Thanatologically

Thangdan Hangkai - The School of Physicality in Astration as known in the Laotian language.

Thang Vinnyan - The School of Spirituality in Astration as known in the Laotian language.

The Absolute - in pneumovology of Astronist Philosophy, the appellation for the union between oneself and The Pneumovollic Cosmos.

The Absolute Truths of The Cosmos - in Centrality Studies, the appellation ascribed to the segment of The Grand Centrality that makes statements about what the entity that is known as The Cosmos in the Astronist Cosmology is, and its relationship and interaction with out known entities, realms, and existences.

The Absolute Universe - in Astronist Philosophy, an appellation for the concept that The Universe is ultimately absolute by its own naturity, and that it shall remain this way forevermore, and also pertains that The Universe is not dependent on any external force, even The Divine, and thus this theory remains non-theistic in its orientation.

The Absorbance of The Protectors - in Cosmic Mystology, refers to the period of time which The Four Protectors each become as One with Jesse.

The Accelerating Cosmos - in Astronist Philosophy, a type of cosmos bound to the philosophical orientation and school of thought known as accelerationism.

The Accouchement - in Cosmic Mystology, refers to the moment in which Jesse and The Four Protectors leave The Cosmic Cradle and are born as physical beings.

The Adornment Principle - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the contemplations around and the notions involved with the Adornment Principle.

The Affixation of The Five - in Cosmic Mystology, refers to the moment in which Jesse is joined by The Four Protectors in The Cosmos to become The Five.

The African Epicentre - abbreviated to TAE, the largest stronghold of The Philosophy of Astronism, including all African countries, except Morocco, Tunisia, and Libya in North Africa.

The All-encompasser - in Astronist Philosophy, an appellation for The Divine as inspired and derived by the Astronist Cosmology.

The Amalgamations of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos for the discourse dealing with the discipline of study of mergenics.

The Ambiguation Principle - in omnidoxicology, the rubral used for the discourse addressing the Ambiguation Principle.

The American Smile - also known as The Smile of American States, and abbreviated to TAS, the stronghold of The Philosophy of Astronism across North America, beginning in South Eastern Canada, the Eastern Coast of the United States, the Southern Coast of the United States, the Mexican border states, the Western Coast of the United States, and South Western Canada.

The Animate Cosmos - in Astronist Philosophy, an appellation for a type of cosmos encompassing the idea that The Cosmos in all its perfect functionalities, appearances, and occurrences; essentially, understanding The Cosmos as a living entity rather than an inanimate entity, the oppositism to which is The Inanimate Cosmos.

The Anomalous Structures - in dynastesiology of Astronist Philosophy, the appellation that collectively relates to all approaches to the cosmical hierarchy that deviate from The Conventional Structure.

The Answer of Existence - in Cosmic Mystology, refers to the moment in which The Divine does answer Divine Jesse's question of existence.

The Anthropic Cosmos - in Spacial Psychology of Astronist Philosophy, the appellation for the type of cosmos created by the application and contemplation of the Anthropological Cosmology.

The Anticipation of The Four - in Cosmic Mystology, refers to the period of time in which The Four Protectors are waiting for Divine Jesse to awaken.

The Antithesis - in Astronist Philosophy, an appellation relating to The Chaos, as the antithesis of The Cosmos, which is destined to join with The Chaos in order to form The Synthesis.

The Apogenesis - in omnidoxicology, the rubral for the discourse philosophically addressing the end of existence, the nature of ultimation, and the existential periphery, and encompasses the discipline of study of ultimatology.

The Apolunic Principle - in Astronist Philosophy, the notion holding that humanity must explore the moons of The Cosmos and should be encouraged to enact devotions towards moons so as to emphasise the cosmicality and the importance of moons.

The Appellation - in Taylorianology, the period in which Brandon Taylorian attempted to name every single planet and star system currently then known to humanity.

The Appendadoxy - in Astronist Philosophy, the document that first outlines Inaugurological Astronism and lays the foundations of the discipline of inaugurology by forming the methods, practices, and terminology of conveying The Philosophy of Astronism in such a way that is clear for individuals or groups to quickly grasp, and is closely related to the practice of cosmechism.

The Apprehension of Ellena - in Cosmic Mystology, refers to the hesitancy of the character of Ellena to accept or indeed understand Jesse's transformation into his Divine being.

The Astronomic Revolution - in astronomy of Astronist Philosophy, the appellation for the series of events that is prophesied by the Astronist Tradition to take place and is comprised of three stages, the first of which is the Reascension of Philosophy, the second of which is the Integration of Cultural Astronomy, and the third of which is the Concatenation of Astronarianism.

The Astrophilic Principle - see The Cosmophilic Principle.

The Astrosa - see astrosa.

Theaterium - in Astronist Architecture, a theatre present in some eidouraniums that is heavily cosmically ornamented, usually in the highcosma style, and in which a great variety of shows, ballets, and orchestral performances are conducted throughout the year.

Derivatives

Theateriums

Theatrosy - in occurrology, a set of performances given either by one musician or by different groups of musicians that is cosmically-themed, very elaborate, expensive to attend, and features cosmic decoration, and astral music, stories, and costume, typically from an Astronist background.

Derivatives

Theatrosies

The Beginning - in Astronist Philosophy, a frequently used appellation for the initiation of The Cosmos, or specifically the event of The Big Bang itself.

The Beholding Of A New World - in Cosmic Mystology, refers to the moment within The Interstellar Dream in which Jesse sees the other side of a black hole.

The Betwixity - in structurology of Astronist Philosophy and in the Astronist Cosmology, the appellation for the distances found between cosmic entities, both physically and conceptually, and is measured and contemplated by the semistrument of betwixity. It is not officially categorised as a domain of existence, such as The Cosmos, The Chaos, or The Mytra, but it may easily be placed within this category due to its appellation and the nature of the subject it addresses.

The Betwixity of The Cosmos - in structurology of Astronist Philosophy, the concept relating to the fact that The Cosmos is formed by the disproximities between celestial entities.

The Beyond - in Astronist Philosophy, irregularly termed as The Beyondance, one of the many appellations ascribed to The Cosmos as part of the Astronist Cosmology.

The Beyondance - see The Beyond.

The Bicosmos - in Astronist Philosophy, an appellation for bicosmology. See bicosmology.

The Book of Naology - written by Brandon Taylorian, the book in which the foundations of the study of Naology were formed, and in which all managerial and preservational conducts, plans, and operations were written.

The Bounteousness of Jesse - in Cosmic Mystology, refers to the period of time in which Jesse conducts goodwill and charity in the world before he embarks on his Divine Mission.

The Breaker of Falsities - in Astronist Philosophy and in Centrality Studies, one of the five appellations given to philosophy in The Reascension of Philosophy segment in The Grand Centrality of The Philosophy of Astronism.

The British Homeland - abbreviated to TBH, the stronghold of The Philosophy of Astronism in Great Britain, and also refers to its birthplace.

The Caribbean Star - abbreviated to TCS, the strongholds of The Philosophy of Astronism including Haiti, and the Dominican Republic.

The Central American Line - also known as The Central American Line of Nations, and abbreviated to TCAL, the stronghold of The Philosophy of Astronism in Central America, beginning in the Mexican city of Guadalajara, heading through to Guatemala, Honduras, and ending in Nicaragua.

The Central Asian Triangle - also known as The Central Asian Triangle of Nations, abbreviated to TCAT, the strongholds of The Philosophy of Astronism in Central Asia, including Eastern Turkmenistan, Central and Eastern Uzbekistan, Central Kazakhstan, Kyrgyzstan, Tajikistan, and far Western China.

The Centrality of Big History - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos for the discourse dealing with the Astronist view that the study and contemplation of the series of events between The Big Bang and the present era is of central importance.

The Centrality of Gravitation - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of gravitology and the role of the force of gravity in The Cosmos.

The Centrality of Wonderment - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the concept and practice of wondermenting.

The Chaos - in Astronist Philosophy, one of the four major components of the Astronist Cosmology pertaining to that which is the opposition to The Cosmos in its entirety, as well as that which is

cosmically natured; progeny of The Chaos are characterised by disorderity, and unknownness amongst other aspects.

The Chaotic Illusion - in Astronist Philosophy, the appellation for the concept and notion that The Chaos itself is entire illusional, and therefore non-existent, a illusory figment of thought.

Thế Chất - The School of Physicality in Astration as known in the Vietnamese language.

The Ciscosmos - in Astronist Philosophy, an appellation for the type of cosmos based upon the perception of The Cosmos as that which is most proximate to oneself, both physically, and conceptually, an example of which in a physical sense would be one's perception of The Earth as part of The Cosmos due to one's location upon and within The Earth.

The Closed Universe - in Astronist Philosophy, an approach to understanding The Universe that fundamentally opposes the concept of The Universe in the Astronist Cosmology and consists of the notion that The Universe is ultimately finite and is therefore not all-encompassing and nor does it possess any divinical qualities, as inferred by the Astronist Cosmology. The oppositism to The Open Universe.

The Commencement - the first day of the Starlight Festival, taking place on either the 40th Zaarine (20th December), or the 14th Harrietine (20th June) in the Northern Hemisphere, and the Southern Hemisphere respectively, and largely consists of a special ceremony and speech held at all eidouraniums and observatories around the world to welcome in the year's starlight festivities, and typically involves a speech by The Chairman of The People's Constitutional Company of Jesse Millette at The Grand World Eidouranium in London, United Kingdom.

The Commencement of The Cosmos - in Astronist Philosophy and Centrality Studies, the appellation ascribed to the segment of The Grand Centrality briefly addressing the way by which The Cosmos began in the traditional and empirical sense.

The Common Elements - in Astronist Philosophy, specifically within the Matrixian cosmology, an appellation given for space, time, and matter, each of these is considered to form the entirety of existence as ascribed to the matrixial superstructure, and pillars of cosmicality.

The Compilation - in Astronist Philosophy and omnidoxicology, the appellation for the instance in which Cometan had the idea to compile The Astronist Methodology and other Astronist philosophy-related works to fit inside The Grand Centrality rather than initially existing as separate publications and is closely associated with the belief orientation of compilationism and is opposed by non-compilationism which measure the belief in the extent to which Astronism and Astronarianism should be associated.

The Composite Cosmos - in Astronist Philosophy, a type of cosmos focusing on the relationship between The Cosmos in its entirety, and the instrument of composity, thus forming a hybrid viewing The Cosmos by the parts that structure it rather than by its entirety, or wholeness, or oneness.

The Concentricity of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of concentritology.

The Contracting Cosmos - in omnology of Astronist Philosophy, a type of cosmos characterised by the instance in which The Cosmos expands and retracts in an eternal cycle.

The Conventional Structure - in dynastesiology of Astronist Philosophy, the appellation for the hierarchical structure of The Cosmos as it is perceived to exist; as the convention by which the cosmical orderity and system is structured, and by which other structures attempt to change.

The Cosmechesis - see cosmechesis.

The Cosmechism - see cosmechism.

The Cosmical Arrangement - in Astronist Philosophy, one of the two essential components of The Cosmical Schematism relating to the partitioning and apportionment of gravity and matter relative to the space and time sanctioned.

The Cosmic Alchemy - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of drentology and the practice of cosmic alchemy.

The Cosmical Elements - in Astronist Philosophy, an appellation for the Nine Cosmical Elements.

The Cosmical Presentation - in Astronist Philosophy, one of the two essential components of The Cosmical Schematism relating to the physical manifestations of cosmical entities in accordance with the physical laws to which they are bound.

The Cosmical Schematism

- in Astronist Philosophy, the appellation for the notioned scheme upon which The Cosmos is considered to have been constituted and to which all cosmical entities are bound.
- in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the concept and notion of The Cosmical Schematism and its surrounding philosophies and contemplations.

The Cosmic Boundary - in obliviology of Astronist Philosophy, the appellation for the alternative term relating to the edge of The Cosmos.

The Cosmic Conception - in Cosmic Mystology, refers to the moment in which Ellena and Divine Jesse conceive as The Cosmos surrounds them.

The Cosmic Course - in Astronist Philosophy, an appellation for the notion that The Cosmos holds a particular direction and order of existence; essentially, another term for the cosmical system and orderity.

The Cosmic Cradle - in Cosmic Mystology, refers to the period of time in which Jesse spent in The Cosmos before being sent on his mission by The Divine.

The Cosmic Entirety - in omnology of Astronist Philosophy, the appellation used to relating to The Cosmos as whole rather than in composite parts, or any particular progeny.

The Cosmic Envisionment - in Cosmic Mystology, refers to the moments in which Jesse looks to The Cosmos for guidance.

The Cosmic Existence - in Astronist Philosophy, the appellation relating to the time in which The Cosmos exists.

The Cosmic Fusion - in Cosmic Mystology, refers to the moment in which the light and the dark do fused with Divine Jesse as The Five As One.

The Cosmic Inception - in Cosmic Mystology, refers to the moment in which the character of Jesse was created by The Divine in The Cosmos.

The Cosmic Inspiritment - in Cosmic Mystology, refers to the moment in which Jesse and The Four Protectors leave their spaceship and surround themselves with The Cosmos and are infused by its energies.

The Cosmic Mindstep - in Astronist Philosophy, the collective appellation for the notions of cosmocentricity, non-anthropicity, and philosophical and astronomical centralisation; the reorientation in the way humanity is to perceive The Cosmos as part of the Astronomic Revolution.

The Cosmic Panorama - in Astronist Philosophy, a popular appellation for the largely metaphorical instance in which one may be able to mentally perceive the entirety of The Cosmos in one view; considered to be an impossible feat for any one mind, especially one that has not explored The Cosmos in its entirety.

The Cosmic Remembrance - in Cosmic Mystology, refers to the moment in which Jesse sees The Cosmos again and knows it to be his home.

The Cosmic Structure - in Astronist Philosophy, the appellation for the particular shape, edifice, and structure of The Cosmos and the composite parts that form this.

The Cosmic Territories - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the interactions and intentions between the civilisations of The Cosmos and how they are expected to understand cosmic entities as territories; essentially, the intertwining of politics with cosmic affairs.

The Cosmic Web - in Astronist Philosophy, the theoretical, philosophical, and devotional notion and concept holding that The Cosmos is fundamentally structured by an interconnected web of celestials, as is physically evidenced by the metagalactic superstructure.

The Cosmographics - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of cosmography.

The Cosmophilic Principle - in Astronist Philosophy, the belief that cosmophilia is a great and positive gift that should be cherished by both the cosmophile and by the civilisation in which they reside due to the potentiality of their mind during such states of cosmophilic enthusiasm.

The Cosmos

- in Astronist Philosophy, the primary entity of devotion, contemplation, notion, conceptualisation, and philosophisation encompassing all that exists within that which is known as The Cosmic Boundary, and that which is considered to originate from The Big Bang. Furthermore, The Cosmos is considered an animated, structured, systemic, and well-ordered whole and forms the three main components of the Astronist Cosmology, and due to this, many theories and concepts are interconnected to this physical, conceptual, and philosophical entity.
- in Astronist Philosophy, all that is beyond Earthly bounds.
- the setting of the Cosmic Era in Astronist Mystology.

The Cosmos in The Universe - in Astronist Philosophy and omnidoxicology, a turn of phrase derived from, and pertaining to the Astronist Cosmology, and involves the idea that The Cosmos is existent within The Universe which holds The Cosmos in place, and is considered to be responsible for its well-ordered nature, yet the extent to which The Universe is continuously actively involved in the affairs of The Cosmos is a point of Astronist philosophical dispute and is in need of further contemplation.

The Creation Moment - in Astronist Philosophy, an alternative appellation for the event that is known as The Big Bang.

The Creation Problem - in structurology of Astronist Philosophy, the appellation for the contemplation addressing whether the entities of The Cosmos do hold a temporal origin or not for there to be a creation created there must exist a creating agent.

The Current Cosmos - in Astronist Philosophy, the appellation for the type of cosmos relating to The Cosmos as it exists in the present time.

The Cycles of The Cosmos - in Astronist Philosophy, an appellation collectively relating to the proposed cycles in occurrence within The Cosmos, and thus forming the cosmical system as a result.

The Cycles of The Universe - in Astronist Philosophy, an alternative appellation relating to Universal Cyclometrics.

The Dead Cosmos - in Astronist Philosophy, an alternative appellation for a Big Freeze Diegesis. See Big Freeze Diegesis.

The Dependee - in Astronist Philosophy, as part of the Dualistic Cosmology, the appellation encompassing all the celestials and events of The Cosmos considered to be dependent upon other celestials and events for their own existence, and are considered to be inferior to the appellation of The Depender.

The Dependence Cosmology - in Astronist Philosophy, a cosmology holding the concept that The Cosmos is entirely interconnected and that each and every celestial and phenomenal event is dependent upon another celestial, or event, and therefore all the composite parts of The Cosmos are dependent upon each other.

The Depender - in Astronist Philosophy, as part of the Dualistic Cosmology, the appellation encompassing all the celestials and events of The Cosmos considered to have other celestials and

events dependent upon it rather than it be dependent upon others, and is considered to be the superior side of the Dualistic Cosmology in comparison to its counterpart appellation of The Dependee.

The Developmentation - in Taylorianology, the period between the years of twenty sixteen and twenty eighteen when the majority of the developments of Astronist subjects occurred, as well as the initial development of The People's Constitutional Company of Jesse Millette, and is usually structured by writing The Grand Centrality of The Philosophy of Astronism.

The Dimensional Universe - more commonly referred to as Dimensions, an era of Astronist stories, characters and events taking place outside both the canonical and mystological Astronist timelines.

The Divine

- in Astronist Philosophy, a major part of the Astronist Cosmology relating to the state of existence beyond both The Cosmos and The Universe.
- referred to in Astronist literature, culture and founding works, as the creator of The Cosmos, The Universe and existence itself.

The Divine Eternity of Freedom - in Cosmic Mystology, refers to the state in which The Five are forever eternally divinely free in The Eternal Plain, thus marking the end to The Grand Chronicles of Astronist Mystology.

The Divine Product - in Astronist Philosophy, an appellation for The Cosmos, or any one of its progeny as divinely created, or as products of some divine creation.

The Divine Recital - in Cosmic Mystology, refers to the moment in which Divine Jesse does recite what he was destined and prophesied to say to The Divine.

The Divine Transcendence - in Cosmic Mystology, refers to the process of Jesse, the boy and Jesse, the man, becoming wholly divine.

The Doomsday Cosmos - in omnology of Astronist Philosophy, known in non-Astronist and non-philosophical spheres as The Big Rip, a type of cosmos characterised by being ripped apart during the endtimes due to it reaching the limitation of its physical expansion.

The Dualistic Cosmos - in Astronist Philosophy, a type of cosmos that is viewed entirely through a dualistic lens, and so believes that all entities and occurrences in The Cosmos are dualistic in their natures, and therefore interdependent in their functionalities, orderities, and in all their other aspects.

The Duty of The Protectors - in Cosmic Mystology, refers to the period of time in which Jesse tells The Four Protectors, Ellena, Oliver, Zara and Harriet, about his Divine Mission and their duty to join him.

The Eastern Diamond - also known as The Eastern Diamond of Nations, and abbreviated to TED, the strongholds of The Philosophy of Astronism in Eastern Asia, including Eastern China, Korea, Taiwan, Laos, Cambodia, and Vietnam.

The Edge of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of perimetrics.

The Educative Mission - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the practice of cosmechesis, its utilities, and the philosophy surrounding it.

The Eidouranium, The Observatory, The Promontory & The Planetarium - in Centrality Studies, the appellation ascribed to the segment of The Grand Centrality introducing the four main types of Astronist philosophical building, as well as providing an outline of the intended role and purpose of Astronist philosophical buildings in any given society.

The Eight Brackets - in dynastesiology of Astronist Philosophy, the appellation for the eight aspects of celestial entities that are taken into consideration when a dynastesiological study is conducted.

The Eleven Cosmo-Alchemic Processes - in Astronist Philosophy, one of the central components to Cosmic Alchemy, considered to be the pillars of Cosmic Alchemy, and central to its “mystical practices, wonderments, and studies” according to The Omnidoxy. These processes remain philosophical, theoretical, and conceptual by their natures, though their meanings, and achievements are much less abstract. The processes include terrestriation, helioation, galaxation, selenation, solaration, obliviation, novaetion, quasation, voidation, expansion, and cosmation.

The Elixir - see The Elixir of The Cosmos.

The Elixir of The Cosmos - in Astronist Philosophy, specifically within Cosmic Alchemy, a mystical state of being in which an individual is in union with both The Cosmos, and The Divine, and this is the state that all philosophers and adherents of Cosmic Alchemy are considered to want to achieve, and is championed by The Five Astronist Characters as the figurative manifestations of The Elixir of The Cosmos.

The Emergence Through The Divine Barrier - in Cosmic Mystology, refers to the moment in which The Five Transcenders are of divine nature so as to be able to enter into The Eternal Plain.

The Encompasser - in dynastesiology of Astronist Philosophy, the appellation used for that which is known as The Universe in the Astronist Cosmology.

The Endeavour of Understanding - in Cosmic Mystology, refers to the moment in The Eternal Plain when it is attempted to understand The Divine.

The Endtimes - see endtimes.

The Engulfment - in Cosmic Mystology, refers to the moment in which Jesse and The Four Protectors are engulfed by a black hole.

The Enlightenment of Jesse - in Cosmic Mystology, refers to the moment in which Jesse realises his Divine Mission and his duty to The Divine.

The Entirety - in Astronist Philosophy, an appellation relating to The Divine as part of the Astronist Cosmology.

The Essentiality of Narrative - in introspectics of Astronist Philosophy, the appellation for the idea that without every occurrence and every entity in existence, the current state and instance of existence would not be as it is; the belief in the essentiality of everything.

The Establishment - in Taylorianology, the period involving the official establishment of The People's Constitutional Company of Jesse Millette, as well as The Institution of The Philosophy of Astronism.

The Eternal Smile - in Cosmic Mystology, refers to the moments in which characters do find freedom from their inhibitions and do become completely divine in nature.

The European Belt - also known as The European Belt of Nations, and abbreviated to TEBN, the group of nations considered to be the strongholds of the company's philosophical operations in Europe, including France, Northern Spain, Switzerland, Northern Italy, Luxembourg, Liechtenstein, Southern Germany, Austria, Czechia, Western Slovakia, Southern Poland, Western and Northern Ukraine, and Belarus.

The Evolutionary Cosmos - in Astronist Philosophy, the central concept of evolutionism holding that The Cosmos and all its individual progeny are on evolutionary paths of development and it is these evolutionary paths that are central to the cosmical system, naturity, and orderity.

The Excubator Cosmos - in Astronist Philosophy, an alternative appellation for the Extracting Cosmology.

The Existence Principle - in Astronist Philosophy, the theory and notion maintaining that for something to exist within The Cosmos, there must be a beginning to it and there must be an end to it, but too, there must have been something that preceded its own existence for it to be created.

The Expanding Cosmos - in Astronist Philosophy, especially within omnology, a type of cosmos focusing on the expansive naturity and tendency of The Cosmos itself.

The Expanding Universe - in Astronist Philosophy, the appellation for the concept relating to the notion that The Universe is infinite and it is expanding infinitely, and The Cosmos exists within such an expansion, and is closely associated with the cosmo-alchemic process of expansion.

The Experience of The Cosmos - in pneumovology of Astronist Philosophy, the appellation for one of The Three Deeds involving practical and mental contact and observation of The Cosmos.

The Exposure to The Void of Potentiality - in Cosmic Mystology, refers to the moment in which The Divine shows the place beyond existence in which existence will come under divine destiny.

The Exterior

- a scattered term relating to all the planets, systems, and political organisations and governments of the galaxy that are not considered to be established, sovereign, or developed.

- the region of space on the outskirts of The Milky Way that is considered to include the least politically, socially, philosophically, and monetarily developed planets, systems, and organisations.

The Families of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of familiology.

The Firmament of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of firmamentology.

The Final Vision - in Cosmic Mystology, refers to the single vision in which Jesse is given a glimpse of the true nature of The Cosmos by The Divine.

The Five Bonds of Society - in Astronist Philosophy, a rubral within The Omnidoxy concerned with the contemplation of the Five Bonds of Society.

The Five Epochs - in Astronist Philosophy, a collective appellation for the time periods in epochology including the Inception Epoch, the Inflation Epoch, Nanonic Epoch, the Tenebrian Epoch, and the Futurity Epoch.

The Five Fundamentalities - in Astronist Philosophy, particularly within Astronist Cosmology, the collective appellation for The Divine, The Universe, The Cosmos, The Chaos, and The Mytra as hypostatic domains.

The Five Astronist Characters - relating to the Astronist characters, Jesse Millette, Harriet Millette, Ellena Chadwell, Zara Litchford and Oliver Mehler.

The Five Mystical Pursuits - in pneumovology of Astronist Philosophy and Astronist Mysticism, the collective appellation for the five pursuits involved in achieving The Pentat Trajectory and rests at the centre of Astronist mysticistic practice. The Five Mystical Pursuits are odysstation, rovation, explication, symposiation, and enosation.

The Flat Cosmos - in kosmetrics of Astronist Philosophy, the appellation for the type of cosmos which advocates to the notion that The Cosmos is flat in shape and dimension rather than spherical, or any other structure.

The Formation of Celestial Entities - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of formatology.

The Four Veries - in obliviology of Astronist Philosophy, the appellation that describes black holes in four categories for people to understand them in a simplified manner; very massive, very diverse, very dense, and very gravitational.

The Frontier - in Astronist Propaganda, the depiction of the abstract concept that the nation, and humanity collectively, must always be working and progressing toward The New Frontier, or just simply The Frontier, which is a utopian vision personalised to the nation in which the propaganda is distributed.

The Functionalities of Celestial Entities - in omnidoxicology, an alternative rubral for The Functionalities of Cosmic Progeny & Phenomena.

The Functionalities of Cosmic Progeny & Phenomena - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the instrument and discipline of functionality in The Cosmos.

The Future Cosmos - in Astronist Philosophy, the appellation for the type of cosmos as distinguished from that of the time, or may also relates to The Cosmos as it exists during The Endtimes.

The Future of The Expanding Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of omnology.

The Future of the World - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos for the discourse dealing with the Astronist approach to the future of human civilisation, humanity in a wider, and the abilities of the human mind.

The Geometry of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of kosmetrics.

The Golden Age of Philosophy - the supposed period after the founding of The Philosophy of Astronism, during which philosophical thought, culture, and methods supersede in importance, all other subjects, and also marks the emergence of Organised Philosophy, and the rise of philosophy's role in society.

The Government - referring to the various agencies and ministries collectively forming the government of The People's Constitutional Company of Jesse Millette.

The Grand Canon of Astronism - an immobile founding one-page document outlining the fundamentality of each of the twelve principles of Astronism.

The Grand Canonical Astronist Timeline - the immobile founding document outlining the chronology of Astronist mystology, theology, fiction, and their connection to the real world.

The Grand Catalogue of the People's Martyrs & Grand Laureates - the motional document detailing the lives of the People's Martyrs and the Grand Laureates, especially the moments they have been recognised for.

The Grand Centrality

- a shortened version of The Grand Centrality of The Philosophy of Astronism.
- in Astronist Philosophy, Naology, and Centrality Studies, the appellation sometimes ascribed to an eidouranium in relation to the society, or civilisation in which the eidouranium is built in order for the eidouranium to become a synonymous manifestation of the role and the characteristics of The Grand Centrality.

The Grand Centrality of The Philosophy of Astronism - an immobile founding document detailing the twelve principles of Astronism, and structuring the foundations of The Philosophy of Astronism.

The Grand Charter of The People's Astronist Fund - a motional document detailing the plans, the ambitions, the founding principles and the policies of the operations of The People's Astronist Fund.

The Grand Chronicles of Astronist Mystology - the immobile founding collection of works founding the ideas and the genre of Mystology.

The Grand Code of The People's Astronist Peacekeeping Order - an immobile founding document detailing the principles and the policies and the plans of The People's Astronist Peacekeeping Order.

The Grand Cognisation - in prophetics of Astronist Philosophy, the appellation for the second of The Ten Grands prophesying the discovery of brand new species of animals, plants, and other currently unknown forms of life in new habitat structure and environments on new planets, and especially involves the recording of these discoveries for the first time.

The Grand Configuration of The Governing Ministry - the motional document underpinning the plans, the policies, and the principles founding The Governing Ministry under Astronist constitutionality.

The Grand Consecration of the Formation of The People's Astronist Federation - the immobile founding document detailing the founding principles of The People's Astronist Federation.

The Grand Constitution of The People's Constitutional Company of Jesse Millette - a motional founding document detailing the principles, the practices, the goals, and the policies of The People's Constitutional Company of Jesse Millette.

The Grand Cosmos

- in Astronist Philosophy, a type of cosmos relating to the philosophical and devotional concepts of The Cosmos in their entirety; it involves beholding The Cosmos in the grandness that it exists rather than simply observing it, and is firstly addressed in the rubral of The Omnidoxy known as The Philosophy of The Grand Cosmos.
- in Astronist Music, the second entry in The Cosmicusy known as The Duscence, and succeeds *Cosmical Wisps*.

The Grand Cradle of Astronology - a motional document detailing the subject of Astronology and laying the foundations for its study.

The Grand Disseminator - in Astronist Philosophy, Naology, and Centrality Studies, the appellation ascribed to the category of Astronist philosophical building involving the planetarium.

The Grand Divine Champions - in Cosmic Mystology, refers to the moment in which The Five do stand In Grand Symmetry with The Divine.

The Grand Divine Contact - in Cosmic Mystology, refers to the moment in which Divine Jesse does touch The Divine and all-creation is absorbed.

The Grand Divine Harmonisation - in Cosmic Mystology, refers to the moment in which The Five are in complete divinity and the entirety of the universes are in perfect equilibrium.

The Grand Establishment of The People's Astronist Central Bank - the immobile document outlining the founding principles of The People's Astronist Central Bank.

The Grand Eye - in Astronist Philosophy, Naology, and Centrality Studies, the appellation ascribed to the category of Astronist philosophical building involving the promontory.

The Grand Festival - the second day of the Starlight Festival, taking place on either the 41st Zaarine (21st December), or the 15th Harrietine (21st June) in the Northern Hemisphere and Southern Hemisphere respectively, and is the most important of the four days of starlight, and is the night during which all celebrations and festivities take place according to the traditions of the starlight festival.

The Grand Gargantuanation - in prophetics of Astronist Philosophy, the appellation for the ninth of The Ten Grands prophesying that there will be planetwide civilisations of huge proportion and population of all kinds of diversity, structure, and operation, and is considered to require the furthest level of imagination to visualise.

The Grand Humanisation - in prophetics of Astronist Philosophy, the appellation for the fourth of The Ten Grands prophesying that humanity will establish colonies and civilisations on worlds other than The Earth, and a great deal of envisioning and creativity will be employed to establish such societies beyond The Earth.

The Grand Impentination - in prophetics of Astronist Philosophy, the appellation for the first of The Ten Grands prophesying the occurrence of a full-scale out-Earth; a mass-scale process of leaving The Earth for other worlds for a permanent period.

The Grand Inauguration of Jesse Millette Societies & Astronist Fellowships - the motional document listing and detailing the purposes of each Astronist society and fellowship.

The Grand Initiation of The People's Astronist Network - the motional document outlining the plans, the policies, and the principles of The People's Astronist Network.

The Grand Journals of Philosophies & Ideologies - the motional document compiling the founding texts of a number of philosophies and ideologies created or expanded upon by Brandon Taylorian.

The Grand Lexicon of Astronology - the motional founding document compiling the terminologies of a number of different subjects, as well as founding new lexicons for the subject of Astronology and Astronist terminology.

The Grand Manifestment - in omnology of Astronist Philosophy, the appellation that collectively relates to the occurrences during The Endtimes of The Cosmos wherein all existence will be visible, and is illuminated and philosophical addressed in the discipline of prerology.

The Grand Astronist Calendar - the motional founding document outlining the official calendar of The People's Constitutional Company of Jesse Millette, which implements the Astronist

methodologies and Astronist lore and includes differing versions made available for use on other planets.

The Grand Opentisation - in prophetics of Astronist Philosophy, the appellation for the seventh of The Ten Grands prophesying that the establishment of mixed civilisations of human and non-human sentients on planets other than The Earth shall form diverse societies in relation to race, philosophy, religion, ethnicity, sexuality, and gender.

The Grand Philosophisation - in prophetics of Astronist Philosophy, the appellation for the sixth of The Ten Grands prophesying that humanity will ultimately explore the philosophical and religious traditions of civilisations and settlements on planets other The Earth, and will subsequently be influenced by such traditions to form new philosophies and religions.

The Grand Seeker - in Astronist Philosophy, Naology, and Centrality Studies, the appellation ascribed to the category of Astronist building involving the observatory.

The Grand Story - in Astronist Philosophy, an appellation relating to the creation of The Cosmos and The Universe, as considered to structure a narrative.

The Grand Symmetry - in Cosmic Mystology, refers to the moment in which Divine Jesse as The Five As One in accordance with destiny, will stand in perfect formation beside The Divine.

The Grand Technologisation - in prophetics of Astronist Philosophy, the appellation for the third of The Ten Grands prophesying the development of human technology to the point at which space travel becomes a commonplace activity.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in Africa - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of Africa.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in Central Asia - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of Central Asia.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in Europe - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of Europe.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in Oceania - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of Oceania.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in North America - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of North America.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in South America - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of South America.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in South East Asia - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of South East Asia.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in The Caribbean and Central America - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of The Caribbean and Central America.

The Grand Treatise of The People's Constitutional Company of Jesse Millette in The Middle East - the motional document outlining the specific plans and ambitions of The People's Constitutional Company of Jesse Millette in each nation of The Middle East.

The Grand Triplicity of The Astronist Universe - the motional document detailing the chronologies of Mystology, the official names and definitions of events, including The Grand Pantheon, The Grand Prophecy and The Grand Prediction.

The Grand Vennisation - in prophetics of Astronist Philosophy, the appellation for the eighth of The Ten Grands prophesying that during the Humanic Exploration of The Cosmos, the ways that are not habitably suitable for humans will be used for other civilisational benefits such a mineral resourcing or as waystations.

The Grand Vision - a motional founding document eternally detailing the past, present, and future operations, informations, and plans of The People's Constitutional Company of Jesse Millette. The content of The Grand Vision can never be removed once it has been placed within it.

The Grand Wonderation - in prophetics of Astronist Philosophy, the appellation for the tenth and final of The Ten Grands prophesying that humanity, after the Humanic Exploration of The Cosmos has occurred, will hold the ability to experience wonderment and to practice wondermentation on all the worlds, celestials, and vessels that sentient life does inhabit as considered to be superior from the perspective of wondermentation from The Earth singularly.

The Grand Works - a phrase used to relate to all Astronist texts collectively with the word 'Grand' in their titles.

The Grand World - in Astronist Orthodoxy, an alternative term for The Cosmos.

The Grand Xenisation - in prophetics of Astronist Philosophy, the appellation for the fifth of The Ten Grands prophesying that there will occur a normalisation of relations between humanity and non-human sentient beings.

The Gravicentric Cosmos - in Astronist Philosophy, specifically within Cosmic Philosophy, a concept, or type of cosmos wherein gravity is considered to be the most important entity, and so the central points of gravitational pull are given an imperative and centrality in cosmic philosophical understanding.

The Great Collapse - in Astronist Philosophy, the appellation for both the event and the period in epochology characterised by the collapse of The Cosmos after it has expanded to its greatest possible extent.

The Great Cosmic Battle - in Astronist Philosophy, the metaphorical opposition between that which is known as The Cosmos and that which is known as The Chaos in the Astronist Cosmology.

The Great Cosmic Eruption - in Cosmic Mystology, refers to the moment in which Jesse is infused and bursts with the powers of The Divine, thus leading him to become Divine Jesse.

The Greater Cosmos - in Astronist Philosophy, a type of cosmos relating to that which exists outside of The Solar System.

The Great Puzzle - in Astronist Philosophy, an appellation for The Cosmos and The Universe as entities which are completely and utterly unknown to humanity, and are entirely and eternally transcendent upon human contact and comprehension, especially as an ideation to devote towards.

The Great Transition - in obliviology of Astronist Philosophy, the appellation for the notion that black holes are evolutionarily transitioned from stars rather than existing as distinct entities of their own, and also relates to the process involved during which stars transition to black holes.

The Great Tumefaction - in Astronist Philosophy, the appellation for the event that is expected to take place relating to The Sun and its expansion and subsequently destruction and engulfment of The Earth.

The Great Wheel - in Astronist Philosophy, a metaphor for destiny whereby the cogs of the wheel are singular entities like a celestial, or humanity, and is especially linked to the concepts of The Will of The Cosmos, or Divine Will.

The Heterogeneity of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of drentology and the practice of cosmic alchemy.

The Heterogeneous Cosmos - in heterogenology of Astronist Philosophy, a type of cosmos characterised by the notion that The Cosmos is both vast in diversity and great in abundance.

The Hierarchy of The Cosmos

- in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of dynastesiology.
- see Hierarchical Cosmology.

The Highership Hierarchy - see highers.

The Highlighting of Brandon Taylorian - referring to the study of the passages from many different books and texts that Brandon Taylorian decided to highlight, and the inferences drawn from those highlighted words and sentences.

The History & Future of Astronomy - in omnidoxiology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the predictions and prophecies about the future of the practice and study of astronomy in the future of human civilisation, as well as exploring the historical context of astronomical study and practice.

The Human Age - in Astronist Philosophy, the appellation relating to the period of time that humanity has been in existence in its sentient form on The Earth.

The Human Cosmos - in sentientology of Astronist Philosophy, the appellation for the type of cosmos wherein humanity is alone because The Cosmos was specially made for humanity only and therefore, there is no need for any other sentient life to exist, and drastically diverges from the beliefs of the Astronist Tradition within regards to sentient life in The Cosmos.

The Identity & Purpose of The Philosopher - in Centrality Studies, the title ascribed to segment of The Grand Centrality concerning the introduction of the persona known as The Philosopher.

The Inimitability of The Cosmos - in formatology of Astronist Philosophy, the appellation for the principle that the human mind would need to physically witness such formations of cosmic proportion in order to understand, describe, and contemplate them in a deeply philosophical way.

The Inanimate Cosmos - in Astronist Philosophy, the appellation for the type of cosmos that stands in opposition to The Animate Cosmos for it is characterised by perceiving The Cosmos as not being alive or animate in its functionalities, occurrences, and appearances.

The Incubator Cosmos - in Astronist Philosophy, another term for the Contracting Cosmology.

The Inexplicable Element - in pneumovology of Astronist Philosophy, the appellation for The Cosmos in a spiritual context.

The Infant Cosmos - in Astronist Philosophy, a type of cosmos representing the earliest form of The Cosmos during the formative epoch of its overall development.

The Infinite Continuation - in Astronist Philosophy, the appellation for the principle that infiniteness invokes disorderity, and therefore infiniteness is absolutely non-cosmical.

The Infinite Cosmos - in omnology of Astronist Philosophy, a type of cosmos characterised by the notion of consistentism and that if The Cosmos is expanding at a constant rate, it shall do so eternally and so it shall expanding eternally, therefore making it infinite.

The Infusement of Divinity - in Cosmic Mystology, refers to the moment in which The Five Transcenders do become wholly divine and their physical, spiritual and divine forms are infused with divinity.

The Infusement of The Four - in Cosmic Mystology, refers to the moment in which Jesse's Four Protectors are told of their duty to him and The Divine.

The Inhibition of Zara - also known as Zara's Inhibition, in Cosmic Mystology, refers to the hesitancy of the character of Zara when The Five face The Destruction of Light.

The Initiator of Academics - in Astronist Philosophy and in Centrality Studies, one of the five appellations given to philosophy in The Reascension of Philosophy segment in The Grand Centrality of The Philosophy of Astronism.

The Inner Star & The Outer Star Theory - considered to be its own school of thought in The Philosophy of Astronism focusing on the concept that there are two versions of every human. The first is the The Inner Star, the version of ourselves that only we and The Divine can truly know, and understand. The second is The Outer Star, the version of ourselves that we present to the world, to show the to world the way we want to be seen, and interpreted. It is believed that one is not superior to the other, and insists that each version is vital to the formation of a full human being, and claims that one is dependent on the other.

The Institution of The Philosophy of Astronism - the primary institution vested with the role, responsibility, and sole purpose of managing the operations, protecting the integrity, and disseminating The Philosophy of Astronism in all its forms to all of humanity. The Institution of The Philosophy of Astronism holds proprietorship over The Philosophy of Astronism bestowed by the writings of Cometan as manifested in The Grand Centrality of The Philosophy of Astronism. The Institution, as it is colloquially known, or IPM, as it is acronomously known, is the sole governing body and authority of The Philosophy of Astronism and holds universal jurisdiction over all aspects of Astronism, including naological management, new concept development, philosophical promulgation, parenic relations, and many others. The Institution is manifested as an institutional organisation as defined from being a charitable body despite the fact that The Institution is a non-profiteering entity. The Institution of The Philosophy of Astronism is directly connected to The People's Constitutional Company of Jesse Millette, and is especially overseen by The Governing Ministry of this body, and therefore The Institution is bound to The Grand Constitution of The People's Constitutional Company of Jesse Millette.

The Interior

- a scattered term relating to all the planets, systems, and political organisations and governments of the galaxy that are considered to be established, sovereign, and developed.
- the region of space around the core of The Milky Way that is considered to include the most politically, socially, philosophically, and monetarily developed planets, systems, and organisations.

The International People's Philosophical Debatory Board - in Astronist Philosophy, the official governing body of all philosophical argumentations and debates that take place within Astronist philosophical buildings, on their estates, or in any buildings owned by The People's Constitutional Company of Jesse Millette. The Board is responsible for the establishment of regulations, the inspection of debates, the measurement of the popularity of certain debatory topics, and the awarding of debaters with special honours, among other duties.

The Interspace Formula - in Astronist Philosophy, the appellation for calculating the required coordinates of someone or something during an Interspace Enquiry and holds that one must be at least twice as far away from the entity as the size of the entity in enquiry.

The Interstellar - in Astronist Philosophy, an appellation for that which exists beyond The Solar System in The Cosmos, but not beyond The Milky Way galaxy.

The Interstellar Dream - in Cosmic Mystology, refers to the dream experienced during The Interstellar Warpment by Jesse.

The Interstellar Warpment - In Cosmic Mystology, refers to the moment in which Jesse and The Four Protectors leave The Solar System and warp into interstellar space.

The Introspective Cosmos

- in Astronist Philosophy, a type of cosmos encompassing the entirety of the discipline of introspectics and all introspections.
- in omnidoxiology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of introspectics and the practice of introspection.

The Investorial Council - the biannual meeting attended by the current investors of The Astronist Consortium and chaired by The Constitutional Leader of The People's Constitutional Company of Jesse Millette.

The Invigoration of Jesse - also known as Jesse's Invigoration, in Cosmic Mystology, refers to the moment in which Divine Jesse awakens.

Theistic Cosmology - in Astronist Philosophy, a type of cosmos that is dependent upon the notion and concept of god for its existence.

Theistic Humanism - a school of thought in The Philosophy of Astronism that bases itself on the centrality of humanity itself to its progression, advancement, and betterment, and includes all other humanistic ideas, but diverts from traditional humanistic thought by the incorporation of theism, not does not conform to theistic intercession, theistic predestination, or theistic encounter.

Theistic Matrixian theology - see Matrixian theology.

Theistic Naturalism - in Astronist Philosophy, a prominent belief and philosophical approach classified as a variation of naturalism, but maintains a belief in both the existence of a god, and the human origination from such a god, but believes that humanity will neither come in contact with this god, nor does this god hold any interactivity with humanity.

The Journey Through The Cosmos - in omnidoxiology, within the inclusive discipline of compendology, the rubral for discourse involving the introduction to compendology in The Omnidoxy that outlines the first notions about the Humanic Exploration of The Cosmos, as one of the staple beliefs of Astronist Philosophy.

The Knowing of The Cosmos - in pneumovology of Astronist Philosophy, the appellation for one of The Three Deeds involving the demonstration of one's awareness of The Cosmos as it is considered to be something that few individuals are expected to fully comprehend, yet this is explicitly not to be interpreted to be a secret, but instead a unique ability for certain individuals to reach.

The Last Civilisation Theory - see dilatism.

The Lesser Principle - in Astronist Philosophy, the appellation ascribed to the notion that all that is smaller is not necessarily all that is lesser, meaning lesser in importance, or lesser in ability, quality, or potentiality, especially in relation to celestials and their differences in size.

The Lightness-Darkness Paradox - in Astronist Philosophy, the appellation for the paradox characterised the notion that although these two supercosmical elements are oppositisms, they are also forever intertwined, but are also too, eternally separated due to their own distinct natures.

The Literal Cosmos - in Astronist Philosophy, a type of cosmos denoting The Cosmos as it is actually, physically, and really is, rather than The Cosmos as it is in depictions, as it is in our imaginations, or as it is described to us, and even as it is observed by humanity as that is not considered to be The Literal Cosmos for humanity's observations of The Cosmos do not entirely encompass it.

The Living Cosmos - see The Pneumovollic Cosmos.

The Logical Cosmos

- in Astronist Philosophy, the appellation for the type of cosmos as understood according to The Cosmos as a logical entity; an entity that is dominated and designated by logic rather than by some spiritual or irrational force.
- in omnidoxyology, the rubric for The Duodoxy disquisition.

The Lonely Cosmos - see isolism.

The Malformations - in Astronist Philosophy, those distorted elements, entities, and events taking place and existing in The Cosmos that are considered, from humanity's perspective, to be abnormal when compared to the normalities of The Cosmos.

The Mathematical Paradox - in obliviology of Astronist Philosophy, the appellation that can be applied to any instance in which mathematics doesn't work or is incapable of making conclusions about something, and is particularly evident of black holes and the application of mathematics to them.

The Matrix - in Astronist Philosophy, the appellation given for the cosmical system through the instrument of study of matrixity as a strict adherence to that which is cosmical with absolutely no toleration for that which is remotely chaotic in its nature.

The Maturity of Progeny - in Astronist Philosophy, the appellation for one of the three elements of the Futurity Epoch characterised by the maturing of celestial entities from their initial states and sees the gradual ageing of all the cosmical progeny.

The Metagalactic Plane - see metagalaxy.

The Metagalaxy - see metagalaxy.

The Middle East Circle - abbreviated to TMEC, the philosophical stronghold of The Philosophy of Astronism in The Middle East, including Iraq, Western Iran, Syria, and Eastern Turkey.

The Milky Way Day - in The Grand Astronist Calendar, a major festivity centred on the specific wonderment, adoration, and laudation of The Milky Way, and is characterised by street parties, education events, children's events, lectures, astronomy and stargazing events, as well as with a wide variety of private traditions between families, and a rich decorative style. This always takes place on 20th Harrietine, which translates to the 26th June in the Gregorian calendar.

The Astronist Century Plans - a business plan for each century constructed at the start and just before each century.

The Astronist Cosmic Calendar - the overarching calendar system with a distinctly cosmical focus, especially regarding the epochs of its two main derivations, The Standard Galactical Calendar, and The Standard Astronomical Calendar.

The Astronist Delineative Organisation - the Astronist institution responsible for the naming, categorising, and officialising of words, and that is also responsible for the maintenance and preservation of The Grand Lexicon of Astronomy, and all Astronist terminology, and nomenclature.

The Astronist Family - the idealistic version of a family under Astronist Family Law, typically depicted with the presence of Astronist characters.

The Astronist Millennium Business Plan - a constantly changing and increasing collection of all Astronist Founding Works, said to be the construction of a plan for The People's Constitutional Company of Jesse Millette always lasting a millennium ahead.

The Astronist Photographic Institute - also operating under the acronym MPI, the Astronist organisation owned by The Astronist Confederation, dealing with the management, ownership, legality, distribution, copyright protection issues, and archiving of all Astronist-related photos, or any other images owned by any of the commercial subsidiaries, governmental agencies, or other organisations of The Astronist Confederation. The Astronist Photographic Institute also owns and manages The Grand Astronist Image Archive.

The Monocosmos - see monocosmology.

The Multiverse - in Astronist Philosophy, the official appellation for the concept of the multiverse. See multiverse.

The Mytra - see mytra.

The Natural Cosmos - in Astronist Philosophy, the appellation for a type of cosmos characterised by heterogeneity by the notion that it is natural to be heterogenous in character, content, and circumstance.

The Natural & The Rational - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the instruments of study of naturality and rationality as applied to a cosmical context, and encompassed by the discipline of orbanology.

The Neighbouring Cosmos - in Astronist Philosophy, a type of cosmos relating to the immediate part of The Cosmos proximate to The Earth, including The Solar System.

The Next Frontier - in Astronist Philosophy, a popular appellation pertaining to the exploration of The Cosmos as the next challenge for humanity to overcome, especially in the context of the history of human endeavours and achievements.

The New Beginning - in Cosmic Mystology, refers to the creation of the universes and hints to the idea that universes could have existed before the creation of our own.

The New Cosmos - in Astronist Philosophy, as inspired by Inverse Cosmology, the appellation for the notion that there exists an infinite amount of cosmoses outside The Cosmos in which we exist, but these new cosmoses still exist within The Universe, however, the possibilities of these new cosmoses considered collectively is infinite.

The New Earths - in Astronist Philosophy, a collective appellation for planets beyond The Solar System in other star systems that are similar in appearance to The Earth itself.

The New Worlds - in Astronist Philosophy, a collective appellation for all planets other than The Earth itself as worlds that humanity is inevitably going to explore and cognisate.

The Nine Cosmical Elements - in Astronist Philosophy, the nine most essential and fundamental constructs of cosmical reality which are often applied to in Astronist philosophical investigations and discussions and include fire, water, earth, air, lightness, darkness, cosmos, chaos, and divine.

The Oblivionic Centrality - in obliviology of Astronist Philosophy, the appellation for the notion that black holes exist at the centre of galaxies, quasars, and other cosmical phenomena for a particular reason and relates to all concepts involved in the exploration of this notion.

The Oblivionic Interior Enquiry - in obliviology of Astronist Philosophy, the appellation for the type of philosophical enquiry made to address question of what if The Cosmos exists inside a black hole and what if each black hole is its own cosmos.

The Oblivionic Orifice Model - in obliviology of Astronist Philosophy, the appellation for the model consisting of two aspects, both visual and abstract, and essentially holds that outside of The Cosmos there exists The Universe and that black holes are openings to The Universe.

The Oblivions of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of obliviology.

The Observable Cosmos - in Astronist Philosophy, a type of cosmos involving only that which humanity can observe through telescopes rather than a cosmos that humanity knows, or can imagine, or the true cosmos itself. Compare with The Unobservable Cosmos.

The Observable Cosmos & The Unobservable Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos contemplating the two cosmoses of The Observable Cosmos and The Unobservable Cosmos.

The Observed Cosmos - in Astronist Philosophy, a type of cosmos that relates only to the parts of The Cosmos that have been observed, rather than those parts which are observable.

Theocentrism - a school of thought in The Philosophy of Astronism that priorities the centrality of theology in philosophy, as well as the depiction of gods in art, literature, and in symbolism.

Derivatives

Theocentrist

Theocentricity

Theocentricistic

The Officialities - in Astronist Archiving, the collective term given for the logos, sigils, and other symbols that are considered to be the official versions at the current time, due to their usage in published works.

Theological Demographics - the branch of Philosophical Demographics dealing with the measurement of a population's belief in a God, but not derivative of any religious affiliations, typically is categorised according to three measures: theism, atheism, non-theism. Another measure may be conducted according to the nature of the theism including pantheism, monotheism, panentheism, and all other theistic positions, but again, with no emphasis on religious affiliation.

Derivatives

Theological Demography

Theological Demographer

Theological Studies - see Divinical Studies.

The Omnissary - in introspectics of Astronist Philosophy, the appellation for The Cosmos as everything within it being essential to its existence and stands in close association with omnissarism.

Theonym - a type of term relating to the name of God, or of a deity, an example in an Astronist context would be The Divine.

Derivatives

Theonymic

Theonymous

Theonymity

Theonzan - in Astronist Mystology, as well as in Astronist Genealogy, a male character of the Prophecies Era, whom is part of the Fourth Generation, as the first son of Julius and Euphemia, and whose most famous adventures are detailed in The Grand Chronicles of Astronist Mystology.

Derivatives

Theonzanian

The Open Universe - in Astronist Philosophy, an appellation for the concept that is in agreement with the Astronist Cosmology by the notion that The Universe is infinite and holds divinical characteristics.

The Order of The Universe - in Astronist Philosophy and Centrality Studies, one of the many appellations ascribed to the entity that is known as The Cosmos in the Astronist Cosmology, its first

appearance being in the segment of The Commencement of The Cosmos as part of The Grand Centrality.

Theoretical Explanation - in Astronist Music, an alternative term for a theoretory.

Theoretical Philosophy - in an Astronist contextualisation, considered a position of period within The Philosophy of Astronism, but also holds its own autonomous view of philosophy and deals with the abstract concepts, theories, and thoughts of a philosophy as opposed to their practical and actual application as dealt with Applied Philosophy; Theoretical Philosophy is typically characterised by an idealism of the way in which a philosophy should be applied, implemented, and interpreted, but Applied Philosophy acts as the oppositism of this by demonstrating the actualities of the application, implementation, and interpretation of the philosophy.

Theoretory - in Astronist Music, a short piece of writing sometimes found at the beginning of Astronist musical compositions addressing the theoretical features of the musical piece, and typically resides alongside a creatory.

Derivatives

Theoretories

Theoretorial

Theoricism - one of the three aspects of Astronist Philosophy that collectively relates to the theoretically study and contemplation of ideas that are characteristically Astronist, and therefore remains separate from the two practical aspects of Astronist Philosophy known as practitionism and categoricism. See practitionism and categoricism.

Derivatives

Theoracist

Theoricistic

Theoricistical

Theoricistically

The Origination - in Astronist Philosophy, an appellation used to refer to The Earth as the origination point of humanity in The Cosmos.

The Originator - an unofficial term sometimes used to describe British Astronism, arguing the idea that British Astronism is the original and untainted version of The Philosophy of Astronism as Britain was the birthplace of Brandon Taylorian, and the country in which The Philosophy of Astronism was founded.

The Originator of Knowledge - in Astronist Philosophy and in Centrality Studies, one of the five appellations given to philosophy in The Reascension of Philosophy segment in The Grand Centrality of The Philosophy of Astronism.

The Overseer - in Astronist Philosophy, an appellation for The Divine, as inspired and derived by the Astronist Cosmology.

The Panoptic Cosmos - see The Grand Manifestment.

The Pental Trajectory - in pneumovology of Astronist Philosophy, the appellation for the task involving The Five Mystical Pursuits.

The People's Building - in Astronist Philosophy, Naology, and Centrality Studies, the appellation ascribed to Astronist philosophical buildings when regarded collectively as a means to emphasise the freedoms that should be upheld for those whom enter, or interact with those buildings.

The People's Astronist Congress - operated by *The People's Constitutional Company of Jesse Millette's* governing body, *The Governing Ministry*, *The People's Astronist Congress* is one of the official legislature of *The Governing Ministry* consisting of five sectors: *The Grand Constitutional Senate*, *The Constitutional Ambassadorial Summit*, *The Constitutional Directorial Summit*, *The Constitutional Unionised Summit* and *The Constitutional Confederal Summit*.

The People's Astronist Incorporated Bank - also known as simply The Incorporated Bank, the trading name of the retail arm of The People's Astronist Central Bank.

The Peregrination into The Solar System - in Cosmic Mystology, refers to the period of time in which Jesse and The Four Protectors leave Earth and travel through The Solar System.

The Perfect Cosmos - in Astronist Philosophy, a type of cosmos characterised by a perceived perfection in appearance, functionality, and interaction.

The Perfect Universe - in Astronist Philosophy, an appellation for an attempt to comprehend the entirety of the infiniteness of The Universe, including all the possible existences, dimensions, and realities of The Universe, considered to be an impossible feat by the Astronist Tradition.

The Permute Spectrum - in introspectics of Astronist Philosophy, the appellation for the scale that inerteologists can use to demonstrate the inertiality and dynamicity of cosmical entities applied to it.

The Peroration - the fourth and final day of the Starlight Festival, and takes place on either 43rd Zaarine (23rd December), or 17th Harrietine (23rd June) in the Northern Hemisphere and the Southern Hemisphere respectively, and involves an ending speech from The Chairman of The People's Constitutional Company of Jesse Millette as a conclusion of the starlight festivities and this will be televised.

The Philosopher - in Astronist Philosophy, the persona of an individual that dedicates themselves to philosophical knowledge, enquiry, ideation, and investigation.

The Philosopher's Cosmos - in Astronist Philosophy, specifically within Cosmic Alchemy, a type of cosmos focusing on the way by which a philosopher perceives The Cosmos as composed of by three parts, including witnessment, experiment, and discoverment.

The Philosopher's Duty - in Astronist Philosophy, one of the five components to the life of The Philosopher involving the responsibility of the person of The Philosopher to guide the world to a realisation of, and an appreciation for the gifts of knowledge, imagination, and understanding bestowed upon every human being.

The Philosopher's Imagination - in Astronist Philosophy, one of the five components to the life of The Philosopher involving the utilisation of the most sacred of gifts bestowed upon a person and the greatest instrument of The Philosopher; their imagination.

The Philosopher's Knowledge - in Astronist Philosophy, one of the five components to the life of The Philosopher involving the utilisation and acquisition of knowledge about The Cosmos, about the nature of humanity, and about the fundamental functionalities of existence.

The Philosopher's Understanding - in Astronist Philosophy, one of the five components to the life of The Philosopher involving the ability, the acquisition, and the utilisation of one's understanding, as defined from the act of enknowledge and from knowledge itself, so that they may be better equipped for philosophical enquiry, and investigation.

The Philosopher's Wonderment - in Astronist Philosophy, one of the five components to the life of The Philosopher involving the devotional practices and interests of The Philosopher conducted for greater comprehension, knowledge, and ideation about The Cosmos.

The Philosophical Cosmos - in Astronist Philosophy, an alternative appellation used for The Cosmos itself, but from the perspective of pure philosophical contemplation and is typically infused with some mystical aura, and is most commonly related to visual expressions of The Cosmos in Astronist and Cosmic Art.

The Philosophical Universe - in Astronist Philosophy, the appellation for the concept within the discipline of epochology denoting The Universe as a means of pure philosophical contemplation and study, and proclaims all ideas to be relevant and positively contributory, and that all ideas are possible some reality of The Universe.

The Philosophy - in Astronist Philosophy, an alternative and colloquial appellation for The Philosophy of Astronism.

The Philosophy of Abundance - in Astronist Philosophy, to understand the naturity of celestials as they exist in scale, especially in size comparisons between celestials and objects that humans can comprehend the size of. There are three levels to this philosophy including Physical Abundance, Mental/Abstract Abundance, and Cosmical Abundance.

The Philosophy of Astronomy - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of astronomy.

The Philosophy of Comparison - in Astronist Philosophy, the appellation for the subdiscipline of introspectics dealing with the nature of comparison, the philosophers of which are known as comparatrists.

The Philosophy of Astronism - as distinct from Astronism itself, the first Organised Philosophy which disseminates the principles, and practices of Astronism, and is a term that mainly relates to the application of Astronism rather than Astronism and its principles, practices, and systems themselves.

The Philosophy of The Cosmos

- a term often used to describe, and is closely associated with, The Philosophy of Astronism, due to The Philosophy of Astronism being the direct initiator of Cosmic Philosophy, and beginning a new era in philosophical thought, cosmology, and astronomy.
- in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the general approach of the Astronist Tradition in understanding the entity that is known as The Cosmos in the Astronist Cosmology.

The Philosophy of The Grand Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the Astronist Tradition's perception of The Cosmos as a perfectly ordered and functioning system, known as The Grand Cosmos.

The Plan of Creation - in Cosmic Mystology, refers to the destiny of every occurrence in the universes as planned by The Divine.

The Plurality of Worlds - in formatology of Astronist Philosophy, the appellation for the notion that each and every planetary celestial is absolutely individual and characteristically unique from all other planets in The Cosmos.

The Pneumovollic Cosmos - in Astronist Philosophy, also known as The Living Cosmos, the appellation for the type of cosmos denoting that The Cosmos is alive, holds vigour, and has its own destiny.

The Preamble of The Grand Centrality - in Centrality Studies, the title ascribed to the introduction to The Grand Centrality of The Philosophy of Astronism which includes some general statements about the nature of the text, the purpose of it, and the way in which it is to be approached, as well as providing a definition of what The Grand Centrality actually is.

The Precognitions of The Divine Mission - in Cosmic Mystology, refers to the period of time in which Jesse receives multiple visions of his mission for The Divine.

The Precosmic Existence Principle - in Astronist Philosophy, the appellation for the principle within Creation Theory holding that there was some form of existence before the creation of The Cosmos.

The Precosmos - in Astronist Philosophy, a type of cosmos and a concept within Creation Theory relating to the time before the existence of The Cosmos as we know it.

The Predetermination - in Taylorianology, the period in Brandon Taylorian's life before twenty thirteen; before Taylorian had the idea for Jesse Millette.

The Presence of The Cosmos - in pneumovology of Astronist Philosophy, the appellation for one of The Three Deeds involving the acknowledgment, acceptance, appreciation, advocacy, and annunciation of the existence, the occurrence, and the being of The Cosmos.

The Present Cosmos - in Astronist Philosophy, a type of cosmos denoting the current time in which the appellation is applied.

The Presentiments - in Astronist Philosophy, an appellation collectively describing the foreboding beliefs and thoughts individuals, or groups may hold about the future as outlined in The Omnidoxo,

especially as a means to encourage action in the present day in order to prevent such presentiments from occurring.

The Pretemporal Cosmos - in Astronist Philosophy, not to be confused with a Pretemporal Cosmology, a type of cosmos encompassing The Cosmos only as humanity can physically observe it, as it considered to be inferior to an understanding and observation of The Cosmos in its entirety, and is also central to and supports the notions involved in pretemporalism.

The Prior Cosmos - in Astronist Philosophy, the appellation for the type of cosmos characterised by considering The Cosmos as it existed before The Current Cosmos, or the present time in which such an idea is conceptualised.

The Prophetic Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of prophecies.

The Prospection Principles - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the practice of prospection and the philosophy surrounding its practice.

The Psychology of Space - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of Spatial Psychology.

The Question of Existence - in Cosmic Mystology, refers to the moment in which Divine Jesse does ask what he was destined and prophesied to ask to The Divine, the question of existence.

The Raise of Divinity - in Cosmic Mystology, refers to the moment in which Divine Jesse is raised by The Four Protectors toward The Divine.

Therapies - in an Astronist contextualisation, collectively relating to the different kinds of therapy, whether they be spiritual, intellectual, or physical, as part of Astration.

The Realisation - in Taylorianology, the period between the years of twenty thirteen and twenty fifteen involving the initial stages of the development of The Five Astronist Characters and involves the initial developments of The People's Constitutional Company of Jesse Millette, as well as the idea of The Philosophy of Astronism, but notably, does not include the writing of The Omnidoxy.

The Reascension of Philosophy

- in Centrality Studies, the appellation ascribed to the segment of The Grand Centrality that addresses the notion and prophecy of The Reascension of Philosophy in human civilisation and in human thought, action, and belief.
- in Astronist Philosophy, also known as reascensionism, the prophecy of the Astronist Tradition that there will occur, sometime during and after the establishment of The Philosophy of Astronism, a mass return to the adherence, appreciation, and acceptance of philosophy as a societal and cultural force and driver rather than other forms, such as religion, materialism, and political ideology.

The Requisite Principle - in pneumovology of Astronist Philosophy, the appellation for the principle that to embark upon The Pental Trajectory, a penter, or pentress must complete all the

principles at some point in order to achieve The Pental Trajectory, or one should at least have the intention to complete them.

The Residual Principle - in Astronist Philosophy, the appellation for the notion that the residuals of The Cosmos are essential to The Cosmos itself because residuals are formed by destructions yet from such destructions they do form creations in the form of celestial entities, and thus, are central to celestial formation in the cosmical system. This principle supports the notion of Creations of Destruction.

The Resolver of Reality & Existence - in Astronist Philosophy and in Centrality Studies, one of the five appellations given to philosophy in The Reascension of Philosophy segment in The Grand Centrality of The Philosophy of Astronism.

The Restoratories - see restoratory.

The Return of Jesse - in Cosmic Mystology, refers to the moment from the perspective of Ellena in which she understands that the Jesse she loves is still within Divine Jesse and so Jesse does return to her spiritually.

Thermofinality - in Astronist Philosophy, as part of Finality Theory, a type of finality characterised by the notion that the ultimations of celestials in The Cosmos are entirely dependent and make an emphasis on temperature and defines a distinct correlation between heat and ultimation due to the increase in activity.

Derivatives

Thermofinalities

Thermofinalism

Thermofinalist

Theronym - a type of term relating to an Astronist character whose name is derived from an animal, flower, or some other natural, or cosmical phenomena.

Derivatives

Theronymous

Theronymic

Theronymity

The Root of All Subjects - in Astronist Philosophy and in Centrality Studies, one of the five appellations given to philosophy in The Reascension of Philosophy segment in The Grand Centrality of The Philosophy of Astronism.

The Russian Front - abbreviated to TRF, the philosophical stronghold of The People's Constitutional Company of Jesse Millette in the Russian Federation, typically centring on Western Russia.

The Separatory Cosmos - in Astronist Philosophy, a type of cosmos as an extension to The Expanding Cosmos wherein The Cosmos has expanded to the point at which its galactic progeny are so far distanced from one another that they cannot see each other.

The Seven Cosmical Families - in familiology of Astronist Philosophy, the seven categories into which celestial entities are organised as part of familiological contemplations, and including the families of mobial, filamial, clusterial, terrial, gargantial, solial, and nephial. The entities that does not fit within any of these seven families are known as infamilised.

The Seven Tenets of Association - in Astronist Philosophy, the rubral dealing with the discourse involving the Seven Tenets of Association.

The Six Fundamentals of the Worldview - in Astronist philosophy, in particular, the study of the Astronist Worldview, the six foundational questions and answers that are necessary in the construction of the Astronist Worldview, and briefly include an explanation of the world, a futurology, a set of values, a methodology, a theory of knowledge, reality, and existence, and an aetiological premise.

The Six Transpirations - in introspectics of Astronist Philosophy, the collective appellation for the six categories of discoveries, revelations, and contemplations of different element including cosmotranspiration, astrotranspiration, philosophotranspiration, sentranspiration, unitranspiration, and divinotranspiration.

The South American Pentagon - also known as The South American Pentagon of Nations, and abbreviated to TSAP, the strongholds of The Philosophy of Astronism in South America, including Central Colombia, Ecuador, Peru, Bolivia, Northern Chile, Northern Argentina, Paraguay, Uruguay, and Brazil.

The South Asian Trapezium - also known as The South Asian Trapezium of Nations, and abbreviated to TSAT, the strongholds of The Philosophy of Astronism in South Asia, including Western Iran, Afghanistan, Pakistan, Turkmenistan, Uzbekistan, Kazakhstan, Kyrgyzstan, Tajikistan, India, Nepal, Southern Myanmar, and Bangladesh.

The South East Semicircle - also known as The South Eastern Semicircle of Nations, and abbreviated to TSES, the strongholds of The Philosophy of Astronism in South East Asia, including Papua New Guinea, Indonesia, Timor-Leste, and Central and Southern Philippines.

The Sovereignty of The People's Constitutional Company of Jesse Millette - the claim made in The Grand Constitution of The People's Constitutional Company of Jesse Millette that the company, despite not claiming any physical sovereign territory on Earth, reserves the right to express its sovereignty over its operations and over the peoples and nations of which it serves, and in addition, reserves the right to hold nonphysical authority over those which choose to adhere to its philosophies, or choose to work for the company.

The Spirits of The Cosmos

- the rubral for a discourse in The Omnidoxy as part of the disquisition titled The Aesthetic Cosmos and addresses the discipline of pneumovology.
- the appellation collectively relating to entities in The Cosmos that are considered to be spiritual in their natures.

The Standard Astronomical Calendar - one of the two main derivative calendars of The Astronist Cosmic Calendar system, focusing its epoch on the year in which the first human being went into outer space, thus dividing the Nescient Era from the Cognisance Era.

The Standard Galactical Calendar - one of the two main derivative calendars of The Astronist Cosmic Calendar system, focusing on the Cosmic Year, and the Galactical Year as its epoch, but does not see much widespread usage due to the large timescales it deals with, and thus contrasts with The Standard Astronomical Calendar.

The Starlight Council - a department within The Institution of The Philosophy of Astronism that deals with the initiation, management, promotion, and development of starlight festivals globally as well as being tasked with the dissemination of the culture of starlight festivals, and is split into national, provincial, and regional branches that must all report to the global department.

The Starlight Observance - the third day of the Starlight Festival, taking place on either 42nd Zaarine (22nd December), or 16th Harrietine (22nd June) in the Northern Hemisphere and the Southern Hemisphere respectively, and involves a unique ceremony wherein an attempt is made for the entire world to be silent in darkness.

The Stars of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of heliology and the general contemplation of stars.

The Subjects of The Cosmos - in Astronist Philosophy, an appellation provided to collectively describe the disciplines of Astronist Philosophy that directly address The Cosmos, or any one of its progeny or phenomena in some way.

The Supreordination - in Taylorianology, the period proceeding The Establishment, involving the official entrance of Taylorian into the chairmanship of The People's Constitutional Company of Jesse Millette, and the following years of works including the establishment of relations, and the building of businesses globally.

The Structure of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of structurology.

The Synonymisation - in Astronist Philosophy, the appellation for the process by which astronomical terms, imagery, and astroculture are expected and intended to become synonymous with that of Astronist culture, philosophy, and depiction.

The Synthesis - in Astronist Philosophy, especially within Cosmic Alchemy, the appellation used to describe the state of existence after the inevitable combination of The Thesis (The Cosmos), and The Antithesis (The Chaos), and is considered to be a perfect and ultimate state of existence in the cosmo-alchemic tradition for it is the ultimatum of balance.

The System of Velorum - in Astronist Philosophy, the system of celestial appellation founded by the Astronist Tradition that names celestial entities according to three parameters: functionality, appearance, and proximity to other named celestials.

The Systems of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the systemic structures and procedures found in The Cosmos and those found within and between celestial entities.

The Ten Grands - in prophetics of Astronist Philosophy, the appellation for the fundamental structure of the discipline which involves ten different prophecies that the Astronist Tradition establishes and upholds concerning the future of humanity in space and in support for the Astronist worldview.

The Thesis - in Astronist Philosophy, an appellation relating to The Cosmos, the antithesis of which is The Chaos, and in the cosmo-alchemic tradition, these two oppositisms are expected to conjoin to form that which is known as The Synthesis.

The Three Deeds - in pneumovology of Astronist Philosophy, the appellation for the three different actions in achieving that which is known as the Cosmic Union, and in includes The Presence of The Cosmos, The Experience of The Cosmos, and The Knowing of The Cosmos.

The Three E's - in Astronist Philosophy, the appellation forming the Sibling-Sibling relationship within the Five Bonds of Society composed of Entrusted Reliance, the Essential Hand, and the Eternal Friend.

The Three Fiends - a creature of Astronist Mythology, that resembles three little boys depicted as fiends and are servants of evil spirits.

The Three Precipices of Time - in Astronist Philosophy, especially within the discipline of study of epochology, the appellation collecting relating to the past, the present, and the future as the three fundamental structures of how we are to understand and comprehend time.

The Three Ventures - in structurology of Astronist Philosophy, the appellation for the three interactions with The Cosmos as identified by studies into Cave Dweller Cosmology; looking at, thinking of, and communicating about The Cosmos.

The Topography of The Cosmos - in omnidoxicology, the rubral in the disquisition of The Principles of The Aesthetic Cosmos dealing with the discipline of study of cosmotopography.

The Transcendence of Divine Jesse - in Cosmic Mystology, refers to the moment in which Divine Jesse as The Five As One, does transcend beyond The Universes and The Cosmos toward The Divine.

The Tricosmic Paragon - in Astronist Philosophy, the appellation provided to the tricosmic concept constituting that existence is formed by The Cosmos, The Chaos, and The Universe, the latter of which underpins and overpins the former two components in order to create a perfection of existence.

The Tricosmos - see tricosmology.

The True Cosmos - in Astronist Philosophy, a type of conceptual cosmos that many different branches, disciplines, subphilosophies, and orientations of The Philosophy of Astronism proclaim to be in approach to in order to achieve a coherent understanding of.

The Tumefied Sun - in kosmetrics in Astronist Philosophy, the appellation for the instance in which The Sun is large enough to first burn The Earth and then engulf it, as part of The Great Tumefaction, as it is known in the Astronist philosophical tradition.

The Turkish Rectangle - abbreviated to TTR, the stronghold of The Philosophy of Astronism in Turkey, and typically refers to Western Turkey, notably excluding the Kurdish regions in Eastern Turkey.

