, cultivability, computability, tractability, insurability, and admirability (related to public relations; the extent to which the strategy looks good to external entities that are not involved).

[6:4:120] Another segment of measurements that need to be applied to Astronic theory include availability, navigability, modulability, adoptability, immutability, adaptability, reputability (the extent to which the strategy is tried and tested), variability, stability, suitability, operability, summability, reliability, testability, durability, arability, and accessibility.

[6:4:121] The final segment of extents, also known as measurements, includes incorrigibility (meaning once the strategy has been put in motion), intelligibility (meaning the extent to which a strategy is able to be understood by different individuals from different departments and specialities), susceptibility (meaning the extent to which the strategy is vulnerable to being understood by the enemy and subsequently thwarted before it can be carried out), conductibility, permissibility, indivisibility, compatibility (meaning the extent to which the strategy is compatible with strategies that are already

being conducted), expansibility, tangibility, plausibility and finally, eligibility (meaning the comparison between strategies for the most efficient way to achieve the end goal).

[6:4:122] Telemetry is the geographic distance(s) between core populations and pro-Astronist regions and scarcely populated or anti-Astronist regions.

[6:4:123] Telemation and telemating, as practiced by a Telemater, or Telemator is the study of the nature of the geography between core populations/heartlands for Astronists and regions of hostility against Astronists.

[6:4:124] Strategic thinking for a philosophical institution entails the consideration of a strategic foresight that explores all possible futures and opportunities for the philosophy and applies these to the practicality of their actual implementation

[6:4:125] After this, a single strategy will be chosen through critical examination of the different options with efficiency of the strategy to achieve the objectives given priority in the critical examination process.

[6:4:126] Application of Liedtka's Five Competencies to the context of Astronic Theory will include the application of the systems perspective, intent focused, thinking in time, hypothesis driven, and intelligent opportunism.

[6:4:127] Strategic Planning is the strategic planning process for The Philosophy of Astronism has been founded by the creation of The Omnidoxy which can be considered to form the foundational elements of The Philosophy's entire strategy as it orients Astronism immediately as an organised philosophy, it defines and distinguishes Astronism.

[6:4:128] It also begins to define the strategy, direction, and suggestions for Institutional decision-making to the greatest extent that it is able to.

[6:4:129] The Omnidoxy remains the guiding light for The Institution and it remains the solemn duty of The Institution to follow on from the foundational words and works of The Omnidoxy by putting its ideas into practice, making Astronism a reality, and by operating in accordance to principles, values, and theories laid out in clarity by The Omnidoxy.

[6:4:130] Suggested tools for the Institution to use post-omnidoxically which will define Astronism's overall status and will greatly benefit the strategic planning process: PESTAL Analysis, Scenario Planning, Porter's Five Forces Analysis, SWOT Analysis, Growth-share Matrix, Balanced Scorecards, Strategy Map, Responsive Evaluation, Ansoff Matrix, and Competitor Analysis.

[6:4:131] Inhibitionism is inspired by the pre-Astronist foreign policy known as containment; inhibitionism is a policy that is characterised by the prevention of the expansion of a system of thought, especially one that is considered to be non-philosophical by its nature.

[6:4:132] Inhibitionism is achieved through a number of different routes, both politically through the strengthening of pro-Astronist governments from being overtaken by said rival, as well as migrationally through the placement of populations in such a way that makes the rival system of thought's population drown out in comparison.

[6:4:133] Inhibitionism is considered to be a major orientation and policy contributing to Philosophic Strategy and its expansion should take place post-omnidoxically though its founding shall always be remembered as residing herein.

[6:4:134] Pro-resource theory pertains to the notion that the organised philosophy or another system of thought that holds the most attainable and maintainable resources will achieve predomination of their rivals.

[6:4:135] This theory emphasises the abundance and the effective utility of resources as the most important element of strategising for an organised philosophy because without resources, an organised philosophy is considered to be vulnerable to collapse due to the systems and processes by which it operates are no longer able to function.

[6:4:136] Performance effects is another facet of study within Philosophic Strategy that focuses on the reflection of a system of thought's success in achieving its objectives and so therefore focuses on the end side of strategy and the measurement of the effectiveness of strategy which remains just as important as the formulation of strategy as its presence creates the Strategic Cycle which is latterintroduced.

[6:4:137] I considered to exist three performance effects, the first of which is the designation to which a system of thought belongs (a philosophy, organised philosophy, religion, or ideology).

[6:4:138] The second of which is the nature of that system of thought's organisation and institutionalisation and whether is it centralised or decentralised.

[6:4:139] The third of which is the nature of the ideas of the system of thought itself; are the ideas relevant to present issues in a society, are the concepts theologically-based or rationally-based, and are the ideas doctrinal or interpretive?

[6:4:140] The performance effects of a system of thought do not revolve around financial performance like performance effects for businesses, but they instead focus on territoriality, followership, cultural entrenchment, Institutional revenue and the extent of the system of thought's financial, political, and economic influence.

[6:4:141] The natures of the different performance indicators:

[6:4:142] Territoriality - nature: measurable, intangible, describable, and presentable.

[6:4:143] Followership - nature: measurable, tangible, describable, and presentable.

[6:4:144] Cultural entrenchment - nature: measurable, intangible, describable, and presentable.

[6:4:145] Financial, Political, and Economic Influence - nature: measurable, tangible, describable, and presentable.

[6:4:146] Institutional revenue - nature: measurable, tangible, describable, and presentable.

[6:4:147] There exists a Strategic Cycle that is herein introduced and shall include; Strategic Formulation — Strategic Implementation — Strategic Reflection — Strategic Reformulation — Strategic Reimplementation

[6:4:148] Effectivity Equation can also be applied to the context of philosophic strategy; $P = m + I_i + C_c + B_{ic} + Y_t + e_{ict}$

[6:4:149] P = Performance; here “ m ” is the mean performance of all businesses across all years.

[6:4:150] I_i is the industry effect for industry i (the performance difference between industry i and the mean).

[6:4:151] C_c is the corporate effect for corporation c (the performance difference between corporation c and the mean).

[6:4:152] B_{ic} is the business effect for a business in industry i and corporation c (the performance difference between that business and the mean).

[6:4:153] Y_t is the year effect for year t (the performance difference between year t and the mean).

[6:4:154] e_{ict} is an error term (the performance difference between a business and the mean that is not accounted for by industry, corporate, business, and year effects).

[6:4:155] An industry effect is the performance difference of businesses in an industry and those in other industries.

[6:4:156] A corporate effect is the performance difference of businesses of a corporation and those of other corporations.

[6:4:157] A business effect is the performance difference of a business and those of other businesses.

[6:4:158] A year effect is the performance difference of businesses in one year and those in another year.

[6:4:159] An e-philosophy, internet philosophy, or online philosophy pertains to a type of philosophy that holds no physical presence (etc. buildings, renditions, books etc.) and exists only online whereby its followers communicate with another through forums and social media, debates are held over phone and video calls, and the proprieted Institution of the philosophy also holds no physical presence.

[6:4:160] E-philosophical economy relates to philosophical and philosophically-related activity involving online transactions, interactions, enknowledgegement and debates.

[6:4:161] The process of uberisation, or an uberised philosophy pertains to an organised philosophy whose proprieted institution is able to provide a digitalised platform enabling follower-to-follower and direct follower-to-institution interaction, the minimisation of the distance between the institution and its follower.

[6:4:162] As well as this, it involves the ability to rate the quality of the institution's interactions with the followers, the extent of contentment that followers feel about the philosophy to which they are adhered, and the extent to which specific concepts, belief orientations, and theories of a philosophy that followers feel particular resonance for.

[6:4:163] The application of Porter's generic strategies to the context of an organised philosophy:

[6:4:163a] Low obligation.

[6:4:163b] Conceptual differentiation.

[6:4:163c] High obligation.

[6:4:163d] Conceptual niche/focus.

[6:4:163e] Familial and cultural entrenchment.

[6:4:164] The core competencies of Astronism:

[6:4:165] Original concepts, theories, belief orientations, and general philosophical structure.

[6:4:166] Unique terminology.

[6:4:167] Strong visual identity.

[6:4:168] Organised, envisioned, and ambitious philosophy with a proprieted Institution.

[6:4:169] Future-oriented, panhumanist, and inclusive philosophy.

[6:4:170] The founder of hundreds of new schools of thought, belief orientations as well as thousands of new theories, concepts, and terms that formulate a new tradition and era in the history of philosophy which is predicated with an entirely revised identity.

[6:4:171] Modern portfolio theory applied to Astronism understands that the portfolio of Astronism follows the notion that the diversification of a philosophy's contents is the most superior of ways to reduce risk.

[6:4:172] As well as this, the maximisation of the chance of followership group as the greater breadth and depth that a philosophy possesses, the more people with different interests will be attracted to the philosophy rather than a philosophy that focuses on only one particular topic and does not hold vast array of new concepts for followers to immerse themselves in.

[6:4:173] This principle that Astronism follows is herein to be henceforth known as variegationism and remains a fundamental part of Astronic Theory.

[6:4:174] Competitive advantages of Astronism are not yet able to be identified due to the infancy of Astronism, however, general competitive advantages of other systems of thought may include high entry barriers, high rates of persecution of non-state supported forms of philosophy and religions, geographic expanse, strategic geographic locations, cultural entrenchment, government intertwinement, low conversion rates (largely due to high persecution rates) and high birth rates amongst followers.

[6:4:175] Philosophic strategic management, also known as philosophic strategic administration is the branch of philosophic strategy which involves the planning and formulation of plans and strategies for the development of a philosophy which pertains to its overall strategic direction and positioning.

[6:4:176] Encompassed within philosophic strategic management is how plans for philosophic strategy are formulated and how they can be implemented by different types of managers.

[6:4:177] That which shall be henceforth known as the practice benchmarking refers to comparing one's Institutional processes and performance metrics to other predominant Institutions, especially those that are designative bests and the most popular practices, concepts, and fashionable belief orientations from other philosophies.

[6:4:178] In project management benchmarking can also support the selection, planning and delivery of projects.

[6:4:179] Thought fashionability shall henceforth pertain to the notion that all types of thought systems have variances in their popularity through their histories with certain concepts, theories, and belief orientations within particular thought systems holding high popular trend in one period while their popularity reduces in a different era or geographical location.

[6:4:180] Blindspots analysis is a method aimed at uncovering obsolete, incomplete, or incorrect assumptions in a decision maker's mental scheme of the environment.

[6:4:181] Philosophic cluster is a geographic concentration of interconnected organised philosophies, institutions, and associated individuals and philosophical societies in a particular field.

[6:4:182] Clusters are considered to encourage the competitive nature of organised philosophies with which institutions can compete, nationally and globally.

[6:4:183] Philosophic clusters, also known as an aggregation, are most commonly found in city centres and there may also exist religious and ideological clusters.

[6:4:184] The employment of new creative directors and leadership for a philosophical institution is part of philosophic development and entails tasks and processes to develop and implement growth opportunities within and between organisations.

[6:4:185] Business development is the creation of long-term value for an organisation from customers, markets, and relationships.

[6:4:186] Business development can be taken to mean any activity by either a small or large organisation, non-profit or for-profit enterprise which serves the purpose of 'developing' the business in some way.

[6:4:187] In addition, business development activities can be done internally or externally by a business development consultant.

[6:4:188] A philosophic ecosystem is an economic community supported by a foundation of interacting organisations and individuals; the organisms of the business world.

[6:4:189] The economic community produces goods and services of value to customers, who are themselves members of the ecosystem.

[6:4:190] The member organisms also include suppliers, lead producers, competitors, and other stakeholders.

[6:4:191] Over time, they coevolve their capabilities and roles, and tend to align themselves with the directions set by one or more central companies.

[6:4:192] Those companies holding leadership roles may change over time, but the function of ecosystem leader is valued by the community because it enables members to move toward shared visions to align their investments, and to find mutually supportive roles.

[6:4:193] A philosophic model describes the rationale of how an organisation creates, delivers, and captures value, in economic, social, cultural or other contexts.

[6:4:194] The process of business model construction and modification is also called business model innovation and forms a part of business strategy.

[6:4:195] In theory and practice, the term business model is used for a broad range of informal and formal descriptions to represent core aspects of a business, including purpose, business process, target customers, offerings, strategies, infrastructure, organisational structures, sourcing, trading practices, and operational processes and policies including culture.

[6:4:196] An Institutional plan refers to a formal written document containing business goals, the methods on how these goals can be attained, and the time frame within which these goals need to be achieved.

[6:4:197] It also describes the nature of the business, background information on the organisation, the organisation's financial projections, and the strategies it intends to implement to achieve the stated targets.

[6:4:198] In its entirety, this document serves as a road map that provides direction to the business.

[6:4:199] Written business plans are often required to obtain a bank loan or other kind of financing.

[6:4:200] Institutional transformation involves making fundamental changes in how business is conducted in order to help cope with shifts in market environment.

[6:4:201] Business transformation is the process of fundamentally changing the systems, processes, people and technology across a whole business or business unit, to achieve measurable improvements in efficiency, effectiveness and stakeholder satisfaction.

[6:4:202] As such, a business transformation project is likely to include any number of change management projects, each focused on an individual process, system, technology, team or department.

[6:4:203] Philosophic cluster theory shall henceforth pertain to the notion that the concentration of a philosophy to a small region, especially just to a single municipality is

greater for the development of an organised philosophy than its wide dispersion across large swathes of land.

[6:4:204] Complementers are businesses that directly sell a product (or products) or service (or services) that complement the product or service of another company by adding value to mutual customers.

[6:4:205] A context analysis is a method to analyse the environment in which a business operates.

[6:4:206] Environmental scanning mainly focuses on the macro environment of a business.

[6:4:207] But context analysis considers the entire environment of a business, its internal and external environment; an example of which is the SWOT and PESTEL analyses.

[6:4:208] A philosophic ecosystem is a collection of organisations that are interdependent to form a complete solution or industry.

[6:4:209] Philosophic foresight is the application of the notion of corporate foresight to context of Astronism specifically, but organised philosophies more generally.

[6:4:210] A philosophic group/syndicate is a collection of parent and subsidiary corporations that function as a single economic entity through a common source of control.

[6:4:211] A potentialised institution involves establishing a competitive advantage by having the lowest cost of operation in the industry.

[6:4:212] Cost leadership is often driven by company efficiency, size, scale, scope and cumulative experience (learning curve).

[6:4:213] A cost leadership strategy aims to exploit scale of production, well-defined scope and other economies (e.g., a good purchasing approach), producing highly standardised products, using advanced technology.

[6:4:214] Critical success factor is a management term for an element that is necessary for an organisation or project to achieve its mission.

[6:4:215] Crossfunding refers to the practice of when a philosophical institution funds the development of an infant philosophy or protophilosophy that it does not hold proprietorship over.

—

[6:4:216] Atavism, to be an atavist, or to be atavistic refers to the reappearance in the present of a characteristic belonging to a remote ancestor.

