[2:16:29] Astronist Music can be considered traditionalist in terms of its musical notation due to its adherence to the standard form of musical representation inspired by the Western musical tradition.

[2:16:30] However, the Astronist musical tradition does not consider itself to exist within the Western musical tradition but instead considers itself to be in a musical tradition of its own, however, the Cometanic additions to Astronist Music are considered to be inspired by the Western tradition while Astronist Music in its entirety is inspired and influenced by a wide range of traditions from varying parts of the world.

[2:16:31] Within the Astronist musical tradition, it is expected that there will form many new traditions and styles and movements of music throughout its existence, the first one of which being the Cometanic musical tradition.

[2:16:32] The introduction to that which is henceforth known as the splendora is of pivotal importance in our introductions to the Astronist musical style.

[2:16:33] As The Lexicon defines it, a splendora is a tricope of repeated notes that ascend in pattern and descend accordingly.

[2:16:34] Splendoral themes of music are significant contributors to the Cometanic style and tradition of music and exist as unique foundations of musical composition, the very first piece of which that incorporates such a style in the context of splendoras is The Grand Cosmos of The Cosmicusy.

[2:16:35] As aforementioned, the Astronist musical tradition is inextricably linked to pianism as the mastery of the piano is considered to be the key to feeling philosophical experiences; the piano continues to have an effect on the composer, the player, and the

listeners and it is by this notion that the Astronist approach to the philosophy of music is formulated, which we shall begin to explore.

[2:16:36] However, we must first introduce a new concept of playing, seeing, and knowing musical creativity and this is henceforth known as freeplaying.

[2:16:37] Freeplaying was alluded to earlier in this discourse and now we can introduce its official definition; the instance in which a composer, during a compositional session, receives a momentum of creative flow manifested by an audial and visual train of thought that develops into a musical melody, especially when this occurs spontaneously.

[2:16:38] By extension to this, that which is henceforth known as a freecept is a musical melody that is created during freeplaying, or during a moment that it wasn't expected or intentionally created.

[2:16:39] Freeplaying is the greatest and highest example of philosophical experience that a composer is able to feel while composing and for this reason, its place remains of pivotal importance to the Astronist approach to the philosophy of music, the integration of philosophy and music, and the wider Astronist and Cometanic styles of composition.

[2:16:40] Now we must introduce and explore the Astronist approach to the philosophy of music; the philosophy of music has been explored by many philosophers and composers throughout the ages; the philosophical aspects of music are essential to understand how music manifests itself in the realities of the world, how it can be used to spread certain messages, and how it shapes the civilisations we create.

[2:16:41] For this reason, the Astronist musical tradition must establish its own defined form and approach to the philosophy of music; the first step in such an endeavour is to answer some of the most fundamental questions with regards to what music is, how it is to be perceived, and it is to be utilised for different purposes.

[2:16:42] As aforementioned, there have existed many approaches to the philosophy of music throughout the ages, but now comes the time to define the Astronist approach which is undoubtedly inextricably linked to Astronism.

[2:16:43] It can be confidently presumed that the precursory characteristics to the Astronist approach to the philosophy of music stand as the incorporation between that which is philosophical and that which is musical, the integration of that which is cosmical to the creative platform of music, and finally, the utility of music for means of philosophising, disseminating, clarifying, and experiencing.

[2:16:44] And it must herein be stated and henceforth understood that the Astronist approach to the philosophy of music shall structure its approach according to these notions and through this scope for a general discussion of the philosophy of music has occurred in many works in the past with its generality covered and concretely understood

by the majority; the purpose for this discourse is not repeat what has already be confirmed by those preceding us.

[2:16:45] Instead, this discourse can be seen as both outlining the Astronist approach to the philosophy of music as formulated by its contributions to the philosophy of music herein; without the distinction of such new contributions, it would remain difficult to pinpoint the exactity of the Astronist approach to the philosophy of music, therefore the contributions can be seen as the necessary precursor to the formulation of the approach.

[2:16:46] The most fundamental of all questions when contemplating the philosophy of music is that which asks us to define what music really is; we all know, of course, what music is so a modified question for us in this context is; what is the definition of music in an Astronist context?

[2:16:47] And so, in this course, the official Astronist definition of music can be read following, after which we shall dissect; both an audial and visual creative platform forming a vast amount of expressions and that serves as an important initiator of philosophical experience, imagination, inspiration, and devotion, typically when paired with a particular message or as part of a defined campaign, or cause.

[2:16:48] The essential notion here is that all forms of music fit within this definition because of the individuality that rests with the nature of music and therefore the necessary and sufficient conditions for the classification of different musics in this way are ascribed according to the extent to which one feels philosophical initiated by a piece of music, or the extent to which the message of the music has been received by them and that they will then act upon the receiving of such a message.

[2:16:49] The power of music must not be understated and the Astronist musical tradition is well aware of its capability to impact the human emotions, psychology, and mind which in turn influence our beliefs and actions.

[2:16:50] The types of music that the Astronist musical tradition praises are those which fulfil their purpose to convey a message or story, or that fit within a particular regime or cause because in doing so, these musics realise their meaning and contribute to the world in furthering the cause or style or movement within which they are part of.

[2:16:51] Departing from traditional thought on the topic, the Astronist musical tradition does not encapsulate music within the boundaries of that which is created by the human mind; instead, the Astronist musical tradition considers all natural sounds to be music.

[2:16:52] The reason for this stance is due to the categorisation of music according to philosophical experience rather than other parameters and so therefore, natural sounds must be considered music because of the many opportunities they hold to initiate philosophical experience, imagination, and inspiration, as well as devotion too.

[2:16:53] We shall now explore the second of the fundamental questions within the philosophy of music and this rests within the contemplation of the relationship between music and mind.

[2:16:54] Essentially, it can be understood that music stimulates the mind with the result of imagination, inspiration, and such things as philosophical experiences and devotions, as it is held in the Astronist musical tradition.

[2:16:55] To perceive in relation to the mind is to be musically minded and is manifested by the ability to construct thoughts that are directly influenced by the music that one hears.

[2:16:56] One's mind may be able to have philosophical experience, construct ideas, be inspired, or practice devotions without the aid of music and this is a gift that must be cherished, but so equally, it remains true that one's mind may rely on the wonders of music to inspire the experiences, ideas, inspirations, and devotions within a person which importantly not make them subordinate to the former, but simply different in what aids them in achieving the same result.

[2:16:57] If the mind is the window to the soul then the mind must also be the window for one's capacity to philosophise and for this reason alone, the influence of the mind is the influence of one's belief orientations and if the mind is truly an influencee of music then it is towards that which we shall look if we wish to understand the connection between music and philosophy.

[2:16:58] The mind holds a susceptible quality to music for it is through the mind that one is able to perceive music when it travels through the ears; it is not one's ears that perceive music, it is the mind.

[2:16:59] The mind is the essential tool for one's philosophising of the world around them and due to music being championed by the Astronist Tradition as one of the primary receptors for philosophising, the connection between music and the mind for the purpose of philosophising is chiefly understood as the purpose for music in a human perceptual setting, as differentiated from the meaning of music.

[2:16:60] Now has come the time to designate our contemplations of the relationship between music and language in the context of the Astronist approach to the understanding and interpretation of music.

[2:16:61] In an Astronist context, language relates to either one's written philosophising or one's verbal and debatory philosophising; language is that which one uses to communicate their contemplations.

[2:16:62] Language is the essence of philosophising in whichever form one's philosophisations are communicated; without language, we cannot philosophise and so

language stands as the precursory to philosophisation and therefore the necessary precursor to the application of music in the context of philosophy.

[2:16:63] But we must not forget that music itself is a language; it is a way of communicating our thoughts, feelings, and desires just as much as we use speech and writings to convey our expressions.

[2:16:64] Further to this, we can understand music therefore as an expression of philosophy in addition to being an inspiriter of philosophy; to describe this we shall henceforth designate music to be duonomic; that which both initiates something and expresses it both in simultation and succession.

[2:16:65] Language is formed by words and it is words that we use to express our philosophisations; a philosophisation can drastically change according to the words we use to express it.

[2:16:66] The mastery of words is the mastery philosophy for philosophy, in its simplest of senses, is the expression of words in a way that conveys ideas, both of a normative and innormative nature.

[2:16:67] Therefore, one must master the word if one is to master the philosophy; language is therefore essential to music in an Astronist context because philosophy is central to the Astronist approach to music; language, music, and philosophy therefore remain inextricably interconnected with one another.

[2:16:68] One of the key areas of contemplative exploration for studiers of Astronist Music and the Astronist approach to the philosophy of music is the usage of language in the context of musical composition and interpretation to manifest philosophical ideas; what does one's music choice say about their philosophical orientation? What does one's musical compositions say about their beliefs and ideas?

[2:16:69] One of the most interesting aspects of the philosophy of music explores the periods within musical history, what these periods and movements reveal about the world, how they characterise the eras in which they were developed, and how they reflect the feelings, wants, needs, and ambitions of the peoples living through those times with the eventual purpose of applying these notions to an Astronist context.

[2:16:70] The Astronist musical tradition recognises every other tradition, period and movement within musical history as an expression of the thoughts, philosophies, feelings, woes and ambitions of the people and the composers of that era just as it considers itself in this same way.

[2:16:71] It is the current ambition and intention for the Astronist musical tradition to reflect these same parameters, but from an Astronist perspective; Astronist music should reflect Astronist thoughts, philosophies, feelings, woes and ambitions.

[2:16:72] The achievement of this only comes with the establishment and development of the tradition itself by incorporating styles that align with the message that you want to send; inevitably involved in this is the changing of people's musical perception according to the musical tone used; an extremely long and gruelling process indeed, yet not entirely unattainable.

[2:16:73] Music must be the reflection of ambition, emotion, and imagination for these three areas form one's motivators for philosophical expression and philosophisation; therefore, music and feeling are inextricably connected and if one is to fuse their philosophisation to their musicality, one must channel their feelings through the music they listen and the music they create.

[2:16:74] Furthermore, the Astronist musical tradition considers music to be one of the primary characterisers of an era; the composers of every era demonstrate their opinions through the music they conduct and less subtly so through the words they may ascribe to the music they create, in the case of songwriters.

[2:16:75] The Astronist musical tradition therefore accepts and praises music for its ability of characterisation and the Astronist Culture embraces the fact that Astronist Music is expected to characterise it.

[2:16:76] The notion that music holds a characterisational ability is incorporated in Astronism itself, especially so in Practical Astronism, but also strongly exists within the ideology of Astronarianism for the integration of music into the societal and cultural aspects of a civilisation is essential to form the identity of that civilisation and this is what Astronarianism uses music for; to shape identity.

[2:16:77] In addition to the notion of identity, it is prudent to mention the extent to which Astronist Music holds influence over the construction of the Astronist Identity, which is certainly subject to change across the course of its existence, but the Astronist Tradition suspects music to hold great strength in its influence across the overall Astronist Identity; again, this another important area of contemplation for tunologists to address, think about, and construct pieces of writing around.

[2:16:78] In earlier centuries, the question of whether there exists a connection between music and emotions; in the context of this discourse, we shall reconfirm the Astronist opinion on such a topic, as well as expand upon it by exploring the connection between music and human ambition, imagination, inspiration, devotion, faith, and most importantly, one's orientation within philosophy as influenced by music.

[2:16:79] The particular way in which a musical piece is both constructed and later portrayed is demonstrative of the philosophisations that listeners will reveal and so therefore the Astronist musical tradition stresses the delicacy of musical composition and the particularity its nature; essentially, how one change can mean change for the message

of the piece and its perception; this is a delicacy that all Astronist composers must remember.

[2:16:80] The Astronist musical tradition understands that which is the relationship between philosophy and music to be distinctly differentiated from that which is the interaction between the two.

[2:16:81] To clarify, the relationship between philosophy and music is purely theoretical while the interaction between philosophy and music is physical and manifestation by its nature, though the two are contemplated fairly equally within tunology for they address different aspects of philosophy and music.

[2:16:82] To end our discussion of the fundamental questions regarding the philosophy of music, we shall now turn our attentions to exploring the question of what is meaning in relation to music as an appendix and neocontextualisation to the Astronist understanding of what meaning is.

[2:16:83] The majority of our discussions and contemplation thusfar within this discourse have centred on or have been inspired by the purpose of music, but we must also address the Astronist definition of meaning and apply this to music, thus forming a different result from contemplations based upon the purpose of music.

[2:16:84] Firstly, in order to clarify the differentiation and contrast between the two, the purpose of music is to listen to, to send a message, to enhance our philosophisations, to inspire, to motivate, and to make us feel a particular way.

[2:16:85] However, like the Astronist understanding of what meaning is, to address the meaning of music we must remove all worldly understandings and attachment and distortions of music and we must also remove our own perceptions from the equation in order to truly understand the meaning of music in an existential sense, as that is what meaning is considered to relate to in the Astronist Tradition.

[2:16:86] And it is therefore held that the meaning of music is an expression of nature at its core far beyond the human capacity to create music; music is in fact communication as a derivation of sound; music is the audial manifestation of physical phenomena at its basicmost extent.

[2:16:87] One of the most important areas of contemplation within the Astronist approach to the philosophy of music rests in the question of the influence of music on philosophy and oppositely, the influence of philosophy on music, the latter of which is of primary concern and interest and it is this that can perhaps be best understood to characterise the Astronist approach to the philosophy of music itself.

[2:16:88] The relationship between philosophy and music therefore remains symbiotic for they mutual benefit and dependent upon one another, but to address the former, the

influence of music on philosophy is so profound, vastly understated, and incredibly diverse that it would be hard to exactly measuring this.

[2:16:89] However, the Astronist Tradition strongly maintains that there exists an infinite and absolute influence of music on philosophy, the products of which are perhaps untraceable unless the philosophers themselves have alluded to the fact that music has influenced their philosophisations.

[2:16:90] All that one is able to speak of is one's own philosophisations and I can say that The Omnidoxy has been written by the graces of musical wonder; each philosophisation of the Astronist Tradition can be considered to either be partially or entirely intrinsically formed by the inspirations of music.

[2:16:91] The relationship between music and the Astronist tradition of philosophy shall henceforth remain strong and even inextricable for Astronist Philosophy cherishes the beauties of music and the imaginational gifts that it so often bestows upon the most creative of minds.

[2:16:92] Latterly, and even more importantly, the influence of philosophy on music is of immense contemplation due to ambitions of the Astronist Tradition in the development of this occurrence.

[2:16:93] The Astronist Tradition understands the influence of philosophy on music to be at the present time of the writing of The Omnidoxy to be in a state of obscurity and disclarity.

[2:16:94] The religious influence on music has been profound throughout the history of religion and it is this type of tradition of influence that the Astronist philosophical tradition intends to recreate under the auspices of a philosophical context.

[2:16:95] The Astronist Tradition intends to develop itself in this way so as to become known and characterised for its establish of philosophical music, thus forming a new genre of music in the process; this is the central goal of the Astronist Tradition in the context of music beginning with the development of the Cometanic tradition within Astronist Music.

[2:16:96] Astronist philosophical music is the embodiment of Astronist Music with the central subject of this musical tradition and genre being The Cosmos just like in Astronist Philosophy.

[2:16:97] The Cosmos, as an embodiment of order, nature, system, function, and beauty in existence, is expected to become the centrepiece of the Astronist composers in their development of musical pieces in the Astronist style; therefore, the Astronist style can easily be characterised by an emphasis on that which is not Earthly.

[2:16:98] Perhaps the greatest deviation of the Astronist musical tradition from mainstream and pre-Astronist music is the peripherisation of love and relationships, which exist centrally, especially in genres such as pop, rock, R&B, and other modern formations.

[2:16:99] In this context, the peripherisation of love and relationship involves the removal of these from the central aspect of music to become a peripheral aspect so as to make the way for The Cosmos to reignforth.

[2:16:100] Of course, the expression of love and relationships shall exist within the Astronist musical tradition, but not in such an emphasised way, or such a repetitive way, as has manifested in mainstream modern forms of musicstry; the peripherisation of love and relationship means to make these aspects subordinate to the subject of The Cosmos and its progeny and phenomena.

[2:16:101] Now that we have understood the central ambitions of the Astronist musical tradition, especially in its development of the influence of philosophy on music, we shall also introduce the new tradition henceforth known as music therapy.

[2:16:102] Music therapy is a tradition and practice developed within the Astronist musical tradition used for philosophical devotion, understanding, inspiration, and enknowledgement through the composing, playing, listening, and analysis of pieces of music.

[2:16:103] Music therapists are expected to train people in these four areas of philosophical experience in relation to the music they hear for such an ability is not considered to be a natural skill for most people; to learn how to see, hear, and perceive music in such a way that can be manifested in these four different types of philosophical experience is the main aspect of a music therapist's profession.

[2:16:104] Music therapy is a practice that is to be much more vastly explored as a discipline within tunology outside the auspices of The Omnidoxy, but its introduction herein is of immense important as it exists at the beginning of the development of the Astronist musical tradition.

[2:16:105] By the study of music therapy, one understands the four-dimensionality of music in relation to philosophy: devotion, understanding, inspiration, and enknowledgement.

[2:16:106] Music therapy is also to be used to enhance one's ability to exercise their philosophisations with their musicality; musicality, as a semistrument of study within tunology, is the extent to which one is able to realise their philosophisations through the composing, playing, and listening of music.

[2:16:107] The Astronist musical tradition is certainly oriented towards that which is known as program music; music that is formed according to a narrative, rather than absolute music that holds no allegorical narrative.

[2:16:108] The Astronist musical tradition considers absolute music to be message-less and without purpose and therefore does not encourage its creation, and certainly does not consider any absolute music to exist within the Astronist musical tradition.

[2:16:109] Another aspect of music philosophical contemplation is the aesthetics of music, essentially pertaining to the beauty of music.

[2:16:110] The first aspect considered to be beautiful about music is its diversity in composition, playing, and even in listening with regards to interpretation; like many of the other artforms, music is ultimately subjective which opens up its contemplation to an endless multitude of constructions.

[2:16:111] The second of the beauties of music is its power and strength in furthering a cause and disseminating a message; there are few greater influencers of the human psyche and soul than that of music.

[2:16:112] The third and final of the beauties of music identified by the Astronist musical tradition is the endless resource that music continues to be for the development of one's philosophisations; a resource that one is able to extract inspiration from in order to manifest into imagination, thus leading to philosophisation, and later the communication of such philosophisations through speech or written discourse.

[2:16:113] These can be known as the three contributions, or three points of aesthetics in Astronist Music and by the character of the Astronist musical tradition, they focus on the integration between philosophisation and music.

[2:16:114] Moving on further, we come to that which is henceforth known as clinicism, which is in close association with music theory, and is embodied by those which are known as musical clinics.

[2:16:115] Clinicism itself is an approach to the education of music through a series of sessions with groups or individually with a tutor, or music therapist for the purpose of gradually attaining one's musical philosophisation; the point of this is to proceed via a gradual course in the achievement of higher musicality rather than to force musicality, or to attain it in a way that one does not appreciate the achievement they have made.

[2:16:116] A musical clinic under the auspices of clinicism is characterised by an informal meeting with a guest musician, philosopher, composer, or music therapist whereby questions may be asked in relation to musical, compositional, or music philosophisation styles and techniques with the intention of improve one's own abilities in such fields.

[2:16:117] A musical clinic, as aforementioned, can be conducted in groups or individually between a learner and one of the four types of tutors with the possibility for a performance or demonstration of ability for the audience to observe and note in order to educate them in how they can improve; these musical clinics are to be held weekly with gradual improvement expected each week until the individuals are satisfied, and it is the discipline of tunology that is to address such clinics with regards to their management, and the content of their proceedings.

[2:16:118] These clinics are to be held inside Astronist philosophical buildings for their topics falls within the auspices of Astronist Philosophy due to it exist within the discipline of study of tunology.

[2:16:119] The central objective is for the audience to learn from the tutor or guest tutor with the goal of further dissemination the Astronist approach to all aspects of music, as well as involving the general study of tunology which certain clinics may focus on, while others may purely focus on music therapy.

[2:16:120] One aspect of Astronist Music that we must also address is the rich tradition of Astronist musicals within the wider Astronist musical tradition, which are considered to be even greater manifestations of philosophical experience, inspiration, and devotion, both in their creation, performance, and observation.

[2:16:121] For this reason, the tradition of the creation of many Astronist musicals shall continue for these are seen as greater manifestations of message as realised through the combination of acting, composing, designing, writing, and philosophising; therefore, musicals are considered to be the greatest manifestation of artistic expression and creativity and for this reason, musicals are championed in the Astronist musical tradition.

[2:16:122] That which is appellated as The Taylorian Experience of Music refers to the explanation of how I, as Brandon Taylorian, the first of my personages as the writer of entirety of The Omnidoxy listen, understand, and most importantly utilise music as part of my Experience of Music, as it is henceforth appellated; this may also be known as The Cometanic Experience of Music for Cometan remains the mononym for which I am to be known in the musical, poetic, and artistic spheres.

[2:16:123] Also contributing to the Astronist approach to the philosophy of music is the Astronist approach to music education; the pedagogy of music is a signifier of one's philosophical understanding of music.

[2:16:124] The Astronist Music Education Philosophy is essentially characterised by the notion of creative composition at its core rather than examination and the rigidity of courses.

[2:16:125] Astronist musical education prioritises the learning of composition soon after one has started learning to play the instrument of choice, even if composition is not their essential goal.

[2:16:126] Learning how to compose music will teach a learner of an instrument the best way to not only play an instrument, but control it; many learning musicians are able to play their chosen instrument, but may still struggle to control the instrument; composers learn to control the instrument from the moment they begin to create music and this is a valuable skill for musicians to master.

[2:16:127] In the Astronist approach to musical education, creativity dominates in composition and playing alike as well as the study of the history of music being central according to periods, movements, styles, and genres in addition to the prioritisation of the study of the philosophy of music.

[2:16:128] That which is appellated as The Incorporation of Image is a concept within the study of Astronist Music in which the composition of music is constructed in conjunction to cosmic and characteral imagery as well as being directly inspired by such imageries.

[2:16:129] Another common term within Astronist Music is the Astronist Music Era in order to contrast the pre-Astronist music eras in the entire history of music; this defines Astronist Music as an era in addition to being a tradition, a style, a movement, and an appendix to Astronist Philosophy.

[2:16:130] A prominent subject within tunology is that which is henceforth known as Astronist Piece Organisation, as it is appellated, which deals with the particularly unique way in which Astronist musical pieces are arranged and organised together.

[2:16:131] This includes the particular layout of the titles and subtitles on Astronist sheets of music, the standard copyright protections placed on every page of an Astronist sheet of music, as well as the organisation of Astronist pieces into many different variations, including amassories, invoments, and others.

[2:16:132] This also involves the unique additions of creatories and theoretories at the beginning of every Astronist musical piece, as well as the particular names ascribed to collections of Astronist pieces, often using the suffixes of -doxy and -cusy.

[2:16:133] Astronist Piece Organisation remains an important subject for tunologists to address as it focuses on aspects of Astronist musical pieces that make them unique in structure, and organisation.

[2:16:134] Deriving from, yet more extensive to creatories and theoretories is that which is henceforth known as tunicusy; this firstly differentiates by the fact that it exists separately from the piece, while the two latter kinds are typically attached to a piece of music.

[2:16:135] Furthermore, a tunicusy is a much longer philosophical commentary and narrative associated with a designated Astronist musical piece and attempts to formulate the purpose of the piece to which it is designated, typically covering the societal, political, cultural, religious, economic, and philosophical topics for which the musical piece is primarily written.

[2:16:136] The genre of philosophical music, as aforeintroduced, is holds two alternative and interchangeable terms with slight variations including the Astronist genre, as well as the cosmic genre.

[2:16:137] Another major aspect of tunology is dealing with Astronist Music Ownership & Legality as it is officially appellated, and concerns itself with submissions of Astronist Music and the legal status of ownership by The People's Constitutional Company of Jesse Millette, or one of its subsidiaries.

[2:16:138] The approach and policies of The People's Constitutional Company of Jesse Millette, or any of its subsidiaries, towards the nature of the ownership of Astronist-styled pieces of music and other musical compositions; this known as Music Legality and involves the Astronist approach to how music is to be owned, regulated, and distributed, but remains a topic to be more thoroughly discussed elsewhere and not within The Omnidoxy.

[2:16:139] We have now reached the point of our discourse whereby we must address the new terminologies of Astronist Music which we shall list herein and beyond The Omnidoxy, these will be placed within The Grand Lexicon of Astronology, but it must also be noted that certainly not all, and not all of the most important terms of Astronist Music are defined within this discourse; the terms defined herein just so happen to have been created during the construction of this very discourse and therefore it seems prudent to demonstrate such simultaneity with their inclusion herein.

[2:16:140] That which is henceforth known as aduation involves the instance in which two people composer a piece together, one as the instrumenter and the other as the producer or creative; aduational composition is practiced by myself as Cometan and my first tutor during my formational years as a composer.

[2:16:141] Another term of Astronist Music is that which is henceforth known as an obsitory, which is an indoor evening concert held in a sopharium usually as a way of raising funds for the building as part of its naological management.

[2:16:142] Obsitorial concerts are characterised by the projection of cosmical images and videos during the concert and are also defined by only playing Astronist musical pieces.

[2:16:143] That which is henceforth known as discoring is the role of being a conductor at an obsitorial concert and is known as the process of discoration, and those whom assume such a role are henceforth known as discorators; this role also involves the choreography

involved in aligning the music with the cosmically themed videos or pictures projected during the concert.

[2:16:144] The term that is henceforth known as reveration refers to the instance and style of an Astronist musical piece in which repetitions or slight echoes of a melody exist, or a musical arch exists that is characterised by repetitions of certain features or patterns in the effort to define a style of compositional featuring and patternwork within the piece, especially as a contrast between features, a common characteristic of Cometanic music, even if in creating a contrast rules are broken.

[2:16:145] That which is known as manuscryption encapsulates the entire process of the construction of a manuscript of music and holds great amounts of variation in the length of time it may take to create it, the creator of which is henceforth known as manuscriber and it may or may not be directly the role of a composer, especially not if said composer is represented by a company due to the company being able to employ manuscribers.

[2:16:146] An octavity in the context of Astronist Music is the instance in which there exists a gap that is eight notes or more apart between the right hand and left hand of where an instrumenter is playing the piano, or another applicable instrument.

[2:16:147] Movementation is another term which relates to the creation of a movement within an Astronist musical piece, technically known as an invoment, and when it is designated as this, this action is known as an invomentation.

[2:16:148] In the context of Astronist Music, the term precomposition relates to the partial completion of a melody, or an entire composition before the official compositional process has begun, typically due to a strong melody that holds length and depth to be variated, the particular type of which is known as a proledy.

[2:16:149] That which is known as Source Music in the context of Astronist Music relates to Astronist pieces of music used in films, television programmes, video games, and other videos, particularly as theme tunes.

[2:16:150] Intral Music is any piece of music that The Five Astronist Characters can hear, know about, or discuss in some setting, but does not necessarily have to be an Astronist piece of music, but it most likely will be.

[2:16:151] Underscoration is the action and process by which a person changes an Astronist piece of music from the original in order to create a new variation, known as an underscored piece.

[2:16:152] An underscorer does not encouragingly change an Astronist piece of music to the extent to which it becomes non-Astronist by its appearance, structure, and general character.

[2:16:153] In Astronist Music, a compodoxy is a piece of music composed by a student of the musidoxic education system, either as part of an official examination, or as an avocational expression.

[2:16:154] In Astronist Music, The Cosmicusy is the first amassory that founded the Astronist musical tradition which consists of cosmically themed piano pieces, the most notable of which is *The Grand Cosmos*.

[2:16:155] In Astronist Music, The Denescence is the tenth musical piece in the amassory known as The Cosmicusy.

[2:16:156] In Astronist Music, a deoctave occurs during a musical piece, playing one octave of an arpeggio descending in order to quickly reach a lower octave.

[2:16:157] In Astronist Music, that which is dextralised is a piano piece, distinctly dominated and lead by movements in the right hand.

[2:16:158] In Astronist Music, a dora is each completed stage of the splendora when a tricope is repeatedly played three times, and only four doras can make up a completed splendora.

[2:16:159] In Astronist Music, The Duscence is the second musical piece of the amassory known as The Cosmicusy.

[2:16:160] In Astronist Music, a gesticusy is a gesture that should be enacted at the end of every Astronist musical piece that involves dramatically lifting one's hands up from the piano keys once the last note has been played.

[2:16:161] In Astronist Music, The Hexiscence is the sixth musical piece of the amassory known as The Cosmicusy.

[2:16:162] In Astronist Music, an intervallic splendora is a type of splendora that features one note intervals between each set.

[2:16:163] In Astronist Music, an inverted splendora is a splendora whose final set of notes is one note behind the previous set rather than one ahead.

[2:16:164] The Kosita is the official name for the Astronist Ballet tradition which incorporates an entirely cosmical genre, including cosmical and galactical settings, props, characters, imageries, and narratives, and is almost always accompanied with Astronist Music, as well as Astronist style stories. Performances of Kosita ballet almost always hold some Astronist philosophical exemplum, or allegory.

[2:16:165] In Astronist Music, a mirroment is a type of piano piece with the same notes in both hands for the majority of the piece.

[2:16:166] In Astronist Music, a mittidoxy is a piece of music within the musidoxical system that is used to introduce a new level for the musician to play at, especially shortly after the passing of an exam.

[2:16:167] In Astronist Music, the musidoxy is the newfound system of musical education founded and utilised within the Astronist musical tradition, and is characterised by its demanding, and challenging structure, but also by its emphasis on composition as integral to higher musical understanding and knowledge, rather than just instrument playing.

[2:16:168] In Astronist Music Theory, to naturalise is the process of turning a sharpened or flattened note to its natural root note.

[2:16:169] In Astronist Music, The Noscence is the ninth musical piece of the amassory known as The Cosmicusy.

[2:16:170] In Astronist Music, The Octoscence is the eighth musical piece of the amassory known as The Cosmicusy.

[2:16:171] In Astronist Music, a pedalmment is a type of piano piece in which all, or the majority of the piece is played with the pedal in some way.

[2:16:172] In Astronist Music, a practicusy is a piece of music that is intentional designed to be played in order to practice and exercise a particular skill on an instrument.

[2:16:173] In Astronist Music, a predoxy is the first great stave of a piece of music.

[2:16:174] In Astronist Music, The Priscence is the first musical piece of the amassory known as The Cosmicusy.

[2:16:175] In Astronist Music, a prodoxy is the second great stave of a piece of music.

[2:16:176] In Astronist Music, The Quascence is the fourth musical piece of the amassory known as The Cosmicusy.

[2:16:177] In Astronist Music, a quodoxy is the fourth great stave of a piece of music.

[2:16:178] In Astronist Music, The Quiscence is the fifth musical piece of the amassory known as The Cosmicusy.

[2:16:179] In Astronist Music, The Septiscence is the seventh musical piece of the amassory known as The Cosmicusy.

[2:16:180] In Astronist Music, a sinistralised piano piece is distinctly dominated and lead by movements in the left hand.

[2:16:181] In Astronist Music, a splendor is a specified arrangement of the notes in any system of music to be played on any musical instrument in a tricope of repeated notes that ascend in pattern and descend accordingly.

[2:16:182] In Astronist Music, a splendoral bass is a set of four splendoras, typically inverted splendoras, that make up a base tune to either be played alone with both hands, or with a separate melody in the right hand.

[2:16:183] In Astronist Music, The Terscence is the third musical piece of the amassory known as The Cosmicusy.

[2:16:184] In Astronist Music, a thidoxy is the third great stave of a piece of music.

[2:16:185] In Astronist Music, often when relating to splendoras, a tricope is a group of three notes that are, in basic splendoras, each one note apart, but in more complex splendoras, can be further apart, and are to be repeated three times in order to complete that particular dora.

[2:16:186] In Astronist Music, a vodament is a section of a musical piece between two distinct movements that acts as a bridging effect.

[2:16:187] In Astronist Music, to achord is to provide a musical idea with chords, typically splendoras in order for them to become achorded splendoras.

[2:16:188] In Astronist Music, an achorded splendor is a type of splendor that is played in chords rather than in separate consecutive notes.

[2:16:189] In Astronist Music, during a musical piece, an adoctave is playing one octave of an arpeggio ascending in order to quickly and smoothly reach a higher octave.

[2:16:190] In Astronist Music, an amassory is a collection of usually ten musical pieces, the first of which is The Cosmicusy.

[2:16:191] In Astronist Music, an ambidox is the movement of one's hands during the performance of a piano piece in which left hand crosses over the right and the right hand then crosses over the left.

[2:16:192] In Astronist Music, an ambidoxy is a musical piece in which an ambidox occurs.

[2:16:193] Now that we have outlined some of the terms within Astronist Music, we can now begin to end the discourse; Astronist Music is established herein and henceforth as a musical tradition, movement, style, and period in the history of music and remains infused by the principles, beliefs, and ideas of Astronism.

[2:16:194] Tunologists are henceforth provided with a great variety of topics to contemplate therefore making the achievement of the title of tunologist one that is expected to take many periods of time in study and thought in order to attain; tunological study is vast in expanse, depth, and its debatorial tradition is expected to be rich in character.

The Far Future Vision

[2:17:1] It is a penchant of mine to envision, yet for such a statement to be proven true, I must dedicate this short discourse to the envisionment of the future far beyond the present time when the activities prophesied in *The Omnidoxo* have all been realised.

[2:17:2] Presently, I can imagine the possibilities and most importantly, the opportunities for humanity, all of which begin and rest upon the embarkation and eventual completion of the Humanic Exploration of The Cosmos.

[2:17:3] I imagine that humanity will unfurl in population onto the majority of the habitable planets of The Milky Way and mix with other species, both humanoids and non-humanoids.

[2:17:4] New cultures, environments, societies, governments, philosophies, and religions will form across the histories of these worlds and the civilisations existing upon them; everything that has happened in the history of humanity on The Earth will inevitably happen on all the other planets of the galaxy and more so in many other ways.

[2:17:5] There will be eras of war and eras of peace; there will be a galaxy-wide transportation system based upon lanes of interstellar travel for all spacefarers to use; the civilisations across the galaxy will be vastly interconnected governmentally, politically, economically, culturally, religiously, and philosophically.

[2:17:6] Trade between planets and other forms of civilisation on dwarf worlds, moons, and large asteroids will occur thus pertaining to the essential requirement for planetary, interplanetary, and interstellar systems of law, regulation, security, and fair trading practice.

[2:17:7] It is prophesied herein that there will be abundance of cultures, philosophies, societal structures, ideologies, and religions that are associated with the different peoples of all the different worlds, perhaps the true abundance of which is uncountable in number.

[2:17:8] And therefore, from this, we can derive that the promulgation of Earthian or humanic philosophies, religions, and ideologies will inevitably occur leading to the formation of a grand diversification of worlds and peoples with The Earth as it is presently as a microcosm of what galactic-wide civilisation will become; a giant wok of beliefs, races, interests, talents, and heritages.

[2:17:9] But having voyaged to the furthest reaching eras of the future, it is important that we return to our present time and circumstances for these remain the necessary precursor to that which will succeed them.

[2:17:10] We remain stood atop a cavern and it is only a matter of time until we must vacate from where we stand, and take the risk to fly to the other side, or descend into oblivion.

The Construction of the Astronist Civilisation (Astronarianism)

[2:18:1] The Omnidoxy is the central founding and authorised text that is accredited to the establishment of the beliefs of Astronism with the Omnidoxy encapsulating wider Astronist Philosophy which also includes that which shall be henceforth known as Astronarianism, as a sister to Astronism, but classified as an ideology, or a political/economic/social philosophy.

[2:18:2] This discourse can be seen as the omnidoxical precursory introduction to Astronarianism in order to make a link to The Astronist Methodology from The Omnidoxy.

[2:18:3] This discourse is provided with an aptly appellation for The Construction of the Astronist Civilisation can be considered the essential purpose of the founding of Astronarianism which covers almost all aspects of societal, governmental, financial, educational, and business functions in the society.

[2:18:4] This discourse can therefore be considered the connector between The Omnidoxy and the latterformed Astronist Methodology which addresses the ideology of Astronarianism from all aspects and with a depth that would not be suitable to be conducted within the context of The Omnidoxy.

[2:18:5] There are three aspects of Astronarianism that are to be outlined with this discourse, the first of which is the relationship between Astronarianism and Millenarianism, and the second is the belief orientation that which is henceforth known as noncurriculum while the third is given a short discourse of its own known as the One State Theory as part of the Astronistic philosophy.

[2:18:6] Astronarianism and Millenarianism; despite the coincidence of the similarity between these terms, that is all it remains; a coincidence, and it is this that we must not forget and a distinction must always be clearly made between the two as dilettants are especially characteristic of confusing similarly sounding and spelt terms while often pertaining to different things.

[2:18:7] According to the beliefs within Astronist millenarianism, Astronarianism is the next millenarian change to occur in which there will exist a utopian period compared to the present times; the belief is further outlined in The Astronist Methodology.

[2:18:8] Noncurriculum, as followed by noncurriculumists, believes that a curriculum based education creates an educational homogenisation and therefore does not allow for the diversification of ideas, and nor does it allow for the promotion of the diversity of topics according to the talents and interests of those in education; noncurriculumism is characteristic

of advocating for personalism within the education system; this belief orientation is further outlined in *The Astronist Educational Methodology*.

One State Theory

[2:19:1] As a final appendage to the previous discourse, we will outline that which is to be henceforth known, in the context of Astronarianism, as the One State Theory.

[2:19:2] Despite its outline herein, the One State Theory does not exist within Astronism, but instead exists as part of Astronarianism and, simply put, offers a practical proposal for The Earth to become single state governed with a large variety of governmental approaches, whether by confederationism, technocracy, or by some other means of government.

[2:19:3] The One State Theory is characteristic of the advocacy for humanism as working for the implementation of the process of humanisation think in context of humanity rather than for a particular country, religious group, or ethnic group.

[2:19:4] The One State Theory establishes one of its principle concepts and processes as that which shall be henceforth known as conpanisation, as encapsulated by the belief orientation of conpanism or conpanisationism, the idea of bringing humanity together into one through a single state world.

[2:19:5] In this, a new prefix known as conpa- is created which pertains to the instance of bringing a group together as one, especially after prejudices and divisions within the group; essentially, a process of unification.

[2:19:6] Conpanism, as followed by conpanists, relates to the belief that the only way to achieve betterment for humanity is through humanity's conpanisation; bringing humanity together in a one state world on The Earth.

[2:19:7] Conpanist thought can be applied to a multitude of areas include purely philosophical, as well as in political, economic, cultural and social contexts, and even though traditional conpanism and conpanisation pertains to a state, there may also exist non-state forms, wherein there is a general consensus to unify humanity, but not to do so via a one state world which demonstrates the ability of conpanism to hold a wide range of orientation that do not have to particularly be grounded into the context of politics and nations.

[2:19:8] The term that is henceforth known as conparity is an approach to unification encompassed by the idea that a divided group is best brought together by displaying their differences so that they can learn to respect and compromise with one another rather than just emphasising their similarities and trying to convince all such peoples to be grouped together and coexist peacefully which, even though they do hold similarities, is not realistic as is evidence by the many instances in history whereby those whom share similar beliefs have fallen out in some way.

[2:19:9] The One State Theory is further explored as a proposed concept within The Astronist Methodology, but it was felt that it's introduced within The Omnidoxy remains suitable.

Philosophical Marketing & Advertising

[2:20:1] This major discourse is concerned with the application of philosophy in general, as well as Astronist Philosophy specifically, to all aspects of marketing and advertising theory, as well as business management theory and all related concept.

[2:20:2] Philosophical marketing and advertising is henceforth categorised as a codiscipline as it exists within both metaphilosophy as well as within tiritology in the context of Astronist Philosophy as it is addressing how a philosophy is to be displayed and oriented in the world and to particular audiences, especially so in the context of a philosophy as a brand therefore defining it from tiritology.

[2:20:3] Similar to the principal purpose of marketing and advertising for businesses which remains profitability meanwhile the purpose of marketing and advertising in this context — in the context of philosophy — is that which is known as promulgation, as is manifested by the belief orientation henceforth known as promulgationism, and is to be measured by promulgability.

[2:20:4] Promulgation therefore remains the centralmost and commonmost aspect of all branches and concepts of philosophical marketing and advertising for promulgation remains the main purpose of these practices.

[2:20:5] Promulgability analysis is herein created as the analysis of the promulgation of an organisation's output either measured according to monetary, publicity, or labour effort factors, typically within a specific periodisation.

[2:20:6] The analysis of promulgation is of immense importance if we are going to be able to improve our marketing and advertising strategies to create greater levels of awareness for future campaigns therefore we understand that promulgability analysis remains elemental to the overall production of results from the campaigns we conduct, thus conveying its importance to us.

[2:20:7] That which shall be known as a promulgability index which involves the listing of campaigns according to the level of their promulgability in order to draw comparisons between different campaigns to decipher which elements of the campaigns worked better than others in order to improve the campaigns.

[2:20:8] That which is henceforth described as the rate of promulgation, or the promulgative rate relates to the relative promulgability of a marketing or advertising campaign, often measured in realtime through simultaneously disseminated questionnaires, polls, and adherency censuses in order to determine the promulgative rate; this remains an intense form of promulgability analysis as it is conducted in concentrated periods immediately following the dissemination of the marketing or advertising materials.

[2:20:9] There is another term that remains central to the Astronist approach to the subject of philosophical marketing and advertising which is known as promulgative proportionality which states the principle that if promulgation increases then adherency or capacity will proportionally increase as a direct consequence.

[2:20:10] Promulgative proportionality rests at the heart of philosophical marketing and advertising theory as it determines the role of promulgation as the central purpose and aim to marketing and advertising a philosophy.

[2:20:11] Furthermore, promulgative proportionality rests upon the notion that adherency and capacity are directly influenced by activities that are conducted for the purpose of promulgation and therefore makes the assumption that awareness will inevitably correspond firstly to capacity and later, to adherency.

[2:20:12] A related term is that which is henceforth known as promulgative time which pertains to the extent of time between when a person becomes aware of a philosophy and when they adhere to it.

[2:20:13] There are three more terms that we must introduce before we continue in our discourse on philosophical marketing and advertising; the first of these is henceforth known as surfaction, also known as positive promulgation.

[2:20:14] Surfaction relates to the instance in which the adherency or capacity of a philosophy exceeds the extent of the promulgative activities conducted within a specified period.

[2:20:15] As the oppositism, that which is henceforth known as disurfaction, also known as negative promulgation, relates to the instance in which the adherency or capacity of a philosophy inceeds (opposite of exceeds) or remains insufficient according to the promulgative activities conducted to it within a given period.

[2:20:16] The final term that is henceforth known as abnormal promulgation relates to increase in promulgation that does not correspond to a proportional growth in adherency or capacity and therefore defies the promulgative proportionality principle.

[2:20:17] It is important to outline these important concepts herein before we delve further into philosophical marketing and advertising theory so that audiences can understand the premises upon which this codiscipline of metaphilosophy and tiritology is based whilst simultaneously defining it from mainstream marketing and advertising theory.

[2:20:18] We must now further our discourse by exploring the many aspects of promulgation strategy, which formulates a major element to promulgative activities, of which there are nine major promulgative strategies.

[2:20:19] The first of these is the most common strategy and is henceforth known as promulgative maximisation relates to the largest possible increases in promulgation according to the means with which to achieve which should remain the greatest ambition of any philosophy.

[2:20:20] Another promulgative strategy is that which is known as gross promulgation relates to the difference between adherency increase and the monetary, resource, and time costs directly associated with such an increase from the efforts of promulgation.

[2:20:21] That which is henceforth known as moored promulgation is a strategic aim focused on immovable growth of a philosophy, or one of its denominations/schools of thought, and to be satisfied with such stagnancy in growth.

[2:20:22] The fourth of the nine promulgative strategies is that which is known as marginal promulgation which encapsulates the strategy aimed at small increases in the context of philosophical adherency or capacitancy, but are not fixed or scaled as is the case of incremental promulgation.

[2:20:23] As aforementioned, that which is known as incremental promulgation is the strategy involving the increase in the awareness of a philosophy through scaled and fixed levels of measured increase rather than overly ambitious increases as is advocated by promulgative maximisation.

[2:20:24] Meanwhile, the strategy henceforth known as promulgative effectiveness is focused on how promulgation techniques will help the wider societal environment rather than just see the purpose of promulgation being the increase in adherence.

[2:20:25] The seventh of these promulgative strategies is known as the promulgative monopoly as a strategy focused on the philosophical institution monopolising promulgative activities over all aligned organisations and adherents.