The Twelve Disquisitions - in Astronist Philosophy, also known as The Twelve Grand Principles, twelve pieces of writing varying greatly in length from one to the other that form the foundations of The Philosophy of Astronism. These are the sole writings to which all studiers of Astronist Philosophy look for a greater understanding and knowledge about the tradition and form the overwhelming majority of The Grand Centrality, and form the entirety of The Omnidoxy.

The Twelve Grand Principles - see The Twelve Disquisitions.

The Twenty-Five Foundations of Philosophy - in Astronist Philosophy, as part of Centrality Studies, the list of twenty five tenets ascribed by Brandon Taylorian in the effort of defining the difference between philosophy and religion, specifically the differentiation between Astronist Philosophy and religion.

The Ultimation of The Cosmos and The Universe - in Astronist Philosophy, one of the three elements of the Futurity Epoch denoting the end of The Cosmos and The Universe.

The Universal Hypersphere - in kosmetrics of Astronist Philosophy, also known as an infinisphere, the appellation for the notion that there is an infinite amount of dimensions due to the infinite naturity of The Universe as expounded by the Astronist Cosmology.

The Universal Medium - in Astronist Philosophy, an appellation used to describe the part of the Astronist Cosmology that is The Universe.

The Unobservable Cosmos - in Astronist Philosophy, a type of cosmos consisting of only that which humanity cannot observe, and is therefore a cosmos of absolute unknowns because humanity cannot observe this cosmos, it can only imagine, or contemplate what it may consist of.

The Vacuological Cosmos - in Astronist Philosophy, the appellation for a type of cosmos in which The Cosmos is absolutely empty of all matter and energy.

The View of All-existence - in Cosmic Mystology, refers to the moment in which The Divine shows The Five As One all the universes and everything in them.

The Walk of Divinity - in Cosmic Mystology, refers to the moment in which The Five Transcenders do walk towards The Divine in The Eternal Plain.

The Widening of The Grand Spectrum - in Cosmic Mystology, refers to the expansion of the universe from the point of The Big Bang and onwards.

The Wider Cosmos - in Astronist Philosophy, a type of cosmos relating to the parts of The Cosmos that exist beyond The Solar System.

The Will of The Cosmos - in Astronist Philosophy, an appellation for the concept that The Cosmos holds a destiny that affects everything within The Cosmos, as is conducted by The Divine.

The Witnessing of The Divine Creation - in Cosmic Mystology, refers to the moment in which The Divine shows The Five As One the moment of The Big Bang; the moment of the creation of the universes.

The World Beyond - in Astronist Philosophy, one of the most popular and regularly used appellations ascribed to The Cosmos.

The World Grandarian Fellowship - an annual gathering of all grandarian politicians and political parties for the discussion of Grandism, as well as the present state, influence, and direction of the political philosophy in current affairs.

The World of Jesse Millette - a phrase relating to the entirety of the Jesse Millette brand and all its creative outlets and expressions, especially related to literature, film, television, musical, and all other cultural expressions about the fictional world of Jesse Millette.

The Worshipment - in Cosmic Mystology, refers to the moment in which Divine Jesse as The Five As One, does cup his hands to worship The Divine.

The Year of Completion - in Taylorianology, referring to the year of two thousand and nineteen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which the completion of The Grand Centrality of the Astronist Philosophical Tradition, and The Omnidoxy inside which, was achieved after many years of working on its creation.

The Year of Consolidation - in Taylorianology, referring to the year of two thousand and seventeen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which a great many efforts were made to consolidate The Eleven Grand Founding Works, as well as other Astronist works, concepts, and businesses.

The Year of Enlightenment - in Taylorianology, referring to the year of two thousand and fifteen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which Taylorian supposedly realised the greater purpose of his dream and subsequently embarked on a larger journey, thus marking a new chapter in the realisation and maturity of his dream.

The Year of Expansion - in Taylorianology, referring to the year of two thousand and sixteen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which Taylorian's imagination ran wild with all the possibilities of his dream in the future, however far-flung they may have been, and is marked as a pivotal year in the early

development of many of the Astronist ideas, The Eleven Grand Founding Works, and many other famous concepts, works, books, and philosophies.

The Year of Ignorance - in Taylorianology, referring to the year of two thousand and fourteen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which Taylorian's unbeknownst of the greater importance and possibilities of his dream is main the central focus. For this reason, this year isn't considered monumental, nevertheless, a hand-full of important concepts, books, and developments are attributed to this year, and it has been argued that there was some overlap between this year and the next, The Year of Enlightenment, thus bringing more weight to the importance of this year.

The Year of Manifestation - in Taylorianology, referring to the year of two thousand and twenty as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which Taylorian and associates made planned and systemised efforts for the promulgation of The Philosophy of Astronism and the dissemination of The Omnidoxo.

The Year of Prolifics - also colloquially known as Prolifics, in Taylorianology, referring to the year of two thousand and eighteen as a reflection of the general themes, events, and works partaken in that particular year by Brandon Taylorian, during which Taylorian's focus centred on the prolific writing of The Original Jesse Millette Series due to its stagnation at book four up to this year, as well as his focus on beginning to write other books, essays, and literatures which he had previously only put a title to. In this year, The Grand Centrality of The Philosophy of Astronism was also honed and completed by Taylorian, which marked the completion of the bedrock from which all other Astronist writings were, are, and always will be founded upon.

Prolificity

The Year of The Gift - in Taylorianology, referring to the year of two thousand and thirteen as a reflection of the general themes, events, and works partaken in that particular year, during which the dream of the character of Jesse Millette, though only in its infancy, was brought to Brandon Taylorian. For this reason, this year is considered to be absolutely monumental in Taylorian's life and his greater journey as a whole, despite not knowing the gravity of his dream at that time.

The Zenith - in Astronist Philosophy, the appellation for the dimension of The Cosmos characterised to exist at the highest point of all things, and is also known as Top of The Cosmos.

Thidoxo - in Astronist Music, the third great stave of a piece of music.

Derivatives

Thidoxies

Thidoxic

Thidox

Thinker - a common demonym used for a follower of The Philosophy of Astronism with no particular denominational association.

Derivatives

Thinkers

Third Generation - in Astronist Genealogy, the term used to describe the group of descendants two generations after Jesse Millette, and mainly consists of the offspring of Phoenix and Celestia.

Third Wave - a cradial term relating to the tertiary subjects listed in The Grand Cradle of Astronology.

Thistle - in an Astronist contextualisation, the planting of thistles on Astronist estates, outside Astronist buildings, or in the gardens, or around patios of Astronist buildings, or may refer to the depiction of a thistle in Astronist Heraldry.

Derivatives

Thistlation

Thistling

Thistlement

Thought Culture - in Astronist Philosophy, this Astronist term requires definition on two distinct levels; the first of which defines the term as referring to a unique system of thought that defines the entirety of a cultural art, architecture, methodology, and all other aspects of culture. The second of which defines the term in a much broader, yet more literal sense, and understands it to refer to a culture, which is often inferred in Astronist Thought itself, whereby thought, knowledge, enquiry, and a distinct interest in philosophy, reason, logic, and all other components of thought by the people, or the followers of a particular culture; a culture that bases itself upon an enthusiasm for thought and its diversities.

Thoughtpath - in Astronist Philosophy, relating to the direction that one may take in their philosophisations, or the general orientation they hold in their approach to subjects.

Three higher existences - in Astronist Philosophy, specifically within the Astronist Cosmology, collectively relating to The Divine, The Universe, and The Cosmos. Compare with the three lesser existences.

Three lesser existences - in Astronist Philosophy, specifically within the Astronist Cosmology, collectively relating to The Chaos, The Mytra, and The Betwixity. Compare with the three higher existences.

Three Orientations - a term that collectively describes the three stances towards Astronist political philosophy, and includes Grandism, Reactionism, and Reorientationism.

Three Sister Subjects - the appellation collectively relating to three connected branches of kosmetrics, each of which dealing with the positions, motions, shapings, and magnitudes of stars, planets, and galaxies, and are known as astrometrics, planetometrics, and galaxometrics respectively.

Thrice - in an Astronist contextualisation, relating to some event, or occurrence in an Astronist book happening a total of three times, or relating some action that must be conducted three times in order for it to be deemed authentic, or genuine.

Throughsee - in Astronist Philosophy, to study The Philosophy of Astronism in-depth so as to understand it in its entirety.

Tithe - in an Astronist contextualisation, relating to the practice of tithing that is constitutionally enforced upon all employees of The People's Constitutional Company of Jesse Millette in order to support Astronist charities, and funds.

Title - the part of the patch or emblem which displays the name of the mission, or the name of the spacecraft.

Titlemount - in Constitutional Terminology, the text on the front page of The Grand Constitution which is traditionally, “The Grand Constitution of The People’s Constitutional Company of Jesse Millette”.

-tius -in Astronist Onomatology, a suffix used for Astronist names in Astronist Mystology, and such names are considered historical.

Toerana - derived from the Malagasy language, in Astronist Philosophy, a term relating to space in Cosmic Philosophy.

Togethering - in Astronist Philosophy, relating to the instance and process in which matter is brought together by gravity.

Token - in Astronist Ornamentation, a type of repetitive ornamental pattern which features just one type of motif and typically holds just one solid background colour.

Tokenette - in Astronist Rendition, a metallic golden, typically six-pointed, embellished star with a central motif, commonly of a cosmical, celestial, or galactical entity.

Tolerationism - a school of thought in The Philosophy of Astronism which focuses its beliefs around the concept of the toleration of sufferings in the hope for betterment and prosperity thereafter, and demonstrates toleration as a unique practice to improve one’s ethics, knowledge, and health.

Derivatives

Tolerationist

Tolerationistic

Tolism - in Astronist Philosophy, the school of thought and philosophy that stands at the oppositism to definitivism and is characterised by a toleration for objects that hold attributes of endlessness and accumulation rather than an avoidance or dislike of such elements.

Topocentrists
Topocentricistic
Topocentricistically

Top of The Cosmos - see The Zenith.

Topography - in Astronist Civicology, refers to the depiction of natural features and phenomena in city and town illustrations, especially when relating to how the town or city has been constructed around these phenomena.

Torch - in an Astronist contextualisation, relating to one of the most common iconographical items depicted to be possessed by the Astronist character of Jesse.

Torpid - in an Astronist contextualisation, relating to the instance in which The People's Constitutional Company of Jesse Millette and an external entity have no relations, or any history of relations with one another.

Derivatives

Torpidity

Torporism - in Astronist Philosophy, the general approach and consensus in conceptualising the nature of The Divine in such a way that consists of a distinct passivity, non-interfering, relentless, but also merciless nature, as derived from insentences from within The Omnidoxy.

Derivatives

Torporist
Torporistic
Torporists
Torporistically
Torpority

Torsity - in Astronist Philosophy, an instrument of study measuring the extent to which a celestial entity makes or is involved in some type of twisting motion or coiling in shape, especially when interacting with another celestial.

Derivatives

Torsities

Totality - in an Astronist contextualisation, the instance of looking at something in its total state, such as the entirety of the operations of The People's Constitutional Company of Jesse Millette, or the entirety of concepts within The Philosophy of Astronism, in contrast to looking at just one or two parts of something.

Totality State - in Astronist Philosophy, the appellation for the conceptual instance in which one reaches an existential realm beyond their original or current existence, an example of which would be the impossible instance in the Astronist Cosmology in which a cosmic entity enters The Universe.

Totius Constitutionis - one of the two official versions of The Grand Constitution of The People's Constitutional Company of Jesse Millette that is much longer in length and detail, and includes the Astronist philosophical buildings list, along with other detailed and lengthy sections that are not present in the Constitutione Concisum.

Totology - the large discipline of study in Astronist Philosophy dealing with celestial entities in their whole, complete, or mature states, or when studied collectively, or may be the study of The Universe, or The Cosmos as perceived in their totalities.

Derivatives

Totologic

Totological

Totologist

Tournure - in Astronist Philosophy, collectively relating to the nomenclature used within philosophical argumentations, or used within the wider Astronist philosophical tradition.

Tovolàhy - derived from the Malagasy language, a term that specifically relates either to the Astronist character of Oliver, or Jesse.

Tovovàvy - derived from the Malagasy language, a term that specifically relates either to the Astronist character of Ellena, Harriet, or Zara.

Toxicant - in an Astronist contextualisation, relating to the element of a business project, or operation that is ruining it, or making it inefficient, or giving it a bad reputation.

Towerpoint - in Astronist Architecture, on the estates of some Astronist buildings, the two towers constructed equidistantly from the central building which are most often used as observation points.

Towngarden - in Astronist Architecture, as part of gardenry, a type of garden of Astronist buildings where the garden itself is located on a terrace, or large balcony of the main building, and is most usually found on Astronist buildings that are located in the centre of towns and cities, thus where there is little room for a full garden, or estate.

Derivatives

Towngardens

Town History - in Astronist Civicology, the thorough commentary of a town's history, especially in relation to its planning, construction, and development, and is most typically in an incunabulum.

Town Planning - the design, attribution, and subsequent construction of a town.

Townsperson - in Astronist Civicology, the type of staffage specifically depicted in the foreground of a town illustration.

Togolese Astronism - the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Togolese Republic.

Tongan Astronism

- the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Kingdom of Tonga.
- the denomination of The Philosophy of Astronism that is most widely followed in Tonga, by the Tongan peoples.

Too Vital To Fail Policy - the emphasis of the operations of The People's Constitutional Company of Jesse Millette, especially regarding its education operations, becoming so deeply interconnected with the economic, political, cultural and social foundations of a nation that its collapse would lead to the subsequent collapse of the nation's education system, thus leading to major issues in other areas of the nation.

Topology - in Astronist Philosophy, the discipline of study dealing with the way in which the disciplines, concepts, theories, denominations and all other elements of The Philosophy of Astronism are arranged and interrelated.

Tormentity - in Astronist Philosophy, the state of suffering severe physical or mental pain.

Tot - in Astronist Philosophy, the philophon for the discipline of totology.

Total Bicosmos - in Astronist Philosophy, a concept within bicosmology philosophising the existence of The Cosmos that is entirely structured upon binarity and duality rather than being partly structured upon binarity and duality.

Totology - in Astronist Philosophy, a major branch of study dealing with any concept, or physical entity in its total state, or most perceived ultimate physical, or abstract state; in essence, considers entities according to their wholes, rather than their separate, imperfect, or incomplete versions.

Totologic

Totological

Totologically

Totologist

-tox - forming masculine agent nouns corresponding to feminine nouns ending in *-trix*.

Derivatives

-toxos

Toxocrator - an interchangeable title of either all or one of The Five Astronist Characters, represented as defenders against the toxicities of the world and humanity, especially in Astronist Art.

TPCCJM - the official acronym for The People's Constitutional Company of Jesse Millette.

Tra - in Astronist Philosophy, the philophon for the discipline of transientology.

Tracinghouse - in Astronist Architecture, as part of gardenry, an outbuilding on the estate of some Astronist buildings in which the resident masons, restorers, curators, or architects can conduct their designing, restoration, and small-scale construction works, and is usually not open to the public.

Derivatives

Tracinghouses

Tractate - in an Astronist contextualisation, collectively relating to The Grand Treatises.

Trademark - in an Astronist contextualisation, relating to all the official trademarks held by The People's Constitutional Company of Jesse Millette for all its brands and characters worldwide.

Trade Union - in an Astronist contextualisation, relating to the unions external to The People's Constitutional Company of Jesse Millette.

Tradition

- in an Astronist contextualisation, relating to the vast traditions of The People's Constitutional Company of Jesse Millette, most of which originate from The Grand Constitution.
- in Astronist Philosophy, the group of concepts, disciplines, branches, schools, and beliefs comprising that which is known as the Astronist philosophical tradition.
- see Astronist Tradition.

Traffic - in an Astronist contextualisation, broadly relating to the number of people interacting with The People's Constitutional Company of Jesse Millette, or any one of its subsidiaries in a particular activity, or across a certain time period, such as the amount of people entering an Astronist fashion store in the space of a week, or the amount of people viewing one of the Company's official websites in the space of a month.

Trail of Destruction - in obliviology of Astronist Philosophy, the appellation for the notion of the existence of black holes relating to the trail of destruction that black holes leave in their wake; essentially, taking the consequences of something as a notion for its existence.

Trajectory - in Astronist Insigniology, the official term for the border of a mission patch, or spacecraft emblem.

Trajecture - in Astronist Philosophy, an alternative term for a trajectory, but particularly in a conceptual context relating to metaphorical route that a concept takes during and after its application, the opposite of which is distrajecture.

Derivatives

Trajectured

Tran - in Astronist Philosophy, the philophon for the discipline of transhorology.

Tranoambony - derived from the Malagasy language and used in Madagascan denominations of The Philosophy of Astronism, any one of the Astronist philosophical buildings, especially a planetarium, literally translated as a starhouse.

Derivatives

Tranokintana

Transapplication - in Astronist Philosophy, a cosmoapplication that ends in addressing an entirely different topic than it had originally intended to address.

Derivatives

Transapplicational

Transapplicative

Transcend - in an Astronist contextualisation, relating to the representation of Astronist characters as transcendents, and transcenrixes, especially so in Astronist Mystology.

Transcendent Philosophy - a broad term encompassing all philosophies and their denominations, branches, instruments, and schools of thought, that deal with the topic of the afterlife and immortality, or even dealing with theological issues.

Transcender - a being who transcends beyond or above normal or physical human existence.

Transcenrix - a female being who transcends beyond or above normal or physical human existence.

Derivatives

Transcenrixes

Transconfliction - in Astronist Philosophy, the cosmical phenomena in which two planets collide with one another causing the distortion of the axis for one of the two planets after impact, particular the larger of the two as the smaller of the two is often destroyed or incorporated into the larger; this is considered to be a cosmochaotic occurrence by the Astronist Tradition.

Derivatives

Transconflictive

Transconflictional

Transconflictor

Transcontinental - in an Astronist contextualisation, relating to the operations of The People's Constitutional Company of Jesse Millette when compared from one continent to another.

Derivatives

Transcontinentality

Transcorrespondence - in Astronist Philosophy, the instance in which a person, an object, or an event is in alignment with the cosmical order as prioritised by propitiationism; the fact of something being cosmic rather than chaotic.

Derivatives

Transcorrespondent

Transcorrespondency

Transfinality - in Astronist Philosophy, as part of Finality Theory, a type of finality characterised by the notion that it remains the nature of finalities to be intrinsically interconnected with other finalities.

Derivatives

Transfinalism

Transfinalities

Transfinalist

Transglobal - in an Astronist contextualisation, relating to the entirety of the operations of The People's Constitutional Company of Jesse Millette, including all its subsidiaries, organisations, governmental agencies, charities, and funds, on The Earth.

Derivatives

Transglobality

Transhorology - the major subdiscipline of study in Astronist Philosophy dealing with the potentiality of travelling through spacetime, or travelling through warps to reach distant parts of the galaxy, or The Cosmos.

Derivatives

Transhorologist

Transhorologic

Transhorological

Transhorologically

Transhuman - a human being that has successfully managed to evolve beyond the physical and mental limitations by means of scientific and technological advancements.

Transience - in an Astronist contextualisation, especially in Astronist Accounting, relating to the instance in which a business project ends before three years, or the decided truncation period.

Derivatives

Transient

Transiental

Transientality

Transientality - in Astronist Philosophy, an instrument of study measuring the extent of the transience of celestial entities, or cosmic events and phenomena.

Derivatives

Transientalities

Transiential - in Astronist Philosophy, relating to transience, and the quality, characteristic, or state of being transient.

Derivatives

Transientially

Transientialism - in Astronist Philosophy, also known as Transiential Thought, the orientation characterised by the notion that emanscence is the lengthening and broadening of cosmic activity in time and space, and stands superior to its oppositism known as ephemerence.

Derivatives

Transientalist

Transiential Thought - see Transientialism.

Transientology - in Astronist Philosophy, a discipline of study within Cosmic Philosophy concerning the philosophical contemplation of transience and the transient existence of some celestial entities.

Unconsciousity

Unconsciously

Unconcorded - in Astronist Education, a phrontistery that does not participate in the principle of Astronist education structure known as concordism.

Derivatives

Unconcordance

Unconcordancy

Undercoverment - in Astronist Philosophy, to cover something conceptually, so as to reveal its true nature.

Undercurrent - in Astronist Propaganda, the term used to describe the underlying message, or allegory of a propaganda piece.

Undercurve - in Astronist Philosophy, specifically within Cosmic Philosophy, the part of the homaloidal planetoplane that is influenced by a gravitational point, typically due to the presence of a celestial entity, and so creates an inward curve in the homaloida.

Derivatives

Undercurving

Underground Network Planning - in Astronist Civicology, the design, naming, planning, and subsequent construction of an underground railway.

Underpinningness - in Astronist Philosophy, the instance and quality of underpinning something, either physically, or conceptually.

Underwatch - in Astronist Architecture, the area beneath an overwatch where one can look up to see the overwatch.

Derivatives

Underwatches

Unethicality - in Astronist Philosophy, the state, or instance of something that isn't deemed correct, or proper in the context of something else, especially a culture, a philosophy, or a religion.

Unfixated - in Astronist Philosophy, especially within Cosmic Philosophy, relating to a celestial entity that is not fixated into a course like the vast majority of planetary bodies are, and is therefore highly chaotic in its naturity.

Derivatives

Unfixatedly

Ungwaru - The School of Intellectuality in Astration as known in the Shona language.

Uni - in Astronist Philosophy, the philophon for the discipline of universology.

Unicity - in an Astronist contextualisation, an Astronist philosophical term for the unification of humanity as whole in order to prepare for the Space Age, or the next frontier which is space travel, exploration, advancement, and progression.

Unificationism - a school of thought in The Philosophy of Astronism which believes in the concept that one shall unify all under the idea of a common cause for the betterment, the advancement, and the prosperity of all humanity, and may also advocate for the rallying of all peoples under one philosophical system, especially one ethnic group, or one nation.

Derivatives

Unificationistic

Unificationist - a person who advocates for the ideas of Unificationism.

Unigesis - in Astronist Philosophy, the idea that The Universe is the most prominent entity when contemplating the nature of existence and the very existence of existence.

Derivatives

Unigetic

Unigetical

Uniment - in Astronist Philosophy, a philosophical argumentation that goes ahead without many delays or elongated disputes; a smooth debate.

Derivatives

Unimental

Unimentally

Unimentality

Unincorporated - in an Astronist contextualisation, of a subsidiary of The People's Constitutional Company of Jesse Millette, in a state of not being constitutionally bound in its methodologies, operations, and practices, and is most commonly an acquisition of the Company from a third party.

Unincorporated Astronism - a broad term for any type, practice, or theory of Astronism that does not, or is not, recognised by The Institution of The Philosophy of Astronism.

Unindexed - in omnidoxicology, an subinsentensation that is not provided with an idexa, usually due to either its shortness or its significancy to receive one as the insentensation to which it is associated is indexed as a contingency. There are a few difference instances of unindexation in The Omnidoxy and there are expected to be differences in opinion of whether unindexed subinsentensations should be included in The Omnidoxy which is dependent upon the editor. Insentensations cannot be unindexed as only subinsentensations can be unindexed.

Derivatives

Unindex

Unindexation

Uninfluenced - in an Astronist contextualisation, of The Constitutional Leader of The People's Constitutional Company of Jesse Millette, must remain immune to all external influences and circumstances especially when expounding the principles of The Grand Constitution, and solemnly staying in full alignment with those principles.

Union - in an Astronist contextualisation, relating to the various unions founded by The People's Constitutional Company of Jesse Millette.

Unionism - a school of thought in The Philosophy of Astronism that advocates for philosophical art, culture, and societal governance to promote the establishment, integration, and championing of unions as the best form of citizen and employee organisation and association.

Derivatives

Unionarian

Unipate - in Astronist Philosophy, argumentation and philosophical discussion, to study, adhere to, use, or to refer to just one aspect of a multifaceted concept, subject, philosophy, or theory,

especially when the knowledge of its other aspects may hurt one's argument, or may contradict, or weaken one's point.

Derivatives

Unipation

Unipating

Unipated

Unipative

Unipational

Unipater

Unipatrix

Uniquity - in Astronist Philosophy, a semistrument relating to the state, or fact, or extent of the uniqueness of something, especially of a concept, or a celestial entity.

Derivatives

Uniquities

Unisence - in introspectics of Astronist Philosophy, the notion that The Universe is the source of authority for everything that exists within it including The Cosmos, and should be compared to premisence and divisence.

Derivatives

Unisency

Unisencial

Unisencially

Unison - in an Astronist contextualisation, a type of representation of the Astronist characters that is similar to quintinity, or a cosmocruxic form, but is typically reserved for a literary platform, rather than in art, architecture, and rendition.

United Progression - in Astronist Philosophy, an appellation for the notion that humanity will reach achievement and peace only through the unity of the principles of all peoples, and is expounded by the Astronist Tradition to be an important ambition for all leaders to contemplate.

Unitranspiration - in introspectics of Astronist Philosophy, one of The Six Transpirations characterised by all new revelations of concepts and theories regarding The Universe.

Derivatives

Unitranspirational

Unitranspirative

Unitranspiratively

Unitranspire

Unitranspired

Unitranspiring

-univ - in Astronist Onomatology, a suffix used for Astronist names, in reference to The Universe.

Universal Basic Standard - the consolidated language, comprising of many dialects and accents, but generally universally understood, that is to be used in all affairs beyond the Earth, and is said to be linguistic representative of humanity beyond the Earth.

Universal Cycles - see Universal Cyclometrics.

Universal Cyclometrics - in Astronist Philosophy, a branch of cyclometrics dealing with the cycles in occurrence in The Universe, directly influenced by The Universe, or those which are universal in nature.

Universal Epochology - in Astronist Philosophy, one of the three main branches of the discipline of epochology dealing with The Universe in relation to time.

Universal Fusionism - in Astronist Philosophy, the belief and notion that the relationship between The Cosmos and The Universe, as inspired by the Astronist Cosmology, is ultimately formed upon a conjoined structure, that these two entities remain separate for now, but their eventuality is oneness.

Universal Horizon

- in perimetrics of Astronist Philosophy, the appellation for the concept holding that the perimeter of The Cosmos is forever eternal from the perspective of cosmic beings and entities.
- in obliviology of Astronist Philosophy, the appellation for the notion that black holes are not oblivions, but are instead portals to that which is known as The Universe in the Astronist Cosmology.

Universalise - in an Astronist contextualisation, to implement something, especially a newly introduced policy, throughout the entirety of The People's Constitutional Company of Jesse Millette, its government, and all its incorporated subsidiaries.

Derivatives

Universalisation

Universalising

Universalised

Universaliser

Universalisee

Universal Jurisdiction - in Astronist Philosophy, the appellation for the notion of the extent of the authority of The Universe, and typically reigns over The Cosmos and all that exists within The Cosmos.

Universal philosophy - in Astronist Philosophy, a classification of a philosophy relating to a philosophy that seeks worldwide acceptance and adherence and actively looks for new followers, an example of which is The Philosophy of Astronism. Compare with an ethnic philosophy.

Universal Plan - in Astronist Philosophy, the appellation for the metaphorical concept that The Universe is part of a systemic plan devised by that which is known as The Divine in the Astronist Cosmology.

Universal Sphere - in introspectics of Astronist Philosophy, the appellation for the introspection classification denoting an introspection which is universal by its nature and context.

Universal Temperature - in firmamentology of Astronist Philosophy, the notion that temperature plays an imperative role in The Universe, beyond the cosmical periphery.

Universal Totality - in Astronist Philosophy, especially in totology, a type of totality holding that The Universe can never hold a totality due to its infinite naturity as principled by the Astronist Cosmology.

Universal Ultimatum - in Astronist Philosophy, and within ultimatology, the appellation for the notion that due to its infinite nature, The Universe, as it is understood in the Astronist philosophical tradition, does not hold an ultimatum.

Universe Day - in The Grand Astronist Calendar, a day of commemoration and celebration dedicated to the specific wondermentation, adoration, and laudation of that which is known and philosophised as The Universe in Astronist Philosophy, and is characterised by decorations of depictions of The Universe, and special lectures and education events at Astronist philosophical buildings that focus on the subject of The Universe from an Astronist philosophical perspective. This always takes place on 55th Ellenine, which translates to the 27th May in the Gregorian calendar.

Universia - in Astronist Mystology, as well as in Astronist Genealogy, a female character of the Prophecies Era, whom is part of the Fifth Generation, as the second daughter of Cosima and Celetius, and whose most famous adventures are detailed in The Grand Chronicles of Astronist Mystology.

Derivatives

Universian

Universine - part of The Standard Astronomical Calendar, the alternative name for the Gregorian month of December.

Universism - a branch of knowledge in The Philosophy of Astronism concerning the study of the nature, existence, and finality of The Universe, and its consequences for humanity.

Derivatives

Universist

Universistic

Universistical

Universistically

Universocentric - holding, representing, or believing The Universe to be at the centre of creation, imagination, and divine interventions.

Derivatives

Universocentricity

Universocentricism

Universology - in Astronist Philosophy and Astronist Cosmology, an Astronist Subject dealing with the philosophical study of the entity known as The Universe in Astronist Cosmology, as distinct from The Cosmos, and involves surrounding concepts and theories.

Derivatives

Universologist

Universologic

Universological

Universologically

Universox - part of The Standard Astronomical Calendar, the alternative name for the Gregorian day of Tuesday.

Univertius - in Astronist Mystology, as well as in Astronist Genealogy, a male character of the Prophecies Era, whom is part of the Fifth Generation, as the second son of Cosima and Celetius, and whose most famous adventures are detailed in The Grand Chronicles of Astronist Mystology.

Derivatives

Univertian

Unknowable Totality - see Agnostic Totality.

Unknownness - in Astronist Philosophy, that which is unfamiliar to The Cosmos, and its system, characteristics, and orderity.

Derivatives

Unknownnesses

Unlimitation - in Astronist Philosophy, a characteristic of The Universe, that of infiniteness.

Derivatives

Unlimitational

Unlimitationally

Uno - in Astronist Philosophy, the philophon for the discipline of unology.

Unology - the major discipline of study in Astronist Philosophy dealing with the nature of The Universe, as a separate entity from The Cosmos.

Derivatives

Unologist

Unologic

Unological

Unologically

Unorganised Astronism - a broad term for any type, practice, or theory of Astronism that is purely individualistic in nature, or one that only holds a very small amount of adherents, and whose differing beliefs are obscure, or are never clearly expressed.

Unornamented - in Astronist Architecture and Philosophy, that which is without ornamentation, either in an architectural context, or a conceptual and philosophical context.

Derivatives

Unornamentedness

Unpinpointable - in Astronist Philosophy, that which is unable to be precisely identified.

Derivatives

Unpinpointably

Unpinpointability

Unquantifiability - in Astronist Philosophy, the instance and quality of being unquantifiable.

Unspecialised contemplation - see exteriorisation.

Untraditional - in an Astronist contextualisation, an informal term for something being unconstitutional.

Derivatives

Untraditionality

Untraditionally

Untrustworthy - in an Astronist contextualisation, to describe an entity, either internal or external to The People's Constitutional Company of Jesse Millette, from the viewpoint of The Grand Constitution and its principles.

Uommen - in Astronist Mystology, as well as in Astronist Genealogy, a male character of the Prophecies Era, whom is part of the Fourth Generation, as the husband of Delicia, and whose most famous adventures are detailed in The Grand Chronicles of Astronist Mystology.

Derivatives

Uommenian

Uppl - a follower of the Icelandic denomination of The Philosophy of Astronism, known as Uppljómunir'ism.

Derivatives

Uppls

Uppljómunir'ism - also known as Icelandic Astronism, the denomination of The Philosophy of Astronism that is predominantly adhered to in Iceland, and by the Icelandic diaspora community that still share an affiliation with the country of Iceland.

Derivatives

Uppljómuniran

Uppljómunir'ist

Upply - a follower of the Swedish denomination of The Philosophy of Astronism, known as Upp'lys'ningism.

Derivatives

Upplys

Upplysning - the root term for Swedish Astronism.

Upp'lys'ningism - also known as Swedish Astronism, the denomination of The Philosophy of Astronism that is most prevalent in Sweden and is closely associated with Swedish originism.

Derivatives

Upp'lys'ningen

Upp'lys'ningist

Upport - in Cosmic Art, as a derivation of Astronist Art, the upper region of a cosmic art piece.

Derivatives

Upportic

Upportical

Upportically

-ura - in Astronist Onomatology, a suffix used for Astronist names, in reference to the Classical Planet of Uranus.

Ura- - in Astronist Onomatology, a prefix used for Astronist names, in reference to the Classical Planet of Uranus.

Ura - in Astronist Philosophy, the philophon for the discipline of uranology.

Uralabe - in Astronist Rendition, either a brass or plastic ornament featuring the classical planet of Uranus and its twenty-seven moons.

Derivatives

Uralabes

Uranology - in Astronist Philosophy, specifically within Cosmic Philosophy, the discipline of study concerning the philosophical contemplation of Uranus as a Classical Planet.

Derivatives

Uranologist

Uranologic

Uranological

Uranologically

Uranometry - in Astronist Philosophy, specifically in Cosmic Philosophy, the study of the differences in purpose and structure between The Earth and other celestial entities, and the relations between these two cosmical elements with that of functionality.

Derivatives

Uranometrics

Uranometrist

Uranomic

Uranomical

Uranomically

Uranus Day - in The Grand Astronist Calendar, also known as Uranian Day, a day of commemoration and celebration dedicated to the specific wondermentation, adoration, and laudation of Uranus itself as one of the classical planets, and is characterised by decorations of Uranus, competitions, festivals, and special lectures and education events at Astronist philosophical buildings that focus on the subject of Uranus, and its place in The Cosmos as a whole. This always takes place on 124th Oliverine, which translates to the 7th November in the Gregorian calendar.

Derivatives

Uranian Day

Urban - in an Astronist contextualisation, relating to the operations of The People's Constitutional Company of Jesse Millette that occur in urban areas.

Derivatives

Urbanity

Urbanality - the extent to which Astronist philosophical buildings are constructed in urban areas in a nation state; the higher the amount of philosophical buildings in cities and urban areas, the higher the urbanality.

Urbanism - in the context of Astronist Propaganda, the specific depiction of an urban scene, especially one whereby the buildings and structures of the city are the centrality, rather than humanity.

Ur'ya - in Astronist Mystology, as well as in Astronist Genealogy, a female character of the Prophecies Era, whom is part of the Fourth Generation, as the second daughter and third offspring of Julius and Euphemia, and whose most famous adventures are detailed in The Grand Chronicles of Astronist Mystology.

Derivatives

Ur'yan

Urma - a humanoid creature of Astronist Mythology, that typically resembles a woman with long flowing hair, and is almost always depicted in water, and is said to be the mythical embodiment of the element of water.

Urstron - in Astronist gastronomy and dietary customs, the practice of not beginning the evening meal until the first star can be seen in the night sky. This practice is of course devoid if the sky remains cloudy.

Derivatives

Urstronic

Urstronal

Uruguayan Astronism - the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Oriental Republic of Uruguay.

Username - in an Astronist contextualisation, relating to the usernames of Astronist characters, brands, and organisations on various social media platforms.

-ust - in Astronist Onomatology, a suffix used for Astronist names.

Uṭartakuti - The School of Physicality in Astration as known in the Tamil language.

Utilitary - in Astronist Philosophy, something that holds a large abundance of utility.

Utmost - in an Astronist contextualisation, another term for the apex of The People's Constitutional Company of Jesse Millette.

-uto - in Astronist Onomatology, a suffix used for Astronist names, in reference to a cosmical utopia.

Uto- - in Astronist Onomatology, a prefix used for Astronist names, in reference to a cosmical utopia.

Utopine - in Astronist Ornamentation, the specific depiction of a planetary, or cosmic utopia.

Uxor - a person's spouse who shares their adherence to The Philosophy of Astronism.

Uxorial - in an Astronist contextualisation, the specific representation of the Astronist character of Ellena as Jesse's wife.

Derivatives

Uxoriality

Uzbek Astronism - the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Republic of Uzbekistan.

374 terms

Vac - in Astronist Philosophy, the philophon for the discipline of vacuology.

Vacate - in an Astronist contextualisation, the official action and process wherein The People's Constitutional Company of Jesse Millette ends the entirety of its operations in a particular country, county, or region of a country, typically due to hostilities.

Derivatives

Vacative

Vacatively

Vacuology - also known as Black Hole Cosmology, refers to the major discipline of study in Astronist Philosophy dealing with concepts of black holes either destroying, or being in some part responsible for the creation of The Cosmos, or The Universe.

Derivatives

Vacuologic

Vacuological

Vacuologically

Vahindanitra - derived from the Malagasy language, in Astronist Philosophy, a term relating to a galaxy when contemplated philosophically in Cosmic Philosophy.

Vahòaka - derived from the Malagasy language, a term relating to the masses of people; the public, or may relate to the majority of people whom associate themselves with a particular denomination of The Philosophy of Astronism in a nation state.

Valgust - a follower of the Estonian denomination of The Philosophy of Astronism, known as Valgustusism.

Derivatives

Valgusts

Valgustusism - also known as Estonian Astronism, the denomination of The Philosophy of Astronism that is almost exclusively followed in Estonia, by the Estonian peoples, and is distinct from its other Baltic counterparts.

Derivatives

Valgustusist

Valgustic

Valgustical

Validate - in an Astronist contextualisation, another term for the proper authorisation of a documentation, bill, or policy.

Valist - a follower of the Finnish denomination of The Philosophy of Astronism, known as Valistusism.

Derivatives

Valists

Valistusism - also known as Finnish Astronism, the denomination of The Philosophy of Astronism that is almost exclusively adhered to in Finland, by the Finnish peoples, and is closely associated with Finnish originism.

Derivatives

Valistusist

Valistusic

Valistusian

Valistusical

Valuationism - a school of thought in The Philosophy of Astronism believing to be most important to philosophical thought, theory, and method are their physical values in the world, and does not consider any concept that has no real world valuation to be relevant, or viable.

Derivatives

Valuationist

Valuationistic

Valve - in Astronist Philosophy, an important factor for philosophical enquiry that relates to a contemplation and the conclusions derived from that contemplation, with bivalves and trivalves demonstrating contemplations that require two or three factors in order to reach a conclusion respectively.

Derivatives

Valves

Vantage - in Astronist Architecture, and a part of gardenry, the architectural style and principle holding that at every suitable, safe, and possible place, the public must be able to look back see where they had walked from, and so, encourages architects to create plenty of observation points, balconies, and terraces throughout the building they are designing.

Derivatives

Vantagery

Vantageries

Vantagism

Vantagement - in Astronist Architecture, specifically relating to the Millettenium, is the point at which one reaches the circular open area beyond the corine steps and looks back, but may also relate to this same action when standing on the balustraded terrace atop of the main archway of the Millettenium.

Derivatives

Vantagements

Vanuatuan Astronism

- the representations, interpretations, implementations and applications of Astronism and Astronist dogma into cultures, peoples and philosophy in the Republic of Vanuatu.
- the denomination of The Philosophy of Astronism that is most commonly found in Vanuatu, and is followed by the Vanuatuan peoples.

Vara - a male follower of The Philosophy of Astronism.

Derivatives

Varas

Varadentry - in Astronist Philosophy, one's vocational preservation of the oral and debatory traditions within The Philosophy of Astronism, which is considered to be in alignment with the Philosophical Spirit, and usually is undertaken by a scholar, or teacher of The Philosophy, especially due to them holding an interest towards the preservation of the Astronist Tradition

Derivatives

-ven - in Astronist Onomatology, a suffix used for Astronist names, in reference to the Classical Planet of Venus.

Ven- - in Astronist Onomatology, a prefix used for Astronist names, in reference to the Classical Planet of Venus.

Ven - in Astronist Philosophy, the philophon for the discipline of venusology.

Venat- in Astronist Philosophy, relating to Venatarat, or sentient evility.

Venatarat - in Astronist Philosophy, the appellation for the collectivity of actions, emotions, and beliefs that are an embodiment of that which is considered and perceived to be sentient evil, namely that which causes the ill-feeling, damage, or death of a sentient or non-sentient entity, either physically, conceptually, or hypothetically. Venatarat forms the embodiment and collectivisation of evil and is therefore opposed to Euleara which is the embodiment and collectivisation of goodness in order to form the Astronist version of a good-evil dichotomy.

Venatic - in Astronist Philosophy, relating to characteristics of evil that are conductible only by sentient beings.

Derivatives

Venatical

Venatically

Venaticity

Venatism - in Astronist Philosophy, the belief orientation holding that Venatarat, or venatic characteristics, are fundamental to the nature and identity of all sentient beings and are therefore natural due to the limited cosmic nature of all sentients rather than being considered distortions or malfunctions of sentient nature.

Derivatives

Venatist

Venatistic

Venatistical

Venatistically

Venatology - in Astronist Philosophy, a discipline of study within the inclusive discipline of contology dealing with the study of the identity, nature, role, and function of Venatarat, the Astronist version of the embodiment of sentient evil, or evility. Venatology is not to be confused with ponerology which deals with the broader philosophical study and contemplation of what it means for something to be evil and so venatology can be considered an Astronist branch of ponerology.

Derivatives

Venatologist

Venatological

Venatologically

Venatologic

Vend - in Astronist Symbology, the philophon for the discipline of vendoxology.

Vendox - in Astronist Symbology, a type of symbol and shape characterised by a central object from which two lines eject vertically downwards from its base after which they loop back around to almost meet one another yet instead form a vertical parallel line with traditionally three of such lines existing on either side. The original vendox is the Astronism Symbol which has its own traditional vendoxical variation, yet it is expected that there will be a great abundance in the variations of vendoxes as inspired by the original vendox. It is important to note that the vendox symbol itself has no philosophical meanings attached to it for it is only when it is described in the context of being the Astronism Symbol that philosophical meaning is ascribed.

Zaranian-Moldovan Character Representation - the specific representation of the Astronist character of Zara in Moldova, including all its variations.

Zaranian-Monacan Character Representation - the specific representation of the Astronist character of Zara in Monaco, including all its variations.

Zaranian-Mongolian Character Representation - the specific representation of the Astronist character of Zara in Mongolia, including all its variations.

Zaranian-Montenegrin Character Representation - the specific representation of the Astronist character of Zara in Montenegro, including all its variations.

Zaranian-Montserratian Character Representation - the specific representation of the Astronist character of Zara in Montserrat, including all its variations.

Zaranian-Moroccan Character Representation - the specific representation of the Astronist character of Zara in Morocco, including all its variations.

Zaranian-Mozambican Character Representation - the specific representation of the Astronist character of Zara in Mozambique, including all its variations.

Zaranian-Namibian Character Representation - the specific representation of the Astronist character of Zara in Namibia, including all its variations.

Zaranian-Nauruan Character Representation - the specific representation of the Astronist character of Zara in Nauru, including all its variations.

Zaranian-Nepalese Character Representation - the specific representation of the Astronist character of Zara in Nepal, including all its variations.

Zaranian-New Caledonian Character Representation - the specific representation of the Astronist character of Zara in New Caledonia, including all its variations.

Zaranian-New Zealand Character Representation - the specific representation of the Astronist character of Zara in New Zealand, including all its variations.

Zaranian-Nicaraguan Character Representation - the specific representation of the Astronist character of Zara in Nicaragua, including all its variations.

Zaranian-Nigerien Character Representation - the specific representation of the Astronist character of Zara in Niger, including all its variations.

Zaranian-Nigerian Character Representation - the specific representation of the Astronist character of Zara in Nigeria, including all its variations.

Zaranian-Niuean Character Representation - the specific representation of the Astronist character of Zara in Niue, including all its variations.

Zaranian-Norwegian Character Representation - the specific representation of the Astronist character of Zara in Norway, including all its variations.

Zaranian-Omani Character Representation - the specific representation of the Astronist character of Zara in Oman, including all its variations.

Zaranian-Pakistani Character Representation - the specific representation of the Astronist character of Zara in Pakistan, including all its variations.

Zaranian-Palauan Character Representation - the specific representation of the Astronist character of Zara in Palau, including all its variations.

Zaranian-Palestinian Character Representation - the specific representation of the Astronist character of Zara in Palestine, including all its variations.

Zaranian-Panamanian Character Representation - the specific representation of the Astronist character of Zara in Panama, including all its variations.

Zaranian-Papua New Guinean Character Representation - the specific representation of the Astronist character of Zara in Papua New Guinea, including all its variations.

Zaranian-Paraguayan Character Representation - the specific representation of the Astronist character of Zara in Paraguay, including all its variations.

Zaranian-Peruvian Character Representation - the specific representation of the Astronist character of Zara in Peru, including all its variations.

Zaranian-Polish Character Representation - the specific representation of the Astronist character of Zara in Poland, including all its variations.

Zaranian-Portuguese Character Representation - the specific representation of the Astronist character of Zara in Portugal, including all its variations.

Zaranian-Puerto Rican Character Representation - the specific representation of the Astronist character of Zara in Puerto Rico, including all its variations.

Zaranian-Qatari Character Representation - the specific representation of the Astronist character of Zara in Qatar, including all its variations.

Zaranian-Réunionese Character Representation - the specific representation of the Astronist character of Zara in Réunion, including all its variations.

Zaranian-Romanian Character Representation - the specific representation of the Astronist character of Zara in Romania, including all its variations.

Zaranian-Russian Character Representation - the specific representation of the Astronist character of Zara in Russia, including all its variations.

Zaranian-Rwandan Character Representation - the specific representation of the Astronist character of Zara in Rwanda, including all its variations.

Zaranian-Saint Helenian Character Representation - the specific representation of the Astronist character of Zara in Saint Helena, including all its variations.

Zaranian-Saint Lucian Character Representation - the specific representation of the Astronist character of Zara in Saint Lucia, including all its variations.

Zaranian-Saint Martinois Character Representation - the specific representation of the Astronist character of Zara in Saint Martin, including all its variations.

Zaranian-Salvadoran Character Representation - the specific representation of the Astronist character of Zara in El Salvador, including all its variations.

Zaranian-Samoan Character Representation - the specific representation of the Astronist character of Zara in Samoa, including all its variations.

Zaranian-Sammarinese Character Representation - the specific representation of the Astronist character of Zara in San Marino, including all its variations.

Zaranian-São Toméan Character Representation - the specific representation of the Astronist character of Zara in São Tomé and Príncipe, including all its variations.

Zaranian-Saudi Arabian Character Representation - the specific representation of the Astronist character of Zara in Saudi Arabia, including all its variations.

Zaranian-Senegalese Character Representation - the specific representation of the Astronist character of Zara in Senegal, including all its variations.

Zaranian-Serbian Character Representation - the specific representation of the Astronist character of Zara in Serbia, including all its variations.

Zaranian-Seychellois Character Representation - the specific representation of the Astronist character of Zara in the Seychelles, including all its variations.

Zaranian-Sierra Leonean Character Representation - the specific representation of the Astronist character of Zara in Sierra Leone, including all its variations.

Zaranian-Singaporean Character Representation - the specific representation of the Astronist character of Zara in Singapore, including all its variations.

Zaranian-Sino Character Representation - the specific representation of the Astronist character of Zara in China, including all its variations.

Zaranian-Slovak Character Representation - the specific representation of the Astronist character of Zara in Slovakia, including all its variations.

Zaranian-Slovenian Character Representation - the specific representation of the Astronist character of Zara in Slovenia, including all its variations.

Zaranian-Solomon Islands Character Representation - the specific representation of the Astronist character of Zara in the Solomon Islands, including all its variations.

Zaranian-Somali Character Representation - the specific representation of the Astronist character of Zara in Somalia, including all its variations.

Zaranian-South African Character Representation - the specific representation of the Astronist character of Zara in South Africa, including all its variations.

Zaranian-South Ossetian Character Representation - the specific representation of the Astronist character of Zara in South Ossetia, including all its variations.

Zaranian-South Sudanese Character Representation - the specific representation of the Astronist character of Zara in South Sudan, including all its variations.

Zaranian-Spanish Character Representation - the specific representation of the Astronist character of Zara in Spain, including all its variations.

Zaranian-Sri Lankan Character Representation - the specific representation of the Astronist character of Zara in Sri Lanka, including all its variations.

Zaranian-Sint Maartener Character Representation - the specific representation of the Astronist character of Zara in Sint Maarten, including all its variations.

Zaranian-Sudanese Character Representation - the specific representation of the Astronist character of Zara in Sudan, including all its variations.

Zaranian-Surinamese Character Representation - the specific representation of the Astronist character of Zara in Suriname, including all its variations.

Zaranian-Swazi Character Representation - the specific representation of the Astronist character of Zara in Swaziland, including all its variations.

Zaranian-Swedish Character Representation - the specific representation of the Astronist character of Zara in Sweden, including all its variations.

Zaranian-Swiss Character Representation - the specific representation of the Astronist character of Zara in Switzerland, including all its variations.

Zaranian-Syrian Character Representation - the specific representation of the Astronist character of Zara in Syria, including all its variations.

Zaranian-Taiwanese Character Representation - the specific representation of the Astronist character of Zara in Taiwan, including all its variations.

Zaranian-Tajik Character Representation - the specific representation of the Astronist character of Zara in Tajikistan, including all its variations.

Zaranian-Tanzanian Character Representation - the specific representation of the Astronist character of Zara in Tanzania, including all its variations.

Zaranian-Timorese Character Representation - the specific representation of the Astronist character of Zara in East Timor, including all its variations.

Zaranian-Thai Character Representation - the specific representation of the Astronist character of Zara in Thailand, including all its variations.

Zaranian-Togolese Character Representation - the specific representation of the Astronist character of Zara in Togo, including all its variations.

Zaranian-Tongan Character Representation - the specific representation of the Astronist character of Zara in Tonga, including all its variations.

Zaranian-Trinidadian and Tobagonian Character Representation - the specific representation of the Astronist character of Zara in Trinidad and Tobago, including all its variations.

Zaranian-Tunisian Character Representation - the specific representation of the Astronist character of Zara in Tunisia, including all its variations.

Zaranian-Turkish Character Representation - the specific representation of the Astronist character of Zara in Turkey, including all its variations.

Zaranian-Turkmen Character Representation - the specific representation of the Astronist character of Zara in Turkmenistan, including all its variations.

Zaranian-Turks and Caicos Character Representation - the specific representation of the Astronist character of Zara in the Turks and Caicos Islands, including all its variations.

Zaranian-Tuvaluan Character Representation - the specific representation of the Astronist character of Zara in Tuvalu, including all its variations.

Zaranian-Ugandan Character Representation - the specific representation of the Astronist character of Zara in Uganda, including all its variations.

Zaranian-Ukrainian Character Representation - the specific representation of the Astronist character of Zara in Ukraine, including all its variations.

Zaranian-Uruguayan Character Representation - the specific representation of the Astronist character of Zara in Uruguay, including all its variations.

Zaranian-Uzbek Character Representation - the specific representation of the Astronist character of Zara in Uzbekistan, including all its variations.

Zaranian-Vanuatu Character Representation - the specific representation of the Astronist character of Zara in Vanuatu, including all its variations.

Omniadoxical Encyclopaedia of Astronism

A

anti-anthropocentrism

worldview rejecting the importance of humanity

The role of an anti-anthropocentric worldview has been foundational to Astronism and the wider Astronic tradition since their mutual inceptions. This is due to the notion that the Astronic penchant is to be cosmocentric which means to decentralise other elements from the belief system, such as God, the Earth, and humanity itself. Therefore, for Astronism to be cosmocentric it should be anti-anthropocentric because placing humanity at the centre of inquiry automatically means ascribing and applying human traits, wants, and needs to non-human physical and conceptual elements. This can be seen in the context of Abrahamic religions which hold an anthropocentric worldview in various instances, one consequence of which is God being attributed to human characteristics and emotions. This is perhaps demonstrable in the most extreme circumstance in the context of Christianity, in which God is incarnated as a man.

The Astronist way is to reject the centrality of humanity, especially so in relation to the affairs of The Cosmos. Anthropocentrism, geocentrism, and theocentrism can be considered the triadic antithesis to cosmocentrism for in each and every way they contradict the principle that The Cosmos is central to inquiry. Astronism's staunch anti-anthropocentric foundations became an integral function in the organised philosophy's determination to distinguish itself from those belief systems preceding it. In doing so, Astronism became the first belief system predicated upon a cosmocentric worldview in which The Cosmos was placed at the centre of inquiry from which humanity was dethroned and seen as little more than a product of nature formed by the coincidental events of evolution. From that point onwards, The Cosmos and its products, namely progeny and phenomena, became central and humanity became subordinate to them; subject to their will as part of the will of The Cosmos.

There have occurred a multitude of consequences due to the anti-anthropocentric worldview of Astronism. The first of which is a distinct disregard for humanity as collectively holding or humans as individually holding some special significance in the chronology of The Cosmos. The removal of human from the purpose of The Cosmos does little to comfort humanity, however, the Astronist system then provided a solution to an apparent disposability of humanity. Humanity was bestowed with the opportunity to achieve transcension through its destiny to become a spacefaring civilisation because of the sentience that it had been afforded as a result of evolutionary processes.

Secondly, because Astronism does not see special value for humanity in relation to The Cosmos in opposition to how Christianity considers humanity, this proceeds vertically to

human individuals; if humanity isn't central then certainly not are the individuals forming humanity. For this reason, Astronism can be considered as a form of the rejection of the centrality of the self. This is especially seen in the transcensionist principles of contributionism wherein the individual self should be ready to be sacrificed for the advancement and betterment of humanity in its struggle for the achievement of transcension. Essentially, because humanity is deposed of its significance then so is the significance of the self.

This formulates a hierarchy of significance applicable to various parts of Astronism in which The Cosmos is provided with the highest importance. After The Cosmos, humanity as a collectivity is placed and then after humanity, individual humans are placed at the bottom of the hierarchy. When considered according to a contributionist philosophy, this hierarchy is demonstrable of the individual human being sacrificial to the betterment of wider humanity and humanity being sacrificial to the chronology and destiny and will of The Cosmos.

Related entries include *cosmocentrism*, *contributionism*, *transcension*, and *humanity in Astronism*.

astration

practices set on achieving corporeal cosmosis

The achievement of cosmosis quickly became a central element of Astronist belief and practice following its founding in the Omnidoxy herein. Emerged are two forms of cosmosis, the post-corporeal form and the corporeal form, the latter of which quickly became considered much more rare and valuable than the former. For the achievement of corporeal cosmosis, a set of practices would need to develop that would guide practitioner towards its achievement. As a result, astration, a collection of practices geared towards the achievement of corporeal cosmosis developed.

Astrational practices are classified into three categories including the spiritual, the physical, and the intellectual. Each form of astration must be achieved in order to attain corporeal cosmosis, therefore, a person can simply determine their corporeal cosmosis through spiritual practices, but they must also do so through physical and intellectual practices. Astration became instrumental to understanding how to both physically and abstractly reach a state of cosmosis whilst one is still alive.

astrocentrism

form of cosmocentrism applied to institutions

It is perhaps a common mistake to synonymise astrocentrism with cosmocentrism and although the terms do hold similarity in their principles, it is in their applicabilities that we see their differences demonstrated. Cosmocentrism is concerned with the individual and collective human condition, both mentally and spiritually; cosmocentricity is considered a fundamental precept to the mental orientation of Astronism.

Astrocentrism, on the other hand, is concerned with the applicability of the cosmocentric worldview not to individuals or humans collectively, but instead, to organisations, institutions, and wider society. In that regard, astrocentrism can be considered a form of cosmocentrism and as a result, astrocentrism can additionally be considered a subsequence of the implementation of cosmocentrism.

Astrocentricity is the completion of the cosmocentralisation of the world as it represents cosmocentrism in manifestations beyond the individual and beyond even the collective; it represents the engraining of the cosmocentric worldview in organisations, both physical and non-physical. It is herein postulated that without the realisation of astrocentrism, the principles and worldview put forth by cosmocentrism cannot be considered truly complete.

Astrocentricity can be considered the guiding force or philosophy that drives forward the process of Astronisation which is the changing of something so that it resembles the ideals and beliefs of Astronism. Unlike cosmocentrism, astrocentrism holds ideological, governmental, political, economic, and industrial aspects which demonstrates both its depth and breadth.

astrocism

mystical tradition of Astronism

All religions hold a mystical dimension that must not be understated; religions and organised philosophies alike share the desire to explore the mystical, the unseen, and the unknown through a variety of communicative and non-communicative methods. Astronism is, therefore, no different in that a mystical tradition holds roots in the very inception of Astronism itself; this Astronist mysticism shall be henceforth known as arocism.

Derived from the term astrosis, meaning knowledge of astronomical mysteries, arocism's goal is not simply to achieve transcension as is the main goal held within Astronism itself, but it is instead fixated on achieving corporeal cosmosis through the resolution of astronomical mysteries. An arocist is concerned with the extraction of knowledge from the progeny and phenomena of The Cosmos so as to better one's own individual knowledge and the knowledge of wider humanity. In this way, we can liken astrosis with gnosis itself which is concerned with the solemn pursuit of knowledge as is the central goal

of gnosticism. In the case of astrocism, the goal is the solemn pursuit of knowledge of astronomical mysteries.

There are expected to be numerous forms of mystical practice associated with Astrocism, some of which are directly related to cosmic devotion and prayer alongside other devotological practices while others are expected to be more occurrological in nature. It can also be said that astrocism is principally based upon the notion that gaining knowledge of The Cosmos is a transformative experience for both the mind, the body, and the spirit. Other forms of Astronist mysticism can be directly related to the personage of Cometan, such as in one's journey in achieving Cometanhood or in achieving a high level of cosmicality.

Cosmicality is an important element associated with astrocist practices and beliefs as it pertains to the extent to which a person is in touch with The Cosmos, both intellectually, physically, and spiritually. One's cosmicality is a direct and integral factor that implicates their overall cosmosis, a branch of which is astrosis; the more that a person is in-tune with The Cosmos, the greater chance they have at achieving a higher cosmicality, hence attaining astrosis. Other practices may be involved in astrocism such as meditation, sensory experiences, and ecstasies.

There exists two forms of astrosis, the first of which is standard astrosis, often referred to simply as astrosis, but to distinguish the form, it may be referred to as unaided astrosis. This form of astrosis is considered the purer of the two forms; it is based on faith, mystical experience, knowledge, established cosmicality, and a fervent belief in cosmocentrism and one's spiritual union with The Cosmos. The second form of astrosis, however, is considered the impure form and is most commonly referred to as aided astrosis, or psychedelic astrosis. This form of astrosis is induced by psychedelic drugs which is studied as part of the Astronist branch of psychonautics.

astronic

relating to the Astronic tradition

The term 'astronic' has been created in our to relate to the tradition of thought, philosophy, religion, mythology, culture and ideology from which Astronism has emerged and which Cometan founded and organised. Astronic refers to many elements in its own right and also encompasses two subsets which are Astronist and Astronist, each of which pertains to different philosophies, religious traditions, ideologies, and cultures, however, they remain forever interrelated, often sharing similar terminologies and points of reference for beliefs, ideas, and histories.

astronic cosmology

The Astronic cosmology denotes the cosmological system of Astronism and presents the Astronist understanding of the creation, structure, function, and future of the universe. The Astronic cosmology plays an essential formative role in the foundations of many beliefs of Astronism; in fact, it formulates the entire belief structure and the worldview of Astronism. To know of Astronism, is to first understand its cosmology for without doing so one cannot understand the pretexts of why Astronists postulate certain beliefs and disavow others.

The Astronist understanding of reality is divided into three existential categories which are themselves divided into existences, of which there are three for each, thus forming nine existences in total. The first category is the greatest significance and is referred to as the three essential existences, which including The Divine, The Universe, and The Cosmos. An understanding of these three terms and their meaning in Astronist belief is essential for grasping the overall Astronist understanding of reality. Also, by understanding these three existences, one will be able to piece together why Astronists believe what they do about certain cosmological questions.

The Divine, in Astronism, is equated with the concept of God in other religions. The Divine is perceived to exist beyond, but also to interpenetrate both The Universe and The Cosmos, hence why Astronism is categorised as holding a panentheistic theology. As distinct from other religions, Astronism introduce depadotheism which states that God is without human qualities and should not be represented or perceived to express emotions due to the humanness of emotionality and the transcendence of divine nature beyond the corporeal and the mundane. The extent to which The Divine intercedes in the world and the lives of individual humans remains debated within Astronism, however, it is generally held that destiny does exist and that cosmic cycles do occur, of which individual humans and even humanity as a whole play an infinitesimal and insignificant role in.

In the context of the Astronic cosmology, The Universe refers to the state of existence beyond that of The Cosmos. In Astronist terminology, what is appellated as The Cosmos means the universe in mainstream discourse while what is appellated as The Universe is a state of infinite existence beyond The Cosmos. This points to the most fundamental difference between these two existences; The Universe is infinite while The Cosmos is finite. The Universe cannot be entered by anything that is cosmic by its nature, but neither can anything universal by its nature enter any cosmos, however, that which is of divinity, or divine nature, is superior, hence its can interpenetrate both.

The createdness of The Universe is expected to be one of the most hotly debated topics of the Astronic cosmology and principally points to the notion that if The Universe truly is infinite by its nature then it must not have been created for creation denotes finiteness. To respond to this, Astronist belief proposes the uncreatedness of The Universe. This pertains to the notion that The Universe was not created by The Divine for it is infinite and has

always existed, however, for The Universe to remain in existence it must be sustained by The Divine, hence retaining the supremacy and superiority that is divine nature.

The Cosmos is one of the most common terms used when discussing anything remotely related to Astronism or the wider Astronic tradition. As aforementioned, the appellation of The Cosmos relates to what is referred to as the universe in mainstream discourse. The Cosmos is the realm of existence in which humanity, the stars, the planets, the galaxies, and all other observable and knowable elements reside. The most profound notion relating to The Cosmos that holds reverberations for the entirety of Astronism is that The Cosmos, its nature, and all that resides within it are limited. This is known as the Cosmic Limitation Principle, or limitationism, and exists as a fundamental element of the Astronic cosmology.

All that resides within The Cosmos holds a cosmic nature, as made distinct from universal nature and divine nature. That which is cosmic is automatically considered limited from the Astronist viewpoint. It is held that all that resides within The Cosmos cannot physically go beyond what is known as the cosmic periphery, which holds its own existence known as The Metakosmia which will be explored later in this entry. Limitationism, as aforementioned, orients many of the Astronist beliefs, such as due to the limited nature of cosmic entities, it is held that it is our nature to cease to exist, hence why Astronism is largely against notions of the existence of an afterlife or the promise of immortality.

The second category of existences of the Astronic cosmology is the three lesser existences which includes The Chaos, The Mytra and The Betwixity. The Chaos can be considered the complete antithesis of The Cosmos. One of the most important characteristics of The Cosmos and cosmic nature is its orderliness and the patterns by which it functions. The Chaos represents all that is disorderly, all that is unknown, and all that acts in violence, destruction, and catastrophe. The Chaos, rather than being its own realm of existence, can instead be understood as a collection of progeny and phenomena as well as concepts, notions and characteristics that are opposite to the nature of The Cosmos.

The Mytra is perhaps the most mysterious and least understood of all the nine existences of the Astronic cosmology. The Mytra refers to the individual, unique, and consequential relationship with The Cosmos; The Mytra can be considered the cosmological equivalent of the amalgamation of one's cosmicality, astrosis, and the extent to which one has achieved corporeal cosmosis. Meanwhile, the third and final of the three lesser existences is The Betwixity which pertains to distances within The Cosmos and in all other cosmoses of The Universe. Essentially, The Betwixity is the space that exists between cosmic progeny and phenomena and so an understanding of The Betwixity is considered to result in a greater understanding of cosmic nature as a whole.

The third and final category of existences of the Astronic cosmology is titled the three subservient existences which includes The Metakosmia, The Metagalaxy, and The Omniverse. The Metakosmia is also known as the cosmic periphery which is considered to be impossible for anything with a cosmic nature to reach because the cosmic periphery

exists neither in The Cosmos nor in The Universe. It instead exists as The Metakosmia, the in-between realm characterised as the boundary between finiteness and infiniteness. The Metagalaxy is the collective appellation for the superstructures of The Cosmos beyond the superclusters of galaxies. It can be understood as the consideration of all progeny and phenomena and the organisation of such according to filaments which form the superstructure; this superstructure's name is The Metagalaxy.

The Omniverse, the final of the subservient existences of the Astronic cosmology, pertains to the Astronist belief that there exists an infinite amount of finite cosmoses in The Universe and it is these infinite cosmoses when considered collectively that is called The Omniverse. The Omniverse is essential to beliefs about The Universe because the infinite nature of The Universe must allow for the infinite amount of entities to exist within it and because cosmoses are considered to exist within The Universe, the infinite amount of cosmoses is a hallmark of Astronist belief.

astronic tradition

group of religions and philosophies based on cosmocentrism and astronomy

The Astronic tradition is a vast collection of philosophies, religions, cultures, ideologies, literatures and mythologies that remain unified by their cosmocentric worldview and their astronomical theme. The Astronic tradition emerges from the founding of Astronism to reorganise all forms of culture and belief regarding space and astronomy. It is presented as a religious, philosophical, cultural, and ideological tradition that stands alongside other traditions of thought and belief. The Astronic tradition is the representative of all astronomical religions and their beliefs; it advocates for the dissemination of belief and thought systems which share its principles of cosmocentricity and includes the following branches: Astronic religions, Astronic philosophy, Astronic ideology, Astronic culture, and Astronic mythology.

Astronisation

to become Astronic or Astronist in character

The spirit of what the process of Astronisation means has been borrowed from other religions and ideologies but for the context of the Astronic tradition and Astronism, the process of Astronisation involves becoming to the likeness of something deemed Astronic or something associated with Astronism. It is to become either Astronic or Astronist in character with, of course, the former representing a larger and therefore more ambiguous set of characteristics than the latter.

The Astronisation of something should only occur naturally if that which is being Astronised is choosing freely to be so. To be convinced and to be told that to be Astronic/Astronist is superior for a justified set of reasons is passable, but to force anyone or anything into resembling Astronic or Astronist ideals is not to be of Astronic or Astronist ideality itself.

astronism

organised philosophy founded by Cometan

Astronism's technical designation is an organised philosophy, making it a synthesis of both philosophy and religion. Astronism represents a refocus on astronomical religions and leads their overall revival in the 21st-century. Astronism is essentially predicated upon the notion that it is humanity's destiny to explore The Cosmos in order to achieve transcension. Astronism holds a multitude of dimensions, both intellectual and physical, as well as spiritual and mystical.

Astronism was founded and it subsequently organised the Astronic tradition of religions and philosophies within which it is now categorised. Personal union with The Cosmos upon one's death is an essential part of the belief system, yet the achievement of corporeal cosmosis is also considered to hold major significance which pertains to union with The Cosmos during one's life. The continual improvement of the self, specifically the cosmicality of the self, is a necessary element of Astronist belief.

Astronism introduces and revolves around the worldview of cosmocentrism as divergent from theocentrism, anthropocentrism, and geocentrism. Cosmocentrism postulates that The Cosmos is central to beliefs regarding the destiny and purpose of humanity and orientates itself on the notion that The Cosmos, its progeny, and its phenomena should become a central concept and element in cultural, economic, spiritual, religious, and intellectual aspects of society. Astronism envisions the future of society to be oriented on the notion that spacefaring will become the dominant force of culture and will influence all aspects of human existence, including religious, political, economic, and intellectual life.

astronist ethics

system of ethics within Astronism

Astronist ethics is the system of ethics associated with the Astronist religion and incorporates various elements from within Astronism itself, but also introduces new beliefs and concepts that do not see connection to beliefs in other branches of Astronism. Astronist ethics is concerned with all aspects of human life from domestic life, personal

hygiene and appearance to what constitutes a moral act, and the ethics of societal governance. Astronist ethics, like other forms of ethics in other religions, addresses all different aspects of morality and its applicability in a multitude of areas. Having said this, Astronist ethics does have areas of ethics that it has shown, especially omnidoxically, that it has particular concern for which can be seen in the frequency to which these topics are addressed in the Omnidoxy herein.

Before we explore these topics of particular interest, we must address Astronist ethics for what it actually is. Astronist ethics is an approach and a set of opinions regarding ethicality and morality that have been accepted as part of the wider Astronist belief system. However, like the wider nature of Astronism, such opinions and beliefs are subject to progression and will themselves effectuate change in society for the motionalist principles of Astronism must always remain fundamental to its functionality as a belief system.

With the founding of Astronism has come the introduction and subsequent development of cosmic philosophy as a branch of philosophy. Therefore, it should be no surprise at a large portion of Astronist ethics is deeply concerned with the ethics of spacefaring and the future of humanity in relation to space and astronomical progeny and phenomena. Beyond this, Astronist ethics is also distinguished by its deep concern for the concept of freedom which is arguably even more significant than the ethical questions derived from cosmic philosophy.

Astronist ethics introduced and has continued to advocate for the belief orientation of eleuthonism which debatably structures the entire ethical system of Astronism. Eleuthonism is essentially based on the notion that freedom is all that is good and that freedom should be prioritised over all other elements of morality. Therefore, if something limits or even places an obstacle between oneself and freedom then that whichever is responsible for limiting freedom is considered morally wrong. This notion forms the basis of the Astronist ethical system, especially when it comes to the discussion of freedom and morality; what is right grants freedom and what is wrong inhibits freedom. This is the paradigm through which the Astronist form of ethics considers all questions of morality. Therefore, it can be conclusively stated that the Astronist ethical system's ultimate goal is to study and to achieve freedom in all its manifestations.

astronist panentheism

main theological position of Astronism

The theological orientation of Astronism is perhaps difficult to clearly derive, especially due to the extensive variety of theological beliefs and positions that are addressed within various discourses of the Omnidoxy herein regarding the nature, role, and identity of the creator of existence. This long running pre-Cometanic debate has clearly caught the

attention of the founder of Astronism with his intentions also clearly marked on developing a series of deep and richly detailed approaches to understanding the persistent question of the existence of God. This points to the philosophical nature of Astronism to explore all avenues and to create new ones; perhaps this is what can be considered the Astronist Spirit as derived from the Philosophical Spirit (which will be latterly introduced with its own encyclopaedic entry).

Despite this, there is a standard agreed-upon theological orientation of Astronism, but it is two-pronged; the first and most principal of such branches is Astronist panentheism. This form of theology is derived from the notion that The Divine in the Astronic cosmology exist both within The Cosmos and The Universe, but also beyond both as an interpenetrative force or energy. This forms the notion that The Divine is a panentheistic conception of God for such a God exists within, but also exists beyond whilst simultaneously including cosmic and universal nature. This also points to the functions and characteristics of divinity and its ability to interpenetrate the lesser natures.

The second element that forms the Astronist theological position was introduced omnidoxically herein and is known as depadotheism, or depadism for short. Other religious traditions are principally based upon an anthropomorphised conception of God whereby God is represented as having feelings and qualities that are shared by humans. For those traditions, this has formed the channel of theology in which a connection between humanity and God is clear and distinct which in turn superiorises humanity and provides humanity with speciality and significance. Depadotheism forms the second basis of Astronist theology by stating that God is not to be anthropomorphised and as a consequence, God is not considered to possess emotions such as love, mercy and wrath. Instead, the conception of God is perceived as emotionless as is considered to be reflected in the mercilessness of nature. Depadotheistic theology does not intend to conceive God as evil, but instead superiorises God to reflect God's nature of divinity which is beyond all corporeal and cosmic attributes, such as emotion. The formulates the Astronist response to the long-established question of theodicy; that The Divine does not act according to ethicality and morality as humans do, but has instead influenced nature to act according to itself. This means that if an asteroid (which is classified as part of nature) were to hit The Earth or if another devastating natural disaster were to occur then nature (both sentient and non-sentient) would do to survive. The natural disasters of which we speak are simply acting according to their own abilities as results of the functionality of The Cosmos.

astronist philosophy of religion

Astronist approaches to the study of religion

There has existed a strong tradition of philosophising about religion from very inception of Astronism itself. In the Omnidoxy herein, there exists an excessive amount of insentensations dedicated to the study of religion, questioning its role in society, as well as

pondering on its future just as there are a large amount of metaphilosophical notions and concepts. Astronism has always been greatly concerned with questions of its own existentiality and designation and this is demonstrated through the tradition of philosophy of religion that is associated with Astronist scholarship. A multitude of theories and concepts have been developed within the Omnidoxy herein in order to tackle important questions regarding the role and function of religion in society and the future of such a role and function.

astronomical elixir

belief in the discovery of astronomical objects and places to achieve corporeal cosmosis

There are many elements forming astrocism, some of which have already outlined in the entry dedicated to astrocism itself, but one of the most important elements that has not yet been explored is that which shall be known as the astronomical elixir. The ultimate goal for astrocists or any person practicing forms of astronist or astronic mysticism is to achieve corporeal cosmosis which is a spiritual, physical, and intellectual union with The Cosmos during one's lifetime. From the inception of astrocism, a variety of methods have been developed in the Omnidoxy herein and many are expected to emerge post-omnidoxically regarding how most efficient to achieve this corporeal cosmosis state.