[6:4:217] Matriliney, to be matrilineal or matrilinear refers to descent through the female line, as in ancestry and inheritance.

[6:4:218] Meanwhile, patriliney, to be patrilineal or patrilinear refers to a relationship or descent by the male line, as in ancestry and inheritance.

[6:4:219] Propositus, a propositor or propositarian shall refer to the person from whom a line of descent originates.

[6:4:220] An astronopolis is a city in which Astronism is particularly prevalently adhered amongst the population.

[6:4:221] Eurhythmy refers to the existence of harmonious proportions in a building and the use of such an architectural technique in the context of sophariums.

[6:4:222] Amphilogy refers to a statement open to more than one interpretation; an ambiguity, of which there exists a huge amount in the context of the Omnidoxy.

[6:4:223] An alogism, to be alogistic, or alogical, or to be in a state of alogicality refers to a statement that is nonsensical or illogical.

[6:4:224] An antilogy, to be antilogical, or to be in a state of antilogicality refers to a contradiction or something that is knowingly in opposition to logic.

[6:4:225] Dissentation, in the context of Astronism, refers to a disagreement made against that which is held or generally accepted or believed by the mainstream.

[6:4:226] Divarication, divaricance, or to be divaricational refers to quality of holding a difference of opinion on a particular topic or notion from others surrounding, either people or an organisation or institution.

[6:4:227] A logicaster, to be logicastical, or logicastic refers to being pedantic in philosophical discussions which ultimately leads to a person believing that their own logic is more logical than it actually is in reality.

[6:4:228] Noetics, to be noetical, or to be in a state of noeticity, in philosophy, relates to the intellect and its nature, especially its study and contemplation.

[6:4:229] Obscurantism, an obscurantist, to be an obscurant, or obscurantic refers to the use of arguments intended to prevent enlightenment or to hinder the process of knowledge and wisdom.

[6:4:230] Prolepsis, to be proleptic, proleptical, or to be in a state of prolepticality refers to anticipating an opponent's argument and answering it before it can be made.

[6:4:231] Millettoiserie, Millettoiserial, Millettoisry, Millettoiserist, Astroiserie, Astroiserial, Astroisry, and Astroiserist are all terms which pertain to anything which is typically Astronist or Astronic in character or function, especially when studied from a non-Astronist viewpoint.

[6:4:232] A philocalist refers to a lover of beauty, the noun of which is philocaly, which Astronists are expected to regularly engage with.

[6:4:233] Ablepsia, ablepsy, and to be ableptical refers to being in a state of a loss of sight and is to be applied to a cosmic context.

[6:4:234] Anopsony pertains to a lack or loss of sight in a cosmical context and often relates to how clouds cause the loss of sight of cosmic progeny and phenomena.

[6:4:235] An abridgement refers to a shortened version of an Astronist Founding Work.

[6:4:236] Exordia or exordium refers to the beginning part of an Astronist Founding Work.

[6:4:237] A limner refers to a person whom illustrates Astronist books.

[6:4:238] Pagination refers to the numbering and arrangement of pages in an Astronist Founding Work, especially so in the Omnidoxy.

[6:4:239] Prolegomenon, prolegomenary, or to be prolegomenous refers to the introduction of a critical essay or book on Millettaria or on astromania.

[6:4:240] Telergy, to be telergial, or to act telergially refers to the influence that one's brain is thought to exercise over another, from a distance, by means of some hypothetical mental energy.

[6:4:241] Physis refers to the nature of change in The Cosmos as well as the philosophical contemplation of this.

[6:4:242] Typocosmy refers to the existence of an implemented universal system of nomenclature which all persons, especially across a species, can relate or understand as type of universal language.

[6:4:243] The terms arcana and arcanum, in the context of Astronist alchemy, refer to a cosmical secret or mystery, and may be more technically referred to as a cosmocana, or cosmocanum.

[6:4:244] Inscience, inscient, insciency, to be insciential, or to act inscientially refers to being ignorant without knowledge which is considered to be a hallmark of aphilosophicality and non-philosophicality.

[6:4:245] Pansophy refers to a system of infinite universal wisdom and knowledge, which is the ultimate aim of knowledge in Astronism, but it is also held centrally that the amount of knowledge humanity could attain is infinite too and therefore, can never be completely fulfilled; related terms include pansophic, pansophist, pansophical, and pansophically.

[6:4:246] Plerophory refers to the state or quality of full confidence or absolute certainty.

[6:4:247] Polyhistor refers to a person of exceptionally wide knowledge; a polymath; to be polyhistoric in terms of philosophy involves holding palpable knowledge in several disciplines of philosophy rather than just one or two.

[6:4:248] Domology refers to the philosophy of law in The Cosmos and its study and contemplation and related terms include domologic, domological, domologically, or domologist.

[6:4:249] Prevenance refers to the act or state of preceding or coming before; related terms include prevenancy and to be prevenant.

—

[6:4:250] Verism is a pre-Astronist term and artistic approach based on a preference to depict subject matters of the everyday rather than those which are heroic or legendary and this can and will be applied to the context of philosophy and cosmic art.

[6:4:251] When applied to cosmic art, verism is synonymous with cosmic realism or puristicism which states that cosmic progeny and phenomena must only be depicted in their true, actual, and natural forms rather than in embellished or exaggerated forms.

[6:4:252] Therefore I ascribe a new branch of the veristic tradition known as cosmic verism which is of course opposed to other traditions within cosmic and Astronic art known as chimericalism and phantomism which stand as advocators for the exaggerated depictions of cosmic progeny and phenomena.

[6:4:253] Additionally, a person that is to be known as a cosmodidact, or someone that is cosmodidactic refers to a person that considers themselves to be taught by The Cosmos, or through The Cosmos.

[6:4:254] This pertains to a person that holds a close personal, spiritual, and intellectual relationship with cosmic progeny and phenomena as well as with The Cosmos in its entirety and any person who considers themselves to be a cosmodidact is someone that is

chiefly taught and therefore chiefly learns from The Cosmos in this way and such a magnificent instance is that.

[6:4:255] I, as Cometan, do consider myself to be a cosmodidact, but not one of full formation for there are still many things that I will learn from The Cosmos; to be a cosmodidact is to deepen one's own relationship with The Cosmos, its progeny and its phenomena which subsequent develops a new function for The Cosmos; an educative function.

[6:4:256] That which is to be henceforth known as autation refers to the state that one is part of a philosophy or religion without needing to undergo any rituals, oaths, or rites of initiation; autating is about being able to join a philosophy or religion without the traditional conversion process.

[6:4:257] The Astronist Tradition is firmly aligned with autation as a solemn practice rather than conversion and in this way, The Institution is removed from being part of the initiation process of those whom follow Astronism which is unlike the majority of other organisations and institutions which hold proprietorship over their respective religion or philosophy.

[6:4:258] That which is to be henceforth known as being in a state of vicinality is synonymous with the term used in the Christian religious tradition of being in communion when in reference to churches their different alignments and associations.

[6:4:259] For denominations of an organised philosophy, or especially denominations of Astronism, to be in a state of vicinality means to hold a relationship of recognition and acceptance between different denominations and institutions.

[6:4:260] The nature and extent of this recognition and acceptance can be varied, but is fairly standardised on the notion that vicinal denominations and institutions acknowledge and respect the views of those which they are in vicinality with which means that they consider such other denominations/institutions/organisations to be just as much part of the philosophy of Astronism as they themselves are.

[6:4:261] Oppositely, when denominations, institutions, or other organisations are considered to be Astronist in their orientations are in a state of contrinity or to be contrinial with one another means that they do not acknowledge or appreciate the views and beliefs of another denomination, institution, or organisation which therefore means that they do not consider them to be part of the philosophy of Astronism, and do not consider their members to be part of the worldwide community of the followers of Astronism known as the Astrosa.

[6:4:262] The stance and state of contrinity is considered to be controversial due to the fact that it shows signs of the denomination/institution following it to be straying from the principles of the Philosophical Spirit.

[6:4:263] Parauthorial, parauthorship, or dual authorship refers to how and when an author uses two or more identities for their books, especially books published in different genres.

[6:4:264] When a fictional character and its creator grow in parallel, both physically, intellectually, and mentally this is to be henceforth known as parabiographical or a parabiography.

[6:4:265] When a fictional character is a reflection of its author in personality and/or appearance is to be henceforth referred to as retrobiographical, or a retrobiography.

[6:4:266] Lexinism pertains to the practice of a publisher pricing books higher in proportion to the number of words in the book; the higher the word count the higher the price selected for the book according to the lexinist approach.

Philosophical, Religious & Ideological Ontology

[6:5:1] Philosophical ontology shall refer to the study of the being, beingness, and becoming of a philosophy or an organised philosophy and shall involve the application of general ontological questions to the context of a philosophical belief system.

[6:5:2] Religious ontology refers to the application of ontological questions to the context of a religious belief system; this subdiscipline of ontology shall involve the questions of what a religion is, the categories of different religions, how can a religion be said to exist, and what are the properties of a religion that make it existent.

[6:5:3] Again, that which is to be known as ideological ontology shall refer to the study of the being, beingness, and becoming of an ideology and shall involve the application of general ontological questions to the context of an ideology.

[6:5:4] The subjectivity of this discourse is the essential preface due to one person's consideration of what being, beingness, and becoming are will be different from another person's point of view; with such a deeply philosophical discipline such as ontology, there exists an even greater deal of subjectivity due to the nature of anything truly philosophical itself being subjective in its nature.

[6:5:5] Philosophical ontology, the study of the beingness of a philosophy, may also be referred to as sophontology.

[6:5:6] Religious ontology, the study of the beingness of a religion, may also be referred to as religionontology.

[6:5:7] Ideological ontology, the study of the beingness of an ideology, may also be referred to as ideontology.

[6:5:8] Branches of sophontology shall principally include sophonics which will refer to the study of the language used by philosophers as distinct from mainstream language; essentially, the study of the nomenclature used by philosophers is what sophonics focuses on.

[6:5:9] Biosophy is the second of the branches of sophontology and refers to the study of the lives and biographies of philosophers in order to reflect in what their values, ideas, and philosophical contributions were.

[6:5:10] Foundational or theoretical philosophy refers to a form of philosophy distinct from practical philosophy whereby the focus is only placed on the theoretical elements of philosophy rather than the practical applications of philosophy.

[6:5:11] Practical philosophy includes a number of different forms of philosophy, the first of which is recreational philosophy which involves philosophisations conducted for leisure and during leisure times.

[6:5:12] Professional philosophy refers to the form of philosophy conducted by people who can consider themselves professionals of the discipline due to the fact that they have managed to derive a sustainable income from being philosophers.

[6:5:13] Academic philosophy refers to the form of philosophy conducted under the auspices of an institution and is conducted by academics who may also be categorised as professional philosophers.

[6:5:14] Philosophical traditions refers to the study of the presence of beliefs, practices, and objects of importance that have developed within philosophical belief systems but have not necessarily come from the organised philosophy's proprieted institution.

[6:5:15] Quotational philosophy refers to the form of a philosophy channelled through philosophical quotes; a philosophy can be demonstrated through quotes as snippets of its beliefs which collectively make up quotational philosophy which can be studied as part of sophontology.

[6:5:16] Functional philosophy is often considered to be synonymous with practical philosophy but functional philosophy is particularly manifested in how philosophical theories and beliefs influence the specific methods for some type of action or process.

[6:5:17] Symbolic philosophy refers to the form of philosophy which is represented through symbols; deriving what symbols mean through symbological analysis is important to this branch of sophontological study as the symbols of philosophies should the beliefs and principles of the philosophy.

[6:5:18] Disciplinary philosophy refers to the form of philosophy manifested in disciplines and fields of study, such as metaphysics, logic, cosmic philosophy etc. which are all disciplinary manifestations of philosophy which form the foundations of our interactions with philosophy and which aid our study of different philosophies.

[6:5:19] Philosophy is derived from a varied combination of science (rational) and mystology (mystical or transrational/parational/hyperational/extrational); in sophontological study, we can also split philosophical study into two categories including impartial philosophy which is the study of philosophy from a neutral perspective typically of non-religious and non-organised elements of philosophy such as philosophical disciplines like ontology, ethics etc. meanwhile the second of the categories is partial philosophy which is the study of organised philosophies, religious philosophies, philosophical beliefs, and/or studying philosophy from the perspective of being part of or an adherent to a particular philosophical system.

[6:5:20] Religion is derived from both the greatest questions and the greatest legends central to the core of human nature.

[6:5:21] Ideology is derived from political circumstances.

[6:5:22] Religion can be described as the proclaimer of truth.

[6:5:23] Ideology can be described as the proclaimer of correction.

[6:5:24] Finally, philosophy can be described as the proclaimer of knowledge, reason, and logic.

[6:5:25] Religions founded upon mythologies and legends: Christianity, Islam, Hinduism, Judaism, Chinese traditional religion, African traditional religion, Sikhism, Spiritism, Bahá'í Faith, Jainism, Shinto, Zoroastrianism, Cao Dai and Paganism/Neo-paganism.

[6:5:26] Eastern religions presented to the Western World as not being founded upon legends hence their questionability as actual religions, but in actuality, each do have their own mythological traditions: Buddhism, Confucianism, and Taoism.

[6:5:27] The definition of a mythology refers to a set of stories or beliefs about a particular person, institution, or situation, especially when exaggerated, totally fictitious, or true to some degree but used and presented through metaphorical effect.

[6:5:28] Mystology's definition to distinguish from mythology; a genre of stories, especially those with a mystical, theological or cosmological setting, theme or character.

[6:5:29] A maniform refers to a collection of practices or manifestations of belief of either a religion, ideology, or philosophy, especially ones which are thematically linked, or are preferable to a certain type of person according to their circumstances, personality, age etc.; therefore, each different type or category of person can be considered to hold a different maniformity, or maniformism that is largely unique to their particular traits, qualities, and circumstances.

[6:5:30] The ontological elements of religion will also be discussed and contemplated within the context of religionology.

[6:5:31] Mythologies of religion are focused upon the following elements:

[6:5:31a] Belief in a god and/or supernatural beings.

[6:5:31b] Distinction between sacred and profane objects.

[6:5:31c] Ritual acts involving sacred objects.

[6:5:32] Maniform of religion:

[6:5:32a] Moral code with a supernatural basis and authority.

[6:5:32b] Sense of awe, guilt, fear, and mystery.

[6:5:32c] Prayer and communication with supernatural.

[6:5:32d] A view of the world and the individuals role in it.

[6:5:32e] Life organised to fit views of the religion.

[6:5:32f] A society or community connected by the religion.

[6:5:33] Ontological elements of philosophy will of course be explored in sophontology as a fundamental element of the discipline.

[6:5:34] The mystology of different philosophies will also be explored as part of sophontology due to the importance of mystologies to some of the beliefs, practices, and practices within philosophical systems.

[6:5:34a] Astronaturalism refers to the removal of all mystological and mythological elements from Astronism and focuses solely on the natural, logic, and rational elements within Astronism and as a result, can be considered a form of Astronism; related terms shall include astronatural and astronaturality.