[2:20:26] Passive promulgation relates to the receiving of awareness without conducting any particular promulgative process to receive awareness and is an occurrence that may be relied upon in strategy when there exists only small amounts of funds for official marketing and advertising campaigns.

[2:20:27] Finally, the strategy which is henceforth known as promulgative compensation refers to the period after promulgation targets have been achieved, and reciprocation of funds back through the operations of the philosophical institutions through greater funding for social programmes for example, so as to stimulate further ideas and funnel funds towards projects that are able initiate change.

[2:20:28] Each of these strategies holds equal amount of respect from the Astronist Tradition as each one is considered to contribute to promulgation in its own unique way that no other can counteract.

[2:20:29] Now that we begin to move away from promulgation strategies, we can begin to look at further foundations to the nature of promulgation, as well as application of promulgation to the foundational aspects of marketing before we then apply philosophical marketing to the topics within mainstream marketing and advertising theory.

[2:20:30] Beginning with that which shall be known as the promulgation motive, this relates to the purpose for promulgating, often in order to derive an alternative to the increase of adherency or capacitancy as is the default; this promulgation motive is expected to vary according to the strategy taken, or the philosophical approaching to marketing and advertising.

[2:20:31] Philosophical monopoly refers to the instance in which a philosophy has no other prominent philosophies or religious traditions to interact or compete with in a specific population therefore pertaining to the assumption that all its promulgations will be fruitful due to the lack of competition.

[2:20:32] Before we begin to look towards marketing performance management, we must considered the group of philosophies and approaches to philosophical marketing and advertising collectivised within for-promulgation philosophy.

[2:20:33] For-promulgation philosophy is characterised by a prioritisation of promulgation as the purpose of philosophical marketing and advertising in the place of the purpose of profit like for businesses.

[2:20:34] However, for-promulgation philosophy sees not only the purpose of philosophical marketing and advertising as promulgatively premised, but further to this, understands philosophy, especially organised philosophy in general and as an entirety, to hold the promulgation of its ideas to be its central purpose for without promulgation, the argument remains that philosophy holds no purpose if one is not willing to share and make others aware of their notions and thoughts.

[2:20:35] Instead of marketing performance measurement, we consider in this context that which shall be known as promulgation performance measurement which is considered to be based on six factors:

[2:20:36] Alignment to the end goals and ambitions laid down in the philosophy, typically derived from the founding document.

[2:20:37] Accountability to the principles and values of the philosophy and its organisational authority as to not compromise on these in order to achieve promulgation.

[2:20:38] Analytics to manifest and statistically display promulgative results as well as track such promulgative activities so as to pinpoint campaigns to superiorises them above others.

[2:20:39] Automation to introduce systems, procedures, and equipments of measurement that are conducted automatically without the requirement of dedicated labour to achieve them, which is typically characteristic of digital forms of promulgation performance methodology.

[2:20:40] Alliances to work with partner organisations to receive information, labour, and specialist resources that are not available internally so as to achieve better performance measurement and management, an example of which would be outsourcing to an agency.

[2:20:41] Assessment to evaluate and to come to definitive conclusions about how promulgation effects a philosophy and its principles, the way it is perceived, and how it interacts with the world with the greater promulgation it receives.

[2:20:42] There are herein ascribed three forms of promulgation according to time which include interim promulgation, median promulgation, and permanent promulgation which refer to short-term, medium-term, and long term methods of promulgation respectively.

[2:20:43] These varying forms of promulgation according to time length are demonstrative of the range of promulgative activities and are to be implemented according to the goals of the promulgator and the resources at hand of the promulgator.

[2:20:44] Another form of promulgation is less so connected to time length and is more directed towards a form of implementation known as senior management which collectively relates to the direct efforts made by the leaders of the philosophical institution holding authority of the philosophy to affect marketing strategy and philosophical operations.

[2:20:45] Before we delve further into the promulgative efforts of marketing a philosophy, we must outline those which are collectively appellated as The Fifteen Transferences which are correspondent to the p's in mainstream marketing theory.

[2:20:46] The first of these is the most important as it rests at the heart of philosophical marketing and advertising theory and refers to profit as transferred into promulgation in the context of philosophy; this transference rests at the heart of the difference between business forms of marketing and philosophical forms of marketing.

[2:20:47] Paper, as the second of the p's meaning money and currency, is transferred into one's ability to offer their adherence to a philosophical system of thought, or more particularly, a denomination, school of thought, or a belief orientation; adherence is therefore considered to be the currency of promulgation.

[2:20:48] Pricing is transferred into sociocultural, religious, and political costs of adhering to a philosophy such as discrimination, persecution, limitation of opportunities, social ostracism, and any other of disadvantage to one's alignment to a philosophy.

[2:20:49] Product, as another of the p's, is transferred into the substance (whether physical or abstract) that a philosophy is providing to someone in exchange for their adherence, and sparks the debate of whether a philosophy is indeed a product primarily or a service.

[2:20:50] Place is transferred into sophariums, debating halls, or astronomical dark sites as locations in which Astronism can be physically manifested and practised, but a broader view of Astronist Philosophy suggests that The Philosophy can be conducted, practised, and manifested in any location, though those listed here are the most publicly common.

[2:20:51] Promotion is transferred into the various activities conducted either by a philosophical organisation, its adherents, or aligned organisations in order to achieve promulgation (profit) by fulfilling the principle that the essential goal of all philosophies is to widen their adherent pool.

[2:20:52] Process is transferred into the many simultaneously occurring and either controllable or uncontrollable elements involved in the development of a philosophy across the course of its history from the moment of its founding and onwards, including all its revivals, declines, resurgences, and obsolete periods.

[2:20:53] Personality is transferred into the way by a philosophical organisation continues to interact with the society and the people within the society, especially in its reactions to crises and criticism which forms its personality.

[2:20:54] People, as another of the p's of marketing, is transferred into population which remains the principle variable for the measurement of adherence and capacity therefore maintaining its relevance for activities of promulgative analysis.

[2:20:55] Packaging is transferred into the way in which a philosophy is either physically or digitally presented as opposed to its abstract presentation as manifested by concepts and theories; packaging is almost entirely controllable by the philosophical institution, by its partner organisations, or by an employed labour force or agency through outsourcing.

[2:20:56] Presence is transferred into the extent of the influence that a particular philosophy or one of its denominations, schools of thought, sister philosophies, or belief orientations holds over a population, an organisation, or over a government.

[2:20:57] Purpose is transferred into the self-promoted and perceived mission of a philosophy; essentially, the end goals and ambitions of a philosophy wherein its idealisms would be realised; what the philosophy wishes to achieve or change in the world so as to fulfil itself.

[2:20:58] Position is transferred into the hierarchy and interactions between a particular philosophy and the other philosophies and religions also present in the country, or in the population and how the said philosophy is to interact with and treat other traditions.

[2:20:59] Picture is transferred into the portrayal or image of the philosophy as perceived by a particular population and is attempted to be controlled, but often remains uncontrollable by both the institution itself, its affiliated organisations, and the philosophy's adherents.

[2:20:60] Proof is transferred into the results that a philosophy achieves over a period of measurement, whether this be in the context of adherency, capacity, or some other measured variable.

[2:20:61] Now that we have established the fundamental transferences between business-oriented marketing and philosophical-oriented marketing, we can now begin to develop philosophical marketing further by incorporating various elements of mainstream marketing theory as applied to a philosophical contextualisation.

[2:20:62] Firstly, we must focus on distribution which, in a philosophical context, transfers into dissemination which pertains to the availability and accessibility of a philosophy to a population, or a segment of the population.

[2:20:63] Fundamentally, we ascribe five societal affectants to the promulgability, availability, and accessibility of a philosophy including the following:

[2:20:63a] Governmental policy / ideology

[2:20:63b] Pre-existing philosophy competitors

[2:20:63c] Dominant religious tradition

[2:20:63d] Cultural orientations and traditions

[2:20:63e] Political, economic, and technological circumstances

[2:20:64] Further to this, it also remains important to establish the channels available to make a philosophy disseminable to a population, and includes:

[2:20:64a] Channel design

[2:20:64b] Intermediaries

[2:20:64c] Channel motivation

[2:20:64d] Channel conflict

[2:20:64e] Channel switching

[2:20:64f] Adherent value

[2:20:65] Disintermediation is another term that is herein applied to the philosophical realm and refers to the instance in which the institution chooses to reduce the involvement of an intermediary organisation in the dissemination channel, typically due either to financial difficulties, or because that intermediary is believed not be presenting the philosophy in the intended way.

[2:20:66] Furthermore, that which is henceforth known as the Trajectory of Channels refers to the different channels of interaction between a philosophical institution and other parties, all of which are herein listed below.

[2:20:67] The first of these is that which is known as a direct channel which refers to the institution directly interacting with their adherents rather than through some other party, known as a face.

[2:20:68] The second of these is that which is henceforth known as an intermediated channel which refers to the philosophical institution and its interaction with the adherents of the philosophy it represents through an intermediary organisation.

[2:20:69] The third of these is that which is henceforth known as an interpreted channel which relates to the philosophical institution and its interaction with the adherents of the philosophy it represents through an interpreter of the philosophy, which is expected to cause considerable contentions between the institution and the philosophy's adherents if the interpreter's version of the philosophy does not correspond to the institution's version.

[2:20:70] The fourth and penultimate version of a channel trajectory is that which is henceforth known as a diplomediated channel which refers to the instance in which a philosophical institution's interaction with the adherents of the philosophy it represents is conducted through two parties of an intermediary organisation and interpreter respectively.

[2:20:71] A diplomediated channel demonstrates the widest gap between the philosophical institution and the adherents of the philosophy which may possible cause fragmentation in what the institution is espousing and what actually reaches the adherents.

[2:20:72] Finally, that which is to be known as an unauthorised channel refers to the instance in which a non-institutional source, as the original initiator of the channel as distinguished from all other channels aforementioned, directly interacts with the adherents of a philosophy instead of a the institution that represents the philosophy.

[2:20:73] Now that we move away from the different disseminational channels, we naturally come to address the various different types of dissemination, of which there are three types.

[2:20:74] Intensivised dissemination is the instance in which the philosophy or school of thought is accessible to all channels to discover and is positioned so that the mass amount of people can relate to the elements of the philosophy that presented, typically those which are more understandable.

[2:20:75] Selectivised dissemination is the dissemination type in which the philosophy or school of thought is accessible in only a limited number of channels and permission is only give to a few intermediaries to disseminate it; essentially requires extensive research in order to discover while the latter is easily discovered.

[2:20:76] Exclusivised dissemination is the final of the three main dissemination type and refers to the philosophy or school of thought is inaccessible to the vast majority of people and is only openly discussed or accessible to particular groups such as specialist or academic philosophers; essentially, not an advertised or marketed element of the philosophy.

[2:20:77] Exclusivised dissemination is closely associated with niche marketing as it only remains concerned with the dissemination of a philosophy only to specialised individuals, however, such individuals may hold considerable influence over others, especially in an educational and governmental setting with reference to academic philosophers and philosopher-politicians respectively.

[2:20:78] As aforementioned in this discourse, pricing refers to the cumulation of the emotional, sociocultural, religious, financial, and political costs of adhering to a philosophy, or one of its denominations, schools of thought, or belief orientations.

[2:20:79] In order to gain a greater understanding of price, we must differentiate it by type and further segment according to subtypes, the former of which we shall now outline to form the foundations of how we are to understand the variations and concentrations in price in the context of philosophy.

[2:20:80] The first of these is social or familial pressure not to follow a philosophy, typically due to sociocultural heritage and norms which is likely to result in social ostracism, familial outcasting, and in more extreme cases, may result in violence, domestic abuse, and forced realignment.

[2:20:81] For this reason, it is expected that many people living under oppressive regimes, or living amongst a conservative family or community will intentionally hide their philosophical alignments and not allow them to be recorded in censuses, thus distorting the real values in philosophical demographics.

[2:20:82] The second form of price resides in the practice of one's philosophy, especially in the context of giving up one's desires, habits, or previous interests so as to conform to the philosophy's principles.

[2:20:83] This should be classified as a form of self-inflicted pricing as long as the individual is aware of such conformities that they will need to abide by, except in the instance that one may be forced into philosophical alignment or realignment which then begins to afflict their human rights and therefore transfers such practices into discrimination.

[2:20:84] Another instance in which this form of pricing may be distorted is through some potential practice of pseudophilosophies, wherein they coerce adherents into joining the philosophy by omitting some of the principles and tenets that adherents must conform to so that the system looks more attractive than perhaps it would do; this henceforth known as erasement which is associated with secretive and potentially pernicious elements.

[2:20:85] Despite the fact that the Astronist philosophical tradition adamantly maintains that philosophies and religions can coexist and are able to be adhered to simultaneously, as communicated through the belief orientation of coexistentialism, there does exist a form of pricing pertaining to the instance in which a person feels they must leave their religion to join a philosophy.

[2:20:86] The instance in which someone feels or conducts this action is to be henceforth known as retroalignment and this is considered to be both unnecessary, pernicious to religious traditions, and generally distorting of the nature of philosophy; despite this not being recognised by the Astronist Tradition, it remains classified as a price.

[2:20:87] Another price is encapsulated in the political dangers and governmental pressures not to join the philosophy which are characterised as implementing institutional restrictions onto such people, including placing obstructions for job opportunities, as well as not being given benefits that others may be given.

[2:20:88] Another price refers to sociocultural, religious, and political consequences of leaving the established or dominant religion to join a philosophical system in the context of an oppressive regime; again, this can be considered as part of political dangers and governmental pressures enforced by the regime.

[2:20:89] Prices are the costs associated with one's alignment with a philosophy and can range from insult to ostracism to outright excommunication from the society, typically via imprisonment depending on the severity of the regime as well as the extent of the conservativeness of the society.

[2:20:90] Now that we begin to move on from discussions of price in relation to philosophical marketing, we come to address the various elements of retailing, service, campaigning, and forms of fundraising for philosophies and their affiliated institutions.

[2:20:91] One of the most important terms to know is philosophical retail which pertains to the notion that philosophies must be sold to adherents metaphorically in order for

adherents to truly align themselves with it; the notion of selling a philosophy rests at the basis of philosophical marketing and advertising and is an alternative form of promulgation that may be seen as lowering philosophy to a commercial level, but is expected to become a lifeblood of funding, organising, and orienting philosophical institutions in the future.

[2:20:92] Retailing a philosophy involves all aspects of marketing and advertising, but prominently involves explanation, recitation, and acceptance of understanding of a philosophy after seeing an advert or receiving marketing materials; within philosophical retail, philosophies are generally considered to be products.

[2:20:93] However, in the context of philosophical service, philosophies are considered to offer services to their adherents through providing them with a wealth of concepts, theories, and notions to contemplate and expand their knowledge and the capacity of their minds to encapsulate.

[2:20:94] The notion that philosophy is a service takes away from other notions about philosophy as a product that should be sold, or philosophy as a commodity that should be traded, but is not necessarily in opposition to the development of philosophical retail.

[2:20:95] As a term derived from mainstream marketing theory, that which is known as campaign activation refers to the instance in which the marketing campaign is actually put into action through procedures such as presenting to the public or the target audience of the campaign in order to distinguish this from the planning and designing of the marketing campaign; it is from campaign activation onwards that we use promulgative analysis techniques to form results about the efficiency of the campaign.

[2:20:96] The majority of philosophical marketing and advertising, especially the Astronist approach to these subjects is based upon the notion that concepts are intangible assets of philosophies that hold a unique value that must be both preserved and acknowledged.

[2:20:97] The classification of a concept as an asset of a philosophy that can be utilised as a resource, either philosophically for the purposes of identification, or financially by the practice of philosophical licensing.

[2:20:98] Philosophical licensing refers to the practice of some religious and philosophical institutions in which a concept they have created is appellated and later trademarked due to it being an intangible asset and from that point onwards, if any external entity wishes to write about that concept, they must either pay or receive permission to do so by the institution that now owns that concept.

[2:20:99] This is expected to remain a very controversial practice as it may be considered to drastically divert from the principles of the Philosophical Spirit by dramatically decreasing the “flow of ideas” as it is known as well as the “openness of philosophy” in general, as is upheld by the Astronist philosophical tradition.

[2:20:100] Despite these concerns, The Omnidoxy herein does not oppose philosophical licensing as a practice due to its principle of raising the importance of philosophical concepts as well as the practical and realistic benefits of conducting such a practice, and does support the notion of accreditationism.

[2:20:101] Accreditationism upholds the idea that is supported by The Omnidoxy and in turn, the Astronist Tradition that Astronism, and wider Astronist Philosophy should always be accredited as the founder and originator of the concepts it created and the terms it formulated, especially those established within The Omnidoxy, whether this be done by legal means, or through a general consensus held by governments, scholars, organisations, fellow philosophies, philosophers, as well as religious traditions.

[2:20:102] Accreditationism can be seen as a less severe form of philosophical licensing as it only advocates for a written or verbal declaration of the Astronist origins of appropriate concepts and terms.

[2:20:103] Whether by the practice of philosophical licensing or upheld via the belief orientation of accreditationism, the topic of the ownership of concepts within philosophy is expected to be an area of discussion and contemplation that is set to divide many philosophers, trilettants, and dilettants alike as to the nature of ownership in the philosophical realm.

[2:20:104] Ownership of concept, as it is known, is therefore the area of study relating to the nature of who, what, or how a concepts can be owned and how it should be owned with one approach consisting of philosophical licensing, and a less drastic measure being encompassed by accreditationism.

[2:20:105] Many other orientations and approaches to the topic of the ownership of concepts are expected to rise and establish themselves post-omnidoxically thus allowing this debate to rage on, but also, this debate is set to spark an even larger one centred on an area of contemplation known as ownership of philosophy which attempts to define how, what, who, and when a philosophy should be owned and the nature of such ownership.

[2:20:106] The ownership of philosophy and ownership of concept debates are to be collectively described and appellated as The Ownership Problems and are set to continue to shape how institutions, governments, philosophers, adherents, and acapacitants alike perceive philosophy and its continuously metamorphosing nature.

[2:20:107] As we now move on from notions about philosophical and conceptual ownership, we come to an important branch of philosophical management, known as philosophical brand management

[2:20:108] Philosophical brand management is the strategic overseeing of how a philosophy is perceived by a particular segment of a population and the population in its

entirety, typically measured in order to improve the perception of that philosophy by the population in question.

[2:20:109] In order to understand the role of philosophical brand managers, we must first establish what a philosophical brand is; a unique system of thought identified by distinct symbols, terminologies, concepts, beliefs, and figures that differentiates it from other philosophies.

[2:20:110] To perceive, manage, and market a philosophy as a brand would be by using the same theories and principles as mainstream marketers and advertisers use and by implementing them to the context of a philosophy, as is omnipracticised throughout this discourse.

[2:20:111] The development of a philosophy as a brand is instrumental to the purpose of philosophical marketing and advertising as well as playing a fundamental role to how the Astronist Tradition perceives the future of philosophy via that which is henceforth known as tridimensionalism.

[2:20:112] Tridimensionalism is the belief orientation steadfastly held by the Astronist Tradition in concern to the present and future role of philosophy in general after its societal reascension and it is here that we first introduce tridimensionalism due to our discussion of philosophies as marketable brands.

[2:20:113] The Astronist Tradition considers all religious traditions to be brands also in addition to their sanctity, divinity, and infallibility which are considered to be clever elements to the formation of religious brands; perhaps by this notion, the Astronist Tradition can be branded itself as ultra secularistic and commercialistic by the transformation and perception of both religious and philosophical tradition as brands similar to those constructed by corporations.

[2:20:114] Before we return to our introduction to tridimensionalism, it is important to note that the Astronist Tradition considers philosophical and religious brands to be fundamentally different from commercial brands due to the purposes of the former two with philosophy's brand mission remaining enknowledgegement, philosophocentrism, and promulgationism meanwhile commercial brands hold missions that encapsulate exact that; a for-profit purpose, structure, and orientation.

[2:20:115] Returning from our digression, that which shall be henceforth known as tridimensionalism is the principle encapsulator of how the Astronist Tradition understands the identity of philosophy, especially so in a futural context.

[2:20:116] Tridimensionalism, as its appellation suggests, supports the idea that the future of philosophy rests on three parts; part one perceives philosophy as a far-reaching and foundational subject and exists as the necessary precursor to all other subjects; philosophy is the subject of all subjects.

[2:20:117] Part two perceives philosophy or philosophically inspired ideology as the primary founder of modern societies instead of religion and part three perceives different philosophies as those which are henceforth known as brands of thought; all three of these are predicated upon tridependence so all three are equally dependent upon one another to coexist.

[2:20:118] By this aforementioned notion and some upcoming notions, we can understand there is a strong current of metaphilosophical discussion to be had from within and inspired by philosophical marketing and advertising.

[2:20:119] We shall now move on to discuss those which are known as the Four Philosophical Responsibilities that pertain to the different responsibilities of parties in relation to philosophies which are inspired from the different channels of distribution as aforementioned.

[2:20:120] The first of these responsibilities is known as institutional responsibility which pertains to the idea that the institution that manages and is authorised to direct a philosophy holds the responsibility to manage how that philosophy is marketed and perceived in a way that does not deviate from the principles of the philosophy itself, as well as the essence of the Philosophical Spirit.

[2:20:121] The second of these is henceforth known as intermediary responsibility which is the idea that the intermediary organisations aligned with a philosophy should be the sole entities responsible for the marketing of the philosophy and the management of its perception by the public in a way that does not forsake the principles of the philosophy itself, defy the beliefs of its institution, or deviate from the values of the Philosophical Spirit.

[2:20:122] The third of these responsibilities is to be known as adherent responsibility which pertains to the idea that the adherents of a philosophy are ultimately responsible for the disintegrated management of that philosophy through the protection of its public perception as well as its dissemination techniques.

[2:20:123] Finally, we come to non-institutional responsibility which is encapsulated by the idea that if non-institutional sources are solely responsible for the management of a philosophy and its marketing then they should be respectful of the values of the philosophy, the principles of the Philosophical Spirit, as well as considerate to the philosophical institution despite its inactivity in the region or country wherein non-institutional sources dominate.

[2:20:124] Now that we have introduced and outlined each of these philosophical responsibilities, it is important for us to move onto other topics, especially pertaining to approaches to broader subjects regarding philosophical marketing and how a philosophy may be presented.

[2:20:125] Cocreationism refers to the instance in which a group of philosophers and either trilettants, dilettants, or adherents come together to produce a mutually valued outcome, typically involving the creation of a new concept, school of thought, denomination, or strategy for the purposes of promulgation.

[2:20:126] Cocreation is a form of promulgative activity involving mutual cooperation and is expected to be one of the most important forms of promulgation as it strives towards cohesion between different parties within a philosophy with a wide pool of creative input so as to form promulgative materials that are appealing to a variety of broad and niche groups.

[2:20:127] Cocreationist approaches can be said to be form of adherent-generated promulgation or content, thus owing to a greater transparency, unbiasedness, and creative diversity in the content generated for promulgation due to the large amount of creative opinions involved in cocreational process.

[2:20:128] Cocreationism is certainly a supported form of promulgation by the Astronist Tradition, and The Institution as it promotes greater cohesiveness and community between the adherents of The Philosophy which perhaps holds a more powerful effect than institution-generated content which is naturally more biased, propagandistic, and present an idealistic view of The Philosophy, as is demonstrating by the vast majority of commercial marketing content and materials.

[2:20:129] Another major approach to philosophical marketing and promulgation in general is that which shall be henceforth known as retentionism which encompasses the belief orientation focused on the fact that philosophies and subsequently, their marketing and advertising strategies, and the institutions that is running them, should be primarily concerned with the improvement of retention rates amongst their adherents rather than with promulgation and therefore does not prioritise the increase of adherents as the superior purpose and function of philosophical marketing and advertising.

[2:20:130] Retentionism could be described as the oppositism to promulgationism because it stresses the importance on focusing on those whom are already adherents and making sure they are happy and are not looking to abandon their philosophical alignment rather than constantly prioritising the search for new adherents.

[2:20:131] Retentionists argue that philosophies will see greater levels of adherency and capacity if they focus their funding and attentions towards those whom already follow their philosophy rather than ignoring them and focusing only on those whom do not follow already.

[2:20:132] Retentionism, in addition to promulgationism, are the two main approaches to philosophical marketing and advertising and despite the acknowledgement herein that there will most likely be many more newfound approaches to philosophical marketing,

both retentionism and promulgationism remain the two omnidoxically founded orientations.

[2:20:133] Retentionist theory and philosophy is herein introduced as a belief orientation and shall be henceforth developed and practised post-omnidoxically within marketing materials, in *The Astronist Methodology*, and in other post-omnidoxical writings.

[2:20:134] As we now move away from addressing the introduction of retentionist philosophy and theory, we come to address some important terms of philosophical marketing and promulgative activities before we briefly addressing promulgative research, after which we shall consider promulgative segmentations.

[2:20:135] Institutional identity, as the first of the new terms that we shall now introduce, refers to the manner in which a philosophical institution such as *The Institution of The Philosophy of Astronism* presents itself both to its adherents and the wider public, and explores the differences in how said institution may present itself.

[2:20:136] Institutional identity is at the core of philosophical marketing in conjunction with the representation of the actual philosophy itself; institutional identity and philosophical identity, in this context, must be distinguished from one another for they are representing different entities and so the promulgative activities conducted are markedly dissimilar in purpose and form.

[2:20:137] That which is known as the philosophical economy, also known as the economy of ideas, relates to the overall portion of the economy based upon the trading of thoughts, reason, ideas, and opinions as assets, products, and service rather than an relating to economic sectors based upon material goods.

[2:20:138] The philosophical economy can be closely associated with the portion of the economy involving education, yet differs in that the former refers to the trading of ideas within the context of a system of thought for the purpose of promulgation.

[2:20:139] The philosophical economy is central to the notions of how philosophy is able to contribute to the wider economy in a way that is financially self-sufficient for philosophical organisation, as well as being one of the major contributions of the Astronist philosophical tradition above most other contributions.

[2:20:140] Another collective term is that which henceforth known as philosophical enterprise refers to all business that base their essential premise on providing a service of thoughts, reason, ideas, and opinions as formulated and organised into a system of thought for people to follow and improve their lives, perceptions, and understandings with rather than a business focused on the production and selling of a material product.

[2:20:141] That which is henceforth known as philosophical consumerism refers to the entirety of businesses and economies focused on the reoccupation of society away from

consumer goods and towards the exchange of thoughts, ideas, reasons, and opinions through systems of thought and encompasses the diverse ways of how companies and economies achieve this and the role of the consumer within this philosophical economy and enterprise.

[2:20:142] Another term of importance in this context is known as philosophical dominance and refers the measure of the strength of a philosophy relative to the offerings of another philosophy, or even a religious or ideological tradition, and is typically measured by three factors: institutionalisation, adherency, and integrability.

[2:20:143] Finally, there exists another element of promulgative practices and activities within philosophical marketing and advertising that is henceforth known as promulgative ethics.

[2:20:144] Promulgative ethics is a branch of Astronist Ethics, officially as part of contology, dealing with the moral principles behind the operation and regulation of marketing and advertising a philosophy by its institutional authority, or by the government.

[2:20:145] It is important to always remember that the ethics of promulgation should hold at least some influence over how the institution or the agency it employs will conduct promulgative activities which is why this contological discipline of study maintains its foundational role, though its post-omnidoxical development is emphasised herein.

[2:20:146] We now take our attentions towards promulgative research and the different variations of such research and how it should be used.

[2:20:147] Within the area of study of promulgative research, we come to address the two applicational approaches henceforth known as adherent research and institution-to-intermediary research, after which we understand there are two methodical approaches, known as quantitative research and qualitative research.

[2:20:148] Adherent research, as its appellation suggests, focuses on either quantitatively or qualitatively analysing the adherents of the philosophy with a quantitative method corresponding to a promulgationist approach while a qualitative method corresponds to

[2:20:149] Institution-to-intermediary research focuses on analysis conducted about the philosophical institution and its relations with the intermediary and how this is analysed to make an effect on the promulgative results; the extent of the difference between the promulgative plan and how that is manifested via any intermediary is to be known as the promulgative contrariety.

[2:20:150] It is a principle upheld herein that the greater the amount of intermediaries between an institution and its adherents, the greater the promulgative contrariety will be due to greater levels and probabilities of distortion, miscommunication, and disagreement between the institution and its intermediaries.

[2:20:151] Applied to these two approaches are the two methodical approaches of quantitative and qualitative research which cover quantity and quality respectively as the primary elements of their approach.

[2:20:152] The development of a new concept, school of thought, denomination, or belief orientation is a very important element to philosophical marketing and advertising as a great of marketing and branding processes are involved with the introduction and development of a new brand.

[2:20:153] For this reason, an area of study and contemplation is herein set aside for the promulgative theories and processes involved in the development of a new concept, school of thought, denomination, or belief orientation.

[2:20:154] The steps involved with the marketing of a new concept to the masses, as part of promulgative research as a plan needs to be conducted as to who this new concept/school/belief shall best resonate with in the scope of the wider population; this entire process shall be known as developmentation.

[2:20:155] Before we delve into the area of study concerned with philosophical segmentation, we shall discuss a few new concepts in relation to metaphilosophical issues, largely pertaining to the monopolisations of different philosophical or religious traditions.

[2:20:156] That which is known as a natural monopoly refers to the instance in which a philosophy or religion holds supremacy due to the exclusive possession and ownership of the terms and concepts it has created.

[2:20:157] This typically relates to newer traditions rather than those which have long histories and therefore more opportunities for schisms and separatisms, thus forming distinct groups that continue to share the same terms and concepts as the original; a natural monopoly is considered to be something to cherish before groups break away from the original.

[2:20:158] There are two distinct subtypes within a natural monopoly, which are to be henceforth known as an absolute natural monopoly and a partial natural monopoly.

[2:20:159] The former of these relates to the instance in which a philosophy or religion holds a monopoly over all of its terms and concepts without direct emulation.

[2:20:160] The latter of these relates to the instance in which a philosophy or religion holds a natural monopoly only over a hand full of its terms and concepts, typically characteristic of a new movement, school of thought, or denomination that has branched from a larger tradition.

[2:20:161] Alternatively, that which is to be known as an original monopoly henceforthly refers to the instance in which a philosophy or religion is credited with being the creator of its own unique group of terms and concepts.

[2:20:162] However, such a tradition remains without a natural monopoly because newer traditions or movements have begun to use its terms and concepts in the same way that it created them; this is characteristic of many of the other philosophical and religious traditions that have already uphold long histories on The Earth.

[2:20:163] Astronism considers itself to hold either a partial natural monopoly or generally a natural monopoly over its terms and concepts because despite the fact that the majority of its terms and concepts hold Astronist origins, there still remain many elements of Astronist philosophical study that rely upon pre-Astronistly created subjects and for reason, to say that Astronism or Astronist Philosophy holds an absolute natural monopoly would be a false claim.

[2:20:164] A very important term is that which shall be known nonpareilance which measures the uniqueness of a philosophy or religious tradition according to the terms and concepts it uses and has created and simultaneously measures the extent to which the philosophy or religion holds a natural monopoly as manifested by the uniqueness of its concepts and terms.

[2:20:165] The Astronist philosophical tradition prides itself on holding and maintaining its own high nonpareilance due to the majority of its concepts and terms stemming from Astronist origins; however, it must be acknowledged that pre-Astronist traditions have influenced elements of Astronist Philosophy, which will be evidential to audiences upon their reading The Omnidoxy and studying the concepts of Astronism and its tradition of philosophy.

[2:20:166] The Astronist Tradition adheres to that which shall be known as nonpareilism, and can therefore be considered a nonpareilist philosophy or tradition, because it supports the notion that the active protection and prevention of the tradition's terms and concepts from imitation should be superiorised as one of the main functions of the philosophical institution managing the philosophy so as to conserve the high nonpareilance of the tradition.

[2:20:167] As we now move away from our digressions, we can begin to address the various aspects involved with philosophical segmentation as its own distinct branch of philosophical marketing theory, but also largely applied with promulgative research theories.

[2:20:168] Philosophical segmentation is the arrangement of the various sections of the population within a society according to belief orientation, demographics, geographic, psychographics, as well as behavioural and situational elements in order to more efficiently apply philosophical marketing campaigns and strategies to specific portions of

the populous therefore efficiency is the primary reason for the development of philosophical segmentations.

[2:20:169] The first and most principal aspect of philosophical segmentation is that which is based upon belief orientation and includes the following segments within it.

[2:20:170] We begin with personal belief which relates to a segment concerning an individual according to their specific and unique personal beliefs which, by its very nature, is considered to be the hardest form of segmentation as it is unsuitable for mass marketing theories and applications.

[2:20:171] Personal beliefs may be shared across portions of the population with some correlation to age, location, habit, personality, and other demographic and psychographic factors, but they ultimately remain as their appellation suggests; personal, unique, and individual by their nature.

[2:20:172] The next of the belief-oriented segmentation is that of interpersonal belief which involves the grouping of people according to their shared beliefs or shared association with a particular concept or specific belief orientation as defined from personal belief which relates largely only to individuals rather than between individuals collectively.

[2:20:173] Another segmentation based upon belief orientation is that which is known as denominational segmentation which refers to the grouping of people according to the particular denomination of the philosophy to which they are aligned.

[2:20:174] Similarly, that which is to be known as school segmentation refers to grouping of people according to the particular school of thought within the philosophy to which they are aligned.

[2:20:175] In a wider context, that which shall be known as national segmentation involves the grouping of people according to the state in which they reside, especially so when said state holds an established national philosophy, therefore this form of segmentation is broader than others as it consists nationwide populous which means that the marketing and advertising campaign constructed must remain wide-ranging and all-encompassing in message for it resonate and penetrate such a large portion of the populous.

[2:20:176] In an even wider sense than the former, we come to the segmentation known as world philosophy which involves the grouping of people according to the philosophy as whole, including all its denominations, schools of thought, belief orientations, national philosophies, and concepts, as well as individual identity.

[2:20:177] We now come to the various forms of segmentation based upon demographics, which are herein listed:

[2:20:177a] Age

[2:20:177b] Gender

[2:20:177c] Income

[2:20:177d] Education

[2:20:177e] Socioeconomic

[2:20:177f] Family size

[2:20:177g] Familial circumstances

[2:20:178] Another aspect of philosophical segmentation involves segmenting according to the geographic region of the populous which persists as an extremely important form of segmentation as philosophical beliefs are expected to greatly vary across different locations and environments.

[2:20:178a] World

[2:20:178b] Supranational coalition

[2:20:178c] Country / nation state

[2:20:178d] State / region / province

[2:20:178e] County

[2:20:178f] City

[2:20:178g] Town

[2:20:178h] Suburb

[2:20:178i] Rural

[2:20:178j] Postcode

[2:20:179] Elements of segmentation involving the psychological aspects of individuals and groups are collectivised as part of psychographics:

[2:20:180] The first of these psychographic aspects is lifestyle segmentation which, in the context of Astronist Philosophy, involves the groups known as noctarians and diurists as two main groups of lifestyle in relation to the Astronist philosophical tradition.

[2:20:181] Another aspect involves socialisation segmentation which focuses on grouping according to people with whom one or with whom a particular group tends to socialise with; this involves peer group pressures, friendships, familial influencers, professional influencers, and academic influencers.

[2:20:182] Thirdly, that which shall be known as influential segmentation involves segmenting according to individuals and groups whom allow others to influence them; who a person allows to influence them is demonstrative of their interests, the extent to which they trust certain individuals and medias, as well as demonstrative of their general susceptibility to messages from particular organisations.

[2:20:183] Fourthly and fifthly, there exists personality trait and political affiliation segmentations respectively which are important elements to how a person interacts with those around them and wider society thus demonstrative as two of the most important forms of philosophical segmentation.

[2:20:184] Finally, as part of psychographic segmentation, we identify dietary segmentation to be the final important element including various form of dietary choices including pescatarians, vegetarians, vegans, flexitarians and omnivores.

[2:20:185] The way a person eats and what they eat is considered to be a prominent aspect and reflector of how a person shapes their belief system and demonstrates principles of abstinence and environmentalism depending on which dietary choice is made.

[2:20:186] We now move on to the category of behavioural segmentation, the first of which involves philosophical consumption which refers to the way in which individuals and groups interact with different philosophical traditions.

[2:20:187] Philosophical consumption is the most important element as it forms the basis of how a person both interprets their philosophy, expresses their philosophy, and how it can be practised; consumption of a philosophy involves these three components.

[2:20:188] Usage behaviour segmentation is another form of segmenting involving how a person uses the ways in which they behaviour in order to demonstrate their feelings towards something, or to send a message about how a philosophical system of thought can be applied.

[2:20:189] Two similarly formed aspects of behavioural segmentation focus on the needs and wants of adherents, which are encapsulated by the belief orientations of necessitism and sybarism respectively.

[2:20:190] A necessitist is a person that follows a philosophy because of their understanding of what they need from that philosophy to improve their life, their knowledge, or worldview, and may not align with their wants.

[2:20:191] A sybarist is a person that follows a philosophy because of what they want from it rather than what they may need to improve themselves; the sybaristic philosophical approach is primarily based upon materialism and one's perceived wants as influenced by their peers around them and the society in which they reside, which are notably also factors that may include necessitistic approaches too.

[2:20:192] Sybarism is considered to be naturally more materialistically focused than that of necessitism, and although both approaches are accepted by the Astronist Tradition, the trustworthiness and the authenticity of the former is held in serious doubt due to its flippant, fickle, and generally avaricious nature due to the use of philosophy to satisfy wants.

[2:20:193] Despite this view, the Astronist Tradition considers the use of philosophy for the satisfaction of wants to be plausible reason for adherence to a philosophy because the wants of the adherent is that which a philosophy is marketed to be able to fulfil so to oppose such utilities of philosophy would be counteracting one of the most prominently identified purposes of philosophical alignment.

[2:20:194] Denying that humans base their alignments according to desire is incorrect so too is the disbelief in that humans should premise their alignments according to their wants for if one does not alignment oneself with something out of their want to do so, then do we not begin to wandering into the territories of coercion, fear-mongering, guilt tripping, and pressuring for the reason of disbelief or disalignment.

[2:20:195] Another aspect of behavioural segmentation involves a benefit-oriented group of the populous which segments according to those whom follow a philosophy because of the benefits one may receive, whether this be social, financial, political, or cultural, e.g. social acceptance or the avoidance of governmental and social pressures.

[2:20:196] Benefit-oriented groups may align with a philosophy for less respectable reasons than to avoid social ostracism for some may instead align to a philosophy because of the financial benefits they may receive or for the purposes of getting a job opportunity, or some other material-based reason, which are less respectable due to the fact that they demonstrate the person to be frivolous about their philosophical alignments, which isn't encouraged of course.

[2:20:197] The alternative to benefit-oriented segmentation is that which shall be known as betterment-oriented segmentation which involves the grouping of people according to those whom follow a philosophy because of the good works that the philosophy does and its positive impact on the society in which one resides and the wider world rather than how it can benefit oneself.

[2:20:198] Betterment-oriented segmentation is outward facing as it primarily concerns itself with the wider world and its circumstances rather than one's individual and personal circumstances.

[2:20:199] Philosophical frequency is the next form of segmentation and is split into two subtypes from its outset; these subtypes are to be henceforth known as consistentism and exceptionalism.

[2:20:200] Consistentism relates to a person that regularly interacts with the philosophy to which they are aligned which would involve, in an Astronist philosophical context, regularly acknowledging oneself of Astronism, visiting sophariums regularly, conducting stargazing and other occurrological activities regularly, as well as cosmic devotion and debating.

[2:20:201] Alternatively, exceptionalism relates to the instance in which a person irregularly interacts with the philosophy to which they are aligned as they prefer to inferiorise the role that philosophy places in their life yet they still remain officially aligned to a philosophy; exceptionalists would be the equivalent to the cultural religious which are people who remain adhered to a religion, but they irregularly acknowledge or practise the religion, nor are they devout to the learning of its teachings and concepts.

[2:20:202] The final element of behavioural segmentation is that which is known as philosophical openness which is again split into two belief orientations to be known as receptivism and claustralism.

[2:20:203] Receptivism relates to a person that is open to learning about philosophies other than the one to which they are aligned or that their friends and family, or the wider society is aligned to; essentially, philosophically open-minded.

[2:20:204] Meanwhile, claustralism is an orientation followed by a person that is not open to learning about philosophies other than the one to which they, their friends and family, or the society in which they reside is aligned to; essentially, philosophically narrow-minded.

[2:20:205] We now move on to the final form of segmentation in the context of a philosophy which is situational segmentation which is entirely dependent upon aspect such a location, circumstances, and personal events.

[2:20:206] There are three subtypes of situational segmentation which generally include a person that is actively looking for a new philosophy, a person entering into, experiencing, or having just experienced a life changing event, or being physically in a certain location or at a particular sopharium which is known from GPS data via smartphones.

[2:20:207] It is important that we now introduce a collection of new terms relating to philosophical marketing and promulgation theory, the first term of which is to be known as promulgative strategy and involves planning to attain sustainable eminent advantage.

[2:20:208] An eminent advantage is an attribute or situation in which a philosophy continues to outperform its rivals across a measured period.

[2:20:209] Eminentism is the belief orientation that the achievement of an eminent advantage should be the prioritised goal of a philosophy, as managed by the respective philosophical institution therefore eminentists are considered to be the most extreme of promulgationists as eminentism advocates for the constant outperformance of rivals rather than simpler promulgation.

[2:20:210] However, from the retentionist viewpoint, the retention of adherents is the measure for eminent advantage rather than adherent growth and philosophical outperformance, and therefore retentionism can be seen as one of the main opponents to eminentism due to eminentism's designation within promulgationism.

[2:20:211] There is expected to be a great amount of criticism directed towards striving for an eminent advantage; one of such criticisms is expected to involve the argument that eminentism is situated at the furthest reaches away from the nature of philosophy, so much so that eminentism even begins to defy the principles of the Philosophical Spirit by constant focus on the outperformance of a philosophy in comparison to its rivals.

[2:20:212] Even the notion of philosophical rivals, as is espoused by eminentism, is expected to be challenged, and is so by the Astronist Tradition, due to its deviation from that which can be described as truly philosophical.

[2:20:213] Moving away from our contemplations of the eminent advantage which, despite its criticism and opposition from certain orientation, is expected to remain a power force in the approach to promulgative activities, we now come to address some more terms in relation to promulgation.

[2:20:214] That which shall be known as digital promulgation involves the marketing of a philosophy or its services using digital technologies, mainly on the Internet, but also including mobile phones, display advertising, and any other digital medium, such as a social networking site.

[2:20:215] Product marketing, as another important term, relates to the marketing of a philosophy as a physical product rather than some abstract set of concepts, or even as a service.

[2:20:216] Social promulgation, as an alternative to adherent growth motivated promulgation, involves the use of marketing theory, skills and practices to achieve social change with its primary purpose to spread the idea that promulgative activities can be and should be conducted primarily for achieving social good.

[2:20:217] Traditional promulgative marketing aims are primarily oriented towards financial benefit, though their positive social effects is not something that should be

overlooked, especially with regarding to the Philosophical Spirit's principle that philosophy should play an active role in the community and wider society.

[2:20:218] In the context of public health, social promulgation would promote general health, raise awareness and induce changes in behaviour, especially with regards to mental health such as the regulation of one's digital utility, one's abstinence from material overindulgence, and to encourage people to spend a greater amount of time developing and improving their philosophic stature.

[2:20:219] That which shall be known as influencer promulgation involves using influencers to promote a philosophy or the targeting of influencers so that they may join the philosophy in order to further promulgate it to the masses, particularly those which the influencer holds the ability to influence.

[2:20:220] Similar in spirit is that which shall be known as philosopher marketing which entails the promotion of a philosopher as an individual in order to promulgate the philosophy of their founding or alignment.

[2:20:221] This also remains similar to leader or founder marketing, wherein the leader or founder of the philosophy is promoted so as to simultaneously promulgate the philosophy of their founding or leadership.

[2:20:222] These different forms of promulgation and marketing techniques are expected to be some of the most popular as they focus more on individuals which are markedly easier to advertise than concepts and beliefs, thus forming philosophical advocates which are those people that are publicly supportive of the philosophy which is another powerful method of promulgation.

[2:20:223] That which is known as attribution is the identification of a set of user actions ("events" or "touchpoints") that contribute in some manner to a desired outcome, and then the assignment of a value to each of these events.

[2:20:224] Attributive promulgation is therefore the identification of events and interactions with a philosophy that markedly increase an person's adherency or a person's potential to become an adherent of a philosophy, thus resulting the assignment of a value to such events and interactions, known as touchpoints, usually between one and ten (or greater numbers may be used for greater accuracy) in order to compare and contrast different touchpoints and their effectiveness in achieving the desired outcome.