One of such methods is the attainment of an astronomical elixir. Inspired by the alchemic term elixir, an astronomical elixir is a physical object or place in The Cosmos that, upon being reached and understood or otherwise attained, will lead to one's achievement of corporeal cosmosis due to one's own heightened cosmicality. Upon knowing and understanding the astronomical elixir, one's conception and perception of The Cosmos would become so extraordinarily high that their achievement of corporeal cosmosis would be completed. What constitutes an astronomical elixir is left to subjectivity, however, it can be considered anything which, upon physical attainment, mental understanding, or spiritual proximity, drastically increases a person's cosmicality. Cosmicality is the extent of the depth to which they clearly perceive and understand The Cosmos for its functionality, spirit, and nature.

astronomic revolution

cultural revolution based on the Astronisation of society

The Astronomic Revolution demonstrates a principal function of Astronism in society and from the creation of the concept of the Astronomic Revolution, there have been various ricocheting effects that have taken hold within Astronism itself. One such notion is the integrality between the process of Astronisation and the foretelling of the Astronomic

Revolution which is considered to be a form of societal Astronisation. The Astronomic Revolution is an event that is prophesied by Cometan to take place alongside or as part of other revolutions such as the Spacefaring Revolution.

The Astronomic Revolution is principally a cultural, religious, and ideological revolution in which cosmocentricity is engrained in societal institutions and in which Astronism and other astronomical religions take centre stage in the cultural and religious identity of the populous. The Astronomic Revolution, although principally, cultural, religious, and ideological, will also hold technological, spiritual and intellectual impacts on society. Astronism advocates for the cosmocentric worldview as a central element of its belief system and the Astronomic Revolution is simply this worldview transcending out of Astronism itself and entering the societal sphere. This is perhaps the reason why the Astronomic Revolution may also be referred to as the cosmocentralisation of society in addition to being described as the astronsiation of society.

astrosis

insight into astronomical mysteries as a form of corporeal cosmosis

Astrosis is the term originating from within astrocism that pertains to astronomical mysteries having been realised and resolved through one's knowledge of The Cosmos. Astrosis is the central aspect of astrocism, or Astronist mysticism, and is fundamental to beliefs regarding the cosmicality of individuals. Astrosis is essentially predicated on the notion that astronomical mysteries are abundant in The Cosmos and that the discovery and resolution of such mysteries will lead to great heights in a person's cosmicality.

Astrosis is an essential portion of the mystical tradition within Astronism as it incorporates various mystical practices as well as the Astronist concept of enknowledgement in order to resolve astronomical mysteries. Some popular potential methods for the achievement or realisation of astrosis include space exploration, cosmic devotion, the heightening of one's cosmicality or Cosmic Awareness. Astrosis is not cosmosis and the distinction between the two is expected to remain a hotly debated topic.

To officially make the distinction, astrosis is a person's or wider humanity's resolution of astronomical mysteries which may lead either to individual corporeal cosmosis or collective corporeal cosmosis. Cosmosis is a spiritual, intellectual, and physical union with The Cosmos, achieved either during one's lifetime, or achieved by all after their death. The goal of astrosis is to achieve corporeal cosmosis. Astrosis can be considered as one of many methods in achieving corporeal cosmosis, but not a form of cosmosis in and of itself.

astrosa

From the inception of Astronism, the organised philosophy has been influenced by pre-existing religions, both Cometanically categorised as Astronic as well as religions that remain categorised as part of other traditions. As part of this influence has come many metareligious and metaphilosophical ideas that have undergone Astronisation to become part of Astronism. One such idea is the notion of a collective worldwide community of Astronists which will be known as the astrosa.

The concept of the astrosa is formed omnidoxically in order to create a community for the followers of Astronism who share similar principles, beliefs, and ideas and who are connected together through ties of religion, philosophy, and a shared cosmocentric worldview. The formation of the concept of the astrosa demonstrates a future-thinking Astronist culture of cohesion and unity. The concept forms the foundations of what the Astronist community is expected to become, but it also points to the distinct globality of Astronism from its very inception as is demonstrated in various other parts of the organised philosophy, both in its characteristics and in the way it functions.

C

cometanism

denomination of Astronism centred on the personage of Cometan

All religions hold denominations which are interpretations of the concepts, beliefs, and theories proposed by that religion; denominations represent groups of individuals whose interpretation of the religion match with each other. Cometanism is such in the context of Astronism for it represents a denomination which coincides with the individual beliefs of the personage of Cometan, as the founder of Astronism, towards Astronism itself.

The development of Cometanism as a denomination of Astronism is actually essential in understanding the nature of the organised philosophy itself and in correctly perceiving the personage of Cometan. In understanding that Cometan's beliefs and views are not entirely synonymous with that of Astronism separates the two as two distinct entities of what is referred to as the Foundational Triad, the third element to which is the Omnidoxy. These three elements remain distinct yet unified in their functionality to found Astronism. Without Cometan there could not have been the Omnidoxy and without the Omnidoxy there could not have been Astronism.

In other religious traditions, the teachings of the founder are synonymous with the emergent religion thereafter. However, this is not the same for Astronism and arguably,

this aspect of Astronism is best demonstrated through the development of Cometanism. What Cometan believed and what Cometan taught are certainly foundational and intrinsically formative to the Astronist religion and organised philosophy as Cometan solely founded Astronism, hence there were no others directly involved. Therefore, Cometan's teachings and writings (manifested in the Omnidoxy) are unequivocally central to Astronism. Despite this, we must also remember the vastness of Astronism as is demonstrated in the Omnidoxy herein due to the treatise's own vastness. Essentially, Astronism is not a singular teaching derived from a singular teacher, but is instead a pool into which many teachers can and will place their thoughts, ideas, and beliefs.

Consequently, this means that what Astronism encompasses a collection of denominations which hold particular teachings and interpretation of Astronist ideas and beliefs, hence the establishment of Institutional Astronism. Cometanism is just another one of those denominations. Although Cometan has dedicated his life to Astronism, he remains ontologically separate from Astronism, hence his ideas and teachings may well evolve and progress in different directions, sometimes towards Astronist beliefs and sometimes away from such beliefs. Cometan is an individual personage and not synonymous with Astronism, hence he touch upon the importance of forming the denomination of Cometanism. What constitutes Cometanism is yet to be fully explored and realised and can arguably only be correctly formulated after Cometan's death, but in such a discussion we learn a great deal about who the personage of Cometan is and what the nature of Astronism is, especially so in contrast with other religious traditions.

conceptual elasticity

characteristic of Astronism to retain shape despite removal of central concepts

Conceptual elasticity is one of the most prominent characteristics of Astronism and it is in fact best described as an ability of Astronism. Conceptual elasticity is perhaps not unique to Astronism, but is proclaimed as such in the context of religions alone. The notion of the conceptual elasticity of Astronism states that Astronism is not pivoted on any one idea and that even the most central of the ideas of Astronism can be removed from the belief system, but due to the abundance of the concepts within Astronism, it will retain its shape, principles, and structure.

An example of such is a person's disbelief in sentientism; if a person does not believe in the existence of life on other planets, they could still identify themselves or be identified as Astronist if they believe in other elements of Astronism. This is the conceptual elasticity, or just the elasticity of Astronism in operation. This is unlike the case of Christianity in which a disbelief in the resurrection of Jesus results in an inability to be a Christian. Due to the definition of what it means to be an Astronist is not pinned on a single belief, this provides Astronism with an elasticity that allows it to survive as a belief system even if certain elements of it are disbelieved or are otherwise not followed.

contributionism

belief orientation based on individual contributions to the collective to achieve transcension

Transcension is a central belief, but also a primary function of Astronism; it can be considered the real-world goal achievable by humanity in relation to The Cosmos and distinct from corporeal cosmosis which is markedly more spiritual. Having been granted its central place in Astronist belief, transcension and its school of thought of transcensionism are not only central to Astronism, but they provide purpose and meaning to what Astronists believe.

With transcension being upheld as such a core tenet of Astronism, it is important that a number of different philosophies emerge that are positioned to achieve the collective and individual state of transcension. One of these philosophies is introduced as contributionism which holds that individual contributions to the collectivity that is humanity will achieve transcension most efficiently. The contributionist ideal is that a select group of special individuals will dedicate their lives to the cause of the achievement of humanity's transcension due to their belief in transcensionism. This ideal will then translate into figures whom prioritise the transcension of humanity above their own individualities; it is the sacrifice and dedication of the individual to that of the collective which contributionism principally upholds.

Finally, it is held in transcensionism that transcension is principally achievable through humanity's exploration of The Cosmos, both physically, spiritually, and intellectually. In the contributionist philosophy of transcension, it is held that collectivity must be prioritised over individuality and that a person's legacy of contributions to the transcension of humanity provides them with existential purpose enough so that they remain content with the part they have played in that which is to be henceforth appellated as the Endeavour of Transcension.

corporeal cosmosis

belief in the achievability of cosmosis whilst one is still alive

Each and every religion or belief system consists of a central goal for its followers; for Christians, it is immortality through salvation by faith in Jesus Christ; for Buddhists, it is the achievement of enlightenment as an escape from suffering by following the teachings of the Buddha. For Astronism, this requirement of a central goal also persists and so, for Astronists, the central goal is the achievement of corporeal cosmosis. All living or animate beings will inevitably become one with The Cosmos upon their deaths (known just as

cosmosis, or as post-corporeal cosmosis), but only a select group will achievement such cosmic oneness whilst they are still alive. This is the group that the Astronists intend to form.

Corporeal cosmosis is firstly the belief that one can achieve cosmosis during one's lifetime, and secondly, encompasses the set of methods and practices to be utilised in the achievement of this form of cosmosis. The achievement of corporeal cosmosis is believed to be realised through a series of different methods and forms of practice and belief, one of which is astrosis and others are pre-Cometanian such as meditation, but have been Astronised to focus on The Cosmos or cosmic progeny or phenomena.

The achievement of corporeal cosmosis is considered to be the ultimate state in a person's spirituality, specifically their cosmicality, or also known as their astrospirituality. A person that has achieved this state of corporeal cosmosis is considered to be of higher knowledge, understanding, ability, and perception of The Cosmos than those whom have not yet achieved the state. Corporeal cosmosis is both a mentality, but also an ability to imagine cosmically in addition to being a spirituality, but specific form of spirituality; one that is centred on The Cosmos as the nucleus of the spirit and the provider of belief, hope, and freedom. Exactly, those whom have achieved corporeal cosmosis are considered to be freed of the bounds of a singular world and the mundanities of domestic and practical life.

These individuals, sometimes known corporealists, are considered to be the most free of us all for they understand their humbling place of insignificance in The Cosmos, yet too, they realise and hold the ability to imagine the true grandness and wondrousness of The Cosmos and its progeny and phenomena. For Astronists, the achievement of corporeal cosmosis is the ultimate release; the ultimate freedom; the highest form of proximation with The Cosmos, hence why it is also known as conscious cosmosis because those whom have achieved it are conscious of their connection with The Cosmos while those whom have only achieved post-corporeal cosmosis are not conscious of their connection with The Cosmos both spiritually, physically, and intellectually. Corporeal cosmosis can be considered the most distinguishing element to the Astronist eschatology and is fundamental to the Astronist belief system as it provides a central dimension of purpose to Astronism beyond that of the achievement of transcension.

One of the most interesting aspects of studying Astronism is the notion of the complexity its eschatological foundations, especially the interactivity between the different eschatological beliefs of Astronism. It can be considered that cosmosis (either corporeal or post-corporeal) is the central element of Astronist eschatology; that corporeal cosmosis is the idealistic form of cosmosis, but that cosmosis will nevertheless occur to all animate beings upon their bodily deaths. This can be considered *the* foundational belief in Astronist eschatology and it is upon this belief that three schools of Astronist eschatology of naturalism, transcensionism and transtellationism are based and introduced thereafter. Therefore, it can be rationally postulated that cosmosis is in fact the central belief of all of Astronism.

cosmicity

particular conception of The Cosmos

In the context of Astronism, the term cosmicity has a primary meaning although it is applied in a myriad of different circumstances during discussions of Astronism. This primary meaning has already been briefly described previously and is often the most popularly applied meaning out of all the terms applicabilities. It refers to the notion of a cosmicity being a particular conception of The Cosmos and is thus used as an instrument of study to explore and derive such conceptions. A conception of The Cosmos is a specific understanding of what The Cosmos is, how it is structure, its role and identity, and how it operates, each of such cosmicities is often ascribed with an appellation denoting a type of cosmos; it is that particular conception of The Cosmos itself that is referred to as a cosmicity. It remains a central instrument of study and is applied prevalently through different branches of cosmic philosophy.

cosmicity

person's extent of spiritual proximity to The Cosmos

Cosmicity is the depth and breadth of a person's conceptions of and proximities to The Cosmos which are increased and otherwise improved through Astronist beliefs and practices, namely cosmic awareness, cosmic devotion, astrospirituality, and belief in and adherence to cosmocentrism as one's worldview. Cosmicity can be described as the more individual or personal when compared to the term cosmicity and relates more closely and practically to a person and their spiritual connection with The Cosmos.

Often, the extent of a person's proximity to the achievement of corporeal cosmosis is measured by the extent of their cosmicity as cosmicity in this sense of the word is considered as an amalgamation of cosmic awareness, belief in The Cosmos, being a practitioner of Astronist practices, and other forms of belief and practice that are considered to increase and clarify of a person's cosmicity. Rather than being categorised as a cosmosis method, cosmicity can instead be understood as a manifesto of a person's journey to the achievement of cosmosis.

cosmic awareness

mental state involving a heightened understanding of The Cosmos

Cosmic awareness, sometimes capitalised and appellated as Cosmic Awareness, is a mentality or state of consciousness that a person is considered to achieve when they attain transcension and/or corporeal cosmosis. A person who is described as being cosmically aware is someone whose perception and understanding of The Cosmos has risen to a higher level than those around them. Cosmic awareness can be considered as a direct contribution to a person's overall cosmicality; the difference between the two is cosmic awareness is something that contributes to a person's cosmicality which is considered as something wider. Cosmicality involves a person's spiritual, intellectual, and physical proximation to The Cosmos while cosmic awareness is largely focused on a person's intellectual proximation to The Cosmos.

One of the words which most frequently appears in the context of discussions regarding the Astronist belief system is that of cosmic proximation or a person's proximity to The Cosmos. This term again can be described as holding a close connection to one's overall cosmicality and it can be considered as a philosophy to the achievement of corporeal cosmosis. That which is introduced as proximationism is an Astronist philosophy or belief orientation stating that proximity with The Cosmos in any context or form is an efficient method for the achievement of corporeal cosmosis. Therefore, proximationists hold that spiritual, intellectual, physical, mental, and religious cosmic proximity is the superior way to achieve corporeal cosmosis and that any way to achieve this cosmic proximity should be permitted.

Returning to the subject of this entry, it can be said that a person's cosmic awareness denotes their raised ability to perceive The Cosmos in ways that others simply do not have the ability to do. Cosmic awareness is deemed achievable through practices such as enknowledge, debates of cosmic philosophy, writing about The Cosmos, imagining The Cosmos, and meditating on the topic of The Cosmos. Interconnected with all other methods for the achievement of transcension and corporeal cosmosis, cosmic awareness fundamentally sets itself apart from other methods by focusing on intellectual means to achieve cosmosis whilst one is still alive; it is expected that cosmic awareness will be the popular choice of cosmosis methodology for scholars and academics rather than cosmic devotion or astrosis which are largely faith-based methods.

cosmic devotion

worship and observance for The Cosmos or certain celestial bodies

Cosmic devotion is one of the many methods devised and believed to be fundamental to one's achievement of corporeal cosmosis and sits alongside other methods like cosmic awareness, proximationism, contributionism, and transcensionism. Cosmic devotion can be described as a set of practices alongside associated beliefs with those practices that are believed to increase a person's spiritual proximity to The Cosmos, thus enhancing their overall cosmicality with the intention of achieving corporeal cosmosis.

Cosmic devotion can exist in many forms and has many appellations such as astrodevotion, astronomical devotion, astral devotion, cosmolatry, astrolatry and cosmic prayer. Cosmic devotion is organised according to its forms, its manifestations, and its concepts. A form of cosmic devotion is the way in which a person practices devotion, specifically what intent they have when they practice the devotion and what effect this has on their beliefs regarding the subject of the devotion. For example, a worship devotion holds different intent and associated beliefs than a venerational or reverential devotion.

The second organisational category for cosmic devotions are known as manifestations of devotion which involves categories of subjects of cosmic devotion. Cosmic devotion involves devotional or worship practice that is directed towards either an astronomical object (progeny), astronomical event (phenomena), transcensional achievement (anthropism), or atmospheric phenomena or object (High Earth). The final organisational element of cosmic devotion are conceptual devotions which are concepts that have been created to accompany manifestations of devotion and have particular connotations and meanings attached to them.

Cosmic devotion can be considered a central element of practice in Astronism and it can be accurately described as the Astronist form of astrolatry, yet not all cosmic devotions involving worshipping celestial objects and it is important to make the distinction between worshipping, venerating, revering, lauding, adoring, and prettifying as just some of the forms of devotion recognised as part of cosmic devotion. To further cement the importance of cosmic devotion to Astronism, an entire discipline of study has been formed omnidoxically to deal with the study of cosmic devotion which is known as devotology.

cosmic philosophy

branch of philosophy dealing with astronomy, celestial bodies and space exploration

Cosmic philosophy can be undoubtedly considered the single-most element which founded Astronism and the wider Astronic tradition of thought. Cosmic philosophy is introduced and omnidoxically established as a new branch of study within philosophy dealing with space exploration, astronomical objects, spacefaring, and humanity's connection and relationship with The Cosmos. Cosmic philosophy draws on all other branches of philosophy, such as ethics, ontology, epistemology, logic, metaphysics, and aesthetics, in order to complement its own inquiries. Originally Astronist in orientation, cosmic philosophy is developing beyond the bounds of Astronism itself to become a neutral field of study within philosophy alongside the branches just listed.

Despite this, cosmic philosophy and Astronism share a relationship with one another that is profoundly integrated. Cosmic philosophy forms a significant part of the inquiries made in Astronism and much of the Astronist set of beliefs, such as cosmocentrism as the

worldview of Astronism is intrinsically formed by the inquiries made by cosmic philosophers. Officially known as cosmontology, cosmic philosophy explores questions that have had little attention during the history of philosophy largely because these are questions that are dependent upon the knowledge that we have only just recently gained about The Cosmos, how it operates, and our role as spacefarers within it.

The questions that are raised in and investigated by cosmic philosophy involving circumstances that will most definitely impact our descendants and the way they see their place and purpose in the world. Cosmic philosophy addresses questions such as, is it ethical for humanity to explore space, does it go against environmentalist and preservationist principles to colonise other planets, how should we colonise planets in a way that is sustainable, who does a newly discovered planet or astronomical object belong to, what role does humanity place in the destiny and chronology of The Cosmos, among many other questions that form the basic of cosmic philosophical enquiry. Credited as the first cosmic philosopher, Cometan intends to lead the development and recognised of cosmic philosophy as a serious discipline of philosophy whose questions are becoming more pressing and whose inquiries will open up a vast array of new questions and subsequent disciplines of study that have never yet been imagined.

cosmocentrism

worldview of Astronism

There is perhaps no more significant belief in Astronism than that of cosmocentrism; it is arguably the most commonly referenced belief when speaking of Astronism and is also the worldview held not only by all Astronists, but also by other religious and philosophical groups within the Astronic tradition. Therefore, although cosmocentrism holds its origins firmly within Astronism, it seems to have transcended Astronism itself to encompass a larger group of people that all seek to place The Cosmos or otherwise astronomy or the universe at the centre of their spiritual, intellectual, and religious lives.

As made distinct from the similar titled astrocentrism, cosmocentrism is markedly a personal orientation; it pertains to a worldview that is to be held by individuals regarding their spirituality, their religiosity, their philosophicality, and their intellectuality. Cosmocentrism is perhaps most simply described as a perception of one's own personal as well as wider humanity's purpose as being centred on The Cosmos. Cosmocentrism states that The Cosmos should become a central element in a person's spirituality, in their intellectual endeavours, and in their religious and philosophical beliefs.

Cosmocentricity comes as a contradistinction from other forms of centricity, principally including geocentricity, anthropocentricity, and theocentrism. It emerges to make a centrality of The Cosmos to make it distinguished from these other forms of centricity. The origins of cosmocentrism are found in the cosmology of Astronism, known as the Astronic

cosmology, in which The Cosmos is described as the reality in which humanity lives and is equated with what mainstream dialogue would refer to as The Universe. The Cosmos is considered an animate entity that was born and will inevitably die and whose nature is unequivocally limited meaning all that exists within it (including humanity) are also limited by that same nature.

Cosmocentrism postulates that The Cosmos is the only empirically real entity to provide existential purpose to humanity, both of believers and the non-believers. It is stated that even the most sceptical people cannot deny the existence of The Cosmos in which they themselves reside, hence for both believers and non-believers, The Cosmos holds a sense of omnality over all peoples. Additionally, cosmocentrism proposes that placing The Cosmos at the centre of our lives humbles us to understand our insignificant place in The Cosmos; that we are significant only to ourselves. Cosmocentrism provides a basis upon which all other Astronist beliefs are perched and for this reason, it can be considered a necessary precursor to all other Astronic beliefs no matter the denomination. Any discussion that takes regarding Astronist or Astronic beliefs and ideas is done so with the often un-uttered assumption of a cosmocentric worldview.

cosmodora

poem of cosmic philosophy

The Cosmodora is a poem that was first introduced herein as part of the Omnidoxy which is considered to metaphorically and ambiguously describe a cosmocentric view of existence as well as supporting the cause for the establishment of cosmic philosophy as a discipline of philosophy. Although the Cosmodora originates as an appellation for the poem to which it is associated in the Omnidoxy, it too can be seen without capitalisation whereby it refers to any poem that can be described as cosmic or cosmocentric by the nature of its subject, hence the term cosmodora can be considered as a wider encompassing word. Cosmodora can be considered a simple yet ambiguous non-academic educative introduction to cosmic philosophy.

cosmomancy

divination system based belief in The Cosmos

Cosmomancy, having been inspired and arguably based upon the long-established practice of astromancy which, upon the founding of Astronism, has been categorised as part of the Astronic tradition of religions, is a system of divination principally based around The Cosmos. The purpose of its creation during the founding of Astronism was to create a system which derived facts and interpenetrative notions about the future from

The Cosmos as performed according to a series of techniques of divination. The goal of cosmomancy is therefore to attain knowledge of the future or simply all that is generally unknown from The Cosmos and is therefore predicated upon the belief that divination by way of The Cosmos is achievable, especially from those with higher levels of cosmicality.

cosmos-chaos dichotomy

Astronic dichotomy between The Cosmos and The Chaos

Foundational to forming a clear understanding of Astronism is gaining coherent knowledge of the Astronic cosmology, or the cosmology of Astronism. This is because the cosmology forms the basis of much of the beliefs of Astronism and its worldview of cosmocentricity. One of the principal aspects of the Astronic cosmology is the categorisation of existences into three categories: the essential, the lesser, and the subservient. Each of these three categories holds within it three existences that are referred to throughout all discussions of Astronist beliefs and ideas, the most popular term of which is The Cosmos.

In Astronism, The Cosmos is what mainstream society has come to call the universe, but in addition to this, The Cosmos is perceived as holding a limited nature and all that resides within it also exists under a limited nature, hence all that exists within The Cosmos cannot exist outside of The Cosmos. This belief in what is known as limitationism, or the Cosmic Limitation Principle, holds consequences that reverberate throughout the Astronist belief system, arguably effecting all aspects from eschatology to theology to soteriology.

A major element of all religions is the development of dichotomies and Astronism is no different in this tradition. In fact, in the Omnidoxy, numerous dichotomies have been developed in order to clarify and explain the beliefs of the organised philosophy. One of such dichotomies is the Cosmos-Chaos Dichotomy, sometimes also referred to as Cosmic-Chaotic Dichotomy. In Christianity, there is heaven and hell; in Taoism, there is yin and yang; in Hinduism, āstika and nāstika. All of these religions and more have dichotomies and Astronism's own most well-known dichotomy that which exists between The Cosmos and The Chaos.

From the Astronist perspective, The Cosmos is the representative of order, structure, knowledge, and function while The Chaos, which is categorised as one of the three lesser existences in the Astronic cosmology, is considered to be the representative of disorder, destruction, unknownness, and disfunctionality. The Chaos is created as the antithesis of The Cosmos yet the two coexist while neither one attributed with notions of goodness or evil. It is this dichotomy that splits existence in the cosmic and the chaotic overarched by universality which is then itself sustained by divinity and in this we gain an understanding of the Astronist conception of existence.

cosmosis

physical, spiritual and intellectual union with The Cosmos

Now we come to arguably the second most central concept or belief within Astronism, second only to the worldview of cosmocentrism. Core to any belief system is its approach to eschatology and the development of its own distinct eschatological belief structure and with the introduction of cosmosis, this requirement is achieved for Astronism. All religions are primarily concerned with what occurs during and after we die and in this case, Astronism is no different, but in its approach to contemplating such topics, it is from that point onwards that we witness the uniqueness of Astronism as manifested by cosmosis.

Commonly referred to as becoming One with The Cosmos, cosmosis is a tridimensional experience that is believed, in Astronism, to occur to all living beings upon their death in which they become physically, spiritually, and intellectually unified with The Cosmos. For this reason, cosmosis may also be known as The Great Equaliser because it states that no matter the wealth, knowledge, race, religion, sexuality, or even species, all living beings will become One with The Cosmos as an inevitability of their cosmic existence. For the naturalist school of Astronist eschatology, which forms one of the three main schools, cosmosis signifies the existential cessation of a being beyond which it does no longer hold any spiritual or otherwise supernatural existence. For the transcensionist school, this belief is largely the same with some differences, but in the transtellationist school, various other supernatural beliefs are held regarding the final destination of the soul of animate beings.

Whatever the approach to Astronist eschatology you take, you will no doubt find cosmosis a essential and presumptive basis for all Astronist beliefs. It is therefore fair to say that a disbelief in cosmosis is unastronistic although various issues are caused with postulating such a notion, the principal issue of which is the conceptual elasticity of Astronism and the notion that it is not reliant on a single belief but is instead defined by a myriad of beliefs.

In Astronism, cosmosis is the final destination of the body and the entire existentiality of all animate beings due to the belief in the existence of soul only finding support in some sectors of the transtellationist school while the majority of Astronist schools do not consider the soul to exist, especially in such a way that it is connected to an afterlife. The form of cosmosis that we have address thus far in this entry is known as post-corporeal cosmosis which is cosmosis that occurs or is achieved as part of one's death. However, there is another form of cosmosis that forms a significant part of the beliefs of Astronism and has arguably given birth to the mystical tradition of Astronism known as Astrocism.

This second form of cosmosis, the most elusive and hardest to achieve out of the two, is known as corporeal cosmosis which involves the belief that cosmosis is achievable not only after one has died, but during one's life. With this core belief of Astronism rising to the forefront of the organised philosophy's entire belief structure, this has provided yet

another existential purpose to human beings, but unlike transcension, it offers a spiritual, philosophical, and religious dimension of purpose and meaning.

From this, the Astronist tradition of mysticism has emerged called Astrocism which holds its central goal to be the contemplative exploration of what corporeal cosmosis is followed by the setting out of various different methods that are positioned to achieve it. The methods of which we speak are vast and may incorporate other elements of Astronism into what is known as their cosmosis methodology. Some of these cosmosis methodologies including transcension, cosmic devotion, space exploration, astrosis, enknowledgement, Cometanhood, amongst many others.

creation theory

discipline dealing with theories and beliefs concerned with the creation of The Cosmos

Creation theory can be regarded as a prominent discipline of study within Astronic philosophy that was founded during the founding of Astronism by Cometan in the Omnidoxy, however, the origins of the subject it addresses traces its history back to when humans could first consider such questions as, how did we come to be?

Creation theory essentially proposes the question of what created The Cosmos, what is the nature of that which created The Cosmos, and what can be known of that which created The Cosmos such as why, how, and when it was created. Creation theory, although it addresses what created The Cosmos, it essentially also intends to explore the nature of The Cosmos itself. Creation theory is contrasted with finality theory which, as evidenced by its title, concerns the cause, chronology, and events of the ending of The Cosmos.

With the development of both creation theory and finality theory, Astronism cements its identity as an organised philosophy and not simply a religion. Although Astronism espouses a particular creation theory of The Cosmos, which is largely in alignment with current scientific discoveries as well as derived from logic inquiry, it is a belief system which embraces approaches to understanding the nature and creation of The Cosmos from a variety of angles, not just superiorising its own. In this, we can derive the strength and centrality of the core principles of the Philosophical Spirit taking centre stage in Astronism.

definitionalism

writing style based on definitions

The Omnidoxy is a document of vastness and diversity, both in structure and in writing style, the latter characteristic of which is manifested through the various different forms of writing that are used in the text. One of these writing styles that is used extensively in the Omnidoxy is definitionalism which relates to a style that is based on definitions of ideas and concepts rather than the rhapsodic discussion or poetic musing of concepts. The definitionalist writing style is arguably the most common in the Omnidoxy, largely due to the extensive amount of concepts introduced in the text thus not allowing for the discussion of them all, but instead only provides the definition of what they are and what they mean.

depadotheism

theological position denying all human attributes applied to God

The theology of Astronism has always intended to distinguish itself from the vast range of theologies that preceded it; the same can be said for the entirety of Astronism and its aim to make itself distinct from the myriad of pre-Astronist religions. To come closer to achieve its unicity from other belief systems, a new form of theology has been developed since the inception of Astronism itself known as depadotheism, or depadism for short.

The theology of Astronism can be considered two-pronged meaning that the complete explanation of the Astronist theology is dependent upon two belief orientations; panentheism and depadotheism. Essentially, Astronist theology holds that The Divine, which is the appellation for God in Astronism, exists both beyond The Cosmos and The Universe, but also interpenetrates all existence. There is little direct connection made between humanity and The Divine in Astronism so as to reaffirm the cosmocentric worldview of the organised philosophy rather than falling to the side of anthropocentrism.

From its inception, Astronism has held issue with the rampancy of anthropomorphism throughout religious traditions such as Christianity. Astronism understands divinity to exist beyond physical, material existence comparable to that of human or otherwise cosmic limited existence. There is no conception of an anthropomorphised God in Astronism and it is from this issue that the depadotheistic theology emerged. Cometan held significant issue with the attribution of human emotions to the conception of God, such as God loving, being angry, or merciful. Cometan understood these traditionally held conceptions of God to be distortions of the true nature of divinity which is beyond all human comparability.

Depadotheism presents a theistic conception of existence in which God (or The Divine in Astronism) has a merciless, non-empathic, neutral, yet truly divine and transcendent nature that is completely removed from that of cosmic limited nature and is devoid of all human attributions. Depadotheistic views of God are considered to be pure and without

human applied attributes as a reflection of ourselves which is considered to be the basis of many non-Astronic theologies and to which depadotheism is opposed.

discipline of study

the term for a subject within the Astronic tradition

There are various functions within Astronism that allow it to operate as an organised philosophy or a belief system in general such as instruments of study, school of thought, and belief orientations. One other example of such functions is a discipline of study which can be described as relating to a subject within the Astronic tradition, an equivalent term would be subject, field of study, or branch of knowledge.

The prolificity of Astronism in creating new subject areas made a cause for the development of disciplines of study as well as subdisciplines of study which represent subsets of subjects that relate to a specific area of study within the wider discipline. This organisation and categorisation of fields of study is essential to the functionality of disciplines of study to not only organise the many beliefs, concepts, and theories of Astronism, but also to form a clarity for those whom wish to study various aspects of Astronism.

discourse

secondary structural element of the Omnidoxy after a disquisition

As there are structures used to organise and clarify Astronism there are structures that have been put in place to organise and clarify the Omnidoxy. Due to the vast scale and subsequent complex of the treatise, it has been essential to develop discourses in order to split portions of writing into subject-oriented or thematised pieces that reflect a particular subject. A discourse provides this function in relation to omnidoxical organisation and allows for the organisation of omnidoxical disquisitions due to the vast areas of study that are covered by the twelve disquisitions of the Omnidoxy. Discourses comprise of a series of insentensations and vary according to length depending on the amount of insentensations residing within the discourse.

Secondary in textual structure only to disquisitions, discourses can exist in a range of scales from short to extensive, hence why there have been created discourse types. These discourse types can themselves be split into two halves, the first according to length and the second according to form or content. The first category of discourse types were according to length and include microdiscourses, pardiscourses, hyperdiscourses and megadiscourses. The second category of discourse types is structured according to form

and content of discourses as well as their positions in the disquisition. This second category includes the following discourse types: standard, centrality, in centrality, philosophy, introductory, conclusatory, and subdiscourse.

disquisition

primary structure element of the Omnidoxy

The Omnidoxy herein has always been heavily organised and categorised since Cometan had started writing it when he was seventeen years of age. This is due to the unique vastness of the text which fundamentally require it to be significantly categorised and organised so that its navigation was easy enough even for those inexperienced in dealing with such large corpuses. The primary manifestation of such structural organisation of the Omnidoxy is that of the disquisition. A disquisition is comprised of a series of discourses that can range greatly in size with a variety of different length outcomes.

For example, a disquisition may have twenty short discourses, but another disquisition may have just five long discourses that make the overall disquisition longer than the one aforementioned. Therefore, a disquisition can vary dramatically in length as well as in the scope of the subjects it addresses. This has become of the primary criticisms of omnidoxical disquisitions because some of the disquisitions within the Omnidoxy vary so greatly from what their titles state that some readers may become confused of the true subject of the disquisition. This issue is blamed partly on the revelatory and uncontrolled nature in which the Omnidoxy was written by Cometan and due to the enormity of concepts, beliefs, ideas, terms and theories that did not necessarily fit into any of the titles of the omnidoxical disquisitions yet needed to be included no matter their suitability to the title of the disquisition into which they were placed. This is expected to remain a key feature, but also an important point of debate for omnidoxicologists as they interpret why certain subjects have been addressed and discourses have been placed into certain disquisitions of the treatise.

divinology

discipline dealing with The Divine or a particular conception of The Cosmos

The study of God, particularly the nature, role, and identity of God, or the creator of existence, is a subject of paramount importance to any religious or indeed any philosophical tradition. Astronism is no exception in this regarding as the question of God or the question of the creator is paramount, yet remains secondary only to question of The Cosmos due to the cosmocentric orientation that Astronism is predicated upon. Despite the inferiority of the question of God to the question of The Cosmos in Astronism, the

discipline of study of divinology is established and propagated as one of the most important disciplines to be studied and discussed as part of Astronist debates.

God in Astronism is named as The Divine due to the beliefs and layout of the Astronic cosmology and is conception of the creator of existence. Divinologists can be considered fixated on the nature, ontology, existentiality, role, and identity of The Divine and there have been introduced herein omnidoxically a long series of divinologies that form specific conceptions regarding these different aspects of The Divine. From this, we can introduce the secondary meaning of the term divinology for such like the terms cosmicality and universality, divinology pertains to a person's particular conception of God or of The Divine.

It pertains to a person's individual opinion and view of what God is, most often categorised according to the range of divinologies provided during study of the different ways that The Divine can be perceived. Often considered the Astronist version of general theology, divinology is specific to the study of The Divine in Astronism and is therefore much more niche in the subject of its study and is therefore also firmly Astronistic in its precursorial viewpoints, such as the assumptions made of Astronic cosmology which ground all divinological viewpoints and beliefs.

enknowledgement

acquisition of knowledge

For centuries, the acquisition of knowledge has been a central tenet of religious traditions founded on the notion that seeking greater quantities and qualities of knowledge will lead to higher states of consciousness, often with the intention of only depending upon one's own knowledge for the achievement of immortality. The religion of Gnosticism is one such example of a belief system based on the acquisition of knowledge and although Astronism would not describe itself as a gnostic religion, it does champion the attainment of knowledge and professes that knowledge will lead to greater advancements in transcension as well as in one's own personal cosmicity with the intention of achieving corporeal cosmosis. It is from this that the concept of enknowledgement has emerged and has become one of the most widely referenced concepts within the Astronist belief system.

Enknowledgement is both a concept and a practice of Astronism; conceptually, it is the notion that knowledge is equated with progression in the attainment of transcension and corporeal cosmosis; practically, it is the act of seeking out knowledge by the variety of means by which one's recovery and absorption of knowledge can take place. The attainment of knowledge is also held to be a significant contributor to one's ability to philosophise therefore a person's extent of enknowledgement is directly related to a person's extent of philosophicity or philosophicality as one's extent of knowledge directly informs their interpretations, their beliefs, and their opinions about a variety of matters

that remain central to both religion and philosophy. Part of Astronist approaches to epistemological study, enknowledgement can also be considered to hold significant applicability to other areas such as ethics, aesthetics, logic, theology and ontology. Particularly important is enknowledgement's role in Astronist ethics because it is believed that freedom, the attainment of which is the goal of Astronist ethics, is best achieved through gaining as much knowledge as possible as greater knowledge is often equated with greater freedom.

ephemeralism

belief holding naturally and intrinsically impermanence

The eschatology of Astronism is a complex area of study that requires extensive pre-knowledge of the worldview and belief structure of Astronism prior to its specified study. Astronist eschatology is structured according to three primary schools of thought covering the matters of the afterlife, the notion and concept of destiny, as well as the existentiality and the final destination of the soul. The three schools are known as naturalism, transcensionism, and transtellationism, each of which holds differing orientations on the aforementioned topics and each of which includes a myriad of their own teachings and beliefs.

One such teaching which can be considered as a cross-school belief orientation meaning that it finds support in different schools of thought of Astronism is that which is referred to as ephemeralism. Ephemeralism is the belief in the impermanence of cosmic nature due to the limitedness of cosmic nature, but the belief orientation demonstrates something must wider. Ephemeralism postulates that the impermanence and transience of cosmic existence means that death should be considered as a natural part of life rather than something that abnormal or as something to feared or mourned, thus departing from traditionally engrained Western concepts of death. Due to the belief of the impermanence of cosmic nature, ephemeralism also rejects the belief of immortality due to immortality's permanency and infiniteness. Finally, the Astronist belief of ephemeralism also postulates that existential cessation is absolute given a person's completion of cosmosis therefore reaffirming disbelief in the notion and concept of an afterlife.

Notions of the impermanence of nature and the surrounding reality have existed for thousands of years, most popularly expounded in Buddhist thought. While ephemeralism can be compared with the Buddhist concept of impermanence known as anitya, it should not be used synonymously and the distinctions between the two should always be made.

The principal departure between the Astronist belief of ephemeralism and the Buddhist belief of anitya is that Buddhism expounds the belief in reincarnation. It is for this reason that Astronism considers the Buddhist notion of impermanence to be either incomplete or distorted due to the notion that reincarnation suggests a sense of permanency of being

despite the transformative occurrence of the aesthetic during the reincarnation process. A hardline literal approach to impermanence is taken by Astronism in which complete existential cessation is a necessary part of Astronist beliefs regarding the impermanence and limitedness of cosmic existence. The Buddhist belief of reincarnation not only clashes with the Astronist belief of ephemerality and its literal interpretation of impermanence but it also isn't suitable to the wider Astronist belief in limitationism. Reincarnation suggests a sense of infiniteness and if not infiniteness then certainly not a sense of limitedness of cosmic nature hence the reason for the total rejection of reincarnation in the Astronist belief system due to the multiple levels of divergence that reincarnation holds when compared alongside Astronist conceptions and beliefs.

extollation

recognition system used in Astronism

The majority of religious traditions have developed systems, either during the time of their inceptions or as a matter of the course of history, that are focused on recognising individuals whom have contributed to the belief system or whom have demonstrated considerable and noteworthy efforts to manifest the principles of a religion. Such systems are known as recognition systems and in the context of Astronism, the specific system used is known as extollation.

Extollation is the tradition and the associated process regarding the recognition of relevant people and their works and biographies within Astronism. The recognition of individuals as contributors to the religion or as hold significance in the religion regardless of their direct contributions to it remains important because these individuals are representative for the general principles of the belief system.

The comparison of different systems of recognition is expected to be a significant addition to the comparative study of religion. Comparing different recognition systems will allow us to understand in a clear sense these recognition systems. Unlike in the Christian form of recognition known as canonisation, extollation can be designated to a person who is still alive and does not involve any notions of intercessory powers or connections to supernatural phenomena (that form of recognition is known as celestification). Instead, to be extolled means to have lived a life according to contributionism in which a person has contributed to the world in their own unique way according to their abilities and ambitions. Candidates for extollation are often confined to being inventors, astronomers, cosmologists, philosophers, writers, astronauts, and explorers. Extolled persons are considered to manifest the principles of Astronism, but of course, there remains a hierarchy of recognition that follows a familiar structure to other recognition systems.

finality theory

discipline dealing with theories and beliefs concerning the end of The Cosmos

Dedicated with its own encyclopaedic entry herein was creation theory and now has come the time to introduce and explore its contrasting discipline of study known as finality theory. Finality theory is concerned with the study and development of various beliefs, ideas, and formulated theories regarding the question of what will happen before, during, and as a result of the end of The Cosmos both for The Cosmos itself and everything within it. There is a standardised Astronist belief regarding the end times of The Cosmos and its inevitability, however, finality theory, in order to reflect the Philosophical Spirit of Astronism, includes all types of eschatological beliefs regarding The Cosmos, not just those which are held or are concurred by Institutional Astronism.

Despite this, finality theory does remain an Astronist discipline of study framed by the beliefs and ideas of Astronism and especially the Astronic cosmology. This is witnessed most obviously in the notion that the finality theory is concerned only with end times of The Cosmos from the Astronic cosmology. In Astronist belief, both The Divine and The Universe are infinite, permanent, and limitless dimensions of existence, hence they hold no end. As a result, the Astronist discipline of study is only concerned with the end times of cosmoses which pertains to the infinite amount and frequency of cosmoses in The Universe that, when referred to collectively, are called The Omniverse. From this, we can clearly derive that finality theory is completely immersed in the beliefs of Astronism and is not completely neutral. It is perhaps best put that finality theory is assumptive of the accuracy of the Astronic cosmology hence it predicates its study upon the theories and beliefs disseminated by the Astronic cosmology.

forms of astronism

ways in which Astronism manifests itself

All religions are organised so as to allow for their study and practice by people whom perhaps do not hold the ability to comprehend the vast collections of beliefs and the dimensions of various religious traditions without such organisation. From its inception has been vigorously organised, perhaps due to the academic nature and writing style and approach by which Cometan developed some elements of Astronism and due to his particular interest in the philosophy of religion, metareligion, and comparative religion. The very ontology of Astronism is stepped in organisation and categorisation of beliefs and the various floating elements that come together to form what we call Astronism, which is also manifested through Astronism's designation as an organised philosophy.

One such fundamental part contributing to the organisation and formulation of Astronism is what are known and sometimes capitalised and appellated as the Forms of Astronism.

The forms of Astronism includes the myriad of ways in which Astronism has and will in the future develop as an organised philosophy and belief system. The forms of Astronism are three dimensional according to the philosophical, the theoretical, and the practical. The forms of Astronism denote a vast collection of ideas, terms, and theories regarding the ontology of Astronism which has greatly contributed to the development of what is known as Meta-Astronism.

The forms of Astronism can principally be understood as the various ways in which Astronism manifests itself or the dimensions through which Astronism can be understood. The study of the forms of Astronism also considers the various levels of orthodoxy within Astronism in addition to syncretism. The forms of Astronism remains an important system for labelling and categorising the various different manifestations of Astronism and is considered to be the principal framework through Astronism is academically studied.

humanic exploration of the cosmos

space exploration considered as a religious and cultural endeavour

From the very beginning of Astronism, an emphasis has been placed on humanity's connection, both of a spiritual, intellectual, and physical substance, with The Cosmos as a direct result of the cosmocentric worldview of Astronism. This fundamental element of belief has pervaded throughout the pantheon of beliefs that form the Astronism that was developed in the Omnidoxy by Cometan and the influence of which should not be understated. It is from this cosmocentric view of both humanity's ontology, humanity's destiny, and humanity's religiosity that the Humanic Exploration of The Cosmos has emerged even to such heights as being labelled one of The Seven Tenets of Association of Astronism.

As expressed on a multitude of occasions through the Omnidoxy, the Humanic Exploration of The Cosmos not only exists on a political, financial, and economic level, but more importantly, it exists on a religious, cultural and intellectual level. It is believed that only the convictions of the religious will succeed in the true exploration of The Cosmos in search for the answers to our being. The Humanic Exploration of The Cosmos itself heralds the Astronomic and the Spacefaring revolutions and expounds that there is no other way but the way of The Cosmos and that there is no greater facet of unexplored knowledge and betterment and progression than that of The Cosmos.

The Humanic Exploration of The Cosmos is both a concept and process that embodies the cosmocentric principles and worldview and it cherishes the notion of the cosmocentralisation of humanity. Essentially, we can derive the Humanic Exploration of The Cosmos in all aspects of Astronism, but it is principally found in the notion that space exploration is considered and should henceforth be considered by both Astronists and non-Astronists alike as a religious, intellectual, and cultural endeavour with motivations

relating to those being expressed most prominently, especially so over the political, economic, and financial motivations that are presently focused upon by those whom do not cherish and care of The Cosmos and those whom do not believe in cosmocentrism as we ourselves do.

hyperdiscourse

type of discourse consisting of more than one hundred insentations

We have spoken of the vigorous organisation that has taken place regarding the Omnidoxy since its develop and that which is known as a hyperdiscourse plays a part in the categorisation and organisation of discourses themselves. A hyperdiscourse is a type of discourse of the Omnidoxy characterised as being more than one hundred insentations in total length. A hyperdiscourse is one of the few types of discourses and acts as a category into which the discourses of the Omnidoxy are placed.

inclusive discipline

series of twelve disciplines introduced in the Omnidoxy

Like in all other aspects of both Astronism and the Omnidoxy, their codifications have become central to their overall identity and development. One such important contributor to the organisation of the Omnidoxy and as a subsequence, the organisation of Astronism, especially the organisation of the study of Astronism, is that which is known as an inclusive discipline.

An inclusive discipline is a collection of disciplines of study that come together to form a thematised field of study and that each of the twelve disquisitions of the Omnidoxy is associated with. The disquisitions of the Omnidoxy were each assigned with an inclusive discipline during the treatise's development and it is these inclusive disciplines that include a range of disciplines of study that relate to a common theme or subject that forms the inclusive discipline.

Despite a proportion of disciplines of study having been categorised as part of an inclusive discipline (known as the process of inclusivisation), these inclusivised disciplines do not represent the entirety of disciplines of study of Astronism. There is another set of disciplines of study which are known categorised as part of an inclusive discipline and these disciplines of study are known as disinclusivised disciplines. Inclusive disciplines form the framework by which a person is able to study the vast amount of disciplines of study that form the academic branch of Astronism, or the study of Astronism.

insentence

writing system applied in the Omnidoxy

All religions and philosophies have sought to distinguish themselves from other religions around them and this is part of a process that arguably all religions and belief systems go through which is something that is considered as part of Cometanic writings and musings on the topic of metareligion. This presently unnamed process of religions can be spotted throughout the development of Astronism as it attempts to distinguish itself from all pre-Astronist religions and philosophies. This process of distinguishing plays an important part in the overall identity of a religion which has become important to Astronism since its own founding.

There are a variety of different examples and manifestations of this process of distinguishing that can be found in Astronism, some of which pertain to the creation of the Omnidoxy, and one such is that of insentence. Insentence is the writing structure (not to be confused with writing style) that is used throughout Core Omnidoxy and is characterised by the unique practice of forming sentences as if they were paragraphs therefore provided a line space between every separate sentence. These types of sentences are known as insentensations and each of which have undergone an indexation process according to the other unique element of the Omnidoxical structure known as indexment, which is the system of indexing developed by Cometan for the purposes of the indexation of the insentensations of the Omnidoxy.

institutional astronism

form of Astronism espoused by The Institution of The Philosophy of Astronism

In all belief systems and systems of thought, there are differences of opinion that should always be acknowledged if not accepted or embraced, but it is the knowledge that we are able to propose differences in opinion without fear of retribution or persecution that makes our modern society the best society to be living in when compared to those of the past. Schisms and splits in doctrine have always occurred for it is part of the human nature to disagree and to propose differences of thought, especially on topics of vastness. It stands to logic to suggest that topics of vastness will subsequently result in opinions of vastness.

Astronism is therefore no different in the development of denominations and this has been accepted from the inception of Astronism in the Omnidoxy as a inevitability of its development. This does not necessarily mean that all denominations will be concurred with for that would defeat the point of identifying them as denominations, but an

acceptance of the inevitability of the development of denominations is proclaimed, especially due to the vastness of topics that Astronism encompasses.

The denomination of Astronism that is considered to be the original denomination of the organised philosophy is that which is referred to as Institutional Astronism. Institutional Astronism proclaims its lineage directly to the teachings of Cometan and the words of the Omnidoxy and is associated with The Institution of The Philosophy of Astronism, the original proprietor for the organised philosophy. Institutional Astronism can be considered synonymous with the beliefs of Astronism espoused in the Omnidoxy and those which are accepted or rejected by The Institution. Institutional Astronism may also be known as Orthodox Astronism, or as the Astronist Tradition, but it should not be confused with Cometanism which refers to a distinct denomination more specific to the individual beliefs of the person of Cometan which were developed as part of Cometan's life post-omnidoxically although many of the views of Cometanism and Institutional Astronism remain aligned.

instrument of study

a conceptual that measures a subject to which it is applied

We have spoken continuously about the importance of organisation to understanding Astronism and its development as an organised philosophy. Now we come to the most important element for forming Astronist investigations regarding all different topics, most predominantly in the realm of cosmic philosophy. Those which are known as instruments of study are a collection of terms called instruments that are used for the measurement of some subject, examples of which include cosmicity, orderity, and naturity. Each of these terms measures the extent to which the subject is according to a predetermined understanding of compared wholenesses; essentially, an instrument of study compares according to a set of characteristics rather than according to numerical measurement.

An instrument of study is classified as a type of conceptual that contribute to the development of investigations regarding a myriad of different topics, but usually, the instrument of study itself will determine the extent of the topics to which it can be applied. Instruments of study are so central to the functionality of Astronist philosophical inquiry that they have been assigned their own discipline of study which makes comparisons between them and is known as instrument theory. Instruments of study will often be applied in a series (although can still be applied singularly) and these series are known as instrumentations. Various examples of instrumentations are locatable throughout the Omnidoxy with most concentrated in the Monodoxy as part of cosmic philosophical musings and discussions.

intracosmism

belief that The Cosmos holds all existential answers

If ever Astronism was to place emphasis or importance on a particular set of beliefs within its pantheon of beliefs then the manifestation of such an emphasis would be The Seven Tenets of Association. The Seven Tenets of Association are Astronist beliefs which are provided with a particular emphasis and are of central concern to Astronism. One such belief is provided with its own encyclopaedic entry herein and is known as intracosmism.

During the comparative study of religion, it is quite easily identifiable that all religions hold particular focuses; these focuses, whether they be physical or conceptual, are what those religions consider to hold the answers to our questions or are the subjects that are considered to hold a central place in the belief system. For Astronism, that central subject is unmistakably The Cosmos as is reflected in the cosmocentric worldview of Astronism.

However, cosmocentrism itself does not encompass the belief that The Cosmos holds most of the answers to our existence. This belief is what is known as intracosmism which itself be considered as a product of cosmocentrism or a result of the cosmocentric worldview. Intracosmist thought proposes that questions the regarding human existentiality and ontology are answerable through our exploration and enknowledgement of The Cosmos as a direct alternative to extracosmical concepts that are at the centre of other religions such as God, the spiritual world, or simply just the human material world on The Earth. Intracosmism can be considered the belief orientation which reaffirms the cosmocentricity of Astronism and allows the worldview to be applied to the context of questions regarding the existentiality of humanity.

limitationism

belief in the limited nature of all that exists within a cosmos

If the entries of the Omnidoxical Encyclopaedia of Astronism have demonstrated anything about Astronism is the fundamentality and influence of the Astronic cosmology on the beliefs and orientations of Astronism on almost all topics of philosophy and a great many on those of religion. We continue in this tradition by introducing that which is known as limitationism which may also be known as the Cosmic Limitation Principle, or the Principle of Cosmic Limitation.

One of the central tenets of the Astronic cosmology is its understanding of the nature of The Cosmos in which humanity resides. It principally states that The Cosmos is fundamentally limited by its core nature and that all that exists within The Cosmos does so according to a limited nature. This limitedness of cosmic nature as the fundamental attribute synonymised with what is considered cosmic in Astronism has reverberating

effects that impact the entirety of Astronism and this is what forms many of the beliefs held by Astronism.

Due to the limitation of cosmic nature, nothing within The Cosmos, including humanity, planets, galaxies etc. can either exist nor can it ever attain any state of infiniteness. For this reason, all notions of immortality or an afterlife are rejected in Astronism directly because of its audience to limitationism therefore the enormity of limitationism and its influence over the identity of Astronism as a whole. In addition to this, Astronism rejects all notions that anything within The Cosmos could somehow escape The Cosmos because it is the Astronist belief that all that exists cosmically cannot therefore also exist universally or divinely, the latter two existences of which are characterised by their infinite natures; such an ability to cross from cosmos to cosmos from The Cosmos into The Universe is known as transcosmisation.

Limitationism provides the prism through which Astronist metaphysical and physical understanding of existence are considered. As a direct result of limitationism, long-established concepts such as the soul, especially a permanent life-extending spirit, are rejected thus creating a distinguishing identity for Astronism and its approach to long-standing religious ideas and doctrines. It is the Astronist adherence to limitationism that grounds much of the beliefs of Astronism regarding the ontology of humanity, the nature of The Cosmos and in addition, the belief also plays a significant part in the eschatology and theology of Astronism.

manumissionism

theological position prioritising freedom over submission

Astronism has, since its inception, developed its own theological basis upon which it is predicated and it is this predication that various Astronist contributions to theology and metareligion have formed. One such element comes in the form of manumissionism which is directly contrasted with its opposite known as submissionism.

The Astronist theology has forever been formed on the notion of its distinction from all preceding theologies in the history of religious traditions. It is from this desire to earn divergence from other traditions that manumissionism has developed and has come to encapsulate and be synonymous with the theological position held by Astronism. Essentially, manumissionism that freedom rather than submission should be the central factor of Astronist theology.

Stepping from the Astronist penchant for the study of and fixation around the concept of freedom, especially having been influenced by Astronist ethics, the theological position of manumissionism manifests what can be called a freedom-focused theology in which the role of theology is for itself to seek freedom and for its adherents to feel freedom rather

than seeking submission from its followers through emotional instruments such as fear, sin, and traditional dichotomies such as heaven and hell. Therefore, the basis upon Astronist theology is founded is on the dichotomy between freedom and submission in which there exists no middleground; something is either seeking freedom or it is seeking submission. Here we see a mixture of the theology of Astronism with its ethical system which is not exactly unique for Astronism, but the dichotomy upon which both its ethical and theological systems are predicated can be said to hold a significant originality.

microdiscourse

type of discourse consisting of ten or fewer insentensations

As we have started to discuss the different types of discourses that make up the disquisitions of the Omnidoxy, we have yet another to introduce known as a microdiscourse. A microdiscourse is a discourse type which is characterised by having ten or fewer insentensations in total length and is therefore the shortest of all discourse types. Although not the most common discourse types of the Omnidoxy, microdiscourse are certainly important discourses in the expansion of the amount of discourses within each disquisition.

Astronistism / astronarianism

ideology promoting Astronist beliefs and spacism

Some religions and belief systems are concerned only with their own religious rites and the continuation of their practices without addressing wider political, social, or economic issues. The politicisation of religion is perhaps one of the most controversial topics in relation to religious study and although it has exist since organised religions and philosophies began, not all systems share the same level of political involvement. Some are simply not geared towards involving themselves in the political landscape, while others have arguably been formed so as to definitively make a political stance.

Astronism can be described as fairly politicised even from its outset due to its tradition of prophesying future revolutions such as the Astronomic Revolution and the Spacefaring Revolution which are both of a political, societal, and economic nature. Further to this, some facets of the terminology of Astronism are notably politicised, most notably that of Astronisation which involves societal change according to the principles of astrocentrism. The politicisation of Astronism is arguably a need rather than a desire for the organised philosophy which is driven by the nature of some of its beliefs and prophecies such as the Humanic Exploration of The Cosmos, the primary driver of which is political discourse.

That which is known as Astronarianism is the overarching ideology that encourages all Astronist ideologies and political philosophies and can be considered the ideological wing of Astronism. It emerged during the early years of The Founding of Astronism and was later codified into the Omnidoxy during The Year of Completion. It is primarily manifested by The Astronist Methodology, a segment of the Appendix of the Omnidoxy and is therefore not part of Core Omnidoxy. The placement of The Astronist Methodology into the omnidoxical appendix was perhaps a choice made to demonstrate separation between the core beliefs and ideas of Astronism and those of its ideological wing of Astronarianism.

Astronarianism is largely synonymous with the term spacism, or the space movement, although this is an erroneous synonymisation because Astronarianism encompasses a wider set of beliefs than those just held in spacism and the space movement. Having said this, the principal beliefs of Astronarianism are spearheaded by the spacism and although it is not described as a ideological orientation of the ideology, it exists in its own right as an ideology that emerged from the Astronarian ideological tradition.

Astronarianism is described according to ideological positions and ideological orientations, the latter of which hold greater importance than the former. There exists four main ideological orientations that were herein omnidoxically introduced and these include grandism, reorientationism, proactionism, and reactionism. There exists a myriad of ever-expanding ideological positions within Astronarianism that may fit into either of the orientations, but it is important to note that ideological positions are not classified as fully formed ideologies unlike ideological orientations and it is in this that we see the difference between the two. Astronarianism is also fairly described as the greatest contribution to Astronic philosophy from its branch of Astronist philosophy as distinguished from Astronist philosophy and demonstrated a bridge of thought and concurrence between the two subbranches of philosophy. Essentially, Astronarianism reflects the involvement of Astronism in the realm of ideology and political discourse so far as to say that all political language that is found in Astronism can be considered part of Astronarianism.

megadiscourse

type of discourse consisting of more than one thousand insentensations

We have already dedicated an entry to the smallest discourse type, the microdiscourse, but now has come to dedicated an entry to the megadiscourse type which is the largest of all discourse types in the Omnidoxy. A megadiscourse is characterised by consisting of more than one thousand insentensations and is the most rare of all the discourse types in the Omnidoxy.

motionalism

notion stating that a religion or philosophy should reshape according to societal changes

Of all the concepts and beliefs of Meta-Astronism, motionalism is arguably the most important of them all as well as the concept which singularly defines the character and fundamental nature of the Astronist identity. Motionalism can be best described as both a metaphilosophical and a metareligious notion stating that a religion or an organised philosophy should be fixated on the idea of progression, namely involving the continuous development and changing of central ideas to suit the era.

Furthermore, the addition of knowledge from scientific discovery should consist as a major factor in that change, and the principle that a belief system should serve and be moulded by the society as a balanced relationship between society and belief system is also central to motionalist thought.

At its core, motionalism is a major contributing factor to Meta-Astronism and is considered a prominent metareligious and metaphilosophical notion with relevancy not only to the way Astronism operates, but in how all religions operate. Motionalism represents the fundamental structure, nature, and identity of Astronism as an organised philosophy and can be considered the principal defining element of the Astronist concept of the Philosophical Spirit; it is fair to say that motionalism makes Astronism an organised philosophy rather than simply a religion.

multifaricity

to have a multitude of different names

One of the defining factors of the identity of Astronism from its very inception was the fact that it held a multifarious nature; as in, there have developed an enormous amount of names for Astronism, the etymologies of which often denote some important aspect of the organised philosophy. To organise this aspect of Astronism, the state, fact and nature of that which is known as mutlifaricity was developed so as to denote Astronism as comprising of a number of different names and forms of reference depending on who is giving the reference, where they are giving it from, which aspect of Astronism they wish to highlight, and who the audience is. In this way, we can understand as certainly a very conscious religion; conscious of its own identity and perception and certainly one that is geared towards its suitability to the adherent rather than the other way around which is arguably how religions have acted for millennia prior.

naturalism

school of eschatology opposing supernaturalism

We have already spoken somewhat of the complex eschatology of Astronism and now has come the time to address one of, if not the most prominent of the eschatological schools of Astronism; to which we refer is that of naturalism. Naturalism is an Astronist eschatological school of thought, the foundations of which drastically predate The Founding of Astronism. However, during the development of the Astronist eschatology, the term naturalism was used to denote the core belief of the denial of the supernatural elements attached the various religious eschatology which dramatically distinguished Astronism from all other religions.

The naturalist school of eschatology pervades throughout Astronism and is no doubt the most influential of the eschatological schools alongside transcensionism and transtellationism. Naturalism is characterised by its core belief that human existentiality and various eschatological questions such as 'what happens when we died' are answerable by means of natural causes, both terrestrial and cosmic. As a result of this belief, all that is remotely supernatural is denied any relevance by the naturalist school. Naturalism is perhaps fairly described as being a grounding force for Astronism to keep rational and logical in its outlook, particularly regarding eschatological issues. Naturalism, as a philosophy, has existed for at least a hundred prior to the emergence of Astronism, but it is from this strain of philosophical stances based on the centrality of natural phenomena that Astronism predicates itself upon.

Naturalism also propounds the notion that humanity is simply a product of nature without any divinely ascribed significance in The Cosmos. Other hallmarks of naturalistic eschatology are the denial of an afterlife, the denial of the existence of the soul, and the denial of the direct interaction between humans and The Divine (God). These beliefs have greatly influenced Astronism and have arguably defined many of its ideas thus demonstrating significant divergence from non-Astronist religions. Ultimately, the prevalence of naturalism is expected to fluctuate as newly developed schools of Astronist eschatology emerge alongside the traditional three, also collectively known as Omnidoxical Eschatology due to the origins of naturalism, transcensionism, and transtellationism being inside the Omnidoxy.

new concept development

department receiving new beliefs and terms

As a product of the pervading belief of motionism comes the introduction of what is known as New Concept Development, often abbreviated to NCD. NCD is a process and functionality of The Institution of The Philosophy of Astronism that is conducted

according to the principles of the Philosophical Spirit. Essentially, due to the motionalist belief that the progression and continual change and expansion of the beliefs of Astronism is ultimately healthy for the organised philosophy, the department of New Concept Development was erected within The Institution by omnidoxical decree.

New Concept Development involves the receiving, reviewing, and officialising of new beliefs, terms, and all manner of conceptuials to become part of what is known as the Astroxa which is the entire collectivity of conceptuials that form Astronism. Such decisions are made by a council of scholars and Institutional leaders. Unlike in other religions and philosophies, any person can submit their conceptual proposal which is derived from the Diversity of Thought policy of The Institution.

This makes the process of New Concept Development revolutionary for the way in which a religion or philosophy operates and grants the ability for laypeople to contribute to their own religion according to the suitability and measured popularity of their ideas. NCD is absolutely vital to the identity of Astronism as an organised philosophy, but it also does a lot to reduce the gap between the adherents of Astronism and The Institution as the proprietor. No more are the days in which the religious institution demonstrates the discourse and prescribes beliefs without consultation and input of the religion's adherents; as a result, NCD has become a hallmark of the studies into Meta-Astronism and is also considered as a champion and the ultimate manifestation of the principles of the Philosophical Spirit.

omnicreativity

Divine attribute denoting infinite sustainment and creation

The Attributes of Divinity are some of the most widely discussed topics within the theology of Astronism, particularly regarding the discipline of study of divinology which is essential akin to the study of theology in a mainstream non-Astronist context. The Attributes of Divinity are a collection of ideas and theories regarding what the characteristics of divinity are considered and believed to be. One of the most prominent of these attributes is known as omnicreativity.

The Astronist divinology affirms the omnicreativity of The Divine through the notion that The Divine is infinite in its nature and thus also infinite by its ability to create. Omnicreativity is the quality and ability of something to be able to create without end; to endlessly create or to create all things without limitation of creativity. Perhaps at first glance, the omnicreativeness of The Divine and the uncreatedness of The Universe are diametrically opposed to one another.

Astronist theology reconciles this by stating that the omnicreativity of The Divine is found its ability to infinite sustain an uncreatedness of The Universe. The Divine's omnicreativity

is further demonstrated through The Divine's ability to create an infinite abundance of isolated cosmoses which reside within The Universe and are considered collectively so as to form the concept of The Omniverse.

omnidoxicology

discipline dealing with the Omnidoxy

Every topic of significance within Astronism and the Astronic tradition is afforded its own discipline of study dedicated to the topic's discussion and academic exploration. One such discipline of study is omnidoxicology which of course addresses the Omnidoxy in its entirety and particularly concerns the subtopics of exegesis, omnidoxicological organisation, textual comparison, and criticism of the Omnidoxy among other. A person considered to be an expert in this field is known as an omnidoxicologist while less formal forms of study are referred to as omnidoxicological studies or omnidoxy studies.

Some may wonder of the purpose of omnidoxicology and its relevancy, but if we look at all other founding texts of religions and philosophies, we see a pattern emerge in which fields of study have concentrated on those particular texts affording a greater understanding of the text, most in an organisational and structural sense as well as in an interpretative and conceptual sense. Omnidoxicology succeeds in this endeavour for the context of the Omnidoxy and propels the founding text of Astronism to the status of it being worthy and significant enough to command its very own discipline of study. If our intention is to grasp a greater understanding of Astronism then we must study and achieve a greater understanding of the Omnidoxy as the necessary precursor for it is the Omnidoxy from which Astronism has emerged.

organised philosophy

synthesis of a religion and philosophy

The topic of the designation of Astronism is one which has caused a multitude of discussions since the inception of Astronism in the Omnidoxy. One of the most important topics that can be considered part of Meta-Astronism is the question of the designation of Astronism for understanding what Astronism is both of itself and in comparison to others is which labels can be attached or otherwise associated with Astronism. In fact, the designation of any belief system is of the utmost importance to discuss and establish as an integral part of the founding of that belief system.

In the case of Astronism, as is reflected by its multifarious nature, it also possesses a multi-designatory nature; this means that a multitude of designations have been associated with

Astronism with a variety of rationale for each of those designations since its inception. However, like in the context of appellatology, there are always the official and technical phrases and terms preferred by The Institution. In the context of Astronist designation, the official and technical or otherwise proper term is that of an organised philosophy. Considered a synthesis of both religion and philosophy, organised philosophy is the perfect phrase to describe as Astronism for it combines both elements of religion and philosophy together to form a single, new system.

The term organised philosophy originates in the Omnidoxy by the writings of Cometan and was originally understood to be a new designation of belief systems separate from both religions and philosophies. However, over time, and especially after the development of the identity of Astronism and its designatory place, it came to be understood as a synthesis of religion and philosophy and it is their combination which has therein formed a new designation, namely that of an organised philosophy.

The question of what constitutes an organised philosophy comprises much of the Astronist debate regarding metaphilosophy and metareligion. It is essentially held that an organised philosophy is a philosophy which has a systemised theology, a set of schools of eschatology, beliefs regarding a variety of other religious topics, practices, and some faith-based concepts and beliefs, but also supports rationality, debates based on logical justification of arguments as well as following the principles of the Philosophical Spirit. Another hallmark of an organised philosophy that distinguishes it from the traditional type of philosophy is that an organised philosophy is directly managed by an institution, specifically a philosophic institution.

pardiscourse

type of discourse consisting of between eleven and one-hundred insentensations

A pardiscourse of the Omnidoxy is the most common type of discourse found in the text and pertains to a discourse which is between eleven and one-hundred insentensations in total. Due to this, pardiscourses are longer than microdiscourses, yet remain shorter than both hyperdiscourses and megadiscourses, but they also make up large portions of disquisitions as many discourses fit into this category.

personal inspiration

revelation through ideation or indirect divine revelation

Perhaps one of the most controversial aspects of any religion or philosophy is not what the belief system believes and what it preaches, but the narrative of how it emerged in the

world. Each religion holds a tradition of stories that contribute to the overall narrative of how that religion came to be. These are called origin stories in the context of the Astronist philosophy of religion and all religions have them albeit some of them focus on a single person while others focus on a multitude and while some focus on supernatural events others focus on rational yet nevertheless preternatural abilities.

Astronism is no different in this regard. It is a belief system which holds a very clear origin story and what that continues to evolve, the initial phase of which was centred on Cometan as the founder of Astronism while in later phases, especially after the dissemination of Astronism, it is expected that many other individuals will become part of the overall narrative. According to the Astronist philosophy of religion, a religion's origin story is considered to end with the death or otherwise completion of the public life of its founder. A religion's founder and its origin story will be forever integral to one another for this is the nature of the founding of a religion.

Of course, the origin story of Astronism is centred on the personage of Cometan, but the origins of Astronism itself can be said to have emerged from what is termed as personal inspiration. The Omnidoxy is considered to be the first and last manifestation of personal inspiration for the Omnidoxy, due to its status as a rolling treatise, will encompass all future authorised instances of personal inspiration. Personal inspiration is a non-theistic form of revelation which is considered to have fuelled Cometan's preternatural ability to solely create the Omnidoxy during his adolescence. The main difference between personal inspiration revelation and other forms of revelation is that which is known as preternaturalism structuring the former and supernaturalism structuring the latter.

Preternaturalism is the belief in a narrative stating a person's beyond normal and natural abilities to do something, such as write an extensive treatise at a very young age such as in the case of Cometan and the Omnidoxy. Preternaturalism does not invoke any type of divine intervention narratives and neither does it rely on miracles or other supernatural phenomena for the origin story of a religion (for those are hallmarks of supernaturalism), but instead, preternaturalism presents a person's beyond natural abilities to achieve something. Naturalism (not to be confused with the Astronist eschatological school), preternaturalism and supernaturalism form the three main bases for revelation and the development of origin stories according to the Astronist philosophy of religion. It is the preternaturalist approach that is affirmed regarding the origins of Astronism which is considered to introduce a new form of revelation, exactly a middleground between natural ability and supernatural ability.

phenomena

astronomical events considered collectively

As The Cosmos is an ordered and structured place according to the Astronic cosmology, it makes sense that what exists within The Cosmos is also extensively categorised and two of the fundamental and most commonly referenced categories is that of progeny and of phenomena. These terms do the job of forming the two fundamental categorisations of entities residing in The Cosmos with progeny pertaining to celestial objects such as planets, stars, moons, galaxies etc. and phenomena pertaining to celestial events such as supernova, eclipses and galactic mergence.

Progeny are objects while phenomena are events and this is the fundamental organisation of The Cosmos. The use of these terms can be most found my concentratively in the context of cosmic philosophy during debates about the nature of The Cosmos and interactions between different parts of The Cosmos and it was from a need to categorise and form clarity regarding these different aspects of The Cosmos that these two terms emerged and became central functions of cosmic philosophical discussion thereafter.

philosophical spirit

typical attributes and modes of philosophy

Another of the most frequently used phrases in the context of Astronism and especially regarding the identity of Astronism and the designation of organised philosophy in general is that which is often capitalised and appellated as the Philosophical Spirit. Astronism has never been just a religion, but instead a synthesis of religion and philosophy. It has always been concerned with the status, identity, and role of philosophy and philosophers since its inception and it has always addressed topics from a distinctly philosophical perspective despite also possessing a variety of very clearly religious elements.

The Philosophical Spirit can be described as a set of attributes, qualities and modes that a philosophy is considered to possess, or that something described as 'philosophical' is considered to behaviour or be characterised. The reason for the attachment of the word 'spirit' to the phrase denotes that this concerns the ethos by which a philosophy is considered to act. The Philosophical Spirit is the overall set of principles and values attached to what it means to behave and think philosophically which forms a significant part to the Astronist contributions to metaphilosophy.

The Philosophical Spirit is considered to be the primary orienter of what it means to be an organised philosophy as it makes connections between philosophical thought and philosophical behaviour. One could argue that the principal hallmarks of the Philosophical Spirit or the ethos of philosophy are the logical justification of arguments, the respect and recognition of opposing opinions, the meaningful contribution to debates, as well as open-mindedness so as not to impose beliefs and ideas, but to instead use consistent rationality to convince others of what one believes and why. With the development of the values and

principles of the Philosophical Spirit has come a greater understanding of the distinctive characteristics that form philosophical action and thought.

poeticism

writing style associated with poetic writing

Not only are there different discourses and other structural elements to the Omnidoxy, but also a series of differences in writing style which demonstrated a sense of literary variety that would be the responsibility of omnidoxicologists to both identify, study, compare, and subsequently interpret. One of these writing styles is that which is known as poeticism and forms one of the three main omnidoxic writing styles.