Philosophical Morphology & Astronist/Astronic Etymology

[6:6:1] Philosophical morphology or sophomorphology refers to the study of the formations of different philosophies and the factors contributing to the formations of philosophies.

[6:6:2] Millettoetymology or astroetymology shall both refer to the study of the etymologies of words that hold Astronist/Astronic origins.

[6:6:3] Morphological Astronism is the study of the formation of Astronism as a philosophy involving the nature of designation, the acceptance of designation, recognition, acceptance, harmonious agreement, unacceptability, and unharmonious agreement.

[6:6:4] Etymological Astronism involves the conduct of etymological explanations of the most prominent words in Astronism which shall take place post-omnidoxically.

[6:6:5] The etymology of Astronism derives from the prefix Astro- which itself derives from the word astronomy and also inspired by the original title of Millettism based on the surname of Millette, the definitions of which are greatly expanded upon in the context of Astronist Philosophy and in other forms of Astronist Culture, an example of which is the redefinition of Millette into both a verb and an adjective.

[6:6:6] Millette as a surname is used for the main character of The Five Astronist Characters known as Jesse Millette, the central protagonist of The Original Jesse Millette Series, as well as in wider Astronist Literature and Astronist Culture.

[6:6:7] It is important to note that Astronism as a term is not derived from the character of Jesse Millette directly, but more so from the surname of Millette and its own etymology so as to distinguish between Astronism and Jesse Millette.

[6:6:8] The surname of Millette is an alternative spelling for the French name Millet where the name was first founded in Burgundy and has been traced there from ancient times.

[6:6:9] It is likely that the name formed from a metonymic occupational name for one who grew or sold Millet or panic grass, a millet-like grain for animal feed.

[6:6:10] The Millette surname spelling is most commonly found in the English counties of Lancashire and Cheshire, hence the connection between Brandon Taylorian and his choosing of this surname for the Jesse Millette character due to his birthplace and residence in the county of Lancashire.

[6:6:11] The particular word of Millette was chosen for the surname of the protagonist due to its derivation from the Slavic element of the name 'mil' meaning mercy, as is transferred into a philosophical context to mean the mercy of mind, of spirit, of body, of cosmos, and

of one's ability to free both oneself and others through one's practice of mercy for the achievement of freedom.

[6:6:12] Therefore, the etymology of Millettism can be primarily summed as "mercy for freedom".

[6:6:13] The etymologies of Millettism and Astronism and its fundamental origins therefore play a large role in describing the essence of what it means to be both Astronist in character, but also what it means to follow Astronism, as well as the principles that Astronism itself expounds.

[6:6:14] The association between Astronism and the concept and practice of "mercy for freedom" is one that is expected to ignite debate over the essence of the Astronist philosophical tradition, especially regarding the application of mercy in this context.

[6:6:15] Mercy is addressed in The Omnidoxy within the discourse of The Role of Mercy in Astronism as part of the discipline of study of prerology due to mercy's meaning of freedom within an Astronist context.

[6:6:16] Astronism is directly derived from four terms, three of which remain pre-Astronist while the third is Astronist in its origins.

[6:6:17] The first three of these are astronaut as a noun, astronomy as a noun and astro- as a prefix, all of which hold meanings in relation to space, the exploration of space, the stars, and the study of space.

[6:6:18] While the etymology of Astronism is acknowledged to have originated from these three pre-Astronist terms, the primary etymological founding for the appellation of Astronism is found to exist in the Astronist verb known as astrone (astroning, astroned, and astroner).

[6:6:19] Therefore, Astronism is considered to be primarily derived from a verb rather than a noun or name.

[6:6:20] To astrone is to think, perceive, and receive all that exists through an astronomical, cosmocentric, or astrocentric lens and so an Astroner is distinguished, yet continues to be in tandem with an astronaut, for the latter physically explores The Cosmos while the former contemplatively and emotionally explores The Cosmos.

[6:6:21] The etymology of an astroner is "explorer of the stars".

[6:6:22] Vendox - "ven" meaning "that which is expressed visually" and "dox" originating from "doxy" but without the "y" instead pertains to "knowledge imparted through means of sight".

[6:6:23] This is rather than through means of reading (-doxy), listening (-dauoxy), speaking (-deroxy), touching (-dinoxy), smelling (-dosm), tasting (-gustoxy), numbers (-noxy), and letters (-loxy).

[6:6:24] The term "omnidoxy" originates from the founding of The Philosophy of Astronism and combines the prefix "omni-" meaning all, or of all things, and the suffix of "-doxy" which, in an Astronist terminological context, refers to knowledge imparted through written means.

[6:6:25] Combining this prefix and suffix, the term "omnidoxy" is formed and therefore means all knowledge, or knowledge of all things, imparted through a treatise. Essentially, the "omni-" element of the appellation refers to the encompassing nature of the text while the "-doxy" element refers to the text's educative and imparting personality.

[6:6:26] Etymologically, the name Cometan is composed of the suffix -an which pertains to the foundership of something which is affixed to the term comet which is obviously indicative of the cosmic theme and identity that Taylorian intended to capture.

[6:6:27] Essentially, the mononym of Cometan metaphorically pertains to Taylorian as symbolical to a comet in its long and unknown trajectory, yet remaining the ultimate seeker in The Cosmos.

[6:6:28] Interestingly, applying a brief knowledge of Astronist cosmological symbolism, comets are generally considered to be chaotic by their natures and somewhat destructive in their paths which displays slight confusion as to the choice of the term comet for Taylorian's authorial mononym.

[6:6:29] This choice has sparked many discussions as to the possible reasons why with the most sound argument being that Taylorian attempted to distance himself as a human being from becoming compared to anything that he considered to be cosmically higher or symbolically ultimate such as stars, galaxies, and other non-chaotic entities in The Cosmos.

The Institutional Leadership (Padronology)

[6:7:1] Padronology, or padronics, is the ontological branch of study closely connected to institutional ontology focusing on the study and contemplation of the leadership of philosophic institutions.

[6:7:2] A padron is the title for the leader of a philosophic institution, specifically The Institution of The Philosophy of Astronism; related terms include padroness, padrina, padrona, and padronist; the padron is the undisputed head of The Institution, but unlike other religious leaders, he or she does not hold philosophical authority or absolute authority.

[6:7:3] Padronship refers to the office held by the padron of The Institution of The Philosophy of The Philosophy of Astronism; it refers to the quality of being a padron; related terms include padrondom, padronhood, and padronate.

[6:7:4] Related terms to the word padron include the following: padronlike, padronliness, padronly, padronal, padronial, padronic, padronical and padronically.

[6:7:5] Two more related terms are padronless and padronlessness which both refer to the instance in which The Institution of The Philosophy of Astronism has no padron or the office of the padron is currently vacant.

[6:7:6] That which is herein introduced as padronism refers to the philosophy or approach taken by a particular padron towards their office and is usually structured upon the different Forms of Padronry, but is most likely unique to their office according to their personality and the circumstances in occurrence at the time of their office; related terms include padronist, padronistic, and padronistically.

[6:7:7] Padronality refers to the period/era whereby The Institution is under the leadership of a particular padron, or the instance in which The Institution is governed by a padron.

[6:7:8] To enpadronise, or the process of enpadronisation shall relate to the entire process of choosing a new padron and installing him or her into their office within The Institution of The Philosophy of Astronism.

[6:7:9] Many specialist and unique terms in relation to padronology can be found extraomnidoxically in the The Grand Lexicon of Astronology.

[6:7:10] Those which will be categorised as the Forms of Padronry will outline different approaches to being a padron and to hold the office of padronship, some of which will be introduced herein, but more are expectedly to be introduced and explored further post-omnidoxically.

[6:7:11] Creative padronry refers to a style of leadership based upon the concept of working cooperatively to develop innovative ideas.

[6:7:12] Those who employ creative leadership tend to do so by creating conditions which promote creativity.

[6:7:13] Creating such conditions, which are sometimes called "supportive contributions", are described as psychological, material, and/or social supports that trigger, enable, and sustain creative thinking in others.

[6:7:14] Innovation padronry pertains to a philosophy and technique that combines different leadership styles to influence employees to produce creative ideas, products, and services.

[6:7:15] The key role in the practice of innovation leadership is the innovation leader which would be the padron.

[6:7:16] As an approach to institutional development, innovation leadership can support achievement of the mission or the vision of an institution or group.

[6:7:17] With new technologies and processes, it is necessary for institutions to think innovatively to ensure continued success and stay competitive.

[6:7:18] To adapt to new changes, "The need for innovation in institutions has resulted in a new focus on the role of leaders in shaping the nature and success of creative efforts."

[6:7:19] Without innovation leadership, institutions are likely to struggle which is why this form of padronry is essential for all successful padrons.

[6:7:20] This new call for innovation represents the shift from the 20th century, traditional view of institutional practices, which discouraged employee innovative behaviours, to the 21st-century view of valuing innovative thinking as a "potentially powerful influence on institutional performance."

[6:7:21] Transactional padronry refers to the second part of a style of leadership that focuses on supervision, institution, and performance; it is an integral part of the Full Range Leadership Model.

[6:7:22] Transactional padronry is a style of leadership in which leaders promote compliance by followers through both rewards and punishments.

[6:7:23] Through a rewards and punishments system, transactional padrons are able to keep followers motivated for the short-term.

[6:7:24] Unlike transformational padrons, those using the transactional approach are not looking to change the future, they look to keep things the same.

[6:7:25] Leaders using transactional padronship as a model pay attention to followers' work in order to find faults and deviations.

[6:7:26] This type of padronship is effective in crisis and emergency situations, as well as for projects that need to be carried out in a specific way.

[6:7:27] Transactional padrons use reward and punishments to gain compliance from their followers.

[6:7:28] They are extrinsic motivators that bring minimal compliance from followers.

[6:7:29] They accept goals, structure, and the culture of the existing institution.

[6:7:30] Transactional padrons tend to be directive and action-oriented.

[6:7:31] Transactional padrons are willing to work within existing systems and negotiate to attain goals of the institution.

[6:7:32] They tend to think inside the box when solving problems.

[6:7:33] Transactional padronship is primarily passive.

[6:7:34] The behaviours most associated with this type of padronship are establishing the criteria for rewarding followers and maintaining the status quo.

[6:7:35] The overall effectiveness of transactional management is that it can be very practical and directive.

[6:7:36] Through transactional management, an explicit measure of success can be discovered through the consistent monitoring of managers.

[6:7:37] The model is also viewed as very straightforward and understandable due to the simple reward and punishments system.

[6:7:38] Within transactional padronship, there are two factors, contingent reward and management-by-exception.

[6:7:39] Contingent reward provides rewards for effort and recognises good performance.

[6:7:40] Management-by-exception maintains the status quo, intervenes when subordinates do not meet acceptable performance levels, and initiates corrective action to improve performance.

[6:7:41] That which is to be known as transformational leadership refers to a theory of leadership where a leader works with teams to identify needed change, creating a vision to guide the change through inspiration, and executing the change in tandem with committed members of a group; it is an integral part of the Full Range Leadership Model.

[6:7:42] Transformational leadership serves to enhance the motivation, morale, and job performance of followers through a variety of mechanisms.

[6:7:43] These include connecting the follower's sense of identity and self to a project and to the collective identity of the institution.

[6:7:44] Being a role model for followers in order to inspire them and to raise their interest in the project.

[6:7:45] Challenging followers to take greater ownership for their work, and understanding the strengths and weaknesses of followers, allowing the leader to align followers with tasks that enhance their performance.

[6:7:46] Emphasising intrinsic motivation and positive development of followers raising awareness of moral standards; highlighting important priorities.

[6:7:47] Fostering higher moral maturity in followers; creating an ethical climate (share values, high ethical standards).

[6:7:48] Encouraging followers to look beyond self-interests to the common good. Promoting cooperation and harmony.

[6:7:49] Using authentic, consistent means; using persuasive appeals based on reason; providing individual coaching and mentoring for followers; appealing to the ideals of followers; allowing freedom of choice for followers.

[6:7:50] The two main characteristics of extraverts are affiliation and agency, which relate to the social and leadership aspects of their personality, respectively.

[6:7:51] Extraversion is generally seen as an inspirational trait usually exhibited in transformational leadership.

[6:7:52] Neuroticism generally gives an individual an anxiety related to productivity which, in a group setting can be debilitating to a degree where they are unlikely to position themselves in a role of transformational leadership due to lower self-esteem and a tendency to shirk from leadership responsibilities.

[6:7:53] Openness to experience; creative expression and emotional responsiveness have been linked to a general tendency of openness to experience; this trait is also seen as a

component of transformational padronry as it relates to the ability to give big-picture visionary leadership for an institution.

[6:7:54] Agreeableness; although not a trait which specifically points to transformational padronship, leaders in general possess an agreeable nature stemming from a natural concern for others and high levels of individual consideration.

[6:7:55] Charisma and idealised influence is a classic ability of individuals who possess agreeability.

[6:7:56] Conscientiousness; strong sense of direction and the ability to put large amounts of productive work into tasks is the by-product of conscientious padrons.

[6:7:57] This trait is more linked to a transactional form of padronship given the management-based abilities of such individuals and the detail oriented nature of their personality.

[6:7:58] Authentic padronry refers to an approach to padronship that emphasises building the leader's legitimacy through honest relationships with followers which value their input and are built on an ethical foundation.

[6:7:59] Generally, authentic padrons are positive people with truthful self-concepts who promote openness.

[6:7:60] By building trust and generating enthusiastic support from their subordinates, authentic padrons are able to improve individual and team performance.

[6:7:61] This approach has been fully embraced by many padrons and padronship coaches who view authentic padronship as an alternative to leaders who emphasise profit and share price over people and ethics.

[6:7:62] Authentic padronship is a growing area of study in academic research on leadership which has recently grown from obscurity to the beginnings of a fully mature concept.

[6:7:63] That said, many foundational papers on this topic have recently been retracted or called into question because of issues surrounding the reporting of data and the inability of the authors to produce their original data.

[6:7:64] Agentic padronry refers to the padronship style is generally found in the business field by a person who is respected by subordinates.

[6:7:65] This person demonstrates assertiveness, competitiveness, independence, courageousness, and is masterful in achieving their task at hand.

[6:7:66] Agile padronry refers to the ability of a padron to be able to lead well in a wide range of circumstances especially new, changing and ambiguous situations.

[6:7:67] Complex adaptive padronry refers to a complementary approach to padronship based on a polyarchic assumption (i.e. padronship of the many by the many), rather than based on an oligarchic assumption (i.e. padronship of the many by the few).

[6:7:68] Padronship in this theory is seen as a complex dynamic involving all, rather than only a role or attribute within a hierarchy.

[6:7:69] The theory calls for skills, attributes and roles which are additional to the demands of traditional leadership.

[6:7:70] Cross-cultural padronry refers to the development as a way to understand padrons who work in the newly globalised market.