[2:20:225] In addition, short conclusive statements or descriptors are often used in order to further pinpoint how and why such a touchpoint has received the value assignment that it has; attributive promulgation can also be seen as another form of promulgative research as it is for the purposes of research that it is primarily used for.

[2:20:226] A philosophical commercial is an advert that is specifically created in order to promote a philosophy with the intended outcome of its promulgation and later, the increase of its adherence to the targeted audience of the advert.

[2:20:227] Retentionist commercials are instead created in order to retain existing adherents of the philosophy and so they are targeted towards that particular audience, and generally used tactics of surprise, new concept development, social works, large scale events, sopharium construction, and others in order to enhance the enthusiasm that adherents feel towards their philosophy which may have been depleted.

[2:20:228] Now that we have addressed this collection of terms, we come to another area of contemplation that is expected to spark a great deal of debate and study, and this shall be known as philosophical consumerism which encompasses all of the actions, theories, concepts, and techniques involved with the preoccupation of society with philosophical products, services, and activities, as inspired by mainstream consumerism which focuses its orientation towards non-philosophical consumer goods.

[2:20:229] Philosophical consumerism is both an area of study and a belief orientation as it entails the belief that philosophies, especially the institutions or leaders managing them, should learn from both the triumphs and problems with consumerism and apply consumeristic theories and concepts to philosophies.

[2:20:230] Philosophical consumerism intends to embolden philosophies to become fierce in the face of competition and rivals so that the philosophy may survive for longer; therefore, philosophical consumerism is an advocate for that which shall be known as philosophical survivalism.

[2:20:231] Philosophical survivalism is a belief orientation holding that a philosophy's primary goal should not be promulgation primarily, but survival, after which the philosophy's survival is secured, its promulgation can begin, and thereafter its retention of adherents in this particular order.

[2:20:232] Philosophical survivalism advocates for philosophies, as managed by institutions, to be fiercely aware of rivalry and the constant threat of demolition from fellow philosophies as well as from religious traditions, or ideologies.

[2:20:233] Philosophical survivalism therefore advocates for philosophies to act like companies and perhaps how some religious traditions act by positioning and funding themselves in such a way that secures their own survival as the utmost goal; this belief orientation, also coupled with philosophical consumerism, form some of the most important approaches and opinions of how a philosophy should act in the modern, materialistic, and consumeristic world.

[2:20:234] The principal aspect of philosophical consumerism is that shall be known as adherentialism which is the idea that adherents own the philosophy to which they are

aligned, both individually and collectively, rather than autophilosophicalism and proprietarianism.

[2:20:235] Autophilosophicalism expounds the notion that a philosophy only owns itself meanwhile proprietarian approaches, encapsulated as proprietarianism, relates to the instance in which the institution managing the philosophy is considered to own the philosophy it is managing.

[2:20:236] Again, these three orientations further develop our metaphilosophical understands of philosophy in general and the ownership of philosophy, how philosophy should be considered to be owned, and the nature of ownership both individually and cross-institutionally.

[2:20:237] The greater promulgation the philosophy gains, the more adherents there will be, and the more satisfied people will be with themselves, with others, and with their society because by embracing philosophy, they will be embracing freedom for philosophy is the manifestation of freedom in thought, practice, and belief.

[2:20:238] Do not mistake consumerism and materialism for they are not better, nor are they any different from the nature of religion, which persists in its domination over people and their minds, actions, and interactions as administered by doctrine; in consumerism and materialism, money is the administer in this context and is the equivalent of doctrine.

[2:20:239] This is the same as consumerism and materialism for all whom fall in their metaphorical claws are damned to unhappiness, self-rejection, discontentment, and disbelief in themselves and the world despite the fact that they hold all the material benefits.

[2:20:240] Consumerism and materialism are just as freedom-suppressing as religions are and for this reason, both consumerism and materialism are not considered to be philosophical by their natures, which remains noted, for philosophy's prioritisation of freedom above all else as its primary identifier in the context of thoughts, practice, mind, actions, and beliefs.

[2:20:241] I see no difference in consumerism and religion for both of them share the characteristic of domination over all the activities of the human mind and body.

[2:20:242] Moving from this particularity, we come to address that which shall be known as philosophic demand which relates to specific type of demand for the choice of philosophies to adhere to which remains a central component to promulgation.

[2:20:243] The Astronist Tradition advocates for the increase of philosophic demand for with an increase in philosophic demand, we will see greater levels of adherence and greater reception of promulgative activities

[2:20:244] Philosophic stature relates to the state of one's philosophical knowledge and depth of understanding and is considered to be something that improves according to the greater amount of time that one spends contemplating and studying philosophy.

[2:20:245] Therefore, the Astronist Tradition stresses that people should be more considered with their philosophic stature than their material stature which is the amount and quality of the possessions they own.

[2:20:246] Working to improve and develop one's philosophic stature as a belief orientation will be herein and henceforth known as staturalism; staturalists are highly encouraged by the Astronist Tradition as the Statural Way, as it is appellated, is expected to be one of the greatest curers of our mental, spiritual, and emotional troubles.

[2:20:247] The instance in which a person is said to be "shopping for philosophy" relates to when a person without a philosophical alignment, or a person who wishes to conduct a realignment researches different philosophies so as to make a defined decision on which one they will realign to.

[2:20:248] The philosophical economy is an economy not focused on providing products to suit frivolous desire, but remains steadfast in its purpose to provide humanity fulfillment to all of our higher and more intellectual needs and wants and remains the ultimate goal for philosophies collectively to achieve through promulgative activities.

[2:20:249] That which shall be henceforth known as metaphilism, as described by the terms metaphilic or metaphilous relate to the instance in which a philosopher or philosophy is distinctly focused for a time on the metas of different entities, whether these be physical or abstract topics.

[2:20:250] Especially in the latter discourses of this disquisition, my writings have become characteristic of digressing towards the metaphilosophical issues which pertains to the fact that I believe there to be many issues with how philosophy is perceived during the writings of The Omnidoxy in the present time.

[2:20:251] It is important that metaphilosophy, as a branch of philosophy, is thoroughly addressed in The Omnidoxy in order to formulate a clear position by the Astronist philosophical tradition of what philosophy is, what it has been, and what it could and should be.

[2:20:252] When people think of Astronist Philosophy, especially Astronism, I want them to attribute it with a great deal of inquiries into the nature of philosophy itself; metaphilosophical notions should always remain at the heart of the Astronist philosophical tradition and the abundance of metaphilosophical concerns in The Omnidoxy is demonstrative of this pertinent interest in the nature of philosophy and its role in society.

[2:20:253] That which shall be known as philosophical branding is a major branch and aspect of philosophical marketing and advertising and remains central to successful promulgative activities.

[2:20:254] There are nine aspects of philosophical branding that we shall herein address, the first of which are appellations that are of particular importance to the Astronist philosophical tradition either applied to philosophy in its entirety, denominations, schools of thought, concepts, theories, belief orientations and practices.

[2:20:255] This also involves other forms of appellation including transliterated appellations, appellational clarity, and appellational correspondence which relates to the use of words so as to accurately correspond to the particular ideas of the appellated subject.

[2:20:256] In addition, neoappellations involve the creation of new words for the purposes of appellation, often due to the fact that there isn't an adequate equivalent and is a common practice in the Astronist philosophical tradition.

[2:20:257] Appellations, especially in the Astronist Tradition, are of great importance as they form differences and uniquenesses of distinction between the Astronist philosophical tradition and other forms of philosophical tradition; it is through appellations that we can identify differentiations between philosophies.

[2:20:258] The second aspect of philosophical branding pertains to symbols as the prominentmost visual aspects of the philosophy and are typically categorised in either of the five following designations: logos, sigils, representations, depictions, and figures.

[2:20:259] Symbols remain perhaps the most important aspect of philosophical branding as philosophical symbols are often the first aspect of a philosophy that people come into contact with, either as part of architectural, renditional, or advertising materials and content.

[2:20:260] The third aspect of philosophical branding pertains to the mission of the philosophy and is manifested by a tagline or catchphrases used in marketing and advertising materials for the philosophy that should briefly encapsulate and all-encompass the philosophy and its most principal beliefs which is a difficult thing for a simple tagline to penetrate.

[2:20:261] The fourth and fifth aspects of philosophical branding involves shapes and colours respectively; vendoxes for Astronism are the principal shape associated with The Philosophy while Astronist Symbology addresses colours and how different colours pertaining to different meanings within an Astronist context.

[2:20:262] Sounds are the sixth element of philosophical branding that should be addressed herein and are manifested as a unique tune or melody associated with a particular philosophy used in marketing materials and commercials.

[2:20:263] Identity is the seventh element of philosophical branding and involves the general or majorative perception held of the philosophy according to a surveyed population; certain portions of a populous, depending on the segmentation chosen, are expected to hold varying different majorative views on a philosophy, thus forming its general identity; a philosophy is generally considered to hold a pluralistic identity, as are most other public entities due to the wide variety of perceptions that a large population holds about such a topic as philosophy.

[2:20:264] The penultimate element of philosophical branding is that which concerns itself with personality which is the way in which the institution representing the philosophy presents itself, as defined from its identity which is how the population perceives it; personality is projecting by its nature and identity is projective meaning that it is returned back to that which it is concerned with by some population.

[2:20:265] The final element of philosophical branding is conceptualised as awareness which pertains to the general level of adherency and capacitancy of the philosophy in question according to a population which promulgationism finds as its central purpose to continuously increase.

[2:20:266] Now that we have covered the nine elements of philosophical branding, it is important that we return to the first of these nine elements which is appellations as the Astronist Tradition identifies there to be Ten Forms of Philosophic Appellation as they are appellatively collectivised, each of which we shall now outline.

[2:20:267] The first of these form are isms which relates to a philosophy that features an ism as its suffix and the second of these are known as initialisms which is a philosophy that features initials to primarily identify itself rather presenting themselves via fully formed words.

[2:20:268] Another appellation form is known as descriptive which involves using a word that directly reflects its belief rather than a word that encompasses all beliefs while the fourth appellative form is categorised as eloquence which is when the appellation for a philosophy is either attractive to say or easy to say and is intended to be this way for aesthetics for marketing and clarity purposes.

[2:20:269] In this context, a neologism is the appellation form for a newly created word, an example of which is Kosma when relating to Astronist Philosophy meanwhile foreignisms are the sixth appellation form which pertains to words from another language, especially not the mother language of where philosophy is founded used as the primary appellation for a philosophy.

[2:20:270] Geoisms pertain to a geographical name for a philosophy, or one of its schools, or denominations and the eighth form of appellation are founderisms which is a philosophy's name that features its founder's name with Taylorianism as a prime example.

[2:20:271] Combinatories are appellations for a philosophy that combine multiple words together to create a single word while the last appellation form are philosopherisms which pertain to a denomination, concept, or school of thought that is named after the philosopher that created it, as distinct from founderisms.

[2:20:272] We now come to the portion of this discourse wherein we must again focus our attention on the definition of terms, the first of which is that which is known as a philosophy line and pertains to the instance in which the introduction of various subtypes of a philosophy under a common, ideally already established, philosophical appellation is allowed, an example of which would be Astronism and all its derivations in the form of denominations, schools of thought, and belief orientations; the extent to which this is allowed is known as the philosophy line; the philosophy is expected to differ greatly depending on the philosophical approach.

[2:20:273] Articularity occurs when a philosophy pops into a person's mind when asked to name a philosophy without prompt; when this occurs, it is to the delight of a philosophical marketer and its associated institution as it proves that the promulgative activities conducted have been successful as the chosen philosophy is the most prominent in a person's mind; it is the articularity of Astronism that The Institution intends to achieve.

[2:20:274] Moving on to that which is known as philosophical paritism, this is the belief orientation in which all philosophies are considered to be equal to each other without exception, even for one's philosophy to which they are aligned; paritists generally hold this belief orientation in order to portray a sense of morality, neutrality, and inclusivity and it is an orientation that is sometimes used as a marketing technique by The Institution.

[2:20:275] A philosophical recall refers to the philosophy or set of schools/concepts/belief orientations that an adherent can elicit from memory when prompted with philosophy as a word in general, and is therefore similar to achieving articularity.

[2:20:276] The next term of our concern is philosophical recognition which is in occurrence when people see or read a list of philosophies, and express familiarity with a particular brand of philosophy only after they hear or see it as a type of memory aide.

[2:20:277] Rephilosophisation is the equivalent to rebranding in mainstream marketing theory and involves a total redefinition and presentation of a philosophy in a marketing and advertising context; rephilosophising is considered to be something exacted too often so as to keep to the marketing principles of consistency, though irregular and subtle forms of rephilosophising in order to better reflect the philosophy are both permitted and encouraged.

[2:20:278] That which is known as strategic awareness occurs when a philosophy is not only top-of-mind to the population, but also has distinctive qualities which people perceive as making it better than other philosophies; it is these distinctive qualities that The Institution and the agencies it employs should be marketing in order to form the strategic awareness for Astronism.

[2:20:279] A philosophy anniversary is a celebration of a philosophy, a school of thought, a denomination, or a concept's continued existence after a particular number of years and depending on the importance of the anniversary, an event may be held in commemoration, especially when used as a marketing technique.

[2:20:280] Loyalty promulgation involves the creation of marketing and advertising techniques in order to promote the loyalty and retention of the adherents of a philosophy, as inspired and encapsulated by the belief orientation of retentionism.

[2:20:281] Meanwhile, direct promulgation involves a form of advertising where philosophies and their institutions communicate directly to adherents through a variety of media including cell phone text messaging, email, websites, online adverts, database marketing, fliers, catalog distribution, promotional letters, targeted television, newspapers, magazine advertisements, and outdoor advertising.

[2:20:282] Another form of promulgation is appellated as mobile promulgation which is a multi-channel online marketing technique focused on reaching a specific audience on their smart phone, tablets, or any other related devices through websites, E mail, SMS and MMS, social media or mobile applications.

[2:20:283] Personal selling is when a sales representative meets with a potential client for the purpose of transacting a sale meanwhile premiums, in the context of philosophical marketing, are toys, collectables, souvenirs and household products that are linked to a philosophy, and often require box tops, tokens or proofs of purchase to acquire, or complimentary to the practices of a philosophy.

[2:20:284] Embedded promulgation is a marketing technique in which references to specific brands or products are incorporated into another work, such as a film or television program, with specific promotional intent.

[2:20:285] Another powerful form of promulgation is philosophical propaganda which involves disseminated messages created by a government to reach the masses of its population to convey a particular perception of a philosophy, especially a national philosophy in order to uplift interaction, retention, and promulgation.

[2:20:286] Publicity promulgation is the movement of information to the general public from the media about a philosophy, or a particular concept or school of thought, often funded by its affiliated institution that manages it.

[2:20:287] The subjects of publicity includes people (for example, philosophers, astronomers, philosophy leaders), philosophical services, organisations, concepts, schools, denominations and works of art or entertainment created by or funded by a philosophical institution, or its partner organisations.

[2:20:288] An underwriting spot refers to an announcement made on public broadcasting outlets in exchange for funding. These spots usually mention the name of the sponsor, and can resemble traditional television advertisements in commercial broadcasting to a limited extent.

[2:20:289] A philosophical ambassador is a person who is hired by an organisation or company to represent a brand in a positive light and by doing so help to increase brand awareness and sales.

[2:20:290] Philosophical broadcasting involves the promotion of a philosophy by means of audio or video, either on the radio or via television.

[2:20:291] A philosophical sponsorship is the act of supporting an event, activity, person, or organisation financially or through the provision of products or services. The individual or group that provides the support, similar to a benefactor, is known as sponsor.

[2:20:292] Display advertising is advertising on websites or apps or social media through banners or other ad formats made of text, images, flash, video, and audio.

[2:20:293] Online advertising is a form of marketing and advertising which uses the Internet to deliver promotional marketing messages to consumers and is expected to be one of the most popular forms of promulgation for philosophies.

[2:20:294] A point of philosophy is the time and place where a philosophical transaction is completed or a person interacts with their philosophy; this can be in any place and at any time, but the most common examples of this are debates, occurrological activities, cosmic devotions, personal inspirations, and all other interactions.

[2:20:295] An out-of-home promulgation is advertising that reaches the consumers while they are outside their homes.

[2:20:296] Promulgative printing relates to all promulgative activities involving printing, such as book publishing, newspapers, magazines, essay printing, scanning and copying, and journals.

[2:20:297] Philosophical demonstration is a promotion where a philosophy and its concepts are demonstrated to potential adherents rather than simply explained or advertised; demonstrations are expected to be some of the most effective forms of small-scale promulgation.

[2:20:298] Promulgative vendibles are products branded with a logo or slogan and distributed at little or no cost to promote a philosophy, one or more of its concepts, or an event held in the name of a philosophy.

[2:20:299] Publications of a philosophy for the purposes of promotion, or for the purpose of critique can either be created digitally or through means of print.

[2:20:300] Not to be confused with the aforementioned promulgative vendibles, vendible promulgation involves the practice of a philosophical institution or agency in developing floor plans and three-dimensional displays in order to maximise the promulgation of its philosophy in a public space, such as in a shopping mall, or in a city centre and is, again, considered to be one of the most important small-scale forms of promulgation and philosophical marketing.

[2:20:301] Word-of-mouth promulgation is a form of promulgation concerned with the extent to which a population speaks about a philosophy, its concepts, its schools of thought, or its denominations; initiated by the practice of seeding by the philosophical institution, or an agency it has employed.

[2:20:302] Seeding, as aforementioned in the previous insentensation, involves the practice of a philosophical institution setting out simple marketing campaigns and adverts, typically just posing a question, in order to spark debate about a topic in order to initiate word-of-mouth promulgation.

[2:20:303] Relational promulgation includes all promulgations produced and consumed within groups, and which are intrinsically linked to relationships and interaction and includes events such as starlight festivals, debates, and starparties that require group participation which are considered to be powerful forms of promulgation due to their concentrated natures.

[2:20:304] Macrophilosophical marketing is marketing across an entire population, or the marketing of a philosophy in its entirety meanwhile its oppositism is microphilosophical marketing which is marketing across a specific segment of the population, or the marketing of a particular aspect of a philosophy, such as a concept, a school of thought, or a belief orientation.

[2:20:305] Intraphilosophical marketing involves a technique in marketing to adherents of a philosophy rather than to those outside a philosophy, especially characteristic of a retentionistic approach to philosophical marketing and advertising.

[2:20:306] Philosophical entrepreneurship, also known as promulgative entrepreneurship, involves the set of activities involved in the marketing and promulgation of a philosophy, especially at its beginning stages, and is also characterised by low amounts of funding and being conducted by the philosopher solely due to the infancy of the institutions and infrastructures established.

[2:20:307] In the context of philosophical marketing, that which is known as targeting involves the designation an audience for the purpose of philosophical marketing through different segmentations.

[2:20:308] Now that we have addressed another collection of terms for philosophical marketing theory, we come to address the two cycles of philosophical marketing and advertising, which are also metaphilosophical by their natures as well.

[2:20:309] The first of them is that which shall be known as the Philosophical Cycle which involves the standard steps encompassing a philosophy and its interactions with the world in the form of cyclical continuance, as follows:

[2:20:309a] Reascension

[2:20:309b] Introduction

[2:20:309c] Promulgation

[2:20:309d] Maturation

[2:20:309e] Domination

[2:20:309f] Decline

[2:20:309g] Renovation

[2:20:309h] Revival

[2:20:310] Due to the writing and layout procedures and styles of *The Omnidoxy*, the creation of a cycle here through shapes is not permitted, however, by listing the different stages here in order we can see how each stages is fundamental to the life and survival of a philosophy.

[2:20:311] The second cycle that we are going to introduce here is that which shall be henceforth appellated as the Promulgation Cycle and involves the standard steps encompassing a marketing campaign and advertisement of a philosophy.

[2:20:311a] Proposal

[2:20:311b] Planning

[2:20:311c] Design

[2:20:311d] Dissemination

[2:20:311e] Reception

[2:20:311f] Discontinuation

[2:20:311g] Repetition

[2:20:312] The use of these two cycles will help structure the foundations of every metaphilosophical issue and promulgative campaign respectively with each cycle holding the central tenets of how a philosophy functions in the world and how a promulgative campaign operates respectively.

[2:20:313] We now come to address some more new terms as part of the wider terminology found within philosophical marketing and advertising that have been primarily inspired and derived from mainstream terms from marketing and advertising theory; the triplet terms is concerned with centricities in relation to promulgation.

[2:20:314] The first of these is adherocentricity, and its belief orientation of adherocentrism, which involve a philosophy, or its promulgation activities that are centred on satisfying and resolving the needs and wants of people's individual and personal lives rather than the wider society.

[2:20:315] The second is henceforth known as sociocentricity with its belief orientation known as sociocentrism and involves a philosophy, or its promulgation activities that are centred on resolving societal issues rather than resolving personal and individual issues.

[2:20:316] The final centricity is that which shall be known as autophilosophocentricity with its own belief orientation known as autophilosophocentrism and involves a philosophy, or its promulgation activities that are centred on developing philosophy as both a subject, a social mobiliser, an institution, and a form of societal structure, and direction, as well as providing ambition, satisfaction, and enknowledgement to vast portions of the populous.

[2:20:317] Services marketing of a philosophy focuses on the services of that the philosophy offers adherents rather than considering the philosophy to be a product; to consider philosophy as providing a service is the preferred view of the Astronist Tradition.

[2:20:318] Focusing on the practical services that a philosophy provides and fulfils for its adherents, yet these services are majoratively abstract such as certain feelings, for example, adherence to a philosophy may make someone feel part of wider group, so achieving a sense of inclusion for them.

[2:20:319] Absolute outsourcing involves the instance in which a philosophical institution outsourcing all of its advertising operations as opposed to partial outsourcing which

relates to when a philosophical institution only outsources part of its advertising operations.

[2:20:320] Other important aspects of planning and successfully executing philosophical marketing involve resource planning, material requirements planning, efficient adherent response, as well as the development of inventory management systems.

[2:20:321] All of these aspects of marketing operations can either be conducted by the philosophical institution, or by outsourced to agencies depending on the costs of doing so and the extent to which the institution entrusts external agencies to properly conduct such activities on its behalf.

[2:20:322] We shall herein and now introduce a new term unique to philosophical marketing theory known as the practice of intermarketing which involves the instance in which a marketing campaign or advert either makes reference to or emulates that of a previously popular campaign or advert, but does so in a different, yet still obvious and recognisable way.

[2:20:323] Intermarketing techniques may be used to spark nostalgia in long held adherents for retention purposes, or they may be used in times of disparity and disagreement in the creativity and marketing direction and so a previously popular campaign is used due to the greater trust held in its success in times of indecision or as part of a wider identity crisis.

[2:20:324] That which shall be known as international philosophical marketing or interdenominational marketing management involves the specific form promulgation wherein a denomination or school of thought of a philosophy that is not native to the country to which it is being marketed.

[2:20:325] Another new term is that which is to be known as intence which is equivalent to the word "management" and involves the entire process of dealing with and controlling not only a marketing campaign or advertisement, but with the entirety of the promulgation of a philosophy.

[2:20:326] Those which are collectivised and appellated as the Methods of Intence are the various different forms of management and are herein listed and outlined.

[2:20:327] That which is known as distributed intence is when duties of promulgation are distributed across a digital platform by a central source, typically across national borders, but not always, and is a form of institutional delegation.

[2:20:328] That which is known as micromanagement in this context is the instance in which The Institution actively involves itself with the small scale and more detailed aspects of the promulgation of its philosophy rather than resorting to institutional delegation.

[2:20:329] That which is known as macromanagement in this context is the instance in which The Institution only involves itself with the large scale aspects of the promulgation of its philosophy which characteristically entails institutional delegation.

[2:20:330] Known as collaborative methods of intence, this form of intence involves all forms of promulgation conducted between adherents of the philosophy rather than the organisational representative of that philosophy so wherein The Institution plays a small, and effectively non-existent role in the promulgation of the philosophy.

[2:20:331] Scientific management refers to the instance in which The Institution is focused on the efficiency of the marketing and advertising strategy to proper convey the main messages and beliefs of the philosophy to the target audience.

[2:20:332] In scientific management, The Institution's role is purely statistically based as it acts as the receiver of results and therefore does not play a practical role in the promulgation of the philosophy.

[2:20:333] Virtual management involves the supervision, leadership, and maintenance of virtual teams that are dispersed work groups that rarely, if ever, meet face to face and it is this form of management that are expected to become more and more popular as digital platforms grow larger and more promulgative activities start to take place over platforms like websites, social media, and other aspects of the Internet.

[2:20:334] Some related to terms to intence are the following collection beginning with social entrepreneurship which involves using one's philosophical beliefs to found a company in order to solve social, political, or environmental issues.

[2:20:335] Meanwhile that which is to be known as a philosophical company is a company founded by a philosopher, one that is founded in the name of a philosophy, or one that is founded for the purpose of promulgating a philosophy.

[2:20:336] Community building is the practice consisting of a major goal for philosophical marketing and advertising that attempts to create a distinct sense of community between the adherents of a philosophy through advertising and marketing campaigns; the creation of a distinct community is one of the primary responsibilities and aims of The Institution and the Astronist Tradition for Astronists and connected groups with different appellations.

[2:20:337] Forecasting is the practice of making predictions about the success that a philosophical marketing and advertising campaign will have on promulgation and the number of adherents and is a form of market research that also effects intence.

[2:20:338] That which shall be henceforth known as leadership or founder marketing is a form of marketing and advertising that places the leader or the founder of a philosophy at

the centre of the marketing campaign strategy as the face of the philosophy rather than the philosophy itself and its own concepts and beliefs.

[2:20:339] An important branch of philosophical marketing theory is that which is appellated as Philosophical Marketing Strategy which involves a group of terms that are involved in the positioning of a philosophy according to strategy; the main elements involved in Philosophical Marketing Strategy are detailed below:

[2:20:340] Capability - ability of the philosophy to meet the needs of the adherent

[2:20:341] Change - ability of the philosophy to withstand societal, cultural, and political changes

[2:20:342] Communication - ability of the philosophy to coherently communicate with its adherents

[2:20:343] Financial - the ability of the philosophy to remain financially independent (self-funding)

[2:20:344] Innovation - regular reinvigorations of the philosophy to stimulate existing adherents as well as to draw the interest of new adherents.

[2:20:345] Performance - the ability of the philosophy to perform via the measurement of variables such as adherence increase, capacity, general promulgation, as well as positive awareness.

[2:20:346] Risk - the ability to recognise risk factors associated with a marketing strategy or a particular advert with how it may be perceived.

[2:20:347] Systems - the establishment and development of systems to deal with crises with these be related to financial circumstances, public relations, or internal management.

[2:20:348] A closely associated branch of philosophical marketing theory is that which is henceforth known as Philosophical Component Marketing and is based upon the following elements:

[2:20:349] Facility - the promotion of the ability of a philosophy to facilitate the issues in society.

[2:20:350] Product - that physical or conceptual substance which the philosophy is providing the adherent in exchange for their adherence.

[2:20:351] Program - managing several different marketing/advertising campaigns within one country, but also across different countries (causing potential issues of contradiction, overlap, mixed messages).

[2:20:352] Before we begin to study Resource Utility within the context of philosophical marketing, we shall touch upon a few more terms, the first of which is comparison promotion which is the marketing strategy of comparing one philosophy to another in a usually biased way in order to stimulate adherence and interest in the promoted philosophy.

[2:20:353] Essentially, comparison promotion involves using another philosophy/religious tradition to promote the better qualities in another and is sanctioned tactic of The Institution of The Philosophy of Astronism, but only in a subtle and non-offensive way.

[2:20:354] That which shall be known as philosophical choice refers to choice in philosophy as being of major importance and is expected to change entirely on how religion and philosophy are to be perceived.

[2:20:355] Philosophical choice attempts to establish a perception of philosophies and religions as products/services in an open market wherein choice is designated to be the major factor, thus doing away with philosophical and religious affiliation marred by familial and societal pressure to conform, as well as governmental conservatism, sanctioned discrimination, and planned forms of persecution.

[2:20:356] The factors impacting on philosophical choice are herein listed: personal preference, associations, habits, ethnic heritage, tradition, values, social pressure, emotional comfort, availability, convenience, economy, image, medical conditions, diet, relational contention, and finally the level of one's education and autodidactic knowledge.

[2:20:357] An example of relational contention for those whom are confused by the introduction of the new term is in the instance that if one has a gay friend, but their philosophy/religion says being gay is bad; this is becoming a common reason for people leaving their religion as it does not align with their social values and relations, and neither does it align with the societal, ideological, or governmental order.

[2:20:358] That which is appellated as Resource Utility is another prominent branch of philosophical marketing theory as it pertains to the study and management of the resources at the disposable of a philosophy and the institution managing it, either in a conceptual or a physical sense, and these varying different forms of Resource Utility are herein listed below:

[2:20:359] Environmental resources - using environmentalism as a cause for philosophical adherence

[2:20:360] Institutional resources - using the power of governmental institutions to increase adherency, funding, and general promulgation.

[2:20:361] Human resources - using the voluntary and paid labour to operate the philosophy on both macro and micro levels.

[2:20:362] Information resources - using the extent of the available information to make conclusions about management and operational approaches and campaigns for the philosophy.

[2:20:363] Knowledge resources - using the knowledge of the labour force to orient the marketing and advertising strategies of the philosophy.

[2:20:364] Land resources - using the land owned by the philosophical organisation, one of its adherents, or an organisation aligned with the philosophy to conduct activities, practices, or to raise funds to support the philosophy in some way.

[2:20:365] Material resources - the objects and renditions owned by the philosophical institution, related organisations, or adherents collectively referred to as Material Amassment.

[2:20:366] Skills resources - the use of skills either by volunteers, employees, or adherents of a philosophy to further the philosophy in whichever way these skilled people can assist.

[2:20:367] Stock resources - the use of stock to create monetary profits for funding purposes.

[2:20:368] Technological resources - the use of technology for the promulgation of the philosophy.

[2:20:369] Time resources - the use of time management to periodise campaigns and strategies for the measurement of results.

[2:20:370] A branch of philosophical marketing known as Problem Solution Management involves conflict, crisis, and stress as the main elements for why a person may adhere to a particular philosophy as an alleviator of either of these three unpleasant emotions and circumstances.

[2:20:371] Conflict - philosophical adherence as the alleviator of conflict

[2:20:372] Crisis - philosophical adherence as the alleviator of a crisis.

[2:20:373] Stress - philosophical adherence as the alleviator of stress

[2:20:374] That which is known as Strategic Management involves the adaptation of the philosophical institution, and subsequently the philosophy it manages, to the social, commercial, and economic environment.

[2:20:375] Due to the fact that the different environment spheres are in constant evolvment, the study of Strategic Management is both a fluid and complex area of study and remains duodimensional in that it must consider the adaptation of the institution and the philosophy as separate entities.

[2:20:376] Strategic Management also involves short-term, medium-term, and long-term adaptation of the institution and/or the philosophy it manages due to the changes in circumstances of the environment demanding unstructured non-repetitive reactions in either of the three lengths.

[2:20:377] Strategic Management affects the entire institution and the philosophy it manages by providing direction both in times of crisis and peace and so, Strategic Management involves both the formulation of strategy as well as the implementation of the content of the strategic design so as to muster results, especially so during times when short-term and critical positioning decisions are required.

[2:20:378] The duodimensionality of Strategic Management is also demonstrated by the fact that it can be completed at several levels involving either overall corporate strategy, or individual business strategies, as well as involving both conceptual and analytical thought processes.

[2:20:379] The use of advertising is, of course, forms one of the two core elements of how a philosophy can be promulgated with marketing strategy being the other; the outlets of advertising that are collectively appellated as Traditional Media include the following:

[2:20:379a] Television

[2:20:379b] Radio

[2:20:379c] Online

[2:20:379d] Domain Names

[2:29:379e] Philosophy Placement

[2:29:379f] Print

[2:29:379g] Outdoor

[2:29:379h] Point-of-philosophy

[2:29:379i] Novelties

[2:29:379j] Endorsements

[2:29:379k] Aerial

[2:20:380] As we contemplate the advertisement of a philosophy and the various different ways in which a philosophy may be advertised effectively, we come to another collection of terms that are again unique to the structure of philosophical marketing and advertising theory.

[2:20:381] One of these is a form of promulgation known either as niche promulgation or scholastic promulgation involves marketing a philosophy towards fellow philosophers, scholars, academics, and perhaps students, but not to the public.

[2:20:382] That which is known as adherosourcing involves the encouragement of the population of adherents of a philosophy to great advertisements, help fund, and management the promulgation of a philosophy.

[2:20:383] Adherentism is the belief orientation holding that it should be down to the adherents of a philosophy to promulgate it rather than down to the philosophical institution alone therefore adherentists presume that adherents should want to disseminate their philosophy.

[2:20:384] The suborientation henceforthly known as justified adherentism promotes the idea that if adherents aren't willing to promulgate the philosophy themselves, they should provide more funds to The Institution in order for The Institution to spend those funds for promulgative purposes.

[2:20:385] The Astronist Tradition expects other orientations on this topic to emerge post-omnidoxically, especially regarding opinions on what adherents are expected to do to contribute to the promulgation of a philosophy.

[2:20:386] The Astronist Tradition promotes a "one world, one message" idea encapsulated by the term of global advertising wherein an advert is so widely resonating that the entire world can understand and relate to it rather than localising campaigns for particular countries and regions.

[2:20:387] Global advertising is typically applied in cases of mass resurgence, philosophical reascension, and in the context of the philosophy in its entirety rather than according to a single denomination or school of thought, and are usually conducted according to a global language such a English, Mandarin, Spanish, or French as some of the most widely spoken languages in the world.

[2:20:388] Furthermore, those which are known as localised variants are when a global advert is localised typically by changing the actors and language to make the advert more resonative and suitable for the specified population, yet the message and essential narrative of the advert remains the same.

[2:20:389] This practice is expected to be a popular one as a branch of global advertising technique and is more also expected to be applied to countries with isolated languages whereby one of the global languages does not have a wide presence there so to reach that populous, a localised variant must be created.

[2:20:390] That which is known as governmental media refers to the instance in which The Institution manages to agree to partner with the government or a governmental organisation or funded agency in order to promulgate the philosophy with the use of government funding to do so.

[2:20:391] Meanwhile, that which is known as guerrilla marketing is a form of philosophical promulgation whereby adherents of the philosophy begin to promulgate the philosophy, but not in the way that The Institution would like, or had intended it to be promulgated, thus causing tension between The Institution and those known as guerrillas whom are conducting such practices.

[2:20:392] That which is known as the process of diversification refers to the instance in which the philosophical institution decides to expand the ways in which its conducts its promulgative activities which is done for one of two following reasons.

[2:20:393] Either the promulgative activities previously conducted have not been efficient enough so expansion in activities conducted is required, or greater funds have come to The Institution so it is able to experiment with new promulgative activities by trying new versions.

[2:20:394] The half a dozen new technologies listed below are to be collectively appellated as New Media in order to contrast them with the aforementioned Traditional Media, and involves the utility of new technologies in order to further promulgate the philosophy.

[2:20:395] Drawbacks are that these remain expensive and not easily conducted due to the limited pool of the labour that are able to develop them, however, they are herein introduced for the purposes of posterity and future utility to further demonstrate the forwardthinkingness of the Astronist philosophical tradition.

[2:20:395a] Drone display

[2:20:395b] Virtual reality

[2:20:395c] Holograms

[2:20:395d] Artificial intelligence

[2:20:395e] 3D printing

[2:20:395f] Robotics

[2:20:396] That which shall be henceforth known as promulgative studies or promulgative methodology refers to a branch of study within philosophical marketing and advertising dealing with the ways in which a philosophy may be promulgated with its essential purpose being to stimulate the enthusiasms of the students in order to development new methods of promulgation; due to the centrality of promulgation to philosophical marketing, promulgative studies/promulgative methodology encompasses the majority of the aspects of this discourse.

[2:20:397] A final collection of terms for philosophical marketing and advertising theory are herein and now outlined for future utility, and the first of such terms is known as article promulgation which involves the creation and distribution of articles across digital platforms for the purpose of digital promulgation.

[2:20:398] Another important form of promulgation that remains one of the first forms of promulgation that The Institution of The Philosophy of Astronism enacted after the founding and during the establishment of Astronism is that which is known as concept video promulgation which involves the creation of short videos that explain philosophical concepts coherently for the masses to understand which are typically uploaded to social media networking sites for dissemination.

[2:20:399] Listed below are the various different forms of interactions that a philosophical institution may have with externalities of different kinds that are herein recognised as relevant to a philosophical marketing and advertising context.

[2:20:399a] Institution-to-adherent

[2:20:399b] Institution-to-organisation

[2:20:399c] Institution-to-intermediary-to-adherent

[2:20:399d] Institution-to-government

[2:20:399e] Institution-to-business

[2:20:399f] Institution-to-influencer

[2:20:399g] Institution-to-philosopher

[2:20:400] That which is henceforth known as cause promulgation involves a philosophical message in relation to a tragic event in occurrence, such as a war, natural disaster, or famine for the dual purpose of promoting the philosophy while also demonstrating the good works of the institution to which the philosophy is affiliated by demonstrating how said institution is helping in the resolution of tragic events.

[2:20:401] Cost by adherence is a philosophical marketing term relating to the measurement and mechanism of costs of a marketing campaign against the number of adherents that the marketing campaign gains the philosophy, either premised on absolute accuracy or estimation and retains an important role in philosophical marketing cost analysis and depending on the results shown, this mechanism may be used to justify the funding of marketing campaigns that have a lower cost by adherence ration wherein the number of adherents gained is lower than average when compared to the costs incurred.

[2:20:402] That which is henceforth known as adherent relationship management, which may also known as retention management, relates to the whole process of ensuring that an adherent's relationship with their philosophy is both positive and beneficial to them so that they continue to adhered to their philosophy.

[2:20:403] As the next of the terms that we shall address, institutional delegation refers to when The Institution delegates the role of retention management to individual sophariums in a country after it is affirmed that such sophariums can more easily reach out to individual adherents in order to create a sense of personalism.

[2:20:404] Meanwhile, deputation relates to the instance in which The Institution pays or asks a group of adherents to promulgate the philosophy through the tools provided to them by The Institution.

[2:20:405] Emotional promulgation on the other hand refers to the marketing of a philosophy so that it appeals to the audience's emotional state, typically involving the advertising of individuals and their anecdotes of how their adherence to the philosophy has helped them individually.

[2:20:406] Promulgative revival, which is also known as mass resurgence, refers to the marketing of a philosophy so as to create a society-wide idea of its return to prominence after a period of inferiorisation on the public stage.

[2:20:407] The narrative that a philosophy is returning to its former glory through renovation is the essential premise and purpose of the initiation of promulgative revival.

[2:20:408] Therefore, we move on to that which shall be known as renovationism which is the belief orientation holding that a philosophy should be periodically reinvigorated so as to stimulate mass resurgence; the frequency of this, known as renovational frequency, is expected to long remain a matter of debate amongst promulgators.

[2:20:409] Promulgative hacking is a process of rapid experimentation across marketing funnel, concept development, sales segments, and other areas of the philosophy to identify the most efficient ways to promulgative a philosophy.

[2:20:410] Intangibility refers to the essential nature of a philosophy as an intangible entity, even when it is manifested in physical objects or is visualised using appellations, symbols etc.

[2:20:411] Personalised philosophy is the instance in which a philosophy, a denomination, a school of thought, or a concept is either consciously or subconsciously personalised or applied to oneself with some consequences being that the philosophy/denomination/school/concept changes from its actual existence to fit in with a person's particular circumstances and exists how they want it to exist for them.

[2:20:412] This should be defined from the creation of a new denomination/philosophy/school/concept as the individual tends not to publicly disseminate their personalised version, but instead keeps it private or shares it only with friends and family.

[2:20:413] Meanwhile, that which shall be known as personalised promulgation refers to adverts and marketing messages that include personalisations such as including a person's name, their interests, their particular beliefs, or their ambitions so as to create a sense of personalism and resonation.

[2:20:414] Due to mentioning the root word, that which is to be known as resonationism is a promulgative approach that calls for the superiorisation of resonation in philosophical marketing and advertising materials in order to ignite emotions in the audience towards the materials they are viewing so as to create a deeper connection between the philosophy and how it is perceived by the audience.

[2:20:415] Therefore, resonationists often use marketing techniques such as the nostalgia creation, shock tactics, surprise, anecdotes, and generally more emotionally charged advertisements than other approaches to promulgation.

[2:20:416] We now come to a dichotomy of orientations, the first of which is to be known as endurism which is the belief orientation holding that philosophies and their concepts are inherently enduring with a very low perishability.

[2:20:417] The oppositism to endurism is that which shall be known as evaporism which is encapsulated by the belief orientation holding that philosophies and their concepts are inherently characteristic of high perishabilities, especially if their concepts and beliefs are resonative only to a particular period or set of circumstances.

[2:20:418] Finally, that which is to be known as restricted promulgation refers to a preview release of a new philosophical concept or service to a limited audience prior to the general public, typically to journalists, celebrities, influencers, fellow philosophers, governmental officials, and other prominent members of a society.

[2:20:419] Philosophical marketing and advertising is an immense branch of logicology both in depth and size, and therefore should not be understated despite the fact that it

may not be a philosophically originating topic, though the amount of metaphilosophical concepts and issues raised and addressed by philosophical marketing is formidable, and this is considered to only increase further as the subject widens to encompass more ideas, approaches, and methods.

[2:20:420] Philosophical marketing and advertising is expected to grow and continue to be inspired by mainstream marketing and advertising theory, often by applying the elements of the mainstream to that which is philosophically relating.

—

[2:20:421] Those which are henceforthly collectivised as synonymised terms within an Astronist context are when an Astronist word is made synonymous in common tongue with another word; the example of which that we will address is the term of philosophy.

[2:20:422] One of the intentions of the Astronist Tradition is to create denominational appellations directed translated as philosophy in different languages so as to synonymise Astronism with philosophy in general in the languages which are listed below; each language is associated the word directly translated from philosophy which are each to be synonymised with Astronism:

[2:20:422a] Bangla and Nepali - Darśana

[2:20:422b] Burmese - Aabhidhammar

[2:20:422c] Chinese - Zhéxué

[2:20:422d] Hawaiian - 'ike

[2:20:422e] Hindi - Darshan

[2:20:422f] Icelandic - Heimspeki

[2:20:422g] Japanese - Tetsugaku

[2:20:422h] Kannada - Tatvaśāstra

[2:20:422i] Khmer - Tossaanvichchea

[2:20:422j] Korean - Cheolhag

[2:20:422k] Malayalam - Tattvacinta

[2:20:422l] Maori - Whakaaro

[2:20:422m] Marathi - Tattvajñāna

[2:20:422n] Punjabi - Darāśana

[2:20:422o] Sinhala - Darśanayayi

[2:20:422p] Somali - Falsafada

[2:20:422q] Tamil - Tattuvam

[2:20:422r] Telugu - Tatvasāstram

[2:20:422s] Thai - Prachyā

[2:20:422t] Vietnamese - Triêt học

Legal Status & Role of Philosophy

[2:21:1] If the readers of The Omnidoxo have not understood the extent to which metaphilosophical issues and ideas are engrained within these omnidoxical writings, then this discourse that we now enter shall certainly affirm this to any doubters.

[2:21:2] The Astronist Tradition considers there to be five forms of philosophy in a context of legality which are collectively appellated as The Five Legal Statuses of Philosophy, the first of which is to be known as administarianism, as considered according to the practice of administering.

[2:21:3] Administarianism involves the instance in which an established philosophy assumes an active role in the functioning of the government, typically characterised by laying down the fundamental personality, ambitions, values, and principles of the nation state, as distinguished from the government itself which continues to be run by a voted political party.

[2:21:4] The second of The Five Legal Statuses of Philosophy is that which is henceforth known as inauguratarianism as a belief orientation and is encapsulated by the status of a philosophy being inaugurated.

[2:21:5] An inaugurated status refers to when a government officially recognises a philosophy as a philosophy within the country, but this philosophy does not play an active role in the functioning of the government.

[2:21:6] Alternatively, that which is henceforth known as the status of being noninaugurated, as encompassed by the belief orientation of noninauguratarianism refers to the instance in which the government has not officially recognised a philosophy in the country, yet the philosophy continues to achieve all or most of the Requirements for Establishment.

[2:21:7] Disinauguratarianism is the belief orientation that is founded upon the disinaugurated status wherein the government disestablishes a philosophy by taking away its inaugurated status, typically after a diversion has occurred by the philosophy or its institutional representative with the government, or because of the occurrence of a cultural, societal, or philosophical shift.