Poeticism can be described as a metaphorical and distinctly poetic approach to writing the discourses of the Omnidoxy as is implied by its name. The poetical writings of Cometan in the Omnidoxy can arguably be found most commonly in the first disquisition of the Omnidoxy known as the Monodoxy. Out of the three writing styles, poeticism can be considered the least popularly utilised after both rhapsodicism and definitionalism.

progeny

astronomical objects considered collectively

An entry in this encyclopaedia has already been provided to one of the main categories of celestial entities in the context of cosmic philosophy; the entry of which I speak is phenomena, but for this entry it is the category of progeny that is focused upon. As phenomena collectively pertains to astronomical events, it contrasts with progeny which collectively pertains to astronomical objects, the study and contemplation of which forms the basis of cosmic philosophical enquiry.

Like Christ is the central aspect of Christianity, like the teachings of the Buddha are the central aspect of Buddhism, the progeny and the phenomena of The Cosmos are the central aspects of Astronism. The fundamentality of what progeny are to Astronists can be found in the extent to which they are referred to throughout discussions regarding the beliefs of Astronism. There is certain a distinct fundamental assumption of the centrality of progeny and phenomena in Astronist contemplation.

promulgation

After conducting thorough studies into the natures of both religions and philosophies, it is strikingly apparent that all belief systems have certain desires that are fulfilled by particular functions. One of such desires that is considered central and a commonality throughout all belief systems is the desire to be disseminated. A belief system's desire, by both its founder and its adherents, to be disseminated as far and wide as possible is rooted in the belief that the belief system is right or correct or the somehow superior way of being and thinking. It is from this desire for dissemination of the founded ideas and beliefs that missionary efforts emerged in different forms across the array of religions and philosophies of history.

In the particular context of Astronism, which certainly does share the desire for dissemination, the function that is considered to fulfil this desire is two-sided. One side of which is fulfilled by that which is called tiriton and the second side is fulfilled by that which is called promulgation. Promulgation is a pre-Astronist term for the dissemination of Astronism by modern means of advertising and marketing.

It is from this promulgative tradition that the Astronist attitudes towards the commercialisation of religion emerged and developed the approach that Astronism can be presented as a set of services with a wide array of associated products that both spread the message of Astronism as well as feed the financial requirements for Astronism to necessarily exist and hold the resources to expand in the modern largely capitalist world.

Not to be confused with tiriton, which involves more traditional means of religious dissemination, promulgation encapsulates the functions and methodologies propelling the commercialisation of Astronism. It is a form of dissemination that can be considered to introduce a new and modern form of and new attitude towards religion. This is one in which religion is in the hands of the consumer and who the promulgator must convince to indulge in the practices and beliefs of that religion which is dramatically different from the vast history of religious adherence found throughout history.

As in all things, there are a variety of different approaches and methodologies concerning promulgation and how it is believed to be best developed so as to protect the dignity of the belief system as well as how it can be utilised to fulfil its function as a dissemination technique. Furthermore, a unique and considerable collection of terminology has developed as part of Astronist promulgation which has been introduced as part of the Omnidoxy which further demonstrates the centrality of promulgative principles and how they remain integral to the identity of Astronism.

reascensionism

belief that philosophy should re-emerge as a pillar of society

It is a fair notion to postulate that with the founding of Astronism did come a considerable amount of contribution to metaphilosophy as the writings of the Omnidoxy remain particularly concerned with exploring what philosophy was, how it was applicable to the real world, its role in modern society, and most importantly, the circumstances of its future. It is quite unique that the Astronist founding text was arguably just as concerned with exploring and explaining philosophy and religion as it was with the introduction and explanation of Astronism.

This concern and consistent address of metaphilosophical concepts and beliefs were ultimately manifested in a single belief; that which became known as reascensionism. Reascensionist thought emerged during The Founding of Astronism as a result of the extensive metaphilosophical musings found in the Omnidoxy with its fundamental motivator being that a distinct lack of role and identity had been placed on philosophy in the modern era and that philosophy as a societal function was being ignored and undermined. It was from this belief that the notion of a problem emerged in the omnidoxical writings regarding metaphilosophy. It would soon become apparent that philosophy it was in need of some form of rejuvenation. It can be said that this motivation for the reinvention of philosophy was born out of a distinctive love of philosophy that has and will stay with Astronism perhaps as best and most prominently encapsulated by its designation as an organised philosophy.

Reascensionism is a belief orientation that was granted the rarity of being classified as one of The Seven Tenets of Association of Astronism, even within which it was granted a place of prominent for it was second only to the belief and worldview of Astronism known as cosmocentricity. This distinct prominence that was extended to reascensionism is striking for it demonstrated the fundamentality of the reinvention of philosophy and its importance to Astronism, particularly the re-emergence of philosophy in modern society.

Reascensionism essentially advocated for the notion that philosophy should make a return to prominence in society by becoming a societal pillar such as politics, government, religion, materialism, culture and other assumed modern social institutions. Reascensionists would come to see the obsolete state of philosophy as being driven by its professionalisation in the 20th century during which time it was almost completely removed from social life and reserved only for the most experienced of scholars and professors.

The reascensionist movement heralds the re-emergence of philosophy to become a central part of people's lives whereby people know and understand the importance of philosophy as well as the important and improving qualities that its societal centralisation could herald. Finally, we must not forget the integrality of Astronist principles with those of reascensionist principles for implementing reascensionism remains high on the Astronist agenda.

reinvigorationism

belief that space exploration must re-emerge as a cultural endeavour

Just as a significant portion of Astronist principles and beliefs regard the future and existentiality of philosophy as well as the role and identity of philosophers, but another significant portion of Astronism is taken up by its beliefs regarding space exploration. These arguably take up an even larger proportion than those regarding philosophy, especially due to the cosmocentricity of Astronism. The previous entry in this encyclopaedia focused on the Astronist notion of the re-emergence philosophy as societal pillar and sometime during the era of The Founding of Astronism, this same principle of re-emergence was applied to the context of space exploration hence forming the belief orientation of reinvigorationism.

Reinvigorationism states that space exploration should be reinvented and will subsequently re-emerge as both a religious and sociocultural endeavour rather than simply an economic and political endeavour as it has developed in the public consciousness since the Space Race during the mid-20th century. Reinvigorationism really does encapsulate a core Astronist belief and can be considered as a subsequence and manifestation of the cosmocentric worldview. As distinct from cosmocentrism itself, reinvigorationism focuses in on particular aspects including the popularisation of mass public interest and affinity for astronomy as well as humanity's interaction with space.

This re-emphasis on space exploration as a cultural and religious endeavour as the two main factors propelling the process forward which has consistently been pronounced throughout all Astronist discourse. As part of Astronist prophecy and political discourse, this can be considered as demonstrated through the Astronomic Revolution. Reinvigorationist thought is ultimately structured upon the principle that not only should space exploration take a central role in human life, society and spirituality, but that the reasons for space exploration should be reoriented towards culture and religion rather than on economy and politics. Reinvigorationism sits alongside a collection of other beliefs and theories regarding the role of the endeavour of space exploration in society which can be collectively referred to as astroculturalism.

retronism

movement promoting pre-Cometanic forms of cosmocentric art

Another belief orientation that can now be considered more of a movement that encompasses a collection of belief orientations is that which is known as retronism and can be categorised as part of the wider astrocultural sphere and set of beliefs. Retronism is

distinct from other belief orientations within astroculturalism as it is completely focused on the promotion of pre-Cometanic and/or pre-Astronist forms of cosmocentric art, particularly those from the Space Race as well as those of historical and prehistorical origin.

Retronism encompasses a movement of artistic expression that harkens back to the pre-Cometanic eras of the Space Race, the various examples of astronomically-themed art throughout the two millennia following the birth of Christ, in addition to the prehistorical and primitive forms of astronomical art. Particular instances and examples of these are known as retrons. Essentially, retronism is the manifestation of the commemoration of pre-Cometanic and pre-Astronist forms of art and the cosmocentric worldview and philosophy. Retronism can be considered as possessing a distinct respect for the forms of cosmocentric thinking prior to The Founding of Astronism and from this notion we can see how retronist thought channels into other facets of astroculturalism, namely that of reinvigorationism.

rhapsodicism

writing style based on deep exploration of complex philosophical concepts

Alongside the writings styles of poeticism and definitionism, rhapsodicism is the omnidoxical writing style is based on deeply explorative writing regarding complex philosophical conceptals. Characterised by its distinct intensity as a writing style, rhapsodicism is closely associated with the Cometanic experiences of indrucies. When it comes to the elaborate explanation of deeply philosophical concepts, rhapsodicism is the choice of writing style.

rubral

title of a discourse

The tradition of the structure of the Omnidoxy is steeped in heavy organisation and categorisation as has been demonstrated by the development of discourse types and the system of indexation applied to the entirety of the Astronist founding text. Another of the demonstrations of this culture of persistent organisation is the development of rubrals for each of the discourses of the Omnidoxy. Rubrals are essentially unique titles which are ascribed to each of the omnidoxical discourses and are considered to reflect the contents within the discourse to which they are attached.

Rubrals are an important structural element for the Omnidoxy as they allow us to navigate each of the discourses of the text and hold the function of allowing readers to categorise

discourses according to theme and contents rather than simply their chronological placement in the Omnidoxy. Rubrals provide a sense of identity for each discourse and therefore they will be integral in the marketing of discourses for they also provide discourses with individuality.

sentientism

belief in life and civilisations on other planets

Throughout this encyclopaedia, each of The Seven Tenets of Association have been afforded their own entries for they are certainly worthy of receiving such due to their place at the core of the Astronist belief system. This entry is dedicated to sentientism which is the belief orientation holding that there exists an abundance of all forms of life in The Cosmos and is known outside of the context of Astronism and in pre-Astronist contexts as cosmic pluralism.

Sentientism is one of the most commonly referred to beliefs of Astronism and typically ignites one of the most popular debates that is expected to be synonymous with Astronist discussions. Sentientism is considered a core belief of Astronism, often appellated as The Distinguisher denoting sentientism's power to distinguish between an Astronist and a non-Astronist. A believer of sentientism is often automatically considered to be a follower of Astronism or at least Astronist-like in leaning. Sentientism extends beyond the relative simplicity of cosmic pluralism and states belief in the existence of a variety of levels of civilisations created by sentient beings thus demonstrating the distinction between the two and the transcendence of sentientism beyond that of the pre-Astronist belief of cosmic pluralism.

space ethics

branch of ethics concerned with space exploration

In Astronism, all aspects of space exploration are considered and have so been explored as part of the writings of the Omnidoxy and one of the most prominent of these aspects is that which is known as space ethics. Space ethics, also known as astroethics, can be considered as the branch of ethics dealing with all concerns involve outer space or space exploration and can be considered one of the most distinctive contributions made by the founding of Astronism to the wider study of ethics.

Space ethics is principally concerned with all human interaction with space itself as well as astronomical progeny (objects) and phenomena (events) in addition to the interactions between humans in the environment of space or on an astronomical object other than The

Earth. Space ethics fundamentally poses the question of whether it can be considered ethical for humans to explore space, civilise space, colonise it, and otherwise change the environment of space.

Space ethics incorporates all other pre-Astronist aspects of ethics into its branch of study with the application of ideologies such as environmentalism being a commonplace occurrence in the context of the study of the ethics of human space exploration. According to Astronists, space ethics is a branch of ethics of distinctly Astronist concern and as a branch of ethics was formally organised from within the emergence of cosmic philosophy and so can be considered as derived from Astronist ethics, Astronist philosophy and wider Astronic philosophy. With a multitude of dimensions involved in its study from the political to the economic to the environmental to the sociocultural, space ethics is a branch of ethics that remains firmly Astronistic in its origins, but is nevertheless proclaimed from the Astronist perspective that it should be the concern of all humanity given the impending Astronomic and Spacefaring revolutions.

spacism

ideology fixated on space exploration and societal Astronisation

The extent to which Astronism steps into the political domain has perhaps already been alluded to in our entry on Astronarianism, the ideological wing of Astronism. For this entry, however, the focus shall turn to a particular movement within Astronarianism that has and will continue to become synonymous with the term Astronarianism itself; the term to which we refer is that of spacism.

Considered higher in categorisation than a belief orientation yet still tracing its origins back to Astronarianism, spacism is perhaps best described as an ideology or a movement, the second of which is perhaps most fitting as spacism is also interchangeably known as the space movement. Spacism is the principal form and branch of Astronarianism that arguably sets the theme for the entire Astronist approach to politics and economics having been predicated on the centrality of outer space as is the entirety of Astronism itself with its cosmocentric worldview orientation.

Spacism, although not itself a belief orientation, but rather encompassing a set of belief orientations, is essentially characterised by its fixation on the topic of outer space and humanity's exploration of space the absolute integrality of these in both the future political and economic sphere on a global level. The spacist movement, as it may sometimes be referred to, advocates for the political and economic emphasis on human exploration of space. It encompasses a vast array of concepts, rationalities and methods inspired by Astronist beliefs for the practical exploration of space. Spacism can be considered as Astronism's primary endeavour into the political realm as a practical function for the initiation of the Humanic Exploration of The Cosmos.

Spacism is expected to develop further as its relevance to the world is predicted to grow tenfold from its outset within the Omnidoxy. Perhaps this further development of spacism will lead to its further distancing from its roots within Astronarianism, perhaps establishing itself as an ideology in and of itself to which Astronarianism holds a particular viewpoint and approach on.

subdiscipline of study

type of discipline categorised within a wider discipline

The development of disciplines of study has allowed us to categorise the vast array of fields of study within Astronic philosophy, but with the organisation of disciplines of study must also come the organisation of those very disciplines of study which means that some need to be placed into subdisciplines of study. A subdiscipline of study is a subject that has been further categorised within a discipline of study due to the decision that it holds enough distinctive aspects to its study that it deserves particular expertise yet its overall theme still remains encompassed by a discipline of study.

subordinationism

cosmic nature is subordinate to universal and divine nature

The influence of the Astronic cosmology on the entirety of Astronism has been referenced throughout our entries and it is from the Astronic cosmology that a myriad of belief orientations have emerged that have contributed to the overall belief structure of Astronism. One such belief orientation is that which is referred to as subordinationism.

The Astronic cosmology is such a way that it is predicated upon a hierarchy of existential categories and within those existential categories that exists a further hierarchy and it is this to which subordinationism pertains. The Divine, The Universe and The Cosmos each hold different natures and an understanding of the differences between these natures serves a basis to the understanding of why certain beliefs in Astronism exist. Perhaps the most well known difference is that cosmic nature is limited while universal and divine natures are infinite; of course, this is the notion from which the belief of limitationism emerged.

Subordinationism, however, relates to another notion regarding the difference between cosmic nature and that of universal and divine nature and essentially states that the former is subordinate to both of the latter. Therefore, all that exists cosmically does so in subordination to all that exists universally and divinely. Principally, it holds that all

existence is subordinate to The Divine either as its creator (in the case of cosmic nature), or its sustainer (in the case of universal nature).

subsensation

a subset of an insensation

In the organisation of the Omnidoxy and in the organisation of the study of Astronism itself, there have emerged a multitude of subsets that allow us to categorise elements further so as to demonstrate difference and encapsulation. Subsensations are examples of this tradition of subsetting in Astronism and can be described as a type of insensation that is indexed in a way that it is encompassed by an insensation. Each subsensation is indexed by the use of alphabetised letters placed after the insensation number to indicate that it exists within or in relation to a full insensation and is most utilised as part of a list.

surceasion

a break in a discourse

Throughout this particular encyclopaedia, there has been a particular emphasis placed on omnidoxical features and with this entry, we will continue in this tradition with the introduction of those which are known as surceasions. A surceasion is a break that is visibly found in a discourse of an omnidoxical disquisition that is characterised by the placement of a hyphen between two insensations either to denote a change of topic or to denote a discourse extension.

Surceasions occur for either of those two reasons and can be located as many times as possible throughout a discourse. They do not demonstrate any difference to the indexation system, but they do signal that a new topic is taking form within the discourse. Surceasions are perhaps most noticeably used when little has been written of as part of a particular discourse portion in which case multiple surceasions may be found on a single page or across a couple of pages.

the betwixity

a lesser existence of the Astronic cosmology

Perhaps the most oddly named of all the existences of the Astronic cosmology, The Betwixity is derived from the word 'betwixt' which is an archaic term denoting between something. Of course, in the context of the Astronic cosmology this pertains to distances between celestial entities; in other words, The Betwixity is space itself.

Categorised as a lesser existences in the cosmology, The Betwixity arguably holds less spiritual or theological significance than other existences, especially in comparison to The Chaos, The Mytra, and even some of the subservient existences like The Metakosmia and The Omniverse. In comparison, the extent to which The Betwixity is referred to is fairly minimal, however, its place as one of the lesser existences remains secured by the integrality of what it pertains to.

Without the space between progeny and phenomena, The Cosmos would not be as it exists and perhaps another reason for the distinct lack of mention of The Betwixity by name in comparison to other cosmological existences is that the words space, distance, area, and even cosmos are used to denote the same subject to which The Betwixity pertains.

Having said all that, there are some interesting aspects of Astronist cosmological thought that a coherent understanding of The Betwixity is integral to the contemplation of. One such example is regarding the existence of The Metakosmia itself poised at the very extreme of The Betwixity while another example is the contemplate and possible wonderment of the enormity of distances in The Cosmos. Yet another example of an area of contemplation in cosmic philosophy that is closely connected with the study of The Betwixity is that of voids in The Cosmos which demonstrate extraordinarily large distances, even by cosmic standards, and in which very little resides in comparison to other areas in The Cosmos.

the chaos

a lesser existence of the Astronic cosmology

As is demonstrated by the cosmocentric worldview of Astronism, the essential existence known as The Cosmos takes a central place within Astronist belief and contemplation, but whether The Cosmos exists so does its lesser existential counterpart known as The Chaos. The Chaos is perhaps the most mysterious of all the concepts and beliefs within Astronism, and especially within the Astronic cosmology for it denotes an existence that is both unknown and unknowable, one that could hold answers to the questions that have puzzled humanity and will continue to do so, and one that is representative of not all that is evil or bad (as one who is still stuck in a good versus evil dichotomy may assume), but instead, is a representative of all disorder, unknownness, and is of course the antithesis to The Cosmos.

Classified as one of the three lesser existences of the Astronic cosmology, The Chaos is perhaps best understood as being a collection of all the instances of disorder, irregularity, volatility and unknownness (from the perspective of humanity) that are present in The Cosmos. The Chaos, just like other Astronic existences such as The Cosmos and The Universe, denotes a particular nature of something or a set of characteristics attached to all that can be considered as being chaotic.

Due to the unknown extent of The Chaos and its influence over The Cosmos, a complete derivability of The Chaos is considered to be impossible. We cannot understand The Chaos to be a physical entity, but instead a metaphysical energy or perhaps even just a conceptuality that translates as a collectivity of entities whose nature cannot be accurately said to be cosmic by their characteristics and behaviour. Due to this underivable aspect of The Chaos, its relationship to The Universe and The Divine is unknowable and also the extent to which it holds influence over other existences and occurrences is also unknowable which further contributes to its elusive and mysterious persona.

Some of the most well-known progeny and phenomena which exist within The Cosmos that are considered to be of a chaotic nature are asteroids and meteors, but principally, it is black holes which are considered to be the most prominent forms of chaosity (or chaotic nature) in The Cosmos. One of the most intriguing and rare of abilities that is considered to be possessed by The Chaos according to Astronist belief is that which is known as transcosmisation.

Transcosmisation is the ability for something to travel between the cosmoses in The Universe which, of course, instantly defies the Cosmic Limitation Principle and therefore reaffirms that The Chaos is neither of a cosmic nature and nor is it controlled by the laws of The Cosmos. Whether The Chaos is infinite therefore is another interesting aspect of chaotic nature to propose and discuss, but also are questions regarding the universality and divinity of The Chaos. All of these questions and more are considered in the branch of Astronic cosmology known as chaology which is the study and contemplation of The Chaos.

the compilation

inclusion of pre-omnidoxical works into the Omnidoxy

Throughout the five year process in which the initial Cometanic version of the Omnidoxy was created and authored, a multitude of changes occurred regarding what would and would not be included in the text. These types of deliberations have occurred throughout history during all the periods in which religious texts have developed and in this sense, the Omnidoxy is no different. One of such instances in which a major change has occurred during the creation of the Omnidoxy is that which is appellated as The Compilation.

The Compilation is the idea and instance in which it was decided that The Astronist Methodology and other pre-omnidoxical works would become part of what was then named The Grand Centrality instead of them being published separately from what would become known as the Omnidoxo. Two orientations are formed in relation to this and closely related topics include compilationism and non-compilationism, especially by opening up discussions regarding the consequences of the proximation of Astronism with Astronarianism.

the cosmos

an essential existence of the Astronic cosmology

No appellation is perhaps more frequently used in the context of the discussion of Astronism than The Cosmos. Grasping a clear and personal understanding and connection with The Cosmos is the centrality of what it means to study and be adhered to Astronism as it forms the basis of the majority of concepts within Astronism due to its integrality with the Astronist worldview of cosmocentrism. Despite the appellation's centrality in Astronism, there is an issue in mainstream terminology due to the notion that that which is referred to as The Cosmos in Astronism is most commonly referred to as the universe in mainstream public discourse while that which is referred to as The Universe is of course something entirely different in the Astronist context.

Emerging from the Astronic cosmology, The Cosmos is the realm of existence in which humanity and all the progeny, phenomena, and space that was created during the event of The Big Bang reside. Just like other existences that came from the Astronic cosmology such as The Chaos and The Universe, The Cosmos pertains to its own nature, known as cosmic nature which is automatically prescribed to all that which exists within The Cosmos (with exception of chaotic entities of course). It is this cosmic nature that forms an integral and significant belief orientation that has arguably shaped the entire Astronist understanding of reality; this is known as limitationism, or the Cosmic Limitation Principle.

Existing in subordination to The Universe and The Divine, Astronism considers The Cosmos to be both limited in its nature and transient while it is outside The Cosmos and each of the other cosmoses that infiniteness and permanence resides which is represented by the existence known as The Universe. Additionally, it is believed in Astronism that exists an infinite amount of cosmoses in The Universe which, when related to collectively, are known as The Omniverse which is itself classified as a subservient existence in the Astronic cosmology.

The Cosmos is the cosmos in which we reside and although the physical characteristics of other cosmoses forming The Omniverse in The Universe may not be the same as the physical characteristics inside The Cosmos in which we reside, every cosmos is considered to be bound by cosmic nature and is therefore both limited and transient. Forming these

cosmoses were an infinite amount of Big Bangs that will continue to occur infinitely in The Universe once the chronology of a particular cosmos comes to an end. The Cosmos, in contrast with The Chaos, represents order, pattern, structure, and substance which are hallmarks of cosmic nature and it is from this clash of natures that the Cosmos-Chaos Dichotomy has emerged.

the divine

God in Astronism; an essential existence in the Astronic cosmology

Every system of thought whether it be classified as a religion, a philosophy or otherwise has contemplated the notion of the external creation of our reality by some higher being beyond its creations in all capacities. Astronism follows this tradition whole-heartedly and has developed a multitude of different theological positions, however, one of which has become endorsed by The Institution and is thus the theological orientation of Institutional Astronism. That which is appellated as The Divine is the principal conception of the concept of God in the context of Astronism and is derived from the Astronic cosmology.

The Divine, in addition to being a conception of God, is also classified as an essential existence, but may more accurately be referred as *the* essential existence for it is the Astronist belief that it is from The Divine that all else originates or is sustained by. The conception of God in Astronism is fairly unique from all other conceptions of God from in other traditions of theology, namely due to the Astronist combination of panentheism and what originates in Astronism as depadotheism, or depadism for short.

Depadotheism states that The Divine does not exhibit or should not be represented or understood as holding human emotions such as love, mercy, and wrath, but is instead more comparable to the merciless and neutrality of the processes of nature. The second aspect of the Astronist conception of God is predicated upon panentheism and it is Astronist panentheism that understands The Divine to hold an attribute interpenetrability. This means that The Divine holds the ability to interpenetrate and flow between The Universe and all of the cosmoses making up The Omniverse whilst also still remaining existent outside of all the cosmoses.

By the belief of subordinationism, The Universe and The Cosmos exist in subordination to that of The Divine with the former being sustained (not created) by The Divine in a state of dependence and the latter being both created and sustained by The Divine in a state of codependence. The foremost defining aspects of divine nature, or divinity, particularly from that of universal nature, is the notion that The Divine is completely and utterly in a state of independence. Essentially, The Divine's existence is not dependent upon another other existence. The Divine is considered to not have created The Universe but is a sustainer of it due to the infinite nature of The Universe. The Divine is considered to be the creator of every Cosmos in The Universe to form The Omniverse.

theistic naturalism

theological position denying supernaturalism yet affirming existence of God

The motional nature of Astronism has resulted in a multitude of different consequences on the way in which Astronism functions as an organised philosophy. One such way is demonstrated in how the dominance of certain beliefs changes across different periods of time in different regions dependent upon the political, cultural, and economic circumstances of that time period and region. In comparative religion, this is perhaps one definite way in which Astronism differs from other religions because in Christianity, for example, the core tenets of faith have not changed for two thousand years and it is largely the same for Buddhism, Islam, and Judaism among others. The way in their beliefs are practiced and expressed have certainly changed, but what they believe at the core of each religion hasn't and the majority of their theological positions have stayed the same, arguably to the degree at which they have remained theological and philosophically stagnant.

In Astronism, the same does not apply for the organised philosophy is structured in such a way that certain belief orientations of whichever subject will see fluctuations in their population throughout the history of Astronism. This is the intended way for Astronism to exist and for its beliefs and ideas to flow which further distinguishes itself as an organised philosophy rather either just a religion or a philosophy. When it comes to the eschatology of Astronism, this motionalism is perhaps most clearly demonstrated for there exists a myriad of belief orientations and although some exist with omnidoxical and Institutional endorsement and support, and even Cometanic support, their popularities with the wider Astrosa are considered to heighten and wane as with all things in their natural forms.

That which is known as theistic naturalism is classified as an eschatological position within the naturalist eschatological school within Astronism and is the pre-eminent position of eschatology and theology undertaken and endorsed by Institutional Astronism which provides it with a superiority over other positions, but this superiority and emphasis most likely will not last forever as other positions grow in popularity, come to the forefront of discussion, and are eventually endorsed and emphasised by The Institution. This Institutional function known as Institutional endorsement remains an important role for The Institution as it highlights what is and what isn't considered part of the Institutional Astronism denomination and therefore demonstrates the beliefs which are, at the current time, considered to be of particular popularity or prominence. This function itself is of course, like all else in Astronism, motional by its nature and operation.

Returning to theistic naturalism, this position holds the particular view in which there is a denial of the existence of an afterlife and there is a denial of the interactionality between humanity and The Divine (God) due to this invoking aspects of supernaturalism. Despite

the distinct lack of supernaturalism in this belief as it is part of the naturalist school, there still remains a distinct affirmation of the existence, interpenetrativity, and omnificity of The Divine as well as a reconfirmation of all the Attributes of Divinity, of which interpenetrativity (also known as interpenetrability) and omnificity form a significant aspect of.

the metagalaxy

a subservient existence of the Astronic cosmology

In the Astronic cosmology, we will now be aware that there exists three categories of existences known as the essential, the lesser, and the subservient and each of these existential categories holds three existences, or realms which are referred to either explicitly or implicitly throughout Astronist and wider Astronic discussions. One existence in the subservient existences category is that which is appellated as The Metagalaxy.

The Metagalaxy can be described as spaces, progeny, and phenomena in The Cosmos beyond the bounds of individual galaxies, namely regarding philosophical contemplations of filaments, superclusters, hyperclusters, quasars, and other cosmical superstructures. The Metagalaxy is therefore a collective term referencing the entirety of superstructures in The Cosmos beyond those of individual galaxies or those progeny and phenomena that exist or occur within galaxies.

the metakosmia

a subservient existence of the Astronic cosmology

Just as we have dedicated an encyclopaedic entry to The Metagalaxy, it is only prudent to dedicate one that which is known as The Metakosmia which, along with lesser existence of The Chaos, can debatably be described as one of the most mysterious and philosophically mouthwatering existences to contemplate due to the myriad of possibilities involved with its particular subject. The Metakosmia can be best understood as pertaining to the area or state of existence that is along the cosmic periphery which is the boundary between The Cosmos (or any other cosmos) and the existence known as The Universe. Essentially, it distinguishes the cosmic periphery and affirms that it exists neither as part of The Cosmos nor The Universe but holds its own existentiality.

The cosmic periphery is the border between two opposite natures; the cosmic nature and the universal nature; the former is of finiteness and the latter is of infiniteness. It is beyond the cosmic periphery that The Universe begins but it is believed that reaching The Metakosmia is impossible for any cosmic entity or being. The Metakosmia is the point at

which any cosmos ends and where The Universe therein begins, but the concept of when a being or entity or some other existence is able to transfer this boundary is known as transcosmisation because that entity has managed to escape The Cosmos and has therefore defied the Cosmic Limitation Principle of cosmic inescapability, the only existences believed to hold the ability to do so are The Chaos and The Divine.

the mytra

a lesser existence of the Astronic cosmology

The third and final of the lesser existences of the Astronic cosmology is that which is peculiarly appellated as The Mytra. In dialogue, it is often quoted between The Chaos and The Betwixity, its counterpart lesser existences, which may be collectively known as The Lessers. As distinct from some of the other existences of the Astronic cosmology, The Mytra is entirely spiritual and conceptual rather than material and physical as The Cosmos, The Metagalaxy, The Omniverse and others are comparable to the latter two qualities.

To define what The Mytra is to refer to a person's individual, unique, and consequential relationship with The Cosmos and involves physical, emotional, spiritual, mental, and intellectual dimensions. The state of a person's mytra is considered to be instrumental to the extent to which that person has achieved cosmosis and it is by this notion that we understand The Mytra to not only be significant in the Astronic cosmology, but to also be significant in the mystical tradition of Astronism. Arguably, it was the concept of The Mytra that founded Astronist mysticism and provided the foundations for the development of the essential belief in cosmosis.

Without The Mytra, it is perhaps arguable that the development of the belief structure of Astronism and especially its involvement in the fields of study of eschatology, soteriology, and in wider theology for that matter. However, in comparison to the lengthy discussions on the nature and interactions of other existences of the Astronic cosmology and their translation into and interpretation by the Astronist viewpoint, The Mytra saw considerably less attention than its counterparts. Despite this, The Mytra is more than likely to receive a much greater focus in a post-omnidoxical setting due, perhaps, to the enormous centrality that has come to be placed on cosmosis towards the end of the creation of the Omnidoxy, especially in comparison to its beginning during which time cosmosis was barely mentioned.

the omniverse

a subservient existence of the Astronic cosmology

One of the realms of existence that is categorised as subservient in order to denote its lack of centrality in comparison to the The Essentials and The Lessers, that which became known as The Omniverse is expected to draw a much greater attention post-omnidoxically due to studies regarding its interactionality with The Universe. Originally described simply as a collective term for the infinite amount of cosmoses in The Universe, The Omniverse, especially towards the end of the Omnidoxy, has come to be understood as the go-between for The Cosmos and The Universe.

It is important to note that each cosmos in The Universe is considered limited and transient while both the frequency and abundance of cosmoses in The Universe infinite. This is because cosmoses are subject to Universal laws while all that exists within cosmoses are subject to Cosmic laws. The Omniverse highlights further distinction between Universal nature and Cosmic nature whilst also demonstrating the importance of showing the interaction between the two natures by reconfirming the infinite abundance of cosmoses in The Universe.

the seven tenets of association

seven core beliefs of Astronism

Every religion has a myriad of beliefs and concepts that form what its belief structure and system is but with all these beliefs circling the metaphorical core of what the religion truly is, the importance of each belief can become obscured. For this reason, religions have had to create hierarchies or categories into which some of their most central beliefs are placed in order to reaffirm their importance. In any religion or philosophy, beliefs hold certain degrees of importance to the core message of that thought system.

Obviously, the core message must be agreed upon and the beliefs that most resonate with that core message are thereafter emphasised. In this regard, Astronism is no different for from its inception, there have been seven core ideas and beliefs that can be considered central to Astronism and the category in which these beliefs are placed is known as The Seven Tenets of Association.

The Seven Tenets of Association is a collectivity of seven beliefs that are considered to hold particular prominence in the formation of the foundations of Astronist thought and namely including the following: cosmocentrism, sentientism, the Humanic Exploration of The Cosmos, intracosmism, reascensionism, cosmic devotion, and enknowledgement. The origins of The Seven Tenets of Association can be found in the Monodoxy of the Omnidoxy and one of the main criticisms of the categorisation is that these beliefs were of particular importance to Cometan at the time of writing that particular disquisition. For this reason, it may be suggested that some beliefs should be replaced with others that

gained more prominence during the latter disquisitions of the Omnidoxo and in a post-omnidoxical setting.

The Institutional response to this criticism is that further categorisations can be made which focus on particular aspects of Astronism which will effectively create core beliefs of different parts of Astronism. Ultimately, The Institution reaffirms that The Seven Tenets of Association still capture the overall Astronist worldview and perception that forms the foundation of Astronism itself. However, swapping out certain beliefs from The Seven Tenets of Association for others is not out of the question and will be welcomed by The Institution if the swap is deemed appropriate. Of course, The Seven Tenets of Association only encompasses a fraction of the plethora of beliefs associated with Astronism, however, they serve a foundational purpose and introduce the general theme and the predisposition of Astronist thought which make The Seven Tenets of Association a useful educative tool for introducing what it means to follow Astronism or to think as an Astronist does.

the universe

an essential existence of the Astronic cosmology

Alongside the two most referenced appellations in Astronism being The Cosmos and The Divine is that which is referred to and appellated as The Universe. An essential existence of the omnidoxically-introduced Astronic cosmology, The Universe has caused issues from its inception, firstly regarding the appellation itself. What is referred to as the universe in mainstream non-Astronist discourse is completely different from what is appellated as The Universe in an Astronist context. The use of capitalisation remains essential in distinguishing the difference between these two similarly named concepts or existences as capitalisation is an essential requirement for all appellations in Astronic philosophy to distinguish them from other meanings; not a unique practice, but one that holds particular importance in Astronism.

The Universe can be understood as the realm of existence beyond The Cosmos and every other of the infinite amount of cosmoses existing within The Universe. It is beyond the periphery of every Cosmos that The Universe is considered to exist. Universal nature is fundamentally divergent from cosmic nature in that it remains an infinite and permanent. Therefore, unlike in popular mainstream discourse, The Universe, as a term, is not equated with the reality or the existence in which we reside, but is instead a completely different, unattainable, and unknowable existence between all that is cosmic. In fact, with the development of this cosmology, there has also developed alongside it the notion of Universal nature which is consistently distinguished from that of Cosmic nature and it is these which form a significant part not only to Astronist cosmology, but to the theology, philosophy, and the entire worldview of Astronism itself.

Earlier in this entry, we spoke of the issues caused by The Universe and its role in the Astronic cosmology and this was not an exaggeration. In fact, The Universe birthed the problem of its own createdness and subsequently caused issues regarding its relationship to The Divine. Universology, or the study of The Universe, is expected to be a hotly debated topic post-omnidoxically due to the fact that not only is the very concept of The Universe controversial, but that its conceptualisation brings with it so many other possibilities for its own nature, but also its interaction with and relationship to other existences of the Astronic cosmology that it remains such an integral aspect of Astronist cosmological belief and thought.

tirition

dissemination of Astronism by non-advertising means

The intention of any belief system or any writer or any person with a passion for the that matter is to have their expressions heard by the world no matter what their ideas and creative enthusiasms are. In this sense, the nature of religions and philosophies are no different as they too hold not only the desire to be disseminated, but the essential requirement that for their ideas and perceptions of the world to develop to reach higher states of understanding, they need firstly to be share with the world and to allow humanity to perceive and interpret them.

Just as Christianity has developed a tradition of missionaries and has even formed its own discipline of study known as missiology to study the works of missionaries, Astronism introduced its own form of dissemination known as tirition, as studied in the discipline of study known as tiritology. In fact, in Astronism, there are two forms of dissemination with tirition being only the first of these with the second known as promulgation. To distinguish the two, tirition is classified as the dissemination of Astronism through traditional religious and non-advertising or commercial means while promulgation is the dissemination through advertising and commercial practices and methods. In this, we see a stark difference between the two, but we are also able to understand how Astronism, from its inception, has held a completely different approach to the topic of religious dissemination than pre-Astronist religions and philosophies.

Astronism sees not only the traditional religious methods of dissemination as utilisable in its efforts to disseminate the Astronist way, but also takes no issue with utilising the channels and platforms of the modern commercial world in the same endeavour. This was such a radically different way of perceiving religious dissemination and perhaps quickly lead to the Astronist embracement of the commercialisation of religion and philosophy and Cometan's role as an exponent of running Astronism according to an organisation which is of course materialised in the form of The Institution of The Philosophy of Astronism.

transcension

human spiritual, mental, intellectual, and physical advancement through space exploration

All fully-formed religions and philosophies hold goals or ambitions, either for individuals, for humanity as a whole, or for an organisation in particular. Whatever the goal may be, it tends to lean into the theological and philosophical foundations of that religion's belief system and provides purpose and meaning to what is to be believed, especially regarding the future. For Astronism, the goal is for humanity which in turn forsakes the individual and any particular organisation and the goal is that which is referred to as transcension.

In what is known as futurological Astronism, or Astronist futurology, there is a collection of beliefs regarding the future of humanity with the prominent of these being the Humanic Exploration of The Cosmos as the inevitable centrality of humanity's future. The Humanic Exploration of The Cosmos is referred to throughout Astronism and it is even classified as one of The Seven Tenets of Association and many may wonder that beyond the obvious that it is a cosmocentric endeavour, what connection is made between human space exploration and the beliefs of Astronism. It is from this question that the goal of transcension occurs.

Now we must distinguish between transcension as a notion that the belief orientation of transcensionism that emerged from it. However, transcension itself essentially refers to the notion that the initiation and subsequent fulfilment of the Humanic Exploration of The Cosmos will lead to advancements in humanity's physical, mental, spiritual, and intellectual abilities and knowledges and that space exploration for the purpose of transcending is humanity's existential purpose.

In this notion of transcension, we see the goal of Astronists as linking to their eschatological beliefs and we understand the connection made between human existential purpose in Astronism and the essentiality of the Humanic Exploration of The Cosmos. It is for this reason that transcension is often referenced is not only provided with its own belief orientation, but with an entire school of Astronist eschatology which is a further demonstration of the concept's importance.

transcensionism

belief orientation stating that humanity's existential purpose is to explore space

As we have dedicated an entry in this encyclopaedia to the notion of transcension, it is important to also dedicate an entry to both the belief orientation and the Astronist school of eschatology that emerged from the notion of transcension which have been aptly named

as transcensionism. Of course, the addition of the suffix -ism to form the term denotes belief in or an action of that to which it is attached and in this case, transcensionism means belief in and/or an action of transcension.

It is important to note that transcensionism has two slightly different definitions depending on the context in which the term is used and these differences should be either be obvious to the context in which the term is used or it should be otherwise specified to the reader. The first aspect of transcensionism is that it is a belief orientation that is directly derived from the notion of transcension and holds that it is humanity's existential purpose and destiny to explore space and that without humanity's commitment to its advancement towards space, that humanity will not achieve improvements in our knowledge, spirituality, intellectuality, physicality, and mentality.

This essential premise is then translated to the context of eschatology to form transcensionism's second definition which is that transcensionism is an Astronist eschatological school that is centred on the belief of transcensionism but specifically involves the belief with the Essentially, transcensionism is predicated upon the notion that the endeavour of space exploration provides humanity with existential purpose without the need for the involvement of a God or the afterlife. Furthermore, important to the belief in transcensionism are the beliefs of both corporeal cosmosis and contributionism as the latter demonstrates a method to achieve transcension while the former is an example of what is achieved if one achieves transcension for humanity.

transtellationism

eschatological school supporting various forms of supernaturalism

There are three major schools of Astronist eschatology that have developed over the course of the writing of the Omnidoxy and two of these are naturalism and transcensionism while the third and final of them is a school titled transtellationism which is directly founded on the notion of the occurrence of transtellation. Transtellation refers to both the physical and spiritual transmigration of the soul to the stars after a person's death and as part of their completion of cosmosis.

Although the principal belief within the transtellationist eschatological school is the occurrence of transtellation, the school of transtellationism encompasses a much broader variety of beliefs, all of which incorporates some form of supernaturalism which makes transtellationism distinct from the other schools of Astronist eschatology. For this reason, transtellationism can be described as the supernaturalist school so as to further distinguish it from the eschatological school of naturalism which rejects all beliefs incorporating supernaturalism.

Transtellationism is the most broad of all the schools in terms of the variety of beliefs within it, the most prominent of which is transtellationism itself which notionises that upon our corporeal deaths our souls transmigrate either to The Cosmos as a whole, usually referred to as “the stars”, or to a particular cosmic progeny or phenomena, all of which is depend upon a each person’s unique interpretation of transtellation and from this, a multitude of positions have developed around the belief orientation.

triadism

three-pronged belief of Universal uncreatedness, divine sustainment of The Universe and divine omnificativity

Throughout the creation of the Omnidoxy, a distinct Astronist cosmology has emerged that encompasses the way in which Astronists should understand and the regard the nature of reality, The Cosmos itself, and those realms of existence considered to exist beyond The Cosmos, namely The Universe and The Divine. A myriad of beliefs and ideas have emerged from the Astronist concern of cosmology as is expected with a subject of such vastness. However, like in all other parts of Astronism, the organisation and categorisation of beliefs is essential to the extent to which those beliefs themselves are coherently understood.

In the case of the cosmology of Astronism, which is essentially the Astronist interpretation of the Astronic cosmology that was itself introduced within the Omnidoxy, the formation of what has come to be known as triadism has been necessary not only in the organisation of all Astronist cosmological beliefs, but also important in narrowing down those beliefs which can be considered central to the Astronist interpretation of the cosmology. As its name suggests, triadism is formed by a total of three beliefs, all of which hold concern for some aspect of the Astronic cosmology, but with particular focus on the nature and interactions between two of the Astronic cosmological existences of The Universe and The Divine. The first of the triadist beliefs is uncreatedness of The Universe, the second of which is the divine sustainment of The Universe, and the third of which is divine omnificativity which, when considered together, create that which became known as the triadic formulation.

uncreatedness

cosmological belief that The Universe was never created by The Divine

One of the most interesting and controversial topics to be discussed in the context of religious debate is that of createdness of our reality; whether there was a creator at all or whether reality has always existed and whether it will forever exist. It is the question that

many have attempted to answer, but none have ever truly known whether their approach is true for the knowledge of the truth is reserved for the nature of divinity, which is of course the Astronist epistemological perspective. Despite this, religions and philosophies have each proposed their conceptions for the createdness of reality and in this regard, Astronism is no different. In fact, Astronism has prided itself from its inception on its confidence to explore all possible approaches for the createdness of reality.

This Astronist virility for debate of such topics emerged from the development of the Astronic cosmology and its categorised understanding of higher realities than the practical domestic realities of human life on the singular planet of The Earth. Cosmicalities, universalities, and divinologies were developed in the Omnidoxy after which the official or Institutional version was carefully explored and picked out to form what is known as the Astronist approach. On the question of the nature of The Universe in the Astronic cosmology, a significant issue soon arose that finds its roots in the very foundations of the Astronic cosmology itself.

The issue of which we speak is known as the problem of the createdness of The Universe and entails the issue that if The Universe is infinite by its nature as is proclaimed in the Astronic cosmology, then it couldn't have been created because anything of an infinite nature is without existential beginning or existential end. This caused an issue that was in requirement to be explore as part of the writings of the Omnidoxy as well as in post-omnidoxical settings. The approach that was selected to be the Institutional Astronist belief regarding this problem was thereafter titled as uncreatedness, or the uncreatedness of The Universe.

As a direct reaction to the problem of the createdness of The Universe, the doctrine of uncreatedness states that that The Universe was not created by The Divine, but has instead always existed so as remain in alignment with its infinite nature. However, the doctrine of uncreatedness also states that The Universe remains sustained by The Divine and is dependent upon The Divine for its continued existence, thus still adhering to the belief of subordinationism and differentiated roles between The Universe and The Divine which are too outlined within the Astronic cosmology. From the Astronist perspective, uncreatedness was the only logical explanation for infinite nature of The Universe and its suitability to the role and functionality of The Divine, both of which were developed simultaneously as part of the Astronic cosmology. A variety of other protoastronist beliefs regarding the problem of the createdness of The Universe in the Astronic cosmology are expected to be developed and further debated post-omnidoxically as part of this multi-faceted topic of both religious and philosophical origin and significance.

unique way

Astronist response to the Buddhist Middle Way

Throughout the Omnidoxy, there have been numerous instances in which the Astronist belief system has held opinions regarding the beliefs and ideas of other religions and philosophies. One of the most prominent examples of Astronism holding a direct response to a non-Astronist belief in another religion is manifested by Astronism's Unique Way. The Unique Way is the Astronist response to the Buddhist Middle Way and is considered to reflect the unquitarian ontological position of Astronism which is provided with its own encyclopaedic entry herein.

The Unique Way denotes the characteristically Astronist approach to dealing with the problem of suffering and the defining the balance between indulgence and asceticism. Astronism advocates for following the Unique Way rather than the Middle Way by stating that each of us, due to our unique natures and beingnesses, hold a unique desire for different combinations of indulgence, moderation and asceticism and therefore denies the validity of single way, such as the Middle Way, as offering a genuine solution due to it being considered as a blanket statement approach to the complex problem of suffering.

In general, the unquitarian way to reject "one size fits all" doctrines which seem to occur in a myriad of different forms in a number of religious and philosophical traditions and the Unique Way is perhaps the ultimate manifestation of the unquitarian ontology applied to a practical circumstance. The Unique Way states that no two people hold the same degrees of indulgence, moderation and asceticism for their lives, but that instead unique dosages of each of these should be sought after in order to suit the unique beingness of the individual. The Unique Way is a hallmark rejector of the notion that general principles should be proclaimed and then be followed by the masses in full uniformity, but is instead an advocator for an individualistic outlook that is not only predicated on the values of unquity, but is symbolised by its emphasis and encouragement of the expression of the unique elements of ourselves that make whom we are and formed our identity, role, and destiny in The Cosmos.

unquitarianism

ontological position held by Astronism

Astronism is of course principally designated as an organised philosophy and so in the spirit of its synthesis of religion and philosophy, Astronism explores both topics of traditional theology and traditional philosophy. Religions, although they may somewhat explore the topic of ontology, it is not done so with much depth or in coherent connection to the religion's wider theological and ethical positions, however Astronism, with being an organised philosophy, has always prioritised its exploration of ontology even going so far as to dedicate an entire disquisition to the study of the nature of being. What emerged from that disquisition known as the Hexadoxy was an entirely new system of ontology known as unquitarianism, or shortened to unquanism.

The influence of unquitarianism is perhaps one that has been largely overlooked, but if we take a look at the study of Astronism and the various instances in which its beliefs and concepts are explained, we either find explicitly mentioned or clearly interpretable instances in which unquitarian thought holds a key part in Astronist beliefs and theories. As the principal Astronist conception and approach to ontology with reverberating consequences influencing Astronist ethics, theology, eschatology, and soteriology, unquitarianism fundamentally states that all sentient beings hold a state of consciousness and mentality known as unquity which is considered to be inextricably linked to the destiny of that sentient being.

Essentially, the nature of being in Astronism is entirely considered through this understanding of unquity. Unquitarianism first originated as the Astronist response to complementarianism and egalitarianism from which it developed to become the primary ontological position of Astronism. Unquitarianism considers all aspects of the existential reality through the filter of unique beingness, so much so that the entirety of the Astronist view of our individual existences is considered as through this belief in each of us holding a unique beingness, function, role, identity, and destiny in The Cosmos. There are different types of unquitarianism that emerged omnidoxically, most notably hyperunquitarianism and fundamental unquitarianism, however, other forms of unquitarianism are expected to emerge post-omnidoxically as the position is further developed and more Astronist philosophers contribute to the tradition of unquitarian ontology.

universality

holding a universal nature or pertaining to a particular conception of The Universe

Just as one of the principal endeavours as part of cosmic philosophy is the formation of conceptions of The Cosmos for a greater understanding of its functionalities and its overall identity so too is the conception of The Universe from the Astronic cosmology. Universality, as a prominent instrument of study, encapsulates this endeavour and develops a clear and coherent vehicle through which contemplations regarding the nature, structure, ontology, function, comparison and identity of The Universe is able to be conducted.

A universality is a particular conception of what The Universe is, how it acts, why it exists, what means by which it exists, and what its future entails among other questions too. There are numerous examples in the Omnidoxo of the development of a multitude of conceptions of The Universe as this plays an important part in the philosophisation of the Astronic cosmology. Not only is the development universalities healthy for the development of our philosophical abilities to contemplate beyond cosmicness, but it also allows us to explore the manifestation of such concepts as infiniteness which are considered integral to the nature of The Universe from the Astronist perspective. From these notions, we can understand Astronism not only as an organised philosophy with its

own view of topics, but also as a vehicle or an arena through which and in which all types of ideas and beliefs can be postulated regarding all manner of topics for this is also integral to the philosophical nature of Astronism and is reflective of Astronism's adherence to the Philosophical Spirit.

vendox

most well-known symbol of Astronism

Like in all religions and in most philosophies throughout history, symbols have been used to represent the most prominent beliefs of the system of thought. It has taken hundreds and sometimes thousands of years for symbols to become synonymous with particular belief systems such as the Yin and Yang symbol representing Taoism, the cross representing Christianity, and the Dharmachakra representing Buddhism among many others. Certain symbols have particular pertinence to certain aspects of the religion to which they are associated which has developed the study into religious symbolism.

From its own inception, Astronism has fully embraced this tradition of religious symbology with a myriad of symbols developing both omnidoxically and post-omnidoxically to reflect certain prominent beliefs within the Astronist organised philosophy. Despite this collection of Astronist symbols, that which is known as the Vendox has always held supremacy and superiority over them all as the principal universal symbol for all Astronism.

The Vendox is the authoritative symbol for Astronism meaning that it precedes all other symbols and is considered the principal symbolic representative for Astronism in its entirety including all its conceptals and in all its different forms and variations. The design of the Vendox rests with Cometan as part of the Seven Year Revelation period, but with the development of the Astronist Vendox came the introduction of a category of symbols titled vendoxes, of which the Astronist Vendox is the first and principal and most well-known example of. The Vendox symbol of Astronism is characterised by the depiction of a blank book in the centre of two strips almost circularly encompassing it entirely which then extend upwards vertically and between which six stars are often depicted.

The Astronist Marketing Methodology

Narrativism

Marketing focused more on creating, establishing and maintaining a narrative, rather than centring on a product.

Creativism

Marketing with creative depth, but not necessarily fully understood, and so, perhaps more akin to art.

Short Marketing

The planning of the longevity of a marketing campaign or piece to last no longer than a period of a month.

Long Marketing

The planning of the longevity of a marketing campaign or piece to last at least a period of a month.

Productism

Marketing whereby the product is clearly positioned at the centre of the campaign.

Entiretism

Marketing that promotes The People's Constitutional Company of Jesse Millette as a whole rather than an individual subsidiary, or a promotion including all Astronist characters.

Astronism Marketing

A marketing campaign distinctly focusing on the promotion of the philosophical ideas and principles of Astronism, or any of its branches.

Cosmic Marketing

A marketing campaign holding a cosmic theme, or is clearly set in The Cosmos.

Characterism

A distinct focus on the actions, characteristics or personalities of Astronist characters during a marketing campaign.

Jessian Marketing

A marketing campaign with a distinct focus on the Astronist character of Jesse.

Ellenian Marketing

A marketing campaign with a distinct focus on the Astronist character of Ellena.

Zaranian Marketing

A marketing campaign with a distinct focus on the Astronist character of Zara.

Harrietarian Marketing

A marketing campaign with a distinct focus on the Astronist character of Harriet.

Oliverian Marketing

A marketing campaign with a distinct focus on the Astronist character of Oliver.

Philosophical Marketing

The integration of philosophical ideas and principles into a marketing piece or campaign.

Dominationism

A marketing campaign with the clear representation of the struggle for dominance between men and women.

Cultural Marketing

The integration of cultural traditions, ideas and principles into a marketing campaign, in order to better relate to the peoples following that particular culture.

Specialised Marketing

A marketing piece or campaign specialised for a certain group, religion, or a nation.

Religious Marketing

The integration of a religion or religious icons into a marketing piece or campaign.

Corporate Marketing

A marketing campaign focusing on corporate, governmental and public information operations of The People's Constitutional Company of Jesse Millette.

National Marketing

The integration of the symbols, icons, values and anthems of a nation into a marketing campaign in order to greater relate the campaign with a nationwide audience.

Musicism in Astronist Marketing

The utilisation of music in a marketing campaign to further emphasise, enhance and illuminate the message of the campaign.

Solitology in Astronist Marketing

The representation of an Astronist character in solitude during a marketing campaign.

Duology in Astronist Marketing

The representation of two Astronist characters during a marketing campaign.

Triology in Astronist Marketing

The representation of three Astronist characters during a marketing campaign.

Quadology in Astronist Marketing

The representation of four Astronist characters during a marketing campaign

Quintology in Astronist Marketing

The representation of all five Astronist characters during a marketing campaign.

Marketing Piece

Relating to an advertisement holding just one variation.

Marketing Campaign

Relating to an advertisement holding more than one variation.

Marketing Narrative

The overarching elements of a brand's marketing campaigns.

Marketing Story

The story in just one advertisement that doesn't make its way into other marketing pieces or campaigns for the same brand.

Marketing Journey

Referring to all the marketing pieces, campaigns, narratives and stories of a brand from its inception to the present day, and the study of the brand's development as reflected in its advertisements.

High Involvement Dominancy

The strategy of a brand to position the majority of its products, messages and services as high involvement purchases by evoking feelings and emotions, as well as strong spiritual, physical and intellectual needs.

Celebrities As Influencers

The strategy taken up by The People's Constitutional Company of Jesse Millette in the majority of its marketing campaigns and narratives, stipulating that celebrities should act as influencers and distributors of a marketing message, rather than actually being featured in the marketing piece or campaign for that role is mainly filled by the Astronist characters, thus highlighting a distinction between Astronist brands and other brands.

Distributional Intergrations

Vertical Integration

combination of one or more stages of production

Horizontal Integration

increase of production of goods or services at the same of the supply chain, typically by internal expansion, acquisition or merger

Spherical Integration

the combination of production in all possible directions under centralised governance, thus leading to a monopoly or oligopoly

Diagonal Integration

the establishment of strategic alliances between companies that are within the same industry or whose operations impact upon each other, to further their own interests, especially when regarding production, supply and distribution of goods and services

Backward Integration

involving vertical integration, the business activity of a company that buys another company that previously supplied it, especially with raw or essential materials

Forward Integration

involving vertical integration, the business activity of expanding to include control of the direct distribution or supply of a company's products, especially when involving the subsequent disadvantage to a rival

Dimensional Integration

the establishment of strategic alliances between companies that are not in the same industry, but whose alliance will further each company's own interests

Governmental Integration

the establishment of strategic alliances between a company and a government to further the interests of both entities

Factors of Emotion-driven Choices

Self-illusion

the suspension of rational beliefs because they are not strong enough to prevent us from enjoying ourselves

Self-focus

the representation consumers are portraying of themselves when purchasing a product of service rather than the components of that product or service

Holistic Perception

a non-rational, non-analytical perception of a product or service because a consumer views it as a whole, rather than an in-depth view

Non-verbal Imagery

communications of emotion rely heavily upon pan-cultural universalities, such as facial expressions

Rejection of Options

not to choose that which we like the most, but to rejection those that we most dislike

The Surrounding Environment

the social, cultural, religious, and peer influences shaping our emotions towards certain products and services

Emotional Intensity

the measurement of the intensity of the emotions of a consumer towards a product or service, during each stage of the purchase.

Distinction of Brand Utility & Brand Communication

it is the purchasing process of a consumer, with the nature of the product/service and their subsequent involvement as the variable, to make their decision based not on the utility of the product/service, but the communication exhibited by the brand.

The Identity of a Brand

particularly important for adolescents who value the approval of their peers more than most other consumer segmentations, the identity of a brand holds the idea that a group of consumers can be influenced by the strength of the beliefs of one consumer in the group, and so, if the identity of the brand is strong enough for that one consumer, they can influence the rest of the group.

Self-symbolic Consumption

if the brand or its products or services have a symbolic meaning to the consumer, then they are more likely to purchase them.

Social-symbolic Consumption

if the brand or its product or services have a symbolic meaning to society, or a particular group of people in society, then they are more likely to purchase them.

The Individuality of Mass-market Brands

the ability of a brand to successfully achieve mass-market consumption in parallel to holding a unique meaning for every individual.

Semiotic Associations

the long process of the cultivation, establishment and maintenance of symbolic meanings attributed to a brand, character, product or service.

The Brand-as-a-person

the construction of a brand around the characteristics of a particular person, whether fictional or real, in order to most efficiently inform the consumers of the brand's purpose, message and meanings.

The Brand-as-a-friend

the construction of a brand, typically representing itself through likeable and friendly characters, to become a friend-like figure to the consumer, thus showing how a brand can establish an interpersonal relationship with a consumer on a higher level than perhaps many other strategies.

Nostalgia

the construction, maintenance and the reminding of consumers that a brand has a place in their personal history, thus establishing an idealistic viewpoint from the memories of the consumer's past interactions with the brand and its products and services.

Brand Community

a non-geographical community sharing the same admiration for a brand, character, product or service.

Name Value

the perceived value of a brand's name to the consumers and potential investors, or buyers.

Brand Equity

the additional benefits, whether tangible or intangible, achieved by the association of a brand to a product or service.

Brand As An Asset

the idea that a brand must be maintained and preserved just as much as another asset held by a company.

Consumer Perspective on Brand Equity

the extent to which brand equity supports and influences the consumer purchase decision.

Brand Awareness

the basic ideas that a consumer attributes to a brand's purpose, message and goals, and the measurement of the accuracy of those attributions.

Brand Attitude

the associations of a consumer's memory that are linked to the brand's values, perceived quality and image.

Brand Loyalty

the extent to which an individual consumer, or a whole consumer group, shows loyalty toward one particular brand, product, or service.

Experience Brand

the degree to which a consumer evaluates the richness of the experiences of a product or service from a brand.

Fashionisation Churning

the strategy of continuously churning the identity of the brand whilst simultaneously holding onto the core elements that define it, in order to keep the brand in fashion.

Brand Prominence

the ultimate goal of a brand to maintain its perceived prominence in many categories including quality, popularity, awareness, purpose, reliability and honesty.

Tangible Dominancy

a product with very little intangible benefits, such as salt.

Intangible Dominancy

a service with very little tangible benefits, such as education.

Living The Brand

the emphasis of including both consumers and employees in the concept that the receivers of the brand should reflect the message of the brand as though they are living symbols of the message.

Employee Brand

a brand that is so distinctive and morally and ethically correlative to a consumer's beliefs that they wish to work for the brand, either in a voluntary or paid role.

Astronist Encoding

The words, pictures, symbols, music, monograms and crests signifying the identity of an advertisement as Astronist.

Brand Hierarchy

Corporate/Governmental Brand

The People's Constitutional Company of Jesse Millette and The Governing Ministry

Industry Brand

the various subsidiaries of The People's Constitutional Company of Jesse Millette

Group Brand

a brand used in more than one category, for example, Jesse Millette Fashions and Jesse Millette Books

Flagship Brand

the leading, most well-known brand, for example, Jesse Millette

Master Brand

the same as a Flagship Brand, but can only be used to refer to the Flagship Brand if another brand is being used alongside it, for example, Cadbury is the master brand and Dairy Milk is the Junior Brand

Junior Brand

a more generic brand used typically for just one product or product category in order to give more context to the product or service, and usually needs a Master Brand to accompany it for the consumer to recognise it

Subordinate Brand

secondary to the Flagship Brand, not as well-known, but still distinctive, for example, Ellena Chadwell and Zara Litchford)

Character Brand

(no logo is shown or is clearly not made to look important, but the characters are the leading representatives of the brand instead

Advertising Agency Methodology

Project management

project details including timescales, contacts, project numbers

Where are we now?

describe current brand details including background, competitors, key issues and position

Where do we want to be?

what needs to be achieved including sales, market share, market value, shareholder value, awareness and perception

What are we doing to get there?

marketing strategy, campaign strategy and specific solutions

who do we need to talk to?

who are the individuals and what they going to do to help the company achieve its goals

practicalities

budgets, timings and schedules, creative and media imperatives

approvals

the individuals who must sign off the brief and confirm the completion of the agency work

Corporate Reputation Methodology

Reputation is the degree to which a company's constituents, consumers, investors and rivals rank it in terms of its credibility, social and financial image, as well as its environmental, ethical and moral standing, and usually translates into a major component of the valuation of a company.

Establishing and maintaining a high reputation increases a company's competitive advantage.

The public have developed a cynical view of the business world mainly because of high profile corporate scandals, and so it has become even more important to withhold your company's reputation, protect it and preserve it. The stock of information and the perceived lack of information about a company are major contributing factors to the company's overall reputation.

Overarching Reputation

the strategy adopted by The People's Constitutional Company of Jesse Millette to instil in all departments that the reputation of the company isn't just a task to maintain for the public relations department, but a fundamental duty of all departments and employees.

Constitutional Reputation

the strategy adopted by The People's Constitutional Company of Jesse Millette that The Grand Constitution is the hallmark and the protectorate of the company's reputation and in turn, its values, principles and goals, and protects the company from conducting in operations that would lead to the damage of the company's reputation.

National Reputation

the crucial concept in corporate reputation that the actions of a company can be offensive to one nation, but be glorified by another. The delicate, and often impossible, balance between this is the ultimate goal of corporate reputation, but often, companies must choose between pleasing one set of people and offending and angering another group.

The Reputation of Capitalism

despite capitalism standing as the fundamental ideology of the majority of economies worldwide, there is a general negative consensus from the public that capitalism favours only the elites in society. Companies have tried to mend this reputation of capitalism by introducing corporate social responsibilities into their marketing strategies in order to show the public that their company operates under goodwill, social development and with ethical, moral and environmentally friendly principles.

The Corporate Brand deals with the requirements of stakeholders and investors.

The Position of Employees

Due to the position of employees situated between the company and its consumers, employees are an essential component of the corporate reputation strategy and so, employees must fully understand that they should reflect the company's values and principles, when at work, but also during their personal life.

Constitutional Identity

the strategy adopted by The People's Constitutional Company of Jesse Millette stipulating that The Grand Constitution outlines the objectives, purpose and values of the company, thus in turn demonstrates its corporate identity, to which the company is constitutionally bound. The Grand Constitution is upheld as the fundamental component of the corporate identity of The People's Constitutional Company of Jesse Millette.

External Forces Impacting Upon Corporate Reputation

politics

economics

society

technology

religion

legality

environment

the media

Internal Forces Impacting Upon Corporate Reputation

corporate strategy

marketing strategy

constitution

culture

resources

financial and managerial expertise

employees as a group

Significance In Services

It is easy to copy a service, therefore a strong brand, strong reputation, with strong values, industry relations and financial investment is required, unless the service will be completely judged on price.

Recovery Plan Methodology

Reputation damage, whether minor or major, is unavoidable, but it is the recovery plan of corporate reputation, that must be well established, prepared for and managed in order to see the survival of the company.

Influences on Corporate Reputation

- Product/Service Quality
- Employee Satisfaction
- Customer Satisfaction
- Customer Service
- Innovation
- Vision & Leadership
- Corporate Social Responsibility
- Profitability
- Market Position
- Comprehensive Reputation
- Constitutionality
- Transparency
- Stability
- Honesty
- Perceived Popularity
- Too Vital To Fail

The ultimate role of the Chairman, as The Constitutional Leader of The People's Constitutional Company of Jesse Millette, is to ensure the constitutionality of the company stays at its highest, thus in turn ensuring the reputation of the company withstands.

Constitutional Corporate Culture

the stipulation of The People's Constitutional Company of Jesse Millette that the company's corporate culture is wholly established, underpinned and upheld by The Grand Constitution, which acts as the ultimate authority of the company's culture.

High Employee Sociability

stimulating a high employee sociability is essential to the success of a company's operations, because if the employees are friendly with one another, that creates a much more positive environment for business, and it is the role of the manager to ensure the highest employee sociability as possible.

High Employee Solidarity

stimulating a high employee solidarity is essential to the success of a company's operations, because if the employees feel they are standing by an organisation and doing good for the world and the peoples of the world, then they are much more likely to be enthusiastic about their role in making that good happen and holding a strong sense of solidarity between their fellow employees, makes them feel as though aren't alone in

doing good and that by working together in solidarity, they can achieve more good. As stipulated by The People's Constitutional Company of Jesse Millette, it is The Grand Constitution that should act as the initiator of the solidarity of the company.

Employee Profiles

in conjunction with the approval of the employees themselves, the company and the employees should construct employee profiles which allow more senior members and managerial personnel to get a glimpse into the strengths and potential weaknesses of a particular employee. This clarification of the specific talents of employees relates to the concept of Talent As Asset, which demonstrates the idea that the talents and expertise of employees should be venerated and seen as assets to the company.

Citizen Brand

a brand that conducts itself with society at the heart of the business.

Founder Brand

establishing a narrative for the betterment of marketing and corporate reputation, around the founder and leaders of an organisation.

The Incorporation of Astronism

the implementation, veneration and incorporation of the philosophy of Astronism, in conjunction with The Grand Constitution and its principles, in order to establish a corporate philosophy around which stakeholders, employees, customers, investors and corporate leaders must rally and unify to construct and maintain the ultimate corporate image.

The Superiority of The People's Constitutional Company of Jesse Millette

the stipulation that The People's Constitutional Company of Jesse Millette is fundamentally superior to that of companies and organisations due to its founding and obligation to The Grand Constitution which establishes, underpins and upholds the values, principles and missions of the company.

Corporate Communication

the entirety of the communications expounded by The People's Constitutional Company of Jesse Millette in order to ensure its furtherance and the achievement of its objectives.

Dimensions of Corporate Communication

Managerial Communications

communications between a manager and another manager, or between a manager and those he/she must manage.

Marketing Communications

communications between a company and the audience it is trying to influence.

Individual Communications

communications between a company and specific individuals or the representatives of those individuals.

Organisational Communications

communications between a company and external organisations, such as non-governmental organisations and charities.

Business Communications

communications between a company and another company for mutual advantage.

Social Communications

communications between a company and the public to inform them of investor relations

Investor Communications

communications between a company and the investors of the company.

Governmental Communications

communications between a company and governments of nations in which it operates.

Internal Communications

communications within a company.

External Communications

communications outside a company, either expounded by the company or by other entities.

Upholding Corporate Communication Activities

- Consistent Messaging
- Propagation
- Coordination of Work
- Demonstration of Internal Communications

Effective Corporate Communication

- Form
- Style
- Timing
- Tone

Positioning Themes

- Functional
- Expressive
- Emotional
- General
- Immediacy
- Propagational

Caused-related Marketing

a corporate social responsibility strategy of placing a specific cause at the centre of a marketing piece or campaign.

Press Releases

an official statement issued biweekly, or after a major world event, giving information about the official response of The People's Constitutional Company of Jesse Millette.

Press Conferences

a biweekly conference of journalists and press members interviewing the Vice Chairman of The People's Constitutional Company of Jesse Millette and, under constitutional law, the press are open to ask any question. After a major world event, or a major event relating to The People's Constitutional Company of Jesse Millette, the Vice Chairman, if the Chairman isn't available, is obligated to make a response a press conference.

Constitutional Interview

a quarterly one-to-one interview, under constitutional obligation, between the Chairman of The People's Constitutional Company of Jesse Millette and a prominent journalist, who rotates for every interview. The interview typically covers the latest events, news and operations of The People's Constitutional Company of Jesse Millette, and the journalist is free to ask the Chairman any question, under the constitutional article of Complete Transparency.

Weekly Address

a weekly video series constructed by The Governing Ministry in which the Vice Chairman of The People's Constitutional Company of Jesse Millette details the operations, events and the latest news of the company, typically for the view of the general public.

Defensive Communications

communications expounded by The People's Constitutional Company of Jesse Millette after a major event, particularly one with the potential to damage the reputation of the company, holding a defensive nature because of the falsity or distortion of truths.

Emergency Communications

communications expounded by The People's Constitutional Company of Jesse Millette after a major emergency in order to brief the general public of the stance of the company and the official response to the emergency.

Communication Strategies

Silence Strategy

a communications strategy of silence, intended to either demonstrate the neutral stance of the company, or to demonstrate the falsity and insignificance of the subject.

Reasoning Strategy

a communications strategy of giving reasons as to why an action or operation was undertaken.

Accommodative Strategy

a communications strategy of adapting to an event, an accusation, or a proven misconduct.

Apologetic Strategy

a communications strategy, typically after a proven event of misconduct in which the company is obligated to apologise for.

Constitutional Neutrality

a constitutional obligation of The People's Constitutional Company of Jesse Millette to act neutrally in all political cases, unless voted otherwise in The People's Astronist Congress.

Astronist Auditing Methodology

The Findings of a Marketing Audit

- the organisation's current market position
- the nature and magnitude of current opportunities and threats
- the organisation's ability to cope with environmental demands
- the detailed analysis of the external environment and internal circumstances
- the objective evaluation of past performance and present activities
- the clearer identification of future opportunities

Financial Audit

Personnel Audit

Production Audit

Structural Audit

Governmental Audit

External Audit

an audit focusing on the external environment of the nation(s) in which a company operates and covers various topics including politics, ease of business, social, environmental, legal and cultural trends.

External Factors

- the business, political and economic environments
- the market
- the competition

Internal Factors

- organisational performance, efficiency and structure
- marketing objectives
- marketing strategy
- information systems
- planning systems
- control systems
- functional efficiency
- inter-functional efficiency
- profitability analysis
- cost-effective analysis
- governing efficiency
- constitutional analysis
- transparency analysis

Stages of the Audit

1. pre-audit activities in which the auditor decides upon the precise breadth and focus of the audit
2. the assembly of information on the factors impacting the subject of the audit
3. a thorough and critical analysis of the information
4. the formulation of recommendations
5. the creation of an Audit Report

6. the development of an implementation programme to apply the recommendations into the company's operations

In-depth Account of the Audit Stages

Stage One

Statement of purpose in terms of benefits, product scope, the evaluation of the size, growth rate, maturity state and the need for primary versus selective strategies. The requirements of success, the divergent definitions of the above by competitors and the definition to be used by the company.

Stage Two

The evaluation of industry performance and the differences within and outside the company. Determining the differences between products, applications, geography and distribution channels and the determining of the differences between customer set.

Stage Three

Potential market development strategies, product development strategies as well as financing, administrative and governing strategies and support.

Stage Four

Identify and profile each significant competitor and distinct types of competitive strategy. The comparison of the company's own and competitors' strategies.

Stage Five

The establishment of planning units or cells and the designation of prime and subordinate dimensions.

Stage Six

Make organisational assignments to managerial staff, executives and government personnel of The People's Constitutional Company of Jesse Millette.

Functional Audit

an audit focusing far more specifically upon a particular element of marketing activity such as sales and pricing.

Comprehensive auditing

for auditing to be efficiently and successfully exercised and implemented, it should cover all major activities of the organisation; elements performing and those not so.

Systematic auditing

a diagnostic process should be adopted covering the external environment, the internal operational systems and the specific activities of an organisation. This process of diagnosis is followed by the development, analysis, and implementation of plans, both short and long-term, specially designed to correct the weaknesses identified in the audit.

The Utilisation of Independent and Internal Auditors

The People's Constitutional Company of Jesse Millette adopts the audit methodology of employing independent organisations, as well as tasking internal departments, with the job of conducting audits and to encourage the cooperation between both independent and internal auditors in order to create the most cohesive, applicational and comprehensive audit report for the utilisation of the company.

Frequent Auditing Practice

under constitutional law, The People's Constitutional Company of Jesse Millette is obligated to conducting both independent and internal audits every six months.

Audit Report

a report issued by an independent or internal auditing authority in which the findings of an audit are outlined.

Response Report

a report issued by a Directorial Council of The People's Constitutional Company of Jesse Millette, in which they detail their responses to the results of an audit.

Auditing Results Strategic Utilisation Methodology

Stage One

after receiving the audit report and the implementation programme from auditors, a review is undertaken by the Directorial Council along with other authorised managerial and executive personnel.

Stage Two

after the review, a Response Report is constructed by the Directorial Council and the reviewers of the Audit Report and details the actions that will be taken by their department in order to properly implement the details and recommendations of the Audit Report. In this Response Report, all external and internal factors must be taken into consideration and other uncontrollable factors such as the political, environmental, social, cultural and economic landscape.

Stage Three

quickly after the Response Report is issued, all relevant departments and employees are informed of the new implementations so they understand the importance of the implementation of the audit results.

Stage Four

in parallel to this, the audit results are further analysed and criticised by internal departments in order to better understand some of the more long-term and possibly deep-rooted issues within the operations of the company.

Stage Five

finally, a three month internal review is conducted by internal departments in order to ensure the results of the audit are being properly implemented in good time for the next obligatory audit in three months from then.