[6:7:71] Today's international institutions require leaders who can adjust to different environments quickly and work with partners and employees of other cultures.

[6:7:72] It cannot be assumed that a manager who is successful in one country will be successful in another.

[6:7:73] E-padronry refers to padronship in institutions not involving face-to-face interactions as the leader of The Institution; this involves leadership and management mainly through digital interfaces as opposed to through face-to-face leadership.

[6:7:74] Now, padrons may lead entire projects from a distance and interact with followers solely through information technology.

[6:7:75] Today, institutions are incorporating technology thus creating a need for e-leadership due to the digital orientation as being the future of philosophic institutions; this is something that all institutions need to understand and accept and subsequently deal with on a correct basis.

[6:7:76] This wiring involves forms of technology such as videoconferencing, online collaboration software, cellphones, e-mail, and Wi-Fi as channels through which e-leadership can be conducted.

[6:7:77] As a result, some established and traditional institutions are struggling with technological-integration issues while employees face a steep learning curve.

[6:7:78] Entrepreneurial padronry involves organising a group of people to achieve a common goal using proactive entrepreneurial behavior by optimising risk, innovating to take advantage of opportunities, taking personal responsibility and managing change within a dynamic environment for the benefit of an organisation.

[6:7:79] Such padronship aims to cultivate entrepreneurial individuals and teams that fully leverage their creative potential in creating value for the philosophic institution.

[6:7:80] Entrepreneurial padronship does this by employing managerial practices that "develop the ability in employees to self-generate, self-reflect, and self-correct in the environments that they engage in".

[6:7:81] Ethical padronry is the padronship style that is directed by respect for ethical beliefs and values and for the dignity and rights of others.

[6:7:82] It is thus related to concepts such as trust, honesty, consideration, charisma, and fairness.

[6:7:83] Not just reaching the objectives of The Institution, but doing it in a way that is sustainable and morally responsible.

[6:7:84] Other forms of padronry shall include the following: instructional padronry, love padronry (the primary tenet of which expects that padrons should love those they serve as padron), meta-padronry, laissez-faire padronry (where all the rights and power to make decisions is fully given to the followers), and restorative padronry.

[6:7:85] Additional forms of padronry include narcissistic padronry, servant padronry, strategic padronry, superpadronry, toxic padronry, and juvenic padronry (a young padron, usually one under the age of thirty).

[6:7:86] That which is to be henceforth known as padronship analysis - the art of breaking down a leader into basic psychological components for study and use by academics and practitioners.

[6:7:87] Good leadership analyses are not reductionist, but rather take into consideration the overall person in the context of the times, society, and culture from which they come.

[6:7:88] Padronship analysis is traditionally housed in political psychology departments and utilises the tools of psychology to achieve political ends by exploiting the psyche in the case of practitioners, or to gain knowledge about the building blocks of leadership and individuals in the case of academics.

[6:7:89] A padronship style refers to a leader's method of providing direction, implementing plans, and motivating people; this is essential a less technical term for a padron's padronism.

[6:7:90] A padron's padronship style or padronic style is characterised by both the form of padronry and the approach/orientation to padronship.

[6:7:91] Orientations and approaches to padronship shall include the following, most of which have been inspired by pre-existing governmental forms: unquitarianism, authoritarianism, democratic padronism, copadronism/copadronship, horizontalism (or apadronship/apadronism), cerepadronism (ceremonial padronry which is when the padron has no role in the operations of The Institution), technocratic padronism (technopadronism), artistopadronism (aristocratic padronism), plutopadronism (plutocratic padronism), timopadronism (timocratic padronism), meritopadronism (meritocratic padronism), terontopadronism (Gerontocratic padronism), and nepadronism (nepotistic padronism).

[6:7:92] Finally, that which is to be henceforth known as vetopadronism refers to when the choice of padron is realised by The Institution to have been the wrong decision and a process of forced removal has to take place.

[6:7:93] A padronic school refers to an organisation, or entity within an organisation, especially a department within a phrontistery, that provides education that focuses on the development of padrons, or for those whom wish to work in departments in close operational conduct with the sitting padron.

[6:7:94] Padronry traits refers to integrated patterns of personal characteristics that reflect a range of individual differences and foster consistent leader effectiveness across a variety of group and organisational situations.

[6:7:95] Padronry development/expansion refers to the choice to expand the role, authority and capabilities of The Institution's sitting padron by The Governing Council beyond that of the standard allocated authority and capabilities.

[6:7:96] Padronic consulting refers to the practice of helping institutions to improve their performance, operating primarily through the analysis of existing institutional problems and the development of plans for improvement from professional consultancies in developing and sustaining institutional operations.

[6:7:97] Organisations may draw upon the services of management consultants for a number of reasons, including gaining external (and presumably objective) advice and access to the consultants' specialised expertise.

[6:7:98] Creative padronry; three different complementary conceptualisations have been suggested which reflect the different contexts in which creative leadership can be applied: facilitating creativity, directing a creative vision, and integrating diverse creative contributions.

[6:7:99] Depending on the type of padronic leadership style that is adopted by the innovation padron, the padron may have either a direct or indirect influence on the faculty of the institution.

[6:7:100] Direct forms of influence in padronic innovation and leadership include:

[6:7:100a] Providing creative input and idea suggestion to employees.

[6:7:100b] Providing the faculty with clear and concrete goals.

[6:7:100c] Allocation of institutional resources (i.e. research and development spending; manpower) for the implementation of new ideas for institutional operations.

[6:7:101] Oppositely, indirect influences from the padron will always effect the operations of The Institution, especially due to the nature of its services and products, which are most commonly expected to manifest in the following various forms.

[6:7:101a] Indirect influences get the same results without providing explicit guidance to employees.

[6:7:101b] These types of influences include; establishing a supportive climate for creativity within the institution.

[6:7:101c] Acting as a role model for innovative thinking.

[6:7:101d] Providing employees with rewards and recognition for innovative thinking.

[6:7:101e] Hiring and team composition (i.e. putting together teams with specific skill sets needed for innovative thinking, or hiring employees with creative personalities without planning what they work on).

[6:7:102] Padronic Paradoxes refers to different forms of paradox that are considered to be existent in the context of padronic leadership and related institutional operations.

[6:7:103] Internal/Localised paradoxes entail conflicting roles experienced within the padron.

[6:7:104] The Dual Expertise Paradox postulates that a padron must have or acquire domain expertise while at the same time obtaining the necessary padronship skills to manage his/her employees and resources.

[6:7:105] The Generation Evaluation Paradox stipulates that a padron must encourage a supportive climate for the generation of new ideas and thinking outside-the-box while evaluating these ideas and realising that not all creative ideas are useful and many may even fail (while not being too critical and negative of those ideas).

[6:7:106] Team-level Paradox entail conflicting interests between the padron and the employees/teams/faculty.

[6:7:107] Creative Personality Cohesion Paradox is based on the research finding that creative workers generally highly value autonomy and, as a result, often prefer to work alone.

[6:7:108] This paradox illustrates the difficulty padrons have in providing their employees with the autonomy they must be creative, while fostering team cohesion (or closeness) to facilitate idea sharing.

[6:7:109] A padron must also be careful not to encourage too much cohesion, as it may discourage group members from disagreeing (even constructively disagreeing) with fellow group members in an effort not to offend them or “rock the boat.”

[6:7:110] The Vision Autonomy Paradox highlights the dilemma a padron faces between providing structure and guidance to a team with respect to the vision of the goal, while at the same time stepping back and providing the team with enough autonomy, especially considering the fact that creative workers highly value autonomy.

[6:7:111] When leading for innovation, providing an overabundance of structure may result in a backlash from employees who feel their autonomy is being taken away from them.

[6:7:112] The Restriction Freedom Paradox underscores that innovation padrons need to allow employees enough time to develop creative endeavours and provide the resources to do so.

[6:7:113] At the same time, the padron must take care to provide enough pressure that they are still motivated to complete the task and not provide too many resources that it has a “deadening effect” on creativity.

[6:7:114] Situational Paradoxes entail conflicting interests between padrons and the situations they face.

[6:7:115] The Intrinsic Extrinsic Paradox holds that instead of providing more readily available extrinsic motivation tools such as bonuses and salary increases, padrons must provide intrinsic motivation, which generally comes from within the employee, to their employees.

[6:7:116] This paradox is based on findings that intrinsic motivation is a key factor in facilitating creativity and extrinsic motivators may either hinder creativity or have an unclear relationship with creativity.

[6:7:117] The Local Long-Term Paradox posits that leaders of innovation must maintain their innovative edge by keeping an eye out for and capitalising on potential opportunities, even at the risk of placing those ideas above or even eliminating ideas that he or she had previously inspired in their teams.

[6:7:118] The padron must also be capable of developing teams that are flexible enough to be passionate about ideas that may have replaced their own idea that was facilitated, inspired, and supported by their padron; this is where the paradox is most clearly visible.

[6:7:119] The competition collaboration paradox involves a padron developing open external relationships with other institutions to discover potential innovation opportunities, while ensuring the institution's emerging ideas are protected in a competitive environment.

[6:7:120] The Feedback Rigidity Paradox involves padrons seeking out and using customer and client advice and feedback towards innovative endeavours to a certain extent, while maintaining control of the vision and not letting the feedback dictate to them; as clients and customers often criticise innovations early on.

[6:7:121] The Failure Success Paradox is the idea that innovation leaders must ensure a safe institutional culture that is willing to embrace risk and failure, while at the same time making sure that the institution is also producing successful products and services despite embracing risk and errors.

[6:7:122] Additional paradoxes identified by Hunter et al. (2011) that do not directly involve the leader but are worth mentioning are the paradoxes that occur between teams and the organisation.

[6:7:123] These include the Insularity Cohesion paradox, the Champion Evaluator paradox, and the Creativity Cost paradox.

Institutional Ontology

[6:8:1] Institutional ontology refers to a branch of ontology dealing with the study of the nature of being, the beingness, and the becoming of a philosophic institution which, when applied to the context of Astronist Philosophy, of course pertains to The Institution of The Philosophy of Astronism.

[6:8:2] Additionally, this branch of ontology will follow the study of interactions between different philosophical institutions which remains an important part of understanding how philosophical institutions are to function.

[6:8:3] Institutional interoperability shall refer to the instance in which two or more philosophical institutions are in direct and frequent collaboration with one another for their symbiotic benefit of mutual increases in followership.

[6:8:4] That which will be known as the Vision Statement of The Institution of The Philosophy of Astronism will be the following: To become and remain the first philosophical institution that holds proprietorship over an organised philosophy.

[6:8:5] The Mission Statement of The Institution of The Philosophy of Astronism will be as follows: To works towards the achievement of the principles, values, and ideals of Astronism as well as its furtherance, establishment, dissemination, and entrenchment.

[6:8:6] That which will be referred to as the planning horizon will pertain to the amount of times an organisation will look into the future when preparing a strategic plan; many commercial companies use a five-year planning horizon, but due to the operational principle of truncation or truncationism which The Institution will follow, each of its planning horizons will consist of three years.

[6:8:7] The nature of the being of The Institution will of course be studied as part of Institutional ontology, but also studied as branches of this will be the nature of the beingness of The Institution and the nature of its becoming.

[6:8:8] A global strategy will be essential to the functions of The Institution; an organised philosophy should as Astronism with the ambitions it holds will instantly hold global appeal, but this needs to be carefully structured and managed country by country and if needs be, region by region within those countries.

[6:8:9] A sound global strategy should address these questions: what must be (versus what is) the extent of market presence in the world's major markets? How to build the necessary global presence?

[6:8:10] What must be (versus what is) the optimal locations around the world for the various value chain activities? How to run global presence into a global competitive advantage?

[6:8:11] The “international” classification of a global business strategy is employed by companies who may sell in foreign markets, but their primary focus is on their home market; this same principle and classification shall be applied to the context of philosophical institutions which whose philosophies hold a presence in different countries, but the home country remains the primary area of operations; for The Institution, this will exist as just a stage or phase of operations rather than a long-term goal.

[6:8:12] These companies may include international strategies in their business model to increase sales, but they know that their main target consumer is local; this will need to be the same for The Institution during that particular phase of its development and expansion.

[6:8:13] Segment architecture refers to a detailed, formal description of areas within an enterprise, used at the program or portfolio level to organise and align change activity; the segment architecture model shall be applied to the context of a philosophical institution in the discipline of institutional ontology.

[6:8:14] Expectation gap refers to the gap between the current performance of an organisation and its desired performance as expressed in its mission, objectives, goals and the strategy for achieving them.

[6:8:15] Sustainable followership rate will be the growth in followers that is sustainable for The Institution to track and manage as well as to properly service as a reflection of its own resources.

[6:8:16] Talent portfolio management involves deciding what resources to include in the portfolio given the goals of the philosophic institution and taking into consideration the changing economic conditions.

[6:8:17] Selection involves deciding what resources to acquire, how many resources to acquire, under what terms, when to acquire each, and what resources to divest.

[6:8:18] The technology strategy shall pertain to the overall plan which consists of objectives, principles and tactics relating to use of technologies within the philosophic institution which will be of particular significance

[6:8:19] Institutional resource allocation shall refer to the internal mechanism of a philosophic institution to be able to allocate resources available to the institution during a particular and in the most efficient capacity available.

[6:8:20] The international philosophic strategy refers to plans that guide commercial transactions taking place between branches of the institution across different countries which will be controlled nationally, but will continue to be under the authority of a global

centre; this structure will provide operational freedom nationally, whilst also applying authoritative functions on a global level.

[6:8:21] Lead scoring refers to a methodology used to rank prospects against a scale that represents the perceived value each lead represents to the philosophic institution.

[6:8:22] The most accurate lead scoring models include both explicit and implicit information which the institution will efficiently utilise.

[6:8:23] Explicit scores are based on information provided by or about the prospect, for example, institutional size, industrial segment, job title or geographic location.

[6:8:24] Implicit scores are derived from monitoring prospect behavior, examples of these include website visits, whitepaper downloads or e-mail opens and clicks.

[6:8:25] Of course, in this discourse, I have only managed to explore the surface of what institutional ontology will become as both a philosophical and business-oriented discipline that covers many different subbranches and fields in relation to institutional operations.

—

[6:8:26] Further to such discussions, there are various approaches and philosophies to understanding and perceiving the ontology of an institution or a religious organisation in relation to its belief system.

[6:8:27] The first of these is to be known as proprietism (not be confused with proprietarianism) which states that the philosophic institution is the proprietor of the belief system/philosophy/religion and therefore is as one with the belief system itself; proprietism forms no separation between the institution and the belief system over which it holds proprietorship; it is important to note that all approaches institutional ontology in the context of Astronism due assume The Institution's role of proprietorship.

[6:8:28] The second of these approaches is to be known as severism which states that The Institution, despite its proprietorship over Astronism, remains ontologically separate from the belief system of conceptals which form Astronism also despite the fact that The Institution holds an authoritative position in deciding the nature and form of such conceptals in the belief system.