[2:21:8] The final form of The Five Legal Statuses of Philosophy refers to the status of a philosophy being anti-inaugurated, as encapsulated by anti-inauguratarianism wherein the government actively opposes the inauguration of a particular philosophy, typically by disseminating mass public messages.

[2:21:9] Each of these philosophical legal statuses form the foundations of how a philosophy is to be perceived according to different law systems, as well as interacted with by different governments.

[2:21:10] The Astronist philosophical tradition herein also recognises there to be a specific nature to how a philosophy can be categorised according to legal means and for this reason, we introduce that which collectivises these recognitions and accordances and comes under the appellation of the Requirements for Establishment.

[2:21:11] There are herein introduced six Requirements for Establishment which are, in addition to The Five Legal Statutes of Philosophy, considered to be central to understanding how a philosophy is to enable itself according to the legal restraints of a country.

[2:21:12] These Requirements of Establishment, as they shall be henceforthly appellated are herein ascribed according to the Astronist point of view of what a true philosophical movement or tradition should legally consist of; it is expected that individual governments will see the Requirements of Establishment laid down here and formulate their own requirements as inspired by these herein established.

[2:21:13] The first of the six Requirements of Establishment is that the philosophy in subject must hold a substantial number of adherents which the Astronist viewpoint deems to consist of at least 0.1% of the total population of the country.

[2:21:14] This requirements instantly outcasts many, what are known as rhizosophies, which are philosophical movements and traditions that have not yet achieved the claim of at least 0.1% of a country's total population; alternatively, there are also rhizoreligions.

[2:21:15] Therefore, philosophies and religious traditions that are very well established in one set of countries and therefore achieve an inaugurated status may well be considered rhizosophies or rhizoreligions, thus demonstrating the flexibility of the application of the term according to location, the history of the philosophy/religion in such a location, and the general level of establishment that philosophy/religion has managed to install.

[2:21:16] It is herein noteworthy that Astronism is designated a rhizosophy itself at the time of the writing of this discourse as part of The Omnidoxy.

[2:21:17] It is also important to mention that the term rhizosophy herein introduced is intended to be derogatory at all or subordinatory in any way instead it is purely applied for the purposes of designation and differentiation between a philosophy/religion that holds substantial following and one that does not yet in a particular country.

[2:21:18] The next of the six Requirements for Establishment pertains to the fact that a philosophy should either by represented or managed by an institution or governed by a philosophical society.

[2:21:19] This requirement is of importance because it demonstrates sense of longevity for the philosophy in subject if there are institutions, organisations, or societies established in order to manage and generally oversee the philosophy and its interactions with society.

[2:21:20] A philosophy that has not yet established itself in the sense of governance can also be described as a rhizophosophy as it is considered, from the Astronist position, to be lacking of the fundamental structure that will allow the philosophy to interact with the society in which it resides in the correct way that philosophies, in a post-Astronist worldview, are expected to act.

[2:21:21] The third of the six Requirements for Establishment is encapsulated by the notion that all philosophies vying for establishment must hold a clear mission statement or “statement of beliefs” document which should always be present to view by all members of the public both online and in some public physical space, such as a library, government building, or institutional headquarters.

[2:21:22] The fourth of the six Requirements for Establishment maintains that a philosophy must always remain accessible to all people so as to avoid cultic tendencies, therefore the philosophy, in a practical and physical sense, should not disallow people to join, and in an abstract sense, the philosophy should not allow for any secretive concepts, codes, or ritualistic sayings that can only be known or are voiced when a person reaches the next level; essentially, philosophies should remain nonhierarchical in order to gain and maintain their legal positions as philosophies, as distinct from secret societies, cults, and religions.

[2:21:23] Another important element of the six Requirements for Establishment is that the philosophical institution, organisation, or society overseeing, managing, and holding authority or responsibility for a philosophy should hold funds and assets in excess of £10,000.

[2:21:24] This may seem like a trivial, non-philosophical, and monecentric requirement, but there does exist a practical necessity for an institution, organisation, or society managing a philosophical movement or tradition to hold sufficient funds to operate its activities.

[2:21:25] For this reason, a philosophy that is to be recognised by the government, from the Astronist perspective, should hold at least the sum of ten thousand pounds to its name in order to be able to postulate itself as a philosophical movement or tradition and most importantly, to be recognised by the government as such.

[2:21:26] The sixth and final of the Requirements for Establishment pertains back to the words of the Omnidoxy which a philosophy must fall in alignment with, specifically within The Twenty-Five Refoundations of Philosophy so that it may be characteristic of a philosophy in the Astronist sense.

[2:21:27] Whether governments take up the sixth requirement in the exact terms set out by the Astronist philosophical tradition in The Twenty-Five Refoundations of Philosophy is down to their preferences of how they consider a philosophy as differentiated from a religion and other sorts of belief systems.

[2:21:28] However, the Astronist perspective maintains that there exists an important reason for the intertwinement of The Twenty-Five Refoundations of Philosophy into the final portion of the Requirements for Establishment due to the fact that the former defines what a philosophy actual is from an intellectual perspective which is fundamental to how a philosophy is to be defined according to that of a legal perspective.

[2:21:29] Now that we have introduced and outlined all of the component factors of the Requirements for Establishment, we can move on to a discuss concentrated on the nature of the freedom of philosophy, what freedom of philosophy is, and how the Astronist perspective on philosophy understands freedom of philosophy and what the institutions of Astronist Philosophy are ambitioned to achieve with regards to freedom of philosophy.

[2:21:30] Firstly, it is prudent to define what freedom of philosophy is as a term which the Astronist philosophical tradition herein understands to pertain to a principle that supports the freedom of an individual or community, in public or private, to manifest philosophy or belief in debate, practice, devotion, and observance without government influence or intervention.

[2:21:31] Freedom of philosophy is also considered to include the freedom to change one's philosophical orientations and alignment without threat of ostracism or persecution as a consequence.

[2:21:32] The Astronist philosophical tradition maintains that freedom of philosophy should be considered a fundamental human right by all nations in a similar way to how freedom of religion is categorised.

[2:21:33] It is herein introduced how freedom of philosophy has four main subtypes existent within it that are necessary to its formation and are therefore cosubstantial which is defined as the instance in which a concept or principle is fulfilled by the necessary accompaniment of each of the declared substantial elements within it; essentially, there cannot be freedom of philosophy if any of each of its cosubstantial elements outlined below are not truly fulfilled.

[2:21:34] Therefore, according to the Astronist Tradition, freedom of philosophy as a legal and human rights apparatus is structured by and approached to according to a cosubstantialist framework.

[2:21:35] The first of the substantial elements within freedom of philosophy is principally the freedom of philosophical belief which entails the freedom to hold and express

philosophical belief both privately and publicly but without obstructing or offending others including holding to certain belief orientations.

[2:21:36] The second of the substantial elements within freedom of philosophy is the freedom of philosophical practice which is encapsulated by a freedom to conduct philosophical practices both privately and publicly but without obstructing or offending others including debating, occurrological activities, and devotion which itself including freedom of expression.

[2:21:37] The third of the substantial elements within freedom of philosophy is that which is henceforth known as freedom of thought which entails freedom of an individual to hold or consider a fact, viewpoint, or thought, independent of others' viewpoints with risk or threat of either social, or governmental pressure, ostracism, and certainly not persecution.

[2:21:38] Freedom of alignment is the fourth and final of the substantial elements within freedom of philosophy and is encapsulated by the freedom of an individual to openly align themselves with a philosophy of their choice without fear of ostracism, violence, or persecution either by their community, or by governmental forces.

[2:21:39] Returning to freedom of thought, it is believed that it should be considered to exist within freedom of philosophy, but remains distinct from it as freedom of philosophy involves freedom of thought, but also encompasses freedom of alignment, freedom of philosophical belief, and freedom of philosophical practice though freedom of thought does officially remain a substantial element of the freedom of philosophy and therefore exists with the cosubstantial structure of philosophical freedom.

[2:21:40] However, the meaning here is that freedom of thought holds a wider breadth that simply just existing within freedom of philosophy alone.

[2:21:41] Herein introduced are a plethora of terms as part of the subject of the legal status of philosophy and includes many different aspects of philosophical legality including belief orientations, variations of law, concepts, as well as physical structures and instances involving the legality of philosophy.

[2:21:42] We will begin with our introduction of terms with that which is known as anti-shunning law which, in philosophical terms, refers to a law opposed to the practice of shunning a person as form of social ostracism due to their philosophical alignments, belief orientations, and the expression of their thoughts.

[2:21:43] Meanwhile, that which shall henceforth be known as recreancy law refers to law that works for the freedom of people to both privately and publicly leave their philosophical alignment and change their belief orientation without fear of governmental, or societal reprimand, ostracism, or persecution.

[2:21:44] Heresy does not exist in the context of true philosophy because there exists no doctrine in philosophy and therefore there is nothing to be heretical about; heresy is considered to be a non-philosophical term and concept, thus it is an opponent to the principles of the Philosophical Spirit, and therefore needn't be discussed again beyond the confines of this single insentensation.

[2:21:45] We now come to the section in the discourse whereby we must introduce those which shall be collectively appellated as The Nine General Laws which are different forms or categories of law in the eight different realms or instances in which law may be created and implemented.

[2:21:46] The first of these is that which most people will be aware of which is ideological law, also known as governmental law which is the set of laws imposed by a government, typically characteristic of a particular form of ideological governance, and can either be implemented according to national or state law, or by local or bylaws.

[2:21:47] The second of The Nine General Laws is that which is most pertinent to the Astronist philosophical tradition and is to be henceforth known as Cosmic Law which are laws, both of a natural and transcendental essence, that reside beyond The Earth in space and on other celestial entities, or demonstrated by cosmic phenomena.

[2:21:48] However, they do remain ultimately beyond the capability of humanity to understand due to our subordination to their workings and remain the primary laws upon which the Astronist philosophical tradition, as well as some other philosophies, are predicated.

[2:21:49] Meanwhile, the category of law that is henceforth known as Humanic Law is pre-Astronistly known as man-made law, relates to laws made by humans and therefore exist in inferiority and subordination to that which is known as Cosmic Law; Humanic Law also includes all other categories of law that are constructed either by individuals or by governments and organisations proclaimed to be managed and directed humans.

[2:21:50] The next of The Nine General Laws is Divine Law which pertains to any law that is understood as deriving from a transcendent source, such as the will of God or from nay different gods; this may also be known as divine prescription in an Astronist philosophical context, as distinguished from philosophic prescription.

[2:21:51] Next there is that which is known as Natural Law is an observable law relating to natural phenomena which Cosmic Law is closely associated with, yet is not dependent upon it as Cosmic Law also involves a transcendental and somewhat supernatural element as which is defined as natural is typically how humans perceive the progeny and phenomena around them and therefore anything beyond or generally unreachable by this perception can be considered supernatural and transcendent.

[2:21:52] Civil Law, as distinguished from governmental law, refers to a system of laws concerned with private relations between members of a community rather than criminal, military, or other societal affairs.

[2:21:53] Meanwhile, that which is known as Canon Law refers to ecclesiastical law laid down by a church and despite its consideration to be one of The Nine General Laws, could also be designated within that which is known as Religious Law.

[2:21:54] In a wider sense than Canon Law, Religious Law relates to all ethical and moral codes taught by all different religious traditions and is therefore not just pertinent to the implementation of law by that which identifies itself as a church.

[2:21:55] There is no equivalent to canon law or divine law other than Institutional law in philosophy because all post-Astronist philosophies, if they desire to involve themselves in politics and law, are expected to formulate a sister philosophy designated as an ideology, the equivalent in Astronist Philosophy to Astronarianism as the ideological sister philosophy to Astronism.

[2:21:56] However, there does exist Cosmic Law which, despite its independence from Astronist Philosophy and even wider general philosophy, remains fundamental to the Astronist philosophical tradition and its prescribed philosophical principles and foundations, especially regarding the disciplines of ontology, cosmology, metaphysics, and epistemology.

[2:21:57] It shall herein be laid down, affirmed, and reaffirmed that the Astronist philosophical tradition and its institutions, organisations, and all its workings are to be directed and prescribed according to Cosmic Law as the most rational, balanced, ethical, and commandant of all laws, as well as existing as the least able to be distorted, and exploited by sentient minds.

[2:21:58] Therefore, it is towards Cosmic Law that not only Astronist Philosophy ascribes itself, but that all other forms of philosophy should also be pertinently aware of Cosmic Law, if not ascribed to its themselves as the supposed beacons of rationality, logic, the attainment of greater knowledge, and the exploration of those elements of existence that may not be so easily explained by the perceptivity of humanity.

[2:21:59] That which shall henceforth be known as philosophical accommodationism refers to a judicial interpretation which espouses that the government may support or endorse philosophical institutions, or philosophical communities and groups as long as it treats all philosophies equally and does not show preferential treatment.

[2:21:60] This also means inaugurating philosophies that wish to be inaugurated without preferential treatment for certain philosophies to be inaugurated over others; essentially, it pertains to the principles that governments should maintain an accommodating nature

with regard to philosophical thought systems and their recognition so as to encourage the establishment and flourishing of new traditions and movements of philosophy.

[2:21:61] Derived solely from a religious context, that which is known as impiety in an Astronist philosophical context refers to the idea that there exists no concept of impiety or sacrilege in philosophy due to the disacredness/ disacralisation of philosophy.

[2:21:62] Therefore, due to the very nature of philosophy itself, all aspects of philosophy are open to lack of respect, parody, mocking, and all other forms of verbal attack which pertains to a further differentiation between philosophy and religion.

[2:21:63] Furthermore, the Astronist Tradition supports the natural process of disacralisation that has occurred over the course of the development of philosophy during its many centuries of history as not only a subject and apparatus of thought and contemplation, but also as a system of thought, life, and belief.

[2:21:63a] And so, the Astronist Tradition introduces and henceforthly supports the belief orientation known as disacralism which pertains to the principle that the disacredness of philosophy should be maintained at all costs so as to continue to differentiation from religion; Astronism, and its institution, can therefore be described as disacralist in their orientation on this topic.

[2:21:64] As we now move to a new topic, we introduce that which shall be known as jurisdictionalism which refers to a belief orientation manifested as a political manoeuvre intended to extend the state's jurisdiction and control over the operations and organisation of the institution managing a philosophy, including influencing its adherents.

[2:21:65] The Astronist Tradition does extend concern over jurisdictionalism from the perspective of its protection of the philosophy it manages from being distorted by externalities, however, it also must accept that countries interpret philosophy in a particular way and according to the principles of the Philosophical Spirit, they remain within their rights to do so.

[2:21:66] However, vehement jurisdictionalists that advocate for governmental control over a philosophies presence within their country with no interaction from the philosophical institution that is responsible for the management of the philosophy in subject.

[2:21:67] Jurisdictionalist thought and approaches to metaphilosophy and philosophical interactions with the state are therefore a controversial issue with the most prominent of concerns espoused by the Astronist Tradition being that jurisdictionalism is too vulnerable to distortion by governments and other externalities that hold their own intentions that may not completely align with the protection and preservation of the philosophy, as outlined by the Philosophical Spirit.

[2:21:68] If the Astronist Tradition takes a liberal perspective, the result may be that it allows for a government to enact either jurisdictionalism or vehement jurisdictionalism as sealed by an agreement pertaining to the fact that the essential nature and principles of the philosophy in subject are preserved, its identity is not distorted, as well as the ability of the institution to claim the populations following this jurisdictionalised version of the philosophy as followers of the wider philosophy that the institution oversees.

[2:21:69] The Astronist philosophical tradition advocates that all of these types are inextricably part of freedom of philosophy as a whole and therefore maintains that both should be equally fought for in order to encompass all aspects of philosophical life.

[2:21:70] It is expected that there will be situations in certain countries and regions whereby only one of the two types is accepted which reinforces the importance of advocating for both aspects to be secured for without both aspects secured, it is believed that freedom of philosophy cannot be said to be fully implemented.

[2:21:71] In a country with a state philosophy or national philosophy, freedom of philosophy is generally considered to mean that the government permits philosophical beliefs and practices of other philosophical traditions besides the state philosophy, and does not persecute believers in other traditions.

[2:21:72] Another portion of contemplation in relation to the legal status of philosophy is that of children's rights which involves the principle that all children, due to freedom of philosophy remaining a fundamental human right, hold the right to adhere to or not to adhere to the philosophy that their parents intend for them to adhere to as philosophical alignment is considered to be a personal and individual choice.

[2:21:73] However, the ability of a child to make such a choice is questioned, yet the Astronist Tradition maintains that it is a solemn duty of the child's parents to oversee and discuss with their child their philosophical ideas and alignments.

[2:21:74] Either way, by approaching this topic from this angle, instilled in the child is a good sense of what philosophy firstly is, and the general beliefs of philosophers for each person to have their own unique and personal approaches to philosophical thought, and that every person's opinion counts; this is henceforth known as paedoceremulation which is the stimulation of a child's mind by encouraging them to think philosophically, to question, and to develop their own opinions from a young age.

[2:21:75] One's freedom of philosophy must be upheld, but not in such a broad sense that adherence to this law defies others in the context of public safety, order, health, decency, civility, freedoms of others, and morals.

[2:21:76] The area of study and contemplation known as restrictions on freedom of philosophy concerns the restrictions on philosophy originating from government

prohibitions on free speech, philosophical practice and expression as well as social hostilities undertaken by private individuals, organisations and social groups.

[2:21:77] The Astronist Tradition accepts and advocates for the notion that all philosophies, whether organised or unmethodised, should register with the government as part of their establishment process which is a precursory measure before the Requirements for Establishment can be implemented.

[2:21:78] Due to the mention of the new word, it seems prudent to introduce that which shall henceforth be known as unmethodised philosophy which entails the opposite to an organised philosophy, one that is not represented by an institution, but is instead governed by a society of people that have aligned themselves with the philosophy; the official definition of an organised philosophy should be as lattermentioned in this discourse.

[2:21:79] That which is known as the action and process of realignment, also known as reaffiliation, in an Astronist philosophical context refers to the process of changing one's philosophy to which one is aligned to another philosophy; this should not be confused with the action of reorientation which refers to the changing a belief orientation rather than their entire philosophical affiliation.

[2:21:80] This can be considered the equivalent of religious conversion, but in a realistic comparison, the differences between religious conversion and philosophical realignment, or reaffiliation, are vast yet the freedom to conduct both is entirely upheld and continues to be advocated for by the Astronist philosophical tradition so as to influence The Institution and its operations.

[2:21:81] Moving on, we now come to that which is henceforth known as incorporationism which involves how the Astronist Tradition herein advocates for all supranational organisations and national governments to either create new documents dedicated to the topic of the freedom of philosophy, or to incorporate, as the appellation of the belief orientation suggests, philosophy into the texts already written which ranges from simply including terms "philosophy" to creating specific articles in reference to philosophy as when required due to its distinction from religion and general belief.

[2:21:82] Both are acceptable to the Astronist Tradition though the former is preferred so as to distinguish philosophical belief from that of religious belief, but also infuses greater importance to the topic of the freedom of philosophy and all its cosubstantial elements.

[2:21:83] The ultimate goal of the Astronist Tradition is for the writing and passing of that which shall be suggested to be named as the Convention on Philosophy (colloquially) and officially known as the Convention on the Rights of Philosophies to Enact Promulgation and Adherents to Believe, Practice, and Express Their Philosophical Alignments.

[2:21:83a] This is to be conducted in addition to philosophy as a term being incorporated into all other relative supranational and national declarations of rights.

[2:21:84] Those which are either known as philosophical discrimination or discrimination by philosophy involves treating a person or group differently because of the beliefs they hold about a philosophy, because of the philosophy to which they are affiliated, or because of a particular belief orientation that a person or a group hold.

[2:21:85] This includes when adherents of different philosophies, denominations, schools of thought, or aphilosophical people are treated unequally due to these beliefs, either before the law or in cultural or institutional settings, such as in the context of marriage, employment, housing, or social ostracism.

[2:21:86] Similarly, but also distinctly, that which is known as philosophical persecution or persecution by philosophy refers to an extreme form of philosophical discrimination involving the imprisonment or execution of people that adhere to a different philosophy, denomination, school of thought, belief orientation, or remain aphilosophical, in opposition to the dominantly held philosophy or religious tradition, or by the government's enforcement of religious law.

[2:21:87] It is important to the Astronist philosophical tradition that these forms of discrimination and persecution in relation to philosophical alignment are to be recognised by both national and supranational governments as infringing on citizen's rights of belief, practice, and thought.

[2:21:88] That which shall from now on be known as philosophical intersectionality refers to the analytic framework found in a mainstream and non-philosophical context which essentially identifies that the various different aspects of a philosophy, including the philosophy itself as an entirety, its denominations, its schools of thought, its belief orientations, the philosophies external to it, and even those whom are aphilosophical are all interconnected, interwoven and are cosubstantial towards one another.

[2:21:89] Philosophical intersectionality is a framework that can be used to identify how these various different elements of philosophical belief, lifestyle, governance, and application are cosubstantial and how, if one element was removed, that philosophy itself would not be able to properly function.

[2:21:90] Philosophical intersectionality therefore includes five different methods of approach which shall be known from here on in as interphilosophically, interdenominationally, interschool, interorientationally, and interaphilosophically; interdenominational, interschool, and interorientational forms may also be collectivised under the term intraphilosophical.

[2:21:91] We shall now introduce another small set of new terms, the first of which is numinosity which refers to the extent to which a philosophy, or an aspect of a philosophy strays into religious or spiritual territory.

[2:21:92] That which shall be known as a philosophical name is a mononymous name, so as to follow the mononymous tradition of Astronic Onomatology, given at birth that resembles a extolled philosopher's name either exactly or as a variation of the original and must be one chosen from *The Grand Registerium of Astronic Onomatology*.

[2:21:93] Meanwhile, that which shall be known as cosmic name is a mononymous name given either at birth or during childhood that resembles cosmic progeny or phenomena as a Astronic-style name and must be one chosen from *The Grand Registerium of Astronic Onomatology*.

[2:21:94] Giving a cosmic name is very closely associated with the practice unique to the Astronic onomatological tradition known as proclivism, or proclivic designation which refers to the practice of waiting to providing one's child with their cosmic name in order to understand their personality more so as to provide them with an accurate cosmic name that reflects their personality.

[2:21:95] The name that would be ascribed to a person during this time of waiting, which itself is known as bideation, before their real name is chosen is to be Cosma for either a boy or girl, thus demonstrating the gender neutral culture of many of the names within the Astronic onomatological system.

[2:21:96] It is important to note that under the Astronic onomatological system, a person may have two mononymous names, either a philosophical name or a cosmic name, however, it is encouraged that people stick to just one mononymous name from the perspective of the Astronist Tradition.

[2:21:97] That which is known as philosophical tourism in the context of Astronist Philosophy, especially within occurrology, refers to the industry developed around the demand for traveling to and staying at certain destinations that particularly well known for their philosophical significance, the birthplace of a philosopher for example, or the place in which he or she wrote their works, or conducted a speech.

[2:21:98] Intimism, as it is to be known here on in, comprises of the various forms and expressions of a philosophy that are distinct from the official beliefs, methods, concepts, theories, and practices of the organised philosophy.

[2:21:99] Intimism is expected to compose of a large amount of the aspects of Astronist philosophical belief and practice, especially amongst those that are culturally philosophical and do not concern themselves with the deeper beliefs and practices of the philosophy.

[2:21:100] Intimists are not to be officially measured according to population consensuses and so the true amount of their population is to continue to be undetermined.

[2:21:101] The term of philophoric refers to the bearing the name of a philosopher, a concept, an astronomer, or a person within a philosophical tradition which is a major aspect of the Astronist onomatological system as well as the use of cosmophoric names which relates to the bearing of a name of a cosmic progeny or phenomena which is again another major part of the Astronist onomatological tradition.

[2:21:102] That which is henceforth known as cosmic apathy, encapsulated by the belief orientation cosmoapathism, refers to the notion that The Cosmos, its progeny, and phenomena are also fundamentally characterised by a distinct sense of passiveness, disconnection and disinterest in human affairs, and lacking awareness of human affairs, feelings, and perceptions.

[2:21:103] The practice of astrobooking, also known as philobooking, refers to a creative expression of an individual or a family's philosophical and astronomical journey, values and events that are captured in scrapbooks, diaries or journals that combine the use of photographs, decorated papers, omnidoxical quotes, thoughts, ideas, notions, stories and embellishments such as buttons, ribbon and other creative art media.

[2:21:104] We now come to address a set of three different belief orientations, the first of which is to be known as prevolutionism which is the belief orientation holding that which happened before the creation of The Cosmos stands as the most important aspect to the existence of The Cosmos itself therefore supporting the notion that The Cosmos is subcreational and dependent upon that which occurred or existed before itself.

[2:21:105] Alternatively, that which is to be known as provolutionism is the belief orientation holding that what happened after creation of The Cosmos is the most important aspect to the existence of The Cosmos, thus supporting the notion that The Cosmos is autocreational and independent from that which occurred or existed before itself, or from that which created it.

[2:21:106] Before we begin to explore that which shall be known as metasubstantiation and its different elements, we come to the point in the discourse whereby we should introduced nominationism which refers to the belief orientation holding that certain individuals have been born in particular circumstances and have had particular events involve them due to the fact that they hold a special purpose to begin or complete something in the world, ranging from a initiating a social movement, completing a prophecy, or righting an injustice.

[2:21:107] These people are known as extollers and all those people that are extolled by the Astronist Tradition listed in *The Catalogue of Extolled Persons of the Astronist Tradition* are automatically considered according to nominationism.

[2:21:108] Autonominationism refers to when a person proclaims they are an extoller which they are then obligated to accomplishing that which they claim to have been extolled for; autonominationists are therefore under obligation to fulfil their claim of extollation before they will be recognised as an extoller by any external entity, with that be a person, an organisation, or The Institution of The Philosophy of Astronism itself.

[2:21:109] We must now explore that which has been aforementioned, known as metasubstantiation theory which literally means a change in the way of reaching a conclusion, dealing with the transformation of a society either towards being functioned and identifiable with a philosophy, or moving away from the proximity between a philosophy and the state and wider social life in general.

[2:21:110] Alternatively, that which is known as retrometasubstantiation relates to the process of the transformation of a society from close identification and affiliation with a philosophy and its values and institutions towards aphilosophical values and institutions, typically either choosing a religious, ideological, or secular society and subsequent values and institutions.

[2:21:111] Metasubstantiation is herein split into two types henceforth known as prometasubstantiation, which involves a proximation towards becoming a philosophical society while retrometasubstantiation, as aforeaffirmed, involves a disproximation from a philosophically-centred society.

[2:21:112] Prometasubstantiationism is the belief orientation holding that as societies progress, particularly through modernisation and rationalisation, organised philosophies will replace religions in most aspects of social life and governance.

[2:21:113] Meanwhile, retrometasubstantiationism is the belief orientation holding that as societies progress, there should be a societal transformation and disproximation to a particular philosophy and see its removal from most aspects of social life and governance.

[2:21:114] This is conducted in order to refresh the minds and worldviews of the population with the intention of either returning to the same philosophy with a different outlook, a different philosophy, or an aphilosophical view altogether, thus opting for an ideological, religious, materialist, or a purely secularist view instead.

[2:21:115] Retrometasubstantiation relates to a similar historical process that occurred in effecting religion, during which religion loses social and cultural significance and as a result of secularisation the role of religion in modern societies becomes restricted therefore in secularised societies faith lacks cultural authority, and religious organisations have little social power.

[2:21:116] According to the stance of the Astronist philosophical tradition, those which are known as philosophical symbols form the same legal status as religious symbols because although they refer to different entities, they hold the same functions as one another and it

is by this notion of similar function that the Astronist philosophical tradition considers to be the most important aspect of determining something's nature.

[2:21:117] In conclusion, therefore, philosophical symbols should come under the same jurisdictional scrutiny and legal status as religious symbols.

[2:21:118] That which is henceforth known as the obedience of philosophy is the compliance of a philosophy, especially the institution that is managing it, with the laws of a country in which it is present or is operating, even if such laws prohibit the operations or existence of the philosophy itself.

[2:21:119] That which is henceforth known as traversal refers to the instance in which a philosophy surpasses another in the size of its following, especially of a philosophy that had previously been the underdog in the particular regard of population size.

[2:21:120] That which shall be known as the Edict of Acceptance is an extended version of the pre-Astronist edict of toleration which refers to religious traditions with regards to their interactions with the government(s) of the nation(s) in which they hold a presence.

[2:21:121] The Edict of Acceptance, as its appellation suggests, focuses more on the acceptance of philosophy by a government rather than simply its toleration, though acceptance remains subordinate to the embracement of a philosophy by a government.

[2:21:122] Under the Edict of Acceptance, there exists an important element henceforth known as tacitality which maintains that a government should both inaugurate a philosophy as well as accept it without having to lionise it, especially of a philosophy that is not a state philosophy, or in a country that is majoratively aphilosophical; tacitality refers to the extent to which the government both achieves and maintains its adherence to the Edict of Acceptance.

[2:21:123] That which is henceforth known as philosophical appreciation refers to a rise in a person's perceived value of the philosophy to which they are aligned the longer they are aligned to it.

[2:21:124] Furthermore, that which is shall be known here on in as adherent appreciation refers to a rise in the amount of adherents to a philosophy, a denomination, a school of thought, or belief orientation across a measured period.

[2:21:125] The belief orientation associated with both of these appreciations is to be known as appreciatism which holds that the development of the appreciation of a philosophy in either of these contexts should be the continuous goal of the institution managing the philosophy as well as the adherents following it.

[2:21:126] Meanwhile that which is known as philosophical depreciation is the diminishment of a person's perceived value of the philosophy to which they are aligned the longer they are aligned to it.

[2:21:127] Additionally, adherent depreciation is a decrease in the amount of adherents to a philosophy, a denomination, a school of thought, or belief orientation across a measured period.

[2:21:128] Depreciatism is the belief orientation associated with these depreciations holding that depreciations in both of these contexts must occur in order for their to exist perspective on the philosophy in question.

[2:21:129] Essentially, for there to exist depreciations in philosophy demonstrates a lack of understanding about the philosophy which means that the institution managing the philosophy as well as its remaining adherents should work towards the reaffirmation of the philosophy to the masses.

[2:21:130] An organised philosophy is a philosophy that is systemically run by an institution that claims sovereignty and authority over the philosophy, or is officially provided with this power by the founder of the philosophy, typically in the founding text.

[2:21:131] For example, the instance in which The Institution of The Philosophy of Astronism is provided with authoritative powers by the Omnidoxy as the founding text of Astronism.

[2:21:132] A national philosophy is a philosophy that is nationally adhered to but does not hold administarian powers.

[2:21:133] A state philosophy is a philosophy that is both nationally adhered to and is provided with administarian powers.

[2:21:134] Meanwhile, that which is to be known as philosophocentrism is the belief orientation holding that philosophy must play and is poised to play a central role in society structure, function, development, and progression.

[2:21:135] A philosophocracy refers to the instance in which a single philosophy plays an active and fundamental role in determining the orientation of a government no matter the political part in power.

[2:21:136] However, that which is known as a multiphilosophocracy refers to the instance in which a multitude of philosophies play an active role in determining the orientation of a government no matter the political party in power.

[2:21:137] The final aspect of this discourse that we shall address before we explore the relationship between Astronism and positivism is that which shall be known as pseudophilosophy.

[2:21:138] That which is described as a pseudophilosophy relates to the characterisation of what a philosophy should be in a society and whether a philosophy should be recognised either by the government itself, or by a government-funded organisation to distinguish between philosophies and pseudophilosophies.

[2:21:139] According to the Astronist Tradition, as inspired by philosophers' past, pseudophilosophy has ten newfound and herein ascribed characteristics:

[2:21:139a] That which relies upon rationally opposing arguments to support its central notions.

[2:21:139b] That which is generally rationally disconjectured.

[2:21:139c] That which attempts to halt enquiry and opposition into its system of thought.

[2:21:139d] That which bases its thought system primarily on speculation and superstition.

[2:21:139e] That which serves to the inclinations of human authority.

[2:21:139f] That which superiorises tradition over reasoned judgement and rational thought.

[2:21:139g] That which develops its thought system upon negative consequences for non-adopters; a system of fear.

[2:21:139h] That which makes an effort to obscure its beliefs and ideas from those whom do not adhere to it so as to make a secret of them.

[2:21:139i] That which holds beliefs and ideas within its system of thought that are fundamentally pernicious to others, or are neutrally found to be immoral.

[2:21:139j] That which exists without following a coherent method of deriving notions and instead claims the sources of its beliefs and conclusions to come from events, proclamations, or unverified phenomena.

[2:21:140] The Astronist Tradition continues to find difficulty in outcasting certain philosophical systems as pseudos and it still remains cautious in the creation of a formula for philosophical systems, as has been ascribed above.

[2:21:141] The difficulties found are with regards to the nature of philosophy for the fear remains that by outcasting certain philosophies because they do not meet criteria, does this fundamentally oppose the nature of the Philosophical Spirit?

[2:21:142] Furthermore, the inclusive nature of philosophy itself is brought into question when some authority begins to decide what can be considered a philosophy and what is considered a pseudophilosophy.

[2:21:143] Conclusively, the Astronist Tradition does not oppose the designation of pseudophilosophies, but instead expresses the need for caution when conducting such designations so as to threaten the nature of philosophy or to deviate from the principles of the Philosophical Spirit.

[2:21:144] It is also important to note that the above criteria for what constitutes a pseudophilosophy should only be applied within the context of the Astronist philosophical tradition; if it is applied outside of this context, we cannot of course control this, but it should be said that the Astronist Tradition does not intend to be the overarching authority for what is constituted as a philosophy or a pseudophilosophy.

[2:21:145] The Tradition maintains that this should remain a role either for the government as advised by philosophers, or by a philosophical organisation which philosophical systems and traditions considered to be the authority in philosophical designations.

[2:21:146] Pseudophilosophy has also been described as an “insufficient commitment to the pursuit of truth” and it was after reading this that sparked another major definitional distinction between religion and philosophy and their fundamental purposes.

[2:21:147] Therefore, herein, the Astronist philosophical tradition understands philosophy to be the pursuit of truth while religions claim to be the truth; perhaps it is in this notion that we see the clearest and most important distinction between these two whilst also continuing to understand their close proximity to one another which this notion does seem to.

[2:21:148] Absolute truths and universals are firstly opposed to the nature of philosophy and are therefore unaccepted and secondly, they cannot exist because they are created by limitation (human mind) within limitation (The Cosmos) therefore absolutisms cannot exist by human creation because of the inferior instruments and circumstances in which they are formed.

[2:21:149] Moreover, the Astronist philosophical tradition does not deny the existence of absolutes for it remains fundamental to the Astronist Cosmology that there exists a certain order, nature, procedure, and progress collectively manifested and appellated as The Cosmos, outside which The Universe exists with its own absolutes and within which many other cosmoses exist with their own unique absolutes.

[2:21:150] The issue comes when humans, as limitations within limitation, create absolutes for the Astronist Tradition maintains that for something to create an absolute, it must itself be absolute, and absolute humans certainly are not and therefore, humanity cannot create truth, only The Cosmos can create truth for we exist within it and we must follow its laws.

[2:21:151] Now that we have explored the Astronist viewpoint of the topic of pseudophilosophy, we come to an ever deeper contemplation of the relationship between an Astronist understanding of knowledge, perception, and sensory experience and that which can be described as a positivistic understanding.

[2:21:152] For those unaware, positivism refers to the principle holding that only knowledge derived from our sensory experience is permitted as certain knowledge.

[2:21:153] Meanwhile, that which is known as interpretivism, also known as antipositivism alternatively proposes that the social realm cannot be studied with the scientific method of investigation applied to the natural world and that investigation of the social realm requires a different epistemology.

[2:21:154] Astronism considers positivism to be fundamentally limiting itself as it remains dependent upon the human ability to observe, perceive, and sense rather dependent upon actual authority, not meaning god, as a manifestation of human creation, but of The Cosmos, as the actual authority of certitude and truth.

[2:21:155] The very notion that there are certainties is rejected by the Astronist philosophical tradition, but these “certainties of knowledge” are formulated by sources of such limitation that they can only be accurately described as incertitudes.

[2:21:156] If a source limited by knowledge speaks of certitude in any context, it remains both rational and logical to either dismiss such claims, or to challenge the source of their perception and experience in order to derive the context from which such certitudes are proclaimed.

[2:21:157] Astronism can therefore be described as contextualistic in this circumstance as it emphasises the next for positivists to look towards the context of the source of the sensory experience upon which their empiricisms are founded.

[2:21:158] Astronism opposes empiricism and maintains that conclusions and certitudes cannot be made by human sensory experience and perception because these are ultimately and inextricably perspectives rather than absolutes.

[2:21:159] A perspective cannot be an absolute and because the entirety of human sensory experience rests upon perspective, the Astronist Tradition maintains the achievement of certitude through sensory experience in any context is ultimately unattainable for perspective cannot be truly said to be without distortion.

[2:21:160] The Astronist Tradition goes on further to state that the closest that humanity or any other sentient species can get to the attainment of absolute certitude is through the cumulation of knowledge, experience, and a multitude of perspectives across generations and cultural spheres but it ultimately maintains that this is a continuously movable attainment which is known as dispassation (dispass), and is encapsulated by the belief orientation of dispassism.

[2:21:161] In this, we see a connection between the nature of truth and the nature of The Expanding Cosmos for even travelling a speeds of magnitude, we shall never be able to escape The Cosmos due to the continual acceleration of its expansion; the unreachability of beyond The Cosmos and the fact that it cannot be overtaken by that which exists within it draws a parallel to the nature of truth and certitudes and our struggle to attain them.

[2:21:162] Astronism accuses positivism of falling into the trap of the “anthropic ego” or “anthropoegocentrism” wherein humans consider themselves to be the authorities of truth, certainty, and the outliners of absoluteness, to which the essence of the Astronist philosophical tradition is opposed because it maintains that human perception, experience, and knowledge are fundamentally, intrinsically, and continuously limited.

[2:21:163] Astronism does not oppose positivism when positivism speaks of The Cosmos (as it is referred to in an Astronist context) as being operated according to general laws, but it finds difficulty in accepting the next stage of positivism which is reliant on sensory perception and experience of humans (or other sentient beings) in order to make conclusions about such general laws, as well as how society should be governed.

[2:21:164] Astronism agrees with negativism in the notion that society and nature should be approached by different epistemologies for to approach to different subjects with the same knowledge premise is troublesome for accurate attainments.

[2:21:165] That which is considered to be a universal truth or law can in fact be better described as an opinion based upon human sensory experience and perspective, which remains riddled with issues of distortion and incredibility.

[2:21:166] Empiricism is understood to be the best way for humans to presently understand the world, but it is not considered to be the absolute way as perhaps it is made out to be because empiricism is ultimately dependent upon human perception rather than objective authority of The Cosmos.

[2:21:167] Fundamental to negativism, or antipositivism, is the belief that the concepts and language researchers bring to their research shape their perception of the social world under investigation.

[2:21:168] Furthermore discussion on pseudophilosophy, as initiated by our contemplations on positivism the Astronist Tradition rejects the notion that any philosophy that does not meet the criteria of analytical or positivistic philosophy is to be

designated as a pseudophilosophy is tantamount to the defiance of the nature of philosophy itself; herein we see two traditions of philosophy attempting to dominate the subject which is entirely in opposition to the principles of the Philosophical Spirit.

[2:21:169] Pseudophilosophy as a term should be free to be used to criticise all philosophies, denominations, concepts, theories, texts, and schools of thought for this remains aligned with the principles of the Philosophical Spirit, but the ostracism of certain traditions that do not align with analytic philosophy or positivism is deemed to be countering the nature of philosophy.

[2:21:170] Out of all other ways in which pseudophilosophy as term is applied to criticise, the Astronist philosophical tradition agrees except in the instance when philosophies are not to be considered philosophies simply because they do not conform to the criteria of two presently dominant traditions.

[2:21:171] Pseudophilosophy criticises dogmatism, but by this notion, such approaches to the application of pseudophilosophy create their own dogmatisms by not allowing other philosophies that do not meet the criteria of two dominant traditions to flourish.

—

[2:21:172] One mistake does not constitute one's life to deteriorate; it is instead a multitude of mistakes and continuously not learning or not taking heed from them that deteriorates one's life through the cumulation of mistakes over time, thus causing pernicious impact on the individual.

[2:21:173] If we are to progress, it is a requirement of all of humanity to accept our physical insignificance in comparison to The Cosmos, its progeny, and phenomena; we are subordinate to them all and it is this hierarchy that shall always remain.

[2:21:174] That which goes by many names reflects the diversity of the actions, thoughts, and beliefs of the human sentience; Astronism, as it is herein and now principally known, shall take new and appellative forms unimagined across the course of its existence.

Astronism, Feminism & Masculism

[2:22:1] The Astronist Tradition intends to form Astronism into a strong advocate for Feminism, especially the Astronist understanding of feminist philosophy, but also intends to create alliances with feminism so to further its principles, values, and ambitions.

[2:22:2] Astronism and feminism hold many aligned beliefs with feminist philosophy holding a strong undercurrent in forms of Astronist culture, including literature, art, architecture, media, as well as philosophy.

[2:22:3] However, the relationship between Astronism and feminism is expected to be tumultuous despite the fundamental similarities of principles held between these two forms of philosophy; this is expected by the Tradition because of the long histories that both of these movements are to have, as well as due to the small number dissimilarities between them.

[2:22:4] Firstly, we must explore that which shall be known as Astronic Feminism, or Astro-feminism which includes demonstrations of feminist philosophy from within these different character philosophies herein listed:

[2:22:5] Harrietarianism - the role of Harriet Millette in feminist philosophy as a representative of femininity in Astronist Literature in turn forming that which shall be known as Harrietarian feminism.

[2:22:6] Ellenarianism - the role of Ellena Chadwell in feminist philosophy as a representative of femininity in Astronist Literature in turn forming that which shall be known as Ellenarian feminism.

[2:22:7] Zaranianism - the role of Zara Litchford in feminist philosophy as a representative of femininity in Astronist Literature in turn forming that which shall be known as Zaranian feminism.

[2:22:8] Jessianism - the role of Jesse Millette in feminist philosophy as a representative of masculinity in Astronist Literature, especially when placed in conjunction with femininity, in turn forming those which shall be known as Jessian conjunctionism and Jessian masculinism.

[2:22:9] Oliverianism - the role of Oliver Mehler in feminist philosophy as a representative of masculinity in Astronist Literature, especially when placed in conjunction with femininity, in turn forming those which shall be known as Oliverian conjunctionism and Oliverian masculinism.

[2:22:10] Due to the introduction of the term conjunctionism herein, it only seems prudent and proper for a mature discourse to define and the term; conjunctionism refers to the

instance in which two or more related topics are considered according to the views of a third party.

[2:22:11] In the context of this discourse, the two topics are femininity and masculinity experience a conjunction when they are considered according either to a Jessian or Oliverian perspective.

[2:22:12] Further to these character philosophies and their infusement with general feminist philosophy, it is important to introduce two newly founded disciplines of study and areas of contemplation to be known as feminology and maleology, the former of which philosophical explores the nature of femininity, girlhood, womanhood, and matronhood while the latter explores the nature of masculinity, boyhood, and manhood.

[2:22:13] Feminological and maleological studies may also explore wifehood and husbandhood respectively in the context of marriage, as well as how the sociological circumstances, roles, and titles affect masculinity and femininity.

[2:22:14] Feminology can be omnidoxically defined as the exploration of the ever-evolving familial and societal role of women, the nature of femininity, and how sociological labels, such as wife, impact upon the status of women and their equalities, liberties, and successes under a particular philosophy, religious tradition, or ideology.

[2:22:15] Meanwhile, maleology refers to the deep-rooted philosophical contemplation and discussion of the nature of masculinity and all sociological elements of being male in human societies, as well as the exploration of the future of boyhood and manhood, and how these are to interact with girlhood and womanhood.

[2:22:16] One of the main areas of contemplation within the auspices of feminology is the consideration of the pre-Astronist belief orientation known as complementarianism which relates to a view of the roles of men and women in a society.

[2:22:17] The complementarian approach is characterised by the notion that men and women are “ontologically the same, but they are functionally different”, however, the Astronist Tradition diverges from this orientation that is largely followed by religious traditions as the Astronist Tradition introduces that which is to be henceforth known as unquitarianism.

[2:22:18] Astronism forms unquitarianism in direct response to complementarianism and espouses that men and women are ontologically the same, are functionally the same, yet are individually unique”.