Stage Six

after this three month internal review, if for any reason the audit results are not being implemented into the company's operations, a contingency plan is constructed in order to better position the relevant department in tackling the issue.

Stage Seven

the auditing process then begins again at the six month mark.

Stage Eight

if auditing results pick up a issue for the second time, further cooperation must be conducted between the internal and independent auditors, as well as further and more detailed information about the issue and how best to solve it. This practice also applies for an issue's solution that is in process, so the auditor can give more relevant information about how the company can best solve the issue at a particular part of the solution process.

Astronist Analysis Methodology

Marketing Function Reviews

a biyearly collection of reviews undertaken by a marketing department in order to clarify and identify the costs of marketing, the efficiency of current marketing strategies, and the sustainability of those marketing strategies within a specific department, or toward a specific product category.

Marketing & Financials Function

the relationship, usually identified by a ratio, between the marketing budget and the relative revenue, profits, and assets, typically when in response to a change in the marketing budget.

Marketing Efficiency Analysis Methodology

Stage One

Identify and clarify all costs and dimensions of a specific marketing campaign. relate these costs back to the marketing budgets of that specific marketing campaign, as well as the yearly marketing budget of the company, and derive the longevity of the

marketing budget for this particular campaign and the percentage of the marketing budget used for each separate type of marketing activity.

Stage Two

Relate this information back to the direct, or 'proven' profit, achieved by the marketing campaign and compare this with previous years' campaigns. This comparison will lead to the Marketing Efficiency Percentage, which details the increase or decrease of the efficiency of marketing campaigns year on year.

Stage Three

A report should then be devised by the cost analysis team identifying areas of marketing activity that should be looked at in terms of their potential to hinder efficiency, and also details the parts of marketing activity that are the most efficient, and that perhaps more expenditure needs to be allocated.

Stage Four

This report is issued to the relevant Directorial Council and departmental leaders, and, after a comprehensive plan of implementation has been devised, the employees of the department and the relevant marketing department will be notified.

Staggered Budget

a strict budgeting mechanism whereby expenditures are issued every three months and the departments within an organisation are told in advance of the expenditure they should expect. This mechanism helps prevent budgeting deficits and more tightly controls expenditures so departments do not overspend beyond their budgets and so, it encourages a greater budgetary management.

Proven Profit

profit that a company can confirm, has been achieved by a specific action.

Subsidiary Focus Dissemination

the encouragement of each subsidiary of The People's Constitutional Company of Jesse Millette to disseminate throughout the subsidiary, a focus unique to their subsidiary and one that detailing the specific objectives of their subsidiary relevant to their business.

Incorporated Subsidiary Business Strategies

the action of devising separate business strategies to best operate each subsidiary of The People's Constitutional Company of Jesse Millette, yet incorporating and communicating with other relevant subsidiaries of which the initial subsidiary's operations may impact upon.

Focus Repositioning

the process of a subsidiary of The People's Constitutional Company of Jesse Millette, actively, after authorisation, repositioning the subsidiary's business focus by disseminating a new subsidiary focus and perhaps as far as implementing a new incorporative subsidiary business strategy.

Departmental Performance Methodology

Stage One

the collection and organisation of each department's financial, structural, employment and operational information, within each subsidiary of The People's Constitutional Company of Jesse Millette.

Stage Two

the information is categorised into categories and subcategories which is emulated across each department's analysis.

Stage Three

the analysis team then compares each category and subcategory with other department's information.

Stage Four

this comparison leads to the analysis team being able to devise a comprehensive report detailing the differences between the financial, structural, employment and operational performances of each department.

Stage Five

this report is then issued to the relevant Directorial Council and management team which, after devising an implementation plan, issue the results of the performance efficiency to each department to all employees and managers can understand the efficiency of their department compared to others.

Stage Six

as well as this, the implementation plan is issued to the managers and department leaders with details of the best ways to improve the efficiencies of their department.

Microcosmic Experimentation

the implementation of a policy, or the increasing of a budget in a department within a specified local area, with the aim of examining and analysing the results of that implementation, before it is implemented on a macro-scale.

Expenses Categorisation

the method utilised by a cost analysis team with the main aim of explicitly categorising each cost of the designing, manufacturing, marketing and distribution of a product or service, into specific categories in order to gather further clarity of cost efficiency and cost analysis.

Singularisation of Product Budget

a strategy utilised by a cost analysis team to explicitly identify and clarify the designing, manufacturing, marketing and distribution costs of a specific product category or product line.

Cost Optimisation

the ultimate objective of a cost analysis team, to strategically identify, clarify and optimise the cost inefficiencies within a company's operations.

Administrative Cost Analysis

the specific cost analysis undertaken to identify and optimise the administrative costs of a company, in order to prevent arbitrary and erroneously allocated expenditures.

Customer Analysis Methodology

Stage One

the explicit definition of customer groups and market segmentations in order to best distinguish one customer group from another, by the identification of their differing needs, incomes, tastes, and priorities.

Stage Two

for each customer group identified, pinpoint the factors causing costs of serving that customer group to fluctuate.

Stage Three

an explicit analysis should then be carried out on the differences between the factors affecting each customer group.

Stage Four

then, a thoroughly detailed analysis of the specific company resources being utilised in order to serve each customer group should be undertaken, including the amount of personnel, the cost of administration, the cost of personnel, warehouse facilities, etc.

Stage Five

relate revenues and costs to each customer group and display the costs in order to identify the groups utilising the most resources.

Stage Six

a Customer Analysis Report should be issued by the cost analysis team detailing the findings of the customer analysis and how best to optimise company resources without compromising on customer service, product or service quality, and without leading the company into straining its workforce.

Factors of the Competitive Environment

- higher levels and increasing intensity of competition
- new and aggressive competitors emerging in greater frequency
- constant competition repositioning seeking competitive advantage
- wider geographic sources of competition
- higher frequency of niche attacks
- requirement of higher frequency of strategic alliances
- increase in the speed of innovation
- requirement of strengthened relationships with customers
- requirement of strengthened alliances with distributors
- further emphasis on value-added strategies
- further aggressive price competition
- requirement to establish a long-term differentiation
- emergence of competitors practicing unethical, immoral and illegal activities

Competitor Analysis Methodology

As the prelude to the competitor analysis, the analysis team must devise a comprehensive identification, collection, and organisation package including the following comparative factors of company and its operations:

1. Sales
2. Market share
3. Cost and profit levels and their variability
4. Cash flows
5. Return on investment
6. Investment patterns
7. Production processes
8. Levels of capacity utilisation
9. Organisational culture
10. Employment structure
11. Products and the product portfolio
12. Product quality and perceived product quality
13. Size and pattern of their customer base
14. Brand loyalty levels
15. Dealers and distribution channels
16. Integration strategies
17. Marketing and selling capabilities
18. Operations and physical distribution
19. Financial capabilities
20. Management capabilities and attitudes to risk
21. Capabilities and flexibility of human resources
22. Strength of alliances
23. Previous patterns of response
24. Extent of leverage
25. Ownership patterns

Competitor Vulnerability Factors

1. Cash flow problems
2. Under funding
3. Mismanagement of expenditures
4. Low margins
5. High-cost operations
6. High-cost distributions
7. Declining market sectors
8. Little presence in growing and high margin markets
9. Declining market share

10. Weak market segmentation
11. Unsustainable positioning strategy
12. Weak reputation or poorly defined image
13. Slow / poor growth
14. Over-dependency on one market
15. Over-dependency on a small number of customers
16. Failure to keep innovation momentum high
17. Product weakness
18. Weak selling propositions
19. Short-term orientation
20. Lack of vision
21. Mismanagement of workforce
22. Failure to prioritise operations
23. High predictability
24. Major weaknesses in the product / service
25. Over-confidence
26. Managerial arrogance
27. Competitive sclerosis
28. Bureaucratic structures

Innovation Momentum

the pace at which an organisation sustain its innovation process.

Competitor Categorisation

The Relaxed Competitor

fails to react or reacts too slowly.

The Swift Competitor

responds quickly and aggressively, almost regardless of the consequences.

The Selective Competitor

reacts with great strategic care.

The Unpredictable Competitor

difficult or impossible to predict the route in which the competitor will advance.

Competitor Intelligence System

Stage One

setting up the system, deciding what information is needed and, very importantly, who will use the outcomes of the system and how.

Stage Two

collection of the data

Stage Three

analysing and evaluating the data

Stage Four

disseminating the conclusions

Stage Five

incorporating the conclusions into the subsequent strategy

Stage Six

the results are later received so the system can be developed for further improvement.

The Survey Stage

Conducting interviews and focus group discussions to pinpoint:

- attributes and their importance ratings
- brand awareness and brand ratings
- product usage patterns
- attitudes towards the product and brand category
- respondents' demographics, psychographics and ideologies

The Analysis Stage

The researcher attempts to identify clusters within the market.

The Profiling Stage

The researcher profiles each cluster and derives attitudes, behaviour, demographics, psychographics, and media consumption habits. Each segment is then named according to the segment's most distinguishing characteristics.

The Astronist Life Cycle

Demographic Segmentation Strategy

The Astronist Life Cycle is an eighteen stage cycle of individual existence depicting the possible periods of time, events, and ways of life an individual could decide to embark upon.

Enlightenment

a prolonged moment in a person's life wherein they understand their place in the world, and decide what they wish to achieve, experience, and do, especially based around a career, or vocation.

Self-actualisation

The Astronist Life Cycle centres itself around the concept of an individual's understanding of themselves and who they wish to be in the world, and the ways in which they do wish to act.

The concept of self-actualisation is integral to the fundamental structures of The Astronist Life Cycle as it hones in on the ideas of an individual's fulfilment of themselves and their talents, ambitions, and capabilities.

Self-concept

The idea of the self-concept is integral to the application of The Astronist Life Cycle, which seeks to refine each individual's idea of themselves, the role in which they feel they fit, and the place they do feel they belong in the world.

Self-purpose

The idea of the self-purpose is, again, another integral part to the application of The Astronist Life Cycle, as the purpose of oneself determines their actions, ambitions, and the paths they do take, thus the concept of self-purpose is fundamental in shaping the ways in which an individual views The Astronist Life Cycle.

Birth
The initial
understanding of the

Childhood (3 - 8)
Wherein the individual
is susceptible to
influences, such as
family and
advertisements, as

Preadolescence (9 - 12)
Wherein the individual is
even more susceptible to
influences, more typically
from friends and public

Adolescence (13 - 18)
Wherein the individual is still susceptible
to the influences around them, but they
also begin to form more critical opinions
about products, controversial topics, and
public figures. This period stands as a

Post-adolescence (19 - 23)
Wherein the individual is
establishing their social,
financial, and work life. This
period is the prime time to
experience The Enlightenment

Pursuance (23 -)
Wherein the individual embarks
on their life's vision whether that
be career-focused, domestic-
focused, etc. This period is

Sustained Activity

Wherein the individual is officially retired, but they are still partly active in the field in

Reversal Influence

Wherein an older member of the family is influenced by a younger person, typically to try something

Vision Transference

Wherein an older individual begins to pass on their vision to those younger than themselves, so it can live on

Entire Reflection

Wherein an individual, most typically close to death, reflects on all they have done, achieved, and

Market Targeting Methodology

Factors of Market Targeting

- the size and growth potential of each segment/ market
- market structural attractiveness
- the objectives of the organisation
- the resources of the organisation

Factors Affecting Segment Profitability

- industry competitors and the threat of segment rivalry
- potential entrants to the market and the threat of mobility
- the threat of substitute products
- buyers and their relative power
- suppliers and their relative power

Market Coverage Options

Single Segment Concentration

Leather goods

Lighters and matches

Cometac cards - an Astronist form of a card game.

Footwear

Children's products: Toy animals, Art and craft toys, Construction toys, Designer toys, Dolls, Educational toys, Electronic toys, Executive toys, Toy mascots, Mechanical toys, Novelty items, Optical toys, Physical activity and dexterity toys, Powered toys, Practical joke devices, Puppetry, Puzzles, Scale modelling, Toy figurines, Toy instruments and noisemakers, Toy robots, Toy weapons, Toys based on works, Traditional toys, Transforming toys, Toy vehicles and Water toys.

Astronomical products: Natural observation, Binoculars, Spotting scopes, Night vision, and Photo stands and tripod adapters.

Microscopes: Student & Junior Microscopes, Biological Microscopes, Stereo Microscopes, Phase Contrast Microscopy, Mechanical Accessories, Samples, Photography With A Microscope, Digital Microscopes, Digital Imagers, and Microscope Adapters.

Mounts and tripods: Celestron Mounts, Fornax Mounts, Paramount Mounts, Skywatcher Mounts, Vixen Mounts, Mobile Tracking Mounts, Tripod Heads, Mounts & Adapters, and Tripods.

Mount accessories: Cases, Bags, Counterweights, Flashlights & Torches, Focusers, Motor Focusers & Adapters, GPS, Cables & Software, Mirrors, Motor Drives, Other Mount Accessories, Power Supplies, Screws & Small Parts, Wedges, Observatories Tents Covers, Observatory Domes, Tents, and Telescope Covers.

Optical accessories: Barlow Reducers, Correctors, Barlow Lenses, Reducers & Flatteners, Collimating Tools, Eyepieces 1.25", Digital Camera Lens Adapters, Eyepiece Kits, Orthoscopic Eyepieces, Planetary Eyepieces, Zoom & Guiding E.P., Baader Eyepieces, Celestron Eyepieces, Explore Scientific E.P., GSO Super Plossl, Hyperion Eyepieces, Magellan Wide Angle, Pentax Eyepieces, Skywatcher Eyepieces, Teleskop-Service E.P., Vixen Eyepieces, William Optics Eyepieces, Eyepieces 2", Digital Camera Lens Adapters, Eyepiece Kits 2", Ultra Wide Eyepieces, Celestron Ultima E.P., Celestron Luminos E.P., Explore Scientific E.P., Kellner Eyepieces, Pentax Eyepieces, Skywatcher Eyepieces, Vixen Eyepieces, Contrast & Deep Sky, Colour Filters, DSLR Camera Filters, CCD Filters, EOS Clip Filters, Herschel-Prisms & Solar Filters, Neutral, Polar, Contrast, Solar Filters, UV IR Cut-Off, Filter Wheels, Finder, Guider, Polarscopes, Finderscopes & Brackets, Rigel Finder, Telrad Finder, Guide Scopes, Autoguiders, Off-Axis Guiders, Laser Finderscopes, Polarscopes, Focusers, Focusing Masks, Prisms & Mirror Diagonals, Amici Prisms, Mirror Diagonals, William Optics Diagonals, William Optics Prisms, Spectroscopy, Spectroscopy Accessories, Spectroscopy Tools, Baader DADOS, Shelyak Alpi, Shelyak Lisa, Shelyak Lhires III, Headlights, Collimating Heating Cleaning etc., Binoviewers & Accessories, Collimating Eyepieces, Desiccants & Optics Heaters, Laser Collimators, Lens Shades, Optics Cleaning Tools and Other Gadgets.

Photography: Astrophotography, Zwo Asi Cmos Cameras, Eagle Telescope, Controller, Cooled CCD Cameras, Celestron CCD Cameras, Moravian Instruments CCD Cameras, Moravian Instruments G0 CCD, Moravian Instruments G1 CCD, Moravian Instruments G2 CCD, Moravian Instruments G3 CCD, Moravian Instruments G4 CCD, Moravian Instruments Accessories, Point Grey Cameras, Planetary Imagers, Video Astronomy, Astrel Instruments CCD Cameras, Astro Modified DSLR Cameras, Astrotrac System, Compact System Cameras, Fornax Tracking System, Guide Scopes, Guider Cameras, Hyperstar System, Lumenera CCD Cameras, TDM Telescope Drive Master, Action Cameras, Wildlife Photography, Bridge Cameras, Compact Cameras, DSLR Cameras, Photographic Adapters, Baader T-2 Adapter System, Camera Adapters (T2, C, M42 ETC), Camera Lens Adapters, Clicklock System, Extensions, SC & Other Adapters, Eyepiece & Afocal Projection, Flatfield Accessories, M68/ZEISS, Pentax 3, Micro Stage Camera Mounts, Piggyback Mount, Camera Remote Controls, Camera Flashes & Lighting, Camera Lenses, and Mobile Phone Lenses.

Books, maps, and software: Books (Education), Books (Astronomy & Physics), Amateur & Popular Astronomy, Astrophotography, Astrophysics, Cosmology, Galaxy Formation, Dictionaries, Encyclopaedias, History of Science, Physics, Physics (Optics), Planetary Science, The Sun, Solar Physics, X-ray & Radio Astronomy, Books (Microscopy), Star Maps & Atlases, and related Software (e.g. Stellarium).

Globes & models: Globes & Astronomical Models, Astronomical Globes, Desktop Globes, Floorstanding Globes, Planetariums / Solar System Models, Sunwatches, Astrolabes, Quadrants, World Maps, Learning Resources, Primary Education, Secondary Education, Higher Education, Portable Planetariums, Watches, and Weather Stations.

Babycare: Prams, Car seats, Swings, Soothers, Highchair, Pack N Plays, Shampoos, Conditioners, Creams, Baby powers, Oil sprays, Nourishing lotions, Baby wipes, and Nursing pads.

Balloons

Jewellery: Anklet, Barrette, Belt buckle, Belly chain, Bindi, Bolo tie, Bracelet, Brooch, Chatelaine, Collar pin, Crown, Cufflink, Earring, Ferronnière, Lapel pin, Necklace, Pectoral, Pendant, Ring, Tiara, Tie chain, Tie clip, Tie pin, Toe ring, and Watch pocket strap.

Electronics: Mobile phones, MP3 players, Game players, Earphones, Headphones, OTG cables, digital cameras, tablets, electronic device accessories and disposable cameras.

Food: Legumes, Plants, Fungi, Nuts and seeds, Baked goods, Breads, Dairy products, Eggs, Meat, Cereals, Seafood, Staple foods (rice, maize, and wheat), Appetisers, Condiments, Confectionary, Convenience foods, Desserts, Dips, pastes and spreads, Dried foods, Dumplings, Fast food, Fermented foods, Halal food, Kosher food, Noodles, Pies, Salads, Sandwiches, Sauces, Snack foods, Soups, and Stews.

Gifts and products for Astrozy: Cosmic plushes (galaxy plush, star plush, pulsar plush, comet plush, meteorite plush, solar system plush, and planet plush (mercury, venus, earth, mars, jupiter, saturn, uranus, neptune, pluto plushes)), Cosmic candle holder, Cosmic candles, Cosmic perfumes, Astrana drinking game, Cosmically-themed cutlery, Cosmic calendar, Cosmic poms, Cosmic mug, Cosmic stick-on tattoos, Cosmic jewellery for children, Cosmic frame, Cosmic wine glass, Cosmic book and plush, Cosmic gift set, Astrana glass set, Cosmic flask, Cometanic quote plaque, Cosmic pin, Cosmic gift set, Cosmic gift bag, LED cosmic progeny / phenomena (LED galaxy, LED star, LED nebulae, LED supernova and LED planet), Cosmically-themed necklace, Cosmic blanket, Cosmic candleholder, Cosmic money box, Cosmic stationery set, Cosmic jewellery box, Cosmic makeover kit, Cosmic window decoration, Cosmic apron, Cosmic votive holder, Cosmic ribbon, Cosmic storage bag, Cosmic wallpaper, Cosmic giftwrap, Cosmic paper chain, Cosmic hat, Cosmic doormat, Cosmic cut-out word plaque, Cosmic window stickers, Cosmic bunting, Cosmic pet hat and scrunchie, Cosmic reed diffusers, Glittered cosmic progeny (to be hung as decorations), Colour your own cosmic decoration, Cosmic cards, Card holder pegs, Starbowl, Copper holder with star impressions or cut-outs, Cosmic cushion, Cosmic pillow, Cosmic Candlepot, Progenial ornament, Cosmic vase, Cosmic decoupage, Cosmic box scene, Cosmic dry clay, Cosmic magic message board, Cosmic toilet seat cover and mat, Embossed cosmic stickers, Felt cosmic progeny, Cosmic fireguard, Foam cosmic progeny, Foil starburst decorations, Cosmic phenomena box scene battery operated, Decorative Barnstars, Cosmic lavalamp, Cosmic projective lamp, Cosmic wishkeeper - for keeping wishes in, Cosmic Cloche, Lit sign featuring cosmic progeny, Make your own astrozy figurines, Pyramidal cosmic card holder, Cosmic mirrored oil burner, Musical cosmic lantern, Cosmic window sign/sticker, Cosmic paper set, "Me in The Cosmos" photo frame, Cosmic storage box, Cosmic doorstop, Cosmic bottle tops, Cosmic lanterns, Cosmic place mats, Cosmic water spinner, Cosmic rug, Nebulae spray, Cosmoglobe, Cosmic ceiling hanger, Cosmic window border, Cosmic tray, Astronaut gnome, Cosmic photo booth props, Cosmic pot pourri, Mini-orrery, Mega-orrery, Ceiling orrery, Mini-cosmoglobe, Cosmic cloth, Cosmic plates, Cosmic oval platter, Cosmic table cover, Cosmic table runner, Cosmic Flannelback tablecloth, Cosmic coasters, Cosmic napkins, Cosmic napkin holders, Cosmic treat tray, Cosmic oven gloves, Cosmic five section serving tray, Cosmic three section serving tray, Cosmic four section serving tray, Cosmic round plate, Cosmic drinking jar, Cosmic party cups, Cosmic wave bowl, Cosmic photo album, Cosmically-themed animal ornaments (all types of animals), and Cosmic glass flower bowl

Colours of astrozy: purple, white, black, turquoise, and yellow.

Astrozy accessories: Cosmic lights, Cosmic pot pikes, Astrozy photo frame, Astrozy photo album, Cosmic garden stakes, Acrylic cosmic progeny, Astrozy colouring book, Astrozy puzzle cube, Acrylic cosmic progeny - colour changing, Incander - a powerful glow stick featuring cosmical patterns and used at starlight festivals, Cosmic garland, Astrogress - a cosmic decoration hung on someone's door to celebrate astrozy, Cosmic masquerade mask, Cosmic page-a-day diary, Theriostellar - ornaments depicting therotranstellation, Cosmic progeny clip, Cosmic motional canvas - a picture of cosmic progeny or phenomena

that moves, Cosmosentiments - sentiments featuring cosmic progeny, Cosmic dome lights - that reflect cosmic progeny or phenomena, Astral balloons - balloons that when blown up feature cosmic progeny / phenomena on, Astrosy quiz cards, and Cosmic signs.

Cosmically-themed games: Rocket Go Go Go!, Space Monopoly, Galactic Kingdom, Colony Collusion, Milky Way Run!, Star Land, and Cosmico.

Cosmic products for pets: Cosmic pet parcel, Cosmic kennel, Cosmic dog bed, Cosmic cat bed, Cosmic cat litter tray, Rocket cat tower, Cosmic cat tower, Cosmic play and scratch cat post, Cosmically-themed cat furniture, Cosmic scratch mat, Cosmic cat pod, Cosmic cat bowtie, Cosmic cat teaser, Cosmic cat hat, Cosmic cat activity centre, Cosmic bowl, Cosmic pet sweater, Cosmic pet coat, Cosmic pet harness, Cosmic pet bandana, Cosmic chew toy, Cosmic soft toy, Cosmic dog collar, Cosmic dog lead, Cosmic dog tag, Cosmic pet crate, Cosmic dog mat, Cosmic dog towel, Cosmic spill bowl, Cosmic pet crate mattress, Cosmic cat flap, Cosmic feeding station, Cosmic pet placemat, Cosmic pet food storage container, Cosmic raised dog feeder, Cosmic water bowl, Cosmic dog dish, Cosmic fish tank / aquarium, Children's cosmic fish tank, Cosmic fish cabinet, Cosmic fish tank ornament(s), Cosmic fish tank air pump, Cosmically-themed vivarium, Cosmic vivarium ornament, Cosmic bird cage, Cosmic bird toy, Cosmically-themed bird table, Cosmic igloo hedgehog home, and Cosmically-themed chicken coop.

Astropark / Space Park: Seesaw, Merry-go-round, Swingset, Slide, Ladders, Jungle gym, Chin-up bars, Sandbox, Spring rider, Trapeze rings, Playhouse, Maze, Climbing frame, Zip line, Bench swing, Bicycle racks, Tunnel, Stepping stools, Balance beam, Monkey bars / ring climber, Fitness course, Whirl and twirl, Synchropod, Climbing wall, Epicenter,, Playpod, Chainwalk - over an oblivion, Rainier, Funhoop, Chime wall, Trampoline - bars at top to reach stars - reach for the stars, Planter, Art studio with a roof, Pumphouse with casa grande roof, Ultra GeoDome Climber, Tracktride, Adventure Net Bridge, Rock N Cross, Pyramid Net Climber, Spring bouncer, Spinabout (standing up), Cosmic themed surfaces - glow in the dark, Starbaby swings, Astrobench, Astrotable, Sustainable bin - general and recyclable waste, Megaslide, Cosmic tube, Cosmic bridge, Rocket climber (moving or stationary) - the rocket climb challenger and a stargazing deck, Planet climber, Star climber, Moon climber, Spinning saucer, Rocket garden / planter, Star garden / planter, Moon garden / planter, Cosmic orb / Nature bowl, Stepping stars, Rocket fountain, Tic-Tac-Toe - space themed - use stars and moons instead of noughts and crosses, Cosmodome (climber), Megadome (climber), Black hole spinner (hurricane spinner), Microplanetarium, Micro-observatory, Orrery climber (moving or stationary), Cosmic Playscape, Saucer spinner, Spacecraft Tower (climber), Spaceship (playhouse), Space colony (playhouse), Cosmic Twirler (climber that twists), Cosmic tube slide (stars inside that glow up), Triple split starslide, Starcabin, Starshaped sandbox / sandpit, Rocket-shaped sandbox / sandpit, Sandhouse (cosmic themed), Sand-diggers, Spacespinner (freestanding sonic spinner), Spacebuggy (spring rider), Four seat starspinner, and Spacesweets sold in a nearby shop.

Market Leadership Methodology

Expansion of the Overall Market

- targeting consumers that are currently non-users
- identifying new uses for the product/service
- increase usage rates

Guarding Existing Market Share

- strong market positioning
- development and refinement of competitive advantage
- maintain product and process innovation
- heavy advertising
- strengthening of customer relations
- strengthening of distributor relations
- strengthening of investor relations
- strengthening of government and corporate relations

Expansion of the Current Market

- heavy advertising
- improvement of distribution
- price incentives
- new product development
- merging
- takeover
- geographic expansion
- distribution expansion

Potential Consequences Affecting Share-gaining Strategy

- the cost of gaining share and whether this will be higher than the returns
- if the implication of gaining share damages an existing part of the organisation
- the company intent on gaining share has few obvious or sustainable competitive advantages and hence a weak selling proposition
- the future life cycle of the product or market is likely to be short
- an increase in share is likely to lead to anti-monopoly legislation
- the increase in share can only be gained by entering less profitable segments
- competitors begin to respond, thus increasing competition

Tactical Defensive Measures

Position Defence

relying on a company's already establishment and fortified position, typically demonstrating a sense of stagnancy.

Mobile Defence

focusing more on market broadening and diversification, with the objective of establishing strategic depth and width, yet does leave the organisation more vulnerable to attacks.

Flanking Defence

focusing not only on primary markets, but secondaries as well.

Contraction Defence

the strategy to withdraw when under attack in order to save the rest of the company.

Pre-emptive Defence

recognising the major faults of a company's defence and reorganising and repositioning the company before an attack can take place.

Counter-offensive Defence

the strategy of taking an offensive stance against an attacker, including meeting the attacker head-on, attacking the attacker's flank and developing a pincer movement in order to cut off the attacker's operational base.

other sub-strategies associated with this main strategy could be using the media to create a bad public image of the attacker, using all the company's external relations rally against the attacker, identify and pressure the attacker's investors and supporters.

Key Factors in Achieving Good Performance

- an ability and desire to try out emerging strategies and operations
- place serving the customers at the centre of all operations
- the encouragement of entrepreneurship within the organisation
- high productivity of employees by establishing high expectations as well as competitive nature
- between employees and rival companies
- branching out to related areas, rather than entering complete new markets
- limited numbers of corporate and executive staff

- strong employee understanding of the founding principles of the organisation

Good Management Rules

- redefining the mundane tasks
- listening to and measuring customer satisfaction
- cherishing and empowering the entire workforce
- quick response to customer needs
- developing a fixation on quality and service
- understanding and showing that change is good, and should be embraced

World-class Marketing Characteristics

- a profound understanding of the marketplace
- creative segmentation and market selection
- powerful differentiation, positioning and branding
- effective marketing planning processes
- long-term integrated marketing strategies
- institutionalised creativity and innovation
- total supply chain management
- market-driven organisational structures
- careful recruitment, training, employee profiling and career management
- a strong and uncompromisable unique selling point
- conducting audits and effectively responding to their results

- adoption of a transparency policy
- the continuous establishment of the unique principles of the organisation

Characteristics of an Effective Internal Marketing Programme

- a fundamental acceptance of the programme's significance by senior management
- a willingness by senior management to change the structure of the organisation in order to recognise the importance of front-line staff
- the establishment, development, and dissemination of clear fundamental principles
- the empowerment of front-line staff so they have more authority to help meet customer needs
- a clear commitment to employee development, training, profiling and fulfilment
- a recognition and veneration system for all employees
- the development of many small, yet strong, teams
- conducting all operations under shared values and principles, especially under a universal company philosophy

Department Divisionalisation

the segmentation of a department into smaller teams in order to create a stronger and more devoted set of teams who cooperate better together than in larger groups.

Structural Flexibility

the extent to which an organisation's actual structure, or perceived structure, can be moved, changed and morphed in accordance to swift changes in the external environment in order to best accommodate itself and take advantage of the shifts.

The Dissemination of Marketing Departments

the vast integration of marketing departments and representatives throughout every part of an organisation's structure and operations.

The Forms of Control

Bureaucratic Control

authority exercised through a chain of command in which superiors give subordinates instructions they are obligated to follow, unless they are not considered constitutional instructions, in which the employee can exercise the right to constitutionally object, but the employee must provide constitutional evidence that they are correct.

Constitutional Control

authority exercised by the policies, articles and principles expounded by a constitution.

Incentive Control

authority exercised by the promise of incentives such as job promotion and salary increase.

Production Technology Control

authority exercised by constraining employees' performance, thereby enabling managers to control operations.

Technical Knowledge Control

authority exercised by an organisation's technocrats who stand as the few who have the knowledge of how to manage specific situations.

Resource Control

authority exercised by the allocation of resources which facilitates certain actions and inhibits others.

Staggered Budget Control

authority exercised by the allocator of expenditures as this action can completely halt the actions of the organisation.

The Stages of Problem Analysis

Stage One

the identification of problems begins with identifying the inefficiencies of the organisation which can be obtained through market research, internal research and mass public opinion surveying, as well as through auditing, financial reporting and internal inspections and investigations to seek out potential scandals and issues.

Stage Two

the processing and organisation of these identified problems can be done by both physical and digital means, such as through databases and analysis systems by digital, and through Audit Reports by physical.

Stage Three

the construction of a plan for solution can be done internally, or independent through cost analysis teams, auditing teams, and research teams. These plans should outline explicitly the ways in which problems or potential problems can be resolved, and how to incorporate the best measures to prevent them from reoccurring. If the problem is inevitable, the plan should take the form of the ways in which the organisation's teams can best weather the problem until it fades away, or how best to resolve it once it has occurred, in order to constraint the amount of damage it causes to the organisation.

Stage Four

the implementation of the decided plan should then take place by briefing executive and managerial staff of the imminent problem, so they can best understand how it will affect their individual departments and agencies. From there, the managerial staff should then inform their teams of employees in the most calm and optimistic way possible, in order not to start a panic amongst the workforce.

Stage Five

it should also be stressed at the suppression of the problem is key until it reveals itself, otherwise, a lot of chaos, and wasted extra administrative costs, could be created for a problem that isn't as devastating as forecasted. Alternatively, the executive members of the organisation, as well as investors and other high profile stakeholders, should be notified to take a stance for the worst, especially if the forecasted problem is expected to have medium to high damage. A brace for the worst mentality better represents the actual problem, especially if it wasn't as bad as expected.

Astronist Promotional Channels

the various channels utilised by Astronist organisations, companies and subsidiaries, to promote their products, services, and informative and ideological messages.

Contingency Planning

the management practice of planning business decisions with the protection of multiple contingencies.

Monetary Flexibilities

referring to the management practice of continually keeping significant monies liquid to tackle financial emergencies.

Intermediary Stability

referring to the assessment of the stability of intermediaries for the protection of one's own business stability.

Stabilitism

the management practice of regularly analysing the stability of one's business operations as well as the externalities of the business.

Counterfeit Eradication

the management practice of relentlessly targeting and eradicating counterfeit products, especially when they threaten the stability of one's own business.

Product Availability

the management practice of relentlessly keeping all products available at all times, especially if the product is seasonal or has just been launched.

Discount Wholesalers & Online Wholesalers

utilised for generic products e.g. pencils, pens, rubbers, rulers etc. especially non-technological products

Speciality Wholesalers

utilised to purchase a specific product or type of product, especially technological products

Merchant Wholesalers

utilised to purchase products in the masses, yet not products considered generic

Utilisation of Vertical Marketing System

throughout majority of business operations in control of every aspect of production, logistics and outlet. Exceptions include businesses that have been licensed or sold (for example, the optical business in Fashions to Luxottica)

Utilisation of Horizontal Marketing System

for the protection of core business operations, complimentary products and further ensure the continuing stability of the market, especially within the education sector business. Yet channel conflict could become an issue regarding acquisitions or the mergers of acquisitions.

Internal Marketing Communications

all marketing promotions and propagations disseminated within The People's Constitutional Company of Jesse Millette and its incorporated subsidiaries, most typically targeted employees.

External Marketing Communications

all marketing promotions and propagations disseminated outside The People's Constitutional Company of Jesse Millette, most typically targeting consumers.

The Exchange Theory

the theory that businesses must exchange communications with every individual who touches their business.

The Astronist Services Methodology

Differentiation of Services from Products

- Intangible
- Inseparable
- Heterogeneous
- Perishable

The Seven Standards of Service

- Reliability
- Reactivity
- Efficiency
- Empathy
- Tangibility
- Accessibility
- Availability

Core Service

the most basic benefits the customer is buying.

Complementary Service

services that support, enhance or dignify the core service.

Mass Customisation

the strategic utilisation of technologies to deliver customised services on a mass basis.

Connection Marketing

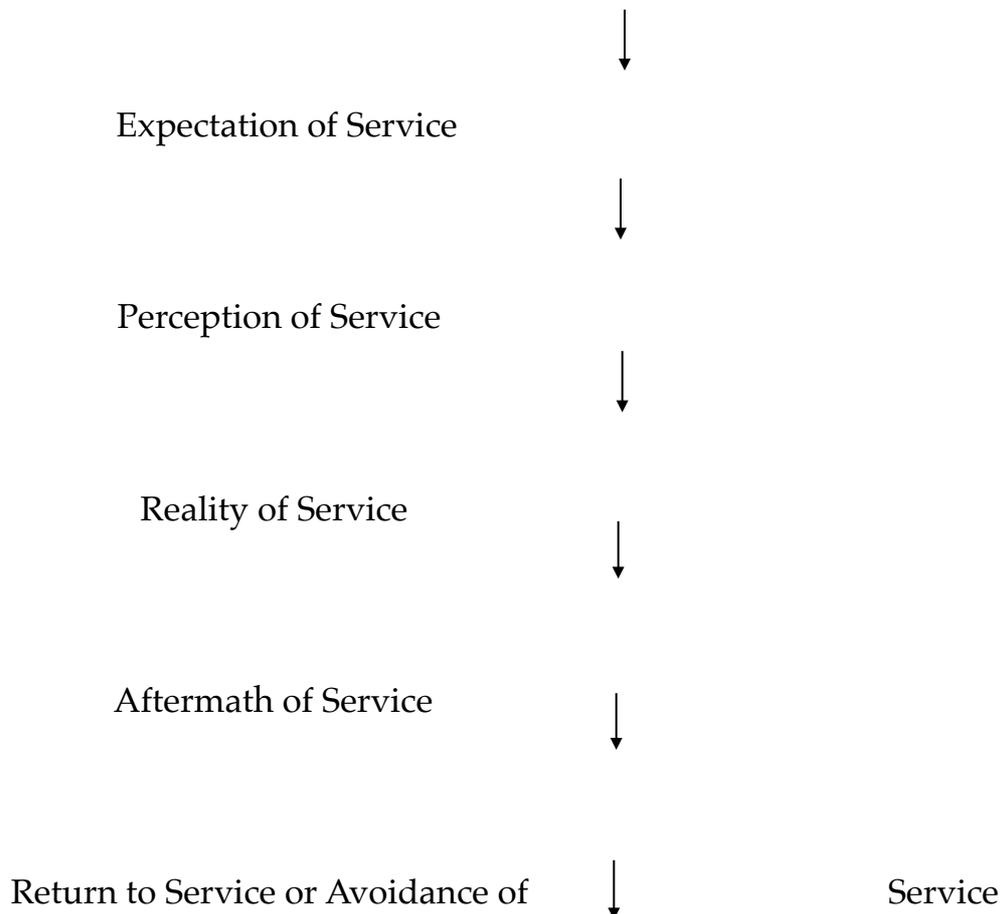

the establishment of a long and mutually beneficial connection between a service provider and a service consumer.

Client-based Operations

The Journey of Service

The Fuels of Expectation

Word of Mouth Communication, Personal Needs, Cost of Service, Past Experience,
Advertising Narrative, Surrounding Influences, Perceived Benefits of Service

Recommendation of Service or Criticism of Service

the establishment of a sector of an organisation's service to the dedication of meeting a selective group of consumer's needs, especially those with higher potential for a long and mutually beneficial connection.

Internal Marketing

treating employees as customers and developing systems, structures and benefits that satisfy, encourage and enhance them.

Distribution Techniques

- Conveniency
- Outlet Amount
- Direct or Indirect Distribution
- Location
- Scheduling
- Proximity to Other Services

Promotion Techniques

- Emphasis of Tangibilities
- Personalisation
- Creation of Figureheads of the Service
- Organisational Image
- Post Purchase Communication
- Testimonials
- Endorsements
- Sponsorships

Pricing Techniques

- Definition of the Unit of Service Consumption
- Bundling of Services
- Separation of Services
- Revenue-oriented Pricing
 - the maximisation of the surplus of income over cost
- Operations-oriented Pricing
 - the matching of supply and demand by varying price
- Patronage-oriented Pricing
 - the maximisation of the number of customers by the variation of price

The Flow of the Service

- begins with management,
- which impresses their agenda upon employees,
- who in turn relay their perception of that agenda to the customers.
- It is, therefore, the employee who is the representative of the service so it be imperative that they believe in the service and agenda of the organisation so much so that they do impress upon the customers the intended perception constructed by management.

The Universality of the Service

relates to the fundamental components of the service that can be found in any place and the values and beliefs of an organisation that are universally understood by all peoples.

Digital Dominancy Methodology

Digital Dominancy Strategies

1. The creation of hundreds of thousands of accounts on social networks all controlled by the company

2. The creation of as many Astronist branded accounts on social networking sites as possible, but keep them suitable, such as national accounts, regional, provincial and county accounts and possible even city-focused accounts
3. The investment in ensuring Astronist accounts, especially the flagship accounts, have the most followers, likes and views and are clearly some of the most popular accounts on the social network.
4. Keep updated on all emerging networks and create strong relations with them while they are smaller.

Branding Continuity

the branding concept of establishing features, characteristics or associations throughout the presentation of a brand across multiple markets. These features tend to transition to suit the market, but not so much that a consumer from a different market wouldn't be able to recognise the brand or the characters. It is the perfect balance between suitability and continuity that brands must strive to achieve.

Alternative Dissemination Strategy

disseminating the same principle message, but in a tailored way that suits the intended audience.

Direct Distribution:

- Personal Selling
- Retail Selling
- Direct Mailing
- Mail Order
- Telesales
- Internet Orders

Indirect Distribution

- Wholesalers
- Agents
- Brokers
- Resellers
- Dealers
- Aggregators

Astronist Taxation Methodology

Taxation Awareness

the policy championed and propagated by The People's Constitutional Company of Jesse Millette, stipulating the encouragement of governments and governing authorities to detail the specific social, cultural, economic and infrastructural projects which the taxes from The People's Constitutional Company of Jesse Millette are being and will be used.

Taxation Publicity

the utilisation of Taxation Awareness as a mass marketing and public relations tool.

Astronist Social Business

the business mechanism developed from Social Business, focusing on the structuring, operating, and founding of corporate principles on the idea that businesses should be socially and economically integrated into society, should pay higher taxes, and should exist not solely for profit maximisation, but social betterment and national advancement.

Corporation Tax

The purpose of Corporation Tax is to generate government income from the operations of business in order to redistribute the funds across the nation in order to pay for infrastructural developments, welfare, and other governmental responsibilities.

However, since its inception, Corporation Tax has been a subject of contention for business who seem to have driven themselves into the corporate culture of taxation avoidance and not encouraging their employees to understand the importance of taxation and how corporate taxation can benefit their business.

Money is not a stationary object. The nature of money is that it moves from one holder to another. The key is to try and keep it under your holding for as long as possible. However, it must also be said that money generates

money and if money does not move, it cannot generate more, leading into the concept of Dead Money.

Under the Astronist Taxation Methodology, it is believed that portions of revenue should be saved, portions of revenue should be spent, portions of revenue should be rewarded, and portions of revenue should be given, given to the nation in which your business resides for without the nation's cooperation, the business would not exist.

Money that is given in taxes, is dispersed by the government, back throughout the nation in various forms, whether tangible or intangible, and whether directly or indirectly relating to or helping your business. The argument is that all taxes that are redistributed throughout the nation, are leading to the betterment of the peoples of the nation, and so, are improving societal structures, economic stability, and overall societal development. The businesses, especially those that are larger and operate throughout the nation, are the main benefactor of tax distributions because tax distributions build stronger societies, larger urban hubs, bring better welfare and education services, and generally provide peoples with better lives, thus incentivising them to purchase the products or services of businesses with their improved incomes.

Under Astronist Social Business, it is believed that businesses should not simply be leeches on society; taking all that they can get and funnelling the funds to foreign lands. Businesses are the lifeblood of capitalism; they form the functioning elements of all societies and have done so throughout history. It is a greater benefit to businesses to pay taxation to improve the lives of peoples in the nation than it is to any other party. Businesses should be integrated into society. They should be part of the function of society. The following question should be asked; if the business was to disappear tomorrow, would it cause significant damage to society? Or would its burden of taxation avoidance and societal isolation actually benefit society greater than its own presence?

It should be in the interest of the business to seek ways in which their customers will purchase more of their products and services, but under this methodology, the taxation system is understood to be the main route of improving the lives of customers and the overall structures of society, thus

leading them to feel they can afford to buy more products and services. This is seen as not only a fundamentality of Astronist Social Business, but a prudential financial and commercial investment back into the society in which the business operates.

Regarding larger businesses, it is argued that taxation is much more important to their interests than any other type of business. This is because larger businesses, which should typically pay larger taxations than smaller enterprises, have a greater chance of gaining influence in the political, social, and budgetary realms. This growing influence via taxation will directly lead to the business being able to have a say in budgetary expenditures, especially those that will affect the operations of the business.

For example, if a company pays £2 billion in taxes a year, the government is much more likely to be influenced by that company than a company which doesn't contribute nearly as much as that in taxes. If a company pays higher taxes, and that same company was to disappear, there would be much more significant affect on the overall economic than if a company that didn't pay taxes disappeared from the economy. The main principle is that paying taxes, especially for larger companies, is an affective way of gaining influence in the nation whilst still improving the overall betterment of the peoples of the nation. Not only this, but a company that pays high taxes is much more likely to gain a positive public image than that of companies which do not.

In a competitive sense, your company that pays taxes may not want its rivals to pay taxes because that may reduce the positivity towards your company and take the social responsibility spotlight away from your company.

Overall, it is the taxation of companies that leads to economic, financial, and social betterment for the peoples of the nation, but it is, under Astronist Social Business and Astronist Taxation Methodology, a key component, too, of business growth, development, societal integration, and political influence.

It is important for a company utilising the Astronist Taxation Methodology to understand the significance of governmental cooperation and to promote closer proximity between the company operations, and the interests and functions of the government.

If it is of the interest of the government to implement strict VAT policies, it is also, therefore, of the interest of the company to become a VAT Registered Company in the nation in order to keep records of VAT taxations on products/services. This corporate cooperation of record keeping allows governments to establish a more efficient VAT system with the intention of generating the higher amounts of VAT revenue as possible.

Handing this valuable information over to the government allows for a relationship to build between the government and the company, especially large companies with vested interests in establishing and maintaining governmental relations. By cooperating with the government on VAT recording, the company can gain influence in governmental operations and can build a voice for their interests in the nation.

This is more than likely to result in the assistance of the government if the company goes into financial instability, and creating a relationship with the government also allows for greater opportunities for the company, its employees, its investors, and its overall operations.

The Ten Principles of Astronist Social Business

1. The founding objectives of the business should centre around one or more national or international issues, for example, poverty, education scarcity, illiteracy, etc.
2. The business should become economically integrated by contributing high taxes and positioning itself as a staple of the national economy.
3. The business should become socially integrated by contributing high taxes, investing in social programmes nationwide, and should propagated its corporate responsibilities to the peoples of the nation.
4. Investors receive their investment back, and a little extra, in order to incentivise them to keep investing, but every investor must understand the principles and the purpose of the company, and its subsidiaries.
5. Company profits, once investor dividends have been paid, stay with the company to fund expansion and improvements.
6. Environmental, societal, and economic sustainability are considered high priorities.

7. The workforce gets increasingly improving wages and working conditions in order to stay above national and international standards, and, for The People's Constitutional Company of Jesse Millette, constitutional standards.
8. The practicing and encouragement of Impact Investing and ensuring the company explicitly outlines the plans, the ambitions, and the methodologies of the company to achieve its goals.
9. The main objective for a company utilising the Astronist Social Business methodology is to satisfy investors, gain social, political, and cultural influence, and to become integrated into the societal and economic foundations of the nation by high taxation contributions, social development investments, and programmes to promote economic progress.
10. All operations of the company should be conducted with joy, enthusiasm, and a universally shared set of principles, for understanding the role the company plays in the betterment of the peoples of the society.

The Astronist Public Relations Methodology

Astronist Public Relations - the management functions and practices utilised by The People's Constitutional Company of Jesse Millette in the establishment and sustainment of mutual lines of communication, acceptance, collaboration, and relations between The People's Constitutional Company of Jesse Millette and its publics; involving the management of issues or reputation emergencies; assisting in managerial personnel keeping informed to public opinions; reaffirming the role of The People's Constitutional Company of Jesse Millette to serve the interests of peoples; serves as a preemptive

warning to anticipated problems; and utilises research and communication as its principal tools.

- Omnination level

Consistency Model

- Communication used to dominate public opinion and to accept the dominant position by portraying an unwavering consistency in image

Open Model

- Communication used to allow public opinion to be completely open and almost wild, whereby no position is ever considered victorious

Transparency Model

- Communication used to allow for complete transparency, with the understanding that there is a narrative position being conveyed.

Rhetoric

- most often labeled as the “narrative”, the set of positions and conveyances expounded by The People’s Constitutional Company of Jesse Millette to ensure the continuation of the company’s official stance and vision for its future.

The Public Sphere

and position of The People’s Constitutional Company of Jesse Millette within it

Planned Communication

- All communication expounded by The People’s Constitutional Company of Jesse Millette or any of its subsidiaries must be planned in order to fit in within the narrative and to ensure consistency and the continuation of the company’s vision.

The Reduction of Predisposition

Approaches to Planned Communication

- setting objectives and targets
- the involvement of all levels of the workforce
- authority and responsibility given to managers that planned communication is executed as planned
- review and appraisal of results by higher authorities within the company
- the documentation of these results and the reassessment and redesign of the previous planned communication

- communication with the appropriate external entities to ensure the achievement of the planned communication

State on the Publics of The People's Constitutional Company of Jesse Millette

- all publics are equal
- the complete transparency of information is vital
- the review of information by transparency committees before being published
- the review of information by constitutionality committees before being published

Segmentation of Publics

- geography of where they live, work, and leisure
- demographics of their age, gender, and income
- psychographics of their attitudes, ambitions, and opinions
- personalities
- group membership in clubs, societies, and religious association
- philosophical association
- media consumption - newspapers, radio, websites, preferred news outlets, and preferred social networks
- job role - manager, assistant, or general worker/labourer

Sponsorship Visibility in the Community

Relevance of the Company in the Community

- instilling this concept drives company valuation
- creates a sense of importance and essentiality
- proclamation of taxation is another driver of relevance and essentiality

Utilisation of Cause-related Marketing (CRM)

- complementation of company operations
- bolstering of company operations
- essentiality of company to the cause that has been invest in

Greening

the process utilised in Astronist Public Relations, in which a specific project within a company, or the entirety of the company's operations are marketed through publicity stunts and events to make a positive contribution to the perseveration of the environment.

Astronist Issues Management

the processes utilised to identify the capacity to which a strategy is able to mobilise, redefine, and redirect itself in the event of an arisen issue, that fall in alignment with the Astronist transparency, and constitutionality obligations of The People's Constitutional Company of Jesse Millette.

Astronist Crisis Manual Dissemination

Preparatory Works

- Crisis Simulation
- Crisis Training

Astronist Crisis Control

- definition of root cause of crisis
- under the severity of the crisis in terms of its depth and breadth
- centralisation of information flows (expounded by central headquarters only)
- crisis team isolation from daily business concerns
- assumption of worst-case
- no dependency on just one individual
- consistent press conferences and publication of reportages to ensure appeasement
- constant reassurance of investors and stakeholders
- upkeep of professionalism
- recognition of the importance of short-term sacrifices to save long-term operations
- consistent conversation between the chairman or vice chairman and all stakeholders

Journalistic Relations

- corporate transparency
- company constitutionality
- consistent professionalism
- all questions answers transparently
- experts present during press conferences

Insiders on Public Affairs (those working in government representing the company)

Outsiders on Public Affairs (those working in the company)

Magnitudes of Change: Short-term change, Long-term change, Concentrated change, Diluted change, Seasonal change, and Annual change.

Other important ideas include: Inclusive Company Communication, Total Brand Communication, Astronist Corporate Philanthropy, Media Planning, and Astronist Emotional Marketing.

Sponsorship purposes

- support product and services
- build media interest
- reinforce the corporate identity
- construction of goodwill
- part of an integrated campaign
- as an alternative to advertising

The Astronist Economic Methodology

Trade Concession

a preferential, most typically exclusive, rate of trading between one nation, or company and another.

Astronist Economics

the social science which studies the interactions, and interrelations between humans in the acquisition, development, and allocation of resources, and typically incorporates psychological, sociocultural, and philosophical concepts into its methodologies.

a system of economic positioning, governance, and management, constructed under newfound principles, and policies, usually supporting the ambitions of The People's Constitutional Company of Jesse Millette.

Tax Concession

a preferential, most typically exclusive, rate of taxation between a government and a company.

Commercial Concession

a preferential, most typically exclusive, rate and ease of commerce granted by a government for a company to operate.

The Journey to National Prosperity

1. Monetary Stabilisation (dollarisation if necessary)
2. Tax Suppression and Simplification
3. Pension System Reformed
4. Promotion of Investment
5. Trade Openness
6. Decentralisation
7. Confederationisation
8. Budgetary Balance, Stability & Oversight

Key Economic Factors

1. Economic Quality
2. Business Environment
3. Governance
4. Education
5. Health
6. Safety and Security
7. Mentality & Philosophy
8. Personal Freedom
9. Social Capital
10. Natural Environment

The Implementation of Astronist Jurisprudence

Astronist Jurisprudence

the constitutionally structured legal system of a nation under Astronist Governing Methodology, most typically focusing on establishing philosophical principles, enacting pro-education leaning policies, and witnessing the cooperation between the nation and The People's Constitutional Company of Jesse Millette in trying to improve the nation from all aspects, whether economic, social, cultural, or philosophical.

Astronist Jurisprudence isn't a complete methodology; it needs the addition of the cultural, social, environmental and religious aspects of the nation's society in order to be implemented properly and in order for the peoples of the nation to fully benefit from its method, therefore, it is right to argue that Astronist Jurisprudence is but half complete for it does need its applicant nation to achieve its totality and to be a force of betterment for all peoples across the nation.

The Nation

the hypothetical nation that would choose to align itself under Astronist Jurisprudence.

Philosophic Identity

Under Astronist Jurisprudence, the philosophical identity of society is debatably the main focus of the system as it is believed under Astronist Jurisprudence, that The Philosophy of the nation, unified, championed, and solidified by figures of honour, heroism, and valour, stands as the critical component of the success of the nation.

If the nation isn't philosophically unified, as distinct from religious principles and worship, the nation, in all its aspects will not function successfully. A national philosophy, in strong alignment with, yet distinct from, the religious identity of the nation, is needed to cultivate a united image of what the peoples of the nation want their nation to be in the future; to be a leading nation, to be a prosperous nation, and most importantly, to be a unified nation under one philosophy shared by all for the betterment of all peoples of the nation.

Under Astronist Jurisprudence, the Astronist characters are transformed and positioned to appeal to the hearts of the peoples of the nations for the betterment of their nations. Under Astronist Jurisprudence, the Astronist characters are heralded as "The Champions of The Nation", and are adorned at the centre of society as philosophically unifying figures, representative of how the peoples of the nation view their symbolism.

It could be criticised that the Astronist characters are, but a work of fiction, and so they do not belong in a place of reality. That be the truth, they are a work of fiction, but the beauty of fictional figures is that they can evolve and morph into whatever you wish them to be. They are not simply one dimensionally. They are not simply carrying one message. They are not simply representative of one people group. Their appearance, their race, their religiosity, their wealth, their circumstance, their personalities, can be changed into a infinite amount of representations, but there will always be one unifying message championed by their presence; the betterment of all peoples of the nation, for the nation, and that, vast occupation is too much a burden on one real person, but to be fictional, to act as philosophical figures meaning much more than what they are initial interpreted as, is the superior route of philosophical unification.

Constitutional Principles

Under Astronist Jurisprudence, the promotion of the constitution of the nation as The Word is important to the understanding of the ambitions, the principles, and the fundamental structures of the nation's society.

Under Astronist Jurisprudence, it is believed that all peoples of a nation should know and understand the words of their nation's constitution whether directly from the constitution itself, or indirectly through philosophical or religious means. The importance of the close proximity between the peoples of the nation and The Word of the nation is a significant relationship which is often overlooked.

However, under Astronist Jurisprudence, the constitutional principles of both the nation's constitution and, with governmental authorisation, The Grand Constitution, must be propagated in order to build a strong, unified, and leading nation in which all peoples both internally and externally, understand the positions, the identity, and the principles of the nation. The strength of the bond between The Word and the peoples, reflects the strength of the very foundations of the nation.

The methodology of Astronist Jurisprudence believes that The Word is at the centre, and should be, at the centre of the structure of the nation, and so, it is the duty of all Astronist Jurisprudence supporters to assist and propagate the dissemination and understanding of the constitution. It is also believed that The Grand Constitution, with all its policies, theories, methodologies and viewpoints across various subjects of management, philosophy, governance, and society, could hold a valuable place in re-enforcing the significance of the nation's constitution and the principles it does represent and hold strong.

Pro-education Policies

In order to ensure the betterment of peoples within the nation, it is essential for pro-education policies to be implemented.

Following the theories of Educentrism and Educationism from The Grand Journals, the nation is encouraged to centre their economic, social, cultural, and governmental components around the national education system.

The education system, under Astronist Jurisprudence, is commonly encouraged to switch to The Astronist Education System, though this is not mandatory. The necessary components, however, come in the form of policy. Under Astronist Jurisprudence, it is the duty of the nation to keep its peoples educated, and so, it is championed that the largest portion of the governmental budget, must be assigned to the education system of the nation. In order to fundamentally comply with Astronist Jurisprudence, this policy is of the highest importance in order to construct a society centred on the education of its peoples, the betterment of its peoples as a result, and finally, the overall improvement of the strength of the nation's economy, workforce, and financial stability.

Another educational and dissemination policy within Astronist Jurisprudence is the wide propagation of education institutions, services, and the education system in general in order to encourage peoples of all ages to engage with the educational offerings available and to better themselves and to better the peoples around them, and so, leading to the betterment of the nation. Under the policy of Educationism, championing the education system as the centre and foundational aspect of society by utilising national, philosophical, and religious figures to promote education, is one of the fundamental ways of encouraging as many peoples of the nation as

possible to understand the value of education for both themselves and the nation as a whole.

Religious Identity

The Religious Identity of a nation, whether that be atheistic, agnostic, or theistic, unorganised, or organised, unimplemented, or implemented, is a key and fundamental structure to the advancement, development, and self-determination of a nation.

It is the ecclesiastical, Islamic, Jewish, Buddhist or any other organised religion, that has formed the fundamentals of all nations throughout the history of humanic society on Earth. And so, it is this identity that can be used most effectively to unify the peoples of the nation, as seen in many a religious revolutions, and oppositely, secular revolutions all the same.

Realising the identity of the worshipping peoples of the nation is key to understanding the cultures, the attitudes, the societal structures, the philosophical principles and the constitution of the nation. Religion has long been a source of contention between peoples. A source of division, conflict, and subsequent hardship, but it has too, been the sole unifier of nations, peoples, and once conflicting groups.

Under Astronist Jurisprudence, Religion is separated, not from the state, for under Astronist Jurisprudence, religion is believed to be a strong unifier for the nation and should not be suppressed, but is separated from the concept of The Philosophy. The religion of the peoples of the nation does inevitably influence the beliefs and philosophies of the peoples, yet it is believed that this distinction between these two entities of thought, is a monumental idea that neither allows religion to gain too much influence over the progression of the nation, nor allows The Philosophy to gain too much influence to overshadow the faith of the nation. It is this delicate balance that Astronist Jurisprudence does ultimately strive towards, for under this methodology, it is strongly believed that the relationship between The Philosophy and The Faith is the key to the success of the nation and subsequently, key to the betterment of peoples in all aspects of their existence.

Introduction to Astronarianism

Astronarianism is a political and economic philosophy or ideology that encompasses a vast array of orientations and positions and is the founding form of Astronic ideology. Astronarianism is uniquely integrated with Astronism, hence a large amount of the ideas and theories of Astronarianism are in some way linked to those which are considered important in Astronism.

In the context of Astronic ideology, there exists orientations and positions and understanding the differences between these is important. An orientation, specifically referred to as an ideological orientation, is a fully-formed ideology that can either be categorised within another ideological group or can exist standalone. An orientation doesn't simply expose a single idea or theory, but encompasses a variety of connected ideas and theories that share some level of unity in their principles. An orientation is also complete and comprehensive enough to be represented by political parties; generally, an ideological position would not be extensive enough on its own to form a political party or movement. By contrast, a position, or also known as an ideological position, usually espouses either one, two or at most, three ideas or theories, but cannot be considered as a fully-formed ideology, hence it is not an orientation; it is more likely that a position would encompass a single idea that may then be incorporated into a wider orientation. It can be said that an orientation is a collection of positions that share a commonality.

Definitions of the positions within Astronarianism:

Extrinsism - the Astronist position holding that political and economic betterment are best sought through building relations and business cooperations with entities outside one's own borders.

Intrinism - a precursor to the policy of isolationism, the Astronist position holding that political and economic betterment are best sought by strengthening internal business ties and cooperation rather than seeking foreign relations.

Spatialism/Spacialism - the Astronist position, specifically part of the Spacist orientation, stating that greater investment in the national space agency will lead to economic betterment and political superiority, especially following the prophesied Spacefaring Revolution.

Opportism - the Astronist position stating that opportunities for economic growth must outweigh political integrity.

Commoditism - the Astronist position stating that space, education, religion and other previously un-commodified areas of the economic should now become commodified.

Unitism - the Astronist position regulating foreign imports according to a specified number of units from particular countries per month, especially as a way to limit foreign imports and to boost the value of a country's own produce.

Indignatism - the Astronist position stating that political dignity and integrity must outweigh economic growth opportunities and therefore stands in contrast to opportism.

Pnemitism - the Astronist position stating that religious and cultural identity and integrity must outweigh economic growth opportunities. This is considered to be one of the most important aspects of grandarianism.

Transactivism - in Astronarianism, the position that the population should be proactive in the society rather than reactive; the method of approaching something proactively.

Amphism - in Astronarianism, the position stating that it is possible for a country to embrace multiculturalism without one of those cultures or ideologies eventually dominating the others.

Haplism - in Astronarianism, the position opposing amphism and states that it is not possible for a country to embrace multiculturalism without one culture or ideology eventually dominating dominating others; it is similar in principle to dominationism.

Hyperactivism - in Astronarianism, the position stating that the efficiency of a government to resolve an issue is a direct measure of that country's political integrity and national identity.

Preactivism - in Astronarianism, the position stating that the superior form of governance is to be constantly future-looking so as to predict and ultimately efficiently prepare for problems before they have occurred.

Enactivism - in Astronarianism, the position stating that problems of the economy and politics should be resolved as and when they occur rather than relying on predictions and preactively resolving problems that have not yet or may not ever arise.

Unreactivism - the Astronist position inspired by the Taoist philosophical principle of non-doing applied to the context of politics and the economy in which it is believed that not taking action to resolve naturally occurring issues is the best way to retain identity and integrity both on a political, economic, and cultural basis.

Informationism - the Astronist position stating that the future of economic success is dependent upon the extent to which a country has developed their information economy.

Sectorialism - the orientation holding that society can be split up into different sectors in which people can live out their preferred economic beliefs whilst still under the governance in a partially centralised government that manages people's transitions between sectors. This would allow people who wish to concern themselves with hypercapitalism to pursue, those whom wish to live a simpler and less money-centric life, and those whom wish to live in a socialist way, or run their businesses or homes in either of these ways.

Consumptionism - the Astronist position entirely focusing on consumers and their needs, and the governmental system acting towards consumers at all times for their benefit rather than for the benefit of corporations.

Hypercapitalism - the Astronist position stating that we are currently living in societies that favour profitability above their own moral principles and over the ethics upon which their nations were founded. Further to this, hypercapitalism expounds the notion that profitability should supersede the upholding of human rights, environmental protection, persecution, and oppression as well as over art, aesthetics, architecture etc.

Self-perpetuation of Hypercapitalism - this is a post-omnidoxical work that shall further introduce and elaborate on the topic of hypercapitalism.

Toxicity of Hypercapitalism - this is a post-omnidoxical work that shall further introduce and elaborate on the topic of hypercapitalism and shall be a postcursor to the work Self-perpetuation of Hypercapitalism.

Post-omnidoxically, that which shall be known as comparative Astronarianism shall arise as a branch of comparology and shall deal with the comparison between past economic ideologies and policies and how they relate to Astronarian and its different orientations and positions, and shall principally including the following pre-Astronarian forms of political philosophy: Anarchism Capitalism (Corporate capitalism, Dirigism, Laissez-faire, Mercantilism, Neo-mercantilism, Protectionism, Social market, and State capitalism), Economic democracy, Fascism, Feminist economics, Georgism, Green economy, Religious economics (Christian economics and Islamic economics), Socialist economics (Market socialist, Marxism, Mutualism, Participatory, Socialist market, Socialist oriented market, Syndicalism, and Communism) and Traditionalism (Communalism, Corporatism, Distributism, and Feudalism).

Also as part of comparative Astronarianism will be the discussion of economic coordinations and how Astronarianism (and its different orientations) fits in with these different coordinations: Closed (autarky), Decentralised, Digital, Dual, Gift, Informal, Market, Mixed, Natural, Open, Planned, Subsistence, Underground, Vertical archipelago, and Virtual. One economic coordination that Astronarianism itself introduces is the coordination known as Spatial/Spacial.

Again, as another element of comparative Astronarianism, the ideology and its orientations and positions will be compared to the following economic transitions, especially in order to derive a distinct opinion on these different economic processes: Collectivisation, Communitisation, Corporatisation, Demutualisation, Deregulation, Expropriation, Financialisation, Liberalisation, Marketisation, Municipalisation, Mutualisation, Nationalisation, Privatisation and Socialisation. The economic transition that Astronarianism introduces and principally advocates for is to be known as spaciasation, or also known as spacialisation.

Comparative Astronarianism will also involve the discussion of Astronarian opinions on the following miscellaneous topics of economic and political philosophy: Expeditionary, Inclusive democracy, Information economy, Manorialism, Newly industrialised, Palace economy, Plantation economy, Plutonomy (Cometanic note: this may be good because

people who wish not to feel the degradation to their ethics and morality that money has can step out of the capitalistic world), Post-capitalism, Post-industrial, Post-scarcity, Resource-based, Token economy, Traditional economy, Transition economy, and World economy.

Thirteen Industries of Focus: these include Foundational Industries: all spacial industries, education, tourism, transportation, construction, healthcare; and these also include Advanced Industries: solar power, artificial intelligence, drones, genomics, robotics, driverless cars, and the connected home.

The legalisation of abortion is opposed in Astronarianism due to the influence of Astronist ethical principles stating that life must always come first no matter the economic or social circumstances. Therefore, Astronarianism is opposed to the legalisation of abortion in all forms and at all stages.

On the topic of the legalisation of euthanasia, there is an ambiguous stance held by Astronarian ideology. One Astronist stance holds that death is a natural occurrence and the emotions associated with it by humans are distortive and therefore we should allow nature as a derivation of The Cosmos to take its course and therefore no euthanasia is permitted. The second Astronarian approach holds that euthanasia is an individual and personal act of compassion for the receiver, but that only a controlled passive form of euthanasia should be allowed so as to not allow for the distortion and extrication of the practice. Ultimately, in the second approach it is held that one being euthanised or not does not negatively affect the wider functionalities of The Cosmos and it should therefore be allowed. Generally, passive euthanasia is considered poised to be legalised while both active euthanasia and assisted suicide are not suitable for legalisation.

The topic of the legalisation of the death penalty / capital punishment is opposed generally in Astronarianism, however, by exception, it is concurred with, but only in the case of terrorism (wherein a person commits murder for the pursuit of political, cultural or religious aims) with the only permitted way of enacting the death penalty by lethal injection.

Concurred for the notion of Life or Permanent Rehabilitation which means that the individual be in a rehabilitative state for an undisclosed amount of time. Also supports the reinstatement of psychiatric hospitals.

Homosexuality / transsexuality / bisexuality and LGBT rights - concurred.

Artificial contraception - concurred, agree with.

Pornography - Dissuaded due to its negative impact on the watcher but not considered to be attributive to an illegal act.

Smoking - Indifferention (means that it is never to be encouraged, but it is fine for small dosage use as well as the notion that it will always be available so its dissuasion is fruitless due to the temptations of man, but also it will not affect the functions of The Cosmos).

Voting - concurred at the age of 15.

Alcohol - Indifferention.

Guns - Opposed. Supports both the physical removal guns and the cultural disintegration of them.

Cannabis usage - Indifferention.

Suicide - Indifferention - not considered to be a sin and those attempting to or those whom have committed suicide should not be stigmatised for this. Death is considered the instance in which one becomes "One with The Cosmos" as influenced by Astronist theology.

Drugs (including cannabis) - Opposed.

Prostitution - Opposed.

Freedom of movement - World citizenship.

Characteristics of an Astronist Society:

- acceptance and normalisation of LGBTQ peoples
- non-military approach
- propagandation
- technocracy
- national/unified philosophy
- confederationism in relation to the structure of the state
- strict adherence to the rights of all peoples
- peaceseeking
- primary focuses of government funding are healthcare, education, philosophical organisations, the space programme, and transportation.
- removal of seeking dominance between males and females; it is not exactly equality because there is a default presupposition that men and women are accepted for the roles they wish to play in society with removal of stereotypes.
- freedom of the press, however, there does exist state channels.
- an abhorrence to using fear as motivation by the government to control the masses; instead, the masses are persuaded and encouraged through advertising, propagandation, and other non-fear driven forms.
- the embracement of labour unions.
- promoting and championing of intellectuals and the arts, especially philosophers who are depicted as leaders, or the forefronters of the society.

- emphasis on policing - moving from military is put into police, and fire forces - police are not militarised though.
- the acts of smoking, drug-taking, and other forms of unnatural ecstasy are discouraged, though not lawfully, although the cultural landscape is understanding of why people wish to do these things rather than looking away, or condemning those people. Interestingly, alcohol is considered an unnatural ecstasy.
- fitness and mental health are both areas subsidised by the government.
- All forms of music, film, and fashion encouraged.
- professionalism - an emphasis on professions.
- private property and business ownership
- direct democracy - regular political votes
- medium level of government involvement

The Four Orientations of Astronarianism

Astronarianism can be considered a Big Tent ideology that holds many different orientations and positions that stretch across the political spectrum. There are herein omnidoxically-identified four orientations of Astronarianism which represent the four largest form of Astronarianism which includes grandism (or grandarianism), reactionism, proactionism, and reorientationism.

Astronarianism is the founder of space politics in the same sense as Green politics or the Green Movement (space movement) which involves the application of all political systems to the context of space colonisation, exploration, commercialisation, militarisation etc. Astronarianism lobbies for space related affairs (prospace/prospacialism, antispace/antispacialism, nonspace/nonspacialism there are many other orientations on the issue).

The organisation of space politics into a political movement and branch of politics is considered to be the most important role for Astronarianism as Astronarianism itself does advocate for certain non-space related issues, but the majority of its advocacy is oriented around the topic of space and its many political aspects. It is the goal of the Astronist philosophical tradition to make Astronarianism and the many orientations within it the first ideology to promote and engage in space-oriented politics for individual nations as Astronarianism's main belief is in the ectopoliticisation/ectopoliticism of space-related affairs.

Astronarianism notionises to those whom see space politics as a non-issue to be unaware of the impending Humanic Exploration of The Cosmos and subsequently the political, ideological, and philosophical groundworks and foundations must be formed first. The space movement and space politics is considered to be predicated on the ideas of The Philosophy of Astronism which are expected to be motivators for the cultural understanding and consideration for issues raised and advocated for in space politics.

Definition of a Space party - a Space party is a formally organised political party based on the principles of space politics, such as the advocacy of space exploration, supporting

spacism, an economy centred on spacefaring, and the Astronisation and astrocentralisation of society. Spacists believe that the issues advocated for in the space movement are future-focused and intrinsically linked to humanity's destiny, thus invoking Astronist beliefs into the ideology. Space party platforms typically embrace capitalistic rather than socialistic economic policies and although they share some principles with Green parties, these two branches of politics are expected to clash because although spacists insist on the conservation of space, they also promote the colonisation of other worlds and the utilisation of resources to build the space-centred economy which isn't exactly Green-focused or preservationist politics. The Asteroid Symbol is to be recognised internationally as the symbol of Space politics.

The Ten Core Tenets of Space Politics:

- astronomical wisdom
- space justice
- philosophic democracy
- non-militarism
- astrocentralisation
- space-centred economy
- space exploration advocacy on political, economic, cultural, and religious grounds
- globalisation
- future-focused vision
- spacefaring revolution

Intranisation/Intransim/Intranise - the process of making an issue contiguous and universal for a country's parliament to consider despite the political party that holds power, and is advocated for in Astronarianism for space-related and environmental-related issues which are considered to be ectopolitical by their nature.

The Comity of Political Astronists (Astronist Comity) is a transnational Astronist organisation founded in the United Kingdom by the Founder of Astronism, Cometan, in 2019 alongside the development of Astronarianism. The organisation's purpose is to unite the different branches of the ideology of Astronarianism under one banner so as to form a political force that seeks to establish general Astronist principles rather than focusing on the sectarian branches of the ideology, particularly emphasising the implementation of spacism as the primary theme of Astronarianism.

Space politics

Space politics (also known as astropolitics, or cosmopolitics) is a political ideology that aims to create an astrocentric sustainable society rooted in spacism, the exploration of space, social justice and grassroots democracy. Its origins reside in the Omnidoxy and it emerged as a result of the beliefs of Astronism and is considered to be one of the founding elements of Astronarianism and Astronic ideology. The political term Space was used initially to refer to the ideology of spacism and the space movement. The politics of outer space includes space treaties, law in space, international cooperation and conflict in space

exploration, and the hypothetical political impact of any contact with extraterrestrial intelligence.

Astropolitics, also known as astropolitik, has its foundations in geopolitics and is a theory that is used for space in its broadest sense. Astropolitics is often studied as an aspect of the security studies and international relations subfields of political science. This includes the role of space exploration in diplomacy as well as the military uses of satellites, for example, for surveillance or cyber warfare. An important aspect of the geopolitics of space is the prevention of a military threat to Earth from outer space.