[6:8:29] Furthermore, another approach will hold that The Institution does not hold proprietorship over Astronism itself, but instead, its version of Astronism known as the Astronist Tradition or as Institutional Astronism; this view regarding the ontology of The Institution will be known as diminutionism as it reduces the scope of The Institution's proprietorship.

[6:8:30] I, as Cometan, herein state The Institution sides with the ontology of itself being proprietism because it holds the capacity to both delineate its own version of Astronism in addition to not only accepting alternative versions, either opposing or otherwise, but that it actually encourages other versions to be developed due to its ultimate adherence to the Philosophical Spirit.

[6:8:31] The ontology of The Institution is therefore uphold to be one and the same with the belief system of Astronism formed of a plethora of conceptualities; unlike in severist or diminutionist institutional ontologies, proprietism expounds that The Institution and Astronism are ontologically as one rather than existing in ontological separation.

[6:8:32] Omnidoxically, Cometanically, and Institutionally, the ontology of The Institution is affirmed to be proprietistic due to The Institution's adherence to the Philosophical Spirit as well as due to the fact that it is a philosophic organisation rather than a religious organisation and although it may have its own interpretation of Astronism known as Institutional Astronism, this is no prescribe for Astronists to dogmatically adhere to; therefore, The Institution's ontology of proprietism is not only a demonstration of its nature of being, but it is also an important demonstrator of The Institution's nature as a philosophic organisation as distinct from other types of organisations such as those of an ideological or of a religious orientation.

[6:8:33] In fact, proprietism is fundamental to the identity of The Institution and integral to the way in which it is able to distinguish itself from other organisations; of course, other organisations and institutions will exist in the future that claim to be as one with the teachings of Astronism, but none of them will have been formed in copartation (also referred to as copatriation) with the Omnidoxy and by Astronism's founder myself as Cometan, hence the proprietist ontology of The Institution to being as one with Astronism itself is further affirmed by these notions.

Conceptual Theory

[6:9:1] There exists a major issue that I have identified during my development of the philosophy of Astronism and due to the nature of the type of philosophy that I envision Astronism to be; in order to address this philosophical issue, I herein created and establish that which is to be known as conceptual theory.

[6:9:2] Conceptual theory, also to be known as concept theory, or termed as the theory of the concept is herein created as a discipline of study within the inclusive discipline of ghenology that is primarily concerned with the study of ontological study of concepts both generally and specifically, despite the fact that this discourse focuses more on the former rather than the latter.

[6:9:3] Conceptual theory is to involve the study of the different types or categories of concepts, the criteria for those categories, the utility of concepts, the value of concepts, and the general ontology of concepts; however, the Problem of Conceptual Value is herein introduced and we must address it, but to say that the Problem will be solved within this single discourse is both unrealistic, but it is also not correct because a Problem such as this will require even further development post-omnidoxically.

[6:9:4] One of the primary issues dealt with in relation to conceptual theory is the question of what moment does a concept come into being as part of conceptual ontology which is a transdisciplinary branch of conceptual theory.

[6:9:5] Is it at the moment of an individual's creation of the concept or is it at the moment of another person's acknowledgement and understanding of that concept? These are just some of the most prominent questions within the field of conceptual ontology.

[6:9:6] My concern for concepts and the reason for my creation of conceptual theory as an entire discipline of study dedicated to their address is due to the fact that The Omnidoxo is the collectivisation of the concepts of Astronism; Astronism is a philosophy, but may also be considered a collectivity of concepts in its most basic forms.

[6:9:7] The primary question igniting issues herein as part of this discourse on conceptual theory is the following: what is the value of a concept?

[6:9:8] As I have worked towards the development of the philosophy of Astronism and saw around me a world built on the value of products and services, I began to wonder of the value of that which I was and am still currently creating.

[6:9:9] My initial thought, which continues to hold a firm position in my approach to solving this issue, was that concepts transcend value, but leaving this question here does not satisfy my conscious.

[6:9:10] To augment the famous saying I shall state that value is what makes the world go around and that money is a derivation of value; a dimension of value one could say.

[6:9:11] To argue that concepts transcend value does not allow for an understanding of why concepts are created and the general ontology of a concept.

[6:9:12] We create in order to put into that which we create an intended value, or another person may conduct a valuation of that which we have created so as to derive the value of the entity created.

[6:9:13] Attempting to solve the issue with the notion that concepts hold no value is considered inaccurate because concepts are created entities and whatever is created holds value.

[6:9:14] Perhaps more specifically we should be asking what type of value exists in relation to that of conceptual value?

[6:9:15] The most common and most dominating form of value is of course monetary value.

[6:9:16] Monetary value is that which we all crave for our products and services we are offering to have the highest valuation in, but by applying monetary value to concepts, I consider this to undermine the nature of concepts.

[6:9:17] Concepts are not simply just products to be sold or services to be provided in exchange for money; concepts are our pillars of thought and beliefs, as a type of concept, are what guide us through our lives, but how are we to place a monetary value onto this?

[6:9:18] Doing this does not allow for the appropriate consideration of what concepts are; we cannot say that cosmocentricity is worth £100 and transcensionism is worth double that, so therefore, how can we conjure the value of a concept?

[6:9:19] Additionally, we must ask ourselves the question of whether we even need to conjure the value of a concept? What is the purpose of concept value?

[6:9:20] I, as Cometan, state herein that we absolutely must consider the conjuring of the value of concepts for this stands as an imperative in the correct of the philosophy of Astronism as an organised philosophy; concepts to Astronism are the products and services to a business; we must know the value of that which formulate the identity of that which I have created if we are to appreciate its nature; understanding the value of concepts is a central element to understanding the nature, functionality, and purpose of Astronism as a whole.

[6:9:21] It is essential that we understand conceptual value if we are to understand Astronism itself for it is, as aforementioned, in its most basic form a collectivity of concepts

that share the common origin of being created by myself as Cometan and being first outlined in The Omnidoxy.

[6:9:22] It remains important to preface this discourse by briefly addressing the fact that it introduces a discipline of study that is of an axiological nature for axiology is the study of value and although conceptual value is not the entirety of what conceptual theory studies as a discipline, it does exist as an important element of understanding the ontology of concepts.

[6:9:23] In the affirmative alignment with the Philosophical Spirit, there is no one fixed answer for the issue of conceptual value, but there are methods that we can apply so as to create conceptual value, some of which are identified and discussed within this discourse, however, it is still herein that many more conceptual valuation methods will be contributed by other verified authors post-omnidoxically.

[6:9:24] To introduce our study of conceptual value, it is important to make clear that there exists two distinct forms of conceptual value, the first of which is quantitative conceptual value which collectively relates to the methods involved with the interpretation of conceptual value based on the quantification of the concept or the collectivity of concepts in order to derive their overall valuation.

[6:9:25] On the other hand, the second category of methods for conceptual valuation are those which can be described qualitative methods which are based on the extent of the quality of a concept rather than the quantification of a concept for the valuation of that concept.

[6:9:26] The primary quantitative method for conceptual valuation is that which shall be henceforth known as monetary-based conceptual value focuses on the accumulation of wealth of the proprietor of a concept or a collectivity of concepts as the way in which to quantify the value of those concepts.

[6:9:27] An example of which would be the wealth accumulated by The Church of Jesus Christ of Latter-day Saints as a cumulative valuation of the concepts that originated with that particular branch of Christianity.

[6:9:28] The monetary-based conceptual value approach does create a quantification of the value of concepts, but this is done highly collectively rather than individually which leaves the value of individual concepts as an unknown.

[6:9:29] It also arguably doesn't provide a valuation of concepts, but rather presents the ability of an Institution to make marketing decisions effectively.

[6:9:30] There are also other quantitative methods that address the Problem of Conceptual Value, the first of which shall be henceforth known as adherence-based conceptual value

refers to the quantification of conceptual value through the number of people adhered to the concept in question, or a group of concepts.

[6:9:31] Even though this is a strong argument for the quantification of conceptual value, there remains a prominent issue with this approach to conceptual value because it remains difficult to quantify people's adherence to individual concepts because even though 1.3 billion people are officially adhered to Catholicism, this demonstrates adherence to a large variety of concepts that are encapsulated within umbrella term of Catholicism.

[6:9:32] Additionally, the huge numbers associated with adherence are not specific to people's level of regular adherence, true belief, and actual understanding of the concepts within that which they have been adhered to since they were children as is the case for most people that are officially adhered to a religion.

[6:9:33] The main issue with adherence-based conceptual value is that it overlooks individual concepts due to the fact that we cannot quantify the number of people whom believe in Jesus's resurrection, for example, and who also believe in the Catholic concept of transubstantiation.

[6:9:34] To notionise that the same 1.3 billion people adhere to these two concepts by equal measure is too much of an assumption, despite its logicity.

[6:9:35] Production-based conceptual value, as it shall be henceforth known, derives conceptual value from the extent to which products that represent a concept are sold for and the amount to which they are sold.

[6:9:36] An example of this is encapsulated as The Omnidoxy itself as the collectivisation of the concepts of Astronism; a production-based conceptual value of Astronism would therefore notionise that the extent of the conceptual value of Astronism is firstly, the price at which The Omnidoxy can be sold for, and the amount of copies The Omnidoxy sells.

[6:9:37] This can be considered a derivation of the aforeintroduced method of monetary-based conceptual value as it is predicated on the notion of the extent to which a product resembling or representing Astronism can be sold for and the extent to which it sells.

[6:9:38] Furthermore, this provides a quantification for conceptual value, however, like some of the other methods herein mentioned, it only provides a quantification for a collectivity of concepts rather than individual concepts.

[6:9:39] That which shall henceforth be known as employment-based conceptual value refers to the extent to which a person is paid in order to create concepts for an organisation, an example of this is New Concept Development (NCD) as part of The Institution of The Philosophy of Astronism which purposefully runs this programme for the development of new concepts and provides people with employment so that they can regularly do this.

[6:9:40] Additionally, the practice-based conceptual value method pertains to the extent to which the principles of concept are put into practice is a derivation of the concept's value.

[6:9:41] Now we come to introduce the different qualitative methods for conceptual valuation with the first of these including the dependence-based conceptual value method which involves deriving conceptual value from the extent to which a functioning entity is dependent upon a concept.

[6:9:42] Keeping with the example of Catholicism, one could notionise by this method that Jesus's resurrection holds a much greater conceptual value than any other concepts within Catholicism due to the entirety of Catholicism being predicated on the concept of Jesus's resurrection while other concepts are secondary and therefore can be considered to derive and be dependent upon the concept of Jesus's resurrection.

[6:9:43] However, there remains an issue with this also because this method doesn't allow for the quantification of the concept in question.

[6:9:44] Stating that Jesus's resurrection holds a high conceptual value due to the fact that Catholicism is dependent upon that concept is firstly, a subjective notion of conceptual value, and is secondly, not a quantified notion of conceptual value for the descriptor of high does not equate to a quantified notion of conceptual value.

[6:9:45] That which shall henceforth be termed as influence-based conceptual value pertains to the method of deriving conceptual value based on the notion that the extent to which a concept influences and this method postulates itself as being able to both qualitatively and quantitatively measure conceptual value.

[6:9:46] Application-based conceptual value refers to the extent to which the concept is applied, but also includes the extent to which the concept is applicable.

[6:9:47] Meanwhile, that shall be known as creation-based conceptual value involves the extent to which one concept has lead to the creation of other concepts as means to measure its conceptual value.

[6:9:48] Additionally, the cocreation-based conceptual value method measures conceptual value according to the extent of a concept's value is derived from the greater amount of people that have contributed to its creation.

[6:9:49] Requirement-based conceptual value pertains to the extent to which a concept is required in a society or the extent to which a society, or individual is convinced that they require said concept.

[6:9:50] As another qualitative method, that which shall be termed as beneficiary-based conceptual value involves the extent to which a person has received benefit from the

application of a concept to their circumstances, or the extent to which their circumstances have bettered after the application of the concept.

[6:9:51] The measurement of conceptual value according to the extent to which the circumstances of the time, location, and context make for the relevancy of the concept which determines its value is to be herein introduced as the circumstance-based conceptual value approach.

[6:9:52] As the final entry into the qualitative methods, that which will be henceforth referred to as the fluctuant-based conceptual value methods involves the notion of conceptual valuation based on the constant fluctuations of the value of concepts, which postulates that the nature of the value of concepts is motional, and that the valuation of concepts is only measurable for a particular time, location, and context rather than a standard or fix measurement of a concept's value which makes the entire process of conceptual valuation in fix measures to be rendered useless or at least inaccurate.

[6:9:53] However, as the final entry into the definitions of these different methods of conceptual valuation, there is a conceptual valuation method that remains both qualitative and quantitative in its nature.

[6:9:54] This is the promulgative-based conceptual value which derives conceptual value from the extent to which a philosophy, a concept within that philosophy, or a group/segment of concepts within that philosophy are known to exist (notably not adhered to) by the largest amount of people (quantitative), but also the extent to which those people truly understand the concepts they are aware of (qualitative).

[6:9:55] That which is to be henceforth referred to and appellated as the Conceptual Proportionality revolves around a notion within monetary-based conceptual value involving the idea that concepts can and should be considered in proportion to the profit they are able to generate.

[6:9:56] An example of this is seen with the new religious movement of Scientology which have a system by which the more money and time a person puts into their study of the religious concepts, the greater amount of concepts are revealed to them depending upon the level at which they have reached within the religion.

[6:9:57] This may also be known as scale-based conceptual value for a hierarchy or ranking system is formulated in which concepts are only revealed at certain stages due to their greater value; the higher the concept up the scale, the greater value it holds.

[6:9:58] A subbranch of study as part of conceptual value within conceptual theory is that which focuses on conceptual value cost which is predicated on the questions of what forms of cost (time, money and other resources) have been utilised in the creation of the value of a concept and also considers whether the cost of a concept can ever be truly quantified.

[6:9:59] That which is to be primarily referred to as hyperconceptualisation, and also known as conceptual acceleration, is herein first introduced as being the psychological phenomena that I have experienced many times during my authorship of The Omnidoxy and the creation and establishment of Astronism and it refers to the instance in which a person thinks of a single idea and that idea quickly expands into many more ideas through accelerated ideation.

[6:9:60] Essentially, an idea that creates a domino effect which subsequently creates a plethora of other related and unrelated ideas is herein defined as a hyperconceptualisation.

[6:9:61] This phenomena may take place over the course of a few days, but is most commonly experienced within the same of a few hours after which a lull is often experienced in which a person thinks of very few new ideas that hyperconceptualise.

[6:9:62] A person cannot control when an idea will hyperconceptualise; it simply just occurs without any indication for the reasons which is why it is herein described as a phenomenon.

[6:9:63] My personal experience with hyperconceptualisation is that it occurred a couple of times a month for me with differing strengths and in different circumstances including times, locations, and concepts.

[6:9:64] From my experience, hyperconceptual triggers also exist in mystery for I have never been able to derive a pattern of hyperconceptual triggers putting them into further obscurity.