[2:22:19] Unquitarianism holds that the categorisation and stereotyping of people according to their gender is neither accurate nor morally upstanding which pertains to its opposition of complementarianism.

[2:22:20] The unquitarian accusation of inaccuracy towards complementarianism derives from the notion that to label an entire gender of people is far too much of a generalisation and holds that the majority of generalisation have the tendency to be incorrect, or at least inaccurate from the reality.

[2:22:21] The unquitarian accusation of the immorality of complementarianism is rooted by the previous accusation of inaccuracy, but expands upon it by notionising that there is an ethical issue in the generalisation of an entire gender group for it is offensive, or at least disenfranchising for those whom do not conform to the generalisation.

[2:22:22] However, unquitarianism also do not entirely align with egalitarianism because that ultimate equality is not considered to emphasise the individual enough and the unique talents, abilities, interests, opinions, ambitions, and feelings of individual people, hence the formation herein of unquitarianism which successfully strikes a middleground between the two ends of the spectrum.

[2:22:23] Despite this, one could argue that unquitarianism is more egalitarian in nature as it could be used to support the notion that each individual person holds unquity and therefore everyone is equal by the notion that they all hold unquity, despite that fact that people's unquities differ from individual to individual.

[2:22:24] Unquitarianism is characterised by a transcendence beyond both stereotyping and categorising gender roles and beyond the equalisation of gender roles as if there does not exist individuals within these categories; unquitarianism therefore focuses on each individual as a separate case for their own roles and does not use the labels and categorisations of the past to formulate the roles and identities of genders in the present and certainly not in the future.

[2:22:25] Unquitarianism therefore understand that some women may wish to hold leadership roles, recognises that these individual women can fulfil such roles in an equal capacity to men, but also that some women not wish to achieve such roles of leadership and instead wish to remain subordinate, or wish to hold inferior roles, or wish to enter roles in which men lead.

[2:22:26] Essentially, unquitarianism approaches the question of the roles of men and women by transcending beyond the stereotypes of gender and looking towards the unquities of the individuals whom happen to be a certain gender.

[2:22:27] Unquitarianism rests at the heart of the Astronist approach to the roles of different gender groups within the context of The Philosophy, but also in the context of wider society.

[2:22:28] Unquitarianism does not set particular roles for women and men in society beyond their biological abilities (giving birth for a women or a man impregnating a woman for example), but instead allows for the unquitisation of roles in society for

women and men whereby each individual person is able to choose their role in society without being stereotyped because of their gender and being categorised according to that.

[2:22:29] Uniquitarianism diverges from complementarianism by the notion that it prescribes roles according to the three unique elements of a person; ambitions, interests, and talents rather than gender, religion, sexuality, locality, race, or class.

[2:22:30] Complementarianism is also opposed to by uniquitarianism because it assigns primary roles for men and secondary roles for women and considers the ultimate authority of decision-making processes to be lay with men.

[2:22:31] Egalitarianism holds that men and women are all equal which is not opposed to as a principle by uniquitarianism, but for uniquitarians, this is not accurate or meaningful enough because it does not hone in on individuals who are, according to uniquitarians, “ontologically equal, but not functionally equal”.

[2:22:32] Uniquitarians hold that men and women as collective groups should be and are equal, but this considered to be a sweeping statement by egalitarians that holds no substance for reality which is instead governed according to individuality rather than collectivity.

[2:22:33] Therefore, uniquitarians hold that each individual is only equal in the principle that we all hold unique ambitions, interests, and talents, but we are not equal in those ambitions, interests, and talents because certain individuals are more ambitious than others, hold more abundant interests than others, and hold more talent than others; therefore, uniquitarians ironically hold a unique place by espousing this notion for, as aforementioned, it exists between the two extremities of complementarian and egalitarian thought.

[2:22:34] However, Astronism also as an entirety isn't aligned with egalitarianism despite it being egalitarian in principle and nature for there are aspects in other disciplines separate from those of a feminological and maleological context wherein Astronism holds a uniquitarian standpoint and these such positions relative to different topics are expressed, either directly or indirectly, through various examples in The Omnidoxy.

[2:22:35] A very important element of this discourse that certainly remains cross-disciplinary is that which shall henceforth be known as transcendarianism.

[2:22:36] Transcendarianism is a wide-ranging collectivity of ideas and belief orientations that feature the instance in which a concept or a belief transcends those that are presently available or were created prior to its own existence.

[2:22:37] Transcendarian approaches can be identified to exist throughout the entirety of the Astronist philosophical tradition, especially within Astronism, typically in order to define the concepts and beliefs of Astronism from those of other philosophies, or of

religious traditions so as to further distinguish those of an Astronist nature from those of a pre-Astronist or non-Astronist nature so transcendarianism holds a literary function as well as a conceptual function.

[2:22:38] Transcendarianism is a cross-disciplinary collectivity of ideas and is usually, but not always, identified by the use of the notion of the transcendence of an idea beyond those of prior existence.

[2:22:39] Transcendarians are also philosophically concerned with the nature of transcendence in a conceptual sense which is usually addressed according to each individual case of conceptual transcendence.

[2:22:40] Conceptual transcendence is defined as the instance in which a newly formed concept or belief reaches beyond the capacity or periphery of a previously formed concept or belief, usually by creating a new approach to the topic addressed.

[2:22:41] Transcendarianism, rather than being a belief orientation in and of itself, is instead a collection or category of different belief orientations that share the commonality of their transcendence beyond previous concepts and beliefs, either by defying the previously laid down logic of such concepts/beliefs, or through the creation of an entirely new idea that resolves around the issues of previously created concepts and beliefs.

[2:22:42] Despite the fact that the relationship between philosophy and society and religion and society differ dramatically from one another, both in theoretical and practical instances, but in the context of women's role in society, Astronism takes a prominent role in response to how other philosophical and religious traditions approach the same issue.

[2:22:43] Women's role in society according to Astronism is based upon those which are collectively known as The Five Principles which form the foundations of how Astronists are to view women in society and how women are to view themselves and subsequently act according to such principles which are also to be reflected in governments and organisations that follow Astronist principles.

[2:22:44] The first of these principles has already been introduced in this discourse and exists as the central element to the Astronist approach to understanding the role and identity of women, especially so in relation to men and can therefore be described the gender-centred element of The Five Principles.

[2:22:45] The principle of which I speak is of course unquitarianism which upholds the notion that women must hold unquity in relation to their male correlatives.

[2:22:46] The second of The Five Principles is that which shall henceforth be known as nonconsequentialism which upholds the notion that women must have absolute freedom to do as they please unless such actions negatively impact another person such as in the

context of abortion which pertains to the ethical grounds upon which the Astronist Tradition opposes the practice of abortion.

[2:22:47] The nonconsequentialist approach counternotions any notions suggesting that the opposition to abortion is automatically oppositional to the protection of women's rights as it argues that women, in the protection of their own rights, should defend the rights of others, especially their own offspring; the securement of womanhood is the securement of the rights of those around surrounding the woman.

[2:22:48] That which is to be henceforth known as vicinism is the next of The Five Principles and pertains to the notion that women must be able to dress as they do wish according to their own principles and values of personal modesty and social decency.

[2:22:49] Vicinist approaches to the role of women uphold that the way in which women dress reflects their ability to function in a society and how they are to express themselves to others and therefore, the freedom of dress for women in accordance to their own personal ethicality is of the utmost important to the securement of the rights of women on a societal scale.

[2:22:50] The fourth of The Five Principles is that which shall henceforth be known eleutherism which notionises that women must be able to explore philosophy, astronomy, and enknowledge themselves about and believe in The Cosmos without fear of persecution or ostracism.

[2:22:51] The Astronist Tradition vehemently upholds the notion that the contributions that women will make to the Tradition will fundamentally support the Tradition in its rise to prominence and in its development.

[2:22:52] Unlike some elements of religious traditions, the Astronist philosophical tradition not only welcomes the contributions of women to The Philosophy, but vehemently encourages all of their contributions, especially because the founder of the Tradition is of course Cometan and so the influence of women is certainly required.

[2:22:53] A society or system of thought in which women are able to express their ideas and opinions is a complete system of thought and an enriched tradition that the Astronist Tradition is intended to emulate from hereon in.

[2:22:54] A system of thought without the contribution of women is incomplete and is a system of thought in which eleutherism isn't upheld or achieved.

[2:22:55] The contributions that women make to a philosophy shall enrich that philosophy and this is something that remains immensely important to the entirety of the Astronist philosophical tradition.

[2:22:56] Astronism is fundamentally predicated on the prominence of women in the development of The Philosophy and clearly understands that, from its inception, there exists an imperative need for the ability of women to express themselves and have their ideas listened to and implemented.

[2:22:57] The final element of the Astronist approach to understanding the role of women in society is to be henceforth known as headshipism which is characterised by the notion that women should hold the freedom to lead the family or the society if they so wish if they hold the abilities, talents, and knowledge to do so.

[2:22:58] The Five Principles that we have introduced refer to the roles of women considered by the Astronist Tradition in relation to society, but now we turn to address the other aspect of this topic involving women's role within the context of Astronism.

[2:22:59] Unlike in many religious traditions, women hold the freedom to take up leadership roles in all aspects of Astronist life and within the auspices of the Institutional elements of The Philosophy.

[2:22:60] Relating to this topic, the motto here is that this is a "non-issue" because the foundations of Astronism are modern and the role and identity of women are both respected, protected, and championed throughout all aspects of Astronist Philosophy, the depiction of women in The Philosophy, and as reflected in the practices and beliefs of The Philosophy in Astronist lifestyles.

[2:22:61] The position of women within Astronism is diverse, which remains a characteristic of the rest of The Philosophy, but the ability of women to hold leadership roles is herein considered not only to be a distinctive characteristic of Astronism, but another factor of the differences between religion and philosophy, the latter of which is notable for its greater tolerance, freedom, and higher positioning of women by the Institutional elements of The Philosophy.

[2:22:62] Astronism is, from its inception, not a philosophical system organised according to a matriarchy or a patriarchy, but is instead predicated on that which is herein introduced as an anthroparchy.

[2:22:63] An anthroparchy emphasises ambition, interest, and talent in humans rather than superiorising humans according to the gender with which they were born, thus demonstrating the strong unquitarian identity of the Astronist philosophical tradition.

[2:22:64] Emphasis is not placed on the gender that one was born and neither a person's race, religion, or nationality, but instead the unique combination of interests, abilities, ambitions, and talents of each individual.

[2:22:65] In all forms of philosophical, naological, and occurrological practice, neither are women nor men provided with any greater status or importance according to their

genders, but instead, they are merited according to the ambitions, interests, and talents that they hold and it is this distinct unquitarian quality of Astronism that the Tradition and The Institution are dedicated to promoting.

[2:22:66] Of course, returning to the foundations of The Philosophy, Astronism holds cosmocentricity to be the most important concept and from the perspective of The Cosmos, the gender of a person is neither significant to their abilities nor their role in a society.

[2:22:67] If we think on a cosmic scale, it is believed in sentientism that there are intelligent beings on many other worlds in The Cosmos which, due to the unique differences in their evolutions, there most likely exists beings of unimaginably different genders of all abundances.

[2:22:68] This notion essentially puts into perspective the triviality of the woman-to-man subordination issue that has plagued the majority of the history of religious traditions and narrates how the future will be predicated post-omnidoxically and also perfectly demonstrates how Astronists are to consider such issues because of how these are shown as trivialities when they are compared to cosmic proportions.

[2:22:69] This is not to say that women's issues and rights are not of importance in an anthropic context because they most certainly are, but Astronism disagrees with instances that assign the subordination of women as a divinely ascribed precept, or more generally, the equation of any specifically anthropic issues to cosmic, universal, or divine scales.

[2:22:70] Any instance of the ascription of anthropic or generally non-cosmic scale issues to cosmic, universal, or even divine scale issues is to be henceforth known as exaggerationism and is rampant throughout pre-Astronist philosophical and religious traditions and it remains something to which the Astronist Tradition is opposed.

[2:22:71] Womanhood in Astronism is difficult to measure because of the structure of The Omnidoxy herein which is cosmically-oriented rather than anthropically-oriented.

[2:22:72] This means that The Omnidoxy mentions little about specific human beings while books of some other philosophies and especially so of religions are anthropically-oriented and base their entire systems of thought and practice around people, what people do, what they have said, and what they have contributed in recorded events, however, Astronism is different in this respect.

[2:22:73] This difference in orientation for The Omnidoxy directly translates to the difference in the orientation of Astronism from that of many religious traditions that not only speak of the actions and words of people at length, but are entirely dependent upon them for their systems of thought to exist.

[2:22:74] Meanwhile, Astronism is cosmically-oriented therefore it is dependent upon the actions of The Cosmos, its progeny, and its phenomena with the actions of people often collectivised as the actions of humanity as a whole, which still remain notably inferiorised from those of a cosmic nature and largely pertain to space exploration and other cosmically-themed and connected events.

[2:22:75] For this reason, other than this discourse herein that addresses the various different Astronist approaches to understanding the identity and role of women, there exists very few instances of specific accounts of either men or women in Astronism primarily because of its cosmical-orientation.

[2:22:76] Meanwhile, especially in religious traditions such as Christianity, the actions and events of individuals such as the resurrection and crucifixion of Jesus are essential predicators for the religion and without them, that particular religious tradition would not have formed.

[2:22:77] Perhaps this fundamental difference in contents and orientation is not only characteristic of Astronism, but a defining factor of difference between philosophy and religion in a wider sense as religion remains dependent upon human interactions with divine elements while philosophy is dependent upon non-anthropoc phenomena that may or may not be directly divinely connected.

[2:22:78] As aforementioned, the contributions made by women to the development of Astronism shall form an appellation for Astronism to be known as the women's philosophy.

[2:22:79] Astronism is to be the first philosophy to be officially attributed with this particular appellation, but a women's philosophy is a philosophy that is particularly supportive of feminism and is a philosophy that particularly understands women to be influential followers that are instrumental to the development and promulgation of the philosophy.

[2:22:80] In this regard, Astronism is particularly characteristic of being a women's philosophy due to the aforeaffirmed notion that women are encouraged by The Institution to widely contribute to the development of Astronism.

[2:22:81] That which is known as implanted feminism refers to the creation of a piece of art, the conduct of an act, or the creation of a philosophy for the purposes of women's rights and is defined from embedded feminism as implanted feminism is genuine while embedded feminism generally is not.

[2:22:82] The representation of women in Astronist artforms, such as in depictions, literature, and in philosophy are considered to be forms of implanted feminism and each hold allegories for the promotion of the rights of women.

[2:22:83] That which is to be henceforth known as depictional/representational feminism refers to the various instances in which someone may come to a conclusion about feminist theory or make a notion about the femininity of an Astronist character and the views of the author on feminism by how the character is depicted in art (depictional) or represented in a book (representational).

[2:22:84] This form of feminism is especially important to the development of the depiction of women in Astronism and wider Astronist forms of art and links theoretical forms of feminism with depicted forms of feminism.

[2:22:85] The issue of the miseducation or the complete non-education of women and its degrading effects on wider society have been well documented by international organisations in recent decades, but the issue of the lack of female education still persists in many parts of The Earth.

[2:22:86] Specifically to the context of philosophy, the education of women and girls of philosophy, especially for the Astronist philosophical tradition, is of immense importance to the development of this tradition of philosophy; the Astronist philosophical tradition remains an inclusive tradition of philosophy that incorporates the contributions of women.

[2:22:87] The education of all women and girls is absolutely essential to the development of a society that is set to potentialise all of its citizens and the resources of the land.

[2:22:88] This same principle is transferrable to the context of a philosophy and understands that the potentialisation of a philosophy is intrinsically linked to the education of women and girls for females that are educated are females that are able to philosophise and contribute to the development of Astronism.

[2:22:89] The Astronist philosophical tradition and The Institution that holds proprietorship over The Philosophy are dedicated to the prevention and eradication of some of the worst violations of the rights of women for the greater development of The Philosophy itself and for the betterment of women worldwide which shall work towards greater levels of progression for wider humanity.

[2:22:90] The practice of female genital mutilation is vehemently opposed to by Astronist social teaching and the Astronist Tradition is poised to work towards the eradication of the practice and to teach those whom do practice it of its terribly abusive nature.

[2:22:91] That which is known as femicide refers to the targeting of women and girls to kill purely because of their gender and remains a rampant issue throughout many countries and is of course linked to reduced levels of the protection of women's rights in such countries and it is the penchant of the Astronist philosophical tradition and The Institution to reduce levels of femicide.

[2:22:92] For the reduction of femicide, the reduction of gun ownership and the greater strictness in gun laws is essential and must be implemented on a transnational basis in order to curb levels of femicide.

[2:22:93] Also, the strengthening surveillance and the sensitisation of the police to femicide are two other methods for the reduction of femicide worldwide which are to be funded by The Institution in countries that most require such implementations.

[2:22:94] The establishment of a national philosophy that supports feminist theory is considered to be a fundamental element to the reduction of femicide and its cultural entrenchment in certain countries that are severely lacking in the development and protection of women's rights.

[2:22:95] The suffrage of women is a central element to the initiation of the women's movement and for this reason, the address of suffrage in this discourse is essential and relates to the circumstance in which women can vote freely without fear of ostracism or violence.

[2:22:96] Beyond this suffrage also closely relates to the instance in which women are able to express their opinions and feelings and are able to develop and implement their ideas for the betterment of the wider society without of ostracism or persecution from other citizens or from the government itself.

[2:22:97] Not only does the Astronist Tradition support the protection of women during voting periods, but intrainstitutionally, women are encouraged to vote for the conduct of The Institution.

[2:22:98] As aforeaffirmed, women are able to hold the highest of positions within The Institution therefore demonstrating Astronism as a philosophical system that is distinctly aware of the negative effects of not allowing women to vote and participate within an organisation.

[2:22:99] As well as this, Astronism also comprehends the hardships that suffragettes had to endure and therefore, upholding the principles for which they stood is important so as not to have let them die in vain and the way in which this principle is implemented institutionally is through the encouragement of talented women to contribute and uptake the highest positions within The Institution.

[2:22:100] That which shall henceforth be known as gender unicity is an Astronist adaptation of the concept of gender equality and refers to the notion inspired by unicityarianism that gender cannot (practically) and should not (ethically) be used as a parameter for notionising whether a person is a certain way or should act a certain way.

[2:22:101] Instead, every person suitably fits into their gender uniquely and expresses their gender uniquely which may not always correspond with the societal normalities of gender

and any deviation from that normality does not mean to suggest that they therefore hold a certain sexuality or an entire identity or personality just based upon how they express their gender.

[2:22:102] Gender uniqueness is an essential component to the notions within unquitarianism and pertains to the expression of gender and the unique way in which every person expresses their gender; this is the achievement of gender uniqueness.

[2:22:103] The notion of girl power in Astronism is present and expressed from within Astronist Literature, especially so amongst the three females of The Five Astronist Characters.

[2:22:104] Further to this, the depiction of girl power in philosophical adverts and promulgative materials is expected to be another popular avenue for promulgators in order to attract women, girls, and mothers to The Philosophy; girl power refers to the depiction of strength for young women and is essential to the formation of the Astronist version and perspective on feminism.

[2:22:105] That which is to be known as the non-philosophicality of marriage refers to the notion propounded by the Astronist Tradition that marriage remains a solemnly religious ceremony which pertains to another of the defining elements of a religion to organise and lead marital ceremonies.

[2:22:106] Philosophical elements may be incorporated into the marital ceremony, but the ceremony itself must remain either religious or secular, such as a civil partnership for example.

[2:22:107] This is another element of difference between a philosophy and a religion with the organisation of marriage remaining one of the prominentmost qualities of a religious tradition.

[2:22:108] It is important to note that marriages are not philosophical, but they remain non-philosophical so marriages are not of concern or responsibility for philosophies to organise or address.

[2:22:109] However, it is also important to note that Astronist social teaching does support the notion that couples should marry for the establishment of a strong family unit for marriage is considered the central bond of the family.

[2:22:110] Therefore, despite the Astronist Tradition not organising or addressing marriage due to it residing within a religious territory, the Astronist Tradition does support the general notion of marriage for the purpose of bonding the family.

[2:22:111] Honour killing is a practice that must be actively discovered wherever it exists and must be extinguished wherever it does reside, both institutionally and in the context of a family.

[2:22:112] Misogyny is a practice that, in Astronist social teaching, is vehemently discouraged and wholly frowned upon due to its encouragement of abuse towards women and the general support it provides to the subordination of women in relation to men.

[2:22:113] Polygamy is a practice that is vehemently opposed to by Astronist social teaching especially due to the correlation of domestic abuse and femicide with such practices.

[2:22:114] Language reform, which refers to the removal of he and she pronouns, is opposed to by the Astronist philosophical tradition, but there are many instances in The Omnidoxy where gender neutral terms have been used such as the use of humankind rather than mankind.

[2:22:115] In some cases, their creation actually demonstrates the awareness of Astronism of the effects of gender-based terms and therefore opts for gender neutral terms as an alternative.

[2:22:116] However, the Astronist Tradition does not support the imposition of language reform law, nor does it believe in the imposition of language reform to individual conversations; only in published works, such as books, articles, and others.

[2:22:117] Astronism opposes the policing of language as that equates to a form of the repression of expressions and creativity, of which language remains the primary medium of.

[2:22:118] Astronism makes a distinction between the imposition and the evolution of language and does not consider the neutrality of pronouns to be a practical, nor an implementable component of language reform.

[2:22:119] Astronism does not accept or recognise the imposition of gender neutral pronouns in wider society, however, within its own organisation, it would for example work for the courtesy of language such as changing the title of chairman to chairwoman, or to simply chairperson if the individual does not wish to hold a title that pertains to their gender; The Institution does support this practice of pertainment choice intrainstitutionally.

[2:22:120] Men in feminism refers to the role of men in feminism and their contributions to the women's movement and feminist theory which the Astronist Tradition considers to be essential to the successful development and practical implementation of feminist theories.

[2:22:121] This principle is especially important for an Astronist context because of the protagonist of Jesse Millette in The Original Jesse Millette Series and in wider Astronist Literature as well as the Astronist character of Oliver, both of whom are essential to the development of Astronist feminism just as much as the female Astronist characters.

[2:22:122] Feminist infusions to the construction of the character of Jesse Millette remains important in order to create a male fictional character that holds an astute understanding and appreciation for femininity and the power of women.

[2:22:123] That which is to be henceforth known as neomascualism refers to the branch of Astronism concerned with the advocacy of men's rights, the concerns of men, as well as the contemplation of masculinity from the perspective of the Astronist Tradition on the grounds of the increasing levels of segregation felt by men during the rise of feminism and the women's movement, thus giving rise to that which is to be known as neomascualinity which is the post-Astronist form of masculinity.

[2:22:124] In order to introduce neomascualinity, it remains essential for us to introduce masculinity in a pre-Astronist sense which is characterised by the global mentality of masculinity being largely rooted in Greek mythology and ancient Greek philosophy which have influenced the majority of humanity's understanding of masculinity which, in an Astronist terminological context, is to be referred to Apollonianism.

[2:22:125] There are some primary Apollonian characteristics of masculinity that hold entrenched influence in the majority of civilisations of The Earth, the foremost of which is the notion that men must hold strength in body (muscularity) and strength in mind (emotionality - a limited demonstration of emotion).

[2:22:126] Other qualities of Apollonianism include courage, independence, violence, assertiveness, limited sensitivity or empathy, a disregard for consequences and responsibility as well as an uncontrollable sex drive and a pass for promiscuity.

[2:22:127] Neomascualinity, also known as Astronist masculinity, is the form of masculinity ushered in by the Astronist Tradition after its contemplation of masculinity and masculism by the Tradition and is characterised by a dozen main elements.

[2:22:128] The first three of these elements includes immense creativity, the acceptance of effeminacy in manhood as well as the characteristics of sensitivity and empathy not only being accepted in a man, but are highly valued as they demonstrate the emotional maturity of a man who exhibits such qualities.

[2:22:129] The first of these elements (immense creativity) pertains to the notion that from an Astronist perspective, creativity is the greatest display of masculinity for a man who is creative is a man whom experiences deep emotions, holds a strong identity, and intends to progress to new heights rather than remain stagnant and

[2:22:130] The second of these elements (effeminacy in manhood) is perhaps the most controversial and the most divergent of all the elements of Astronist masculinity.

[2:22:131] However, understanding that males can and do hold the ability and tendency to demonstrate socially constructed female characteristics and that this does not degrade their masculinity, but instead deepens it in many ways, the primary way for which is that Astronist masculinity is characterised by strength in identity so the incorporation of non-masculine elements into a male's identity does not compromise their own masculinity.

[2:22:132] Further so, for a male to be unable to demonstrate some elements of femininity is actually considered to be a weak point in the male's masculine identity for masculinity and femininity are not dichotomic, but are instead symbiotic and so they exist for mutual advantage which involves their intercorporation in some instances.

[2:22:133] The next element of the Astronic or Astronist man is not only a comprehensive appetite for responsibility, but also an astute consciousness of consequences which is polarising from the Apollonian construct of masculinity.

[2:22:134] The Astronist man not only craves responsibility, but thrives from it for the good of his health, both mind, body, and spirit, and also for the maturity of his abilities and experiences for the Tradition maintains that a man without any responsibilities cannot be called a man for that is what we call a boy.

[2:22:135] In the Apollonian version of masculinity, there is a distinct lack of focus on the ability of a man to care for others' desires rather than or in addition to his own, but in the Astronist version and interpretation of masculinity, there is a distinct emphasis on the importance of the male ability to nurture both for himself, those around him, and the wider civilisation in which he lives.

[2:22:136] Unlike in pre-Astronist and non-Astronist forms of masculinity, masculinity in the Astronist Tradition is not measured by economic contribution, but is instead measured by the extent of the creativity, ambition, and talent of the male figure.

[2:22:137] This parameter for masculinity is the singlemost defining aspect of Astronist masculinity from all other forms of masculinity in different cultures and makes the Astronist version of masculinity unique for an emphasis on creativity, ambition, and talent as the central constructs for masculine identity are not organised in such a way in any other tradition of thought.

[2:22:138] Just as elemental to understanding the nature of Astronist masculinity is the notion that true men hold high religiosity and high philosophicality and the parameter for this is that the greater the philosophicality of the man, the more pungent their masculinity is considered to be.

[2:22:139] The ability of a man to be loyal rather than promiscuous is a sign of true masculinity from an Astronist perspective for a man that is able to keep himself from the indulgences of the world and to focus on that which he has committed to and holds responsibility for is perhaps the greatest differentiation between a man and a boy.

[2:22:140] Another constituent part of Astronist masculinity is a distinct openness to new ideas and an acceptance of divergences from that which may be considered a social normality; Astronist men are able to comprehend that the world and humanity change and evolve and that an attempt to halt such change is simply a delay rather than a stoppage.

[2:22:141] The second to last element of Astronist masculinity is that such men must hold a self-assured identity and no desire to control women for in doing so, men demonstrate their strength in mind and body and their ability to know themselves, what they want, and how they want it therefore not needing to control others or to distort their true identity to achieve such.

[2:22:142] Finally, perhaps harking back to the Ancient Greeks and so aligning more with Apollonian masculinity than the form of masculinity has become presently dominant, the Astronist approach to masculinity emphasises the aesthetics of man and the beauty of the male body, mind, and spirit.

[2:22:143] This is to be demonstrated through various artforms and may either be erotic or non-erotic in character in order to demonstrate the aesthetics of men and to espouse strength in masculinity through the beauty of the male figure, the male mind, and the male soul.

[2:22:144] Notably, this does not automatically pertain to homoerotic or homosexual forms of art as some may presume, but instead simply an appreciation and emphasis on the beauty of men for the exhibition of masculinity as the beauty of women has become an exhibition of femininity.

[2:22:145] That which is known as the practice of misandry is of course condemned by the Astronist Tradition and it is held that feminism must not promote the degradation of men and boys for if this does occur, then the achievement of feminist ideals is devoid of meaning and purpose and in fact becomes unachievable.

[2:22:146] That which shall henceforth be termed as paternity in a maleological context refers to the instance and set of characteristics associated with being a father and the nature of fatherhood and the contemplation of the nature of fatherhood within maleological discourses.

[2:22:147] The Astronist Tradition considers upstanding paternity to be synonymous with the aforeintroduced elements of Astronist masculinity which are to be applied to context of fatherhood.

[2:22:148] The Omnidoxy leaves the consideration of the nature of fatherhood and paternity to post-omnidoxical Astronist authors as an extension and further development of Astronist masculinity which is herein omnidoxically ascribed.

[2:22:149] The address of the topic of conscription is of importance to us as conscription has played and continues to play a prominent role in the lives of many male populations worldwide.

[2:22:150] The forced conscription of either men or women when not in the context of war is opposed to by the entirety of the Astronist philosophical tradition due to the non-militaristic quality of the Tradition despite the inaptonymy of the term Millettism and its close terminological structured to militarism.

[2:22:151] Maleology is the discipline of study dealing with the contemplation of masculinity and although it was formed as part of the Astronist philosophical tradition, the contemplations within it are not necessarily Astronist in character.

[2:22:152] Feminology is the discipline of study dealing with the contemplation of femininity and although it was formed as part of the Astronist philosophical tradition, the contemplations within it are not necessarily Astronist in character for like in its associated discipline of maleology, feminology holds a stance of neutrality between perspective unless specified otherwise in the discourse.

[2:22:153] There are herein introduced three conceptual dimensions of neomascularity from the perspective of the Astronist Tradition, the first of which is to be known as the Masculinity of Mind which is the dimension of masculinity for within the mind of a man.

[2:22:154] The second of the three maleological conceptual is that which is appellated as the Masculinity of Spirit which pertains to the dimension of masculinity for within the spirit or soul of a man and the third is appellated as Masculinity of Physicality which relates to the dimension of masculinity for within the physicality of a man in contrast to the mentality and the spirituality of man.

[2:22:155] The elements of Astronist masculinity incorporate different aspects from the three dimensions and maleologists are tasked with both interpreting and applying between these two different instruments of maleological contemplation.

[2:22:156] Purplewashing is important to Astronist symbolism and philosophy as the many shades of purple are often used to represent Astronism and its interactions with humanity as a whole rather than one particular gender which could cause conflictions with feminist symbolism as their use of purple diverges from its usage in an Astronist context.

[2:22:157] Another practice that is closely related to a feminomaleological context is objectification which relates to the use of this as a literary tool in forms of Astronist literature and art, especially between The Five Astronist Characters.

[2:22:158] That which shall henceforth be known as Astro-feminism, Astronic feminism, or Astronist feminism relates to the general system of thought and notions constructed and characterised by Astronist approaches to feminist philosophy, typically as interpreted by non-Astronist feminists.

[2:22:159] The Astronist Tradition considers gender inequality to the disadvantage of femininity is collectivised by The Five Discernments which provide reasons for the nature of gender inequality.

[2:22:160] The Five Discernments include gender roles, appearance, the tools of the media, the occupations afforded to women, and dominance of masculinity throughout much of human history and across The Earth expected for isolated regions in which femininity has dominated.

[2:22:161] The Five Discernments of feminological contemplation are contrasted by those which are collectively appellated as The Five Counteractions, the first entry into which pertains to the reaffirmation of the broadened female role in society beyond that of traditionally female occupations.

[2:22:162] Secondly, the re-embrace and re-entrenchment of motherhood, wifehood, breadwinnerhood, female friendship, and career-womanhood are all states of being for women that must be reaffirmed and redefined according to terms of modernity.

[2:22:163] Thirdly, the exploration of ultrafemininity, mesofemininity, and nonfemininity in a philosophical context of feminology will further develop and entrench brand new notions about femininity and its evolving nature in the future of human society and this is passionately encouraged by the Astronist Tradition.

[2:22:164] The use of knowledge, language, appearance, and achievement to define femininity is another element of The Five Counteractions and remains instrumental to the development of feminological discourses.

[2:22:165] The fifth and final element of The Five Counteractions to The Five Discernments involves the promotion of extolled women both past and present to demonstrate inspiration for both men and women of all ages as such extollations form manifestations of different forms of femininity.

[2:22:166] To comprehend and emulate, people require examples and it is these extolled women and their portrayal through society in artforms and other outlets of expression such as manifested by statues and ornaments is the primary way in disseminating such exemplars of femininity.

[2:22:167] This element forms the final counteraction to the previously defined discernments that have developed across the centuries and have shaped the current inequalities between the sexes; it also remains important to note that these counteractions do not seek to outbalance the influence of masculinity, but instead rebalance the Scale of the Sexes so that both genders are able to be uniquely balanced with one another.

[2:22:168] That which shall henceforth be known as futurological feminism, and also known as cosmofeminism, refers to the branch of contemplation in feminology dealing with the role of feminism in the future and in instances of space exploration and on worlds other than The Earth and forms one of the most uniquely Astronist contributions to modern feminism.

[2:22:169] The development of cosmofeminism is to occur post-omnidoxically, but the origination of the term and its central concern of the role of women in future events, especially so during the Humanic Exploration of The Cosmos, remain firmly omnidoxical in origination and cosmofeminist thought is encouraged, by the Astronist Tradition, to become the centrepiece of the Astronist contributions to feminism.

[2:22:170] We have already addressed the topic of pornography from an Astronist perspective elsewhere in this discourse, but here we address the same topic from the Astronist feminist viewpoint which considers pornography to be a degradation of women for the sexual pressure and fanaticisms of men and part of the reason for the rampant misogyny and inequality faced by women in many parts of The Earth today.

[2:22:171] The Astronist feminist views on prostitution involve the consideration that prostitution is the societal targeting and degradation of vulnerable women.

[2:22:172] However, those women who practice should not be prosecuted, but should instead be helped financially and educationally in order to lift themselves out of the poverty they are experiencing which is expected to be the primary cause of their descent into prostitution in order to fund themselves and/or their family.

[2:22:173] The topic of sexual orientation/sexuality from the Astronist feminist perspective is another important aspect that feminologists should consider and develop post-omnidoxically.

[2:22:174] However, on this topic, it is herein stated that women must be provided with the freedom to explore their sexuality and this right should be universal and never compromised or interrupted by the government, a philosophy, a religion, or any other group, even that of the person's family.

[2:22:175] Another topic that is important to briefly address within a maleological context is that of circumcision which is considered to be a non-philosophical practice, but one that is not support by the Astronist Tradition nonetheless.

[2:22:176] There are many different Forms of Astronism both of an omnidoxical, folk, and heterodoxical nature and one of these forms holds prominence in the development of the Astronist approach to feminist theory and is to be henceforth known as Gynocentric Astronism.

[2:22:177] Gynocentric Astronism is a form of Astronism that is uniquely focused on women, the interpretation of Astronism solely from the perspective of women, and collectively relates to the female followership of Astronism.

[2:22:178] The development of Gynocentric Astronism is considered to be the precursor to the development of Astronist feminism as gynocentricity sets the theoretical foundations leading to the development of Astronist feminism and is therefore defined from Androcentric Astronism as another Form of Astronism.

[2:22:179] Of course, Androcentric Astronism pertains to a Form of Astronism that is specifically focused on men, the interpretation of Astronism from the perspective of men and collectively relates to the diversity of the male followership of Astronism and is obviously closely associated with the discipline of maleology.

[2:22:180] From the Astronist feminological and maleological perspective, the matriarchy and patriarchy is perceived according to the belief that both can coexist without domination of each other because of their concerns with different portions of society for a matriarchy is formed in the concern of women and a patriarchy is concerned with men.

[2:22:181] However, we now introduce that which is to be henceforth known as an anthroparchy which is predicated on focusing on a society ruled by and for humans rather than by or for men or women and is considered to be the defining characteristic of the Astronist approach to understanding society as it is non-segregatory by its nature and it remains inclusive of all humans rather than one gender, race, nationality, or sexuality.

[2:22:182] Anthroparchal ideas are of course pre-Astronist and many of the religious and secular institutions of the 21st century espouse similar notions in an attempt to become politically correct despite their policies and doctrines affirming otherwise.

[2:22:183] However, Astronism remains the source of the term and prides itself in being founded upon the concept rather than just adopting its ideas for the sake of pleasing others as other pre-Astronist and non-Astronist institutions are culpable of.

The Principle of Moratorism

[2:23:1] Omniaddressed in The Omnidoxy has been the designation of Astronism as simply that; a philosophy, and during this venture of differentiation, a chasm between Astronism and religious traditions has formed and has been widened further by all the differences designated by The Omnidoxy as to why Astronism firmly remains a philosophy at its heart.

[2:23:2] Furthermore, this has perhaps left the organisational relationship existent between Astronism and various religious traditions without certainty which brings us to the topic of this discourse which holds the eventual aim of answering the question: how is Astronism to view its interactions of religious traditions?

[2:23:3] It is firstly important to note that Astronism holds deep respectation for the traditions of religion that have emerged throughout the history of humanity on The Earth and stands firm in the belief that religions have contributed to the civility of humans by allowing them to think and perceive on levels beyond their corporeal selves.

[2:23:4] However, it is also a belief held within Astronism that religion has been one of the principle leaders in the undermining of philosophy and its role within society and it is the belief of the Astronist Tradition that religion had replaced the role that philosophy had once forged.

[2:23:5] But we must not dwell in the histories of nations and their traditions for too long as we will not gain an understanding of the approaching future if we do not see it in this way; we must see the future as connected, yet distinct from the past if we are to form a new way of civility.

[2:23:6] Because Astronism holds reascensionism at its heart, it prioritises the recentralisation of philosophy, its mass embracement, and the societal refocus on philosophy; whether this replaces religion is a consequence that cannot be helped for perhaps the two cannot be equally emphasised?

[2:23:7] This is not the belief of the Astronist Tradition which insists that philosophy and religion can hold equal and differentiated roles in society, but only if compromises are made on behalf of the religion to allow philosophy to rise to a rank of influencing the masses.

[2:23:8] By this notion, Astronism holds no contentions towards religions despite their involvement in the undermining of philosophy, however, it bases its main principle along that of moratorism.

[2:23:9] Astronism holds a moratorist orientation in relation to its approach to how religious institutions should interact with philosophical topics, but what exactly is a moratorist approach?

[2:23:10] Astronism holds the belief of moratorism and practices moratorion which is characterised by the notion that religious institutions should have no authority when it comes to cosmical affairs, and believes that such institutions should not get involved, or comment upon such affairs, especially when their comments regress from the scientific facts of reality and of Common Logic.

[2:23:11] Common Logic in this sense is appellated as such in order to differentiate official statements of opinion and belief orientation from logic, the latter of which is characteristic of religious traditions in response to a topic.

[2:23:12] Astronism does not enter the territories of religion by describing in great depth a new form of divinity, and neither does it entirely concern itself over marriage, sexuality, theology, and takes a pluralist approach to eschatological issues so as to mitigate itself whereas in the case of religions, they must hold steadfast to one element of belief as is another differentiation between philosophy and religion.

[2:23:13] By this justification, the Astronist Tradition does not believe that religious traditions should impede upon the areas of contemplation towards which Astronism dedicates itself for the held belief is perhaps best characterised by the phrase; don't not enter our arena and we shall not enter yours.

[2:23:14] Moratorism is classified as a philosophy while moratorion is classified as a practice and therefore the implementation of moratorism does not always resemble the principles set forth by the philosophy itself.

[2:23:15] Moratorion is officially the prohibition of religious institutions from publicly preaching about cosmical affairs, especially when they are found to be spreading falsities or regressive opinions about The Cosmos and its exploration; specifically, this relates to the governmental implementation of the philosophy of moratorism.

[2:23:16] Astronism is steadfast in its belief in the implementation of moratorism, but it also must be stressed herein the potential dangers of its implementation if the implementor is not true to the philosophy itself and its principles.

[2:23:17] Moratorist thought is obviously expected to be opposed by the religious traditions, but this does not concern The Institution of The Philosophy of Astronism which is to be henceforth designated as the preserver of moratorism and its implementation as moratorion.

[2:23:18] It is important to note how the philosophy of moratorism remains central to Astronist thought as itself being the preserver of philosophy and philosophical astronomy and its implementation in society; moratorism also remains central to the essence of Astronist Philosophy.

[2:23:19] To return to the original insentensations of this discourse, moratorism further widens the chasm between Astronism and the various religious traditions and institutions but this considered to be a necessary widening factor.

[2:23:20] Moratorist thought is about further categorising and differentiating the territories of Astronism from those of the religious traditions and from a perspective of moratoriation, ideology is considered to be its implementor rather than philosophy itself.

[2:23:21] Moratorism is a philosophy, moratoriation is a practice, and ideology is the implementor of moratorism and therefore the practitioner of moratoriation; we must never forget the importance of moratorism and the principles it stands for and how this will impact upon the society in which moratoriation is applied.

—

[2:23:22] If I ask you about what you believe regarding death, The Universe, and The Cosmos within it, and if you say to me nothing, or your face displays bewilderment, then I shall tell you to leave and not return until you have used your mind and have thought about these higher entities beyond yourself and your own ways.

[2:23:23] Now, if I ask the same question to another, even if their reply is so illogical, irrational, and aphiosophical, I shall do nothing but commend their efforts in thought for, if you truly do believe in the Philosophical Spirit, there should exist no shame in expressing one's opinions, no matter how illogical, or irrational they may truly be.

[2:23:24] In essence, I have greater respect for those whom share their illogical and irrational thoughts than for those whom do not share their thoughts at all, simply because they haven't given the time to ponder upon the question posed.

The Comparison of Perspectives (Comparology)

[2:24:1] The comparison between different forms and systems of thought is an important element of study for religions and ideologies, as is demonstrated by the established of the subject of comparative religion and in order to continue on in this same vein of knowledge, the Astronist Tradition herein develops the discipline of study of comparology.

[2:24:2] This discourse within logicology is dedicated to the discipline of comparology which deals with the comparison of Astronist views on other philosophies, religions, ideologies, cults, and principally focuses on different cosmologies.

[2:24:3] Comparological study extends the tradition of comparing different forms of belief, thought, and methods of practice as well as generally different worldviews and understandings of existence which the Astronist Tradition considers to be important so as to continue on with developing a philosophical heritage which comparison, criticism, and analytical investigation remain at the core of.

[2:24:4] Comparological study is important for another fundamental reason as it remains a self-bolstering study which entails the notion that greater comparological study will lead to a greater understanding of what the Astronist philosophical tradition is because by comparing, the study of Astronism is bolstered and therein becomes more developed from its comparison to other traditions.

[2:24:5] We begin with our comparological studies by addressing the various different cosmologies that have developed over the course of human history and apply these cosmologies to the Astronist Cosmology and its perspective as to formulate a full comparison between the two.

[2:24:6] Firstly, we must address the most pertinent and extolled of all cosmologies to the Astronist Tradition beside the Astronist Cosmology itself which is the Copernican Cosmology which primarily espoused heliocentrism, thus changing humanity's view of The Cosmos and more importantly, humanity's place within it forevermore.

[2:24:7] The heliocentric cosmology founded by Copernicus and further established by both Kepler and Galileo maintained that The Earth revolved around The Sun rather than The Sun around The Earth, and certainly not that The Earth is the center of The Universe as had been believed previously.

[2:24:8] To the Astronist Tradition, heliocentricity can be considered in one of two ways, the first of which is the scientific and empirical aspect which was mentioned in the previous insentensation as that focuses on the actual scientific findings of the cosmology.

[2:24:9] However, the Astronist Tradition identifies a second perspective on heliocentrism which focuses more on the microcosm that heliocentrism was and remains as in a wider contemplation of humanity's place in The Cosmos for heliocentrism remains the first empirical and fully formed system of understanding that did not place The Earth and subsequently humanity at the centre of the cosmological system.

[2:24:10] The Astronist Tradition stresses this aspect of understanding heliocentrism for one of two reasons; the first is because this presents heliocentrism to mean something that effects humanity and our role and position in the cosmological hierarchy and its systems, and the second reason is because this emphasises a philosophical undercurrent and measure of heliocentrism that is perhaps missed out from the empirical and scientifically oriented aspects of Copernican, Kepler, and Galileo's works.

[2:24:11] The Astronist Tradition of course concurs with heliocentrism heliocentricity is considered to be the necessary precursor to cosmocentricity and a progression away from geocentricity which still is considered to hold a strong grip in the hearts and minds of people despite science's opposition to it; the termination of geocentricity, and a subsequence anthropocentricity, of which both are intertwined, is one of the major elemental goals of Astronist Philosophy.

[2:24:12] Furthermore, the Astronist Tradition extols both the concept and model of heliocentrism and those whom were instrumental to its founding due to the major impact it has held on human development, as well as the course of religions and philosophies alike and the belief remains here on in that if the Copernican Revolution did not occur then the Astronist philosophical tradition would not exist for the Astronist Tradition is founded upon inspirations of the discoveries of those astronomers, visionaries, and philosophers past.