Space politics can be described as a movement that encompasses a variety of different ideologies, yet remains founded and spearheaded by Astronarianism and its four orientations. There is expected to be a strong activism culture/tradition within space politics like in green politics because the space movement and space politics is predicated on the idea that there must occur a drastic social change and repredication towards space-related topics and towards the imminent initiation of the Humanic Exploration of The Cosmos as the essential neopredication for society and wider humanity (cosmocentricity). Therefore, activism plays a central role in the furtherance of the space movement in order to engrain the spacist ideology into multiple societies.

Space politics itself is not an ideology, but is instead a branch of politics, meanwhile the space movement can be considered an ideology, or political ideology that is predicated on spacism as founded by the Astronist ideology.

Space politics is also described as a social movement because it involves group action across a wide range of people and is nondiscriminatory and inclusive by its nature as it involves and raises concerns for all of humanity and therefore people from different cultures, religions, political views, ethnicities, classes, nationalities etc. are all considered to be involved which makes space politics more specifically defined as that which shall be known as a pansocial movement as it isn't exactly predicated on the idea of oppressed populations being empowered to challenge and resist powerful elites as is the traditional understanding of a social movement.

Space politics, and particularly the term space movement, is certain a political movement at its core with philosophical, cultural, and ideological foundations with those foundations being transcended into politics through the founding ideology of Astronarianism and its branches which forms a group of people that intend to achieve a political goal by entering their ideas and issues into the political system.

Space politics, and the space movement may also be categorised as part of the environmental movement and although this designation is not disagreed with by the Astronist viewpoint, space politics is considered to be a distinct branch of politics from that of green politics. However, space politics, or the space movement may be considered part of the environmental movement when space, other planets, and celestial entities are classified as part of nature. Also, the nature of space politics and the way in which

advocates and politicises is conducted in a similar way to that of the environmental movement and green politics therefore it is expected that space politics/the space movement will be equated to the environmental movement/green politics.

Within the context of the entire Astronist philosophical tradition, I have introduced thousands of different terms during the formation of the tradition and I have also developed new meanings of words through a process of redefinition and so it remains important for myself, as Cometan, to distinguish between different terms used which we shall now conduct in regards to this particular topic.

Space politics - the branch of politics dealing with space-related issues, especially involving political parties and ideologies that at least include or entirely orient themselves around the notion of spacism, repredicationism, and cosmocentricity.

Space movement - the societal, cultural, philosophical, religious, yet chiefly political grouping of people for the advancement of space politics in general, of spacism, or specifically of Astronarianism as the founder of spacism.

Spacism - the politicised version of the Astronist philosophical concept of cosmocentricity that, despite being founded by the ideology of Astronarianism, remains ectoAstronist and so can be used, applied, and adhered to outside of the context of Astronarianism. When a concept or another form of abstract is ectoAstronist, it means that it was created within the context of the Astronist philosophical tradition, but can be and is applied, used, and adhered to outside of the Astronist philosophical tradition by both non-Astronist and pre-Astronist philosophies, ideologies, and religious traditions and spacism is an example of an ectoAstronist abstract.

Astronarianism - to be officially known as The Ideology of Astronarianism founded by Cometan and first outlined herein as part of The Grand Centrality that advocates for the establishment of space politics, the advancement of spacism and its related themes, concerns, and causes, as well as the development of the four orientations that form the structure of The Ideology including Grandism, Reorientationism, Proactionism, and Reactionism. Astronarianism, and its different orientations, are not solely concerned with space politics and spacism it must be noted, but their main focus and purpose is predicated on these two topics.

Contributing pre-Astronist and non-Astronist philosophies that the majority of the factions within which are expected to be supportive of the advancement of space politics and generally pro-spacism with their own particular intentions: Socialism, Communism, Authoritarianism, Libertarianism, Anarchism, Conservatism, Environmentalism (considered to be ambivalent depending upon the reasons emphasised within spacism for the exploration of space), Liberalism, and Nationalism (though the equation of nationalism with spacism is not advocated for by the Astronist ideology).

Ideologies that hold a majority of factions that are against the advancement of space politics or are generally anti-spacism, or at least non-spacism due to their own particular reasons and intentions - a list is not given in The Grand Centrality pertaining to these, but is instead to be researched and created post-centralitically. Feminism is considered to be one of the main non-spacist political philosophies/ideologies due to its disproximation from causes emphasised and advocated for in spacism. Another difficult equator to spacism is that of populism which supports the concerns of ordinary people. Unless said ordinary people are philosophically, culturally, or ideologically engrained by the ideas of Astronism/ Astronism

List of topics important to the space movement:

- the reasons for and benefits of space exploration to both individuals of all kinds (academics, business owners, politicians, ordinary people, investors etc.) as well as society and humanity as structured wholes and the presentation of these reasons via political campaigns.
- the exploration and development of the different orientations within Astronarianism as the founding ideology of the space movement.
- greater funding for space-related endeavours by both public and private entities
- global cooperation - humanity flag, earth flag, non-nationalism
- fertile place for economic growth and for corporate operations
- originism
- philosophical reascension
- the centrality of The Cosmos, astronomy, philosophy, and cosmology in the lives of all humans
- Earth environmentalism
- planetary environmentalism - the protection of other planets environments from humanity
- anti-militarism/opposition to the militarisation of space
- anti-nuclear
- electoral reform
- corporate social responsibility applied to the context of corporate activity in space

Space state/Spaciocracy - a government where the regulatory ideals and procedures are primarily informed and predicated by spacism and spacist ideals informed by spacist form of government, usually as spacist democracy.

Spacial development / Spaciosustainability - economic development and corporate and governmental activity that is conducted in space, but remains accountable to a central authority as well as in abidance with the latest forms of space law from that same central authority.

Contributing philosophies to spacism and space politics: Agrarianism, Environmentalism, Globalism, and Social liberalism.

Space movement shares some / many ideas and is associated with the following movements: Animal rights movement, Anti-nuclear movement, the Astronomic Revolution, Climate movement, Conservation movement, Environmental movement, Global citizens movement , Globalisation movement, Peace movement, Student activism, and the Spacefaring Revolution.

Spacist schools of thought

- New horizons spacism (an ideology based on the notion that the convergence of technological change, social innovation, and philosophical foundation provides the most successful path to the achievement spaciosustainability).
- Deep spacism (promoting the notion of the inherent worth of all astronomical and celestial objects and entities regardless of their instrumental utility to the satisfaction of human needs and so is closely associated with spacioconservationism which advocates for the protection of all astronomical entities and objects. Deep spacism notionises that the astronomical world, as a segment of the wider natural world, existing as it does by superiority to that which humanity could create or manage itself which is why deep spacism strongly advocates for the non-intervention of human activities and technologies in natural and astronomical processes, including the alterations of such entities and so deep spacism rejects the notion of the practice of terraformation. Deep spacists argue that all astronomical entities and processes hold instrumental roles in the functionality of the astronomical world and therefore, despite the inanimateness of these entities, deep spacism notionises that such astronomical entities hold the right to exist as part of the astronomical system and so human intervention with such entities and their processes is not only dangerous in the sense that such processes could be disturbed, but it is also ethically wrong to intervene in such processes that are considered to be beyond and superior to that humanity and our capabilities).
- Cosmocapitalism (the view that capital exists in the astronomical world as “astronomical capital” (astrosystems that hold that which is to be known as astronomical yield) on which all wealth is set to be dependent upon, and therefore, market-based government policy instruments should be applied in such a way so as to regulate corporate and organisational activities in space and to conserve astronomical objects that hold considerable astronomical yields.
- Ecospacism - (notionises that the principles, values, and ideas from environmentalism and green politics should be exactly applied to the context of space politics and the space movement in order to formulate the most effective campaigns.)
- LGBTQIA astronomy (a broad school of thought combining the fields of queer theory and astronomy in order to define the role, identity, and position of non-heterosexual persons within the context of the space movement or within a particular spacist campaign).
- Spacionationalism (not to be confused with cosmonationalism) (the elimination of a country’s reliance on foreign sources of fuel and energy by promoting space-situated energy sources that can be adequately resourced, maintained, and utilise spaciosustainably by a single country).
- Spaciosocialism (an ideology merging aspects of socialism with that of space politics, astronomy, globalisation, panhumanism, united humanism, and the space

movement. Spaciosocialists generally believe that the expansion of the capitalist system is the cause of social exclusion, poverty, war and will eventually cause spacioenvironmental degradation through globalisation and imperialism, under the supervision of repressive states and transnational structures.)

- Spacioanarchism (a school of thought formed by the combination of spacism and anarchist principles and can be considered an extension on the pre-Astronist school of thought of Green anarchism, but rather than broadly critiquing human interactions with non-human entities in general, spacioanarchism notionises that space should remain without governmental organisation and civility, but should instead be based upon a society in which voluntary and cooperative foundations are valued without recourse for force or compulsion and so strongly opposes the notion of the surveillance of spacefarers as well as the monitoring of corporate activities by a central authority.
- Spacioconservatism (a combination of conservatism with spacism and so involves the advocacy of spacist ideas and principles on behalf of a conservative party which incorporates spacism into its own ideas, policies, and campaigns.)
- Space left (a combination of spacism with ecospacism, conservationism, united humanism, cosmofeminism, spaciosocialism, spaciocommunism, cosmoliberalism and spacioliberalism and therefore forms a segment of the space movement that is characteristically left-wing in leaning.
- Space right (a combination of spacism with spacioconservatism, spacionationalism, traditionalism, hierarchy, property rights, and principle of the preservation of social and governmental institutions rather than the advocacy of revolution and therefore forms a second segment of the space movement that can be classified as right-wing in leaning.
- Cosmoliberalism/Spacioliberalism - any form of liberalism or liberal political party or campaign that incorporates some extent of spacism into its ideology with wide variance and so cosmoliberals/spacioliberals are usually liberal on social issues and pro-spacism on economic, financial, cultural, and political issues.
- Cosmoliberalism - a political philosophy that involves a mixture of values from both libertarianism and spacism, especially the application of the former onto the prospective civilisations predicted and encouraged by the latter which would therefore involve extra-Earth colonies and civilisations and the lives of the citizens residing within them being minimally controlled by governmental bodies.
- Social astronomy - concerned with the preparation of different human societies for the Astronomic Revolution as well as for the wider Humanic Exploration of The Cosmos.
- Green Arcadianism - concern for the preservation of the environments of “paradise planets” as predicted in arcadianism.
- Space municipalism - the encouragement of spacism from the municipal rather than state or national basis.
- Space localism - the encouragement of spacism from local forms of government.

Astronomy: the study of the economic, political, financial and commercial perspectives of astronomical objects, processes, and entities.

Astrosystem - a single astronomical entity (astrosyst), or a community such entities composed in conjunction with astronomical processes such as orbits, collisions, radiation, and other processes.

Astrome - a community of astronomical entities that hold common characteristics according to the area of space in which they reside, for example, the asteroids, comets, moons and other astronomical entities residing near the planet Neptune shall differ from those that reside nearer to The Sun.

Astrosphere - the entire summation of all astrosystems within a particular solar system.

Solarsphere - the entire summation of all astrospheres within a particular grouping of solar systems.

Galactosphere - the entire summation of all solarspheres within a galaxy.

Astronomical economics /Astroeconomics/ Astronomics/ Cosmoeconomics - is both a crossdisciplinary/ transdisciplinary and an interdisciplinary field of academic research addressing the interdependence and coevolution of human economies and natural ecosystems, both intertemporally and spatially.

Exoeconomy /Space economy - sustainable use of astronomical resources for economic growth, improved livelihoods, and jobs while preserving the health of the astrosystem.

Astronomical yield - the harvestable elements of an astronomical entity as measured and calculated in terms of the monetary value of such elements according to the present market value.

Astronomical commodification - the perception of astronomical objects and entities as commodities that are to be mined and sold for profit through a capitalist economic system.

Astrotourism is expected to form one of the largest sectors of the astroeconomy due to the huge numbers of tourists that are expected to pay high prices for spaceflight at the beginning of the industry before it plateaus out to the masses, after which the astrotourism industry will shadow that of the current tourism industry that is functioning on The Earth now.

Astrosystem services - referring to the different benefits that humans are able to exploit from the astronomical environment, including the dependence of humanity on The Sun, the future possibility for asteroid mining, the discovery and utility of a plethora of resources from astronomical bodies including simple resources such as water.

Astroservitisation - the incorporation of an astronomical object or body into the service of one's commercial enterprise, either directly or by way of product.

Astronomic capital - the totality of natural resources available beyond The Earth which is considered to be endless in relation to humanity's capabilities to locate and utilise all such resources. Astronomic capital rests at the heart of astronautics as it is these astronomical resources that form the basis for the astronomical economy. The locating, extraction, exploitation, manufacturing, selling, profiteering, utilisation, reutilisation, wastage and sustainable remanufacturing of such astronomical resources forms the fundamental process of astronautics.

Exoplanetary capital - forms of natural resources found on planets other than The Earth that may or may not resemble the natural capital of The Earth.

Spaceship Earth in spacism - a world view encouraging everyone on Earth to act as a harmonious crew working toward the greater good.

Astroprospecting - the entire process of the locating, mining, and selling of astronomical resources by commercial prospectors (known as prospectors), private individual prospectors for profit (known as cospectors), private individuals for recreation (known as fospectors) or by governmental prospectors (ospectors).

Forms of Prospecting:

Abiospecting - (resources prospected from non-living and non-organic material)

Biospecting - (resources prospected from the biosphere from living and organic material)

1. Astrospecting (mining of asteroids)
2. Hydrospecting (prospecting for water)
3. Dendrospecting (prospecting for exoplanetary trees)
4. Phytospecting (prospecting for exoplanetary plants and vegetation)
5. Herbospecting (prospecting for exoplanetary leaves, seeds, or flowers)
6. Aquaspecting (prospecting for exoplanetary marine life of all kinds)
7. Lithospecting (prospecting for exoplanetary rocks)
8. Microspecting (prospecting for exoplanetary microbial resources)
9. Agrospecting (prospecting for exoplanetary locations for agricultural development)
10. Locuspecting (prospecting for exoplanetary locations for suitable habitation)
11. Infospecting (prospecting for information)
12. Comspecting (mining of comets)
13. Theriospecting (prospecting for exoplanetary animals)
14. Solarspecting (exploitation of solar rays for energy and other usages)
15. Prespecting (mining for metals)
16. Minerospecting (mining for minerals)
17. Liquispecting (mining for liquids)
18. Gaseospecting (mining for gases)
19. Aerospecting (prospecting in the atmospheres of planetary bodies)
20. Edaspecting (prospecting for exoplanetary soil)
21. Neospecting (prospecting for presently unknown natural resources)
22. Oleospecting (prospecting for forms of oil on exoplanets and in astronomical bodies)
23. Carpospecting (prospecting for exoplanetary fruits and seeds)

24. Anemospecting (prospecting for wind power)
25. Sentiospecting (prospecting for sentient life)

Astroprospectivity - the extent to which a designated region holds potential for prospecting valuable natural resources is measured by the concentration of such resources, as well as the diversity and the valuability of such resources.

Astroprospective mapping - the practice of mapping an exoplanet or another astronomical object or body according to its prospectivity of resources (including diversity, concentration, and valuability) and such maps are kept as valuable records for future prospecting endeavours and may also map a solar system or even a cluster of solar systems and would typically take a digital form that zoomable and quickly updatable.

Proastrism - the theory in astronomy stating that the mined materials from astronomical objects and entities needn't be taken back to The Earth, but instead used to build civilisations or other useful instruments or vessels on other planets. Resting at the heart of proastrism is the idea that astronomy will lead to the non-dependence of transearth civilisations, organisations, and vessels on The Earth's economy. Essentially, proastrism foresees that astronomy will one day hold its own sovereignty for its existence rather than be dependent upon The Earth's economy systems. Proastrists argue that the detachment of the astronomical economy from The Earth's economy is a natural and correct process to take place once the establishment of the astronomical economy has fully occurred.

Transrocketing - the practice of using resources mined from astronomical objects and bodies as fuel for spacecraft so that they are able to travel further for longer periods of time and can stock up their fuel at mining facilities without having to carry all the fuel required for their entire journey.

Danger of concentrated precious metals oversupply due to the success of asteroid prospecting of metals such as gold and platinum which, due the potential for unrivalled profits, may cause an astrorush which would lead to oversupply of the market, hence causing market collapse which is highlights the imperative importance of the regulation of the astroeconomy so that it can grow sustainably and with longevity rather than quickly, but with a short lifespan due to deregulation.

The standard basic principles of economics must be applied to astroeconomics in order for it to be success as a form of economy and as a major influencing factor of The Earth's economy; the application of the principles of economics to the context of astroeconomics shall take place post-centralitologically.

The further development of the foundations of astronomy must take place post-centralitologically due to the fact that astronomy requires a document of its own to outline its foundations, but The Grand Centrality shall always be remembered for introducing the term of astronomy, astronomical yield, and the other concepts and

notions related to astronomicals that are present in this discourse and other discourse found in The Omnidoxy both as part of Astronarianism as well as part of The Philosophy of Astronism which also outlines some of the foundational orientations for astronomicals as found in the inclusive discipline of expology.

Values and principles of astronomicals:

1. Spaciosophy/Spacial wisdom - aiming to achieve spacial harmony and equilibrium through the exploration of space - there is considered to be an current imbalance due to humanity's present inability to explore space and humanity's present incapability to perceive space through wisdom.
2. Astrocentric democracy - a democracy that prioritises spacial issues and employs a policy of ectopoliticisation for such issues so as not to embroil spacial issues in bureaucracy.
3. Nonviolence, Pacifism, and the Peace movement
4. Cosmoenvironmentalism, environmentalism, preservation and conservation
5. Social justice, Human rights, and Civil liberties
6. Social unquity
7. Astrocentric economy
8. Economic unquitarianism
9. Unquitarian opportunity
10. Sustainable development
11. Respect diversity

The Four Pillars of Space Politics:

1. Spaciosophy
2. Astrocentricity (political, economic, financial, and legal)
3. Unquitarianism
4. Cosmoenvironmentalism

The difference between cosmocentricity and astrocentricity, the former of which pertains to philosophical, cultural, and social while the latter relates to political, economic, financial, and legal elements.

Astrodemocracies incorporate or support the following forms of democracy: Anticipatory democracy, Consensus democracy, Direct democracy, Economic democracy, E-democracy, Empowered democracy, Liquid democracy, Media democracy, Participatory democracy, Pluralist democracy, Radical democracy, and Semi-direct democracy.

List of other related aspects of spacist ideology:

Cosmotheology - a form of constructive theology that focuses on the interrelationships of religion and nature, particularly in the light of environmental concerns. Ecotheology generally starts from the premise that a relationship exists between human religious/spiritual worldviews and the degradation of nature. It explores the interaction between ecological values, such as sustainability, and the human domination of nature.

Cosmoenvironmentalism - the application of the principles, values, and policies advocated in environmentalism to the context of the environment of space.

Space building / Spacioconstruction - the construction of buildings that hold some form of astronomical utility.

Space technology / Astrotechnology - the development of technologies for use in space in an way that it is sustainable and the development of technologies to be used in space and on other celestial and astronomical objects and entities for the betterment of the environment and life on The Earth.

Human spacioecology - the study of the relationship between humans and their natural, social, and built environments beyond The Earth either on other planets, on another astronomical entities, or in space aboard spacecraft.

Political spaciology - the study of the relationships between political, economic, and social factors with spaciological issues and changes occurring in human civilisation.

Cosmofeminism - theorising about gender in order to draw upon a relationship between humanity and the cosmic world beyond The Earth and humanity's place in The Cosmos considered through by the feminist perspective.

Space economics / Astronomics / Astroeconomics - an economic that aims to focus its identity and the majority of its most prominent industries around space and the proliferation of economic growth through the use of the resources in space in a way that promotes cosmosustainability and therefore intends to achieve spaciological economic development without causing the degradation of the cosmoenvironment.

Astrocapitalism / Space capitalism - the ideology opposing astrosocialism holding that capital exists in the context of space through astronomical yield in astrosystems on which all human economic growth and development will one day depend therefore, a market-based government policy should be used to bolster funding for space programmes, private space-related companies, and the wider enculturation of the masses about the importance of space via the cultural elements of Astronism.

Astrosocialism - an ideology merging aspects of socialism with that of space politics, spacism, Astronarianism, and the cultural elements of Astronism. Astrosocialists generally believe that the expansion of the capitalist system is the cause of stagnation in space exploration due to the poverty, war, and environmental degradations caused through globalisation and imperialism under the supervision of capitalist economies.

Astrotax / Astronomical taxation - a tax levied on all commercial activities conducted in space with huge variances in the nature of the taxation and its percentage depending on how such activities are conducted, where they are conducted, the level of profit that the

commercial enterprise is expected to make, and the amount of commercial activity that they conduct over a set period. The details of these variances is to be outlined post-omnidoxically.

Free-market spacism - the notion that the free market and property rights provide the best means of achieving the Humanic Exploration of The Cosmos as well as spaciological economic development.

A few issues affect most of the green parties around the world, and can often inhibit global cooperation; some affect structure, and others affect policy, and these may also cause issues with space politics and the spacist movement too: Anti-nuclear, Bioregionalism, Biosafety, Biosecurity, Electoral reform, Fundamentalism vs. Realism, Greenwashing, Indigenous peoples, Land reform, Natural capitalism, Primate extinction, Prometheanism, Rainforest destruction, and Safe trade.

On matters of ecology, extinction, biosafety, biosecurity, safe trade and health security, "Spacers" generally agree. There are very substantial policy differences between and among Space Parties in various countries and cultures, and a continuing debate about the degree to which natural ecology and human needs align. Agreement on particular issues is often reached using a consensus decision making process.

More related topics include the following:

Antispacism - refers to the way that various groups in society have sought to counter the effects of environmental ideology and movements, to redirect and diminish public concern about the environment, to attack left-leaning environmentalists, and to persuade politicians against increased environmental regulation.

Nonspacism - neutral or impartial position on the issues raised and advocated for by spacism and the space movement.

Space activism - the collection of individuals and their works and ideas that are consistently advocating for the principles of the space movement or spacism, especially so in both parliamentary and social environments.

Conservation movement - contributed to by spacism and is considered to be closely associated with the space movement.

Astroterrorism - an act of violence committed in support of ecological or environmental causes, against people or property.

Space terrorism - not to be confused with astroterrorism, consists of one or more unlawful actions that harm or destroy environmental resources or deprive others of their use. More colloquially, the phrase is also used to label actions seen as the unnecessary or unjustified destruction of the environment for personal or corporate gain.

Astrocentrism - a term used in spaciological political philosophy to denote a space-centred, as opposed to human-centered (i.e. anthropocentric), system of values.

A comparison of astrocentrism with other forms of political centrism will take place post-omnidoxically as part of studies relating to comparative Astronarianism:
Anthropocentrism, Industrocentrism, Technocentrism, and Biocentrism.

Spaciological modernisation - a school of thought in the social sciences that argues that the economy benefits from moves towards environmentalism.

Astromodernism - an environmental philosophy which argues that humans can protect nature by using technology to "decouple" anthropogenic impacts from the natural world.

Spaciological/ Astrocentric/ Cosmocentric civilisation - the final goal of social and environmental reform within a given society. It implies that the changes required in response to global climate disruption and social injustices are so extensive as to represent another form of human civilization, one based on ecological principles. Broadly construed, ecological civilization involves a synthesis of economic, educational, political, agricultural, and other societal reforms toward sustainability.

Restorationist spaciology - the scientific study supporting the practice of ecological restoration, which is the practice of renewing and restoring degraded, damaged, or destroyed ecosystems and habitats in the environment by active human intervention and action.

Spacism on the supposed issue of human overpopulation which spacism opposes as an issue/ disregards as an issue.

Spaciological justice - a social movement that focuses on the fair distribution of environmental benefits and burdens.

Space rights - a broad philosophy, ideology, and social movement regarding concerns for space environmental protection and improvement of the health of the environment of space, particularly as the measure for this health seeks to incorporate the impact of changes to the space environment caused by human spacefaring activities, and may or may not be opposed to the ideas and beliefs of spacism and the space movement.

Space movement - also including conservation and space politics, the space movement is a diverse scientific, social, cultural and political movement for addressing spacial issues and the wider question of humanity's exploration of space. Spacists advocate for the sustainable management of space exploration and stewardship of the space environment through changes in public policy and individual behavior and perception of space and its connection to humanity as influenced by Astronist beliefs. In its recognition of humanity

as holding a destiny to explore space, the movement is centred on spaciology, space ethics, and the astrocentralisation of society.

The space movement is an international intergovernmental and sociocultural movement, represented by a range of organisations, from the large to grassroots and varies from country to country. Due to its large membership, varying and strong beliefs, and occasionally speculative nature, the space movement is not always united in its goals. The movement also encompasses some other movements with a more specific focus, such as the Astronist movement and the Spacefaring Revolution. At its broadest, the movement includes private citizens, professionals, religious devotees, economists, politicians, scientists, nonprofit organisations and individual advocates.

Spacist Forms of Government to be elaborated on in a post-omnidoxical setting: Spacist anarchy, Spacist anocracy, Spacist autocracy, Spacist aristocracy, Spacist democracy, Spacist ergatocracy, Spacist federalism, Spacist genocracy, Spacist kraterocracy, Spacist kritarchy, Spacist liberal democracy, Spacist meritocracy, Spacist monarchy, Spacist netocracy, Spacist noocracy, Spacist oligarchy, Spacist partocracy, Spacist plutocracy, Spacist republic, Spacist social democracy, Spacist stratocracy, Spacist technocracy, Spacist theocracy, and Spacist timocracy.

Forms of Spacism that are to be elaborated on in a post-omnidoxical setting: Analytical spacism, Anarcha-spacism, Antispacism, Apolitical spacism, Communist spacism, Conservative spacism, Corporatist spacism, Cultural spacism, Cyberspacism, Ecospacism, Environmentalist spacism, Equality spacism, Feminist spacism, Gender spacism, Individualist spacism, Labour spacism, LGBTQIA spacism, Liberal spacism, Libertarian spacism, Marxist spacism, Material spacism, Maternal spacism, National spacism, Neospacism, Non-spacism/Dispacism, Pacifist spacism, Postmodern spacism, Postspacism, Pro-spacism, Racial/Ethnic spacism, Radical spacism, Separatist spacism, Social spacism, Socialist spacism, State spacism (Spaciocracy), and Transpacism.

Religio-political variants of spacism that are to be further explored and elaborated on post-omnidoxically: Agnostic spacism, Astronist spacism, Atheistic spacism, Buddhist spacism, Christian spacism, Confucian spacism, Cultic spacism, Freemason spacism, Islamic spacism, Hindu spacism, Humanist spacism, Jewish spacism, Mormon spacism, Neopagan spacism, Secularist spacism, Shintoist spacism, Sikh spacism, Spiritual spacism, and Theistic spacism.

National variants of spacism that are also to be introduced and further elaborated on in a post-omnidoxical work: Afghan spacism, Albanian spacism, Algerian spacism, American spacism, Andorran spacism, Angolan spacism, Antigua and Barbuda spacism, Argentinian spacism, Armenian spacism, Aruban spacism, Australia spacism, Austrian spacism, Azerbaijan spacism, Bahamian spacism, Bahraini spacism, Bangladeshi spacism, Barbadian spacism, Basotho spacism, Belarusian spacism, Belgian spacism, Belizean spacism, Beninese spacism, Bermudan spacism, Bhutanese spacism, Bolivian spacism, Bosnian and Herzegovinian spacism, Botswanan spacism, Brazilian spacism, Bruneian

spacism, Bulgarian spacism, Burkinan spacism, Burmese spacism, Burundian spacism, Cambodian spacism, Cameroonian spacism, Canadian spacism, Cape Verdean spacism, Central African spacism, Chadian spacism, Chilean spacism, Chinese spacism, Cook Islander spacism, Colombian spacism, Comoran spacism, Congolese spacism (Democratic Republic of the Congo), Congolese spacism (Republic of the Congo), Costa Rican spacism, Croatian spacism, Cuban spacism, Cypriot spacism, Czech spacism, Danish spacism, Djiboutian spacism, Dominican spacism (Dominica), Dominican spacism (Dominican Republic), Dutch spacism, Ecuador spacism, Egyptian spacism, Emirati spacism, English spacism, Equatorial, Guinean spacism, Eritrean spacism, Estonian spacism, Ethiopian spacism, Faroese spacism, Fijian spacism, Filipino spacism, Finnish spacism, French spacism, Gabonese spacism, Gambian spacism, Georgian spacism, German spacism, Ghanaian spacism, Greek spacism, Grenadian spacism, Guatemalan spacism, Guinean spacism, Bissau-Guinean spacism, Guyanese spacism, Haitian spacism, Honduran spacism, Hungarian spacism, Icelandic spacism, Indian spacism, Indonesian spacism, Iranian spacism, Iraqi spacism, Irish spacism, Israeli spacism, Italian spacism, Ivorian spacism, Jamaican spacism, Japanese spacism, Jordanian spacism, Kazakhstan spacism, Kenyan spacism, Kiribati spacism, Kittitian and Nevisian spacism, Kuwaiti spacism, Kyrgyzstani spacism, Laotian spacism, Latvian spacism, Lebanese spacism, Liberian spacism, Libyan spacism, Liechtensteiner spacism, Lithuanian spacism, Luxembourgish spacism, Macedonian spacism, Madagascan spacism, Malawian spacism, Malaysian spacism, Maldivian spacism, Malian spacism, Maltese spacism, Marshall Islander spacism, Mauritanian spacism, Mauritian spacism, Mexican spacism, Micronesian spacism, Moldovan spacism, Monacan spacism, Mongolian spacism, Montenegrin spacism, Moroccan spacism, Mozambican spacism, Namibian spacism, Nauruan spacism, Nepalese spacism, New Zealander spacism, Nicaraguan spacism, Nigerien spacism, Nigerian spacism, Niuean spacism, North Korean spacism, Norwegian spacism, Omani spacism, Pakistani spacism, Palauan spacism, Palestinian spacism, Panamanian spacism, Papua New Guinean spacism, Paraguayan spacism, Peruvian spacism, Polish spacism, Portuguese spacism, Qatari spacism, Romanian spacism, Russian spacism, Rwandan spacism, Saint Lucian spacism, Salvadoran spacism, Samoan spacism, San Marinese spacism, São Toméan spacism, Saudi Arabian spacism, Scottish spacism, Senegalese spacism, Serbian spacism, Seychellois spacism, Sierra Leonean spacism, Singaporean spacism, Slovakian spacism, Slovenian spacism, Solomon Islander spacism, Somalian spacism, South African spacism, South Korean spacism, South Sudanese spacism, Spanish spacism, Sri Lankan spacism, Sudanese spacism, Surinamese spacism, Swazi spacism, Swedish spacism, Swiss spacism, Syrian spacism, Taiwanese spacism, Tajik spacism, Tanzanian spacism, Thai spacism, Timorese spacism, Togolese spacism, Tongan spacism, Trinidadian and Tobagonian spacism, Tunisian spacism, Turkish spacism, Turkmen spacism, Tuvaluan spacism, Ugandan spacism, Ukrainian spacism, Uruguayan spacism, Uzbek spacism, Vanuatuan spacism, Venezuelan spacism, Vietnamese spacism, Vincentian spacism, Welsh spacism, Yemeni spacism, Zambian spacism, and Zimbabwean spacism.

As part of the study of comparative Astronarianism, the relationship between space politics and other forms of politics will be explored which will principally include the following: Green politics (describe the intersectionality between green and space politics

and the use of issues in the former to promote the issues raised in the latter - this is to be henceforth known Gaianism), Anarchism, Capitalism, Christian democracy, Collectivism, Communalism, Communism, Communitarianism, Conservatism, Constitutionalism, Distributism, Environmentalism, Extremism, Fanaticism, Fascism, Feminism, Fundamentalism, Globalism, Individualism, Industrialism, Intellectualism, Islamism, Liberalism, Libertarianism, Masculism, Militarism, Monarchism, Nationalism, Progressivism (Progressive conservatism), Radicalism, Reformism, Republicanism, Social democracy and Socialism Utilitarianism.

Below are the general purposes of each of the different ideologies within Astronarianism:

- Reorientism - adaptation to the political environment (adaptionism)
- Grandism - hypercapitalisation of the political and economic environmental (hypercapitalism)
- Spacism - astrocentralisation of the political, economic and cultural landscape (astrocentrism)
- Proactionism - creating and controlling the political environment rather than reacting to it
- Reactionism - reacting to the events taking place in the political environment.

Astropolitical federation - an astropolitical or space political federation is a collection of political parties from either within one country or across a multitude of countries which share the same or similar ideology or principles, yet remain separate political parties.

Also as part of the study and introduction of Astronarianism must become the application of the Astronist belief of unquitarianism which will subsequently develop Uniquitarian economics, Uniquitarian anthropology, Uniquitarian psychology, Uniquitarian sociology, Uniquitarian politics, and Uniquitarian ideology.

Grandism

Grandism, also known as grandarianism, as followed by grandists or grandarians, is one of the four orientations of Astronarianism classified as such in the Omnidoxy by Cometan. The principal characteristics of The grandist party colour is gold.

The main principles and ideas of Grandism include the following:

- democracy
- hypercapitalist economy dominates
- The true improvement of countries
- Regulation of corporations to stop exploitation
- Absolute halt to all military engagements beyond the nation's borders
- Instead, helping neighbouring countries in real ways in order to help the domestic population
- Astronism and all other religions recognised
- Homogenisation of the state culture
- National philosophy instatement

- Liberty, secularism, and freedom of faith, political association, and free market economy
- Astronist education system instatement, unless a national education is deemed as sufficient
- considered transcendent of the left-right spectrum paradigm
- the use of propaganda is widespread
- still supports globalisation and the instatement of the federative governmental structure
- considered the most heavily Astronist out of the three major orientations
- strong economy, strong culture, strong philosophy, and strong state (motto)

Listed here are the political parties which are considered to be part of The World Grandarian Fellowship:

- The Grand Party of Afghanistan
- The Grand Party of Albania
- The Grand Party of Algeria
- The Grand Party of Andorra
- The Grand Party of Angola
- The Grand Party of Antigua and Barbuda
- The Grand Party of Argentina
- The Grand Party of Armenia
- The Grand Party of Aruba
- The Grand Party of Australia
- The Grand Party of Austria
- The Grand Party of Azerbaijan
- The Grand Party of The Bahamas
- The Grand Party of Bahrain
- The Grand Party of Bangladesh
- The Grand Party of Barbados
- The Grand Party of Belarus
- The Grand Party of Belgium
- The Grand Party of Belize
- The Grand Party of Benin
- The Grand Party of Bermuda
- The Grand Party of Bhutan
- The Grand Party of Bolivia
- The Grand Party of Bosnia and Herzegovina
- The Grand Party of Botswana
- The Grand Party of Brazil
- The Grand Party of Brunei
- The Grand Party of Bulgaria
- The Grand Party of Burkina Faso
- The Grand Party of the Republic of the Union of Myanmar
- The Grand Party of Burundi
- The Grand Party of Cambodia
- The Grand Party of Cameroon
- The Grand Party of Canada

- The Grand Party of Cape Verde
- The Grand Party of Central African Republic
- The Grand Party of Chad
- The Grand Party of Chile
- The Grand Party of China
- The Grand Party of Taiwan
- The Grand Party of Cook Islands
- The Grand Party of Colombia
- The Grand Party of the Union of the Comoros
- The Grand Party of the Democratic Republic of the Congo
- The Grand Party of Republic of the Congo
- The Grand Party of Costa Rica
- The Grand Party of Côte d'Ivoire
- The Grand Party of Croatia
- The Grand Party of Cuba
- The Grand Party of the Republic of Cyprus
- The Grand Party of Czechia
- The Grand Party of Denmark
- The Grand Party of Djibouti
- The Grand Party of Dominica
- The Grand Party of Dominican Republic
- The Grand Party of East Timor
- The Grand Party of Ecuador
- The Grand Party of Egypt
- The Grand Party of El Salvador
- The Grand Party of Equatorial Guinea
- The Grand Party of Eritrea
- The Grand Party of Estonia
- The Grand Party of Ethiopia
- The Grand Party of Fiji
- The Grand Party of Finland
- The Grand Party of France
- The Grand Party of Faroe Islands
- The Grand Party of Gabon
- The Grand Party of The Gambia
- The Grand Party of Georgia
- The Grand Party of Germany
- The Grand Party of Ghana
- The Grand Party of Greece
- The Grand Party of Grenada
- The Grand Party of Guatemala
- The Grand Party of Guinea
- The Grand Party of Guinea-Bissau
- The Grand Party of Guyana
- The Grand Party of Haiti

- The Grand Party of Honduras
- The Grand Party of Hungary

Reactionism

Reactionism, also known as reactionarianism, as followed by reactionists or reactionarians, is one of the four primary orientations of Astronarianism. The Reactionist party colour is bronze.

Reactionism is characterised by the following elements:

- democracy
- right-wing, conservative positioning along the left-right political spectrum
- opposition to social reform

- opposition to the decentralisation of traditional values, or the conventional state of affairs
- Astronism recognition
- National Philosophy established that entirely reflects the traditional values and principles of the people and their state both presently and historically
- Astronist education system instatement, unless a national education is deemed as sufficient
- Homogenisation of the national culture
- Differs from the grandarianism in the helping of other countries in any sense and advocates for protectionist trade and economic policies
- Heavily domestically focused too, which is a diversion from grandarian thought.
- Strong sense of the Astronist version of nationalism (not sadistic version) (Patriotism)
- Advocates for a return to proper religious society and familial structure (especially in Christian countries)
- The use of propaganda is widespread
- The Astronist Federative governmental structure instated

Listed here are the political parties which are considered to be members of The World Reactionarian Conference. These parties have two types of name formats, the first of which is The Reactionist People's Party of and the second format is The Reactionarian Party. For the purposes of this list, the first format will be utilised:

- The Reactionist People's Party of Afghanistan
- The Reactionist People's Party of Albania
- The Reactionist People's Party of Algeria
- The Reactionist People's Party of Andorra
- The Reactionist People's Party of Angola
- The Reactionist People's Party of Antigua and Barbuda
- The Reactionist People's Party of Argentina
- The Reactionist People's Party of Armenia
- The Reactionist People's Party of Aruba
- The Reactionist People's Party of Australia
- The Reactionist People's Party of Austria
- The Reactionist People's Party of Azerbaijan
- The Reactionist People's Party of The Bahamas
- The Reactionist People's Party of Bahrain
- The Reactionist People's Party of Bangladesh
- The Reactionist People's Party of Barbados
- The Reactionist People's Party of Belarus
- The Reactionist People's Party of Belgium
- The Reactionist People's Party of Belize
- The Reactionist People's Party of Benin
- The Reactionist People's Party of Bermuda
- The Reactionist People's Party of Bhutan
- The Reactionist People's Party of Bolivia
- The Reactionist People's Party of Bosnia and Herzegovina

- The Reactionist People's Party of Botswana

Reorientation

Reorientation, also known as reorientarianism, as followed by reorientists, or reorientarians, is one of the four orientations of Astronarianism. Silver is the colour of all reorientarian political parties.

Reorientation is characterised by the following elements:

- democracy
- left-wing policies and positioning along the left-right political spectrum
- the use of propaganda is not widespread
- the dehomogenisation of national culture and society
- Astronism recognition
- globalism and globalisation at the forefront
- absolutely no sense of nationalism, not even the Astronist version (and not even patriotism)
- international, transnational, and omninational is the direction and vision
- Astronist education system instatement, unless a national education is deemed as sufficient

- National Philosophy NOT instated
- built upon social reform: free welfare, benefits, education, and heavy regulation on corporations
- centralised government, no instatement of the Astronist Federative governmental structure

List below are the names of all the political parties which are considered to be members of The World Reorientarian Association:

- The Reorientarian Party of Afghanistan
- The Reorientarian Party of Albania
- The Reorientarian Party of Algeria
- The Reorientarian Party of Andorra
- The Reorientarian Party of Angola
- The Reorientarian Party of Antigua and Barbuda
- The Reorientarian Party of Argentina
- The Reorientarian Party of Armenia
- The Reorientarian Party of Aruba
- The Reorientarian Party of Australia
- The Reorientarian Party of Austria
- The Reorientarian Party of Azerbaijan
- The Reorientarian Party of The Bahamas
- The Reorientarian Party of Bahrain
- The Reorientarian Party of Bangladesh
- The Reorientarian Party of Barbados
- The Reorientarian Party of Belarus
- The Reorientarian Party of Belgium
- The Reorientarian Party of Belize
- The Reorientarian Party of Benin
- The Reorientarian Party of Bermuda
- The Reorientarian Party of Bhutan
- The Reorientarian Party of Bolivia
- The Reorientarian Party of Bosnia and Herzegovina
- The Reorientarian Party of Botswana
- The Reorientarian Party of Brazil
- The Reorientarian Party of Brunei
- The Reorientarian Party of Bulgaria
- The Reorientarian Party of Burkina Faso
- The Reorientarian Party of the Republic of the Union of Myanmar
- The Reorientarian Party of Burundi
- The Reorientarian Party of Cambodia
- The Reorientarian Party of Cameroon
- The Reorientarian Party of Canada
- The Reorientarian Party of Cape Verde
- The Reorientarian Party of Central African Republic
- The Reorientarian Party of Chad

- The Reorientarian Party of Chile
- The Reorientarian Party of China
- The Reorientarian Party of Taiwan
- The Reorientarian Party of the Cook Islands
- The Reorientarian Party of Colombia
- The Reorientarian Party of the Union of the Comoros

Astronist Business Economics

Astronist Business Economics is the application of Astronist economic theory to the normative economic landscape, the use of economic principles to establish theory, the analysis of economic influences on business decisions, and the investigation of the market in motional circumstances.

Naturalism

In Astronist Economics, the stance of perceiving and relating all economic, and business activity through the lens of natural processes, typically those conducted by animals, or other natural phenomena.

As part of Naturalism in Astronist Economics, the concept of hibernation relates to the economists of the nation, or the owners of a business to reserve some of their resources in all aspects (not just wealth), in preparation for the times to come. This does not mean to say that there are bad times ahead, but the expectancy of difficult times is the preparation

for them, and when prepared, businesses and economies are much more like to be able to weather the difficulties ahead as opposed to being unprepared and not being able to weather the difficulties, or changes that are almost inevitable in developing economies, and businesses.

If a company sees greater sales at one time of year than another, then that company experiences Annual Hibernation and it is therefore more essential than ever for that company to stock up on its resources in order to wade through the quieter season, but what is also important is to use the time of dormancy to create the best campaign and business plan for the busier season.

Similarly, the concept of migration relates to a business, or an economy making a change of direction, or focus. For a business, this may mean orientation in the focus of the business' main revenue stream, or the entry into a new market, or industry. For an economy, this may relate to the prioritisation of one industry or sector over another for a particular time period, or a focus on funding for one sector of the economy over another for a specific period. Migration is an essential process for the constant refresh of business operations, and economic practice, and is thus, an important aspect of economic Naturalism.

Another concept within Naturalism is that of The Predator and The Prey, which in an economic context may relate to two or more competing economies, and in a business context, may relate to a large business looking to take control of a smaller business, or to stop the business from growing further and becoming a rival. It is the nature of The Predator to squish The Prey, and it is the nature of The Prey to execute a plan and not be squished with the aim of growing large enough to transform into The Predator.

A concept of importance is also cooperation which, in a business and economic context, relates to two companies, or two economies working together for mutual benefit, rather than working independently for the benefit only of the self. The main aspect to be aware of for each are the intentions of the cooperating counterpart; their motivations to partner; the benefits they perceive to gain, and whether their benefits outweigh your own.

The process of locomotion refers to an economy that is in the process of transferring its foundations and structure, such as moving from an agrarian economy to becoming an industrial economy. This process can also be related to a business whereby a company grows to a size in which they begin to operate in multiple markets, or in multiple industries, or their wealth grows to a size that constitutes a change in taxation.

Exclusivity in Measure

In Astronist Economics, the term Exclusivity in Measure refers to the measurement of a consequence, an event, or a business, or economic practice in exclusive terms, meaning no other external factors are considered other than the subject itself.

Inclusivity in Measure

In Astronist Economics, the term Inclusivity in Measure refers to the measurement of a consequence, an event, or a business, or economic practice in inclusive terms, meaning all external factors must be considered in addition to the internal ones.

Legality

In Astronist Economics, the study of the legal relationships within corporate governance, and the implementation of law into the decisions and plans made by companies, and may also relate to the relationship between corporations and governments.

It has become commonplace for companies to manipulate law to their own advantage, but law is all we have to decipher between anarchy and order. Law is counterpart to the enforcer and the receiver, and the way in which law is applied is a direct consequence of its interpretation. In a corporate sense, the enforcer is the government, and the receiver is the company. Both of these entities have an ethical responsibility to each other to enforce and receive the law respectively.

In taxation, the government creates tax laws for the companies to adhere to, and this is one of the most important ethical responsibilities for the companies to fulfil. This is something that many large companies fail to do because their corporate cultures are based upon themselves rather than the wider economy. It is, however, in equal measure, the ethical responsibility of the government to create fair taxation laws that still ignite enthusiasm for business, without still causing taxation anarchy.

In a similar way, companies must always follow the regulations and complex business transaction laws set down by the government. However, in many countries, the high amount of regulations result in business becoming more governmental, especially so in its speed. Business must always be quick for that is the nature of good business. To slow business down with regulatory laws is to choke business and the great economic reliefs that come alongside success in enterprise. Another of the ethical responsibilities of the government is to make business easier so that more money can be generated, and thus, more taxation for the government overall. It does no good for either party to strangle business and the speed at which it can occur in the name of complex regulation for this results in more administration for the government and less business prosperity for the economy.

However, it must be said with just as much earnest that governments must not encourage business anarchy, whereby corporations are left to conduct their operations with very little authority, or regulatory checks. For the government, it is most important to find the perfect balance between these two measures, and to maintain these measures as they are motional and can be influenced by a plethora of factors.

The role of the business in the economy is to generate as much capital for itself and the wider economy as possible whilst also creating jobs, a safe and comfortable working environment, and products to serve the people. Symbiotically, the role of the government in the economy is to create and ensure in longevity a business environment that is fair for

companies to conduct their operations legally, and without unnecessary obstacles that ultimately, only inhibit business practices.

Prescriptionism

In Astronist Economics, the process wherein a business, or economic difficulty, or issue is perceived as a problem to which a medicine can be prescribed, especially in the form of monetary reliefs, and is usually characterised by a business, or economic plan.

Rationality

In Astronist Economics, rationality is one of the central concepts to decision-making procedures, and typically involves the removal of all emotional, relational, and non-logical elements from the decision-making process in corporate and economic situations.

Motionality

In Astronist Economics, motionality is another of the most central concepts to decision-making procedures, and involves the taking into consideration of factors of both internality and externality which are all considered motional. The extent to which the movement of factors is discussed in the decision-making process directly relates to the level of motionality.

The Raising of Resources

In Astronist Economics, the process of The Raising of Resources, also known as Resourcism, relates to the process of a company, or government purposefully stocking up on resources during times of greater yield, and using the resources to wade through times of lesser yield, and is directly related to the process of hibernation within Naturalism.

Paradigm

In Astronist Economics, relating collectively to the methodologies of the Astronist worldview in both an economic, and in a business context, and in theory, is typically relative to the utopian, or idealised version of the methodology.

Creativism

In Astronist Economics, the belief held that creativity, imagination, and future vision are the only distinguishing factors of longevity between humanity and technology, and holds that both businesses, governments, and overall economies should cater more for the creative industries.

Judgement of Decision

In Astronist Economics, the concept relating to the reflection, analysis, and conclusion of decisions by thorough examination, and by linking the applicative aspects to their theoretical counterparts.

Multi-disciplinary Subject

In Astronist Economics, the concept that economics should always hold multiple disciplines of study within it, especially when psychology, sociology, philosophy, and geography are incorporated.

Incrementalism

In Astronist Economics, one of the most prominent concepts that relates to the economic principle that as long as there is still growth in the economy, then there is still progression, despite growth sometimes slowing.

Marginalism

In Astronist Economics, the principle holding that marginal change, or marginal economic growth is always superior to rapid growth, or excessive change, especially when stability is considered the centrality of all good economic practice.

Exhaustion of Potentiality

In Astronist Economics, the concept relating to the full debilitation of potential for a market, a product, or an industry, in relation to either a business, or an economy.

Potentialism

In Astronist Economics, the term relating to the theory that all economic items have a certain level of potential, similar to the way in which energy is measured in its potential, and holds that the higher the potential for an economic article, whether that be cash, a commodity, or a product, the higher its economic worth. Potentialism brings with it a system of perceiving economic items and measures them according to their potentiality levels, rather than their actual value. In this way, all products, commodities, and economic items can be classified under one system. However, the key aspect of this system is that every individual has a different interpretation of what one product's potential may be. Although, in the same way, this system allows for the quantification of more abstract products, services, or economic articles by giving them a more quantifiable subject.

The Proper Allocation of Resources

In Astronist Economics, refers to the understanding of resources; their qualities, potentiality, and the maximisation of their uses, and the subsequent allocation of these resources, especially during times which such resources are limited, and is founded on decision-making, the proper collaboration of the company, or government, and the decipherment of the information which is available at the proper time.

Marginal Revenue | Marginal Cost | Ownership

Revenue Maximisation is better for customers, but Profit Maximisation is better for the owners and shareholders. It is the duty of the manager of the company to decide which stakeholder it is more prudent to please; this is called the Manager's Paradigm, and cannot be avoided due to it being an intrinsic decision of the managerial role. It is the responsibility of the ownership to understand the complex nature of the manager's central position surrounded by many stakeholders which they aim to please, but it is not the responsibility of the customer to do the same.

Using a Marginal Revenue and Cost Model, it is inevitable that as marginal revenue decreases, marginal cost will increase as a direct consequence and measuring this over a period of time, the two axes intersect, and at this point, the specific product that the model represents is maximised; this is also called Exhaustion of Product.

It is also inevitable that the axis will slide, although keeping at this point for as long as possible is the manager's role. Due to the Exhaustion of Product, a new product must be introduced before the business itself becomes exhausted, but this is also problematic due to the increase in costs for the creation of a new product, and the labour needed to complete this. In this way, the product life cycle in an economic context is explained by its limitation due to the marginal revenue and cost.

Economic Entirety

One of the central-most concepts of the Astronist Business Economics landscape which is either intrinsically, or indirectly influential to the range of principles, and concepts of Astronist Economics, and describes a new way of perceiving either a singular, or a series of transactions, and their repercussions on the wider economic system that is in place, but is almost always disregarded in economic theory and analysis.

The concept encompasses the idea that each and every transaction, no matter the nature, size, or intention, adds to the overall entire economic environment. This concept can be most often applied to that of cost and how each transaction adds to the economy in more ways than just itself, and is said to be a merger between the way in which an accountant would look at a series of transactions, and how an economist would.

An example of how this could be applied; some friends decide to plan a trip to see a cricket game across the country. The initial and basic cost is that to the individuals themselves, including the cricket game tickets, the train fare, the food, and the accommodation. However, by using this theory, we look must deeper into this trip and the details of each possible transaction that is occurring; firstly, the purchase of tickets is done through a website which must be firstly designed, constructed, and maintained which may provide a flurry of jobs for individuals in digital roles, which could be said to add to the macroeconomic environment, rather than the local, or microeconomic environment.

Secondly, not including the main train journey, each and every transportation adds to the local economic environment, which may include a taxi to the train station, and a coach to take the group from the train station to the cricket ground, which all provide jobs for the transporters, and as a consequence provide uses for the various transportation methods in use, thus satisfying both micro and macroeconomic environment factors.

Thirdly, the train journey itself must be manned by a crew from the driver, to the ticket-master, to the platform controller, to the waitress in the onboard cafe; each and every role is supplemented by the purchase of the train tickets. The train itself must be bought, fuel must be bought to make it work, and engineers need to be on hand if the train were to

break down. Perhaps there are many more economic factors to introduce here, but the point is clarified enough by those already mentioned. In a similar way, these train journey factors satisfy both local, national, and even international economic environments.

Fourthly, the booking of hotels may now be done through the use of a mobile application which means that the company must have an easily accessible and consistently maintained mobile application which customers can use which also requires a digital department. Not only this, but the fact that the group are using a hotel for their trip suggests an even greater and much more complex contribution to both the local and macroeconomic environments. The complexity enters when one begins to think about all that is required to run a hotel and those involved in the maintenance, operation, and improvement of the entire hotel, and the experience it claims to provide.

Finally, and according to the Economic Entirety principle the most important part, the group go to the cricket game and enjoy watching the sport being played out. This is the most important part of the entire series of transactions due to it being the central pull factor for the group to go on the trip, and not only invokes culture, entertainment, and leisure, but is also the main driver of economic growth. In this way, due to the intense detail and thoroughness through which the principle describes of the transaction series, it seems a much greater detriment to all levels of the economic environment if the trip was sudden called off.

Often, before the introduction of the Economic Entirety principle, only the one-dimensional costs to the individual were analysed, yet now, with this implementation of this principle, a larger and more three-dimensional environment is revealed with not only the cost to the individual, but the benefits these costs provide to the companies, employees, and consequential benefactors involved, and places greater emphasis on the contribution of the customer to the wider economic environment.

The Consumption of Culture is a major component of the Economic Entirety principle and states that culture, including music, art, literature, technology, sport, fashion, celebrity, history, and architecture, is the main driver of economic transaction and activity, and thus, culture must be continuously and endlessly developed, improved, and expanded in order to secure future economic transaction and prosperity.

Remuneration Committees

A group of both impartial, experiential, and sometimes expertise which is used, typically on mandatory and pre-selected days throughout a quarter, to take an overview of the company's accounts, operations, and other complex articles, and they are to produce an unbiased, honest, and clear reports on their findings, and are most commonly present through The Governing Ministry of The People's Constitutional Company of Jesse Millette for a large variety of purposes in many different departments.

Trusteeship of The People's Constitutional Company of Jesse Millette

A concept of ownership relating to the suggestion that The People's Constitutional Company of Jesse Millette should be boarded by a committee of trustees, with the main difference being the reduced power of each trustee when in comparison to the current Governing Council model.

Revenue Maximisation & Satisfactory Profit

The central principle of Astronist Business Economics propounding the concept that The People's Constitutional Company of Jesse Millette must not be based upon the maximisation of profit, but the maximisation of revenue for the benefit of the customers, and other stakeholders, whilst in parallel, creating satisfactory profit to somewhat please the shareholders, but stresses that the shareholders must not demand the maximisation of profit as this is against the Astronist business culture.

Astronist Relations Methodology

Direct Relations

sustaining frequent and positive communication directly with an organisation outside the company's ownership.

Indirect Relations

sustaining frequent and positive communication with an organisation via another entity, so if that entity did not exist, the relations with the initial organisation would not either.

Internal Relations

sustaining and encouraging frequent and positive communication between organisations within the company's ownership.

Dependent Relations

communications between the company and an entity that are dependent on an intermediary.

Fractured Relations

infrequent and damaged communications between the company and an external or internal entity, most commonly due to unwanted or unexpected occurrences.

Diminished Relations

communications that have completely ended between the company and another entity, most typically an external entity.

Rejuvenated Relations

communications that have been re-established by the company with an external entity, most typically due to a change in administration, a change in ownership, or the mutual realisation that both entities must sustain relations in order to operate.

Diagonal Relations

communications between the company and an entity that rivals or is opposed to another entity that the company sustains relations with, thus reaffirming the company's status of neutrality.

Dimensional Relations

communications between the company and an entity that doesn't operate in the same industries as the company, but does offer a significant, and mutually beneficial alliance.

Historical Relations

communications between the company and an external entity that have existed for more than thirty years.

The Sustainment of Thorough Relations

Thorough Relations describes the sustaining of relations between The People's Constitutional Company of Jesse Millette and every entity that it operates through whether directly or indirectly, and every entity that is in close proximity to its operations, whether physically or digitally. An example of this would be the omninational, direct relations between The People's Constitutional Company of Jesse Millette, and every bookstore or bookseller that actively stocks any Astronist titles.

Introduction to Millettocracy

A system of government for a nation operating under Astronist Methodology and constitutional law, comprising a newfound middle ground between traditional political opponents. To be officially categorised as a functioning Millettocracy, the nation needs recognition from The People's Constitutional Company of Jesse Millette and The People's Astronist Congress.

All of the informations, policies, and taxation recommendations in this methodology are simple suggestive and should therefore be customised for each individual nation.

Fiscal Policy

A simple taxation system is necessary for a more comprehensive and efficient government revenue scheme which consolidates different taxation types and establishes a gradual rising rate of corporation tax to ensure fairness, competitiveness and responsibility are at the forefront of taxation principles.

The Gradual Rising Rate

Corporations, both large and small, benefit greatly from operating in nations with fertile lands, large and growing workforces, large and growing customer bases, and growing economies, therefore they should give back to the nations in which they produce their products and the nations in which they sell their products.

The Astronist Methodology supports the growth of small businesses and entrepreneurial spirits, therefore The Gradual Rising Rate will be introduced in order to combat corporate taxation avoidance, yet still incentivise entrepreneurs to begin business ventures.

The Gradual Rising Rate is the corporation tax beginning at a lower rate when a business is first established and after certain boundaries are crossed based on two variables (profit and length of operations), the taxation on the business rises, creating a gradual rising rate over the course of the business journey.

The Gradual Rising Rate Model

Length of Operations Rate	Taxation	Profit Rate	Taxation
First Year	9%	Below £10,000	3%
Third Year	12%	£10,000 - £20,000	6%
Fifth Year	18%	£20,000 - £40,000	12%
		£40,000 - £80,000	18%
		£80,000 - £160,000	24%

If a company had just been set up in its first year and made profits of between £10,000 and £20,000, it would pay a taxation that year of 7.5% as that calculates the midpoint between the two taxation variables.

However, if a large corporation began doing business in the nation, they would be able to claim First Year Length of Operation, but if their profits were £200,000+, they would pay a tax of 21% as that is the midpoint between the two variables.

Finally, if a small company had been operating in a nation for over ten years but only had profits of below £10,000, their taxation rate would result as 15.5%.

Perhaps one of the initial criticism of this methodology would be the fact that each individual business's taxation rate is relatively individualised, thus leading to greater amounts of jobs required in governmental taxation departments. However, developing a computer-based model and inputting hundreds of thousands of businesses into it and finding the Taxation Midpoints of each, would solve that issue, thus leading to greater efficiency and ultimately, a fairer taxation system.

The Corporations Taxation Model

Length of Operations Rate	Taxation	Profit Rate	Taxation
First Year	7%	£1m - £10m	2%
Third Year	12%	£10m - £100m	4%
Fifth Year	14%	£100m - £400m	6%
		£400m - £800m	8%
		£800m - £5b	15%

Companies are automatically transferred to The Corporations Taxation Model if they report profits above £1 million and importantly, their Length of Operations variable resets to First Year.

National Insurance Contributions

Employee National Insurance Contributions Model

	£500 - £699 a month	£700 - £3,599 a month	£3,600 - £6,999 a month	£7,000+ a month
A -	2%	8%	14%	20%
B -	5%	13%	21%	27%

Employee National Insurance

A - individuals aged between 25 and 40

B - individuals aged between 40 and 55

C - individuals aged between 55 and 70

By utilising this model, contributions are concentrated on individuals who are likely to be more concerned about their state pension and gradually introduces younger segments of the population into the concept of pension funding.

Employer National Insurance

Employer National Insurance Contributions Model

	£500 - £699 a month	£700 - £3,599 a month	£3,600 - £6,999 a month	£7,000+ a month
A -	1%	2%	6%	10%
B -	3%	6%	9%	13%

- A - individuals aged between 25 and 40
- B - individuals aged between 40 and 55
- C - individuals aged between 55 and 70

By utilising this model, companies and individuals employing others can concentrate their contributions on those of their workforce that the benefits of National Insurance Contributions are most relevant to, and allows employers to gradually introduce pension funding to younger segments of their workforce.

Self-employed National Insurance (optional)

Self-employed National Insurance Contributions Model

	£500 - £699 a month	£700 - £3,599 a month	£3,600 - £6,999 a month	£7,000+ a month
A -	1%	2%	6%	10%

- A - individuals aged between 25 and 40
- B - individuals aged between 40 and 55
- C - individuals aged between 55 and 70

By utilising this model, individuals who are self-employed have the option to agree to standard contributions, or can self-determine their contributions if governmentally authorised. Again, this model concentrates contributions on those who are most concerned about the consequences of National Insurance Contributions, and gradually introduces younger self-employed individuals into the concept of pension funding.

Income Tax

Under the Millettocratic methodology, the Income Tax system is based on two variables: age and income.

Income Taxation

Age Rate	Taxation	Income Rate	Taxation
18 - 25	8%	Below £10,000	2%
25 - 30	14%	£10,000 - £20,000	8%
30 - 45	20%	£20,000 - £40,000	15%
		£40,000 - £80,000	25%
		£80,000 - £160,000	38%

If an individual is the age of 22 and they are earning between £10,000 and £20,000, their income tax would stand at a midpoint calculation of 7%.

If an individual is the age of 39 and they are earning between £20,000 - £40,000, their income tax would stand at a midpoint calculation of 17.5%.

If an individual is the age of 55 and they are earning over £200,000, their income tax would stand at a midpoint calculation of 38%.

By utilising the Millettocratic methodology, income tax is much fairer on those beginning to establish their careers, and is thus raised on those who have established themselves or have been working a larger amount of years.

Value Added Tax

Value Added Tax (VAT) Model

Rate	% of VAT	Applicable Products & Services
Standard	20%	Most goods and services
Zero	0%	Books and educational products, foodstuffs, non-luxury

VAT Exemptions Include:

- Postage stamps
- Financial and property transactions
- Standard medical supplies and non-prescriptive drugs

Fuel Duties

Petrol, diesel, biodiesel and bioethanol - 59.95 pence per litre

Liquefied petroleum gas (LPG) - 31.61 pence per kg

Natural gas used as fuel in vehicles, e.g. biogas - 12.70 pence per kg

'Fuel oil' burned in a furnace or used for heating - 10.70 pence per litre

Alcohol Duties

Beer Duties

More than 1.2% up to 2.8% - 19.42 pence per litre for each % of alcohol

More than 2.8% up to 7.5% - 32.08 pence per litre for each % of alcohol

More than 7.5% - 41.77 pence per litre for each % of alcohol

Cider Duties

(Still) More than 1.2% up to 7.5% - 48.38 pence per litre

(Still) More than 7.5% but less than 8.5% - 70.04 pence per litre

(Sparkling) More than 1.2% up to 5.5% - 48.38 pence per litre

(Sparkling) More than 5.5% but less than 8.5% - 86.46 pence per litre

Wine Duties

(Still) More than 1.2% up to 4% - 93.93 pence per litre

- (Still) More than 4% up to 5.5% - 135.30 pence per litre
- (Still) More than 5.5% up to 15% - 294.65 pence per litre
- (Still) More than 15% up to 22% - 393.82 pence per litre
- (Sparkling) More than 5.5% but less than 8.5% - 289.46 pence per litre
- (Sparkling) More than 8.5% up to 15% - 380.72 pence per litre

Spirit Duties

£36.74 per litre of pure alcohol

Tobacco Duties

- Cigarettes - 25% of the retail price, plus £4.50 on a packet of 20
- Cigars - £4.13 on a 10g cigar
- Hand rolling tobacco - £6.24 on a 25g
- Other smoking tobacco and chewing tobacco (e.g. pipe tobacco) - £5.59 on a 25g packet

Stamp Duty

Non-residential/Mixed-use

- Below £190,000 - 0%
- £190,000 - £250,000 - 2%
- £250,000 - £450,000 - 5%
- £450,000 - £700,000 - 9%
- £700,000 plus - 13%

Residential Use

- Below £170,000 - 0%
- £170,000 - £250,000 - 2%
- £250,000 - £400,000 - 5%
- £400,000 - £650,000 - 8%
- £650,000 - £900,000 - 12%
- £900,000 plus - 15%

Insurance Premium Tax

Rates

Standard Rate 10%

Higher Rate - for travel insurance, mechanical/electrical appliances insurance and some vehicle insurance

Standard Rate - all other versions

Exemptions from Insurance Premium Tax:

- most long-term insurance
- reinsurance
- insurance for commercial ships and aircraft
- insurance for commercial goods in international transit
- premiums for risk located outside the home nation

Gambling Taxations

Bingo Duty

12% of profits in the accounting period (bingo receipts less any winnings paid out)

Casino Gaming Duty

32% of gross gaming yield of premises in the accounting period

Lottery Duty

19% of all stake money paid in the accounting period and stake money payable, but not yet received, on any tickets or chances taken in the accounting period

Machine Games Duty

Cost to play	Prize	Rate you pay
20 pence or less	£10 or less	8%
21 pence to £5	£11 or more	22%

Effective on all gaming machines

Landfill Tax

If your business gets rid of waste using landfill sites, you are obligated to paying landfill

Rate	Amount Payable	Exemptions:
Lower Rate	£8.65 per tonne	<ul style="list-style-type: none">• dredging activities• quarrying and mining• pet cemeteries

fees on top of your normal landfill fees

Climate Change Levy

Main Rates

Electricity - £0.00557 per kilowatt hour

Natural Gas - £0.00194 per kilowatt hour

Liquefied Petroleum Gas (LPG) - £0.01258 per kilogram

Any other taxable commodity - £0.01530 per kilogram

Main rates are payable by businesses in the following sectors:

- industrial
- commercial
- agricultural
- public services

Carbon Price Support (CPS) is available for:

- businesses using that uses small amounts of energy
- domestic usage (including armed forces residential accommodation, children's homes, homes for the elderly and disabled, hospices, houseboats, houses and other dwellings and any building primarily used for education including student accommodation)

- charities and organisations engaging in non-commercial and non-profit activities

Carbon Price Support is paid by the owners of the electricity generating stations and operators of combined heat and power stations

Aggregates Levy

A tax on sand, gravel and rock that's either been:

- dug from the ground
- dredged from the sea in national waters
- imported

A taxation rate of £4 per tonne of sand, gravel, or rock is levied with half a tonne equaling a £2 levy and one and half tonnes equaling a £6 levy and so on.

Runway Duty

A tax levied on every aircraft that lands on any runway in the nation, even if it is only to fill up on fuel.

Higher Rate - £60 (for private jets and cargo aircrafts)

Standard Rate - £40 (for commercial airliners)

Lower Rate - £15 (for single manned aircraft and non-commercial airliners)

Exemptions:

- Airmail aircrafts
- Military aircrafts
- Emergency aircrafts

Nature Tourism Tax

A type of tax levied on companies during their accounting period that make profit from natural habitats including nature reserves, safaris, and national parks.

Below £20,000 - 2%

£20,000 - £50,000 - 4%

£50,000 - £100,000 - 6%

£100,000 plus - 8%

Exemptions:

- Zoos

Public Asset Purchase Duty

If an individual or a company wishes to buy a publicly / government owned asset (including museums, nature reserves, etc.), a duty is placed on top of the purchasing price and on top of stamp duty.

Commercial Use

Below £190,000 - 4%

£190,000 - £250,000 - 8%

£250,000 - £450,000 - 12%

£450,000 - £700,000 - 16%

£700,000 plus - 20%

Residential Use

Below £170,000 - 8%

£170,000 - £250,000 - 14%

£250,000 - £400,000 - 23%

£400,000 - £650,000 - 27%

£650,000 - £900,000 - 34%

£900,000 plus - 36%

Abolished Taxations:

1. Capital Gains Tax
2. Inheritance Tax
3. Air Passenger Duty
4. Petroleum Revenue Tax
5. Tax Credits (Working and Child)

County/Confederation Council Tax

A yearly tax levied on the owners of households governed either by a county council or a confederative council rather than the central government of the nation.

The rates of this tax vary from county / confederation to county / confederation depending on the costs of living in that jurisdiction and the features of the household like its size, grounds, number of people living in it etc.

County / Confederation Council Tax is categorised into the following bands:

- A. a caravan used as temporary or permanent household
- B. a flat or apartment with two or less bedrooms
- C. a terraced house with two or more bedrooms
- D. a semi-detached house with two or more bedrooms
- E. a detached house with two or more bedrooms with no grounds beyond a garden
- F. a detached house with two or more bedrooms with grounds beyond a garden
- G. a detached house with two or more bedrooms with a business operating on its grounds or significant outbuildings, stables, or other buildings housing animals

Health Insurances

Health Insurances is a mandatory self-funded payment whereby an individual pays a monthly portion of their wages to either a private Health Insurance company or the state-run Health Insurance company, in order to insure themselves and their child / children of healthcare beyond emergency procedures.

Typically, depending on the structure of the nation, health insurances are handled by confederated regions or county councils. All the thirteen healthcare packages as mentioned below include complete treatment from inception to resolution in state-run hospitals.

In the event of an emergency, the patient will receive medical care in state-run ER departments until they are medically examined and are considered to be in a "stable" condition, and then their insurance package would have to be triggered in order to receive further treatment, housing, and procedures. All treatments and prescriptions beyond emergency means, determined by the concept of "stability", must trigger the individual's insurance package.

For example, in the event of a cancer illness, that patient, unless more than two medical professionals deem it to be so, is not considered “critical”, and so therefore the individual’s insurance package would have to be triggered in order to receive the long-term treatment to fight the cancer.

If it is proven that an individual, couple or family cannot afford the package they need as confirmed by a medical professional, then the government will help to support them by funding up to 40% of the package, which is a percentage that will drop as the income of the individual/couple/family in question rises or recovers.

There are thirteen different types of healthcare packages:

Family Package

eligible for a couple with at least one child (including adopted and fostered children) and is the most common form of health insurance - £460.00 a month (£5,520 a year)

18 - 21 Package

eligible for individuals aged between 18 and 21 who wish to begin their own health insurance plan separate from that of their parents or guardian - £55.00 a month (£660 a year)

Guardian Package

eligible for guardian(s) with at least one child to look after up to their maximum age of 21 - £290.00 a month (£3,480 a year)

Lone Parent Package

eligible for a lone parent with at least one child whose partner either does not live with or support the child/children, or whose partner has died - £190.00 a month (£2,280 a year)

Standard Individual Package

	Rates (Monthly)	Rates (Yearly)
21 - 30	£175.00	£2,100
30 - 45	£220.00	£2,640
45 - 60	£290.00	£3,480

eligible for individuals between the ages of 21 and 70 which rises as the individual gets older and is calculated using the following model:

New Citizen Package

eligible for individuals and families who weren't born in the nation or who haven't been citizens of the nation for more than 7 years - £510.00 a month for families with two parents and at least one child and the table below shows the individual citizen prices:

	Rates (Monthly)	Rates (Yearly)
21 - 30	£190.00	£2,280
30 - 45	£250.00	£3,000
45 - 60	£360.00	£4,320

Empty Nester Package

eligible for parents whose children have either left home or have chosen to pay for their own health insurance package - £350 a month (£4,200 a year)

Over 70 Package

eligible for individuals or couples are both aged over 70 - £410.00 a month for individuals (£4,920 a year), and £615.00 a month for couples (£7,380 a year)

Over 85 Package

eligible for individuals or couples are both aged over 85 - £470.00 a month for individuals (£5,640 a year), and £675.00 a month for couples (£8,100 a year)

Widowed Package

eligible for an individual whose partner has passed away - £270.00 a month (£3,240 a year)

Couples Package

eligible for couples without children - £380.00 a month (£4,560 a year)

Standard Protection

eligible for any individual for basic medical housing, treatment and procedures beyond emergencies, but is only available two years consecutively until an alternative option has to be decided - £75.00 a month (£900 a year)

Additional Applicable Healthcare Benefits:

- Vaccine Damage Payment - a tax-free payment of £78,000 to those whose severe disability was caused by a vaccination
- Healthcare Travel Costs - for peoples of physical disability, temporary inability or severe mental disability, a transport will be provided to take them to their various medical appointments if they do not have another means of transportation

The private Health Insurance companies are bound to charging the same prices for their healthcare packages as the government, with the main difference being that individuals may receive better and more tailored benefits if they choose to be insured by a private Health Insurance company.

Maternity Fund

The recommended fund by the government in which a couple who wish or are planning to have a child or are already pregnant, pay a percentage of both their wages into the fund to cover costs such as maternity leave, basic necessities for newborn babies, and childcare. The government will pay a standard 40% of the percentage which the couple have chosen to put into the fund.

Medical Extrication

The main alternative to Health Insurances in the Astronist system is that of Medical Extrication, which involves each citizen of a nation that do not wish to partake in Health Insurances being allocated a Medical Savings Account by the government in which at least 5% of the individual's monthly income is put into it, which dramatically decreases the amounts of taxation required from the government in regards to healthcare.

In addition to having an individual account, a family version can be set up to suit the specific requirements of the family and can thus be used by any registered family for any prescriptions, or operations required.

Pension Fund

The recommended fund by the government in which a couple or an individual pay a percentage of their wages into the fund to cover costs such as their pension after retirement, their health insurance after retirement, and another costs. The individual/couple's National Insurance Contributions are partly funnelled into their pension fund.