[6:9:65] Another pair of terms to introduce herein are conceptual subjectivity and objectivity, each of which pertain to states, or qualities regarding the nature of concepts and their ontologies.

[6:9:66] Conceptual subjectivity postulates the notion that concepts ultimately hold a subjective nature therefore the pinpointing of a universal valuation for a concept is not a possibility.

[6:9:67] Oppositely, conceptual objectivity postulates the notion that concepts are ultimately objective by their nature therefore pinpointing a universal valuation for a concept, or a collectivity of concept is possible.

[6:9:68] By this dichotomy, we understand that there exists two natures to the ontology of concepts for the beingness of a concept can either be understood as something that is subjective or as something that is objective, the former of which demonstrates a nature of quantitative immeasurability and the latter of which demonstrates a nature of quantitative measurability.

[6:9:69] That which is also contemplated and studied within the boundaries of conceptual theory is that which shall be termed as the economy of concepts, or the promulgative economy as it may also be known.

[6:9:70] This term pertains to the Astronist notion of the existence of a market in which religions, philosophies, organised philosophies, and ideologies are all vying for the awareness, understanding, and adherence of their own concepts, beliefs, theories, and school of thought over other religions, philosophies, organised philosophies, and ideologies.

[6:9:71] This is considered to be a real economic market in which people's money is replaced by their awareness, understanding, and adherence to these types of systems of thought which is therefore considered to be an amalgamated entity of different methods directed towards understanding and manifesting conceptual value.

[6:9:72] Not only this but the economy of concepts is central to the nature of and reasons for the organisation of philosophy as part of the entire process of the reascension of philosophy because it is the nature of the strategic development of Astronism as a propertied philosophy under the proprietorship of The Institution of The Philosophy of Astronism to successfully perform within the economic of concepts.

[6:9:73] The notion that promulgability is both a quantitative and qualitative approach to conceptual value therefore becomes relevant within conceptual theory because it is predicated on the notion that the measurement of a philosophy's success is in proportion to the highest number of people being aware of that philosophy (quantitative).

[6:9:74] Additionally, it is not only this extent, but also the depth to which people know the concepts within the philosophy, the amount of concepts they know, and the quality of their understanding of those concepts which is what ultimately makes promulgability a qualitative approach to conceptual value.

[6:9:75] Conceptual worth and conceptual value are similar yet distinct concepts as conceptual value is collectivistic by its definition and nature while conceptual worth invokes a much more personal understanding of what conceptual value relates to.

[6:9:76] Conceptual worth involves how an individual considers a particular concept to have helped them in their own personal circumstances, an individual's own personal experiences with a concept, or a person's own individual opinions on a particular concept or group of concepts.

[6:9:77] Essentially, conceptual worth is non-personal conceptual value while conceptual value is collectivistic and more societal rather than personal.

Introduction to Expology

[7:1:1] The world beyond our world is the world we ought to explore, for the world on which we reside has been explored and now it is time to fulfil our true purpose and go beyond that which no human has before and embark on our true journey.

[7:1:2] The exploration of the cosmic world is now upon us and it is those who think limitlessly, doubtlessly and beyond that which can be seen, who will qualify for such a grand journey.

[7:1:3] This new world, it is all but familiar yet it is one's attitude which progresses all to the next step of the grand journey without end.

[7:1:4] Forget all that is Earthly and all that you have been taught, for this new world acts not in accordance to such rules as it follows none.

[7:1:5] Encourage the young to dream of the cosmos and all its wonders, known and not, for one may grow to be gifted the ideas that progress all further.

[7:1:6] It is the passage of what has been known, what is known and what shall be known that one must understand, for all that we have known and is known may not suit the future known.

[7:1:7] Maintain your faith yet do not fear unfamiliarity and all it may gift to you.

[7:1:8] Still, watch for those who maintain faith without foundation and do not let one be the cause of stagnancy for all.

[7:1:9] It is the push of change that is to drive us further into the direction of that which we were planned to follow.

[7:1:10] About this new world, all that is said is not wrong until proven not so and all that is said is not right until proven so, but allow your's and other's thoughts to mix and mesh and manufacture that which may be the key.

[7:1:11] Remember, it is the beauty of this new world that not one is right and not one is wrong for we all have knowledge none until this new world is explored.

[7:1:12] Find, you will, those who share this new world, but do not fear.

[7:1:13] They are of same source and structure and kin to you.

[7:1:14] Welcome them, treasure them and learn from them for you may need their knowledge to survive the grand unknown.

[7:1:15] Your faith, it should not act as a barrier to you from exploration, for your faith will evolve with you and your morals and principles will not change if you do not wish them do so.

[7:1:16] It be your faith that guides you.

[7:1:17] It be your faith that should improve you.

[7:1:18] It be your faith that enlightens you.

[7:1:19] Make what you wish be your faith, but do not turn your back to this new world welcoming you.

[7:1:20] Now, go and think and wonder and wish all about this new world, yet one thing must be pressed; this new world, it is one of danger, unknownness and the darkest of all creation, though it is your home for you live within its borders already.

[7:1:21] The rest welcomes you and your brothers and sisters to explore it and all its many worlds for our world is of large kin and we have met only a few of its relatives.

Expological Investigation

[7:2:1] Expology is the inclusive discipline of study dealing with the contemplation of the Humanic Exploration of The Cosmos and wider space exploration, the belief orientations, concepts, theories, and notions associated with such a journey and era, as well as all the possible instances and events that could take place during the Humanic Exploration of The Cosmos.

[7:2:2] Everything begins with belief and humanity's exploration of The Cosmos is no different for I am Cometan and I am the believer in The Cosmos and our exploratory role within it.

[7:2:3] The philosophical reasons for cosmic exploration are superior over all other reasons for space exploration; the Humanic Exploration of The Cosmos is a philosophical and cultural period and process with its economic, financial, and technological elements remaining secondary.

[7:2:4] If we know not what we do something for then we hold no purpose in that which we do and it is philosophy that guides us to purpose and meaning.

[7:2:5] Similar to how the Christian restorationists have attempted and continue to attempt to restore the values of the Christian religion to a more primitive earlier time, the Astronist philosophical tradition in its entirety, as well as the philosophy of Astronism in particular, can be labelled as that which shall be henceforth known as remediationist, or remedist.

[7:2:6] The belief orientation of remediationism, or shortly known as remedism, is the primary belief orientation of the Astronist philosophical tradition regarding the general topic of expology for it states that humanity's understanding and perception of The Cosmos, and our place, role, and destiny within it are fundamentally skewed and require crucial reunderstanding and reconfiguration by a philosophy that supports the Humanic Exploration of The Cosmos.

[7:2:7] It is from the remediationist principles of Astronism that the reascensionist and reinvigorationist movements of Astronism arise and are predicated upon; the essential premise of remediationism is that humanity's understanding of The Cosmos must be remedied as it is presently in a state of distortion and it is one of the primary goals of Astronism to remedy this, hence the thematic foundations of Astronism and its development of central beliefs and tenets such as cosmocentrism, astrocentrism, and transcensionism.

[7:2:8] Any instance in which remediationist principles are applied is to be henceforth referred to as an act of remediatry; for example, the application of any reascensionist or reinvigorationist principles would therefore also be an act of remediatry.

[7:2:9] It is remediationism that informs Astronism of the majority of its beliefs because with the development of remediationism brings purpose and function to Astronism which points to one of the appellations used to refer to Astronism which is The Remediator.

[7:2:10] It is essentially so that remediationism is a proponent of mass perceptual change which will subsequently transcend to mental, physical, religious, technological, and even economic change with regards to the entity that we know and love as The Cosmos.

[7:2:11] By the principles of remediationism, Astronism is therefore dedicated to the cause of space exploration, particularly the Humanic Exploration of The Cosmos, the former of which and similarly worded terms pertains to the process in general, while the latter term is specifically the type of space exploration that Astronism advocates for; a philosophy-first form of space exploration lead by Astronic beliefs and ideas which thereafter inform the physical, technological, and economic elements of the process.

[7:2:12] The essential principle here is that Astronism advocates for conceptuality first before physicality arises; the conceptual must come with the physical to follow.

[7:2:13] Astronism is certainly therefore a proponent of space advocacy which of course encompasses any type of support for space exploration, space colonisation as well as private and public spaceflight in their non-philosophic senses.

[7:2:14] Astronism is not only in its advocacy for space exploration in general for since the Space Age, hundreds of companies, organisations, and government agencies have arisen that holding dear many of the same principles that Astronism philosophically advocates for.

[7:2:15] However, we present the unicity of Astronism being that it is the only fully organised philosophy that holds a strong advocacy and is in fact entirely predicated upon the notions, principles, and prophecies of space exploration and civilisation so much so that the theme of Astronism is oriented around this due to its cosmocentric outlook.

[7:2:16] Just like the organisations, companies, and agencies mentioned, Astronism, as an organised philosophy, will conduct and manifest its steadfastly held principles of space exploration through activities like educating the public on space related subjects, lobbying governments or increased funding in space-related activities or supporting private space activities, but it shall do this in a unique way for it is represented and solely propertied by its founding institution; The Institution of The Philosophy of Astronism.

[7:2:17] Therefore, it is The Institution that the public will see as the primary authoritative representative for the philosophy of Astronism and it is The Institution, and its subsidiary organisations that will lead the way in the promulgating the principles of the philosophy and their subsequent translation into various activities and operations.

[7:2:18] And just like other organisations, The Institution will recruit employees and volunteers, fund projects, and provide information for their membership and interested visitors.

[7:2:19] Similarly to other organisations in the field, The Institution's operations will be sub-divided into four categories including enterprise (its commercial operations), practice (its funding operations), advocacy (its educational operations), and theory (its philosophic operations and contributions).

[7:2:20] It has been said that "the space movement seeks the betterment of humanity and a greater future for everyone" and Astronism is no different in its own outlook and its principles.

[7:2:21] Of course, it is only realistic that each and every organisation that predicates its operations around the space industry holds different priorities and short-term objectives, but all organisations should share the ultimate goal of building space settlements.

[7:2:22] To go further than this, we can also categorise organisations involved in space exploration into two camps, the first being labelled as Astronic and the second being labelled as non-philosophic, or just non-Astronic.

[7:2:23] To gain an understanding of the differences between these two forms of organisations, we must look towards the goals of the organisations in question; to clearly define an Astronic organisations goals, they generally yet not exhaustively include the following:

[7:2:23a] The establishment of space settlements with the intention of developing such settlements into entire civilisations with huge human populaces.

[7:2:23b] The precise prioritisation for the discovery and interaction with non-anthropoc forms of sentient life as an essential primary goal of space exploration.

[7:2:23c] The promulgation of Astronism as the first and only cosmocentric philosophy in tandem with space explorative activities.

[7:2:23d] The furtherance of humanity's scientific knowledge and understanding of The Cosmos as a working and well-ordered whole as well as its individually functioning progeny and phenomena.

[7:2:23e] Philosophically, to gain a greater understanding of ourselves and to attempt to come closer to answering some of the most enduring questions that have persistently been unanswerable throughout human history.

[7:2:23f] Economically, to greatly enhance the scope of human economic output through the development of planets other than The Earth which will form new economies,

industries, products, and sectors that greatly outweigh the present economic capacity of The Earth.

[7:2:24] Most of the leading non-profit space organisations join together to form the Space Exploration Alliance which Astronism, via its representative as The Institution of The Philosophy of Astronism, intends to also become a member of by clearly stating its own goals and the philosophical principles that are guiding its path.

[7:2:25] As an American organisation, the Alliance has been formed to "advocate for the exploration and development of outer space" to members of the United States Congress.

[7:2:26] The Alliance organises the annual Legislative Blitz to lobby members of Congress for space exploration, and every space enthusiast is encouraged to participate in the Legislative Blitz by calling, emailing, or personally visiting their Congressperson's office.

[7:2:27] These are activities that The Institution and its subsidiary organisations will also become involved with, especially regarding promulgating the continuously developing and altering ideas and beliefs of Astronism.

[7:2:28] It is essential to understand that the intentions of The Institution shall always remain Astronic in their nature and this should always be made clear, especially when subsidiary organisations of The Institution may not be universally known to be working in the name of Astronism.

[7:2:29] Having said this, it is the belief of the Astronist philosophical tradition that space-related affairs for the future must not be entangled with politics and public policy of individual nations and even though the present practicality of removing the space industry from the politics of individual nations is a feat too overbearing, this remains another of the principal end goals of Astronism.

[7:2:30] Any instance in which an industry is attempted to be removed from the political sphere or from the public policy of a singular nation, especially when such national policy demonstrates the industry is to be henceforth referred to as the process of ectopoliticisation.

[7:2:31] It remains important to understand that ectopoliticisation is not attempting to remove the discussion of space from politics or public policy, but it is instead attempting to make the space industry into something that transcends politics and so that even when the bureaucracies of national and international politics bring activities to a halt, the extent to which this affects the operations of the entities working within the space industry is minimised.

[7:2:32] This is because space will be ecto- or outer, or in some sense, beyond the realm of politics meaning that it is still discussed within the political sphere, but it is not held back

by political bureaucracies as is the case in the present time and as has been the case since the industry of space began to develop in the 20th century.

[7:2:33] The process of ectopoliticisation must be encouraged so that spaceflight and cosmic exploration is not regressed and controlled by the corruptions of politics.

[7:2:34] This is believed due to the principle that spaceflight is a humanwide topic and it should therefore be dealt with by an independent organisation or set of organisations that make decisions for states that have joined it regarding their space programmes as an ectopolitical organisation.

[7:2:35] An ectopolitical organisation is an organisation that is not effected or influenced by the politics within and between individual nations.

[7:2:36] Ectopoliticisation is applied in this context in order to stop space politics and the space movement from being derailed or regressed by the bureaucracies of political parties that may attempt to stop the development of the space industry for their own reasons whether that be due to complications regarding lobbying or due to instances of corruption and bribery which do continue to persist worldwide.

[7:2:37] Space policy is herein categorised as a major branch of spaciology involving the political decision-making process for, and application of, public policy of a state, or an association of states, regarding the topics of spaceflight and the uses of outer space, both for civilian (scientific and commercial) as well as for military purposes.

[7:2:38] International treaties, such as the 1967 Outer Space Treaty, have attempted to maximise the peaceful uses of space and restrict the militarisation of space, but the Astronist Tradition and The Institution holds the view that such treaties are firstly outdated, do not consider the complexities of space that we now better understand, they do not consider space in the same way that it is presented herein both economically, culturally, and philosophically, and they do not hold the same ambitions as the Astronist Tradition and many others, both businesspeople and ordinary people, regarding the exploration and utilisation of space.

[7:2:39] Space policy intersects with science policy, since national space programs often perform or fund research in space science, and also with defence policy, for applications such as spy satellites and anti-satellite weapons; from a philosophic perspective, ethics needs to be intermingled with space policy as well as in addition to the cultural factors involved with space and both its exploration and utilisation.