[2:24:13] To conclude, despite the fact that cosmocentrism, or cosmocentricity is not a scientific or empirical doctrine with its origins resting in philosophy, the Astronist Tradition also considers heliocentricity, or heliocentrism to also be philosophical at its core as well as scientific, thus pertaining to the Tradition's emphasis of the philosophical aspects of heliocentrism.

[2:24:14] We now move on to our next cosmology of comparological address that is the long established Chinese Cosmology, which the Astronist Tradition understands to be characterised by its conflation philosophical notions and approaches to the discussion of cosmology.

[2:24:15] The basic premise of Chinese Cosmology rests on the idea that the universe (as equivalent to The Cosmos in the Astronist Tradition) is a single organism and that a holistic approach to its understanding should be taken rather than a composite one.

[2:24:16] This is both concurred and disagreed with in the Astronist Cosmology which forms existences as wholes in its cosmology, but also stresses the compositeness of those

existences, especially The Cosmos and The Universe from the progenies, phenomena, and realms within them; this is why the Astronist Cosmology can be described by the term herein introduced as holopoly.

[2:24:17] Holopoly is the concept that The Cosmos and The Universe in the Astronist Cosmology can be and should be equally considered according to holism and compositism, which pertain to the whole and the elemental parts of something respectively.

[2:24:18] Holopolism, as the belief orientation encapsulating the concept of holopoly, is considered to be the superior way of understanding and approaching cosmological study, thus diverting from the Chinese Cosmology which focuses purely on a holistic view of the universe.

[2:24:19] The holopolistic way of understanding both The Universe and The Cosmos is considered to be superior by the Astronist Tradition as the only surefire way of completely understanding these realms of existence as they exist both in a distinct wholeness and a distinct compositeness to one another.

[2:24:20] Meanwhile, Astronists are expected to understand The Universe both according to its wholeness and its compositeness in an equal simultination known as isomination which involves considering something in two seemingly opposing or dichotomic aspects both simultaneously and equally.

[2:24:21] The Astronist Tradition understands and accepts the essential premise and reasoning for Chinese Cosmology holding a holistic view, but maintains its primary complaint of Chinese Cosmology that by understanding The Cosmos and The Universe according to their wholenesses deprives the cosmology from understanding the important elements within the wholes that formulate its nature as well as holding a more practical perceptual ability for humans to interpret.

[2:24:22] The next of the cosmologies of our comparological address is that of Chaucer's Cosmology which the Astronist Tradition holds as its central objection focuses on its opposition to the conflation of astronomy and astrology in Chaucer's works but Chaucer is not to be blamed for this as ignorance does not conflate to blame in this context.

[2:24:23] However, Astronism praises the deep affection that Chaucer felt for astronomy and the importance of astronomy in reckoning time which became one of astronomy's central roles throughout its premodern history although the Astronist Tradition is not entirely fond of this role that astronomy used to play.

[2:24:24] In the centrality that astronomy is provided by Chaucer in his works, Astronist Philosophy considers this to be reminiscence and precursory to its own actual centralisation of the subject which lead to the creation of concepts and subjects such as

astronocentricity, astronomy, cosmocentricity, as well as almost all of the occurrological activities.

[2:24:25] The Astronist Tradition ultimately extols Chaucer for his contributions to the history of astronomy and its philosophisation, but it must be noted herein that the extent of the influence of Chaucer's Cosmology on the Astronist Cosmology in comparison to the great influence of other cosmologies, such as the Copernican, Galilean, and Big Bang cosmologies, holds considerable disparity.

[2:24:26] Brahe's Cosmology is the next cosmology of our address in this discourse to which the Astronist Cosmology is fundamentally opposed to due to Brahe's belief in an unmoving earth at the centre of the universe rather than following the concurred Copernican cosmology as aforeaffirmed in this discourse and by explaining this, there is no need to further elaborate.

[2:24:27] A modern cosmology that has held and continues to hold a strong influence over the Astronist Cosmology is the Big Bang Cosmology which, when considered across the entire course of history on the study of cosmology and the development of different cosmologies, was created in close proximity to that of the Astronist Cosmology.

[2:24:28] It is for this reason that the Astronist and the Big Bang cosmologies hold a strong bond especially from the Astronist perspective and the Big Bang Cosmology's influence on the way in which the Astronist Cosmology has formed and despite the general concurrence between the two cosmologies, there are some conflictions.

[2:24:29] The Big Bang Cosmology is concurred with due to the empirical nature of its founding; that the universe began with a creation point or singularity before which space and time did not exist, and to the end of this definition, the Astronist viewpoint adds "for that particular cosmos".

[2:24:30] However, in the Astronist Cosmology, it is believed that The Cosmos is part of a wider Universe and that many Big Bangs, or inceptions as they are known, have occurred for each of the cosmoses in The Universe.

[2:24:31] Therefore, Big Bang Cosmology rests at the heart of the Astronist Cosmology which expands beyond the Big Bang Cosmology itself therefore without the Big Bang Cosmology there could not exist the concept of the infinite amount of cosmoses within The Universe as is upheld by the Astronist perspective.

[2:24:32] The Atomist Cosmology is the doctrine that all natural phenomena are to be explained in terms of the motion and contact of imperceptible and immutable particles.

[2:24:33] Atomism regards phenomena according to its atomic proportions while holism regards phenomena according to its holistic, physical, and perceptual proportions.

[2:24:34] Amphism is the view that regards importance to both of these outlooks throughout its philosophy yet may hold tendencies towards one or the other known as Atomic Amphism, or Holistic Amphism.

[2:24:35] Orientationally, the Astronist Cosmology is Holistic Amphism due to its agreement and respect for both atomism and holism, yet its tendency to focus on the physical and perceptual elements of natural phenomena to form philosophical notions therefore Astronism is majoratively amphistic.

[2:24:36] We now move onto a cosmology of the one of the greatest, if not the greatest philosopher of all time, Aristotle, whom remains of the most highly extolled figures in the Astronist extollative tradition.

[2:24:37] The essential premise of Aristotle's Cosmology, as also characteristic of other similar cosmologies, is concerned with the nature and movements of celestial bodies, as well as the formation of the idea of their concentric patterns, thus forming the foundations of concentricity.

[2:24:38] While Aristotle's cosmology is appreciated for without this cosmology, the later cosmologies of greater accuracy and reality would have not been able to base their cosmologies from any other, the cosmology is inevitably opposed due to its own opposition to that of the Copernican Cosmology to which the Astronist Cosmology is aligned and in concurrence with.

[2:24:39] However, the Astronist Tradition, when considering Aristotle and his works maintains the principle that the inception of thought is hardest while the extension or alteration of what already exists is an easier feat, the former of which Aristotle and his intimate contemporaries are characteristic while the latter is characteristic of later astronomers and philosophers.

[2:24:40] Astronist Philosophy and Cosmology does not recognise Dante's Cosmology as it is based in a non-Astronist and a non-cosmocentric system of thought, though it is respected for its contributions.

[2:24:41] The next of the cosmologies to address in Astronist terms is Dirac's Cosmology which also is not recognised as it is theoretically inconsistent, incorrect and is also not relevant to the Astronist Cosmology.

[2:24:42] The significance of certain large numbers and the variability in time of the gravitational constant is the basic premise of Dirac's Cosmology thus making it redundant to the further development of the Astronist Cosmology.

[2:24:43] Early Greek Cosmology as a collective term encompassing many of the cosmologies of the Ancient Greek philosophers is approached to with respect and extollation due to the foundational and precursory role played.

[2:24:44] However, none are accepted as cosmologies except only theoretical approaches to understanding cosmology according to ancient philosophical theories and worldviews, but to say that they are fully formed cosmologies is exaggeratory at best.

[2:24:45] Greek eschatology did not involve The Cosmos and stars as it focused on the nature of the underworld as the direct opposite to the Astronist Cosmology, and therefore it not recognised, and is in fact opposed to by the Astronist philosophical tradition.

[2:24:46] The next of the cosmologies addressed in this discourse is Egyptian Cosmology which holds a particularly interesting and prominent role within the Astronist cosmological perspective.

[2:24:47] The role of astronomy in Egyptian eschatology is apparent and is both respected and extolled by the Astronist Tradition due to its several appearances in tomb decoration and therefore the astronomical centrality to Egyptian understandings of the world, life, and death itself.

[2:24:48] The earliest depictions of human astronomical understanding are accredited to the ancient Egyptians and for this reason again, their attempts at understanding cosmology are extolled despite their primitivities.

[2:24:49] However, the cosmologies proposed by Egyptian civilisations are not officially recognised by the Astronist Cosmology due to their relative irrelevance to the present day concerns of cosmology, though the spiritual and eschatological significance of astronomy in Egyptian Cosmology is of exollative and respective status, as aforementioned.

[2:24:50] Furthermore, there is certainly something for the Astronist Tradition to learn and take inspiration from with regards to this astronocentric eschatology of the Ancient Egyptians, especially in its application to an Astronist context for although the Astronist Eschatology is not directly inspired by the Ancient Egyptian Eschatology, the astronomical aspects of this ancient eschatology is something that the Astronist Tradition can draws links to with regards to its own eschatological ideas.

[2:24:51] The next of the cosmologies to be briefly addressed within this discourse is Eudoxus' Cosmology which remains unrecognised and is not considered irrelevant though is nonetheless extolled and respected by the Astronist philosophical tradition.

[2:24:52] Galileo's Cosmology is the next cosmology of our address and is, by the Astronist Tradition, considered to be worthy of extremely high extollation and respectation due to Galileo's dissemination of the heliocentric model of cosmological understanding which is of course considered to be the necessary precursor to the Astronist cosmological understanding as aforeaffirmed.

[2:24:53] Galilean philosophy goes beyond its advocacy for heliocentrism because of Galileo's persistence in challenging the establishments of his day, thus by the essence of the Philosophical Spirit which prioritises enquiry, opinion, challenge, and dispositions of constant philosophisation.

[2:24:54] Galileo's resoluteness in the face of the most powerful organisations of his day for the purpose of a cause in which he believed is also one of the main reasons for his high extollation in the Astronist philosophical tradition in addition to his actual findings.

[2:24:55] Furthermore, Greek Cosmology is extolled and respected by the Astronist Cosmology due to its intertwinement and great amount of influence over the earliest developments in philosophical study and contemplation and some of the earliest philosophers.

[2:24:56] Therefore, the time and context of this cosmology is considered to hold greater relevance than its actual contents in relation to modern understandings of the universe which hold great disparity when compared to the understandings found in Greek Cosmologies.

[2:24:57] Of the non-religious cosmologies addressed in this discourse, we finally reach Herschel's Cosmology which the Astronist Tradition, and subsequently Astronist Cosmology is respective and appreciative of for Herschel's Cosmology progressed astronomers and the wider world beyond focusing on a planetary and cometary centred cosmology and moving towards stellar-centred cosmology and introducing the study of stellar astronomy.

[2:24:58] This is of extreme fundamentality to the Astronist Cosmology and forms an essential precursor to how the Astronist philosophical tradition understands the universe.

[2:24:59] Furthermore, in addition to the Copernican and Galilean cosmologies addressed in this discourse, Herschel's Cosmology is also considered to have played a foundational role in the development of philosophical concepts such as cosmocentricity being the prime example.

[2:24:60] It was Herschel's predisposition to look beyond The Solar System to the cosmic progenies and phenomena beyond that opened up humanity's understanding that there existed countless many more systems of stars beyond the confines of The Sun and its own system, thus acting as the precursor the study of galaxies and of course, beyond those, the universe itself.

[2:24:61] Perhaps the greatest parallel drawn between Herschel's Cosmology and the Astronist Cosmology is the principle to think far beyond that which has already been considered and studied, which the Astronist Tradition expects all its adherents to naturally complete for without such thoughts beyond the known into the unknown, we would not have any of the cosmologies mentioned herein.

[2:24:62] This is because each of them have followed the principle of thinking beyond the rest of humanity's current capacity to do so in respect to the time, location, and context of their beginnings.

[2:24:63] We now move on to an important subcategory within different cosmologies which moves away from the secular, cultural, or scientific cosmologies that have been addressed in the first part of this discourse and to move towards addressing the various religious cosmologies that have developed over the course of human history in different civilisations, as influenced by, of course, religion primarily, but also ideology, politics, world affairs, language, societal structures, and government.

[2:24:64] Principally, the notion of religious cosmologies in general is opposed by the Astronist philosophical tradition due to its adherence to the omnidoxically introduced philosophy of moratorism which religious cosmologies fundamentally break and therefore, the Astronist Tradition is opposed to their existences.

[2:24:65] No religious cosmologies are to be taken seriously or as imnemnic approaches to cosmology, more as metaphorical approaches according to the Astronist Tradition, although in the context of comparology, they are addressed due to the nature of comparological study itself which encompasses comparisons of all beliefs and systems, despite whether the Astronist philosophical tradition agrees or disagrees with them.

[2:24:66] Islamic Cosmology is the first religious cosmology that we shall address in this discourse and it is this cosmology that the Astronist Cosmology does not recognise due to its tendency to borrow and depend upon the theories and concepts of preceding cosmologies (seven heavens cosmology) with a change of terminology marking the only differences in some instances.

[2:24:67] When the majority of a cosmology's ideas are repetitions of earlier ideas with different names, this is a practice that is not considered to form any worthiness to a system of thought, especially not a cosmology which poises itself to be respected; this practice of repetism as it shall be henceforth known does not command any respectation, and therefore the Astronist Cosmology does not recognise Islamic Cosmology.

[2:24:68] Furthermore, Astronist Cosmology rejects all anthropocentric or anthropotranscendental notions found within the Islamic Cosmology, especially regarding the role of humanity in the universe, which Islamic Cosmology considers the former to be integral to the latter as it holds that the universe would not able to exist without humanity.

[2:24:69] Focuses more on the relationship between God and the universe rather than the structures, functions, and creation of The Cosmos (as the universe is known as in the Astronist Tradition) itself unlike in the Astronist Cosmology which focuses heavily on the functionalities of The Cosmos, as well as the nature of its progeny and phenomena rather

than some transcendental elements of The Cosmos which, it is admitted and acknowledged, they are discussed, yet they are certainly not made a central focus.

[2:24:70] Perhaps it is in this notion of disparity between centralities that defines the main difference between a religious cosmology and a philosophical cosmology, with the former focusing much more on the divinical and transcendental aspects of the universe (which still remains opposed under moratorium) while in philosophical cosmology, the actual elements, structures, patterns, functions, and occurrences in The Universe and its cosmoses are centralised in study and contemplation.

[2:24:71] Now that we have covered one of the most fundamental differences between the Astronist (philosophical) and Islamic (religious) cosmologies, we come to one of their similarities which is found in the notion that both are hierarchical in their approaches to cosmology.

[2:24:72] The Astronist Cosmology holds a clear hierarchical structure of elements, realms, and existences with clear distinctions between different levels and the positions of these different aspects are provided with clarity; this is the same for religious cosmologies, and in this context, Islamic cosmology.

[2:24:73] However, within this similarity, we ironically find another dissimilarities which is that despite the fact that both the Astronist and Islamic cosmologies hold hierarchical structures, the components of these hierarchies are drastically different for humans are placed at a much higher level in the Islamic cosmological hierarchy than in the Astronist cosmological hierarchy for example.

[2:24:74] Therefore, in order to form some element of clarity, when we say that there exists a similarity of hierarchies between Astronist and Islamic cosmologies, we mean literally that; that there does exist a similarity for they both have hierarchies, but the natures of those hierarchies, the positions that each aspect given, and the general approach to the construction of such hierarchies form no similarity between the two cosmologies.

[2:24:75] It is by this notion that we see that we must be specific in what we are comparing and therefore this is an important lesson for comparologists to heed when they are making comparisons; clarity of comparisons is key to disabling interpreters from distorting the words of the comparologist.

[2:24:76] Aforementioned in our subdiscourse on Islamic Cosmology and the Astronist opinion on this particular religious cosmology, the Islamic Cosmology was accused by the Astronist Tradition of supporting anthropocentric or anthropotranscendental notions, the latter of which we shall now address and formulate into a concept and belief.

[2:24:76a] So, that which shall henceforth be known as anthropotranscendentalism refers to the belief that humanity is either equal to, or is transcendent, superior, or in some better than The Cosmos itself either intellectually, spiritually/divinically, or physically; this is

rejected by the Astronist Cosmology and the wider Astronist philosophical tradition which in response follows antianthropotranscendentalism.

[2:24:77] Another fundamental complaint that the Astronist Cosmology holds with the Islamic Cosmology, as is characteristic of the Astronist Cosmology's complaints towards other religious cosmologies, is that there is no recognition of any of the other features of the universe that present day astronomers, philosophers and laypeople take for granted to know and perceive.

[2:24:78] There is no concept of solar systems, of galaxies, or of "space" itself and there is no address on the now established fact that The Earth is a planet like the other planets visible from it, or that stars are other suns, just very far away.

[2:24:79] Quranic cosmology is primarily limited to that which is visible to the naked eye further distancing it from the Astronist Cosmology which is complex, embraces the compositeness of The Cosmos, and is innemnic by the majority of its nature due to the time, location, and context of its founding.

[2:24:80] This leaves a chasm between Quranic and Astronist cosmologies, the latter of which addresses element of existence, cosmological structure, systems, and orders that the

[2:24:81] Islamic Cosmology simply does not address and for this reason, there exists an immense disconnection between what Islamic Cosmology addresses and what the Astronist Cosmology addresses with an unresolvable disparity identified to be in existence between them whereby the latter of which far outpaces the levels of discussion of the former on the topic of cosmology.

[2:24:82] Finally, another important point of contention between the two cosmologies addressed in this discourse is the Quranic attempt to undermine the progenies and phenomena of The Cosmos by considering them to be a "lower heaven", which is fundamentally rejected by the Astronist Tradition.

[2:24:83] The Astronist Tradition does not make any connection between the notions of a heavenly paradise purported to be accessible to humans in the afterlife with the only connection made between cosmic progeny and phenomena being that they are products of divinity that are physically and spiritually closer to The Divine than humanity is.

[2:24:84] By this notion, the Astronist Tradition raises cosmic progeny and phenomena to a higher state than humanity (which is considered to exist within the category of progeny) while the Quranic approach attempts to lower the statuses of cosmic progeny and phenomena, either to a level below that of humanity, or to a level that undermines their direct divinity, which is considered in the Astronist cosmological tradition.

[2:24:85] Now that we have addressed Islamic Cosmology, we come to address Biblical Cosmology which itself is inclusive of the Christian religious tradition's understanding of

cosmology, which also includes the Christian view of the role and position of humanity in the cosmological hierarchy.

[2:24:86] The Astronist Cosmology is fundamentally opposed to that of the Biblical Cosmology and does not recognise Biblical Cosmology due to its irrelevance to actual immemorial cosmology.

[2:24:87] The Astronist Tradition considers the Biblical Cosmology to be a distraction from actual cosmological topics and entities of contemplation as the Biblical Cosmology is centred on the development of The Earth, its flora, fauna, and humanity too.

[2:24:87a] Despite the apparent irrelevance of the majority of the biblical narratives, the Astronist Tradition does provide some credit to the biblical writers in their development of the notion that the universe is a well-ordered, ordered, and structured entity.

[2:24:87b] However, the question of the study of the Biblical Cosmology is considered to be a moratorational issue as it is an instance in which a religion is involving itself in the affairs of The Cosmos and it is therein that the Astronist Tradition takes issue and contention.

[2:24:88] The only context in which biblical cosmology is praised is for its contributions to early understandings about the cosmos, but to take it as a serious cosmology is tantamount to a form of fundamentalism which is how creationism is identified by the Astronist Tradition.

[2:24:89] The next of the religious cosmologies that we shall consider in this comparological setting is Jain Cosmology which is markedly less so dismissed and rejected than others due to its unique approach and the absence of mythological elements, as well as its differentiation from the anthropocentric, geocentric, and non-Astronist concepts found in other religious traditions.

[2:24:90] The Astronist Cosmology holds a similarity with the fundamentals of Jain Cosmology in that they both believe in the infinity of the universe (which the Astronist Cosmology capitalises so as to become the recognisable "The Universe").

[2:24:91] However, despite this similarity, there exists a deep dissimilarity when the point is raised that Jains do not speak of multiple cosmoses within The Universe thus showing divergence from the Astronist Cosmology.

[2:24:92] Additionally, Astronist Cosmology departs further from Jain Cosmology when addressing the shape of The Cosmos and The Universe, which Jains hold to be a unique, yet unproven understanding of the shape of these two realms of existence which does not correspond to that of the Astronist Cosmology which considers at least part of its understanding of the shape of The Cosmos and The Universe to be immemorially inspired.

[2:24:93] The next of the religious cosmologies of our attention herein is the Bahai Cosmology which, after short studies, there can be found a fundamental dissimilarity between these two cosmologies from the outset with the division of Bahai Cosmology into five realms and the Astronist Cosmology seeing three higher existences in The Divine, The Universe, and The Cosmos.

[2:24:94] However, the Astronist Cosmology of course extends further by introducing the three lessers known as The Chaos, The Mytra, and The Betwixity which means that there are six realms that are therefore existent in the Astronist Cosmology in contrast to the Bahai Cosmology's five realms.

[2:24:95] There does exist a sense of anthropocentrism and anthropotranscendentality from the Bahai Cosmology which, as has been aforeaffirmed both throughout this discourse and the disquisitions of The Omnidoxy, is opposed to by the Astronist Cosmology, thus demonstrating further divergences between these two cosmologies.

[2:24:96] The ancient and long-established Buddhist Cosmology is the next of the religious cosmologies of our address herein and like the Jain and Hindu Cosmologies, the Buddhist Cosmology holds there to be no ultimate beginning nor a finality to the universe which, as omniaffirmed throughout this discourse and others, is the appellation equivalent to The Cosmos in the Astronist Cosmology with The Universe being considered infinite in the Astronist Cosmology which therefore shares a parallel to these Indian-originating cosmologies.

[2:24:97] Another parallel is found in the divisions of the cosmology into six cosmological realms of rebirth as is the six higher and lessers in the Astronist Cosmology, though the natures, attributes, and purposes of these realms hold dramatic differences, as well as the general outlook of the Astronist Cosmology and how it holds disparity when compared to that of the Buddhist outlook.

[2:24:98] We should also look in a simultaneous motion at the Hindu Cosmology in close proximity to its Buddhist and Jain successors on the Indian subcontinent.

[2:24:99] The Hindu Cosmology considers all of existence to be cyclical while the Astronist Cosmology is notably linear in its approach to cosmological understanding as is demonstrated by those which are collectively appellated as The Cosmic Narratives and relates to the notion that each individual cosmos of The Universe as having its own unique narrative that is absolutely unique from all other cosmoses in The Universe and remain linear and distinct from one another.

[2:24:100] Despite this fundamental difference, the Astronist Cosmology holds respectation and extollation for the Hindu approach to cosmology due to its diversity of concepts and theories which in turn demonstrates the vastness and philosophicity of the tradition that is arguably the widest spread organised philosophy in the world.

[2:24:101] Mormon Cosmology is the next cosmology addressed in this discourse and differs from the Biblical Cosmology despite establishing itself as a Christian tradition as it does not share the same cosmology to other forms of the Christian religious tradition.

[2:24:102] The Mormon Cosmology holds some important similarities with the Astronist Cosmology, especially in the belief in sentientism (which is an Astronist term) in the existence of many inhabited worlds other than The Earth which is considered to a major element of similarity between these two cosmologies.

[2:24:103] However, the theological interconnections between planets and certain ones being closer to the throne of God are not recognised as innemnic by the Astronist Cosmology and are therefore both unrecognised and rejected.

[2:24:104] Other beliefs such as the doctrine that Jesus Christ visited other worlds is also not recognised by the Astronist Cosmology and is rejected.

[2:24:105] Gnostic Cosmology is also not given any recognition by the Astronist Cosmology and little similarities can be drawn between these two cosmologies and therein ends our address of this form of cosmology.

[2:24:106] Meanwhile, the relationship between the Astronist and Raëlian cosmologies is marred with complexities due to the array of similarities and differences and the close-knitted nature between such similarities and differences.

[2:24:107] The Astronist Cosmology holds many similarities with the Raëlian Cosmology, especially in the context of humanity for the Astronist Cosmology agrees with Raëlians in the belief that life can be created on other planets, especially through terraforming, molecular biology, and cloning.

[2:24:108] However, the Astronist Cosmology believes that other planets already hold non-anthropoc civilisations which is not as defined in Raëlism and its cosmology.

[2:24:109] Astronist Cosmology also does not recognise any of the supernatural beliefs in Elohim nor does it support any stereotypical ideas surrounding extraterrestrial life.

[2:24:110] However, the practices of cloning in Raëlism go far beyond their purposes and presence found in Astronism which does not provide a focus or centrality to cloning as it seems to be in Raëlism.

[2:24:111] Zoroastrian Cosmology is the final cosmology directly connected to a religious tradition that is to be address in this discourse and it remains a cosmology that many other religious cosmology owe their concepts and for this reason, the Zoroastrian Cosmology deserves respectation.

[2:24:112] However, the Astronist Cosmology designates the Zoroastrian Cosmology as fundamentally narrativistic, mythological, and metaphorical in its premise and is therefore rejected as a cosmology to be taken seriously.

[2:24:113] Moving on to cosmologies that are not directly related to a religious tradition, we come to address Evolutionary Cosmology as derived from Darwinian theories which centre themselves on the idea of natural selection rather than supporting the design argument held serious implications for religious cosmologies and rendered them practically illogical to believe.

[2:24:114] It is, therefore, for this reason as to why the Astronist Cosmology deems such cosmologies to be irrelevant as they are not considered to hold any immemoriality, or any argument to stand up against that of Evolutionary Cosmology, as manifested by Darwinism.

[2:24:115] Focusing on the evolutionary developments of cosmical progeny and phenomena as real, changing, and constantly augmenting entities which is a major component of the Astronist approach to understanding the functionalities and the compositeness of The Cosmos itself.

[2:24:116] Periodic Cosmology is the next set of cosmologies of our contemplation which includes cosmologies that are characteristic of a particular person, era, or civilisation, and typically only thrived during those particular areas, or times until new cosmologies formed.

[2:24:117] Examples of which would be Megalithic Cosmology, Medieval Cosmology, Plato's Cosmology, Mesopotamian Cosmology, and Native American Cosmologies.

[2:24:118] Each of these cosmologies, although they are typically not recognised by the Astronist Cosmology as immemorial, serious, or relevant cosmologies, are all extolled and respected due to their contributions to the overall history of cosmological philosophical contemplation which has led to the discoveries and developments of more recent astronomers and philosophers and the traditions that have sprouted since their innovations.

[2:24:119] Without these preceding cosmologies, the Astronist Tradition does not believe that the latter cosmologies would have come about due to its belief in the Prior-Latter Principle which holds that that which has occurred prior must have had an intrinsic impact on that which occurred afterwards.

[2:24:120] Further to this, the Astronist Tradition designates cosmology, in its contemplational sense rather than its practical and theoretical sense, to be wholly the territory of philosophy as derived from rationality and not to be a territory of religion, as it once was. This is laid down by the philosophy of moratorium.

[2:24:121] Addressing Romanticism in the context of cosmological study manifests itself as Romantic Cosmology which focuses itself on “the original unity of man and nature in a Golden Age; the subsequent separation of man from nature and the fragmentation of human faculties; the interpretability of the history of the universe in human, spiritual terms; and the possibility of salvation through the contemplation of nature.”

[2:24:122] This does not mean to say that Astronism sides itself with Enlightenment and classicism as the opposites to romanticism as there are many examples in Astronist Philosophy that are reminiscent of romanticist approaches despite being in different contexts and methods, such as the focus on inspiration in many parts of Astronist philosophical practices as in aspects of Cosmic Devotion, subjectivity as manifested by the Philosophical Spirit, and an emphasis on the primacy of one’s individuality in all mental, physical, spiritual, and philosophical contexts.

[2:24:123] The Astronist Cosmology’s views on Cosmic Ancestry, which is to be henceforth known as cosmoancestrism in an Astronist philosophical tradition.

[2:24:124] Astronist Philosophy describes Cosmic Ancestry less severely than other traditions and sees it as the belief in the origin of life coming from space rather than originating from on The Earth and coming from a comet for example.

[2:24:125] This theory is not opposed by the Astronist Tradition and depending on the inimic developments in this recently theorised notion, the Astronist Tradition is expected either to distance itself or proximate itself with the theory, but in the present situation of the theory, the Astronist Tradition holds a tendency to lean towards this notion as it is cosmocentric at its heart.

[2:24:126] That which is known in non-Astronist and pre-Astronist contexts as cosmic pluralism, or the plurality of worlds, refers to the Astronist belief known as sentientism which is a belief in addition to The Earth, the existence of sentient life on other planets; Astronism is a staunch defender of this belief and it remains one of The Seven Tenets of Association.

[2:24:127] As two belief orientations within sentientism, those which are known as anthroposentientism and nonanthroposentientism.

[2:24:128] The former of these holds that there exists humans on other planets like humans on The Earth which is opposed by the Astronist Tradition as Astronists believe only in the existence of other humanoids, but not exactly humans are humans are considered unique in that respect due to the evolution of The Earth.

[2:24:129] Meanwhile, nonanthroposentientism maintains the notion that there does not exist any sentient beings on other planets that in any way resemble humans, but there may include humanoids on other planets due to humanoids not interjecting the evolutionary path of humans on The Earth.

[2:24:130] We must now move on to a broader comparological discussion that does not only address cosmologies of different persons and traditions, but instead makes comparisons between Astronism and other traditions, systems of thought, religions, cults, and concepts in their holistic states.

[2:24:131] The first of these non-cosmological aspects of comparology focuses on Astronism and its views on that which is known as exotheology.

[2:24:132] Astronism of course does not designate itself as an exotheological philosophy and neither does it orient its philosophy around exotheological issues, though it does address them as part of wider contemplations about The Cosmos in Cosmic Philosophy.

[2:24:133] Astronism persists that the discussion of extraterrestrials is absolutely necessary and should always be a topic that Astronists should debate amongst themselves.

[2:24:134] This also involves the potential cultural impacts of extraterrestrial contact which again should be centralised as a topic of discussion for Astronist philosophers and Astronists in a wider sense.

[2:24:135] We shall now begin to discuss the various different forms of religion and how Astronist Philosophy approaches these religious tradition and by conducting a comparological investigation, we shall hopefully make conclusions about how Astronism considers its interaction with such religions, thus demonstrating the relationships between these religions.

[2:24:136] Bábism focuses on the unknownness of godliness which demonstrates a parallel to the concept of The Divine in Astronism which, by its nature and appellation, is fundamentally made vague, unknown, and decentralised with intention.

[2:24:137] Astronism shares little other similarities with the tiny tradition of Bábism and so herein our discussion ends.

[2:24:138] Astronism and Bahá'í Faith are intended, by the works of The Institution, many encounterments due to the presence of Bahá'í growing worldwide.

[2:24:139] Astronism welcomes its interactions and integrations with the Bahá'í Faith, particularly due to this religious tradition's recognition of many of the world's major religious and philosophical traditions.

[2:24:140] It is not the ambition of Astronism to be recognised by the Bahá'í Faith, but it is instead hopeful that it can work together for the faith to achieve one of the faith's main precepts of the unity of all people in a world order, as well as the rejection of racism and nationalism.

[2:24:141] Philosophically, however, Astronism holds little in common with the Bahá'í Faith, but it is in this very notion that we strike at the core of the faith to work towards the unity of all peoples and their beliefs despite their differences.

[2:24:142] Astronism and Christianity are expected to hold a longer and complex history from the very outset compared to the relationship Astronism, also to be known as Kosma, as well as by others appellations, and other religious traditions.

[2:24:143] This is in an overall Christian theological and philosophical context while comparisons between Astronism and denominations of Christianity focus more on the specific doctrinal differences between The Philosophy and the denomination which, notably, are not addressed within The Omnidoxy for their presence is best suited elsewhere so as not to continue on about traditions that are not entirely relevant Astronism itself.

[2:24:144] Astronism's main concern with Christianity overall are the links between Christianity and astronomically related subjects including Christianity fundamental rejection of life on other worlds, the anthropocentricity that rests at the heart of Christian theology, as well as the outlooks held by many millions of Christians about the heliocentric model and its apparent falsities.

[2:24:145] Further to this, the Astronist Tradition also criticises Christianity for its apparent lack of astronomical centrality which, due to the errors of religions on this part, has led to the creation of moratorium in order to protect such subjects from the distortions of religious traditions.

[2:24:146] Despite this, the Astronist Tradition does identify one of the main connections made between Christianity and astronomical influence is the Star of Bethlehem which stands as the central aspect of the nativity story.

[2:24:147] Perhaps this link to the Christmas Star presents a sign of the centrality and importance of The Cosmos in Christianity that has been repeated downplayed and undermined throughout the entire history of the Christian religious tradition, as is expected by the Astronist Tradition.

[2:24:148] Christians believe in the miraculousness of the Star of Bethlehem and Astronism interprets this as astronomical entities and occurrences as being central elements and even leading to the decisions and events elemental to Christianity, thus pertaining to the potential cosmocentricity of Christianity that has been subverted and forgotten.

[2:24:149] Still regarding the Christmas Star, Astronism embraces the view of Mormons that the Star of Bethlehem was an actual astronomical event which the Astronist Tradition accepts than some godly act or angelic occurrence.

[2:24:150] Astronism does not hold any opinions about the actual doctrine of the Star of Bethlehem itself or any other element of Christianity as Astronism is not a Christian denomination and therefore it does not intend to hold any regard to the doctrines themselves, but the purposes of comparological study, we must make enquiries and criticisms of Christian doctrine from an Astronist perspective.

[2:24:151] Astronism rejects both the view of the Jehovah's Witnesses and the Seven-day Adventists on the Star of Bethlehem, both groups of which intend to undermine the inclusion of the Star of Bethlehem at the heart of the nativity which removes the notion that there exists a sense of cosmocentricity in Christianity.

[2:24:152] Particularly that of the Jehovah's Witnesses, which considered the Star of Bethlehem to be a product of some satanic influence which is rejected by the Astronist philosophical tradition on the basis that such views undermine the role of the cosmic progeny in the Christian narrative, thus diverging from the notions set forth herein by the Astronist Tradition with regards to the Christian religious tradition.

[2:24:153] Whilst Astronism typically holds a theistic perspective on most concepts, no matter how undefined it is, especially when comparing it to the traditional religious structures, it has been argued there are pockets of non-theistic, or perhaps even atheistic concepts, especially when regarding the indistinct nature of what the philosophy calls The Divine.

[2:24:154] In most other theistic philosophies and religions, a greater definition is given to the wants and needs of God from humanity, but due to the argued incentrality of humanity to The Divine, this is not discussed in large amounts of detail, and could be argued to run closer to Ietsism, and other related concepts.

[2:24:155] Another topic within Astronist Theology is that of Divine intercession and the relationship between The Divine and humanity which is widely referred to throughout the philosophy.

[2:24:156] It is generally interpreted that Astronism does not support, especially not to the extent of Christianity, the intercession of God in human life specifically, but instead has direct intercession on the events of The Cosmos and The Universe.

[2:24:157] But also, the philosophy does support the idea that God has created a destiny for every person; it could perhaps be evidently argued that Astronism supports theological concepts of a monotheistic nature, due to their never being any mention of other Divine beings, other than The Divine itself.

[2:24:158] One of the largest divergences of Astronism from Christianity is that the philosophy doesn't seem to support the idea that humanity could be connected to God in any way beyond the fact that God created humanity itself.

[2:24:159] The most central tenet of Christianity is the belief in Jesus Christ as the Son of God in human form, but fundamentally, from a theological, conceptual, and theoretical point of view, Astronism does not support this concept.

[2:24:160] Astronist Christians, or Astro-Christians, have skirted around this major deviation in theological concept by affirming that God did intercede with humanity in the creation of Jesus Christ, but they also acknowledge the concept that beyond this, God has had no intercession, and places greater emphasis on the concepts surrounding The Cosmos.

[2:24:161] Due to the nature of philosophy, as defined in The Twenty-Five Refoundations of Philosophy within The Grand Centrality, no Astronist philosophy is defined by one concept alone, and the exclusion of a particular concept makes the philosophy no less functional.

[2:24:162] The influence on Astronism from Christianity is, however, vast mainly due to the location of its founding being in the United Kingdom, one of the largest Western powers, and a country with a long Christian history.

[2:24:163] This can be witnessed by some of the culturally inherent concepts within The Philosophy, especially within the language used, and the ethical, moral, and social concepts expounded by Astronism.

[2:24:164] The majority of the elements of Christianity are inherently foreign to the Astronist philosophical tradition including all the events in both the Old and New Testaments which hold no significance, or indeed any reference in Astronism, except for their comparological inclusion herein.

[2:24:165] This forms a distinct disconnection between Christianity and Astronism for the two are different in almost every way, even down to the fact that they are fundamentally disparity in their designations with the former being a religion and the latter a philosophy which departs them from the outset.

[2:24:166] Everything from their basic structure, the majority of the issues they address, the central elements of them both, their histories, social teachings, and the source of their inspirations are all intrinsically disparate which makes for different comparological investigations between the two.

[2:24:167] Despite this, there are aspects of Astronism that are perhaps reminiscent of some sort of Christian organisation with disciplines of study such as missiology and ecclesiastical polity directly and admittedly being inspired for the creation of tiritology and naological polity respectively.

[2:24:168] Astronism holds deep and fundamental issue with Christian theology in the sense that it contrasts with the ideas of Astronist Philosophy, however, the acceptance of

Christianity and the acknowledgement of all its traditions and contributions to human civilisation are nonetheless important and supported by the Astronist Tradition.

[2:24:169] The next of our comparological addresses is focused on Gnosticism as a formed religious tradition and how The Philosophy of Astronism interprets Gnosticism.

[2:24:170] Astronism rejects gnostic teachings of the evilness of matter and the goodness of spiritual elements, however, Astronism accepts the unknowable God aspect, but does not recognise that god's actions and intercessions in the creation of other spirits, thus demonstrating the mixed views held by Astronism towards Gnosticism.

[2:24:171] To further add to this mixture of criticisms, neither does Astronism agree with the gnostic ideas of an evil spirit creating the universe, nor does it subscribe to the idea that to achieve salvation, one must learn a secret knowledge.

[2:24:172] This is because firstly The Philosophy of Astronism does not centralise salvation nor does it believe, as a philosophy, in secret knowledge for it upholds the notion that knowledge is open to all as part of Astronism's alignment to its designation as a philosophy as defined in The Twenty-Five Refoundations of Philosophy.

[2:24:173] In conclusion, there exist fundamental and irrevocable disparities between the essential beliefs and principles of the Astronist philosophical tradition and the Gnostic religious tradition.

[2:24:174] The Druze are the next of the religious group that we going to briefly comparological investigate in this discourse and essentially, Astronism holds a likening for the incorporation of elements of different philosophies into the Druze belief system, but it does not agree with the secretive theology of the Druze.

[2:24:175] The references to that which is cosmic is appreciated by the Astronist Tradition, yet the majority of the ideas within the Druze religion are not held or centralised by Astronism including reincarnation, the transmigration of the soul, cyclical rebirth, and the centralisation of a deity.

[2:24:176] Therefore, there exists so little similarity between Astronism and the Druze religious group that their in-depth comparison is difficult as a balance between similarities and differences is difficult to formulate, but essentially both Astronism and the Druze religious group are diametrically disproximated from one another in the orientations they hold as well as by the topics they are focused on.

[2:24:177] The Islamic religious tradition is the next of the religions of our address in this discourse and there although their stands many parallels between Islam and Astronism, there also does exist some fundamental contrasts.

[2:24:178] One of the main element of a comparological investigation is the identification of how a religion, or another subject of the investigation is astronomically influenced due to that being of the highest priority for the Astronist Tradition.

[2:24:179] The moon and crescent symbol is astronomically influenced which The Philosophy of Astronism holds a likening for with regards to Islam as it demonstrates a certain cosmocentricity that is lacking from the symbols of other traditions.

[2:24:180] Astronism holds no issues with the staunch aniconism present in Islam as cosmic progeny and phenomena do not fall into either of the categories discouraged or even forbidden to be depicted in art, thus forming the tradition of Astro-Islamic Art which the Astronist Tradition hopes to vigorously establish and promulgate.

[2:24:181] Astronism greatly differs from Islam on the cultural and societal structures and functions including on the roles of women, LGBT rights, education, exorcisms, politics, and jurisprudence.

[2:24:182] Despite the many differences between The Philosophy of Astronism and the religion of Islam, The Philosophy of Astronism only works towards achieving harmony with Islam and its denominations.

[2:24:183] Astronism does not hold any other similarities or areas of interest with regards to the religion of Islam due to Islam's centralisation of theological issues, including that of the Oneness of God, Day of Resurrection, Angels, Predestination, and other theological topics.

[2:24:184] However, Astronism, as a philosophy rejects the words of a Sufi saint who stated ten ways in which people's beliefs point to Allah, the particular lines of contention are:

[2:24:185] "The Physicists; worshipping the natural properties, which are actually attributes of God and The Philosophers; worshipping the seven planets, which represents further names of God."

[2:24:186] The Astronist Tradition takes major contention with these words as they are immensely damaging to the true role of both physicists and philosophers, which remain two of the most extolled groups of people by the Astronist Tradition.

[2:24:187] Specifically, the Astronist Tradition does not take contention with any particular aspect of the words, but instead considers the tone of the entire two sentences to be completed in order to undermine, downgrade, subordinate, or decentralise The Cosmos and its progeny and phenomena in some way.

[2:24:188] The atmosphere that these two sentences presents does not sit well with the Astronist Tradition, particularly due to the apparent incentrality that these sentences convey regarding The Cosmos and its progeny and phenomena and for the Astronist

Tradition, the centralising of god is of stark contrast to the in centrality of god found in the majority of the Astronist philosophical concepts and notions.

[2:24:189] The comparological investigation between Astronism and Judaism is primarily focused on the Astronist view of modern Jewish philosophy, as well as the incorporation of Astronist philosophical notions into a Jewish scholastic apparatus and worldview; also of concern is the Astronist view on Zionism.

[2:24:190] Jewish philosophy holds very few similarities with Astronism, particularly due to the starkly different originations of the two forms of philosophical approach, yet the Astronist philosophical tradition and its component culture and institutions are all-embracing and accepting of Jewish philosophy and culture, as well as the Jewish people in general.

[2:24:191] Perhaps one of the most controversial elements of Astronism and Judaism's relationship is the Astronist acceptance and support for Zionism, as reaffirmed herein and now in this discourse of The Omnidoxo.

[2:24:192] Zionism is considered by the Astronist Tradition to be an important element of Jewish unity and supports the notion for a Jewish homeland which has now been established as the State of Israel, though the Astronist Tradition and its institutions do not support some of the activities of the State of Israel; it is only the principle of Zionism that the Astronist Tradition supports.

[2:24:193] Astronism and the Rastafari movement (Rastafarianism) share little similarity with one another with the former either outright rejecting Rastafari ideas, or at least holding a stance of disproximation to them, thus demonstrating the lack of relevance that Astronism considers to be held by the Rastafari movement.

[2:24:194] The Astronist Tradition holds no contention with Rastafari culture, or Rastafarianism as a social and political movement, yet Rastafarianism's theological notions do cause the most contention.

[2:24:195] Of course, the majority of the interactions expected to occur between Astronism and Rastafarianism will do so in Ethiopia, Jamaica, and other countries in the Caribbean with the majority of the interactions between The Philosophy and this religion expected to consist of cultural infusion whereby elements of Rastafari symbolism are mixed with Astronist culture, art and rendition which the Astronist Tradition is not opposed to.

[2:24:196] Astronism and Zoroastrianism share very little in common along cosmological, eschatological, and philosophical lines, yet the main aspect that we must touch upon in this brief comparology is the respectation and extollation afforded to Zoroastrianism.

[2:24:197] Perhaps one may question why such respectation and extollation is provided? The reason is that the Zoroastrian religious tradition is the originator of many of the essential

elements of other religious traditions with messianism, judgment after death, heaven and hell, and free will being some of the major concepts that originated within its tradition.

[2:24:198] This is of immense importance to point out as without the influence of Zoroastrianism, it is difficult to see how many of the religions succeeding it would have flourished as they managed to do so because of the aforementioned concepts were already engrained in the minds of many after Zoroastrianism's creation of them, thus making it easier for later religions to use those already engrained concepts, ascribe new names to them, and create their own traditions.