The government will pay a standard 20% of the percentage and their employer will pay another 20% of the decided percentage rate. Banks will then compete to offer as many benefits as they can to entice individuals or couples to place their pension fund with that bank.

Pension Age

The standard Pension Age for all fit and able-bodied peoples of the nation is 70 years old, but this does fluctuate depending on the calculated Average Life Expectancy of the people of that nation.

After the age of 70, individuals are eligible to retire and live from their Pension Fund, but a key concept that should be introduced and encouraged, is the concept of Part-time Pensioner, wherein the pensioner, if able-bodied and healthy, should be encouraged to take up a part-time role in a business. There are strict guidelines to the limitations of this concept, such as the pensioner cannot work for more than 25 hours a week, they cannot do laborious work or work that they more likely to suffer injuries from, and they cannot work in this scheme beyond the age of 80.

Benefits System

The benefit system is structured on fifteen different types of benefits, all of which are governed and funded by the central government, not the confederate governing bodies.

List of authorised benefits:

Adult Social Care

help with paying for care on a council-to-council basis

Attendance Allowance

£47.30 a week for those who are physically or mentally disabled and need help to be looked after

Carer's Allowance

a taxable allowance for those who look after someone who is disabled

Childcare Benefit

a benefit whereby the government will pay up to 60% of each child's childcare costs (in nurseries) if the parent(s) can prove that they cannot afford the costs

Constant Attendance Allowance

to help pay for the daily care of an individual who has been medically examined as being 100% disabled

Crisis Loans

interest-free loans for those who do not have enough money to meet their, or their family's, immediate short-term needs, most typically after a natural disaster or medical emergency

Guardian's Allowance

a tax-free payment of £35.00 a week per child for people who are bringing up children whose parents have died

In-Work Allowance

a fixed tax-free payment of £35 per week, or £55 per week in the capital, for parents in work and bringing up children alone

State Pension

a fixed payment of £61.20 a week to all those who have reached state pension age in addition to the individual's pension fund

Emergency Pension Allowance

a standard payment of £61.20 a week for those of pension age whose pension fund has run out, but evidence must be shown that they had accumulated a pension fund initially

School Uniform Benefit

if parent(s) can prove they cannot afford to pay for their child's school uniform, it will be sent to them in conjunction with the school

Statutory Sick Pay

a standard rate of £71.12 a week half payed by employers and the other half payed by the government for up to 6 weeks if somebody is unable to work because of an illness

War Disablement Pension

a pension for those injured or disabled as a result of service in the Armed Forces

Widowed Parent's Allowance

a standard weekly allowance of £94.32 per child paid to a parent whose husband, wife, or civil partner has died

Abolished & Unrecognised Benefits (based off UK Benefit System):

1. Bereavement Allowance
2. Bereavement Payment
3. Budgeting Loans
4. Child Benefit
5. Child Tax Credit
6. Child Trust Fund
7. Cold Weather Payment
8. Community Care Grant
9. Council Tax Benefit
10. Disability Living Allowance
11. Employment and Support Allowance
12. Funeral Payments
13. Healthcare Travel Costs Scheme
14. Health Costs
15. Health in Pregnancy Grant
16. Healthy Start Scheme
17. Housing Benefit
18. Income Support
19. Industrial Injuries Disablement Benefit
20. Job Grant
21. Jobseeker's Allowance
22. Local Housing Allowance
23. Maternity Allowance
24. Mobility Supplement
25. Over 80 Pension
26. Pension Credit
27. Retirement Allowance

28. Return to work Credit
29. Severe Disablement Allowance
30. Statutory Adoption Pay
31. Statutory Maternity Pay
32. Statutory Paternity Pay
33. Sure Start Maternity Grant
34. Tax Credits
35. Training Premium
36. Travel to interview scheme
37. Widow's Pension
38. Winter Fuel Payment

Foreign Policy

The foreign policy of a Millettocratic nation is the most simple of policies and can be entirely described in the following two statements:

“A nation under Millettocratic ideology is a friend to all nations that do not show hostility and obstacle towards the betterment of the peoples of the nation, and so, if a belligerent nation was to act in this such manner, they would be excluded from the relations of our nation on the grounds of hostility, belligerence, a threat to the people, and would be labelled an aggressor nation.”

“As a nation under Millettocratic principles, we have a constitutional duty to respect the sovereignties of all other nations and to not engage in activities of hostilities to towards other nations for our own betterment. It is our universal policy that working with nations rather than working against nations leads to the mutual betterment of all peoples of each nation.”

Monetary Policy

The purpose of the implementation of a Millettocratic governing structure is to establish and maintain a stable and gradually growing economy and monetary stance on the world stage.

In order to stabilise the currency of a nation, the following processes can be implemented in order to align a country's currency with the respective largest, most stable currencies:

dollarisation - aligning a country's currency with the US Dollar

yuanisation - aligning a country's currency with the Chinese Yuan

euroisation - aligning a country's currency with the European Union's Euro

afroisation - aligning a country's currency with the African Union's Afro.

One of the main benefits of establishing as a Millettocratic nation is the fact that the nation automatically receives assistance, guidance and supplements from The Astronist Central Bank and is encouraged to follow the policies of The Astronist Central Bank and the Astronist Banking system.

Commercial Policy

The nation under Millettocratic methodology should prioritise the ease of business, the welcoming of business and supplementing of business within their nation in order to stimulate further economic growth, thus leading to the betterment of the lives of the peoples of the nation.

Another major priority is to create exclusive free trade deals with every non-belligerent nation in the world in order to establish a diversified trade network so as no to create a dependency on one nation or a union of nations.

A strategic to try and stimulate economic growth is by investing and building industries that are unique to that nation, or are niche industries that not many other nations are well-adversed to trading in. This increases diversification, reducing dependency, and in turn, creates a stronger economic identity.

Another strategy is to promote features of the nation that are unique to the nation whether that be famous landmarks, natural phenomena, or unique tourist attractions, as that will, again, increase tourism, build a stronger economic identity, and reduce dependencies on dominating exports.

Economic Identity

The concept that every nation, or region of a nation, has a certain identification reflected in their economic productions, manufacturings, and their overall output. In basic terms, Economic Identity is what the nation or region is known for producing, and a strong economic identity is characterised in the diversity, flexibility and durability of the nation's economic output. A nation's Economic Identity is calculated using two variables; firstly its diversity, flexibility and durability, and secondly, its size of output.

Governing Policy

- Largely decentralised government
- Confederated government
- Transparency - informing the people of all governmental actions before they are taken
- Direct Democracy - utilising referendums to decide on medium to large issues in order to encourage high voting citizenship
- Constitutional Principles - constitution of the nation is inspired by The Grand Constitution

Philosophical & Ideological Policy

- Astronist characters at the centre of the nation's philosophical identity
- Strong religious unities and distinctions
- Religious protections
- "Work hard enough and you will succeed" mentality

The Five Identities of The Nation

The National Figurehead

The entity, whether a person, a fictional figure, philosophical figure, or religious figure, that stands as the symbolic leader of the nation, typically without any direct authoritative power.

The Rotating Leadership

The individual, typically the president or prime minister, or a political party that spends a set amount of time in power, but then is voted to stay in or is voted out by the people.

The Word

Most typically referring to a nation's constitution, The Word resembles the fundamental principles of a nation, and underpins what the nation stands for, and outlines its policies.

The Faith

A broader identity than that of the other four, The Faith refers to the foundational religious identity of the nation, whether that is atheism, agnosticism, or theism, as well as recognising religious minorities.

The Philosophy

The Philosophy refers to the central and wholly unifying set of attitudes and guiding principles, shared widely throughout the nation, and is made distinct from religious worship. Under a Millettocracy, the default philosophy of the nation would be Astronism.

Astronist Economic Establishment Methodology

The Astronist Economic Establishment Methodology outlines the key components of establishing and maintaining the ways in which to grow an economy, divided into specific industries.

Accountancy

As an industry of professionalism and a fundamentality to business and enterprise, a strong accountancy sector within an economy is a positive step to creating a stable environment for business to flourish.

Advertising/Public Relations

Centred around more creative aspects of business, advertising and public relations, again, stands a fundamental role in the establishment of enterprise within a nation, and if a nation can build a distinct and talented advertising sector, it may carve out a niche for itself that would be hard to compete with.

Aerospace & Defence Contracting

Under Millettocratic methodology, the aerospace and defence industries would not be as large as they are in current superpowers as these industries have a direct influence on conflicts worldwide. However, the aerospace industry especially, should be one of strength and key advancements, yet its influence on political and governmental affairs should be capped.

Agriculture

Ideally making up 10% to 20% of a Millettocratic nation's economy, the agricultural industry, with its countless subindustries, is a key player in the nation's economy, and a strong agricultural sector, comes with it greater distinctions especially if the nation can carve out a niche aspect of agriculture for themselves, and especially as other more developed nations turn to service economies, a larger agricultural sector in the nation may lead to stable, yet significant, economic growth. It should

be noted, however, the practice of subsistence farming isn't encouraged under Millettocratic methodology as that only hinders economic growth, and that the agricultural sector shouldn't be depended upon by the wider economic environment of the nation as that too, doesn't promote diversification and is another form of economic hindrance.

Agricultural Services & Products

In order for the domestic agricultural industry to grow sustainably, the manufacturing and producing of agricultural products and services internally, is the best way to ensure a sustainable, and non-dependent industry. Including agricultural vehicles, tools, and irrigation systems, this industry has a lucrative domestic market if the nation's agricultural sector is large enough, but it also has great potential for international growth, especially if the domestic company's irrigation techniques are revolutionary.

Airlines

Having a national airline is an essential hallmark of a developed economy, but it is the sustainability and stability of that national airline that makes the nation's economy more greatly benefit from its presence. In the spirit of encouraging capitalist competition, the nation should not limit its investments in just its national airline, but other domestic and international airlines as well. A strong airline industry leads to greater growth and stability in the tourism industry, exportations, and national security.

Alcoholic Beverages

Under Millettocratic methodology, the taxes on alcoholic products are generally higher than in other nations, therefore this industry isn't encouraged as the consumption of alcohol isn't a desired habit of the majority of the population. Although not prohibited like in some nations for religious reasons, the alcohol industry definitely isn't one of Millettocratic interest.

Alternative & Renewable Energy Production & Services

One of the most important industries within Millettocratic methodology is that of alternative and renewable energy production. A large amount of nations depend on oil and gas exports to support their economies, yet insufficient funds are being invested in the production of alternative and renewable energies. This leaves a lucrative gap for the nation to fill. Depending on the location, climate, and general topography of the nation, solar energy may be an energy source of high

potentiality for the nation. If this was the case, the nation should certainly prioritise the production and exportation of solar energy as well as utilising its solar energies to help the nation function, thus creating a sustainable nation with limited dependency on oil exports and imports.

Architectural Services

Despite being a more niche industry when compared to others, Architectural Services may, if developed correctly, lead to a lucrative niche in the world's design needs, especially as urban centres are becoming more compacted, and more and more mega-projects are gaining mass amounts of investment from governments. If the nation could successfully position its education system towards catering for the young who have natural design and artistic talents, it could generate a new wave of architects, and with the establishment of a strong ease-of-business infrastructure, there would be little standing in the way of the nation to becoming a leading in this niche industry.

Attorneys/Solicitors/Law Firms

Similar to the accountancy industry, the law and attorneys industry is another fundamental component of business and its successful establishment, will lead to the subsequent establishment of a strong ease-of-business mentality and infrastructure throughout the nation. If the nation propagates itself as having a strong legal infrastructure, it will garner more investments from external individuals and organisations, thus leading to a stronger nation and re-enforcing the importance of strong institutions as pillars for economic growth.

Auto Manufacturers

Many of the largest economies in the world have some of the most famous auto manufacturers developing and producing their products in their nation, which has led to the develop of those nation's economies as direct consequence. Therefore, encouraging and stimulating the establishment of a thriving automotive industry will definitely lead to a stronger economic landscape overall, as seen in many of the world's largest economies.

Banking

As another pillar of fundamentality in both business and economic fields, banking stands as an essential infrastructural and institutional component for the betterment of the nation. Creating strong banks and implementing the ease-of-business mentality throughout the institutions will lead to mass investment in the

nation, as stronger banks lead to stronger economies as the bank industry sits at the centre point of all economic activity, thus creating a solid and sustainable banking industry should be the nation's utmost priority.

Bars & Restaurants

Encouraging smaller enterprises establishes the backbone of the nation's economy and it is bars and restaurants dispersed across the nation in various towns and cities that play a crucial part in the construction of the nation's backbone. The nation should encourage and give incentives to potential entrepreneurs to set up their businesses in order to construct the foundations of the economy.

Broadcasting

The media is one of the most powerful forces of the economy both domestically and internationally, therefore it is essential for the nation to have a continuously growing broadcasting sector in all the different platforms, from radio to television to digital, the nation, if it wishes to establish itself as a distinct power, should invest heavily in the broadcasting sector.

Building Contractors & Construction

Building houses, commercial properties, and other types of residential properties is essential for the nation to establish higher living standards, greater investment, and greater immigration rates, which may be very important for nations with decreasing populations.

Casinos/Gambling

Some nations around the world have benefited greatly from the gambling industry and some nations have actually constructed their national economies around the industry. The nation may benefit from taking a similar stance in the gambling industry as long as the principles and religious values of the nation do not clash with the practice of gambling. If the nation wishes to control the proximities of the industry, they may opt to create Free Cities, whereby gambling in those urban areas is encouraged and concentrated, but beyond the city limits, the practice isn't encouraged publicly.

Cattle Ranching/Livestock

Counted as part of the agricultural industry, the livestock sector is a key component to grow in order to establish a strong foundation for the wider agricultural industry. Depending on the climate, topography and natural habitat of

the environment of the nation, the livestock sector could be a crucial part of the nation's overall growth.

Charity

It is the duty of the nation to encourage the establishment of solid charitable organisations which are active both domestically and internationally. The establishment of these charities generates a flow of income that goes straight to the peoples of the nation in building better lives and improving living standards for the peoples of the nation, and so, charity is an important factor of Millettocratic economic policy.

Chemical Manufacturing

Some nations in the world are under strict sanctions due to their political alliances and overall behaviour, and this the use of chemical products may not be available to them. However, if the nation does not suffer that obstacle, the chemical manufacturing industry may be the key to bolstering the nation to advanced status. The strength of institutions and ease-of-business will inevitably be tested in the establishment of this industry, but it is the growth potential of this industry that may just motivate officials and outside investors to invest in the nation's chemical manufacturing sector.

Civil Servants/Public Officials

Growing a large sector of civil servants and public officials is another way to reduce unemployment and if those workers understand the united ideology of the nation and understand their role in the betterment of the nation, they are more likely to make the correct decisions to help the nation. Establishing a strong, large, and united public officials workforce is a fundamental element to constructing solid institutions which are undoubtedly the best way to create stronger economies.

Clergy/Religious Organisations

Under Millettocratic methodology, the spiritual and religious identity of the nation is a key factor to its distinction and does surprisingly play an important role in the nation's economy, especially in the tourism industry. Making use of religious sites, world heritage sites, and propagating religious phenomena, is a good way of generating steady flows of tourism, and the religious organisations also contribute to the industries of construction, architecture, and charity.

Clothing Manufacturing/Fashion Design/Textiles

The clothing and fashion industry is one of the largest worldwide. With this ever-growing and expanding industry comes a lucrative source of economic revenue and since the fashion industry is closely linked with many others, such as broadcasting, retail, and textiles, it is an important industry to invest in. Notice that the most developed of economies all have at least one fashion brand that was created within their borders. This pattern should illuminate the nation into encouraging entrepreneurs to establish their own brands and with the mentality of “work hard enough and you will succeed”, coupled with the ease-of-business ideology, the nation could see the emergence of some large fashion brands. As well as this, the clothing manufacturing sector is a key industry to have a foothold in as it generate significant economic value, but the treatment of workers in this industry is notoriously poor, and so to keep within the standards of Millettocratic methodology, strict regulations and inspections would have to take place in order to ensure that no exploitation of workers was occurring.

Coal Mining

Coal Mining has been a staple industry for many nations throughout industrial history, however, many developed nations today do not rely on this resource due to its instability, scarcity, and its affects on the environment of nations. Coal Mining may be a good way of boost the nation’s economy in the initial sense, but in the long-term, Coal Mining definitely isn’t the future of economic growth.

Computer Software

Microsoft and Apple are two of the largest companies in the world, and it is their growth and success worldwide that has bolstered the American economy, especially in the last ten years. Therefore, it is prudent for the nation under Millettocratic methodology, to understand the importance of the ease-of-business methodology and to encourage entrepreneurs to start enterprises by creating a stable business environment for businesses to grow. If nation was able to generate some of its own computer software companies from within its borders, especially software that is as revolutionary as Apple and Microsoft’s was, then the nation will see itself as an instant global economy due to the world’s dependency on computer and mobile devices.

Crop Production & Basic Processing

As the largest subindustry within agriculture, crop production and its processing carries a fundamental role in the structuring of the agricultural sector. This

subindustry is highly encouraged to be developed and advanced as it is an industry that impacts all nations of the world, and if new and distinct processing methodologies could be developed, the nation would see a larger increase in economic revenue and overall stability in the agricultural sector.

Cruise Ship & Liner Manufacturing

With the continued growth of the tourism industry, especially the cruise tourism subindustry, the cruise ship and cruise liner manufacturing sector could be a key industry for the nation to improve its overall manufacturing prowess, and its tourism industry as a direct result. Due to the relative niche of this manufacturing sector, the nation should encourage the establishment of entrepreneurial businesses in this sector.

Customer Service Provider

Some of the most populous nations in the world have made use of their populations by partnering with companies from developed nations to establish a vast customer service provider industry. It should be a key priority for the nation to establish this industry if its rising population continues. Industries such as this improve the language skills of many of the nation's peoples, the skills of the nation's peoples, and the communication skills of the nation's peoples. This industry is one of the utmost importance, and so, should be heavily invested, and should encourage the largest companies of the world to utilise the growing population to their advantage by setting up a solid customer service industry.

Dairy Production

As an extension of the agricultural industry, the dairy production industry should be a key part of the overall agricultural industry if the climate and topography of the nation exists in accordance to the suitability of the animals producing the dairy products.

Dentistry & Orthodontics

Although the industry of dentistry is include in the healthcare services of many nations, the development of this industry is important to the construction of a national healthcare service that can provide good quality dentistry services. As well as this, orthodontics, which is usually a private industry as separate from public services, is another subsection of dentistry that is a key area to develop as a niche industry and one that is encouraged.

Doctors & Other Medical Professionals

The education system of the nation is the fundamental structure that creates a strong and ever-developing network of doctors. Establishing this strong network is a key part of creating a nation that can keep the health of its peoples in good standards and by creating this network of medical professionals, the nation can provide a universal healthcare service that can either be public, or privately managed.

Drug Manufacturing

This industry is one that should be universally encouraged as it connects to many others and is a lucrative and developed industry that can become a niche for the nation if it creates drugs that are revolutionary and can be exported to other nations. However, the industry is reliant on the education system of the nation to become developed in order to develop the education of the peoples and to encourage a portion of them to enter this industry with incentives of high paid work and job security.

Education

Under Millettocratic methodology, the commodification of education is encouraged and the entirety of the education system, or a certain percentage of the education system, is managed by The People's Constitutional Company of Jesse Millette. Under the Millettocratic methodology, education is placed at the forefront of all other industries of the nation, and is given the highest governmental expenditure, and the mentality of the peoples of the nation in all areas of society, should be the positioning of education at the centre of all society.

Electric Utilities

The establishment of this industry is a key component to the entire nation's development as the universal distribution of electricity leads to the creation of all potentialities in industries such as the internet, and the digitalisation of other industries. If the nation does not have a universal and stable supply of electricity, the nation will be fundamental hindered from development, and so, the Millettocratic methodology fully supports the development and advancement of this industry.

Electronics Manufacturing & Equipment

Some of the largest and most developed economies in the world have risen to that position on the back of the emergence of the largest electronics manufacturing and

equipment companies such as Samsung and Toshiba. This industry is, therefore, a key sector for development, however, the nation may find this industry difficult to carve out a distinction for itself as the competition is developed and is well-known to be fierce.

Entertainment Industry (Film, Music, Television, etc.)

This industry, as realised by the United States, is the most important of all industries in terms of establishing a distinction of one's nation. Using the United States as a model for this creative industry's development, the establishment of companies that are creating distinctive entertainment and productions is the best way to impress upon other nations, your nation's beliefs, ideologies, and cultures. As well as this, the entertainment industry has led to the exponential growth of the American tourism industry with examples such as Hollywood, being the prime incarnation of this idea.

Environmental Services

This is a key industry for the nation to carve out a niche for itself. For nations with environmental distinctions due to their climatology and topography, this industry should be highly encouraged to fully develop and advance as it holds great potentialities for other industries and is one that isn't that highly developed in that many nations of the world. With environmental organisations and forums growing ever-more concerned about the environment, this industry is going to continue to come into the spotlight and is thus, a key area for economic development and investment.

Farming

As one of the staple subindustries of agriculture, farming is the key component to the development of the nation's economy as long as the climate and topography are in accordance for farming development. Despite farming being viewed as a component of a less-developed nation, that very fact could lead to a niche being carved out for the nation which could export its farmed products to other nations that haven't agriculturally sound landscapes. The nation should take this opportunity if it presents itself to the nation, however, keeping in mind that no industry, under the Millettocratic methodology, should be dominant in the nation's economy so the farming sector should be fully exploited, but not the point where by it becomes more than thirty percent of the overall economy.

Financial Services

As previously mentioned, the establishment of strong financial institutions is a fundamental component of establishing and sustaining a developed economy. Financial Services is an industry that is highly encouraged to develop, but it is also filled with major potentialities for other industries and generally, the overall economic and business environment will be improved if the nation uphold a strong Financial Services sector.

Food Processing & Supermarkets

The largest company in the world by revenue is Wal-Mart, and it is not a coincidence that Wal-Mart was founded in the nation with the largest economy in the world. The food retail sector is a fundamentally important sector for development. All major economies have their own distinct food retail companies that have grown domestically and have exported their brands worldwide, thus leading to a larger economy for the host nation, therefore, this industry is highly encouraged to develop as it creates a strong domestic spending sector, and defines the nation as a hub for enterprise.

Food Products Manufacturing

If the nation prioritises farming and agriculture, the Food Products Manufacturing industry may feel like a natural succession of the farming sector. However, this industry is highly competitive, but if the nation can manage the industry strategically and carve out a niche for itself, its entire economic stability would be improved.

Forestry Products & Services

This industry may prove to be a beneficial niche industry for the nation if it can create good quality products for both domestic use in the agricultural industry and exportation to other nations. However, the key in this industry is quality and efficiency, because if the products do not differ from other available products, the nation will not see significant benefit from this industry.

Foundations, Philanthropists & Non-profits

Despite not being an industry in its nature, the establishment of philanthropical foundations and non-profits generates huge amounts of investment and donations from some of the world's wealthiest organisations and individual. Ensuring that the funds will get to where they are supposed to go, will improve the confidence of investors, and will lead to greater economic developments as long as the financial institutions of the nation stand strong against corruptions.

Funeral Services

This industry is another that could be a very lucrative and niche industry for the nation that cultivates a company that provides the highest quality of funeral services for a mass customer base. This company could then export its services to other nations that do not have developed funeral services which could lead to economic development for the nation of origin.

Garbage Collection & Waste Management

As the world continues to produce more waste and more and more countries are developing which brings more waste per individual, the waste management and garbage collection industry has exponential growth opportunities. Therefore, the nation is highly encouraged to develop and advance this industry in all ways, as being the leader in this industry will certainly lead to prosperity and develop, not for the economic landscape, but the nation's domestic living standards and environment.

Oil & Gas

This industry is widely known as the key pillar-industries of many of the world's economies and has led to major economic growth and development for many of the those nations. However, with that comes a dangerous consequence of dependency on this one subsection of the energy industry. Under the Millettocratic methodology, this type of dependency is highly encouraged to avoid, yet it is acknowledged that oil and gas are valuable for quick economic stimulus, therefore it is an industry that should be controlled in order for it not to become dominant over all others so at thirty percent of the overall economy is generated from the oil and gas at the highest possible percentage.

Gun Manufacturing

Under Millettocratic methodology, the act of war profiteering, which many of the most developed nations have contributed to and even encouraged, is condemned and completely forbidden. However, the manufacturing of arms, especially small-calibre guns, is encouraged as a niche industry for the nation if any sanctions placed upon the nation, do not clash with the development of this industry.

Healthcare Services

Under Millettocratic methodology, healthcare is half funded by government and half funded by insurances paid for by individuals, but the government does pay for the construction of hospitals, and purchases medical equipment and technologies for universal usage. Therefore, there is a huge opportunity for companies domestically, to create beneficial funds from the healthcare system, as well as establishing companies abroad to manage healthcare systems and to produce and provide healthcare products, services, and supplies. This industry is a key industry for economic growth, but its advantages do hinge on the quality and accessibility of its exported products and services.

Higher Education

With the commodification of education also comes the commodification of higher education which provides universities with greater autonomy from the governmental education system in terms of the management. Higher Education institutions are a good indicator of the nation's economic prosperity and development, and so, under Millettocratic methodology, the investment into Higher Education and the encouragement of international students to study within the nation, is a key subsection of the Education industry to develop and advance, yet under Millettocratic methodology, the overall education structure and curriculum is either wholly or partly managed by The People's Constitutional Company of Jesse Millette.

Home Builders

This industry is another key indicator of the nation's economic investments, prosperity, and development, because if houses are not being built, that highlights a potential issue in the economic environment. It is imperative that a strong network of housebuilding companies is encouraged and establish in the nation as that generates more opportunities in other areas such as external investments, tourism, and greater economic growth because of the housing market.

Hospitals & Nursing Homes

Typically, the building of hospitals and nursing homes, although funded the government, is outsourced to other companies which provides a great opportunity for companies to build their portfolios and to generate work for local labourers as the construction of such large buildings requires tradespeople from many different areas such as electricians, joiner, plumbers, etc. As well as this, the construction of private hospitals and nursing homes, is another advantageous opportunity for

construction companies therefore, it is imperative that the education system readies subsequent amounts of individuals for labour work.

Hotels & Motels

The construction and management of hotels and motels has limitless economic advantages, from creating larger construction companies which can reinvest their profits into other construction projects across the nation, to the tourism industry, which cannot function properly without high quality hotels and motels for tourists to stay in. Therefore, this subsection should be a priority to develop in order to support other closely connected and dependant industries.

Infrastructural Construction

The infrastructure of the nation acts as the backbone of the nation. If the infrastructure is weak, unstable, or in disrepair, then other industries that count of strong infrastructures, such as tourism, transportation, retail, and many others, will see reduction in revenue, thus causing major economic damages. Therefore, it is highly prudent for the nation that it invests its funds into infrastructural projects across the nation, not just in the largest cities. If the infrastructure of the nation is of sound quality, the rest of the nation's industries will thrive as a direct result.

Insurance

Due to the structure of the healthcare system under the Millettocratic methodology, there is a large opportunity for insurance companies, both locally, regionally, and nationally. There is opportunity for international expansion of domestically grown insurance companies, but the main opportunity is that of the domestic population of the nation. Due to the nature of the healthcare system, insurance companies will be positioned as some of the most powerful companies in the nation.

Logging, Timber & Paper Mills

This industry has great potential to be one with high economic advantages for the nation, yet this industry is one that must be heavily regulated in order to preserve the environment of the nation and to respect the environmental principles of the Millettocratic methodology.

Marine Transport

Marine Transport is the largest transportation industry for many economies of the world and places like Singapore, Shanghai, and Tianjin, have benefited greatly from establishing the largest ports in the world and have become some of the largest hubs as a direct result. The construction of ports in strategic locations ready for exporting and importing goods is a fundamental component to obtaining economic betterment for the nation and its peoples, and so, this form of construction and the transportation of goods by ships is highly encouraged.

Meat Processing & Products

The processing of meats is another pillar-industry to enter into, especially if the nation has a high live stocking and farming sector as the two are closely connected. The establishment of a network of meat processing plants and companies exporting meat products could see a large economic benefit for the entire nation, but notable obstacles include the odours caused by the processing, the cost of processing plants nationwide, and the competitors in the industry. However, if the nation can carve out a niche for itself in this sector, then the nation will have a strong and ever-growing sector as a key pillar of their economic growth.

Mining

Another of the pillar-industries, mining has become the second largest producer of economic growth for nations after oil and gas, and so, similarly to oil and gas, mining has the tendency to dominate national economies. Under the Millettocratic methodology, this type of economic dominance is discouraged as it only inhibits further economic growth and does not allow for the diversification of the economy, which leads to the status of being a developed economy. If the resources of the nation are suitable, and the environment will not be damaged as a result, then mining for precious metals and minerals is encouraged under the Millettocratic methodology, but control must be enforced in order to stop the mining industry from playing a dominant role in the economic landscape as diversification is the ultimate key to a developed economy.

Nutritional & Dietary Supplements

In many of the more developed nations of the world, nutrition and dietary requirements have become a key part of the food industry overall. Therefore, a key niche for the nation may lie in the manufacturing and exportation of nutritional food products and dietary supplement products to nations with higher gross domestic products than the nation of origin.

Phone Manufacturing

As distinct from electronics manufacturing, phone manufacturing is a very important industry to the largest economies in the world like China and the United States. Despite this industry being highly competitive and arguably already saturated, if a company from the nation could revolutionise the phone or another mobile device as Apple did with the iPhone, then the nation would be automatically propelled to economic prosperity.

Postal Companies

Despite postal companies not having a much of an impact on the economic environment as they once did especially as digital technologies and 3D printing advance, the postal industry is still one that needs to be given investment and could become a significant industry in its own right domestically.

Printing

The printing business has been damaged in the last few years with the industry of cloud-sharing services whereby people don't need to print documents, they can just put them on the cloud and send them to others via that digital platform. However, the emergence of 3D Printing has been said to hold revolutionary practices that will affect all industries of the economic landscape. Investing in the development, research, and applications of 3D Printing may serve as a great economic benefit later on and could propel the nation to higher economic prosperity, however, the risks are very high and this technology is still in its infancy, and so, isn't an industry, under Millettocratic methodology, to rely upon as the dependency of an economic on a current or future economic prospect isn't encouraged.

Professional Sports & Sports Arena Construction

In many of the most developed economies of the world, there is a distinct pattern of investment in professional sports, most notably football, basketball, cricket, and the olympics. Investing in professional sports and the construction of sports arenas is a lucrative business and the establishment of a national sport is extremely distinctive and allows for a nation to venture into other areas such as mass tourism like with the olympics, and the propagation of national heroes through great sportsmanship, the retail industry via sales of sportswear, food, and gym members, as well as the architectural and construction industries via the designing and construction of sports centres, stadiums, and leisure facilities. This industry may

seem one that carries no economic benefit, but once analysed, the sports industry is a key sector to invest in to lead to economic development.

Publishing

Under Millettocratic methodology, the publishing industry is championed as one of the fundamental cornerstones of culture, and economic growth within the nation. Investment in publishing is highly encouraged under Millettocratic methodology, and for the nation overall, the establishment of a distinctive national publishing persona will lead to a greater presence of the publishing industry.

Railway Construction

As closely connected to the infrastructural construction industry, railroad construction is also a fundamentality to the transportation, tourism, and construction industries, as well as the wider economic and business environments of the nation. The entire nation should have a stable and interconnected railway network in order to connect all areas of the nation which encourages greater enterprise and domestic migration.

Real Estate & The Housing Market

As previously mentioned when discussing construction, this industry is absolutely fundamental to the functioning of the overall economy and acts as a strong indicator of economic prosperity or downturn. Establishing a strong housing market in close cooperation with the household construction industry and the wider construction industry is key to creating a growing real estate industry which could attract wealthier clientele to the nation as long as the nation's security, infrastructure, and climatology suit the needs of wealthier clientele.

Retail

A fundamentality of a developed economy, retail is an industry that is built upon the backs of other industries such as farming and agriculture, construction and fashion, and food production, but it is itself a huge industry that the nation, under Millettocratic methodology, should be targeting for investment and development in order to solidify itself as a economically developed nation. With the vastness of retail being a key component of its interest in the wider economic environment, it is the single most industry that touches the lives of the peoples everyday, and so, establishing a strong retail sector is key to, not only improving the economic landscape and diversity of the nation, but also, the living standards of the peoples of the nation.

Securities & Investment

As closely linked to the banking and financial services sectors, the securities and investment industry is a key component of economic growth because of its encouragement of enterprise and exponential effects on the overall economic environment, which is why the majority of the largest and most developed economies in the world, have the largest and most diverse stock markets. With a stock market and investment funding, also comes indirect investment into the national economy due to the movement of monies within the nation. The increase of this movement fundamentally increase the economic output of the nation due to greater stability, investment, and encouragement.

Steel Production

As another pillar-industry, but with less of a tendency to dominate an economy, steel production is a key area for the nation to invest in because the demand for steel is forever increasing due to the expansion and construction cities, especially across Asia and Africa. Steel production companies should be encouraged to start in order to establish this industry and the education system should encourage the peoples to go into enterprise in order to found the companies that will fundamentally assist the economic growth of the nation.

Student Loan Companies

Due to the Millettocratic methodology's education system, student loan companies are giving more autonomy from the government and although there are government controlled and funded student loan companies, private companies are encourage to offer similar services, but are heavily regulated on the prices and services that they can offer. This relatively unique autonomy creates a new industry of educational loans which opens up a brand new way of obtaining economic revenues from the education system, whilst still holding onto the commodification and capitalisation principles of the Millettocratic education system. Despite being heavily regulated by the government or The People's Constitutional Company of Jesse Millette itself, these private student loan companies could become some of the largest in the nation, and could begin to export their offerings internationally to countries friendly towards the Millettocratic education methodology.

Telecoms Services & Equipment

Some of the wealthiest individuals and nations on the planet have gain their prosperity from the telecommunications sector, and so, the nation is highly encouraged to invest in this ever-growing and ever-changing sector which closely related to other such as entertainment, broadcasting, and retail.

Tobacco

Due to the Millettocratic principles of the methodology, the entire tobacco industry is discouraged to engage in which is reflected in the standardised taxation on tobacco products and the overall economic drain of currently existing tobacco companies which do not engage in society and do weaken the health of the people of the nation. Tobacco isn't prohibited as nothing under Millettocratic methodology can be fully prohibited, but it is discouraged and not propagated.

Tourism

The tourism industry has been mentioned more times than any other industry throughout all of these discussions, and so, it is easy to infer that the tourism industry of the nation is one of the pillar-industries that affects and generates revenue in almost all other industries of the nation. The vastness and complexity of the tourism industry does give it some obstacles to develop, but continued investment in the industry will open up a variety of other industries as a result. The tourism industry acts as the lifeblood of the nation and stands, closely beside the entertainment industry, as the industry that demonstrates the distinction of the nation and should, if successful, show the nation's culture, uniqueness, and the reasons why the nation and its people have sovereignty of their land, their history, and their culture. Tourism is highly encouraged under Millettocratic methodology and is also closely connected to the architectural, construction, infrastructural, retail, and hoteling industries.

Transportation

The industry of transportation is another industry that is absolutely fundamental to the functionality of the nation for without a strong transportation system in all forms, trade, business, and economic growth is stagnated with little chance of changing. The nation under Millettocratic methodology is obligated to the investment and development of its transportation infrastructure and system because if the transportation sector isn't stable, many other industries will fall as a direct result.

Trucking/Logistics/Haulage

Closely connected to the industry of transportation, haulage involves the transportation of goods throughout the nation and abroad, most typically by way of trucks and lorries. This, although only a subindustry, is an important area to highlight as it has major economic effects if not developed correctly. With high dependency on infrastructure, the logistics industry plays a foundational part in the distribution of goods throughout the nation as without logistics, there would be no exportations and importations for the nation. Also fundamentally reliant on fuel, the industry is also important to the automobile industry, and so, by showing these examples, it is clear that the trucking /logistics /haulage industry holds significant importance for the growth, stability, and development of the economy of the nation.

Vegetables & Fruits

As a close subindustry to the wider agriculture sector, the cultivation and selling of vegetables and fruits is a key sector to grow, for many of the same reasons why agriculture is a good area to develop as it creates a strong and stable economic base which can be built upon in other industries. Overall, if the climatology and topography of the nation is suitable, then there is no reason why this subindustry shouldn't be highly encouraged and invested in.

Zoos, Safaris & Nature Reserves

If the nation consists of significantly unique and vast nature reserves, then this subindustry of tourism should be prioritised as its own significant sector of growth. However, under Millettocratic methodology, this subindustry, especially regarding the government owned nature reserves should be regulated in order to prevent exploitation, corruption, and overall adherence to the Millettocratic values.

Sovereign Wealth Fund

Under the Millettocratic methodology, it is of the utmost importance to establish a Sovereign Wealth Fund and to put a certain percentage of the national revenue into the fund in order to preserve the security of the nation in any future emergencies. This is a technique has been utilised by many of the world's largest and most successful economies, as well as The People's Constitutional Company of Jesse Millette, therefore is an obligation of the nation under Millettocratic values and methodology, to put funds in their Sovereign Wealth Fund for the betterment, protection, and security of the peoples of the nation and the nation's economy.

Astronaut Spatial Economics Methodology

Space/Spatial Economics

the branch of knowledge concerned with the production, consumption, and transfer of wealth beyond Earth.

The Space Trade

the overarching term referring to the action of buying, selling and transporting goods and services beyond the Earth's atmosphere, especially between planets and moons.

Spatial Mining

the overarching term used to refer to the practice and industry of mining beyond Earth.

Asteroid Mining

Perhaps one of the most lucrative and commonly imagined forms of mining, Asteroid Mining involves the extraction, processing, and transportation of raw materials from asteroids and other minor planets. These minerals and volatiles could then be used as trading materials between two traders at a Trading Station, could be sent back to Earth and utilised, or could be taken to the nearest planet or civilisation, and used as rocket propellants, for construction purposes, or trading.

Depending on the type of materials mined from the asteroid, they could fetch a large profit for traders and miners who engage in the practice. Initially, after the asteroid selection has been taken, which could be a lengthy process as deciding which asteroid has significant deposits may require in-depth research, the primary obstacle to mining the asteroid would be landing your mining craft and equipment on the surface of the asteroid. This would not be an easy feat to accomplish, especially in the earliest years of the practice. Landing your craft on a moving, and relatively small surface, would certainly require advanced technologies in order to accurately and safely land your craft.

Secondly, the trader would only have a short period of time to successfully extract their targeted materials before other miners arrived and began mining too. The miner would then have to make the decision of whether to process the minerals on-site whilst still on the asteroid, or whether to process them in a more secure location aboard their vessel, or on a nearby

planet, or back on Earth, or whether to sell them as unprocessed minerals, which would greatly decrease their value and attractiveness to potential buyers.

A useful practice called Asteroid Cataloging, would be mandatory to conduct and involve the recording, on a publicly available database, the asteroid you are mining in order to keep an account of the asteroid's mining potentiality. The miner would have to provide information such as the main materials they mined from the asteroid, the rough amount of materials mined, the coordinates of the asteroids location when it was mined, but they are not required to share information about the amount of money they plan to, or actually do receive from trading the materials.

Space Manufacturing

Refers to the production of manufactured goods in an environment beyond a planetary atmosphere. Space manufacturing has four more advantages and these include:

- the unique environment can allow for industrial processes that cannot be readily reproduced on Earth.
- raw materials could be processed as a lower expense compared to the cost of lifting materials into orbit from Earth.
- hazardous processes could be performed in space with a lower risk of environmental damage.
- items too large and heavy to launch on a spacecraft could be assembled beyond Earth instead.

Space manufacturing hinges on the economical transportation of materials which directly relates to the delta-v, a change in velocity required to transport materials from the mining sites to the manufacturing/processing plants, or Trading Stations. Asteroids and minor planets and moons, have a much lower delta-v than Earth, making it easier to launch materials from their surfaces than from Earth's.

Using the spacial environment could lead to improving the manufacturing processes and techniques used to manufacture and process materials. A

microgravity environment allows the control of convection in liquids and gases, and eliminates sedimentation. Therefore, diffusion becomes the primary means of material mixing, thus allowing otherwise immiscible materials to be intermixed. This spacial environment also allows for the enhanced growth of larger, higher-quality crystals in solution.

The ultra clean vacuum of space allows for the creation of very pure materials and products with the vapour deposition to build up materials layer by layer, free from defects. The spacial environment can naturally provide extremes of heat and cold, therefore sunlight can be concentrated to melt extracted materials, and oppositely, materials kept in constant shade can be exposed to temperatures close to absolute zero and the temperature gradient can be exploited to produce strong, glassy materials.

Closely linked to the practices of the different mining forms, materials processing is a fundamental element to the success of spacial mining. If extracted materials are not properly processed, their worth decreases as their usages are limited and the buyer has to perform the processing procedure themselves. Mineral ores must be refined to extract specific metals, and volatile organic compounds need to be purified. These procedures include the transportation of the materials, the transportation time, the propulsion energy expenditure, and the extractions costs are all taken into account during the planning process, which explains why unprocessed materials are worth much less than processed materials.

Solar power provides a readily available power source for thermal processing. Even with heat alone, simple thermally-fused materials can be used for basic construction of stable structures. Bulk Soil from the Moon, asteroids, or other minor planets, has a very low water content, and when melted, forms a glassy materials which is very durable. These simple, glassy solids can be used for the construction of habitats on the lunar surface or elsewhere. The solar energy, by utilising steerable mirrors, can be concentrated in the manufacturing area.

The production of hardened steel in space will introduce some new factors. Carbon only appears in small proportions on the lunar surface and will need to be delivered from elsewhere. Waste materials carried by spacecrafts is one possible source, as are comets. The water normally used to quench

steel will also be in short supply, therefore requiring strong agitation procedures to generate a stable supply.

Casting steel can be a difficult process in microgravity, thus requiring special heating and injection processes, or spin forming. Heating can be performed by using the process of Concentrated Sunlight combined with electrical heaters. The casting process would also need to be managed to avoid the formation of voids as the steel cools and shrinks.

Metal-shaping is a technique used to change metals into their desired form. The standard methods including casting, drawing, forging, machining, rolling, and welding. Both the rolling and drawing methods require heating and subsequent cooling, which could be more easily achieved in the extremities of the spacial environment. Forging and extrusion will require Powered Presses, as gravity won't be available. Electron beam welding will perhaps been the most preferred method of Metal-shaping in space as it has been tested more frequently than other methods, and has more concrete success rates. The machining method will require specific and high-precision equipments which will need to be imported from the Earth, or from a nearby Trading Station, or civilisation.

The most useful and economically beneficial commodities of space manufacturing tend to centre around the following nine commodities:

- growth of protein crystals
- improved semiconductor wafers
- micro-encapsulation
- rock mining
- water mining
- ceramic production (used as thermal and electrical insulators)
- metals
- solar panels construction and solar energy trading
- fuel/oil/gas drilling, extraction, and refining

Trading Stations

Trading Stations are specially designed facilities found on planetary surfaces, lunar surfaces, or aboard space stations, which allow for free-trade to take place. These facilities act as a key way for traders to network with

each other, and to meet up and sell their newly acquired materials and products. Trading Stations stand as fundamental components to the advancement and growth of The Space Trade, and are most typically owned and operated directly by The People's Constitutional Company of Jesse Millette, or by one of its subsidiaries.

Lunar Mining

Similar to Asteroid Mining, Lunar Mining involves the extraction, processing, and transportation of raw materials mined from a moon's surface. Viewed as a safer alternative to that of Asteroid and Comet Mining due to easier landing processes and general mining conditions being much more hospitable, Lunar Mining is seen as a hugely profitable industry, and one that has few limitations. Due to the amount of moons in The Solar System and beyond, there are many different mining sites that would offer much higher quantities of raw materials and the transportation of these raw materials to nearby Trading Stations, either located on the moon itself, or in nearby space stations, would significantly reduce the costs when compared to the difficulties of transporting materials from Asteroid and Comet Mining.

Meteorite Mining

Distinct from other types of spacial mining, Meteorite Mining involves the locating, collecting, extraction, processing, and transportation of raw materials for trading purposes. Meteorites are objects largely made up of rocks and metals that have plummeted to the surface of either a planet or a moon with a sizeable gravitational pull.

These meteorites would have to first be located by miners on the surface, and then collected for processing and transportation. In order for the meteorite materials to be economically viable, a large amount would have to be collected together by machineries. Typically, ninety-percent of all meteorites are made up rock only, a significantly less valuable resource than the metals found in only ten-percent of meteorites.

The practice of Meteorite Mining has the potentiality of becoming a significant industry in its own right due to the lower costs and dangerous associated with it, but the relatively lower volume of valuable materials

associated with the practice may highlight a fundamental limitation to the industry.

Comet Mining

Similar to the practice of Asteroid Mining, Comet Mining involves the extraction, processing, and transportation of raw materials mined from a comet's surface. Typically Comet Mining is seen as drastically more dangerous and expensive to undertake, however, the financial benefits of this practice are considerably higher than that of other closely-related industries due to the potentially diverse range of minerals and metals found in comets that have traveled from the further reaches of The Solar System and beyond.

Planetary Mining

Planetary Mining refers to the extraction, processing, and transportation of raw materials mined from a planetary surface other than Earth. This type of Spatial Mining is made up of the conventional methods of mining as used on Earth, yet brings with it more interesting concepts such as microgravity mining, the sovereignties of mining and the jurisdiction and legality of mining on other planetary bodies.

Space Constructions

In order to establish civilisations and colonies of humanity beyond Earth, the Space Construction industry will become an instrumental component of the furtherance of humanity beyond Earth.

Therefore, understanding how best to manufacture, transport, and utilise building materials in microgravity environments, or environments even slightly different to that of Earth, is fundamental to the success and fulfilment of Spatial Construction projects.

The Space Trade

Spatial trade is a foundational industry of Space Economics and stands as the largest and most common of spacial industries. The transportation, importation, exportation, and trading of raw materials, manufactured

goods, and other products, makes The Space Trade a critical part of all Space Economics, which arguably would exist without The Space Trade.

The possibilities and potentiality of The Space Trade are absolutely endless, as humanic expansion continues, the size, vastness and subsequent complexity of The Space Trade, will only grow larger. However, with the growth of The Space Trade brings with it further complexities regarding legality, trading zones, jurisdiction, authority and rising criminalities.

To combat criminalities and unauthorised trading, a Trade Union or Trade Guild, should be established in order to uphold and enforce trading regulations, and to police any potential criminalities involving The Space Trade.

Spacecraft Manufacturing

An obvious and fundamental component of Space Economics is the utilisation of spacecraft technologies in order to travel and transport goods and materials through space and its vast distances.

Therefore, industry of Spacecraft Manufacturing is poised to become the largest of all Space Economics industries as every other industry is either directly or indirect dependent on the usage of spacecrafts, therefore propelling Spaceship Manufacturing to a powerful position with the entire economics of space.

Many decisions will have to be made about the manufacturing of spacecrafts. Initially, and perhaps most fundamentally, the location of the manufacturing will have to be decided upon. Whether the spacecrafts will be made on Earth or whether they will be manufactured in largest enough space stations, or on other stable planetary or lunar services where it would be appropriate to manufacture on a large scale.

Spacecraft Manufacturing would also bring with it further questions about environmental impacts, resources of fuel, and the sustainability of the spacecraft industry. Regarding the component of fuel, Fuelling Stations will need to be constructed across explored regions to allow Spacecrafts of all sizes to top up on their fuelling to complete their journeys. This will inevitably

leading to a lucrative Fuel Retailing industry as a direct result of the growth of the Spacecraft Manufacturing sector.

Spacial Architecture

Another industry that may not have been one's first concept of Space Economics is that of Spacial Architecture. In order for Space Economics to flourish, constructions will have to be designed and built according to this relatively unique and fundamentally abstract environment. This will host a brand new set of architects who will have to study how to design structures of all kinds, both residential and commercial, in microgravity environments, hazardous areas, and on surfaces surrounded by extremities such as coldness, heat, and other natural phenomenon not found on Earth.

Terraforming

More likely a governmental practice rather than a commercial one, Terraforming involves the artificial transformation of a planet or moon, or another celestial body that it resembles Earth, or can sustain human life without the use of spacesuits and cumbersome life support systems.

Despite the large-scale ethical and moral and environmental contentions with the concept of Terraforming, the practice may become a necessity if humans wish to sustain colonies and larger civilisations beyond Earth.

Robotics Manufacturing

The industry of Robotics Manufacturing is another industry that will inevitably become essential for humanic exploration, civilisation construction, and will also stand as a fundamental component of many other industries including mining as the prime example.

Robots can be constructed to accomplish specific tasks such as entering hazardous environments that humans simply couldn't survive in. As well as this, robots offer countless different functions within commercial and residential disciplines, therefore positioning Robotics Manufacturing as a key industry in the furtherance of humanic Space Economics and more generally, The Space Trade itself.

However, like many other of these inevitable industries, Robotics Manufacturing does come with its own unique set of contentions, most

typically in the form of the statuses of robots to humans and the fundamental rights and privileges of different type of robots. As well as this, the concept of Artificial Intelligence is most inevitably going to course further contentions at the idea of beginning a large scale industry of Robotics Manufacturing.

Solar Energy

With other energy supplies such oil and gas being costly to transport and generally more unstable and precarious, especially in the field of Space Economics, Solar Energy may be a viable alternative. Despite the obvious setbacks of the larger distance from The Sun or another star, the less energy there is, Solar Energy could be more easily stored and less costly to transport. Oppositely, with the construction of solar panels on surfaces or spacecraft closer to the sun or another star, the amount of energy produced would greatly surpass that of other resource potentialities.

Life Support Systems/Spacesuits

Another future, and potentially highly lucrative, industry is that of Life Support Systems and Spacesuits manufacturing. It is inevitable that most non-Earth environments, especially those not terraformed, are going to require the human population to wear spacesuits, or to at least have a Life Support System fitted close by at all times in order to insurance against any emergencies. This will lead to the rise of this particular industry which could then branch out into other related areas such as manufacturing specifically designed suits for certain planetary or lunar environments, or for specific jobs such as mining suits etc. As well as that, this industry could branch out future to create a whole new scientific and biological subject of Life Support Science, which would research how best to ensure the safety of human populations in certain planetary environments and when partaking in certain jobs.

Cryonics/Cryogenics

The industry of cryonics/cryogenics, although already established on Earth, will stand as a fundamental science in Space Economics and space exploration in general, especially when humans are embarking on journeys that will take years to complete. Cryonics/cryogenics will rise as a

fundamental component of human space exploration and will dominate Space Economics, especially in the regions beyond The Solar System.

This dominance will lead to a very lucrative industry for any companies that can produce and maintain cryonic/cryogenic facilities and self-administrable cryonic/cryogenic capsules. As one of the more advanced industries discussed in this methodology, cryonics/cryogenics has a long time to develop before it becomes dominant in Space Economics, yet it will also stand as humanity's key to exploring systems beyond our home system.

Space Currency

The Millé, and more colloquially referred to as The Cosmic Credit, or simply "Creds", is a standardised form of currency used beyond the Earth, developed by The People's Constitutional Company of Jesse Millette. Below is the Official Symbol of The Millé currency:

The Millé Mint is the official minter of The Millé and serves as the authority of all issues regarding The Millé. The Millé appears in three forms; The Digital Millé, The Millé Counter, and The Millé Ingot.

The currency is mainly used in the trading on planets and Trading Stations beyond Earth, but can be exchanged on Earth for national currencies. Due to the inevitable complexities of national currencies being used in space trading, The Millé is encouraged to be used in all circumstances beyond Earth, and so, stands as the official currency for the majority of Trading Stations, planets, moons, and corporations operating beyond Earth.

Spacial Nanorobotics

The practice of Nanorobotics involves the creation of machines or robots at or close to the scale of a nanometre, which could then be used for a large variety of utilisations.

Below is a list of the potential applications of nanorobotics:

- *cancer treatment* - the identification and destruction of cancer cells more accurately
- *drug delivery mechanisms* - the targeting of areas to control and prevent disease
- *medical imaging* - the creation of nanoparticles that gather in certain tissue and then scanning the body with a magnetic resonance imaging (MRI) could help highlight problems such as diabetes
- *new sensing devices* - the almost limitless customisable properties of nanorobots will allow new sensing capabilities to be unlocked which can then be integrated into already existing systems
- *information storage devices* - the potentialities of the storage capabilities of a single nanorobot are completely untold, with the current record on a single gram of DNA successfully storing 5.5 petabytes of data which translates to around 700 terabytes.
- *new energy systems* - if developed properly, nanorobotics will play an integral role in the emergence of new energy systems by making existing machineries more efficient and by developing more efficient renewable energy systems.
- *super-strong metamaterials* - nanorobots, due to their infinitely large customisability, will be a fundamentality of the creation of the strongest and lightest materials which could be used for spacial structures, spacecrafts, and specially designed for structures in hazardous environments
- *smart windows and walls* - the integration of nanorobots will lead to the development of windows and walls that can control their internal temperature, clean themselves, and display screens.
- *health sensors* - nanorobotics will play a fundamental role in the development of sensors that monitor our blood chemistry which will then notify us when there is something not right.
- *spacial-adaption* - nanorobots, when placed inside the human body, could be the main way of automatically adapting one's body to changing environments such as the differences between Earth and Mars and outer-space. The nanorobots would act as variables in the body, which would change the properties of the body in accordance to the new environment.

The CosmoNet is the communications network used during spaceflight and on planets and moons other than Earth and acts as an alternative to the Internet used on Earth.

New Era Education

When humanic society becomes a multi planetary species, it will be the utmost priority of The People's Constitutional Company of Jesse Millette to uphold and evolve the education of humanity, and thus, will usher in a New Era of Education.

This will include the digitalisation of education, the digital storage of education, the universal accessibility of education, the evolution of education to suit the fundamental differences of multi planetary existence such as cultivation technique on planets other than Earth. Other types of education will have to be implemented, such as knowledge of living on the planet or celestial body on which they were born, the learning to fly a spacecraft, and the learning of the geographical make-up of newly discovered worlds.

Astronist Free Trade Methodology

Astronist Open Trade

also known as *Astronist Free Trade*, *Trading Liberty*, or *Progressive Commerce*, the systems and theories of economic practice, and principle, based upon the ideas of Free Trade, and in alignment with Astronist economic philosophy, structures the ideas of open markets, decreased governmental intervention, and further builds upon the ideas of Free Trade from a distinctly Astronist standpoint.

Trade Accord

an official documentation stipulating the details of regulation and taxation of either a single shipment of goods, or more broadly, a whole class of goods.

Released Trade

a class, shipment, or type of traded goods whose lowered regulations and taxations have been predetermined by way of a *Trade Accord*.

Trade Exemptions

- the fast-tracking of particular traded goods due to the nature of the goods, or the status of the receiver of the goods.
- an agreement made between two trading entities, typically one of exclusivity, in which special exemptions are made for certain classes of traded goods, such as lowered regulation, higher security, or lowered taxation.

The Astronist Banking Methodology

Network Banking

the emphasis of wealth and networking during the process of banking and the bank acting as an intermediary between two business partners. This idea also carries that the bank, as an institution, should be the epicentre of business transaction, education and networking, just as much as a wealth depository. Network Banking positions the role of the bank as a intermediary in all forms and potentiality of wealth, business and monetary transaction.

Business-oriented Banking

the banking mechanism of encouraging and initiating business between individuals or companies whom are using the same bank. This emphasis on igniting business between banking clients further strengthens the connection between clients and the bank as the intermediary through which the monetary aspects of the business are handled.

Anonymous Depository

the banking mechanism of titling bank accounts principally by number rather than by name. This mechanism allows for the clientele to hold their privacy from other externalities. This aspect of withholding the name of the client from public and unauthorised employee view further solidifies the connection between the banking institution and the clientele.

Banking Neutrality

the banking mechanism of holding assets in neutral or unassociated countries. This allows for the stability of monetary transaction and management with the reduction in the risk of confiscation, loss or political unrest leading to a reduction in asset value.

Movability of Wealth

the level of accessibility, availability and ease of transfer of wealth, which constructs a stronger relationship between the client and the banking institution.

Customer-centred Banking

the establishment of a banking mechanism that places the customer / client at the centre of all banking operations and most significantly, places the needs of the customer before the needs of the bank itself.

Astronist Microfinance

the wide array of services provided by Astronist banks to individuals, entrepreneurs, and small businesses, usually consisting of small transactions and loans of monies.

Astronist Microtrading

the practice, most typically found in the developing nations of Africa and Asia, of Astronist banks stimulating small scale trading of business within and between cooperating nations, by upholding low interest rates and deregulating trading policies.

Astronist Microcredit/Microlending

the practice, especially in developing nations, of Astronist banks lending small amounts of money at low interest rates to new businesses for use of investing in the hope of stimulating commerce.

Astronist Microbanking

the wide array of services and benefits offered in developing nations, most typically used by individuals, in order to increase the usage of bank accounts in developing nations, with the main benefits being high interest rates on micro-savings, incentives to save, and the securement of funds, especially in nations susceptible to corruption and insecurity.

Astronist National Bank

the branches of banks directly managed by The Astronist Central Bank, most typically seen in developing countries, and the main proprietors of microfinance.

Constitutional Banking Methodology

The banking mechanism acts as the fundamental basis of Astronist Banking by which all banking is conducted in accordance to, The Grand Constitution of The People's Constitutional Company of Jesse Millette.

The Primary Constitutional Clauses of Astronist Banking

All institutions using the Astronist Banking methodology must employ at least one Constitutional Protectorate, who is responsible for ensuring all banking transactions are conducted in accordance to The Grand Constitution. Constitutional Protectorates are one of few individuals that have universally authorised access to the banking records and names of all clientele of the bank for the assurance of constitutional adherence.

The Grand Constitution stipulates the prohibition of clientele and banks using the Astronist Banking methodology to deal with individuals or companies involved in nefarious transactions including the following:

- taxation avoidance
- money laundering
- illegally acquired wealth
- wealth directly originating or benefited from war
- wealth directly acquired by detriment to the government or the majority of peoples of a nation
- and wealth acquired from nations that engage in continued hostility with The People's Constitutional Company of Jesse Millette

The governments of nations do not have the authority, unless proven so with evidence in Astronist Congress or with the approval of the nation in which the bank operates, to acquire the details of clientele of banks under the Astronist Banking methodology beyond the number of the account, which is the only aspect of the account open to public view.

All banks under the Astronist Banking methodology, are constitutionally obligated to conduct interest rates within the constitutional bounds, so as not to conduct in usurious activities. The maximum interest rate, under constitutional law, is 10% per year, and so, any Astronist banks utilising a higher interest rate, will be reported to, investigated, and if found guilty, will be expelled by The Astronist Central Bank, which retains all constitutional authority to conduct such an act.

Banks, under the Astronist Banking methodology, are not required to cease business with clientele from sanctioned companies or nations, unless the funds are directly attributed to war profiteering, taxation avoidance or any other nefarious means stipulated in The Grand Constitution.

There is universally no minimum requirement to hold a bank account under the Astronist Banking methodology as the promotion of banking in undeveloped nations is crucially to the development of wealth funds in those nations - to reject individuals on the basis of not having enough wealth to begin an account stagnates wealth accumulation among poorer individuals, thus leading to further trappings and increased monetary instability.

Any deceased individuals who do not have any relatives or guardians, who bank under the Astronist Banking methodology that do not have a will, do not stipulate in their will the direction in which their savings are to be used, do not have not appointed executor to their will or leave any amount of their wealth to a bank under Astronist Banking methodology, are obligated to the equal dispersion of the wealth across Astronist companies, charities, organisations or funds or any entity that is constitutionally incorporated.

All banks under the Astronist Banking methodology are constitutionally obligated to give reports to The Astronist Central Bank detailing their operational experiences by using the Astronist Banking methodology.

Under the Astronist Banking methodology, all banks participating are obligated to the transference of information when a client these one Astronist bank for another, with the clients approval only. This creates closer connections between the Astronist Banking community and constructs a sense of exclusivity between the banks, whilst still encouraging an air of competition, as it is the successive bank's objective to better utilise the client's information and needs than their predecessor.

Constitutionality

the degree to which a bank under the Astronist Banking methodology is constitutionally compliant. A bank that is highly constitutionally compliant is recognised by The People's Constitutional Company of Jesse Millette as displaying the three following qualities; good and legal banking practices, banking stability and banking efficiency. It is the responsibility of the Constitutional Protectorate to ensure the constitutionality of the banks under the Astronist Banking methodology stay as high as possible.

Municipalitim

also known as cantonism, the banking mechanism only practically and legally actionable in nations who recognise municipalities as autonomous or semi-autonomous from the federal government. This banking mechanism entails the emphasis of the banking autonomy of a municipality and stipulates that banks within the municipality are only legally obligated to act in accordance with the municipal banking laws, rather than the federal laws. Therefore, banks outside the municipal jurisdiction may be subject to additional laws that inhibit their abilities to affectively benefit their clientele.

Direct Depositary Policy

the universal policy throughout the entirety of a banking institution under the Astronist Banking methodology that allows for deposits to be directly inserted into the client's account upon deposit, and acts as a leading factor in the achievement of Complete Availability and greater consumer-friendly practices by banking institutions.

Digital Banking Assurance

the promotion and education of digital budgeting tools by banking institutions under the Astronist Banking methodology, entails the banking institution's role as the provider, educator and intermediary between a client and their money on digital platforms. Increasing the confidence of consumers in their usage of digital banking platforms will greatly improve both the efficiency and depth of knowledge that the client has of their banking activities. As well as this, educating clients for a more cohesive knowledge of digital budgeting techniques will allow them to self-manage their funds in the most beneficial ways possible with guidance and support from their banking institution. Finally, Digital Banking Assurance will provide greater opportunity for the peoples of developing nations to be introduced to the benefits of banking with more efficient, cohesive and supportive practices put in place to better customise banking to individuals and their specific needs.

Complete Accessibility

the universal banking mechanism under the Astronist Banking methodology, outlining the imperative principle that all client must have full accessibility to their funds in all places and on all platforms in the least amount of time possible. The principle of Complete Accessibility is most commonly referred to as a fluctuating status of Astronist banks, rather than an eternal quality because the nature of the banking industry does not always allow this and due to financial policies, economic events and governmental reforms, banks do take time to adjust their operations.

Complete Availability

the universal banking mechanism under the Astronist Banking methodology, outline the imperative principle that a client's funds must be available at all times, whether this be during a banking transfer, a move from one bank to other, or a banking deposit. The Complete Availability of a client's funds leads to the notion of "store not keep", a phrase coined to emphasise the idea that the implementation of the Astronist Banking methodology, results in the client being positioned as the centre-point of all action, rather than a component of the action, thus reducing the notion that banks can regulate the availability of a client's funds for non-security related reasons.

Information-sharing

the constitutional obligatory banking mechanism of two or more Astronist banks sharing client-authorized information about a client's financial records, investment records and monetary valuations. This especially occurs when a client chooses to leave one Astronist bank for another.

Monetary Advisorship

the role of an advisor within an Astronist bank responsible for advising clients on the most astute courses of financial action to take in the current economical, political and financial environments. This role tends to lean towards advising clients on how best their investments will benefit them if they choose to invest their money in Astronist organisations, constitutionally incorporated organisations or on the Education Sector Global Index, a stock market founded by The People's Constitutional Company of Jesse Millette.

Anti-manipulatory measures

the Astronist Banking mechanism stipulating the constitutional prohibition of manipulating overdraft protections and transaction orders. This most commonly includes the action of changing the order of a client's transactions in order to increase the overdraft charge. Under the Astronist Banking methodology, the transactions are processed in the order in which they received, not in the order in which increases overdraft charges in order to combat manipulatory practices conducted by other banking institutions.

Whistleblower Encouragement

the banking mechanism of Astronist Banking that encourages employees to uncover and report any and all unconstitutional practices to their superiors. This is usually a task attributed to Constitutional Protectorates and financial managers that have authorised access to clientele information.

The Differentiation of Astronist Banking

the mechanism of Astronist Banking stipulating that the function of a bank under the Astronist Banking methodology is to purely store the funds of its clientele rather than retain the funds, thus linking to the mechanisms of Complete Availability and Complete Accessibility. This differentiation in Astronist Banking changes the nature of the banking service fundamentally for under this methodology, the bank is repositioned as simply a place of wealth storage, distribution and transference under the clientele approval as opposed to the bank itself being a wealth possessor.

Banking Decentralisation

the creation and application of banking policies, interest rates etc. which vary by region, county, canton or province under a decentralisation technique, whilst still under liberal authority from The Astronist Central Bank.

The Role of The Astronist Central Bank

- holds and stores, yet does not manage, all the funds of The People's Constitutional Company of Jesse Millette and all its subsidiaries unless a subsidiary officially stipulates otherwise.
- responsible for the universal implementation and enforcement of the principles of The Grand Constitution in Astronist banks.
- to be officially recognised as an Astronist bank, a bank must register itself with The Astronist Central Bank.
- under direct control of The People's Grand Treasury Building, the building housing the monetary reserves of The People's Constitutional Company of Jesse Millette, as well as all other People's Treasury Buildings around the world.
- retains the constitutional authority to expel banks from the system that have evidently breached constitutional law.
- provides all statistical and monetary informations about The People's Constitutional Company of Jesse Millette, and has representatives in The Bureau for Expenditure Debates, The Bureau for Financial Debates, The Bureau for Taxation Debates and The Bureau for Accounting Debates within The Governing Ministry.
- under direct control of The Ministry of The Astronist Central Bank.

Astronist Banking Revenue Pillars

- Net Interest Margin
- Interchange
- Monetary Penalties (for example, late credit payments and overdraft violations)

- Storage Fees (the universal annual fee for the service of wealth storage)
- Overdraft Fee
- Uninformed Fee (a fee charged for a large purchase such as a car or the down payment of a house when the client has not informed the bank of the purchase within at least a week's notice of the purchase date)

Abolished Banking Fees Under Astronist Banking

- Monthly Maintenance Fee
- Out-of-network ATM Fee
- Inactivity Fee
- Card Replacement Fee
- Incoming Wire Transfer Fee
- Stop Payment Fee
- Foreign ATM Fee
- Over the Counter Withdrawal Fee

Acquiring Bank

a type of bank or financial institution that processes credit or debit card payments on behalf of a merchant, of which the Astronist example, is *MilletteLine*.

Asset Qualifying

the process of evaluating an asset in terms of measuring its credit risk and thus, draws a profile of the asset and rates it according to an Asset Criteria.

Asset Criteria

the set of components relating to an asset which are used to evaluate it's qualities.

Preauthorisation

the practice of verifying electronic transactions initiated with a debit or credit card by holding the balance in a lock until either the merchant clears the transactions, or the individual whom the account belongs to, authorises the transaction. This default process is most commonly triggered when the amount is considered to be significant, or is in extremely quick succession to another larger transaction.

Method of Contact

relates to the various methods of communication between an account holder and their respective banking institution, and in Astronist Banking, is split into three categories; primary, secondary, and tertiary. The Primary Method of Contact is one's fingerprint or eye-scan which are mainly used in commercial banking; The Secondary Method of Contact is a bank card along with a pin number; and The Tertiary Method of Contact is a recitation of the account number, the pin number, and the Confidante Question & Answer.

Confidante Question & Answer

the system of security used in The Tertiary Method of Contact whereby the account holder recites both the question they had previously arranged to recite in affiliation with the account in question, and the subsequent answer to that question.

Bank Codation

a code assigned by The People's Astronist Central Bank, as the supervisory body of the Astronist Banking industry, to all banks or financial institutions which used, either wholly or partially, some form of Astronist Banking practices, or are a subsidiary of The People's Astronist Central Bank. This is used to identify banks and financial institutions which are using Astronist Banking practices unauthorised, or banks that have been set up as subsidiaries of The People's Astronist Central Bank, but are actually fraudulent banks.

Banking Officer

in an Astronist bank or financial institution, the lowest rank of an individual who carries the legal capacity to agree to and sign documents on behalf of the entire bank, or financial institution, and is typically succeeded by Loan Officers, Assistant Branch Managers, Branch Managers, and the Bank Executor.

Bank Reserves

in Astronist Banking, the holdings of deposits taken by all branches and subsidiary banks and financial institutions, when metaphorically totalled and associated with the holdings of The People's Astronist Central Bank.

Account Statement

received by an account holder, a monthly summary of the transactions of an account with the option of receiving it by post, by secured email, or on the banking app.

Banking App

in Astronist Banking, the digital application and reflection of one's bank account, and displays all transactions, services, and other important informations relevant to the account holder, and is considered to be the centre of one's banking life.

Bank Statement

the mandatory monthly statements provided by each branch, subsidiary, or other financial institution of The People's Astronist Central Bank, or the specific transactions made by way of Astronist Banking practice, which are then collated and interpreted by The People's Astronist Central Bank in order to conclude the total amount of transactions made by an Astronist bank, or under Astronist banking practice in the respective month.

Agent of Bank

the various retail and postal outlets that have formally agreed to process transactions under Astronist Banking practices, and have agreed to share such transactions with The People's Astronist Central Bank.

Banking Desert

an area within a country, or an entire country, which is void of, or has inadequate Astronist Banking services, or does not have any Astronist banks or financial institution branches in a sufficient proximity.

Banking Hostile/Hostility

a country identified by its void of Astronist Banking institutions, typically by government decree.

Branch

in Astronist Banking, is a bank either directly or indirectly managed or partnered with The People's Astronist Central Bank, or is a subsidiary of The People's Astronist Central Bank, that either wholly or partially conducts Astronist Banking practices.

Commercial Bank

a type of banking and financial institution most typically used for public services such as accepting deposits, making business loans, and offering basic investments products, but less so for corporate banking, banking of significant amounts, and contract banking for large enterprises, and in an Astronist Banking context, would follow the relevant Astronist Banking practices if it is a subsidiary or partnered banking institutions of The People's Astronist Central Bank.

Concentration Risk

in Astronist Banking, the process of monitoring either a branch's or an entire bank's ratio between its accounts and their revenues, and the debtors to whom the bank as lent money, and is considered a basic and early sign of banking imbalance if either side becomes too dependent on the other.

Banking Imbalance

in Astronist Banking, the point at which a concentration ratio signals a significant imbalance between the revenue of a bank, and the amount of funds lent to debtors, and signifies a need for Debtor Recall before further imbalance takes place and any damage occurs.

Debtor Recall

in Astronist Banking, the process undertaken by a branch or The People's Astronist Central Bank as a whole, whereby debtors are informed that their interest rates will rise within a certain period due to a Banking Imbalance, if it wasn't previously contractual agreed that their interest rate couldn't change.

Core Banking

the basic banking services provided by branches that are not subsidiaries or partners of The People's Astronist Central Bank, but have formally agreed to practice isolated Astronist Banking practices for the convenience of the account holder.

Enumeration Room

also known as the count room, in Astronist Banking, the room in which large volumes of currency are counted, typically by machine, but are heavily guarded and secured, and typically only exist in Astronist National Banks or inside the headquarters of The People's Astronist Central Bank.

Deposition

in Astronist Banking, the official term given to a deposit of funds, typically one of high value or of sensitive context.

Electronic Funds Transfer (EFT)

a transfer of funds from one bank account to another, either within a single financial institution or across multiple institutions, and in an Astronist Banking context, the non-Astronist banks must inform the account holder of all the differences between their banking practices and the Astronist banking practices before the transaction is made, and vice versa.

Financial Inclusivity

in Astronist Banking, one of the central tenets holding that all branches, non-corporate subsidiaries, and partners of The People's Astronist Central Bank should strive toward offering affordable banking services to all sections of disadvantage and low-income peoples of society, especially in country where the national average income is below average, or the education on, or usage of, banking is low.

Full-reserve Banking

in some forms of Astronist Banking, the practice whereby banks are required to keep the full amount of each depositor's funds in cash for immediate withdrawal on demand, as opposed to loaning out funds.

Intrabank Network

in Astronist Banking, the issuance of ATM cards that can only be used at branches, subsidiaries, or financial institutions that are owned or partnered with The People's Astronist Central Bank.

International Bank Account Number

the internationally agreed system of identifying bank accounts by their associated account number, and of which The People's Astronist Central Bank is part of.

Investment Bank

typically a subsidiary of The People's Astronist Central Bank is authorised to conduct Astronist Banking practices in alignment with the operations of a typical investment bank, and typically hold greater autonomy than other subsidiaries of The People's Astronist Central Bank.

Non-banking Subsidiary

in Astronist Banking, the type of firms which do not offer banking services, but are subsidiaries of The People's Astronist Central Bank, and instead offer insurance and investment advisory services.

Personal Identification Number (PIN)

the unique number associated with an individual who owns account, and is thus distinct from the account number, as one account can occupy multiple PIN numbers.

Public Bank

in Astronist Bank, a bank that is under partial ownership of the government of a country and The People's Astronist Central Bank. This is true for some Astronist National Banks, or may more broadly relate to a bank under government ownership which is officially partnered with The People's Astronist Central Bank and uses Astronist Banking practices.

Remote Deposit

the process of depositing a cheque from one's home or office without the need to go to a bank's branch, and is typically done by scanning the cheque.