[7:2:40] Space policy also encompasses government regulation of third-party activities such as commercial communications satellites and private spaceflight which is extremely important regarding the spacial ethics, baronism, and the utilisation of space for non-illicit intentions.

[7:2:41] Space policy also encompasses the creation and application of space law, and space advocacy organisations exist to support the cause of space exploration, but this has not, at least not until the Astronist Tradition has been founded, been considered in philosophic, cultural, social, or religious terms which the Tradition advocates for as it considers space exploration to be a tridimensional endeavour involving philosophy, culture, and societal elements.

[7:2:42] The future of space exploration involves both telescopic exploration and the physical exploration of space by unmanned robotic space probes as well as human spaceflight, but the perception of the masses that space exploration is not only a scientific endeavour but a philosophic, cultural, and social endeavour is the emphasis that the Astronist Tradition intends to make with it holding the ambition to become the leader in those three elements of the space exploration process.

[7:2:43] Near-term physical exploration missions have been announced by or are being planned by both national and private organisations, focused on obtaining new information about the solar system, but the Astronist Tradition intends to add new objectives to those existing, some of which have already been outlined or inferred as part of the writing of the Omnidoxy.

[7:2:44] In the longer term there are tentative plans for crewed orbital and landing missions to The Moon and Mars, establishing scientific outposts that will later make way for permanent and self-sufficient settlements with the title of civilisations being granted only as they settlements reach a certain, yet still unspecified, state of civility, the discussion of which is considered to be an interesting area of study and contemplation for expologists.

[7:2:45] Further exploration will potentially involve expeditions and settlements on the other planets and their moons as well as establishing mining and fuelling outposts, particularly in the asteroid belt.

[7:2:46] Physical exploration outside the solar system will be robotic for the foreseeable future unless technological advancements increase to the extent of which they are able to propel human spacecraft faster yet still safely for human survival; it is the distances of space that technologists and engineers must grapple with.

[7:2:47] That which is to be known as unmanned exploration is the practice of exploring celestial bodies without actually sending humans aboard missions.

[7:2:48] However, the Astronist Tradition argues that the more people venture into space, despite the risk and despite the greater cost, the normalisation of spaceflight will grow.

[7:2:49] For this reason, that is why the Astronist Tradition encourages and intends to bolster the widespread perception that human space exploration, as it is appellated as the Humanic Exploration of The Cosmos, is a tridimensional endeavour of philosophic,

cultural, and societal/social elements and intentions; it is for these elements that will encourage greater enthusiasm for we need only turn to what millions of people have done positively in the name of their religion and the impossibilities that they were able to achieve with the religious force driving them forward; is it this type of force, known in this context and introduced herein as the Philosophic Force, that the Astronist Tradition intends to imbue in the masses.

[7:2:50] If spaceflight continues to remain something that is shrouded in mystery and fear then how will we be able to encourage the next generations to become part of the spacefaring industry?

[7:2:51] The future possibilities for deep space exploration are currently held back by a set of technical, practical, astronomical, and human biological limitations, which continue to define and retain the current ability of both manned and unmanned space exploration to flourish to its full potential.

[7:2:52] As of 2017, the farthest any man-made probe has traveled is the current NASA mission Voyager 1, currently about 13 billion miles (21 billion km), or 19.5 light hours away from the Earth, while the nearest star is around 4.24 light years away; this puts into perspective the minimality of our spacial endeavours and the huge journey of challenges that lay ahead of the entirety of humanity.

[7:2:53] The following list summarises some of the technical limitations facing human spaceflight: the current status of space-faring technology, including propulsion systems, navigation, resources and storage.

[7:2:54] As previously mentioned, distance is a major obstacle for the astronomical order of magnitude of the distance between us and the nearest stars continues to be a challenge for the current development of space exploration.

[7:2:55] At its current top speed of 157,100 miles per hour (70.2 km/s), the Helios 2 probe would arrive at the nearest star, Proxima Centauri, in around 18,000 years, much longer than a human lifespan and therefore requiring much faster transportation methods than currently available.

[7:2:56] In terms of propulsion, the main challenge is the liftoff and initial momentum, since there is no friction in the vacuum of space with the storage and efficiency of fuel also continuing to be a pressing issue.

[7:2:57] Based on the mission's goals, including factors such as distance, load and time of flight, the type of propulsion drive used, planned to use, or in design varies from chemical propellants, such as liquid hydrogen and oxidiser (Space Shuttle Main Engine), to plasma or even nanoparticle propellants.

[7:2:58] The proposed Project Longshot Nuclear Fission Engine schematic presents the theoretical possibilities of nuclear based propulsion which have been analysed for over 60 years, such as nuclear fusion (Project Daedalus) and nuclear pulse propulsion (Project Longshot), but have since been discontinued from practical research by NASA.

[7:2:59] However, there are many leading scientists whom continue to stand by this segment of theories as the most realistic form of space exploration methods that will be able to make longfield human spaceflight into a reality.

[7:2:60] On the science fiction side, the theoretical Alcubierre drive presents a mathematical solution for “faster-than-light” travel, but it would require the mass-Energy of Jupiter, not to mention the realistic technical issues involved in the practical development of such a contraption.

[7:2:61] The human element in manned space exploration adds certain physiological and psychological issues and limitations to the future possibilities of space exploration, along with storage and sustenance space and mass issues.

[7:2:62] The physiological issues involved with human space exploration are enormously long including the fact that transitioning gravity magnitudes on the body will be detrimental to a person’s orientation, coordination, and balance.

[7:2:63] Without constant gravity, bones suffer disuse osteoporosis, and their mineral density falls twelve times faster than the average elderly adults.

[7:2:64] Without regular exercise and nourishment, there can be cardiovascular deterioration and loss in muscle strength.

[7:2:65] Dehydration can cause kidney stones, and constant hydro-static potential in zero-g can shift body fluids upwards and cause vision problems.

[7:2:66] Furthermore, without Earth’s surrounding magnetic field as a shield, solar radiation has much harsher effects on biological organisms that are exposed to it in space.

[7:2:67] This type of exposure can include damage to the central nervous system, altered cognitive function, reducing motor function and incurring possible behavioural changes, as well as the possibility of degenerative tissue diseases.

[7:2:68] Not only are there major physiological issues, but there exists tremendous psychological issues with human spaceflight, the majority of which have not yet been discussed or truly understood which is why the Astronist Tradition advocates for much greater levels of in-depth study of which it has termed as spacial psychology as a discipline of study dedicated to empirically understanding the effects of living in space or on other planets on the human psychology.

[7:2:69] According to NASA, isolation in space can have detrimental effects on the human psyche, the specific effects of which still remain largely unknown which suggests that it is completely true that human psychology in space still remains almost completely unknown.

[7:2:70] Behavioural issues, such as low morale, mood-swings, depression, and decreasing interpersonal interactions, irregular sleeping rhythms, and fatigue occur independently to the level of training, according to a set of NASA's social experiments, are the main psychological effects and symptoms that human spacefarers will face.

[7:2:71] The most famous of NASA's social experiments, Biosphere 2, was a 2 year long, 8 person crew experiment in the 1990s, in an attempt to study human necessities and survival in an isolated environment.

[7:2:72] The result of which were stressed interpersonal interactions and aloof behaviour, including limiting and even ceasing contact between crew members, along with failing to sustain a lasting air-recycling system and food supply.

[7:2:73] Resources and sustenance is another major segment of issues as part of human spaceflight and considering the future possibility of extended, manned missions, food storage and resupply remain relevant limitations that are not easily overcome.

[7:2:74] From a storage point of view, NASA estimates a 3-year Mars mission would require around 24 thousand pounds (10,000 kg) of food, most of it in the form of pre-cooked, dehydrated meals of about 1.5 pounds a portion.

[7:2:75] Fresh produce would only be available in the beginning of the flight, since there would not be any type of refrigeration systems, but if there was a refrigeration system, then fresh food would be a greater possibility and would significantly increase living standards aboard such a spaceflight.

[7:2:76] Water's relatively heavy weight is a further limitation considered within the storage segment of issues, so much so that on the International Space Station (ISS), the use of water per person remains limited to 11 litres a day, compared to the average of 132 litres per person.

[7:2:77] The ISS "Veggie plant growth system" and Red Romaine Lettuce have been used for purposes of resupply supported by efforts made to recycle, reuse and reproduce, to make storage more efficient.

[7:2:78] Water can be produced through chemical reactions of hydrogen and oxygen in fuel cells, and attempts and methods of growing vegetables in micro-gravity are being developed and will continue to be researched.

[7:2:79] Lettuce has already successfully been grown in the ISS's "Veggie plant growth system", and has been consumed by the astronauts, even though large-scale plantation is still impractical, due to factors such as pollination, long growth periods, and lack of efficient planting pillows.

[7:2:80] That which will be henceforth referred to as space nursing pertains to the nursing speciality that studies how space travel impacts human response patterns and also pertains to a wider industry of nursing in space environments, such as all astronauts on missions being required to hold medical training as well as the particular practices of nursing that are and are not implementable in the environment of a spacecraft.

[7:2:81] As a branch of space medicine in association with space doctoring, the speciality will also contribute to knowledge about nursing care of earthbound patients with its successful understanding remaining vital to the success of human spaceflight.

[7:2:82] There are a plethora of medical issues expected to be caused by spaceflight and it must also be remembered that this list is not exhaustive.

[7:2:83] The effects of microgravity on fluid distribution around the body are greatly exaggerated which is expected to cause significant issues to what we consider normal bodily functions.

[7:2:84] In October 2018, NASA-funded researchers found that lengthy journeys into outer space, including travel to the planet Mars, may substantially damage the gastrointestinal tissues of astronauts.

[7:2:85] The studies support earlier work that found such journeys could significantly damage the brains of astronauts, and age them prematurely known as the process of prematuration.

[7:2:86] Cardiac rhythms is another major element of medical issues and heart rhythm disturbances have been seen among astronauts through experimentation before, during and after spaceflight.

[7:2:87] Most of these have been related to cardiovascular disease, but it is still not clear as to whether this was due to pre-existing conditions, or the effects of spaceflight.

[7:2:88] It is hoped that advanced screening for coronary disease has greatly mitigated this risk of increased or irregular cardiac rhythms.

[7:2:89] Other heart rhythm problems, such as atrial fibrillation, can develop over time, necessitating periodic screening of crew members' heart rhythms.

[7:2:90] Beyond these terrestrial heart risks, some concern exists that prolonged exposure to microgravity may lead to heart rhythm disturbances.

[7:2:91] Although this has not been observed to date, further surveillance is warranted and this remains one of the most important elements of space medicine to understand and resolve before mass space exploration is granted to begin.

[7:2:92] In space, astronauts use a space suit, essentially a self-contained individual spacecraft, to do spacewalks, or extra-vehicular activities (EVAs) which causes decompression illness to take place after spaceflight.

[7:2:93] Spacesuits are generally inflated with 100% oxygen at a total pressure that is less than a third of normal atmospheric pressure; this is another instance in which a dramatic physiological change must occur for all humans participating in spaceflight, either for commercial, scientific, or militaristic purposes.

[7:2:94] Eliminating inert atmospheric components such as nitrogen allows the astronaut to breathe comfortably, but also have the mobility to use their hands, arms, and legs to complete required work, which would be more difficult in a higher pressure suit.

[7:2:95] After the astronaut dons the spacesuit, air is replaced by 100% oxygen in a process called a nitrogen purge.

[7:2:96] In order to reduce the risk of decompression sickness, the astronaut must spend several hours pre-breathing at an intermediate nitrogen partial pressure, in order to let their body tissues outgas nitrogen slowly enough that bubbles are not formed.

[7:2:97] When the astronaut returns to the shirt sleeve environment of the spacecraft after an EVA, pressure is restored to whatever the operating pressure of that spacecraft may be, generally normal atmospheric pressure.

[7:2:98] Decompression illness in spaceflight consists of decompression sickness (DCS) and other injuries due to uncompensated changes in pressure, or barotrauma.

[7:2:99] Decompression sickness is the injury to the tissues of the body resulting from the presence of nitrogen bubbles in the tissues and blood.

[7:2:100] This occurs due to a rapid reduction in ambient pressure causing the dissolved nitrogen to come out of solution as gas bubbles within the body.

[7:2:101] In space, the risk of DCS is significantly reduced by using a technique to wash out the nitrogen in the body's tissues.

[7:2:102] This is achieved by breathing 100% oxygen for a specified period of time before donning the spacesuit, and is continued after a nitrogen purge.

[7:2:103] DCS may result from inadequate or interrupted pre-oxygenation time, or other factors including the astronaut's level of hydration, physical conditioning, prior injuries and age.

[7:2:104] Other risks of DCS include inadequate nitrogen purge in the EMU, a strenuous or excessively prolonged EVA, or a loss of suit pressure.

[7:2:105] Non-EVA crew members may also be at risk for DCS if there is a loss of spacecraft cabin pressure.

[7:2:106] Symptoms of DCS in space may include chest pain, shortness of breath, cough or pain with a deep breath, unusual fatigue, lightheadedness, dizziness, headache, unexplained musculoskeletal pain, tingling or numbness, extremities weakness, or visual abnormalities.

[7:2:107] Primary treatment principles consist of in-suit repressurisation to re-dissolve nitrogen bubbles, 100% oxygen to re-oxygenate tissues, and hydration to improve the circulation to injured tissues.

[7:2:108] Barotrauma is the injury to the tissues of air filled spaces in the body as a result of differences in pressure between the body spaces and the ambient atmospheric pressure.

[7:2:109] Air filled spaces include the middle ears, paranasal sinuses, lungs and gastrointestinal tract.

[7:2:110] One would be predisposed by a pre-existing upper respiratory infection, nasal allergies, recurrent changing pressures, dehydration, or a poor equalising technique.

[7:2:111] Positive pressure in the air filled spaces results from reduced barometric pressure during the depressurisation phase of an EVA.

[7:2:112] It can cause abdominal distension, ear or sinus pain, decreased hearing, and dental or jaw pain.

[7:2:113] Abdominal distension can be treated with extending the abdomen, gentle massage and encourage passing flatus.

[7:2:114] Ear and sinus pressure can be relieved with passive release of positive pressure.

[7:2:115] Pretreatment for susceptible individuals can include oral and nasal decongestants, or oral and nasal steroids.

[7:2:116] Negative pressure in air filled spaces results from increased barometric pressure during repressurisation after an EVA or following a planned restoration of a reduced cabin pressure.

[7:2:117] Common symptoms include ear or sinus pain, decreased hearing, and tooth or jaw pain.

[7:2:118] Treatment may include active positive pressure equalisation of ears and sinuses, oral and nasal decongestants, or oral and nasal steroids, and appropriate pain medication if needed.

[7:2:119] Ultrasound is the main diagnostic imaging tool on ISS and for the foreseeable future missions.

[7:2:120] X-rays and CT scans involve radiation which is unacceptable in the space environment.

[7:2:121] Though MRI uses magnetics to create images, it is too large at present to consider as a viable option.