[2:24:199] The Astronist Tradition herein ascribes the appellation of The Progenitor to the religion of Zoroastrianism and although little else of Zoroastrianism is of interest to Astronism due to the primitivity and disparity of the former compared to the latter, it is the respectation and extollation that the Astronist Tradition provides to Zoroastrianism that is the most important element of our contemplation of the religion.

[2:24:200] Astronism and Buddhism are two philosophies, the latter of which may also be described as a religion, that share a variety of concepts, practices, and beliefs unique to each of their traditions with little amount of contention between them, especially when comparing Astronism and its contentions with other religions in this discourse.

[2:24:201] Buddhism does not see humans as being in a special moral category over animals or as having any kind of God given dominion over them as Christianity does which is a notion not only also held by Astronism, but is also staunchly defended by the Astronist Tradition.

[2:24:202] According to Buddhist thought, "humans are seen as being more able to make moral choices, and this means that they should protect and be kind to animals who are also suffering beings who are living in samsara."

[2:24:203] The principle of this belief is also generally held by The Philosophy of Astronism, however, the notion involving samara, as well as other Dharmic concepts such as reincarnation, nirvana, karma and others are not recognised by Astronism, thus demonstrating a disconnect between these two traditions of thought.

[2:24:204] Buddhism also sees humans as part of nature, not as separate from it which is something that is also generally held within the Astronist Tradition as humans are considered to be products of cosmic progeny which classes them as derivations of the celestials as are animals and plants rather than separate in some spiritual or prophetic way.

[2:24:205] It is safe to state that The Philosophy of Astronism shares the least amount of contention with Buddhism, and perhaps Hinduism too, than any of the other religions mentioned in this discourse which is either down to the disproximity of these philosophies from one another and therefore their paths do not cross to cause contention.

[2:24:206] Or it could be put down to the generally similar atmospheres of both Astronism and Buddhism with their focuses on interpreting existence without the reliance or centrality on the notion of a creator god although there does exist some contention between the cosmologies of Astronism and Buddhism, as aforesaid.

[2:24:207] Astronism and Hinduism, as aforementioned in this discourse, hold little contention in comparison with other religions, however, the Astronist Tradition does not accept the concepts of reincarnation, karma, samsara, moksha, or the stages of life upheld by the Hindu tradition amongst many others, but it does acknowledge them to exist and hold important value in Eastern philosophical systems.

[2:24:208] The reason for Astronism's disacceptance of such Dharmic concepts is because they hold no presence within the beliefs, cosmologies, disciplines, and theories of the Astronist philosophical tradition.

[2:24:209] Astronism respects Hindus for their pursuit of knowledge and understanding of truth and agrees with the notion that truth is eternal, but from the Astronist perspective, it shall never be possible to reach ultimate truth for we reside within a realm of limitation known as The Cosmos.

[2:24:210] Astronism understands truth in three ways existent as Divine Truth, Cosmic Truth, and Perceptual Truth; the former of which relates to ultimate and eternal truth which is unattainable by all that is cosmic by its nature; the median of which refers to the truth in The Cosmos and all the other cosmoses of The Universe which refers to when truth varies from cosmos to cosmos in The Universe.

[2:24:211] The latter of which refers to the truth perceived by humans which refers to all human knowledge and belief, both proven and that which remains unproven; no aspect of Perceptual Truth can truly be considered to be a certainty for the perceptual, sensory, and emotional experiences of humans, and other forms of sentient life, distort such truth; this understanding of truth and its nature perhaps do not align with the Hindu philosophical notions regarding truth.

[2:24:212] Astronism does not officially recognise the theological understandings of Hinduism for example the belief in Brahman as the ultimate truth and reality, as well as the polytheistic nature of Hinduism as part of Astronism's own system of thought, but maintains that such non-Astronist beliefs can still be followed in simultination to being a Hindu.

[2:24:213] Additionally, as is the stance taken towards other non-Astronist scriptural texts, The Vedas are not recognised by the Astronist philosophical tradition as holding ultimate authority in the Astronist Tradition.

[2:24:214] Other aspects of Hinduism are also not recognised by the Astronist Tradition including the Hindu purpose to achieve dharma and the immortality of the individual soul which is rejected by Astronism, as well as the focus on the achievement of moksha which is again not a recognised concept within Astronism.

[2:24:215] Astronism and Jainism hold a similar relationship as Astronism and Buddhism and Hinduism as they all originate from an Eastern Dharmic religious tradition.

[2:24:216] Again, reincarnation and karma as the most important elements of Jainism are not considered within the Astronist philosophical tradition and neither are some distinct Jain beliefs such as The Three Jewels and the Twelve Vows, yet they still remain respected and extolled for their contributions to Eastern systems of thought.

[2:24:217] As the final instalment of the Eastern Dharmic faiths, Sikhism and its comparison to Astronism hold many understandings of recognition from Astronism to Sikhism with very little contentions, if any at all.

[2:24:218] From gathering an understanding of Sikhism, the Astronist Tradition considers there to be no areas of contention for Astronism towards Sikhism and the fundamental ten principles beliefs of the religion with all such beliefs not considered to oppose Astronist thought in any way, thus making the philosophy and the religion very compatible to one another.

[2:24:219] The Astronist Tradition intends to bring to Sikhism one aspect that seems to be sorely lacking from the religion which is an astronomical angle both in philosophy and practice, as is the commonmost element that Astronism tends to inject into all non-Astronist systems of thought.

[2:24:220] The Astronist Tradition intends to incorporate this apparent seamless compatibility between Astronism and the Sikh religion into practical functions by orienting its Institution towards helping Sikh communities, showing Sikh peoples how their religion is bolstered through the introduction of Astronism into their lives, and how by doing so, they will not defy their religion.

[2:24:221] Astronism and Confucianism are diametrical in the majority of the circumstances of their founding with the former originating from 21st century England espousing cosmocentricity while the latter originates during the 5th century BC in China focusing on societal function, basic ethical principles, and the prioritisation of familial relations; perhaps there is no greater disparity than between the origins of these two philosophical traditions.

[2:24:222] Astronism extends respectation and extollation to Confucius as the founding father of a major philosophical system and the Astronist philosophical tradition holds no contentions with that of the Confucian system, primarily because neither of these philosophies cross paths in their focuses so there is no instance for contention to occur.

[2:24:223] A related philosophy is Neo-Confucianism which, like its predecessor of Confucianism, does not have any contentions with The Philosophy of Astronism because again, the two philosophical systems do not overlap in teachings with practices such as introspection and meditation in Neo-Confucianism deserving both respectation and extollation from the Astronist Tradition.

[2:24:224] Astronism and Shinto are a philosophy and a national religion respectively and perhaps immediately demonstrate no similarities to students, yet the reality is quite different upon deeper contemplations.

[2:24:225] Shintoism “focuses on ritual practices to be carried out diligently to establish a connection between present-day Japan and its ancient past,” which, despite the foreignness of rituals to Astronism, the latter part of the description is resonant to Astronism because in Astronist Philosophy, the actions, beliefs, and thoughts of the present are considered to be reflective by the past and inspired by the future.

[2:24:226] The notion of the interconnection between the past, present, and future by the conduct of contemplation, belief, and subsequent practice is an concept of importance within Astronist Philosophy, and is also considered so by the Astronist Tradition, and is to be henceforth known as omnitemporalism, for it demonstrates the importance and intertwinement of thoughts, beliefs, and practices in all the past, present, and future Elements of Time as they are appellated.

[2:24:227] Shintoism can also be described as “the religion of public shrines devoted to the worship of a multitude of ‘spirits’ or ‘essences’ suited to various purposes such as war memorials and harvest festivals, and applies as well to various sectarian organisations.”

[2:24:228] Perhaps the greatest disparity between Astronism and Shintoism are the differences in the practices of the latter in comparison to the former, though the atmospheres of both of these systems of thought hold greater similarity to one another.

[2:24:229] One of these similarities in essence is demonstrated by the concept of Kami which “refers to the singular divinity, or sacred essence, that manifests in multiple forms: rocks, trees, rivers, animals, places, and even people can be said to possess the nature of Kami.”

[2:24:230] The concept of Kami perhaps best similarised to the concept of The Divine in the Astronist Cosmology, and one of the most pertinent elements of Shintoism is its focus on the connection and centrality of natural phenomena to greater means and causes, the atmosphere of such a concept is supported by Astronism.

[2:24:231] As aforeaffirmed, the practices of Shintoism demonstrate the greatest of disparities with Astronism, thus forming the largest areas of contention between these two

systems of thought, particularly due to Shinto's practices focusing on divination, spirit possession, and shamanic healing.

[2:24:232] These practices are generally rejected or disrecognised by the Astronist Tradition for they are all foreign to not only Astronist Philosophy, but also wider philosophy too.

[2:24:233] According to Shinto thought, "Kami refers particularly to the power of phenomena that inspire a sense of wonder and awe in the beholder (the sacred), testifying to the divinity of such a phenomenon," and when described in this sense, the approach of the Astronist Philosophy is very proximated to that of Shintoism.

[2:24:234] The notion that natural phenomena hold the collective power of wonderment and inspiration is a central concept in The Philosophy of Astronism that holds particular connection to the concept of cosmocentricity which itself places particular importance to the inspiring abilities of natural phenomena, particularly those of a Cosmic Nature, more so than those of an Organic Nature.

[2:24:235] In Shintoism, the notion of "Kannagara refers to the law of the natural order," which is another element of Shintoism that is of immense connection to Astronism as The Philosophy remains consistently expressive of the existence of a cosmic orderity and system as an extension to the general natural order.

[2:24:236] Unique ritualistic ceremonies and the centrality of the Japanese nation are at the centre of Shinto and although these elements of the religion are foreign to Astronism and remain inconsistent to the practices and ambitions of The Philosophy, they are still provided with respectation by the Astronist Tradition for their immense powers of inspiration.

[2:24:237] Therefore it does remain difficult for Astronism to relate to Shinto, though there are many elements in its naturalistic theology and cosmology that are considered to be similarly important elements within Astronist Philosophy which have been addressed herein.

[2:24:238] The comparological discussion of Astronism and Taoism is of particular interest, especially due to their similar designations as organised philosophies, yet their originations are so greatly in disparity, particularly according to the time periods and locations of their mutual founding.

[2:24:239] Taoism denotes the principle that The Tao is "the source, pattern and substance of everything that exists" which forms a resemblance to the role and function of The Divine from the Astronist Cosmology as its own source, pattern, and substance of all existence.

[2:24:240] “Taoist ethics vary depending on the particular school, but in general tend to emphasise wu wei (action without intention), naturalness, simplicity, spontaneity, and the Three Treasures: compassion, frugality, and humility.”

[2:24:241] In default, the Astronist approach to ethics support such humble notions of goodness and righteousness, but in arguable disparity with Taoist ethics, takes a more realistic approach to the feelings, desires, reactions, and ambitions of humans in their personal quests, as formed through their own knowledges and circumstances.

[2:24:242] “Taoist cosmology is cyclic; relativity, evolution and the notion of how 'extremes meet' are main characteristics,” which, despite the fact that the Astronist Cosmology expounds linearity and infinity rather than cyclicity, the justifications of the Taoist cosmology through relativity, evolution, and the contact of extremities are used to justify the linearity of the Astronist Cosmology.

[2:24:243] In Taoism, “the universe is seen as being in a constant process of re-creating itself, as everything that exists is a mere aspect of qi, which when condensed, becomes life and when diluted, it is indefinite potential”.

[2:24:244] Despite the fact that Astronism does not recognise the Taoist ontological and cosmological approach for its does not conform to the Astronist Tradition, it does not reject it entirely and so therefore, in some sense, Taoist thoughts are expected to exist in some elements and groups within the wider Astronist philosophical tradition, despite the Tradition’s orientation itself towards linearity, though via concepts such as The Omniverse and others, the notion of a recreating universe is not foreign to Astronism.

[2:24:245] “Qi is in a perpetual transformation between its condensed and diluted state; these two different states of qi, on the other hand, are embodiments of the abstract entities of yin and yang, two complementary extremes that constantly play against and with each other and cannot exist without the other.”

[2:24:246] There are many instances wherein a yin and yang dichotomy can exist within the Astronist Cosmology, perhaps most notable demonstrated in the higher form via the relationship between The Cosmos and The Universe, or the relationship between The Cosmos, The Universe, and The Divine thus forming a trichotomy.

[2:24:247] In another instances, a yin and yang scenario can be found in a composite sense through all the different instruments of study found and utilised in the Astronist philosophical tradition to derive concepts and conclusions of understanding for the vast majority of the instruments of study are based upon the comparison of opposites, thus demonstrating a centrality on many composite versions of the wider yin and yang understanding of existence which forms a greater connection between Taoism and Astronism than was perhaps previously realised.

[2:24:248] "Human beings are seen as a microcosm of the universe and as a consequence, it is believed that deeper understanding of the universe can be achieved by understanding oneself."

[2:24:249] This notion in the context of Astronism is partly true, but Astronism does not consider a deeper understand of oneself to be the primary, or superior form of a better understanding of The Cosmos and The Universe for this is considered to be an element of anthropocentricity from the Taoist thought that Astronist thought rejects.

[2:24:250] Therefore, from a cosmocentric, or Astronist viewpoint, more and more observations, inspirations, and contemplations focusing on The Cosmos will eventually lead to a greater understanding of The Universe and The Divine and all other higher existences.

[2:24:251] Astronism maintains that the answers to existence lay in humanity's greater focus on The Cosmos rather than focusing on themselves which is constructs a direct counternotion to the principles expounded by Taoism, thus demonstrating a divergence of thought between the two traditions.

[2:24:252] However, the Astronist Tradition does agree with the first part of the above notion of Taoism that humans remain as microcosms to the universe for they are considered to be derivations of cosmic progeny as part of Organic Nature, but it is the prioritisation of the understanding of oneself rather than the understanding of The Cosmos as the paramount that is difficult for Astronism to accept with regards to the Taoist notion.

[2:24:253] This is because Astronist thought posits that existential answers do not just lay in the microcosmic elements of existence, namely humanity, but instead are best found and understand through the observation and contemplation of the underivated cosmic progeny and phenomena for they show a greater direct connection to divinity than humans do; furthermore, any notion of anthropocentricity is rejected by Astronist thought.

[2:24:254] "Taoism can be defined as pantheistic, given its philosophical emphasis on the formlessness of the Tao and the primacy of the "Way" rather than anthropomorphic concepts of God."

[2:24:255] This element of Taoist cosmology and theology is acknowledged by Astronism, especially due to the similar conceptualisation of The Tao when compared to The Divine, however, it is important to note that the Astronist Tradition does not ever make an ethical connection between The Divine and what humans and any other sentient being should morally be doing, thus diverging from the notion of the Way in Taoism.

[2:24:256] Further to this, the notion of the rejection of anthropomorphism in Taoism is also considered important to Astronist thought which demonstrates another similarity between

how these two philosophies share some parallels, but equally share just as large disparities with each other.

[2:24:257] “The pantheon of Taoism is characterised by higher and lesser deities that move up and down in significance according to their activities.”

[2:24:258] This demonstrates another point of contention and divergence between Astronism and Taoism because Astronism, despite the Astronist Tradition’s adherence to disproportionalism with regards to a prohierarchal view of higher existences, it is not believed that these different existences can move up and down in their significances which demonstrates the divergence between Astronism and Taoism.

[2:24:259] This belief regarding higher existences and their abilities to move and down in the hierarchy is to be known as henceforth known as vermotionism, and despite its rejection by the Astronist Tradition, it is still expected to exist in some form in the wider Astronist philosophical tradition.

[2:24:260] Vermotion relates to how something, either physically or conceptually, is able to move vertically in a hierarchy according to a present change in circumstances.

[2:24:261] “Fortune-telling, mediumship, and astrology are significant in Taoism,” which demonstrates a similarity in divergence as was demonstrated between the differences in practice between Astronism and Shintoism, and herein we have come across a similar divergence in practice coupled, despite some similarities in thought between these two philosophies.

[2:24:262] All three of these practices that remain important to Taoism are not recognised or accepted by the Astronist Tradition, and cannot be easily found in the wider Astronist philosophical tradition, except perhaps for the latter of the three, astrology, which Astronist Philosophy continues to have a difficult relationship with.

[2:24:263] Chinese folk religion involves the “veneration of forces of nature and ancestors, exorcism of harmful forces, and a belief in the rational order of nature which can be influenced by human beings and their rulers as well as spirits and gods.”

[2:24:264] The beliefs and practices of Chinese folk religions are of immense foreignness to the Astronist philosophical tradition in its entirety with the majority of their concepts and practices being either unrecognised or opposed by the Astronist Tradition, with the only exception being that the Tradition holds respect for Chinese folk religions in their efforts to propound the notion of a “rational order of nature” which is likened to the Astronist approach in understanding the functionalities and systems of the organic world, as a derivation of the cosmic world.

[2:24:265] Worship in Chinese folk religions generally involves devotions to “a multiplicity of gods and immortals, who can be deities of phenomena, of human behaviour, or

progenitors of lineages," which remains another element of the Chinese folk religions that is foreign to Astronist Philosophy.

[2:24:266] Other elements of Chinese folk religion involve the notions of "heaven as the transcendent source of moral meaning", "breath and energy animate the universe", "the veneration of ancestors," and "moral reciprocity".

[2:24:267] The first of these elements is rejected by the Astronist Tradition due to the notion that some divine entity posits morality to humanity because of its transcendence above all else in existence which is opposed so as to remove morality from divinology, with the oppose being a very religious and theologically-based assumption.

[2:24:268] However, philosophy, and especially the Astronist Tradition, hold that there exists no connection between transcendent beings and the dictation of morality which is considered to be a tool invented by religious traditions to control the masses through notions primarily based on fear.

[2:24:269] Shamanism also plays a role in Chinese folk religion which is another point of contention for The Philosophy of Astronism as shamanism in general is rejected as a practice by the Astronist Tradition.

[2:24:270] Falun Gong, as the next of the religious traditions to be comparologically addressed, expounds "truthfulness, compassion, and forbearance through the adherence and cultivation of these values."

[2:24:271] These simple notions of morality are not contested by Astronist Philosophy with another central element of adherence to the religion existing as the cultivation of a certain "moral rectitude and the practice of meditation, practitioners of Falun Gong aspire to eliminate attachments, and ultimately to achieve spiritual enlightenment."

[2:24:272] This aspect of Falun Gong is considered to be a repetition of Buddhist philosophy which expounds the elimination of all suffering with the prospect of achieving enlightenment in a state of nirvana; for this reason, the Astronist Tradition acknowledges such concepts as ultimately Buddhist in origination though accepts that the methods and practices incorporated into Falun Gong may be somewhat unique to its own tradition.

[2:24:273] "The nature of the cosmos doesn't change, and it is the only standard for determining who's good and who's bad so to be a cultivator you have to take the nature of the cosmos as your guide for improving yourself."

[2:24:274] This particular element of philosophy in Falun Gong has been pinpointed due to its relevance to the Astronist philosophical tradition and this is an element of thought that the Astronist Tradition takes inspiration from when it is oriented towards cosmocentricity; the notion that by observation and understanding of The Cosmos one is better equipped to improve themselves is an inspired notion attributed to Falun Gong.

[2:24:275] It is the notion of cultivation that the Astronist Tradition is particularly interested in for the extraction of improvements for oneself from The Cosmos is considered to be a notion of particular importance in Astronist Ethics therefore this becomes an ontological issue and this notion is to be known as cultivationism.

[2:24:276] The fact that the belief orientation of cultivationism is directly inspired by the concepts of Falun Gong which proximates these two initially disproximated systems of thought, however, the majority of the other practices and concepts of Falun Gong remain foreign to Astronism, and largely unrecognised.

[2:24:277] Cheondoism “places emphasis on personal cultivation, social welfare in the present world, and rejects any notion of an afterlife,” which are all notions that The Philosophy of Astronism accepts, but does not necessarily centralise these notions in the same as Cheondoism, though their general natures cannot be said to be non-Astronist in orientation.

[2:24:278] Cheondoist thought is strongly influenced by Confucianism, but incorporates Korean shamanism, thus distinguishing it from being purely a Confucian school of thought, but because of the introduction of shamanistic practices, this further disproximates Cheondoism from Astronism as Astronism rejects shamanism due to its reliance on personal divinatory inspirations and proclamations.

[2:24:279] Caodaism is the next of the religious traditions to be considered comparologically and is a system of thought primarily holding the “Cao Dai to be the supreme deity, believed by Caodaists to have created the universe.”

[2:24:280] This principal aspect of Caodaism isn’t rejected by Astronism for this expounds monotheism which is a respected belief orientation by the Astronist Tradition and also remains present within many aspects and interpretations of the Astronist philosophical tradition, despite the differences in appellation that Caodaists ascribe to their supreme deity.

[2:24:281] “The symbol of the faith is the Left Eye of God, representing the yang (masculine, ordaining, positive and expansive) activity of the male creator, which is balanced by the yin activity of Mother Goddess, the Queen Mother of the West; the feminine, nurturing and restorative mother of humanity.”

[2:24:282] This aspect of Caodaism is generally opposed by Astronism because it directly attributes human gender identities to a godly or divine entity which is a form of anthropomorphism which Astronism is characterised as generally rejecting and opposing, especially because of the anthropocentric roots of such belief orientations.

[2:24:283] “Adherents engage in practices such as prayer, veneration of ancestors, nonviolence, and vegetarianism with the goal of union with God and freedom from saṃsāra and duality constitutes the harmonious balance of the universe.”

[2:24:284] It is important to make a digression here particularly we introduce the concept of Astronist Philosophy that shall be henceforth known as recompositionism which essentially observes The Cosmos as internally comoving entity that is constantly seeking the rebalance and recomposition of its component elements.

[2:24:285] This belief orientation within the Astronist philosophical tradition does hold controversy because it is primarily premised through the observations, thoughts, and feelings manifested in sentient minds and circumstances.

[2:24:286] However, recompositionists also relate their notions to cosmic progeny and phenomena by arguing that the rebalance and recomposition of sentient affairs is purely a derivation of the same rebalancing and recompositional occurrences between progeny and phenomena in The Cosmos.

[2:24:287] Recompositionist thought is very closely associated with the notion of comovement as it supports the notion that The Cosmos and The Universe are comoving, but also that there is intracomovement in occurrence whereby elements and entities within The Cosmos are also comoving for the purpose of rebalance and recomposition.

[2:24:288] Recompositionist concepts are perhaps best demonstrated through the corporeal and anthropic instances from which the orientation originates because of the clearer instances of comovement, rebalance, and recomposition in occurrence in situations that are most resonative to anthropic circumstances; this relates to the Clarity of Ideas notion.

[2:24:289] The Clarity of Ideas notion, which is also to be henceforth known as resonativism, postulates the idea that concepts, theories, and belief orientations may not be best understood in reality by the masses through their applications to cosmic examples, and should therefore be applied, wherever suitable, to anthropic circumstances so that they shall be better understood and accepted as a result.

[2:24:290] This is also considered to be controversial orientation because it may be seen as giving into an anthropocentric view of circumstances rather than a cosmocentric one, the latter of which is of course posited by the Astronist Tradition and so therefore, resonativist approaches are considered to be not only non-Astronist, but anti-Astronist because they are anthropocentric in leaning.

[2:24:291] Resonativists may postulate that their beliefs are only held because of the realistic circumstances of promulgating a concept or belief orientation to the masses who require to be told the concept through examples and consequences that either direct involve humans, or at least affect human life in some way so as to form the resonance for greater understanding.

[2:24:292] As we now return to our comparological discussion of Caodaism, one of its most important beliefs involves the notion that “before the creation of the universe, there was the "dao", the infinite, nameless, formless, unchanging, eternal source.”

[2:24:293] This notion, despite its inconsistency with the Astronist understanding of The Universe, does resonate when considering the Astronist concept of The Divine due to the understanding that The Divine did exist before all else as the creator of The Universe.

[2:24:294] The Caodaist notion that “the negative and positive principles of the universe are the components of the eternal nature,” is resonative to the Astronist Tradition due to the consideration that there exists many dichotomies throughout existence, but the eternality of these is disputed by the Tradition as eternality demonstrates universality and divinity.

[2:24:295] “In terms of the cosmos, faithful Caodaists believe there are heaven and hell, which are the main destinations for souls after death.”

[2:24:296] This pre-Astronist and non-philosophical eschatology is not followed by the Astronist philosophical tradition, especially regarding heaven and hell and the transversion of the soul as the actual existence of the soul is taken into question by the Astronist Tradition.

[2:24:297] The Caodaist eschatology involves the notions that “in order to go to heaven, souls are required to cultivate their virtues and/or devote themselves to spiritual causes without merit from the latter, they cannot escape the cycle of birth and death, but can improve their virtues and merit gradually to reach better places in the universe, including the 72 planets (ours is the 68th), the 3,000 worlds, the four great cosmic regions, and the thirty six heavenly planes.”

[2:24:298] This cosmically-themed eschatology is to the respectation and extollation by the Astronist philosophical tradition merely due to its cosmical theme, however, the actuality of the eschatology and the notions it expounds remain foreign and unrecognised by the Astronist Tradition.

[2:24:299] The comparological investigation into Astronism and African traditional religions covers a wide range of different religious beliefs, concepts, and practices which have developed across the African continent over the course of its history.

[2:24:300] “These traditions are oral rather than scriptural, include belief in a supreme creator, belief in spirits, veneration of the dead, use of magic and traditional medicine.”

[2:24:301] Perhaps one of the greatest distinctions between Astronism and the various African traditional religions is that the former is documentary while the latter is

majoratively oral as it relies on the how religion is spoken and debated and this is how it is promulgated.

[2:24:302] The other aspects of the African traditional religions are generally foreign and unrecognised by the Astronist Tradition, nevertheless they remain accepted for the Tradition understands that The Philosophy will most likely be syncretised with such beliefs in African countries where these practices are most prevalent.

[2:24:303] “The role of humanity is generally seen as one of harmonising nature with the supernatural,” which is rejected by the Astronist philosophical tradition due to the role of providence that humanity is provided with this identity, especially because in Astronism, humanity’s role is considered to be reactive in the observation, inspiration, exploration, and enknowledge of The Cosmos rather than a proactive role.

[2:24:304] Therefore, the Astronist Tradition supports the belief orientation to be henceforth known as proactivism rather than the belief orientation that is to be known as reactivism.

[2:24:305] The notion that “the supreme deity is worshipped through consultation or communion with lesser deities and ancestral spirits,” is rejected by the Astronist Tradition for direct human interaction with deities and spirits is considered to be foreign to The Philosophy of Astronism and its own divinology.

[2:24:306] “The deities and spirits are honoured through libation and the sacrifice of animals, vegetables, cooked food, flowers, semi-precious stones and precious metals,” are two more practices of African traditional religions that all remain foreign to Astronist Philosophy, thus demonstrating the little amount of similarities between Astronism and the various African traditional religions.

[2:24:307] “The will of the supreme deity is sought by the believer also through consultation of divinities or divination,” which again remains foreign to the Astronist philosophical tradition due to the notion that humanity should seek direct interaction with divinity which is not considered to be existentially possible because of the limited existence within The Cosmos that disallows all interactions of humanity to The Universe and The Divine which reside outside of The Cosmos.

[2:24:308] “There is a general belief in a cyclical nature of reality,” in the African traditional religions which is rejected by the Astronist philosophical tradition, but it remains a foreign concept to the Astronist Tradition which maintains all cosmoses to be linear.

[2:24:309] However, The Universe and The Divine, due to their infinite natures, do defy this notion of linearity as they have always existed, but they also defy the cyclic reality notion for they both transcend beyond cyclicity by the notion that the cycles of reality must have been created in some instance, unless they themselves are infinite which would

mean they would have to be both universal and divine in nature; this remains a major point of contention for the Astronist Tradition.

[2:24:310] “The living stand between their ancestors and the unborn and in traditional African religions embrace natural phenomena – ebb and tide, waxing and waning moon, rain and drought – and the rhythmic pattern of agriculture,” which are less so foreign to the Astronist philosophical tradition due to such concepts remaining of interest, especially so the notion of the embracement of natural phenomena, cosmic progeny and phenomena of which are derivations.

[2:24:311] Vodou, the next of the religious traditions gaining our comparological attention in this discourse, revolves its own theology around a “distant and unknowable supreme creator,” which draws parallels to the concept of The Divine in the Astronist Cosmology for this too is distant, unknowable, and all-creative.

[2:24:312] That which this supreme creator is named, Bondye, “does not intercede in human affairs, and thus they direct their worship toward spirits subservient to Bondye, called loa.”

[2:24:313] The former part of this description of the Vodou understanding of the interactivity of that with divine essence being a non-interceding activity is resonative to the Astronist Tradition, especially the fact that the affairs of humanity are made distinct from those of divinity.

[2:24:314] According to Vodou thought, “every loa is responsible for a particular aspect of life, with the dynamic and changing personalities of each loa reflecting the many possibilities inherent to the aspects of life over which they preside.”

[2:24:315] In an propermissive sense, the notion of loa and its reflection in every aspect of life could be considered according to the different dichotomies demonstrated through instruments of study in the Astronist philosophical tradition, however, in an antipermissivist stance, this would not be well received and it is to the latter that the Astronist Tradition holds a tendency to slide to in the context of Vodou and its concepts.

[2:24:316] Digressing slightly, due to the inclusion of the term propermissive, it seems suitable to address herein that there exists two approaches in the Astronist philosophical tradition, in comparological study especially, of how something can be applied or interpreted.

[2:24:317] Propermissivism, as the belief orientation shall henceforth be known, refers to the instance in which the comparologer is lenient and obliging to the subject being investigated which is characterised by a tendency to make largely positive interpretations and comparisons of the subject, thus drawing a greater proximity between the relationship of the two subjects, when a neutral or unbiased comparologer may be less optimistic with their own interpretations and comparisons of the same two subjects.

[2:24:318] Alternatively, that which shall henceforth be known as antipermissivism which is a method of comparological investigation characterised by a distinct strictness and severity in their contemplations involving largely negative slants in their interpretations and comparisons of the subject being investigated while a neutral or unbiased comparologer may be more optimistic with their interpretations and comparisons of the same two subjects.

[2:24:319] If anything, the demonstration of these different realities for comparological study highlights their immense vulnerability to distortion depending on the intention of the comparologer, as comparologists may also be known, yet typically in a more colloquial and non-professional sense for a comparologer can refer to anybody conducting a comparological study while a comparologists suggests a person with greater scholarly understanding and background.

[2:24:320] Meanwhile, impermissivism refers to the belief orientation of neutral or unbiased interpretation which is generally considered to be either impossible by those whom subscribed to the two previously introduced orientations, or at least not providing an interesting or in-depth comparological investigation if an impermissivistic approach is taken.

[2:24:321] Returning from the digression now, we come to address some of the practices of the Vodou tradition which generally involves “the presentation of offerings, the creation of personal altars and devotional objects, and participation in elaborate ceremonies of music, dance, and spirit possession.”

[2:24:322] These forms of religious practice are of course foreign to the Astronist philosophical tradition due to their non-existence in its tradition, however, they are nevertheless respected while in fact some of their elements are not so disproximate from Astronist philosophical practices, especially involving the creation of personal devotional objects (the equivalent of which is Astronist Rendition), as well as the incorporation of music into some practices (the equivalent of which is the intrinsic relationship between Cometanic music and Astronist Philosophy).

[2:24:323] However, the other practices such as the presentation of offerings, spirit possession ceremonies, and the creation of personal altars do remain completely unrecognized and foreign to the Astronist philosophical tradition, and do remain rejected by the Astronist Tradition.

[2:24:324] The relationship between The Philosophy of Astronism and the religion of Umbanda remains strained as Umbanda is considered to be a reappellated religious tradition entirely created through reappellations of concepts and doctrines from pre-existing faiths and is therefore not considered to be worthy of further comparological discussion.

[2:24:325] Occultism is a wide-ranging tradition of beliefs and practices that vary depending on their location of origin and Éliphas Lévi had “stressed the need to solve the conflict between science and religion, something that he believed could be achieved by turning to what he thought was the ancient wisdom found in magic.”

[2:24:326] Such a resolution is not recognised by the Astronist Tradition as a suitable solution to the the apparent conflict between science and religion which philosophy itself is not concerned with for in this conflict, philosophy is the mediator and the middleground between the two conflicting parties, though its loyalties of course rest with the former rather than the latter.

[2:24:327] Furthermore, Hanegraaff remarked that “occultism was essentially an attempt to adapt esotericism to the disenchanted world, a post-Enlightenment society in which growing scientific discovery had eradicated the dimension of irreducible mystery previously present.”

[2:24:328] Noteworthy is that “rather than outright accepting the triumph of scientism, occultists sought an alternative solution, trying to integrate scientific progress or modernity with a global vision that will serve to make the vacuousness of materialism more apparent.”

[2:24:329] It seems that the occultists struggled with the shifting dominators in knowledge in the world and the general rising dominators in society in general such as materialism and consumerism and therefore attempted was the fusion of scientific progress and modern society.

[2:24:330] However, the Astronist Tradition considers this to have already occurred and remains existent at the centre of the Astronist philosophical tradition through the progression of space exploration and discovery, as is manifested through astronocentricity into the daily functions of society.

[2:24:331] For this reason, the Astronist Tradition holds great respect for the occultists and their ambitions to reverse the domination of materialism and consumerism in society through demonstrating their negative effects on the society they hold domination over.

[2:24:332] Occultism in a general sense is said to be encompassed by three main practices which include astrology, natural magic, and alchemy, the two formers of which are rejected by the Astronist Tradition while the latter’s relationship remains constrained, as we shall now address herein.

[2:24:333] The relationship between The Philosophy of Astronism and Alchemy is expected to remain complex throughout their mutual histories of interaction with one another which is demonstrated by the several inclusions and references to alchemic practices and beliefs here within The Omnidoxy, most notably so through the development of Astronist

Alchemy and Cosmic Alchemy as two new, yet inseparable forms of alchemic practice and belief.

[2:24:334] As we move on to satanism as a belief system, despite the nonexistence of satan in The Philosophy of Astronism in any of its reappellated forms, Astronism continues to denounce the organisation of beliefs on satan as a specific derogatory, divisive, and offensive system of belief directed to taunt the beliefs of other religious traditions; when the purpose of a belief is to taunt this is not accepted as protected under the auspices of the Philosophical Spirit.

[2:24:335] Astronism and Humanism are expected to hold a wide-ranging relationship between concurrence and rejection despite the atmospheres of each of their philosophies holding inherent similarities.

[2:24:336] Humanism “emphasises the value and agency of human beings, individually and collectively, and generally prefers critical thinking and evidence (rationalism and empiricism) over acceptance of dogma or superstition.”

[2:24:337] As many Chinese religions are designated as humanist religions such as Confucianism being the primary example, but the designation of Astronism as a humanist religion is rejected, however, the designation of Astronism as a humanist philosophy, or generally humanistic is much more accepted by the Astronist Tradition.

[2:24:338] Despite the rejection of anthropocentricity in a philosophical context in Astronism, a propermissivist view of humanism would suggest that cosmocentricity can still be prioritised in humanist thought for it maintains that nowhere in humanism does there exist opposition to a concentration on The Cosmos as long as the values and agency of human beings are upheld.

[2:24:339] Furthermore, the Astronist Tradition generally considers itself to be proximate to the nature of humanist philosophy by the notion that it is generally more supportive of critical thinking and evidence.

[2:24:340] Finally on this particular aspect, the Astronist Tradition, despite its rejection of anthropocentricity, continues to maintain that humanity do hold a role in The Cosmos based on exploration, devotion, and enknowledgement and so considers this to be perfectly integrateable to the humanist system of thought.

[2:24:341] Humanist ethics generally refers to a “perspective that affirms some notion of human freedom and progress,” which is of course supported by The Philosophy of Astronism, especially in close proximity to the aforementioned notion of humanity’s role in The Cosmos for the exploration of, devotion to and enknowledgement about The Cosmos is considered to be the essence of human freedom and progression beyond all current capacities held on The Earth alone.

[2:24:342] Furthermore, humanist thought maintains the view that “humans are solely responsible for the promotion and development of individuals and emphasises a concern for man in relation to the world.”

[2:24:343] This element of humanist philosophy is particularly supported by the Astronist Tradition by the notion that humans remain responsible for their own individual developments and due to its emphasis on the concern for humanity which is considered to be best fulfilled through the exploration, devotion, and enknowledgement of The Cosmos.

[2:24:344] In a theological context, humanism is “a non-theistic life stance centred on human agency and looking to science rather than revelation from a supernatural source to understand the world.”

[2:24:345] The Astronist philosophical tradition herein established that which shall henceforth be known as Cosmic Humanism, or cosmohumanism as it may also be known, which applies all aspects of the notions within humans towards The Cosmos, or a cosmic circumstance rather than purely anthropic circumstances.

[2:24:346] Essentially, the Astronist philosophical tradition sees a greater enhancement for humanism in its reorientation towards focusing on The Cosmos, the exploration, devotion, and enknowledgement of which is considered to be the next greater aspect of progression and triumph for humanity.

[2:24:347] Furthermore, this cosmic reorientation does not hold any contentions with the original form of humanism for The Cosmos is not a supernatural source of revelation and knowledge in order to understand existence, its understandings are based on scientific and innemnic discoveries, and neither does it require a theistic belief in order to orient oneself towards it therefore every aspect of humanism’s cosmorientation remains suitable and coincides with humanistic beliefs and principles.

[2:24:348] A very wide-ranging religious tradition is that which is known as spiritualism for this fundamentally encompasses “a metaphysical belief that the world is made up of at least two fundamental substances, matter and spirit.”

[2:24:349] The Astronist philosophical viewpoint on this fundamental notion of spiritualism causes immediately contentions between the two systems of thought as the notion of a spiritual world is a difficult element for Astronism to concede on, especially due to the disincorporation of any aspects of the spiritual world into Astronist Philosophy for the very reason that The Philosophy wishes to remain grounded in rationality by focusing on cosmical elements.

[2:24:350] Ascribed below are nine of the most prominently characteristic elements of spiritualist thought written in second person which shall each be addressed herein so as to cover all aspects of this vast traditions by attempting to encompassing the majority of its fundamental beliefs.

[2:24:351] "We believe in infinite intelligence." - This is a belief that is fundamentally opposed by the Astronist philosophical tradition due to the maintenance of the limitation of all that holds residence within The Cosmos and due to all infinite characteristics being only accessible beyond cosmic means by transcending into the realms of universality and divinity.

[2:24:352] "We believe that the phenomena of nature, both physical and spiritual, are the expression of infinite intelligence." - Again, this remains a notion that is rejected by the entire Astronist philosophical tradition and the designation of nature into physicality and spirituality rather than organicity and cosmicity, as is held in the Astronist viewpoint, remains another point of fundamental divergence.

[2:24:353] "We affirm that a correct understanding of such expression and living in accordance therewith, constitute true religion." - This is an aspect of belief that the Astronist philosophical tradition does not compute due to its focus on the constitution of religion rather than focusing on notions and beliefs.

[2:24:354] "We affirm that the existence and personal identity of the individual continue after the change called death," - the Astronist eschatology, despite its decentralisation due to Astronism retaining its designation as a philosophy, generally holds the naturalist perspective which holds that there is no existence after death for such notions of an afterlife are considered to be of human construction to satisfy the fears of humanity, therefore this aspect remains another point of divergence between these two thought systems.

[2:24:355] "We affirm that communication with the so-called dead is a fact, scientifically proven by the phenomena of Spiritualism," - as is expected, this notion of spiritualism is refuted by the Astronist philosophical tradition due to the majority of the practices and beliefs involved with spiritualism remaining foreign and non-integrateable to the Astronist tradition of philosophy.

[2:24:356] "We believe that the highest morality is contained in the golden rule: "Do unto others as you would have them do unto you," - as we begin to see the growing non-existence of similarity between Astronism and Spiritualism, we further deepen dissimilarity by not computing with this belief of Spiritualism, though its general ethical principle is provided with respectation.

[2:24:357] "We affirm the moral responsibility of individuals, and that we make our own happiness or unhappiness as we obey or disobey nature's physical and spiritual laws," - this element of Spiritualism is supported and held a cornerstone of similarity between Spiritualism and Astronism, though the only point of divergence within this is that Astronism would focus on physical and cosmic laws rather than physical and spiritual laws.

[2:24:358] “We affirm that the doorway to reformation is never closed against any soul here or hereafter,” - if the element of the soul was to be removed from this notion then the Astronist Tradition would be more inclined to agree with its general principle of openness to redemption and reformation of one’s moral and ethical state, but the moral and ethical state of the soul is less so computable for the Astronist philosophical tradition.

[2:24:359] “We affirm that the precepts of prophecy and healing are divine attributes proven through mediumship,” which again does not compute with the Astronist philosophical tradition and its general orientation, especially so with the prominence provided to the practice of mediumship which is non-existent in Astronism.

[2:24:360] One of the final religious traditions that is to be comparological investigated herein this discourse is Spiritism which primarily “postulates that humans are essentially immortal spirits that temporarily inhabit physical bodies for several necessary incarnations to attain moral and intellectual improvement.”

[2:24:361] Spiritist thought also “asserts that spirits, through passive or active mediumship, may have beneficent or malevolent influence on the physical world.”

[2:24:362] The premise of Spiritism and the topics raised by its focus and orientation of spirits are so far removed from the Astronist philosophical tradition’s priorities that, again, the vast majority of the concepts and practices in Spiritism are completely indifferent to Astronism, particularly due to its own lack of concern for the issues raised and supposedly fulfilled by such religious traditions.

[2:24:363] Spiritist thought describes a spirit as “not an abstract, undefined being, only to be conceived by our thought for it is instead considered to be a real, circumscribed being, which, in certain cases, is appreciable by the senses of sight, hearing, and touch.”

[2:24:364] Such notions are completely rejected by the Astronist philosophical tradition in its entirety, which is a view that is especially bolstered via the Spiritist notion that “all spirits are destined to attain perfection by passing through the different degrees of the spirit-hierarchy.”

[2:24:365] Further to this, Spiritism also upholds the belief that “a spirit's successive corporeal existences are always progressive, and never retrograde; but the rapidity of our progress depends on the efforts we make to arrive at the perfection.”

[2:24:366] Again, this aspect of Spiritist belief remains foreign to the Astronist philosophical tradition due to the near complete indifference to the existence of spirits according to The Philosophy of Astronism, therefore the topics that Spiritism and Astronism address are fundamentally disproximate, but this does not mean to say that these two systems of thought cannot hold respectation for one another.

[2:24:367] We will now address a different type of comparological subject between Astronarianism and Juche ideology for to compare The Philosophy of Astronism with the Juche ideology of North Korea would hardly be fair due to the former being a philosophy and the latter being an ideology, thus demonstrating their fundamental differences in the topics they concern themselves with.

[2:24:368] The Juche ideology postulates that "man is the master of his destiny," and that "the Korean masses are to act as the masters of the revolution and construction by becoming self-reliant and strong a nation can achieve true socialism."

[2:24:369] Some aspects of Juche are inspiring for Astronarianism, especially so regarding the propagandational aspects of the ideology, such as in the creation of a strong nation and the emphasis on mass national unification which are also narratives expected to be used in Astronarian forms of propaganda which, in the context of A, is a term that does not hold the same negative connotations as it does in mainstream applications.

[2:24:370] Other aspects that remain emphasised within Juche are the "presence of a sacred leader, rituals directed towards such leaders, and familism in general," the latter of which is of particular resonance with Astronarianism for it agrees with the general notion of familial priority both in the private lives of the masses as well as from the governmental perspective.

[2:24:371] As we now carry on in our comparological discourse, Christian Science is recognised as a branch of the Christian religious tradition by the Astronist Tradition though its actual conceptual recognitions are little, if at all acknowledged.

[2:24:372] Adherents of Christian Science "subscribe to a radical form of philosophical idealism, believing that reality is purely spiritual and the material world an illusion," which is an ontological view that is outrightly rejected by the Astronist Tradition, and is not mentioned within The Omnidoxy, yet it is expected that certain groups within the Astronist philosophical tradition will nevertheless follow such a system of belief.

[2:24:373] "This also involves the view that disease is a mental error rather than physical disorder, and that the sick should be treated not by medicine, but by a form of prayer that seeks to correct the beliefs responsible for the illusion of ill health."

[2:24:374] Again, such a notion is completely foreign to the Astronist philosophical tradition in its entirety and so therefore it remains difficult to make a conclusive comparological statement; all that can perhaps be said is that the Astronist Tradition holds respectation from Christian Science and its contributions to American Christianity, however, the vast majority of the topics and issues centralised in its system of thought are so disproximated from those prioritised in the Astronist system of thought that the two are not considered to interlock with one another despite the effort and hope that they will hold mutual respectation for each other's world view.