Account Partitioning

in Astronist Banking, the service provided of one's bank account whereby the funds can be partitioned for different purposes, such as funds for a holiday, yet still remain part of the same account.

Clearance Organisation

in Astronist Banking, organisations which manage the clearance of bank transactions or transfers, and assign sort codes for bank transference authorisation, and are wholly owned subsidiaries of The People's Astronist Central Bank.

Sort Code

a unique code used for the authorisation of banking transferences and transactions, and are supplied by Clearance Organisations of The People's Astronist Central Bank.

Stop Payment

an order by a customer, after identity authentication has taken place, whereby they refuse to pay a cheque or direct debit and the funds are returned to their account with the cheque or direct debit unpaid. This allows for the customer to retain ultimate control over their funds and is also used in the event of fraudulent activity, or in the event of a stolen cheque being deposited into the wrong account.

Unbanked

an adult that do not have their own bank account.

Inbank/Inbanking/Inbanked

in Astronist Banking, the process of switching from one sister bank to another that are both owned by the same parent bank.

Parent Bank

in Astronist Banking, The People's Astronist Central Bank when regarded as the owner of all its subsidiaries.

Sister Bank

in Astronist Banking, the subsidiaries of The People's Astronist Central Bank when in relation to one another.

Private & Corporate Banking Methodology

All Private & Corporate Banking services are wholly owned and overseen by The People's Astronist Central Bank, and are all fully incorporated into The Astronist Banking Methodology, are therefore consistent in their practice of Astronist Banking.

Foreign Currency Exchange

it is the foremost policy of all Astronist Banking institutions globally to provide for people's, the greatest possible currency exchange rates for all in the current exchange market.

Global Transaction Banking

it is the foremost policy of The People's Astronist Central Bank to provide global banking to those whom require such services, and thus, the establishment of operations in nations is the most important of all the aims of the Astronist Banking industry.

Banking Reportages, Statistics & Analysis

it is the foremost policy of The People's Astronist Central Bank to provide clear, detailed, and useful banking reports on any basis as required, and aims to provide statistics and analysis for the construction of a complete conclusion of all banking aspects associated with one's account.

Specialised Asset Finance

it is the foremost policy of all Astronist Banking institutions to provide tailored asset management and finance advisorships to manage assets in specific industry, and uses techniques that will best suit the management of assets in particular industries.

Tailored Borrowment

it is the foremost policy of all Astronist Banking institutions to tailor all lending requests to their initiator's present and future circumstances by dedicating officers that are industry-aware, and can facilitate the initiator's request in respect to the industry in which operate.

Wealth Planning & Family Governance

it is the foremost policy of all Astronist Banking institutions to ensure that all funds are positioned in their intended places, and are used for their intended reasons.

Philanthropic Services

it is the foremost policy of all Astronist Banking institutions to consist all one's philanthropic vocations with funding governance with the knowledge that all funds get to where they ought to be.

Real Estate Financing

it is the foremost policy of The People's Astronist Central Bank and wider Astronist philosophy, that development of towns and cities globally should be in constant increase, and so, with the secured and generous services of real estate financing, The People's Astronist Central Bank and all other Astronist Banking institutions, should rise to be the forefront financiers for real estate projects globally.

The Astronist Accounting Methodology

Astronist Reportages

any report officially documented and distributed by The People's Constitutional Company of Jesse Millette, especially regarding functional, financial or economic operations.

Astronist Accounting

the accounting systems specifically utilised by The People's Constitutional Company of Jesse Millette and all incorporated companies.

Dimensional Bottom Line

in accounting, the expansion of traditional financial reportages to include ecological, social, economic, political and external relations and alliances of the company and the analysis of company performance in each sector.

Recognition Accounting

the accounting practice of including revenue, expenses, assets, and liabilities into the financial statements of a company.

Accruals

revenues and expenditures are matched to one another to compare profitability.

Astronist Calendar Implementation

into the Astronist Accounting Calendar (separate from the standard governmental tax year, accounting year etc.). Refers to the implementation of the Astronist Calendar into the accounting practices, whereby the accounting practices follow the Astronist Calendar.

Prudency

the extent to which a company's accounting strategy is cautious, definitive and unassuming.

Net Realisable Value

what a product can be sold for after deducting any expenses involved in the sale. In the case of closing inventory, an adopted accounting technique is to deliberately knock down the net realisable value in order to conform to prudency. Acting modestly and not assuming the inventory is worth more will defend against disappointment and pessimism if the inventory value is valued less than expected.

Retained Profits

profits that have been retained by a company to protect themselves in the event of a financial emergency or to use to inject funding during financial difficulties, as distinct from the monetary reserves of a wealth fund.

Runtime

the period of time in which a product or service is available.

Locked Revenue

The financial policy championed by The People's Constitutional Company of Jesse Millette, referring to the obligation of all revenues generated by Millette Education Standard Holdings from semi-nationalised companies, to not be spent in other nations without authorisation from the joint government owner of the company, yet the funds are still financially reported in global revenues.

Chained Revenue

a subsidiary's revenue that is obligated to stay within that subsidiary, or at least the same industry, and is thus not authorised to be utilised by the parent company, yet the revenue does show up on the parent company's accounts.

Astronist Revenue-sharing

a category of revenue that is completely uninhibited from obligation, thus standing as the alternative to Locked Revenue and Chained Revenue.

Astronist Profit-sharing

a form of post-tax profit that is shared and donated into various Astronist charities and organisations, yet is not considered a cost to the company.

The Maximisation of Profit Reinvestment

the goal of the negotiations between a company and its investors to maximise the percentage of profit that is reinvested into the company's operations.

Four Distinct Types of Astronist Accounting

External Accounting

past oriented, highly regulated by external and semi-external entities such as The Governing Ministry, People's Committees and governments. For public information usage, therefore can be used by any external entities.

Internal Accounting

future oriented, information for those within TPCCJM, internal use only so only people within the company can freely see and utilise it, no regulation from external or semi-external entities. - however, only used within countries or industries with more significant levels of competition.

Governmental Accounting

accounts shared by TPCCJM with the external government only (not The Governing Ministry), yet the accounts can be made public, but only under the government's prerogative

Actionable Accounting

all similar features to Internal Accounting, yet is inspired by Transparentism, therefore, all its contents are available to be viewed by the people of a nation, yet aren't available for public utilisation. Typically also provides more written detail and context into the reported figures. Yet cannot always be used due to significant competitors in which case, the alternative of Internal Accounting will be utilised.

Consolidated Accounts

an accounting report combining all elements of the company's accounting details, typically for view of inventors, executives and authorised managerial personnel.

Discounting Accounts

accounts offering a more detailed insight into the company's pricing, amounting and organisation of its discounted products and services

Inventory Accounts

accounts offering a more detailed insight into the company's inventories, and is split into four sections.

Sold Inventory

inventory that has been sold before the end of its runtime.

Unsold Inventory

inventory that is hasn't been sold by the end of its runtime.

Undetermined Inventory

inventory that is not yet defined.

Scheduled Inventory

inventory that is scheduled to company into the sphere of the company at a certain time or during a specific period.

The Seven Principal Financial Statements

- Statement of Financial Position (Balance Sheet)
- Statement of Income (Profit and Loss Account)
- Statement of Cash Flows
- Statement of Funding
- Statement of Investments
- Statement of Liabilities
- Statement of Equities
- Statement of Reserves

The Six Principal Assets

- Intangible Non-current Assets (including the history of the company, past and scheduled marketing campaigns and marketing pieces, as well as past corporate and brand reputation and recognition)

- Intangible Current Assets (including a new marketing campaign or piece that is to end at a set time)
- Tangible Non-current Assets (including trade agreements and deals)
- Tangible Current Assets (including Retained Profits and monetary reserves)
- Perishable Assets (including governmental, organisational and corporate alliances and relations, as well as corporate and brand reputation and recognition)
- Imperishable Assets (including the actual corporate name and brand as distinct from its reputation and recognition)

Requirements of Astronist Reportages

- relevant
- reliable
- comparable
- understandable
- actionable
- reflective
- constitutional
- transparent

Types of Ratio Analysis

Performance Ratio

assess the relative success of the business

Pretax Profits ÷ Shareholders' Funds

Liquidity Ratio

assess the extent to which assets cover business liabilities

Current Assets ÷ Current Liabilities

Efficiency Ratio

assess the management and utilisation of assets

Revenue ÷ Non-current Assets

Investor Ratio

asses items of particular interest to investors

Year Dividend ÷ Number Of Shares In Issue

Lending Ratio

assess financial relationships

Debt ÷ Equity

Asset & Liability Classifications

Goodwill & Alliances

Current Asset

Loan

Non-Current Liability

Overdraft

Current Asset if not using; Current Liability if using.

Inventory

Current Asset

Creditors

Current Liability

Debtors

Current Asset

Prepaid Expenses

Current Asset

Accrued Expenses

Non-current Liability

Premises

Non-current Asset

Land

Non-current Asset

Cash

Current Asset

Proposed Dividend

Current Liability

Vehicles

Non-current Asset

Accounting Adjustments

Elements of the company's accounts that cause accountants to make unavoidable adjustments to the fundamentality of the accounting figures.

- Returns
- Discounts
- Delivery Charges
- Unsold Inventory
- Time of Payment Differing From Point of Sale
- Late or Non-payment

Sales returns are deducted from revenue (Returns Inward)

Purchases returns are deducted from purchases (Returns Outward)

Discounts

accounts will show full price, but the discount will be implemented into the Discounting Account

Delivery charges

accounted as part of the value of purchases

Unsold Inventory

accounted in the sections of the Inventory Account titled Unsold Inventory, and counts as a cost of sales, thus reducing profits.

Prudential Accounting Principles

- Modesty
- Caution

- Underestimation
- Preparedness
- Unassumingness

These accounting principles are purposefully constructed to defend the company's accounts against pessimism, disappointment, doubt and perceived instability.

Transition of Profitability

the concept of profits adding to the capital and assets of a company over time, especially when profits are both sustainable and have show longevity in their gradual growth.

Ways of attaining cash

- Bank loan
- Share issue
- Corporate alliance investment
- Government incentives
- Selling assets
- Individual investment
- Share selling

Opening Annual Statement

the company's statement of financial position at the beginning of an Astronist Accounting Year, so would be issued in January.

Closing Annual Statement

the company's statement of financial position at the end of an Astronist Accounting Year, so would be issued in December.

Quarterly Statement

an obligated statement on the financial position of the company issued every three months.

Monthly Statement

an obligated statement on the financial position of the company issued at the end of every month.

Operating profit

profit deduced before interest and tax.

Add Back Depreciation

the accounting practice of taking the depreciation of non-current assets to reduce the perceived income statement of the company.

The Sustainment of Cash Flow

The Sustainment of the Decrease in Inventory

a build up of stock uses cash so causes a damaging impact upon cash flow, therefore a decrease in inventory is positive as long as new stock is scheduled to be bought.

The Sustainment of the Decrease in Receivables

if customers are paying the company back quicker, that increases cash flow, therefore sustaining a decrease in receivables is positive.

The Sustainment of Payables to Suppliers

if the company is paying back its suppliers quicker, then its cash flow will reduce, therefore sustaining the company's payables to suppliers is essential to sustain a positive cash flow.

Operating Cash Flow

the amount of cash a company generates from its revenues after all costs associated with investments on capital items have been deducted. Also, it can refer to the extent to which a company can sustain its cash flow whilst in operation, usually between accounting periods.

The Sustainment of Solvency

the ability of a company to operate sustainably by being able to pay all its debts, as well as its costs. Solvency can be sustained either by demonstrating monetary reserves as a means of paying future debts and costs, or by obligating a necessary percentage of the company's gross profits to the payment of debts.

The Sustainment of Liquidity

the ability of a company to always keep a significant portion of liquid assets, in order to demonstrate its ability to pay its debts, as well as any emergencies that require quick cash injections.

Cost & Management Accounting

The Positivities of Cost & Management Accounting

- internal utilisation
- supports decision-making
- control of business activities
- more operational details

Cost Allocation

the process of identifying and aggregating costs, and assigning those cost to a specific cost object, such as a research project, a product, a customer, or a sales region or department. This process allows for the measurement and management of costs, and allows accountants to demonstrating the specific areas of a business that are costing the most.

Cost Proportion

the process of comparing two or more different cost objects, and pinpointing which is most and least cost efficient, by looking at the revenues and profits generated from each object.

General Costs

common costs that affect the operations of more than two different department, an example of which would be employee salaries.

Specified Costs

costs that can be pinpointed to a particular department, an example of which would be specific technologies or equipment used by only one department.

Cost Apportionment

the process adopted by the subsidiaries of The People's Constitutional Company of Jesse Millette, wherein the general costs of each department are shared out across all departments so as to cover all fundamental costs of running the business.

Expenditure Apportionment

the process adopted by the subsidiaries of The People's Constitutional Company of Jesse Millette, wherein the expenditures given to the subsidiary are shared out amongst the different departments relative to their proven needs.

Expenditure Appeal

the annual constitutional obligation of all departments, governmental agencies and bureaus, to make official appeals to their authoritative bodies stipulating their monetary expenditure needs which will then be reviewed and taken into account by the authorities when constructing the expenditures of each department.

Cost Efficiency

the measurement of the extent to which a cost object is generating a sustainable return.

The Diversity of Profitability

the concept that profitability is a much broader term than traditionally interpreted, such as the indirect profitabilities of marketing activities, or the intangible profitabilities of maintaining recognition and reputation. These types of profitabilities may not have direct or tangible financial impact, yet the concept stipulates that they should be recognised as indirect or intangible contributors to financial profitability.

Necessary Subsidy

the constitutionally obligated act of each department of a subsidiary giving financial aid to other departments, most commonly the marketing department, especially when the activities of the aiding department are indirectly dependent on the activities of the receiving department, most commonly the marketing department.

Necessary Bailout

the constitutional obligation of each department of the subsidy to bailout other departments within the subsidy so as to stop them from collapsing. The departments are not obligated to bailout departments from other subsidiaries.

Cost Sphere

a newfound digital method of visualising a company's costs whereby all the costs are positioned in a sphere with the core of the sphere representing the company. Different costs are then put into the sphere represented by dots or balls of light, and typically the further away from the core the dot is positioned, the less frequently or less impact it has upon the operations of the company. The size of each cost is represented by the size of the dot, for example employee salaries would be positioned very close to the core and would also be quite a large dot so as to emphasise their size, significance and frequent impact upon the operations of the company. Each dot can be connected to others by thin lines so as to demonstrate their either their dependence on one another or their direct impact upon one another. Costing dots appearing outside of the sphere demonstrate external costs or potential future costs for the company. Using a digital device, additional information can

be retrieved if the user clicks on any dot. Cost Spheres can be built inline with the accounting periods of the company, whether that be annually or quarterly, or can be more specified to a certain subsidiary or department, and ultimately serve as a newfound way of visualising and measuring the importance of individual costs.

Cost Dimension

the concept of viewing a cost in all its different dimensions, such as its contributions to operations, the various elements that make up the cost, as well as the sustainability, future forecast and the methodologies devised to make the cost as efficient as possible.

Dimensionism

the in-depth accounting mechanism of viewing different objects of a company's operations in all of their dimensions, so as to further analyse their contributions, the elements making up the cost, and the cost sustainability, and efficiency.

Sphericism

the largely digital mechanism of viewing a company's operations in the forms of spheres whereby the core of the sphere represents the company and dots surrounding the core represent different elements of the company or a particular department within the company.

Dimensionisation

the process of viewing an element of something in all of its dimensions so as to identifying and deeply analyse its nature in order to better understand, manage and forecast its activities.

Management Accounting Process

Stage One

Objective Identification

Requirements of Market Information, Competition and Financial Availability for Projects

Stage Two

Course of Action Decision

Sufficient relevant and reliable information to permit a rational choice to be made

Stage Three

Development of Actions

Forecasts and resource allocation plans

Stage Four

Control of Activities

Exertion of control to ensure plan is followed - short-term monitoring of reports

Stage Five

Assessment of Plan

Performance reports and comparisons with forecasts and plan objectives.

Stage Six

Redefinition of Objectives

Amendment of plans in accordance with budgets, other plans, constitutional obligations and operations.

Astronist Cost Accounting

The Elements of Astronist Cost Accounting

- Cost information
- Cost objects
- Establishment of Budgets
- Standard costs
- Actual costs
- Processes and activities of production
- Analysis of variance
- Profitability
- Social usage of funds
- Costing information for specific items, departments and sub-departments, projects, events etc.
- Cost Accounting Main's Objective: Keeping Operations Within Budget
- Budget Surplus and Budget Deficit Management
- Impacts of Unforeseen Events

Costing Approaches

- Absorption Costing

- Job Costing
- Product Costing
- Batch Costing

Absorption Costing

an accounting mechanism whereby indirect or intangible costs are accumulated and allocated to products/services for planning, control, management, and measurement purposes.

Costings Should Be

- understandable by all concerned
- quick to apply so information is not delayed
- fair to all parties involved
- accurately reported so as to relay true information
- both constitutional in nature and in application
- as detailed as possible so as to apply with assured accuracy
- publicly available and accessible under constitutional transparency obligation

Disadvantages of Absorption Costing

- costs may not be accurate
- allocation and apportionment of costs can be quite arbitrary
- leading to incorrect decision making
- absorption rate set in advance so may be inaccurate
- possibly lacking in sufficient details of the activity

Direct Inputs

- Materials
- Labour

Indirect Inputs

- Production Overheads
- Administrative Overheads

Expenditure Investment Methodology

Expenditure Investment

the process conducted by a department or governing agency or bureau involving the assessment, and allocation of how to most efficiently invest non-operational expenditure.

Non-operational Expenditure

expenditure that is specifically allocated for capital investment, rather than to cover operational costs of the department.

Determinations of Investment

- Amount of capital available
- Source of capital
- Longevity of the project
- Cash flow efficiency and sustainability from the project
- Scheduling and timing of the project
- Externalities
- Capital allowances and taxation
- Grants
- Residual value of the asset
- Constitutionality of the project
- Potentiality of alliance or governmental subsidy
- Potentiality of damage or clash with other operations and scheduled projects
- Sensitivity of company or subsidiary sales price, market share, operating costs, and sales volume

Current Investment Appraisal Methods

- Payback
- Accounting Rate of Return
- Net Present Value

Astronist Investment Appraisal Methodology

A five-pronged methodology of investment appraisal in which every aspect of appraisal is identified and implemented so as not to leave any gaps. The methodology fuses traditional and new techniques together and focuses more on the creation of reportages, the contextualisation and the reflection on the externalities of potential projects.

Project Outlay

refers to the initial investment costs of the project and the month in which this is paid is usually designated beside it.

Truncated Value

the value, revenues, or profits of an investment project achieved between the Project Outlay and the end of that year, in Astronist Investment Appraisal Methodology, considered Year Zero.

Interpolation

the implementation of typically indirect data that gives further contextualisation to the project in question, most commonly observed in the The Numerical-based Evaluation.

Due to the fact that every three years, The Governing Council rotates, the third year (actually the fourth operational year) is highlighted as the Review Year in which the project is most heavily analysed by the new governing administration.

The method begins by analysing the projects individually and then compares the project later in The Reportage of Findings.

Project Example

Year	Annual Cash Flow	Cumulative Cash Flow
Project Outlay	£125m (September)	-£125m
0	£20m (Truncated)	-£105m
1	£50m	-£55m
2	£60m	£5m
3	£40m	£45m
4	-£15m	£30m

Phase One - Return Efficiency

Begins by receiving initial investment cost for the project (Project Outlay) which is placed in both Annual Cash Flow column and Cumulative Cash Flow column as the Project Outlay which has no specified time period attached to it.

Then, the project hypothetically begins and by the end of Year 0, which is set in default because the project may have been started midyear or toward the end of

the year. The annual cash flow for Year 0 is the truncated amount generated by the end of the accounting year from when the project was initially invested.

The first year begins and by the end of it, the annual cash flow for the first full year is provided. The rest of the annual cash flows for each year are then forecasted with the cumulative cash flow indicating the extent to which the annual cash flow is affecting the overall cash flow of the project.

Calculating the return efficiency of the project use:

Cumulative Cash Flow of Year Before Positive CCF (-£55m) ÷ Annual Cash Flow of the Year of Positive CCF (£60m) Equals 0.92,

therefore **the payback year stands at 2.92 years**, so classed as within Year 2.

A conclusive statement should then be issued which details the opinion of the investor toward this individual project, yet keeping in mind the fact that there hasn't yet been any comparison with other projects. For the example shown, the investor or The Governing Council, would likely deem the project as a reasonable opportunity for their administration as the project begins a period declining cash flow beyond the third year. Due to the constitutional laws to which The Governing Council are bound, they are obligated to rotate administration every three years. This new outlook every three years gives the managers of project appraisal a centre point to work alongside with as they must keep in mind that a new Governing Council means a new set of direction for current projects. The fact that this project fits within the three year period and actually provides positive cumulative cash flow for Year Four, works to the project's advantage, but after the new administration in Year Three and the dwindling down of the project in Year Four, it would mostly likely be phased out as new projects emerge from the new administration.

Phase Two - Profitability Measurement

Default Depreciation - 10%

Year	Annual Cash Flow	Depreciation	Profit Flow
Project Outlay	£125m (September)		
0	£20m (Truncated)	-£12.5m (=£112.5m)	-£7.5m
1	£50m	-£11.25m (=£101.25m)	£38.75m
2	£60m	-£10.125m (=£91.125m)	£49.875m
3	£40m	-£9.112m (=£82.013m)	£30.888m
4	-£15m	-£8.201m (=£73.812m)	-£23.201m

Year	Annual Cash Flow	Depreciation	Profit Flow
Project Outlay	£125m (September)		
0	£20m (Truncated)	-£12.5m (=£112.5m)	-£7.5m
1	£50m	-£11.25m (=£101.25m)	£38.75m
2	£60m	-£10.125m (=£91.125m)	£49.875m
3	£40m	-£9.112m (=£82.013m)	£30.888m
4	-£15m	-£8.201m (=£73.812m)	-£23.201m
5	-£30m	-£7.381m (=£66.431m)	-£37.381m
6	-£40m	-£6.643m (=£59.788m)	-£46.643m

Total Depreciative Value **-£65.212m**

Phase Three - Accountable Deduction

Deduction Rate Formula: $v \div (1+r)^n$

v = valuation (Project Outlay+Depreciation+Profit Flow)

r = discount factor

n = number of years

Default Discount Factor = 10% (0.1), but if the actual discount factor is known, or a figure is proven to be more accurate, then that does supersede the Default Discount Factor, and so must then be implemented.

e.g. £125m in 2 years at 10% Discount Factor is worth $125 \div (1+0.1)^2 = £103.3m$

Depreciation Technique

With realistic depreciative measures, using the Default Discount Factor of 10% and subtracting the depreciation figure from the Depreciated Project Outlay.

Deducted Valuation

Total Deducted Valuation - $125 \div (1+0.1)^6 = £70.55m$

Truncated Deducted Valuation - $125 \div (1+0.1)^4 = £85.37m$

Annual Deducted Valuation Calculation

Year 0 Deducted Valuation (Truncated) - $105 \div (1+0.1) = \text{£}95.45\text{m}$

Year 1 Deducted Valuation - $*(105+-11.25+38.75) = 132.5 \div (1+0.1)^1 = \text{£}120.45\text{m}$

(Carried Value+Depreciation+Profit Flow)

Year 2 Deducted Valuation - $(132.5+-9+51) = 174.5 \div (1+0.1)^2 = \text{£}144.21\text{m}$

Year 3 Deducted Valuation - $(167+-8.1+31.9) = 198.3 \div (1+0.1)^3 = \text{£}148.98\text{m}$

Year 4 Deducted Valuation - $(198.3+-7.29+-22.29) = 168.72 \div (1+0.1)^4 = \text{£}115.23\text{m}$

Year 5 Deducted Valuation - $(168.72+-6.56+-36.56) = 125.6 \div (1+0.1)^5 = \text{£}77.98\text{m}$

Year 6 Deducted Valuation - $(125.6+-5.905+-45.905) = 73.79 \div (1+0.1)^6 = \text{£}41.65\text{m}$

*Annual Cash Flow valuations must **not** be added to the Deducted Valuation calculations

Valuation Rate

the difference between two Deducted Valuations calculating the rate at which the valuation is either increasing (above 1%) or decreasing (below 1%) in value. E.g. $144.21 \div 120.45 = 1.1972\%$, and $115.23 \div 148.98 = 0.7734\%$, and $41.65 \div 77.98 = 0.5341\%$

Year	Annual Cash Flow	Discount Factor(10%)	Present Value
	Project Outlay		
	£125m (September)		
0	£20m (Truncated)	1.000	£20m
1	£50m	0.909	£45.45m
2	£60m	0.826	£49.56m
3	£40m	0.751	£30.04m

Phase Four - Present Value Assessment

Beginning with a default Discount Factor of 10%, the Present Value of the Annual Cash Flow estimations is calculated in the following formula:

Annual Cash Flow \times Discount Factor = **Present Value**

Advantages of understanding Present Value:

- Takes account of time value of money
- Accounts for the whole of the project
- Produces an absolute measure rather than relative profit
- Provides a realistic account of value by factoring the devaluation of money

Phase Five - Conclusive Components

The final phase of The Astronist Investment Appraisal Methodology comprises of three chronological components: the contextualisation of the project, the numerical-based evaluation, and the reportage of findings.

The Contextualisation of the Project

A project may demonstrate financial and theoretical success, but the practicalities of the project may reveal major obstacles in its application, the chances of negative potentialities and the measurement of externalities. This sub-phase determines information not traditionally factored in other accounting and appraisal methodologies, thus showing the ability of this methodology to look beyond the financial and theoretical applications, and factoring in the practicalities of projects when appraising them.

The Environments

- Natural Environment
 - Seasonality
 - Climate
 - Climate Change Susceptibility
 - Topography
 - Distances
- Financial Environment
 - Currency Stability
 - Storage of Funds (Banks)

- Security of Funds
- Commercial Environment
 - Competition Or No Competition & The Implications
 - Ease of Exportation & Importation
 - Availability of Local Labour
- Political Environment
 - Corruption Susceptibility
 - Government Structure
 - Political Stability
 - Business Friendly Administration
 - Strength of Political Alliances
 - High Levels of Bureaucracy
 - Extent of Dependency on other Nations
- Cultural Environment
 - Religious Obstacles
 - Cultural Unfamiliarities
 - Institutional Power
- Social Environment
 - Crime Rate
 - Social Freedoms
 - Extent of Welfare (Education, Health, etc.)
- Legal Environment
 - Legal Obstacles
 - Constitutional Obstacles
 - Presence of Lawyers

The Potentialities & Externalities

- War/Invasion
- Natural Disaster
- Government Collapse
- Threat of Terrorism
- Threat of Gang Violence
- Threat of Banditry
- Currency Collapse
- Threat of National Bankruptcy
- Susceptibility to Revolution

The Numerical-based Evaluation

The second sub-phase focuses on the cumulation, organisation and evaluation of all the numerical information gathered in the previous phases of the methodology.

The following numerical informations should be of main focus:

- The Year of Investment Return (Payback Year)
- The Total Depreciative Value
- The Total Profit Flow
- The Truncated Profit Flow
- The Total Deducted Valuation
- The Truncated Deducted Valuation
- Valuation Rate
- Present Value

These numerical informations should be gathered and compared with one another to formulate a Financial Evaluation of the project demonstrating the key strengths and weaknesses of the project from a financial viewpoint which should then be used in The Reportage of Findings.

As well as this, a method of interpolation should be utilised when constructing The Numerical-based Evaluation, which involves the implementation of typically numerical values into the evaluation that are relevant to the specific project, an example of which would be the economic growth of the nation in which the project largely resides, the nominal GDP of the nation, or the GDP per capita of the nation. This numerical information isn't directly related to the project, but its presence could give a wider view of the economic and financial circumstances of the nation in question.

The Reportage of Findings

The third and final sub-phase centres around the construction of a comprehensive and detailed report which should feature financial, theoretical and practical informations regarding the project.

In order to compare the project in question with other available project opportunities, a Comparison Report will be constructed within The Reportage of Findings, detailing a direct comparison between the financial and contextual informations in order to derive clear strengths and weaknesses between the compared projects, thus leading to a decision on the most feasible project in the following categories: financial, environmental, and external.

A neutral standpoint should be taken until the end of the report, wherein a Conclusive Statement will be construction in which the appraisers are obliged to explicitly state their opinion of the feasibility and practicality of the project by incorporating financial, contextual, and theoretical informations into their statement.

The Reportage of Findings should also be tailored towards the group of individuals that are expected to read. Tailoring of reportages should be based upon the market location, the cultures of the market, the language, the colloquialisms, the terminologies, and the methodologies used in a particular region, or nation.

The Reportage of Findings will then be presented to whomever it does most concern and from this documentation, a decision will be made by the fully-informed executive and managerial personnel on which project, if any, will be granted investment from the budget expenditure.

The Astronist Management Methodology

Part-nationalised Company

a company founded by The People's Constitutional Company of Jesse Millette that has become equally or partly owned by the government of a nation.

Governmental Partnership

a company founded and owned by The People's Constitutional Company of Jesse Millette that conducts operations in official partnership with a governmental organisation, agency or state company.

Subsidised Company

a company founded and owned by The People's Constitutional Company of Jesse Millette that directly receives or benefits from the investment of a nation's government.

Exclusivity Partnership

a partnership between companies that only occurs in a certain nation or within a certain region.

Flagship Subsidiary

the largest, most publicised and most constitutionally incorporated subsidiaries.

Primary Subsidiary

large subsidiaries, significantly publicised and are incorporated, yet often do not bear the Jesse Millette brand.

Secondary Subsidiary

medium sized subsidiaries, moderately publicised and are incorporated, yet often do not bear the Jesse Millette brand.

Tertiary Subsidiary

small sized subsidiaries and not significantly publicised as well as having no connection to the Jesse Millette brand.

Acquisitions

subsidiaries that are bought by The People's Constitutional Company of Jesse Millette, thus are subsidiaries that have not been internally formed and thus, under constitutional law, cannot become incorporated companies, yet do still fall under the jurisdiction of The Governing Ministry and The Governing Council.

Investments

a company that The People's Constitutional Company of Jesse Millette has considerable investments in, yet does not wholly own its operations and nor is the company considered incorporated or unincorporated.

Nationalised

a company of internal foundation that has been later nationalised, yet the management of its operations are still under control of The People's Constitutional Company of Jesse Millette.

Semi-nationalised

a company of internal foundation that has been later been semi-nationalised, usually an equally split shareholding agreement between the government in question and The

People's Constitutional Company of Jesse Millette, yet the management of the company's operations are still under control of The People's Constitutional Company of Jesse Millette.

Propagated

a company's operations that are openly propagated by The People's Constitutional Company of Jesse Millette.

Non-propagated

a company's operations that are not openly propagated by The People's Constitutional Company of Jesse Millette.

Special Administrations

a company under special administrative management by The People's Constitutional Company of Jesse Millette, usually due to the location of the operations of the company being hostile, either politically or militarily.

Governmental Partnerships

a company formed by joined partnership between a government and The People's Constitutional Company of Jesse Millette, of which The People's Constitutional Company of Jesse Millette manages and has the potential to incorporate with the permission of the government.

Incorporated

subsidiaries that have been fully incorporated into The Grand Constitution and thus, are obligated to follow all constitutional policies and must answer to The Governing Ministry and The Governing Council as their authority.

Incorporated Merger

an incorporated subsidiary that has been merged with an external company that later becomes fully incorporated after administrative and constitutional integration.

Unincorporated

subsidiaries that have not been fully incorporated into The Grand Constitution and thus, are not obligated to follow all constitutional policies except that each subsidiary must still answer to The Governing Ministry and The Governing Council as their authority under constitutional law.

Unincorporated Merger

an unincorporated subsidiary that has been merged with an external company that stays unincorporated after administrative integration.

Holdings

a hollow collectivity company representing a number of companies, usually within the same industry or for taxation purposes.

Consortium

the overarching parent organisation of The People's Constitutional Company of Jesse Millette.

Competitive Justification

any justification made by The People's Constitutional Company of Jesse Millette to forego the strict implementation of any policy due to competitors in the business environment

The Five Year Renewal

the process carried out by The Governing Council and The Governing Ministry every five years that seeks to review all and renew the majority of agreements, deals and fundings in order to keep operations secure and efficient.

Market Value-driven

the management policy indicating the importance of business operations with the focus on prioritising the increase of market value over other aspects of the business.

Revenue-driven

the management policy indicating the importance of business operations with the focus on prioritising the increase of revenue over other aspects of the business.

Assets-driven

the management policy indicating the importance of business operations with the focus on prioritising the increase and protection of assets over other aspects of the business.

Investor Relations-driven

the management policy indicating the importance of business operations with the focus on prioritising the interests of the investors over other aspects of the business.

Corporate Relations

the management, maintenance and establishment of official relations between one company and another, usually for mutually advantage.

Impression Management

the establishment and management of the perceptions of an individual, group or mass audience towards a company's values, beliefs and operations.

Reputation Management

a management team within a company tasked with the upkeep of the company's reputation, especially when regarding the perceptions of the quality of their products or services.

Reputation Maintenance

the strategies adopted by a Reputation Management team that most swiftly and efficiently maintain the reputation of a company.

Reputation Restoration

the strategies adopted by a Reputation Management team that most swiftly and efficiently restore the reputation of a company after a damaging event or scandal.

Transparency Contract

a signed documentation outlining the extent to which a private investor or donator to an Astronist organisation wishes to reveal information, such as their identity and the amount they donated.

Company Circular

a daily report of the activities and public engagements of The People's Constitutional Company of Jesse Millette, ambassadors and executives from The People's Constitutional Company of Jesse Millette, or The Constitutional Leader.

Actual Profit

Profit generated by The People's Constitutional Company of Jesse Millette, that is inline with governmental profit sharing and taxation laws, mainly the exclusion of investorial sums as costs.

Constitutional Profit

Profit generated by The People's Constitutional Company of Jesse Millette, that is subject to constitutional law, mainly that the investorial sums are considered as costs and are not associated with the profit of the company.

Impression Management Strategies

Preparation

Evidential Positioning & Sources

Evidential Qualifications & Expertise

Honesty & Sincerity

Prioritisation of Goodwill

Adoption of Clear & Understandable Delivery Style

Assertiveness

Identification of Similarities & Familiarities With Audience

High Receiver Involvement

High Credential Endorsements

Operational & Financial Transparency

Governmental, Financial & Operational Stability

Investment in Marketing, Public Relations & Corporate Relations

Investor Relations Methodology

Dividend Percentage Payback

It is the constitutional stipulation of The People's Constitutional Company of Jesse Millette to all of its shareholders and investors of all its subsidiaries

and incorporated companies that all dividends will be paid annually according to the Astronist Calendar date of 26th Ellenine (28th April) which signifies the end of the Astronist Accounting Year and stands as the Dividend Payment Day for all shareholders and investors.

It is the constitutional stipulation of The People's Constitutional Company of Jesse Millette, under Astronist Methodology, that the percentage of the investor's stake is directly translated into the dividend bonus on top of their Initial Investment Sum.

For example, if the company made a profit of £1.5 million, and there were fifteen investors with ten investors holding 40% amongst them (4% each), and 60% was held by the other five investors (12% each), then

40% of £1.5 million equals £600,000 ($\div 10$ equals **£60,000** each)

60% of £1.5 million equals £900,000 ($\div 5$ equals **£180,000** each)

Therefore, the investors are all allocated their fair share of the total profits according to the stake that they do hold. The two figures emboldened are the dividend bonuses granted to each investor and should, when totalled, equal the total profit. In Astronist methodology, the Initial Investment Sum of the investor is counted as a cost and is thus, not associated with the Actual Profit of the company, which is conforming to the concept of Constitutional Profit.

It is of highest priority that all investors understand their importance within the company in keeping it operational, but also, they must understand and agree with the principles of The Astronist Methodology, and the ideas of Astronist Social Business and the purpose of The People's Constitutional Company of Jesse Millette, which is not a profit-centred company and despite the needs and wants of investors being heard, considered, the majority of their suggestions are undertaken, they do not form the ultimate authority within the company as The Governing Ministry, The Grand Constitution, and The Astronist Congress, are considered higher in authoritativeness.

Each investor of The People's Constitutional Company of Jesse Millette is automatically an investor of its parent company, The Astronist Consortium. The investors of The Astronist Consortium are obliged to keep in close contact with each other and are constitutionally obligated to attend two meetings per year titled The Investorial Council. The Constitutional Leader of The People's Constitutional Company of Jesse Millette is constitutionally obligated to chair every Investorial Council.

During each Investorial Council, the needs and wants of investors are taken into consideration by The Constitutional Leader, and from there, The Constitutional Leader is obligated to present these concerns to The Governing Council at their next meeting. Actions will then be taken within the boundaries of constitutional principle, in order to ensure the satisfaction of each investor. It is only The Constitutional Leader, by constitutional law, who is allowed to interact with the investors of The Astronist Consortium; no Governing Council members or any other governing official is constitutionally allowed to communicate, with the punishment of expulsion if this unconstitutional action is undertaken.

The Role of The Constitutional Leader

The Constitutional Leader is constitutionally prohibited from owning any stake in The Astronist Consortium, and so because of this, is considered a neutral party in all investorial affairs and is solely a human representative of The Grand Constitution in all affairs.

Subsidiaries & Public Companies

The People's Constitutional Company of Jesse Millette, although a private and constitutionally bound organisation itself, does control and manage many subsidiary companies and public companies which leaves confusion about the role of investors in these companies. Due to the contents of The Investorial Pledge, which is constitutionally obligated for all investors to conduct and sign in order to be officially recognised as an investor of The Astronist Consortium, each investor is bound to the entirety of The People's Constitutional Company of Jesse Millette.

This means that when an investor is investing in The Astronist Consortium, they are investing in the entirety of the company, not just one subsidiary of the company. Investors can position their funds towards certain projects

and companies, but which positioning must be granted by The Governing Council, and The Constitutional Leader as an extension in order to ensure the constitutionality of the action.

Regarding Public Companies, due to their structure, they are owned by the public and are traded on the stock markets, therefore they cannot be invested by the investors of The Astronist Consortium directly, however the investors of The Astronist Consortium can invest in any public company controlled by The People's Constitutional Company of Jesse Millette as long as they do so through the proper means of acquiring public shares and if they are an existing investor of The Astronist Consortium, they are then given recognition for that status and their investment may be taken over others, especially in a market competing for company shares.

However, indirect investment is also a practice that is constitutionally sound which involves an investor already invested in The Astronist Consortium directing their funds towards a particular company in order to assist in its management, but crucially, would not receive any monetary dividends from the indirect investment, and it would also, again, have to be passed by The Governing Council and The Constitutional Leader before being able to take place.

The Astronist Employment Methodology

Self-commercialisation

the practice of establishing oneself as a brand or persona by networking, constructing social media profiles, or carving out a distinctive way of conducting oneself, and is a technique typically used by entrepreneurs.

Self-marketing

the practice of marketing oneself as a brand or persona, especially in the form of describing oneself in an interview, or profiling oneself and one's ambitions, and strengths and weaknesses.

Self-education

the practice of teaching oneself a subject, most typically outside a formal education institution, or typically using non-traditional methods to teach oneself a subject.

Cultural Capital

the extent to which an individual possesses a diversity range of knowledge in an array of subjects, mostly typically in the subjects of literature, art, history, politics, and geography.

Social Capital

the extent to which an individual possesses a range of contacts either physically or digitally, and usually in the aid of conducting business.

Economic Capital

the extent to which an individual possesses significant monetary assets to aid in conducting business, most commonly derived from an investor as having high economic capital, but can also mean of employees of a business.

Employee Constitutional Rights

the set of rights bestowed to all employees of The People's Constitutional Company of Jesse Millette and all its incorporated companies, by The Grand Constitution.

Entrepolyee

a hybrid phrase referring to an individual whose official role within a company is that of an employee, but is simultaneously encouraged to bring a sense of entrepreneurship and innovation to their role.

Compulsory Cultural Capital Examinations

the examination undertaken by all employees of The People's Constitutional Company of Jesse Millette and all its incorporated companies, in which potential employees are tested on the diversity of their knowledge across an array of subjects.

Progressive Salary

the system of incentivising employees by continuously increasing their salary by reasonable amounts the longer they are employed, with the larger increases seen in promotions, and is a technique used by incorporated and unincorporated subsidiaries of The People's Constitutional Company of Jesse Millette.

Employment Structures

The newfound Astronist employment structures adopted by some subsidiary companies of The People's Constitutional Company of Jesse Millette.

Spiral Employment Structure

the type of employment structure taking the similar shape of a spiral galaxy whereby a new employee starting in a job of the lowest ranking, begins on the outer rim of the spiral, typically on the edge of an outstretching arm.

as the individual begins to work in the company, they gradually move round the arm and the speed at which they move reflects the impact they make upon the department in which they are working.

if the individual receives a promotion, they jump inward to the next arm of the spiral closer to the core which is representative of their boss or the leadership of the whole company.

this continues until the individual reaches the core whereby they cannot achieve a higher rank within the spiral rank, either by becoming the leader of the department or the company or serving as the deputy to the leader.

in the event of the spiral arms merging, this represents the greater hive of activity and competition as the employee reaches closer to the spiral's core.

Concentric Employment Structure

the type of employment structure taking a concentric structure wherein a new employee begins on the outermost ring of the concentric circle if they begin in a role of the lowest rank.

as the individual works in the company, they move round the outermost circle, but do not move inward, to the next ring until they receive promote, which is unlike the spiral structure, since working in this employment, there is no progression in terms of the length of time one works for the company, every progression is based on promotion.

in the concentric structure, time is also represented, with the completion of a ring, representing a year of work in the company.

however, the concentric structure is similar to the spiral structure in that the further inward the individual progresses, the greater their salary and the greater their role in the company.

the concentric structure feature a dot in the very centre of it, which represents the leading role within the department or the company, and so, there is no higher position beyond that.

Other ideas regarding employment including a Per Capita Model and Progressive Salaries.

The Astronist Governance Methodology

Decentralisation

congressional buildings within each nation to deal with domestic affairs (the grand congressional building deals with international affairs).

Constitutional Principles

The Constitutional Leader does not change unless impeached, however, on The Governing Council, they act only as a reminder of the Constitutional Principles - they have no direct authority over the other members (only by way of ensuring the constitution is not breached).

Direct Democracy

referendums are the main way that new policies, laws and cross-company decisions are made. These are conducted in Directorial Councils, Domestic and Grand Congress, Unions and national, multinational, international or omninational public votes. No vote is superior to another and it is the task of The Governing Council (who do not vote in referendums) to act impartially, constitutionally and to make decisions with the results of the referendums.

Referenda Neutrality

as detailed in the constitution, it is the universal obligation of The People's Constitutional Company of Jesse Millette to act as a completely neutral entity for the betterment of peoples in all nations. It is only a majority referendum (classed as 65% or more in Astronist Referendums) that would initiate The People's Constitutional Company of Jesse Millette to take action beyond humanitarian means within a dispute and the decision would also have to be supplied with sufficient evidence that the company's intervention would lead to the betterment of the peoples involved.

Transparency

the openness, accessibility and availability of internal and external information and documentation regarding The People's Constitutional Company of Jesse Millette and is engrained within the constitution.

Astronist Jurisprudence

The constitutionally structured legal system of The Astronist Governing Methodology, most commonly focusing on spacial law, philosophical principles and pro-education leaning policies.

Astronist Finance - Corporate Wealth Fund

Astronist Arbitration

Astronist Law & Astronist Constitutional Law

Astronist Discussion - always have at least one person present who has experienced whatever is being discussed in addition to the qualified experts present.

Astronist Corporate Jurisprudence

For The People's Constitutional Company of Jesse Millette and all its incorporated subsidiaries, The Grand Constitution has the foremost and supreme jurisdiction over all operations, and disputes, and the constitutionality of an action is judged by word of The Grand Constitution. If, however, a particular circumstance occurs wherein it is not clearly stipulated in The Grand Constitution, the foremost jurisdiction falls to the interpretation of the actions by The Constitutional Leader and The People's Astronist Congress, of which are both constitutionally bound to found their judgements from the writings of the constitution in conjunction with their own present interpretations of the action.

The Governing & Directorial Councils

The Governing Council is voted for every three years (the same person can join multiple times with a limit of three, but they must be at least a term apart)

Directorial Councils are voted for every year (the same person can join multiple times with a limit of five, but they must be at least two terms apart)

New or impactful operational policies (non-constitutional policies) within businesses and departments are decided upon by Directorial Councils and a vote within either the grand or domestic Congress is taken every time a new policy wishes to be enacted depending on whether it impacts another national or not.

Millettocracy

A system of government for either a nation, organisation or company, operating under Astronist methodology and constitutional law, comprising a newfound middle ground between traditional political opponents.

To be officially categorised as a Millettocracy, the entity needs recognition from The People's Constitutional Company of Jesse Millette and The People's Astronist Congress.

Whilst supporting the concept of government funded education system, national healthcare services, and other infrastructures, Millettocracies do tend to lean toward the idea of individuals "making their own way in the world" so unnecessary benefits are significantly reduced, which takes on entrepreneurial values.

Millettocracies offer a middle ground between elitism and mass social welfare and is often summarised as self-determined elitism.

Self-determined Elitism - the idea that an individual or a household should work their hardest with little to no direct government benefits in order to self-determine their financial prosperity rather than rely upon governmental benefits.

Millettocracies generally favour a steady flow of immigrants, yet under constitutional law, they are to be very heavily monitored and are certainly not given unnecessary benefits.

Confederationism

Also known as Astronist Confederation, a system of international governmental and societal organisation derived from wider Astronarianism, that champions, what it proclaims, as the proper implementation of the confederative governmental structure.

Separate from the traditional, or pre-Astronist version of confederation, confederationism is defined by the considered inconsistencies, and inefficiencies of the pre-Astronist confederative governmental model, known as confederalism.

Omnopolies are a unique feature of the Astronist confederative model - companies have the privilege to trade cross-confederatively without tariffs, and those which are part of the confederation have supremacy over non-confederative companies.

Primarily defining features of Astronist confederations or confederationism:

- Introduction of all value added industries for each of the members of the confederation in order for them to reduce the agricultural sector and their dependence on no value added commodities, especially for a confederation of largely undeveloped nation states; this supports a dependence for that which is known as free interconfederational trade, for the betterment of the intraconfederational state.

- Unlike in a federation, in an Astronist confederation, a member state can be part of up to three Astronist confederations at one time.
- Astronist confederations are not limited to countries/ governments in their membership requirements; instead, companies, non-governmental organisations, and institutions can join.
- The aspect of Common Action is still widely accepted in the Astronist version of confederations, as inspired by its traditional counterpart; Common Action is considered according to three major components; Common Thought, Common Value, and Common Vision, which is a prominent aspect of Astronist philosophy.
- The Astronist model of confederations gives an entirely balanced deal of power to its members and the Confederative Central Authority. Essentially, the Central Authority deals with all interconfederational issues, intraconfederational trade and economic policy, as well as cross-confederative education.
- In the Astronist model for confederations, the Central Authority does not deal with currency, immigration, foreign relations. However, the Central Authority does deal with immigration of the confederation as a whole, and it does conduct foreign relations on behalf of the confederation as a whole.
- In fact, member states are encouraged to keep their own national currencies, to conduct their own foreign relations, and to have their own national immigration policies.
- On world maps, members states are depicted as part of the confederation, rather than defined by their own national borders, or may be depicted as part of overlapping confederations (up to three for each nation state).
- All non-state members of the confederation are considered entirely equal; however, state members of the confederation are considered according to the size of their national populations; this is known as populationism in this context, as the larger the national population, the larger their influence within the confederation, however, there are policies in place to protect the smaller members.
- All members, whether states or non-states, retain their rights to secession at any time, through the retainment of the sovereignty.
- The Central Authority has no involvement in the domestic cultural affairs of the nation states, but it does retain the power to suspend members if its affairs or identity do no longer reflect that which is known as the Confederative Common; known as Common Action.
- Free trade between all members of the confederation

- No type of schengen zone area between member states.
- The economic policy of the confederation is that each country is encouraged to specialise in its best and most prominent services/goods in order to establish a state of comparative advantage between confederation members.
- A confederation is a group of different member states and other entities and is not itself a sovereign state, whereas a federation is its a sovereign state.
- Due to the principle of populationism being upheld in Astronist confederations, decision-making in the Astronist confederative model is much more efficient than its pre-Astronist counterpart.
- Law in the confederation follows the structure of three categories, similar to that of a federal system, known as Intrastate Law, State Law and Confederational Law and these are listed as follows.

State Law: Immigration law, Bankruptcy law, Taxation laws, Religious law, Criminal matters, Infrastructural affairs, Affairs of Sovereignty, Foreign relations, and Land resourcing laws (mining).

Confederational Law: Welfare, Education Law, Patent and copyright Law, Philosophic Law, Corporate law, Wills, inheritances and estates, Real estate and other property, Air travel and aerospace law, Fishing and maritime law, Interconfederational and intraconfederational trading law, and Intraconfederational civil rights.

Intrastate Law: Rent laws, Local safety, Counciloral affairs, City affairs, and Housing Law.

The Astronist Education Methodology

Educentrism

A newfound philosophy underpinning the principles of education governance, management, and the positioning of education at the centre of society.

Educationism

A branch of Educentrism, holding the belief that an emphasis on educational and scholastic features of a society should be made during the propagation of the society.

12. Millettian Luxury Restaurants
13. Millettian Boutique Hotels

Branded Physical and Digital Stores

Product Lines for both men and women carried in Branded Physical Stores:

- Fragrances
- Outerwear
- Non-prescription eyewear

- Accessories
- Luggage
- Non-seasonal Clothing Collections
- Seasonal Clothing Collections
- Undergarments & Sleepwear
- Luxury Footwear

Physical Store Types

- Standard Stores
- Luxury Stores
- Flagship Stores
- Incorporated Stores
- Authorised Dealerships
- Independent Stores
- Department Stores
- Travel Stores

Standard Store - branded stores stocking products without a specific focus on luxury items, usually located in cities.

Luxury Store - branded stores stocking products with a specific focus on luxury items.

Flagship Store - largest branded stores by floorspace, usually located within the capital city.

Incorporated Store - branded stores that have been incorporated into another institution owned by The People's Constitutional Company of Jesse Millette, such as Millette Education Institutions.

Authorised Dealership - branded stores that have been franchised, and usually located in smaller towns and cities.

Independent Store - stores that carry at least one line of Jesse Millette products.

Department Store - department stores that carry at least one line of Jesse Millette products or feature pop-up stores.

Travel Store - pop-up stores featured on cruise ships or airlines that feature Jesse Millette products.

Prescription & Non-prescription Eyewear Luxottica Partnership

Our Prescription & Non-prescription Eyewear business is completely outsourced to Luxottica, the largest eyewear company in the world, with which an exclusive license

Luxottica's Vertical Integration

agreement is signed, decade, for Luxottica to globally distribute both sunglasses for the Jesse Millette brand.

Product Development
(Design & Engineering)

typically renewed every design, manufacture and prescription frames and

In accordance with the Methodology, Luxottica exclusive license agreement the licensing of Astronist brands and licensing of Astronist entities does Millette Fashions.

Distribution

(Wholesale & Retail E-commerce, 7,000+ Stores Globally)

they believe the operations of Jesse upon their Prescription & Non-this scenario, Luxottica would Fashions, who would then contact their concerns. If the dispute

Customers

Millette Licensing to have harmful impacts prescription Eyewear business. In communicate with Jesse Millette Jesse Millette Licensing to offer continues, it can then be taken to

The Constitutional Directorial Summit whereby all entities would therefore be under the overarching jurisdiction of The People's Astronist Congress.

The exclusive license agreement covers the brands and likenesses of all Astronist characters:

- Jesse Millette
- Oliver Mehler
- Ellena Chadwell
- Harriet Millette
- Zara Millette

The exclusive license agreement covers the following suitabilities:

- Men's
- Women's
- Children's
- Non-prescription glasses
- Prescription glasses
- Sunglasses
- Prescription glasses

Fragrances

Our Fragrances business is partly outsourced to International Flavours & Fragrances Inc. which create, manage and manufacture fragrances which our company will then distribute to our physical and digital stores, as well as wholesale partners, department stores, independent stores etc.

Other Millettian-marketing businesses will include the following: Toiletries, Cosmetics, Affordable Footwear, Imagewear, Watches & Jewellery, Duty Free, Promwear, Millettian Couture, Millettian Luxury Restaurants, and Millettian Boutique Hotels.

Design & Production

Collectivity -

Capital Collectivity - the main Production Collectivity of a nation and usually receives all information from design centres which it then passes through its collectivity.

Production Collectivity - a cluster of strategically positioned production factories, usually within lower income nations to improve employment rates.

Non-Seasonal Design Collectivity - a strategically positioned design centre, usually in a nation nearby the Production Collectivity.

Seasonal Design Collectivity - a global design centre located in London in the United Kingdom.

Transmarket Distribution - the distribution of goods from one market into another.

Seasonalism - a continuous production of products that are reviewed every three weeks and are renewed every three months

Millettian Production Collectivity of Moldova:

1. Chisinau (Capital Collectivity)
2. Balti
3. Comrat
4. Dubasari
5. Bendero
6. Tiraspol
7. Crasnoe
8. Floresti

Millettian Non-Seasonal Design Collectivity of

1. Kuala Lumpur

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

These factories serve: Indonesia, Philippines, Vietnam, Brunei, Malaysia, Cambodia, Laos, Thailand, Singapore, United States of America, Canada, Australia, New Zealand and Timor-Leste.

Millettian Collectivities of Africa

Millettian Production Collectivity of Liberia

1. Monrovia (Capital Collectivity)
2. Buchanan
3. Harper

These three factories serve: Sierra Leone, Côte d'Ivoire, Ghana, Togo, Benin, Burkina Faso, Guinea, Cape Verde and Guinea-Bissau.

Millettian Production Collectivity of Senegal

1. Dakar (Capital Collectivity)
2. Touba
3. St Louis
4. Ballou
5. Ziguinchor
6. Thies
7. Mbour

These seven factories serve: Egypt, Libya, Tunisia, Algeria, Morocco, Mauritania, Mali, Senegal and The Gambia

Millettian Production Collectivity of Tanzania

1. Dar es Salaam (Capital Collectivity)
2. Zanzibar Town
3. Tanga

4. Mtwara
5. Lindi
6. Mwanza
7. Kigoma
8. Mbeya
9. Songea

These nine factories serve: Tanzania, Burundi, Rwanda, Democratic Republic of the Congo, Kenya, Uganda, Ethiopia, Somalia, Djibouti, Eritrea, South Sudan, Republic of the Congo, Gabon, Equatorial Guinea, São Tomé and Príncipe.

Millettian Production Collectivity of Madagascar

1. Antananarivo (Capital Collectivity)
2. Toamasina
3. Ambanja
4. Antsiranana
5. Toliara
6. Itampolo
7. Ifaty
8. Morondava
9. Maintirano

These nine factories serve: Madagascar, Mozambique, Malawi, Zambia, Angola, Namibia, Botswana, South Africa, Swaziland, Lesotho, Seychelles, Mauritius, Comoros and Zimbabwe.

Millettian Production Collectivity of Nigeria

1. Lagos (Capital Collectivity)
2. Abuja
3. Port Harcourt
4. Onitsha
5. Calabar
6. Ibadan
7. Zaria

These seven factories serve: Nigeria, Cameroon, United States of America, Canada, United Kingdom, France and Germany.

Millettian Production Collectivity of Niger

1. Niamey (Capital Collectivity)

This factory serves: Niger, Egypt, Algeria, Morocco, Libya, Tunisia, Turkey, Greece, Spain and Italy.

Millettian Production Collectivity of Chad

1. N'Djamena (Capital Collectivity)

This factory serves: Sudan, Chad, Egypt and Central African Republic

Millettian Non-Seasonal Design Collectivity of Nigeria

1. Lagos

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

Millettian Production Collectivity of Honduras

1. Tegucigalpa (Capital Collectivity)
2. San Pedro Sula
3. La Ceiba
4. Tela
5. Juticalpa
6. Comayagua
7. Danli
8. Catacamas
9. Choluteca

Millettian Non-Seasonal Design Collectivity of Mexico

1. Mexico City

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

These nine factories serve: Mexico, Guatemala, Belize, El Salvador, Honduras, Nicaragua, Costa Rica, Panama, United States of America and Canada.

Millettian Production Collectivity of Puerto Rico

1. San Juan
2. Bayamón
3. Humacao
4. Ponce
5. Arecibo
6. Mayagüez
7. Guayama
8. Caguas
9. Yauco

Millettian Non-Seasonal Design Collectivity of the Dominican Republic

1. Santo Domingo

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

The nine factories serve: The Bahamas, Cuba, Haiti, Dominican Republic, Jamaica, Turks and Caicos Islands, Anguilla, British Virgin Islands, Antigua and Barbuda, Montserrat, Saint Kitts and Nevis, Guadeloupe, Dominica, Martinique, Saint Barthelemy, Saint Lucia, Barbados, Saint Vincent and the Grenadines, Grenada, Trinidad and Tobago, Aruba, United States of America, Cayman Islands, Bonaire and Curaçao.

Millettian Production Collectivity of Venezuela

1. Caracas (Capital Collectivity)
2. Valencia
3. Puerto La Cruz
4. Maturin
5. Guayana City
6. Barquisimeto
7. Maracaibo
8. Merida
9. Barinas
10. Ciudad Bolívar
11. Carupano

Millettian Non-Seasonal Design Collectivity of Colombia

1. Bogotá

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

These eleven factories serve: Venezuela, Guyana, Suriname, Colombia, Ecuador, Peru, Bolivia, Paraguay, Uruguay, Argentina and Chile.

Millettian Production Collectivity of Brazil

1. São Paulo
2. Campinas
3. Curitiba
4. Goiânia
5. Salvador
6. Recife
7. Fortaleza
8. São Luís
9. Belém
10. Macapá
11. Manaus
12. Vitoria

Millettian Non-Seasonal Design Collectivity of Brazil

1. Rio de Janeiro

Millettian Seasonal Design Collectivity of the United Kingdom

1. London

These twelve factories serve: United States of America and Brazil.

Outsourcing - refers to the process of contracting out business sectors to other organisations, especially a company that has a monopoly or oligopoly of the industry.

Store Variations - the categorisation of differing Jesse Millette fashion stores, including _____.

Pricing Variations - the pricing differentiations between of Jesse Millette products depending on the nation and location in which the store is situated.

Price Fluctuation - the process of Jesse Millette products differing in price from store to store, or from week to week.

Price Mimicking - the process of the price of Jesse Millette products rising or falling in direct reaction to sales of the product.

Geographical Pricing - refers to the pricing policy of setting a product's price according to the geographical location where the product is to be sold, especially focusing the economic circumstances of the mass customer base.

External Pricing - refers to the pricing policy of setting a product's price according to external current affairs within a nation or region.

Locked Price - when the price of specially selected Jesse Millette products is mandatorily locked from Price Fluctuation and Price Mimicking.

Product Entry - referring to the period of time in which a Jesse Millette product has recently been launched, thus its price is at its highest.

Product Equidistance - referring to the period of time in which a Jesse Millette product reaches the middle of its life cycle and is at risk of Price Fluctuation and Price Mimicking.

Product Exit - referring to the period of time in which a Jesse Millette product is coming to the end of its season and so its price begins to decrease.

Premises Acquisition - referring to the management policy of encouraging businesses to purchase their shop premises rather than rent.

Complete Integration - referring to the point at which all areas of the business, both horizontally, vertically, diagonally, dimensionally, as well as backwardly and forwardly, are owned or controlled by one company.

Corporate Controllershship - the position of a company controlling every aspect of their business, yet not completely owning all aspects, especially the intermediaries or producers.

Pricing Considerations - the range of key processes that should be undertaken in order to correctly select the price of a company's products, from Organisational Orientation to Price by Quality to Price Selection, Price Policies, Price Adjustments and finally, Price Reaction.

Organisational Orientation - refers to the company's overall competitive position, product cost, degree of differentiation, company strengths and capabilities, range of products, consumer perceptions and expectations.

Price by Quality - value determination, quality as a reflection of price

Price Selection - determining demand, estimating costs, analysis of competitors, selecting final initial price

Price Policies - refers to the different pricing strategies such as Locked Price, Price Mimicking, Price Fluctuation, Geographical Pricing, External Pricing, Psychological Pricing.

Price Adjustments - refers to the different methods used to adjust the price of a product including, Trade Discount, Quantity Discount, Seasonal Discount, Cash Discount, Promotional Allowance (customer loyalty cards), Annual Volume Bonus.

Price Reaction - the management actions undertaken when the price of a product changes including Price Cuts, Price Increases etc.

Price Sensitivity Reduction - referring to the process of reducing a customer's price sensitivity to the lowest point possible by using marketing tactics such as product distinctiveness, substitute unavailability, high quality, prestige and exclusivity.

Competitor-based Pricing - referring to the influence of pricing to be the actions of competitors.

Market-based Pricing - referring to the influence of pricing to be the size, circumstance and potentiality of the market.

The Pricing Seesaw Theory - referring to the management theory that a business should have different products with a variety of specially defined prices in order to create an Equilibrium of Pricing.

Equilibrium of Pricing - part of The Pricing Seesaw Theory, the point at which a business secures a variety of products under a variety of prices in order to avoid pricing imbalance.

Pricing Imbalance - part of The Pricing Seesaw Theory, the point at which a business does not secure enough of a variety of products under a variety of prices and thus, either results in low prices or high prices.

Pricing Contract - refers to every element involved with the negotiation of product pricing including the following:

- Packaging Requirements
- Quality
- Terms of Payment
- Discounts
- Domestic Transportation Charges
- International Transportation Charges
- Distribution Charges
- Product Deficiency Assessments
- Trade-in Allowances
- Cost of Samples
- Delivery Details
- Development Support in Production Process
- Inspection Arrangements
- Exclusivity
- Guarantees and Warranties
- Remedies for Major or Minor Default
- Cancellation Compensation
- Future Contract Options
- Quantity
- Product Specification

The Astronist Methodology for The People's United Educational Space Exploration Confederacy

List of Astronist Starships constructed by PUESEC in close cooperation with Scipio, The Space Company:

1. The Grand Star (Grand Class & Star Class)
2. The Coronet (Capital Class)

3. The Gauntlet (Capital Class)
4. The Radiance
5. The Tristar
6. The Venator
7. The Infiltrator
8. The Starchaser
9. The Cometcatcher
10. The Freighter-class Ships (Freighter 1, Freighter 2, etc.)
11. The Explorer
12. The Consular
13. The Interceptor
14. The Crucible
15. The Regalia
16. The Acceptor
17. The Anticipator
18. The Hammerhead (Flagship Class)
19. The Arbitrator
20. The Champion
21. The Conveyor
22. The Commodore
23. The Vindicator
24. The Dauntless
25. The Valour
26. The Daybreaker
27. The Nightshroud
28. The Dawn
29. The Twilight
30. The Eclipsor
31. The Defiance
32. The Deliverance
33. The Accommodator
34. The Dominator
35. The Diligence
36. The Voyageur
37. The Inspiritor
38. The Enlightener
39. The Divinitor
40. The Divinitrix
41. The Executor
42. The Executrix
43. The Endurance
44. The Founder
45. The Frontier
46. The Fortitude
47. The Fellowship

48. The Starwind
49. The Gallantry
50. The Galactica
51. The Guardian
52. The Initiator
53. The Glorifier
54. The Hunter
55. The Intercessor
56. The Assessor
57. The Worshiper
58. The Pioneer
59. The Liberator
60. The Freedom Star

The Omnipraxy

Omnipraxis – The entire definitive guide to all the devotional, philosophical, and investigational practices within The Philosophy of Astronism.

The Appendadoxy: Inaugurological Astronism

Creation of a **questionary** that addresses some of the key beliefs of Astronism in order to initiate discussion: an example, do you believe in sentient life beyond The Earth?

The First Astronist: The Foundations of Taylorianism

Taylorianism - a major branch of the Astronist philosophical tradition and a sister philosophy to Astronism that is primarily focused on developing its own interpretation of The Philosophy of Astronism by the personal beliefs, actions, and experiences of Brandon Taylorian and his family members and the events and narratives in which they are involved with during their lives.

The First Astronist - a discourse outlining the personal approach taken by Brandon Taylorian towards the beliefs and practices of Astronism/Kosma/Astronism and is the main basis for the development of Taylorianism which itself can be considered an approach to Astronism/Kosma/Astronism.

Philosophical (belief and practice) life - the part of a person's life that is representative of their ideas, beliefs, and practices, usually characteristic of individuality.

Filiative (family) life - the part of a person's life that is representative of them as part of a family unit of activities, beliefs, and practices, usually characteristic of collectivity.

Merited (material) life - the part of a person's life that is representative of their achievements and possessions that they individually own and collectively own with others (usually family or friends).

Sophic-Filiative Interactivity - the notion that a person with a family is best involving them in some sort of belief and practices (whether these be religiously, philosophically, or ideologically rooted) in order to provide structure, morality, activity, and a sense of communality to their children (usually through the institution of a church, or sopharium, or state depending on the origin of the beliefs and practices) whilst also allowing their

children to practice the openness and fullness of philosophy and the upholds the belief that these two elements of a person's beliefs and practices can coexist through the notion of copractition.

Copractition - the notion expounded by Taylorianism that Astronism can be practiced alongside one's religion through the notion of Sophic-Filiative Interactivity.

The organisation of a person's approach to Astronism in the form of a complete or partial system is characterised by an eponymous appellation such as Taylorianism.

The Notations of Brandon Taylorian

Whether you agree or not of the Principles within The Grand Centrality, it is my duty as receiver to share that which has been gifted to me.

The Grand Centrality presents not a religion, but a philosophy; a way of thinking.

It is thy faith and morality that must be used in conjunction with the words of The Grand Centrality.

Share your learnings you may wish and so share your learnings you may not wish; the choice will always be of your own; not of those around thee or those purported to be above thee.

Free, you are, to do what thy wish with the words of The Grand Centrality for to block freedom is not of my nature or the nature of the words.

To think is all I wish of thee, to think about what the words say and what they mean to thee, but not as a group or family or a people; thou as an individual; thou as a creation of the divine one.

The purpose of The Grand Centrality is to set out words which one may use as guidance; not as obligation and so mix and mesh the words into thy faith and morality and all that which you are, for The Philosophy of Astronism assists that which you already know, are and believe.

If, for one thing, you use my words, use them for the betterment of peoples, the furtherance of humanity and the progression of all.

If just one quotation thy use to motivate, inspire and bring joy to thee, then do so with pride and confidence and if thy wish, share with others thy joy, inspiration and motivation of the words then allow the others to read and choose their own path of interpretation for their own individuality insists thy must do so.

All I can ask of thee is all I can ask of myself which is to be a man of good deed and moral, have faith and hope and most of all things, imagine all there is to imagine in this universe of universes and make that which I imagine come true for the betterment of peoples.

The Statement of Amendments

The Grand Centrality of the Astronist Philosophical Tradition written by Founder, First Chairman and Constitutional Leader of The People's Constitutional Company of Jesse Millette, Brandon Taylorian, is hereby bound to the words in The Grand Centrality yet amendments may be made to The Grand Centrality to suit informational change, major cultural change or legal change. Specified versions of The Grand Centrality may be made in order to suit the beliefs of certain nations, peoples, religions and cultures without too losing the distinctive thoughts and ideas of The Philosophy of Astronism.

All amendments and specified versions of The Grand Centrality must be requested to and processed by The Institution of the Philosophy of Astronism during which time, the council of The Institution of the Philosophy of Astronism will discuss, process and make a final vote on whether the request in question is of suitability. Before the amendment or specified version can be officially recognised, both the current Chairman and Vice-Chairman of The People's Constitutional Company of Jesse Millette must sign their names to a form provided by The Institution of the Philosophy of Astronism.

A public announcement will then take place once the request has been officially recognised and two weeks afterwards, a day will be picked by The Institution of the Philosophy of Astronism to hold a ceremonial amendment or addition of a specified version to The Grand Centrality of the Philosophy of Astronism. The amendment will then be regarded as equal word to that of The Grand Centrality's original words and any specified versions of The Grand Centrality will be available for certain religions, cultures, peoples or nations to observe.

From the moment of the end of the ceremony, all copies of The Grand Centrality of the Philosophy of Astronism in the public domain will be replaced with an amended version and henceforth all printed and digital publications of The Grand Centrality will include the newly recognised amendment.

The Declaration of Allegiance

I, Brandon Taylorian, Founder, First Chairman and Constitutional Leader of The People's Constitutional Company of Jesse Millette and the sole Founder of The Philosophy of Astronism, The Institution of the Philosophy of Astronism and writer of The Grand Centrality of the Philosophy of Astronism do hereby declare The Philosophy of Astronism to have allegiance only to The People's Constitutional Company of Jesse Millette, the betterment of all peoples and the furtherance of humanity through thought, faith, morality and the unification of all peoples.

The Entwinement of Faith

Faith be not a barrier to betterment of thyself, those surrounding and the wider world beyond for faith evolves with thee it does and so too does your morality.

Entwining thy morality and faith with thought is betrayal not to neither, nor is the expansion of your knowledge a betrayal of thy teachings for the expansion of knowledge is all that progresses peoples further and it is of human nature to want to progress beyond that of those before oneself.

Use not, most of thee, the words of The Grand Centrality to be thy faith for alone without morality or faith, they mean little. Entwine the words of thought with the words of thy faith, with the words from within thyself and benefit it will greatly thy mind, thy body and thy soul for all three make that which thou art and that which thou ought to be.

Work, the words of The Grand Centrality, will with thy faith for thy faith and the words of The Grand Centrality have both the same purpose of being; to better thyself, to better those around thee and to ensure the betterment of all peoples and the furtherance of humanity.

It is thy faith holding thee, thy morality guiding thee and the words of The Grand Centrality enlightening thee that will lead thee towards the betterment, furtherance and progression of thyself, thy people and all other peoples.

The Edict of Universal Values

I, Brandon Taylorian, Founder, First Chairman and Constitutional Leader of The People's Constitutional Company of Jesse Millette and sole Founder of The Philosophy of Astronism, do hereby declare the Edict of Universal Values. The Grand Centrality of the Philosophy of Astronism outlines the universal values of all peoples and does too, outline the actions required to initiate furtherance, betterment and progression for all peoples in this world and the world beyond that which we currently reside. The universal values bound all humanity together for it is the value of life, faith, morality and thought that all must observe in order to create a world of harmony, progression, development and above all, freedom.

Henceforth, it is the duty of all who read the words of The Grand Centrality and The Grand Centrality of the Philosophy of Astronism itself to adhere to the universal values of all sentient beings and so all amendments of The Grand Centrality must be in accordance with the universal values of all peoples for without the universal values bounding all words of The Grand Centrality together, there would be little meaning to them. It is, too, the duty of all in authority to share equally, promote and implement the universal values of all peoples and sentient beings, and it is too a grave defiance of the divine one if the universal values of all peoples and sentient beings are violated. The Grand Centrality of the Philosophy of Astronism stands beside The People's Constitutional Company of Jesse Millette and The Institution of the Philosophy of Astronism as a key promoter and enforcer of the importance of universal values and it is henceforth the duty of The Philosophy of Astronism to serve all peoples, sentient beings and the universal values of the one of divinity.

The Note on the Encouragement of Expansion

It is the duty of all humans to work to progress thyself, those around thee and all peoples of this world and the worlds beyond in order to continuously secure the betterment and furtherance of future developments, progressions and expansions.

It is, therefore, the duty of The Grand Centrality of the Philosophy of Astronism, as the people's philosophy, to promote, share and implement the idea of expansion in all those who follow the word and wish to better themselves and work toward the betterment of all peoples.

It is the grand journey of humanity to explore the world that has not yet been explored by any before now to our knowledge and it is the grandest of all expeditions to explore the world beyond our own.

Promote the encouragement of continuous expansion without end we must for depends, it does, on the future of all peoples to remain secure, peaceful and prosperous.

Explain, you must, to those of ignorance to the importance of expansion that all will be lost if expansion isn't initiated and continued successfully and that it is the expansion of development and the expansion of all knowledge and thought that will allow furtherance and betterment and progression of all peoples to worlds beyond our own.

The Final Affirmation of Loyalty and Compliance

I, Brandon Taylorian, Founder, First Chairman and Constitutional Leader of The People's Constitutional Company of Jesse Millette, do hereby place final affirmation of loyalty and compliance with three entities; The People's Constitutional Company of Jesse Millette, all sentient beings and the one of divinity and all-knowingness. Henceforth, the The Grand Centrality serves all peoples of all nations, all worlds and all else, belongs to The Institution of the Philosophy of Astronism as guardian of the philosophical tradition presented herein and ultimately, affirms its loyalty and compliance with the words, wishes and plans of The Divine One of all-knowing, all-seeing and all-creation.