[7:2:122] Ultrasound, which uses sound waves to create images and comes in laptop size packages, provides imaging of a wide variety of tissues and organs.

[7:2:123] It is currently being used to look at the eyeball and the optic nerve to help determine the cause(s) of changes that NASA has noted mostly in long duration astronauts.

[7:2:124] NASA is also pushing the limits of ultrasound use regarding musculoskeletal problems as these are some of the most common and most likely problems to occur.

[7:2:125] Significant challenges to using ultrasounds on space missions is training the astronaut to use the equipment (ultrasound technicians spend years in training and developing the skills necessary to be good at their job) as well as interpreting the images that are captured.

[7:2:126] Much of ultrasound interpretation is done real-time but it is impractical to train astronauts to actually read/interpret ultrasounds.

[7:2:127] Thus, the data is currently being sent back to mission control and forwarded to medical personnel to read and interpret.

[7:2:128] Future exploration class missions will need to be autonomous due to transmission times taking too long for urgent/emergent medical conditions which is why each spacefarer should have at least a basic knowledge and practice of medicine and nursing prior to their spaceflight.

[7:2:129] The ability to be autonomous, or to use other equipment such as MRIs, is currently being researched.

[7:2:130] Medicine in space is a major element of space exploration and should therefore be considered and contemplated with incredible significance by Astronists and by The Institution itself as an elemental part of the Humanic Exploration of The Cosmos.

[7:2:131] The Advanced Diagnostic Ultrasound in Microgravity Study is funded by the National Space Biomedical Research Institute and involves the use of ultrasound among Astronauts including former ISS Commanders Leroy Chiao and Gennady Padalka who are guided by remote experts to diagnose and potentially treat hundreds of medical conditions in space.

[7:2:132] This study has a widespread impact and has been extended to cover professional and Olympic sports injuries as well as medical students.

[7:2:133] It is anticipated that remote guided ultrasound will have application on Earth in emergency and rural care situations.

[7:2:134] Findings from this study were submitted for publication to the journal Radiology aboard the International Space Station; the first article submitted in space.

[7:2:135] Decreased immune system functioning is a major medical issue; astronauts in space have weakened immune systems, which means that in addition to increased vulnerability to new exposures, viruses already present in the body, which would normally be suppressed, become active.

[7:2:136] In space, T-cells do not reproduce properly, and the cells that do exist are less able to fight off infection.

[7:2:137] NASA research is measuring the change in the immune systems of its astronauts as well as performing experiments with T-cells in space.

[7:2:138] On April 29, 2013, scientists in Rensselaer Polytechnic Institute, funded by NASA, reported that, during spaceflight on the International Space Station, microbes seem to adapt to the space environment in ways "not observed on Earth" and in ways that "can lead to increases in growth and virulence".

[7:2:139] Increased infection risk is the next major element of medical issues that is expected to occur to astronauts; a 2006 Space Shuttle experiment found that Salmonella Typhimurium, a bacterium that can cause food poisoning, became more virulent when cultivated in space.

[7:2:140] In this part of the Omnidoxy, the Astronist Tradition emulates realism whilst in the majority of the other discourses and disquisitions of the Omnidoxy, the traditional approach of Astronism has been presented which holds the tendency to lean towards

idealism which is of course presented positivistic while realism is most often associated as negativistic.

[7:2:141] More recently, in 2017, bacteria were found to be more resistant to antibiotics and to thrive in the near-weightlessness of space.

[7:2:142] Microorganisms have been observed to survive the vacuum of outer space, however, this does require further experimentation to understand the nature of.

[7:2:143] Researchers in 2018 reported, after detecting the presence on the International Space Station (ISS) of five *Enterobacter bugandensis* bacterial strains, none pathogenic to humans, that microorganisms on ISS should be carefully monitored to continue assuring a medically healthy environment for astronauts.

[7:2:144] Effects of fatigue are also significant for human spaceflight often requires astronaut crews to endure long periods without rest.

[7:2:145] Studies have shown that lack of sleep can cause fatigue that leads to errors while performing critical tasks.

[7:2:146] Also, individuals who are fatigued often cannot determine the degree of their impairment.

[7:2:147] Astronauts and ground crews frequently suffer from the effects of sleep deprivation and circadian rhythm disruption.

[7:2:148] Fatigue due to sleep loss, sleep shifting and work overload could cause performance errors that put space flight participants at risk of compromising mission objectives as well as the health and safety of those on board.

[7:2:149] Loss of balance is extremely important because leaving and returning to Earth's gravity causes space sickness, dizziness, and loss of balance in astronauts.

[7:2:150] By studying how changes can affect balance in the human body, involving the senses, the brain, the inner ear, and blood pressure, NASA hopes to develop treatments that can be used on Earth and in space to correct balance disorders.

[7:2:151] Until then, NASA's astronauts must rely on a medication called Midodrine, which is an "anti-dizzy" pill that temporarily increases blood pressure, and/or promethazine to help carry out the tasks they need to do to return home safely.

[7:2:152] Loss of bone density is absolutely significant because spaceflight osteopenia is the bone loss associated with human spaceflight.

[7:2:153] After a three or four month trip into space, it is known now that it takes about two to three years to regain that lost bone density.

[7:2:154] However, presently new techniques are being developed to help astronauts recover faster.

[7:2:155] Research in the following areas holds the potential to aid the process of growing new bone in order to resolve the loss of bone density from spaceflight.

[7:2:156] Diet and exercise changes may reduce osteoporosis in addition to Vibration Therapy, which may help to stimulate bone growth.

[7:2:157] The taking of medication could trigger the body to produce more of the protein responsible for bone growth and formation.

[7:2:158] Loss of muscle mass is another significant element of spaceflight because in space, muscles in the legs, back, spine, and heart weaken and waste away due to the fact that they no longer are needed to overcome gravity, just as people lose muscle when they age due to reduced physical activity.

[7:2:159] Astronauts rely on research in the areas listed below to build muscle and maintain body mass.

[7:2:160] Exercise may build muscle if at least two hours a day is spent doing resistance training routines.

[7:2:161] Hormone supplements (hGH) may be a way to tap into the body's natural growth signals.

[7:2:162] In addition, medication may trigger the body into producing muscle growth proteins to help rebuild muscle and body mass.

[7:2:163] Loss of eyesight during spaceflight; visual impairment due to intracranial pressure; after long space flight missions, astronauts may experience severe eyesight problems.

[7:2:164] Such eyesight problems may be a major concern for future deep spaceflight missions, including a manned mission to the planet Mars.

[7:2:165] Loss of mental abilities and risk of Alzheimer's Disease is raised as part of continued space travel it has also been discovered.

[7:2:166] On December 31, 2012, a NASA-supported study reported that manned spaceflight may harm the brain of astronauts and accelerate the onset of Alzheimer's disease.

[7:2:167] On 2 November, 2017, scientists reported that significant changes in the position and structure of the brain have been found in astronauts who have taken trips in space, based on MRI studies.

[7:2:168] Astronauts who took longer space trips were associated with greater brain changes.

[7:2:169] From these many medical issues, it is of course clear that spaceflight is not presently compatible with the current state of human physiology, but by considering this in proactive terms, space will not change for humanity, but instead humanity must therefore change instead which is why Astronism believes and centralises transcensionism and may be associated with the ideals and beliefs within transhumanism.

[7:2:170] Orthostatic intolerance in space remains inevitable because astronauts lose fluid volume including up to 22% of their blood volume due to the fact that it has less blood to pump, the heart will atrophy.

[7:2:171] A weakened heart results in low blood pressure and can produce a problem with "orthostatic tolerance," or the body's ability to send enough oxygen to the brain without fainting or becoming dizzy.

[7:2:172] Under the effects of the Earth's gravity, blood and other body fluids are pulled towards the lower body.

[7:2:173] When gravity is taken away or reduced during space exploration, the blood tends to collect in the upper body instead, resulting in facial edema and other unwelcome side effects.

[7:2:174] Upon return to Earth, the blood begins to pool in the lower extremities again, resulting in orthostatic hypotension.

[7:2:175] Radiation effects will likely cause spaceflight radiation carcinogenesis; Soviet cosmonaut Valentin Lebedev, who spent 211 days in orbit during 1982 (an absolute record for stay in Earth's orbit), lost his eyesight to progressive cataract.

[7:2:176] Lebedev later stated: "I suffered from a lot of radiation in space; it was all concealed back then, during the Soviet years, but now I can say that I caused damage to my health because of that flight."

[7:2:177] On May 31, 2013, NASA scientists reported that a possible manned mission to Mars may involve a great radiation risk based on the amount of energetic particle radiation detected by the RAD on the Mars Science Laboratory while traveling from the Earth to Mars in 2011–2012.

[7:2:178] Finally, sleep disorders are expected to be consistent elements of human spaceflight which will no doubt result in performance errors due to fatigue and sleep loss.

[7:2:179] Fifty percent of space shuttle astronauts take sleeping pills and still get two hours or less of sleep.

[7:2:180] NASA is researching two areas which may provide the keys to a better night's sleep, as improved sleep decreases fatigue and increases daytime productivity.

[7:2:181] A variety of methods for combating this phenomenon are constantly under discussion and should be discussed by both scientists as part of organisations like NASA, businesspeople as part of corporations like SpaceX, and philosophers as part of institutions such as The Institution of The Philosophy of Astronism; by this point, we see the tridimensionality of space exploration including scientists, businesspeople, and philosophers.

[7:2:182] As previously mentioned, this portion of the discourse demonstrates the Astronist Tradition's commitment to cosmic realism in the context of the practicality of space exploration rather than cosmic idealism.

[7:2:183] The Astronist Tradition considers cosmic idealism to be core to the theme of Astronism in the context of belief orientations, Astronist art, theories, and the majority of other conceptals except for those in the context of space exploration.

[7:2:184] Cosmic idealism is distinguished from cosmic realism by the notion that cosmic idealism focuses on the pursuit of and belief in perfection in all forms in relation to The Cosmos.

[7:2:185] Meanwhile, cosmic realism is distinguished as the perception of The Cosmos, beliefs regarding The Cosmos, humanity's interactions with The Cosmos, as well as humanity's understanding of The Cosmos in realistic and practical terms in such a way that accepts space exploration for the immense challenges it presents as well as the realities of the aesthetics, functions, and hostility of The Cosmos and its progeny and phenomena rather than idealistic understandings of such elements of The Cosmos, its progeny, or its phenomena.

[7:2:186] Like in all other facets of the Astronist philosophical tradition, there exists a wide variety of belief orientations and approaches to the most interesting and confounding of topics.

[7:2:187] It should therefore come as no surprise that there is a healthy collection of belief orientations on one of the most important and pertinent topics to be addressed within the Astronist philosophical tradition; that of space travel and exploration.

[7:2:188] It remains one of the most important ambitions of the Astronic tradition to be distinguished by its focus and concern for all that does reside beyond earthly and anthropic bounds, meaning all that is cosmic, multiplanetary and celestial by nature.

[7:2:189] This thematic element of Astronism is essential to its development as an entire tradition of philosophical thought and hence I shall further confirm the importance of the continuation of this theme by introducing various different belief orientations regarding that which shall be henceforth as space exploration rationality.

[7:2:190] The Five Orientations on Space Exploration Rationality, as they shall be henceforth collectivised and appellated, will explore the topic of space exploration from different philosophical perspectives, including its purpose, viability, cultural significance, and more as belief orientations are derived.

[7:2:191] The Five Orientations on Space Exploration Rationality include cosmocentrism, survivalism, remunerationism, spaciopoliticism, and spacioscientism, each of which include many more suborientations, as they shall be henceforth referred to, which therefore formulate the entire orientation branch.

[7:2:192] The first branch is the most important to the Astronic tradition and of course originates from within the philosophy of Astronism as it remains one of the philosophy's core tenets.

[7:2:193] I am obviously speaking of cosmocentrism, or cosmocentricity, the former of which pertains to this conceptual in the form of a belief orientation while the latter term relates to this conceptual in the form of a concept, or notion so as to define the usages of these two terms.

[7:2:194] It is important to preface the explanation of these different orientations by the fact that each of the five are provided with their own categorisations, their own characteristics, and essentially their own inner driving forces which they do encompass.

[7:2:195] These categorisations are largely derived from different parts of our societies and they set the theme for the suborientations that reside within each orientation.

[7:2:196] Keeping this in mind, let us look towards the largest orientation, and the one that the Astronist Tradition is affirmably adhered to, which is cosmocentrism.

[7:2:197] Cosmocentrism is provided with the following different forms of rationality which it is considered to address and encompass: philosophical, explorative, social, religious, cultural, and spiritual.

[7:2:198] This means that all of the suborientations within cosmocentrism hold one or more of these different characteristics or categorisations along with many different combinations of such qualities.

[7:2:199] Cosmocentrism itself can be described as a belief orientation holding that humanity must exploration space and enknowledge itself about The Cosmos in a way that The Cosmos and its progenies and phenomena become one of the central elements to everyday human lives, societies, and most importantly, integral to anthropic purpose.

[7:2:200] Cosmocentrism advocates for the centralisation of all that is cosmic in the way we think, the way we interact with others, our ambitions, our moralities, our understandings and conceptions of our individual destinies as well as wider human destiny as a whole, in what we believe about ourselves and others and from where we came and to where we are headed.

[7:2:201] The first of the suborientations within cosmocentrism is that which shall henceforth be known as reprecidationism.

[7:2:202] This term derives from the herein omnidoxically introduced verb to reprecidate which relates to an act of reprioritisation of the basic fundamental foundations of something; in the context of the belief orientation of reprecidationism, this relates to the fundamental restructuring of human society.

[7:2:203] Reprecidationism is the primary cosmocentric reason for space exploration and essentially calls for the idea that humanity's entire orientation, worldviews, and perceptions of themselves individually and collectively will be forever revolutionised by the Humanic Exploration of The Cosmos.

[7:2:204] Therefore, Astronism sees the Humanic Exploration of The Cosmos as the ultimate reprecidation or restructuring function of society and that this reprecidation, this rebasing of human society, thought systems, beliefs, and ontological realities, must occur as part of the Astronomic Revolution for the advancement and progression of humanity with the eventual aim of achieving transcension as part of transcensionism.

[7:2:205] Due to the fact that the Humanic Exploration of The Cosmos is considered to be reprecidatory by its nature, this is used henceforth as a rationality for humanity's imminent exploration and subsequent civilisation of space and planets other than The Earth.

[7:2:206] The reprecidation of humanity can be considered as an aftereffect of the Astronomic Revolution, but also that in whatever belief orientation does eventually come to dominate the Humanic Exploration of The Cosmos, human reprecidation will inevitably occur anyway.

[7:2:207] Therefore, we must make distinct the act or process of reprecidation and its occurrence from the belief orientation of reprecidationism, the latter of which is dependent upon the former while the former is not dependent upon the latter as the process of

reprecation is considered to occur no matter what belief orientation comes to dominate the Humanic Exploration of The Cosmos.