[2:24:375] It is important to preface this part of our comparological studies with the fact that theology in general is not emphasised in any form in any part of the Astronist philosophical tradition as it remains dedicated to the maintenance of Astronism's designation as a philosophy which is not bolstered through an emphasis on theological issues.

[2:24:376] For this reason, it must be understood that our comparological contemplation of different theological positions is not taken according to doctrine or belief in Astronism for there exists no one set theological position within Astronism as theology in general is not emphasised in philosophy as it is considered an element of religious contemplation.

[2:24:377] For the purposes of comparological clarity, when we address Astronism and theism we must understand their fundamental differences in accordance to what they are; the former is a philosophical tradition whose beliefs, concepts, and principles may incorporate different elements of theological understanding while the latter is a form of theological belief that may exist within a given tradition.

[2:24:378] The existent relationship between Astronism and theism is expected to remain a difficult one due to the open decentralisation of god in Astronist Philosophy due to philosophy itself being non-theistic in orientation and address.

[2:24:379] In addition, the engrained vagueness of god as conceptualised by The Divine in Astronist Philosophy further demonstrates a creator that little about which is known unlike in the majority of the religious traditions.

[2:24:380] Despite such, to consider this in a positive light one could counterintention that the very introduction of The Divine in Astronism demonstrates the theistic orientation of The Philosophy, though decentralisation is continued to be emphasised as one of the main principles of the Astronist philosophical method.

[2:24:381] The next of the theological orientations to address is that of deism and in Astronist Philosophy, this form of theology is evident throughout and is considered to hold strong parallels and influence in Astronism, yet the Astronist Tradition does not consider Astronism to be a purely deistic philosophy.

[2:24:382] "Deism posits that God exists as an uncaused First Cause ultimately responsible for the creation of the universe, but does not interfere directly with the created world."

[2:24:383] It is easy to decipher how deist thought has influenced the very foundations of the Astronist Cosmology for such a description of deism almost perfectly coincides with the role and identity of The Divine in the Astronist Cosmology.

[2:24:384] Furthermore, deist thought holds that "god created the world and set it in motion but does not actively intervene in individual human affairs but rather through

divine providence; god will give humanity such things as reason and compassion but this applies to all and not to individual intervention.”

[2:24:385] Again, this identification of the role of god is demonstrative of the role and identity of The Divine in the Astronist Cosmology, especially resonative are the elements pertaining to god's inactivity in the intervention into human affairs, as well as the disemphasis on revelation and individual proclamations.

[2:24:386] “Deism can also be defined as the view which posits God's existence as the cause of all things, and admits its perfection (and usually the existence of natural law and Providence) but rejects divine revelation or direct intervention of God in the universe by miracles.”

[2:24:387] Again, the approach of deism in understanding theology holds parallels to the Astronist approach with the emphasis on the creation of existence from a singularity, but the rejection of divine revelation and intervention with the corporeal, especially the intimate happenings of human society.

[2:24:388] It also rejects revelation as a source of religious knowledge and asserts that reason and observation of the natural world are sufficient to determine the existence of a single creator or absolute principle of the universe.

[2:24:389] The Astronist Tradition considers deism to be a rational and logical understanding of the creator of existence through the removal of the elements of theology that superiorise humanity's role, as well as those elements that overly exaggerate the role of humans in Divine elements of existence.

[2:24:390] To conclude, deism certainly is closely intertwined with the Astronist approach to theological issues, however, the designation of the Astronist philosophical tradition as a deist tradition or philosophy is inaccurate because of the wide variety of thought systems and beliefs that are able to be held within the tradition therefore pinpointing one element of theological approach would be conducting a disservice to the true diversity within the whole Astronist philosophical tradition.

[2:24:391] The relationship between Astronism and atheism is expected to be remain complex throughout their interactions with one another due to the existence of the term The Divine as an important element of the Astronist Cosmology.

[2:24:392] The Divine as a term refers to a vague element and manifestation of god so the system of thought of atheism is not inherent to Astronism though its orientation does remain existent throughout many aspects of the Astronist philosophical tradition.

[2:24:393] Atheism is perhaps too often entangled and synonymised with philosophy due to philosophy's origination and continued embracement of rationality and logic which are also too often synonymised with atheistic orientations.

[2:24:394] Atheism does certainly hold a place within the Astronist philosophical tradition as do all other theological positions although its consideration is not centralised in the tradition, not when compared to the previous addressed theological orientation of deism.

[2:24:395] The next of the theological orientations is agnosticism which can be said to reside at the heart of Astronism's divinity from the very instance of the appellation of the creator of existence as The Divine due to its vagueness would could be interpreted as agnostic in nature.

[2:24:396] Also, the decentralisation of god in Astronism due to it remaining a philosophy could be seen as another form of agnosticism within The Philosophy, as well as the pockets of association between The Divine and an distinct unknownness that is demonstrated through its vagueness and ambiguity in the Astronist Cosmology.

[2:24:397] However, there is considerable challenge to such notions by claiming that these are instead examples of the non-theism present in Astronism rather than demonstrating any agnostic quality of The Philosophy.

[2:24:398] There are very few explicit instances of polytheism present in Astronism, however, polytheism could be interpreted as being essential to the Astronist Cosmology by the notion that The Universe, The Divine, and The Cosmos are all gods, or deities either separate as part of a Cosmic Pantheon, or as manifestations of a Divine Ultimate.

[2:24:399] However, these concepts and interpretations of the Astronist Cosmology are not held by the Astronist Tradition as polytheist notions are not considered to be rationally acceptably the Tradition due to the general concentration of the singularities of existence rather than the pluralities.

[2:24:400] Astronism and monotheism is the next comparological relationship that we shall now address which can be considered to exist at the centre of Astronist Cosmology through the establishment of The Divine concept, however, monotheistic thought continues to be decentralised and disemphasised in the Astronist Tradition.

[2:24:401] Monotheism is the central element of many religious traditions and despite the establishment of The Divine concept, the close-knit relationship between monotheistic belief and religious tradition is too much of a synonymisation for the Astronist Tradition.

[2:24:402] There are many other interpretations of monotheism's presence in the Astronist philosophical tradition, typically pointed towards The Cosmos or The Universe due to their greater centralisations in Astronist Philosophy, especially due to the veneration of the composite parts and entirety of the former.

[2:24:403] The next of the theological positions to be addressed herein is pantheism which holds “the belief that reality is identical with divinity, or that all-things compose an all-encompassing, immanent god.”

[2:24:404] Furthermore, pantheist thought does not recognise a distinct personal anthropomorphic god which is supported by the majority of the notions within the Astronist philosophical tradition.

[2:24:405] Pantheism could be connected to The Cosmos and its role in our reality and our inescapability from it according to the Astronist Cosmology and the same can be said of the relationship between The Cosmos and The Universe.

[2:24:406] Panentheism is of immense interest to the Astronist philosophical tradition as it encompasses “the belief that the divine pervades and interpenetrates every part of the universe and also extends beyond time and space.”

[2:24:407] Panentheism is closely associated with Astronism, which is a position that is especially bolstered by the dedication of an entire discourse to panentheism as manifested by the rubral of The Panentheistic Principle.

[2:24:408] Panentheist thought is intrinsic to the Astronist approach to understanding reality and existentiality in all its senses for The Cosmos, The Universe, and The Divine formulate the three higher existences and interpenetrates each of the possible existences.

[2:24:409] The Cosmos, The Universe, and The Divine all share a characteristic interpenetration, pervadation, and transcendence beyond time and space in their own instances.

[2:24:410] Dystheism revolves around “the belief that a god, goddess, or singular God is not wholly good (eutheism) as is commonly believed (such as in the monotheistic religions of Christianity and Judaism), and is possibly evil.”

[2:24:411] There aren't any instances of reference to dystheistic thought in Astronist Philosophy as identified herein by the Tradition but any instances of the identification of such theological orientation in other documents are nevertheless acknowledged, but they are considered purely interpretative and are not to be considered with any gravity.

[2:24:412] As we now leave behind our theological comparative studies, we come to address the Astronist philosophical tradition's opinion on UFO religions.

[2:24:413] UFO religions encourage any tradition in which “the existence of extraterrestrial (ET) entities operating unidentified flying objects (UFOs) is an element of belief.”

[2:24:414] “Typically, adherents of such religions believe the ETs to be interested in the welfare of humanity which either already is, or eventually will become, part of a pre-existing ET civilisation.”

[2:24:415] The next of the religious traditions to be addressed comparologically is raëlism which involves the belief in “progress in social engineering would ensure that this creation would have a better chance of both surviving and having the potential to understand its creators.”

[2:24:416] All forms of UFO religious tradition are outrightly rejected and opposed by the Astronist philosophical tradition due to the undermining of cosmic entities and related notions as a determined effort to form their absurdity.

[2:24:417] Due to the synonymisation of UFO religions with eroding the seriousness and complexities of studying, contemplating, and debating about The Cosmos and its progeny and phenomena, the Astronist Tradition considers such UFO religions to be the very forces of influence to which the Tradition is tasked with immobilising at every opportunity it does receive.

[2:24:418] Raëlists hold that “research on how civilisation would occur on another planet would allow scientists to decide what traces of their origin should be left behind so that their role in life creation would someday be revealed.”

[2:24:419] It is important to note herein that Raëlism as a belief system is not supported by Astronist Philosophy in its entirety and although there may be similarities in premise of these two systems of thought, the natures, practices, principles, and ambitions of these two thought systems exist in an incredible disparity with one another.

[2:24:420] Further to this, Raëlists hold that “the progress achieved by the science teams would ultimately sustain a perpetual chain of life,” which, again, does not hold parallel to the goals of the Astronist Tradition; despite acknowledgement and respectation held for Raëlism, the system of thought remains principally foreign to that of the Astronist philosophical tradition.

[2:24:421] We shall address smaller religious traditions that are commonly considered to be cultic in nature, but these shall be addressed briefly with only mentions of the most pertinent elements of their thought system that is of comparological interest to the Astronist philosophical tradition.

[2:24:422] Astronism on Ananda Marga - accepted due to its positive contributions to Hindu philosophy in the modern age.

[2:24:423] Astronism on Ancient Mystical Order Rosae Crucis - accepted due to philosophical explorations into various subjects including physics, biology, psychology, and others.

[2:24:424] Astronism on the Anthroposophical Society and wider Anthroposophy - accepted despite its vague and inconspicuous aims which are designated as points of improvement from the perspective of the Astronist Tradition.

[2:24:425] Astronism on Antoinism - neutrally accepted due to the fact that this new religious movement doesn't attempt to change any aspects of Astronist Philosophy as it targets aspects of Christianity to change which is of no concern to Astronism.

[2:24:426] Astronism on Bochasanwasi Akshar Purushottam Swaminarayan Sanstha accepted as a branch of Hindu philosophy rather than contributing to anything in an Astronist sphere.

[2:24:427] Astronism on Brahma Kumaris World Spiritual University - accepted as a branch of Hindu philosophy and praised for its centralisation of the role of women, but is also not recognising as contributing to Astronist Philosophy.

[2:24:428] Astronism on Branch Davidians - unaccepted due to its categorisation as a cult and its cult-like tendencies.

[2:24:429] Astronism on Christadelphians - neutrally accepted as a branch of Christianity, but is not considered to be close to the sphere of the Astronist philosophical sphere.

[2:24:430] Astronism on Christian Science - neutrally accepted as a branch of Christianity but is because its beliefs do not counter that of Astronist Philosophy so herein we see the neutrality of Astronism.

[2:24:431] Astronism on Church of Divine Science - neutrally accepted as a branch of Christianity in the new thought movement.

[2:24:432] Astronism on Church of Satan - unaccepted due to its dangerous and negative tendencies rather than because of a serious belief in satanic values of the church.

[2:24:433] Astronism on the Church of Scientology - a stance of neutrality is taken as Scientology is considered to be an organisation rather than a religion, but the maintenance of relations organisationally is important.

[2:24:434] Astronism on Discordianism - unaccepted due to its divisive tendencies.

[2:24:435] Astronism on Family International - unaccepted due to its core beliefs and their disproximity to the concerns of Astronist Philosophy.

[2:24:436] Astronism on Iglesia ni Cristo - neutrally accepted as a branch of Christianity.

[2:24:437] Astronism on the International Society for Krishna Consciousness - neutrally accepted as a branch of Hindu philosophy

[2:24:438] Astronism on the Invitation to Life - unaccepted due to its harming tendencies and for its false promises of miraculous healings.

[2:24:439] Astronism on Maha Bodhi Society - neutrally accepted as a branch of Buddhism and supports its ambition for the resuscitation of Buddhism in India.

[2:24:440] Astronism on the Nation of Islam - unaccepted due to its divisive tendencies and its disproximation to Astronism.

[2:24:441] Astronism on the New Apostolic Church - neutrally accepted due to its popular presence in certain countries and the fact that its doctrines do not affect that of Astronist Philosophy.

[2:24:442] Astronism on The New Church - neutrally accepted due to its disproximation to Astronism.

[2:24:443] Astronism on Noahidism - neutrally accepted due to its disproximation to Astronism.

[2:24:444] Astronism on Peoples Temple - unaccepted due to it being a suicide cult.

[2:24:445] Astronism on Pilgrims of Arès - unaccepted due to it being a cult.

[2:24:446] Astronism on The Process Church - unaccepted due to its influence from Scientology

[2:24:447] Astronism on Rajneesh - unaccepted due to being cultic in nature.

[2:24:448] Astronism on Ramakrishna Mission - neutrally accepted as a branch of Hindu philosophy.

[2:24:449] Astronism on Religious Science - accepted as a form of New Thought philosophy

[2:24:450] Astronism on Sahaja Yoga - unaccepted due to being cultic in nature.

[2:24:451] Astronism on Sathya Sai Baba - unaccepted due to holding cultic tendencies.

[2:24:452] Astronism on Shri Ram Chandra Mission - neutrally accepted as a branch of Hindu philosophy, yet its purpose remains unclear.

[2:24:453] Astronism on Soka Gakkai - accepted as a Japanese new religious movement and a large contributor to new traditions of Buddhism in Japan.

[2:24:454] Astronism on Sukyo Mahikari - accepted as a contributive organisation to new systems of thought in East Asia.

[2:24:455] Astronism on Temple of Set - unaccepted due to its cultic tendencies.

[2:24:456] Astronism on Tenrikyo - accepted as a Japanese new religious movement and an important contributor to new traditions of thought in East Asia.

[2:24:457] Astronism on Thelema - accepted as a form of Western esotericism and an important new religious movement.

[2:24:458] Astronism on Theosophy - accepted as an important addition to esotericism and occultism, though it is still regarded as suspicious by the Astronist Tradition due to its secretive and cultic undertones.

[2:24:459] Astronism on Transcendental Meditation - neutrally accepted due to its disproximation to Astronist philosophy and its beliefs.

[2:24:460] Astronism on True Buddha School - neutrally accepted as a branch of Buddhism and as a contributor to new schools of thought in Buddhist philosophy.

[2:24:461] Astronism on Twelve Tribes - unaccepted due to fundamentalist teachings.

[2:24:462] Astronism on Unification Church - unaccepted due to it holding a cultic nature.

[2:24:463] Astronism on Unitarian Universalist Association - accepted due to its acceptance of many different philosophies and religions.

[2:24:464] Astronism on Unity Church - neutrally accepted as a branch of Christianity in a new thought tradition particularly due to its disproximation to the Astronist sphere of thought.

[2:24:465] Astronism on Universal Church of the Kingdom of God - accepted, though its hostility to other religions and philosophies is of concern, as well as being accused of corruption, illegal adoptions and movements of children, money laundering and charlatanism.

[2:24:466] Astronism on Universal White Brotherhood - unaccepted due to the harmful effects of the doctrines of this new religious movement on the psyche of some of its followers and generally holds an authoritarian nature.

[2:24:467] Astronism on The Way International - unaccepted due to its disproximation to Astronism.

[2:24:468] Astronism on Word of Faith - neutrally accepted as a new Christian denomination due to its disproximation to the sphere of Astronist Philosophy and its interests.

[2:24:469] Astronism on World Mission Society Church of God - unaccepted due to its cultic tendencies.

[2:24:470] A drastically important appendage to this discourse is the thorough address and contemplation of cults, as well as the differences between these and religions, and the differences of both of these from philosophy so as to reaffirm Astronism's designation as the latter.

[2:24:471] In this part of the discourse, many different aspects of religions, cults, ideologies, and philosophies will be espoused and although all should be taken as the literal stances and findings of the Astronist philosophical tradition, the descriptions of these various groupings are somewhat cold, yet this does not pertain to any notions that the Tradition do not intend to associate or organisationally cooperate with members of such groups, and neither does this mean that members of such groups can't be adherents of The Philosophy of Astronism in addition.

[2:24:472] Now that we have clarified the role and status of this end of the discourse, we can move on to discuss all elements of these four groupings on a metaphilosophical level by beginning with addressing the essential differences between each of them association with that which each group is closest with.

[2:24:473] The essential difference between a cult and religion remains their distinctions in nature as conversion is characteristic of the latter meanwhile coercion is characteristics of the former.

[2:24:474] The essential difference between religion and philosophy is that the former proclaims truth while the latter does not just as the Astronist philosophical tradition does not ever proclaim truth, higher power connection, divine revelation, or transcendental knowledge.

[2:24:475] Finally, the essential difference between philosophy and ideology remains that the former is the set of rudiments that found a society while the latter implements such rudiments, characterises a political party, and sets forth proposals for law as inspired by the ideological interpretation of the philosophy from which it originated.

[2:24:476] Now that we have laid out the general and basic metaphilosophical foundations in relatively simple and concise terms, we can begin to delve into such issues and apply such ideas to The Philosophy of Astronism.

[2:24:477] Firstly, we must explore the natures of religions and cults and their dual differentiations from the nature of philosophy itself to the intrinsic contrasts in how such subjects/groups physically manifest themselves as well as the role they play in the society reside; furthermore, we will also now speak of these subjects in relation to Astronism specifically before we return to speak about them in general sense.

[2:24:478] One of the main differences between Astronism and a religion or cult is that Astronism, as a philosophy, does not provide all the answers nor does it claim to provide all the answers, but instead provides the tools to gain a better understanding of some of the questions which a person must then explore for themselves.

[2:24:479] One need only study The Philosophy of Astronism for a short time to realise its inherent differences from religions and cults which is demonstrated by its core nature in providing the tools to achieve the answers rather than espousing unchangeable, stationary, and doctrinal answers.

[2:24:480] This is considered to be the centralmost differentiation between Astronism, as a philosophy, and other religions and cults; their core natures are obviously and prominently different from one another.

[2:24:481] Of course, there is an interpretation from the application of such tools themselves, and this is what we refer to as the Astronist Tradition for that is supposed to be the official Astronist viewpoint of such topics to which the apparatuses are applied.

[2:24:482] Astronism and religions/cults; the former provides the instruments with an interpretation of their application but leaves adherents to come to their own conclusions under the auspices of The Philosophy while the latter provides a series of answers through the interpretation of scripture with such answers proclaimed as absolute and ultimate truth and often, divine revelation.

[2:24:483] Cults and religions are defined from philosophies by the very fact that the two formers are based upon proclamations, typically by individuals or groups saying they have received revelations from God, or some other divine being such as an angel, or they proclaim to have visions or knowledge of God that no else can have therefore we see the central importance of proclamations to the nature of religions and cults which is not a characteristic of philosophies.

[2:24:484] We can therefore confidently state that the main element of cults and religions are proclamations while philosophies are based upon instruments, guiding ideas and the practice of locating notions, ideas, and theories in order to formulate them into temporary conclusions.

[2:24:485] The term of temporary conclusions may seem like an oxymoronic term, but the designation of temporary conclusions is of extreme importance to philosophy, as both the

Astronist Tradition and the Philosophical Spirit maintain that there no such things as permanent conclusions in philosophy due to philosophy's own nature.

[2:24:486] There exists an inherent superiority for people within cults and religions as they believe they hold the ultimate truth and therefore, there fundamentally exists an us versus them attitude to outsiders which is non-existent in the realm of philosophy for the border between adherents and non-adherents is not thickened by initiation, divine revelation, ultimate truth, and ritual as are characterised by both religions and cults.

[2:24:487] Philosophy is primarily based upon subjectivity, as we have aforealluded, which makes it a partially relativistic group depending on the preference of the adherents in heeding the interpretation of the Astronist Tradition.

[2:24:488] Meanwhile, religions and cults are formed upon the premise of both doctrine and selectivity, the former of which lays down the credence while the latter, as working in conjunction with the former, makes a selection of doctrine according to narrative and those elements which are not included within the selection are not subject to obligatory belief.

[2:24:489] We must also briefly outline the differences between cults and religions, of which there are many, but the prominentmost of these is that cults do not reveal what their beliefs are initially; the unfolding mystery is one of the most important characteristics of a cult as distinguished from a religion.

[2:24:490] It is one of the core natures of cults that they hold hidden agendas for their adherents; essentially, the organisation that manages the cult has a controlling functions over its adherents in a more concentrated way than that of religions.

[2:24:491] It is the stance of Astronist Philosophy as a whole that all pre-Astronist and non-Astronist forms of astrology were and still remain a religion primarily because of the divinatory powers associated with astrological belief and practice.

[2:24:492] Astrology in its pre-Astronist and non-Astronist forms is also considered to be a religion in order to further define it from Astronist contributions and versions of astrological belief and practice, typically because the two are expected to be syncretised which Astronist Philosophy does not hold control over.

[2:24:493] Further to this, it is important to note the main difference between non-Astronist and Astronist contributions to astrology, of which the latter does not hold proclamations of divination.

[2:24:494] It is the innemnic function of The Cosmos that the constellation will move in a million years time and therefore Astronism does not consider constellations to be entities of divination for their origins exist from the imaginations of humanity and therefore, it is the divination element of non-Astronist astrology that Astronism disagrees with; this

notion proves to us that we must always look towards the origination of something in order to differentiate whether it from direct divinity, or from some other origination.

[2:24:495] By this notion, furthermore we can relate it to the wider discussion about The Philosophy of Astronism and religions/cults due to the fact that the former admits and accepts its origination from the mind of human being with no divinatory connection while the latter groups either claim, or are fundamentally premised upon the idea that their founders are somehow connected to a divine revelation and so their founding system of thought originates from divinity.

[2:24:496] Furthererso, on the topic of astrology, such astrological signs are not given the gravity by Astronist Philosophy that astrologers themselves grant the practice.

[2:24:497] It is considered to be an entertaining hobby, the essence of which Astronism identifies with because of its astronomical and cosmic theme, but it is not to be considered a source of actual divination.

[2:24:498] The Philosophy of Astronism looks to the stars for philosophical guidance to be inspired by The Cosmos, but astrologers look to the constellations, which are manmade interpretations of the patterns of the stars themselves for the purposes of divinising; it remains important to note the differences in origin from constellations and stars, the former of which origins with humanity while the latter is cosmical and holds direct divinity by the beliefs of the Astronist Tradition.

[2:24:499] Astrologies are generalisations and they involve one person telling another person who they are and what they are like which is considered wrong by Astronist Philosophy due to the superior positions of influence that astrologers place themselves within which demonstrates the indivinity, impurity, and general insincerity of such practices.

[2:24:500] Astronism identifies with the celestial, astronomical, and cosmic essence of astrology and the focuses of the subject, but disagrees with the notion of celestial divination as divination is a religious trait, not a philosophical one.

[2:24:501] Astronism also believes that the divination of constellations by humans is a distortion and distraction of the true divinical essences of the stars and other cosmical progeny and phenomena, such as the stellar and planetary movements.

[2:24:502] Before we move on to some final few topics regarding the categories of philosophical and religious peoples, as well as the Astronist Tradition's approaches to discrimination of philosophy and other related topics, we must first address the various commonalities and dissimilarities between philosophies and religions/cults so as to formulate a clear chasm between the two, yet also acknowledging the several bridges that link them together.

[2:24:503] But before we begin, this notion holds something of importance for us to quickly address as despite the fact that the Astronist philosophical tradition has repeatedly and solemnly distinguished philosophy from religions and cults, it also acknowledges and accepts the many similarities found between them.

[2:24:504] There does remain an inherent set of link between philosophies and religions as the latter did origin and was inspired by the former, as were all other subjects for the Astronist Tradition maintains the appellation of philosophy as The First Subject.

[2:24:505] Philosophies and religions perhaps do hold similar functions for people all over the world in their searches for answers and truth and meaning as well as the wider human need for the exploration of ideas, but it must always be maintained that religions remain distinguished from philosophies by their core natures as has been outlined in this discourse, as we will now reaffirm by addressing some of the most prominent of dissimilarities, as well as acknowledging the several commonalities between them.

[2:24:506] First we begin with the commonalities between philosophies and religions/ cults, the prominent most element of which is the use of symbols for conveying meanings, representing allegories, as well as for depicting beliefs and concepts.

[2:24:507] The second of the commonalities is the fact that both of these groupings provide concepts, ideas, and theories and even though some elements of Astronist Philosophy are based upon belief, the entirety of Astronist Philosophy is not based upon this while both religions and cults are dependent upon the notions of belief and faith, yet philosophy is not dependent upon this to continue to function.

[2:24:508] Despite the distinct dissimilarities in the answers given to questions by both philosophies and religions, there does exist a similarity in the general questions asked by both the former and the latter, though the specialty disciplines that religions and philosophies contemplate are of immense different, such as the focus on religion on disciplines such as soteriology and hamartiology while philosophy focuses on cosmology and ontology.

[2:24:509] Another of similarity between philosophies and religions, especially so when Astronism is compared with religions is the existence of feelings of awe and mystery within Astronism similar to some religious aspects, such as cosmic devotions and personal inspirations as Astronist philosophical and occurrological practices.

[2:24:510] The fact that religion and philosophy are distinct does not mean that they are entirely separate as has been aforementioned in The Omnidoxy; they both address some of the same issues and it is therefore not uncommon for a person to be engaged in both religious study and philosophical study simultaneously.

[2:24:511] Religions and cults share distinct terminologies according to the appellations of their concepts, beliefs, major figures, denominations and other prominent elements and

this is not dissimilar to Astronist Philosophy, which has been particularly prolific in the construction of its own distinct terminology for it considers the development of nomenclature not to be exclusive to religions as all other subjects share such practices.

[2:24:512] Another aspect of religions that Astronism, as a philosophy, does share is the measurement of the number of adherents associated with The Philosophy and this practice is conducted within The Philosophy of Astronism due to the fact that it remains an organised philosophy, meaning that its role in society is of metaphysical concern and therefore the number of people whom express adherence to its philosophy are considered to be important statistics to keep updating.

[2:24:513] In the context of Astronist Philosophy, the term that is henceforth known as assertancy is described as the measurement of the attention that The Philosophy of Astronism receives from the public in a general sense, whether from adherents or non-adherents, critics or adorers, and therefore assertancy is not to be confused with the level of philosophical adherence in a particular country or region.

[2:24:514] We have now covered the several similarities between philosophy (Astronism specifically in parts) and religions, however we must now move on to discuss the many dissimilarities between philosophy (as well as Astronism specifically) and religions, which is of particular importance to penetrate and solidify for Astronist Philosophy.

[2:24:515] One of the primary difference between philosophy and religion in general is the absence of the proclamations of truth from the former while such proclamations are not only practised, but are essential to the latter.

[2:24:516] Further a distinct reliance on faith is characteristic of religion to sustain the proclamations at the heart of the religious tradition which has in turn lead to the exclusion of reason from religion by normalising miracles, faith-based divinations, revelations, as well as supernatural phenomena associated with the founder(s) and later the saints of such religious traditions.

[2:24:517] Astronist Philosophy sees no particular problem in this characterisation of religion, but it maintains that the centrality of truth proclamation, faith-based rationality, and divinatory supernaturalism remain prominent elements of all religious traditions, and therefore must remain at the main creators of the chasm between philosophy and religion.

[2:24:518] To add a further element to these central dividers of philosophy and religion, it is another of characteristic of religion to hold a defiance against logic and rationality in relation to its scriptural interpretations and doctrine with the justification of belief in such illogicalities manifested as divine revelation, divinatory power, human inferiority of understanding and the promise of salvation in belief.

[2:24:519] In contrast, logic and rationality must remain as the central pillars of philosophy and will so forevermore, especially in the Astronist philosophical tradition.

[2:24:520] However, the Astronist Tradition maintains that not elements within philosophy need be proven to be real for a concept remains exactly that; an abstract notion expounded by the mind that needn't be true, needn't be real, and needn't be false, yet the Astronist Tradition maintains that the most important aspect is that it must be contemplated and later debated.

[2:24:521] To clarify, philosophy doesn't need to be only concerned or only accepting of that which is materially existent, but instead it should be concerned with the stages of notion that thinkers have engaged with to come to their formulated conclusions or ideas.

[2:24:522] Therefore, the principle aspect of philosophy is not only to believe in that which we can see or prove, but believe in that which has been logically or rationally concluded through logical and rational stages of notion, and therefore not only in that which has been logically or rationally proven for the Astronist Tradition maintains that belief remains an important component of philosophy which it argues has been undermined by past traditions, and thus, it establishes the discipline of study of positology which shall remain dedicated to the philosophical contemplation and debate about the nature of belief and its role in and relationship with philosophy.

[2:24:523] The common religious counterargument is known as divine transcendence which is encapsulated by the notion that divinatory events, persons, and beliefs are transcendent of logic and rationality for these algorithms are of human origin.

[2:24:524] This is something that the Astronist Tradition is expected to grapple with as it attempts to satisfy the argument of divine transcendence while also accepting that both logic and rationality are of human origination and therefore cannot be entirely trusted due to their auspices reaching only as far as the human mind can think, perceive, and experiment.

[2:24:525] In this, we strike at the heart of the metaphysical differences in how the Astronist philosophical tradition approaches contemplation of philosophy because in this tradition, logic and rationality are not supremised as has been the case for centuries of philosophical tradition.

[2:24:526] Instead, the Astronist philosophical tradition welcomes syncretism of logic and rationality with belief and transcendence which is perhaps the greatest characteristic of Astronist Philosophy from all other traditions of philosophy while also being one of the greatest deviations of the Astronist philosophical tradition from the foundational rules of philosophical practice.

[2:24:527] The Astronist Tradition recognises the faults and shortcomings both in logic and rationality as well as belief and transcendence, but successfully syncretises them in the hope of creating a superior hybrid that is able to satisfy the masses, as well as the

academics that study and criticise it for philosophy has failed in former sense while religion has failed in the latter.

[2:24:528] Returning to our discussion of dissimilarities, philosophy is expected to be most commonly characterised by the Astronist Tradition as being the provider of instruments to achieve understanding rather than being told the doctrines to understood by the masses; the former allows people to come to their own conclusions through their own explorations (philosophical relativism) while the latter depends upon people being taught the doctrine, to hold faith in it, and to attempt to understand it as a divine narrative of truth that is not to be augmented, not to be changed, challenged, opposed, or reorganised; by this notion of dissimilarity, we see two distinctly different natures wherein philosophy remains in constant motion, religion remains stationary.

[2:24:529] Another important dissimilarity between philosophy and religion are the differences in approaching the formulations of answers to common questions for the former while refer to logic and rationality inspired by imagination, debate, argumentation, and reason while the latter refers to the words of sacred scripture, divine providence, god's sovereignty, and divine revelation; perhaps there exists no clearer demonstration of the differences between philosophy and religion than by this notion.

[2:24:530] Of equal importance to the differences between philosophy and religion is not just that of a conceptual level, but also that of a physical and practical level manifested by the notion that religion holds rituals at their core to demonstrate faith while philosophy does not accept any form of ritual within it its auspices, especially so in the Astronist Tradition, though accusations of ritual practice is expected to come by critics of the Tradition.

[2:24:531] Despite such criticisms, the Astronist Tradition maintains that all its occurrological activities are founded as philosophical activities, are not obligatory to adherence, are not necessarily to be conducted according to a prescribed order, and are not considered sacred as sacredness is non-existent within the auspices of philosophy generally, but also in Astronist Philosophy specifically.

[2:24:532] As has been aforementioned, both philosophy and religion wish to attain truth, but the latter proclaims it while the former provides the tools for each individual to achieve it until the revelations of truth change again through the development, introduction, and establishment of new ideas which philosophy embraces while religion typically does not.

[2:24:533] Philosophy is also characterised by its decentralisation from the notions and beliefs in a deity meanwhile, of course, one of the centralmost elements of all major religions are their claims of divine revelation, deity worship, divine providence, as well as the will, sovereignty, and authority of a deity, which are all foreign, thought not totally non-existence to philosophy.

[2:24:534] An important aspect of both religions and philosophies, which should be considered a commonality of them, is the centrality given to the texts and works of literature associated with their development and later, their establishment as systems of thought and belief.

[2:24:535] Although, within this commonality, we find a dissimilarity as the nature of the literatures of philosophy and religion are intrinsically different from one another as the latter's literature is to be taken by faith and the majesty of a deity while the former's literature are to be taken as ever-evolving documents as part of motionism, as well as documents that are not divinely inspired nor are they infallible, but they are nevertheless logical, rational, useful, and fundamental to certain approaches to understanding.

[2:24:536] The work of philosophy is also of difference from the work of religion which can be seen in philosophies as based on rational arguments and although those arguments may not always be proven valid or successful, but it is this effort to see argument which differentiates their work from religion.

[2:24:537] Oppositely, in the works of religion, and even in religious philosophy, reasoned arguments are ultimately traced back to some basic faith in god, gods, or religious principles which have been discovered in some divine revelation or miraculous event and due to the very divine and pure nature of religion as it proclaims, the infallibility of religious doctrine cannot be allowed for that would negate the divinity of the religion and its beliefs, but in following such notions of infallibility, the possibility of argument and opposition from within the religion is naturally extinguished.

[2:24:538] Perhaps one of the most distinguishing factors between philosophy and religion is the absence of sacredness in philosophy both as a concept and a physical manifestation, and although there are renditions and buildings of importance in The Philosophy of Astronism, these are not provided with divinatory or sacred functions as they are in a religious context.

[2:24:539] As an appendage to the previous notion, many religions teach adherents to revere sacred scriptures meanwhile in a philosophy, especially so in the context of Astronist Philosophy, there are no obligations or even any encouragements to revere The Grand Centrality or anything else within it despite it being the founding work of Astronist Philosophy; in this simple example, we see another inherent difference between philosophy and religion.

[2:24:540] The majority of religions tend to include some sort of belief in what can only be described as the "miraculous" — events which either defy normative explanation or which are, in principle, exist outside the boundaries of what should occur in The Cosmos, meanwhile philosophy does not require this sort of belief and if any elements of Astronist Philosophy can be described as bordering on the supernatural, these only exist in a conceptual sense rather than a rationalised or existentially justified sense.

[2:24:541] It remains true that miracles do not play a major role in every religious or cultic tradition, yet they also do equally remain a common feature of religious traditions while they are non-existent in philosophical traditions which proves itself as another differentiating factor between religion and philosophy.

[2:24:542] Now that we have affirmed and reaffirmed the many differences between the nature of philosophy and that of religion we can begin to differentiate between people that identify within these groups through the creation of new terms.

[2:24:543] Firstly, a religious person that isn't philosophical can be henceforth either described as an acapacitant, discapacitant, or simply aphilosophical.

[2:24:544] Meanwhile, a philosophical person that isn't religious, so oppositely to the former, can either be described as a capacitant, a philocitant, or simply irreligious, which is a word that holds a markedly different definition within an Astronist context.

[2:24:545] Lastly, a person who is aligned with both a religion and philosophy is to be henceforth known as a multicapacitant, or a simacitant.

[2:24:546] There is a term that is herein introduced that is to be henceforth known as capacity which measures the extent to which a person fills their life with philosophical and religious association, study, and contemplation; the greater the amount of time a person devotes themselves to a religion or a philosophy or both raises the level of their capacity.

[2:24:547] The associated belief orientation with the capacity, both as a measurement and as a concept, is that which is known as capacitism, as followed by capacitists, and encapsulates the belief that the goal of all Astronists and all those whom hold an interest in philosophy should be the maximisation of their capacity to raise it to its highest level.

[2:24:548] Capacitists maintain that the prioritisation of not only raising, but maximising one's capacity should be adhered to by all whom follow The Philosophy of Astronism for they understand the accumulation of knowledge, understanding, ability, and the fullness of philosophical and religious experience.

[2:24:549] We now move away from the nature of philosophy and religion, as well as the role and measurement of capacity so that we can focus upon that which shall be henceforth known as nondiscriminationism.

[2:24:550] Discriminationism encompasses the idea that philosophy can be discriminated against because it's nature rests upon opinions and the posing of questions so the imposition of discrimination laws is counterintuitive to the nature and purpose of philosophy.

[2:24:551] Furthermore, this can be considered another difference between philosophy and religion as it stems from the notion that religion is sacred while philosophy is not and it does not and shall never claim to be so.

[2:24:552] The advocacy of discriminationism is part of the practical elements of philosophy and its role in society as something that shouldn't be untouchable as religion orients itself, but philosophy orients itself as something that is not only touchable, but mouldable and changeable and embraces its nature of variability.

[2:24:553] One of the most important metaphysical questions that is posed within this discourse is that of whether The Philosophy of Astronism is a communal or an individual philosophy?

[2:24:554] To address this, we herein establish denism which relates to the communal aspects of a philosophy, or the orientation of a philosophy towards being communal, and especism which holds an orientation towards establishing a philosophy according to individuality and individual practice.

[2:24:555] Denists look towards the communal aspects of Astronist Philosophy, especially within The Philosophy of Astronism and includes public stargazing activities, debates, shared contemplation, casual argumentation, and all other public and shared occurrological activities.

[2:24:556] Alternatively, especism points towards the individual aspects of Astronist Philosophy such as personal inspirations, contemplation, individual occurrological activities, and cosmic devotion rather than the communal aspects and prioritises these as the most important elements in understanding the nature of Astronism and following its philosophy properly.

[2:24:557] However, the view of the Astronist Tradition is that The Philosophy of Astronism is two thirds especistic and one third denistic because even though there are individual elements at the core of Astronism, the communal aspects of The Philosophy outnumber the individual aspects.

[2:24:558] Therefore, The Philosophy of Astronism can be described as a majoratively communal philosophy according to the Astronist Tradition, but this points to a wider and more generalised discussion about the nature of philosophy itself and whether it remains communal or individual?

[2:24:559] The Astronist Tradition considers its stance towards The Philosophy of Astronism in this regard to also resonate with general philosophy whereby two thirds of philosophy is communal while one third remains individual, and therefore philosophy as a subject can be described as majoratively communal with individualistic undertones.

[2:24:560] However, the Astronist Tradition also points out the interconnectedness of denism and especism as forming communality and individuality respectively with reference to philosophy as the former often exists as the necessary precursor to the latter while both equally complement each other thus the Tradition sees the value in both approaches to philosophical study and practice.

[2:24:561] We will now begin to end this discourse regarding the reiteration of the Astronist cultural and societal identity, especially so to contrast it with other traditions and identities.

[2:24:562] The Astronist cultural and societal identity remains supportive of the equal role and rights of women in a society, as well as in a household in relation to men whom assume deciding roles in some households in other traditions and identities.

[2:24:563] Further to this, the promulgation of women's equal and defined role in society is to be prioritised while the second element of Astronist cultural identity is the acceptance of LGBTQ peoples and their rights, but not their lionisation; not because such peoples should be segregated and certainly not vilified but in order to avoid the creation of stereotypes of that community, or to indirectly distort or oversimplify the journey of the people within that community.

[2:24:564] Astronist cultural identity also advocates for The Five Freedoms which include The Freedom of Movement, The Freedom of Belief, The Freedom of Lawful Action, The Freedom of Debate and The Freedom of Public Opposition

[2:24:565] The second to last element of the Astronist cultural identity is that of monogamy as monism is central to many aspects of Astronist societal function, as is seen in the mononymous structure of Astronist names as well as the belief that a person should only be married to one person at a time.

[2:24:566] Finally, and linking the third element is how the Astronist cultural identity prioritises freedom from oneself both bodily, mentally, and philosophically, as well as freedom from others and the world surrounding oneself.

[2:24:567] The Astronist philosophical tradition considers these elements to be central to its principles with regards to many of the social issues corrupting current societies and intends to implement these principles to formulate the ideal Astronist Society.

The Origineity of Astronism

[2:25:1] The origin of something, whether it be abstract or physical, holds an immense amount of importance for how it is perceived, how it interacts with the world and its counterparts, how it presents itself, and how, especially if its abstract, it is to be interpreted by others and for this reason, the Astronist Tradition herein establishes the concept of origineity.

[2:25:2] Origineity is formed to address the nature of the origins of The Philosophy of Astronism and may, in a non-Astronist context, be applied to other philosophies, a religion, an ideology, or some other system of thought in order to derive the nature and circumstances in which such traditions originated.

[2:25:3] Therefore, origineity can be defined as a method of deriving meanings and purpose about The Philosophy of Astronism and is primarily concerned with the nature of The Omnidoxy as a single book to which Astronists derive the majority of their ideas from regarding Astronism; for this reason, it isn't wrong to include origineity as concept within the disciplines of centralitology and omnidoxicology.

[2:25:4] There are two major derivations of origineity including monogeneity and polygeneity which the majority of religions, philosophies, and ideologies are expected to fall into.

[2:25:5] The state of monogeneity, a monogenous system of thought, or a system of thought that adheres to monogenism is characterised as originating from a single book and continues to make reference to that single book, or only recognises the authority of that single book in its system of thought.

[2:25:6] Monogenesis could be described as a characteristic of The Philosophy of Astronism due to its focus on The Grand Centrality, however, as we shall witness later in this discourse, this may not be an all-encompassing argument.

[2:25:7] The process that is henceforth known as monogenisation refers to the instance in which a system of thought narrows the selection of books that are to hold official authority, and can therefore be quoted from to justify notions, thus becoming monogenous in its orientation.

[2:25:8] For a system of thought to monogenise itself should not be seen as an effort to move towards fundamentalism, nor should it be considered to narrow the abilities of the thought system to be accepting of new traditions of thought within its system.

[2:25:9] Instead, the process of monogenisation is conducted in order to streamline the authorisation given to texts within the system of thought so as to restrict the extent to which other books are able to influence the thought system.

[2:25:10] The second of the major derivations of origineity is that which is henceforth known as polygenesis; a religion, philosophy, ideology, or other system of thought that is described as being polygenous originates from a group of books rather than one and continues to make reference to that group of books, or does not recognise the authority of one single book.

[2:25:11] Polygeneity, as a state or fact of a system of thought, is more stereotypical of philosophical traditions that have developed over the course of centuries and by multiple individuals rather than a single person, however, a monogenous system of thought may also have been created by a multitude of people contributing to the writings of a single text, the Christian tradition of the Bible for example.

[2:25:12] Polygenism does not necessarily take away from the authorities of particular texts, but instead allows for other texts to be prioritised or used as subjects for justification.

[2:25:13] Polygenistic instances are criticised by the notion that allowing multiple books to hold the same authority within a system of thought opens that system up to fragmentation as such books may hold conflicting or a least contradictory messages; the monogenistic approach superiorises itself by the notion that traditions that follow monogenism hold a more unified message than those of a polygenous nature.

[2:25:14] The process of polygenising, or polygenisation refers to the instance in which a system of thought opens itself to a group of authorised books to determine itself rather than a single book and is therefore the direct opposite to the process of monogenisation.

[2:25:15] Now that we have addressed the two major forms of origineity, we come to its lesser forms which include ambigenism and omnigenism, as characterised by the instances of ambigeneity and omnigeneity respectively.

[2:25:16] An ambigenous system of thought can be described as the instance in which the origination of a system of thought remains unknown, or the original work, or the founding work of the tradition is ambiguous typically due to the long history of the system and the scant amount of available records during the time of its founding.

[2:25:17] Ambigenesis is not considered to undermine the system of thought in any way and is expected to be rarer in present times due to ambigeneity being characteristic of older traditions of thought, however, modern systems could be ambigenous through the anonymisation of its author, or the purposeful ambiguation of its origins, either for genuine or for inauthentic reasons.

[2:25:18] The final derivation of origineity that must address in this discourse is that which is to be known as omnigenism which relates to the instance in which a religion holds no instructions about which book or text holds authority and welcomes the introduction of new texts without any specificity on which books are to be used to justify beliefs and which are not.

[2:25:19] Omnigenity, or omnigenesis is seen to be more aligned with the Philosophical Spirit than any other forms of origineity, and therefore more characteristic of a philosophy rather than of a religion or ideology.

[2:25:20] This is because to be omnigenous is to accept all contributions to the system of thought as positive contributions as long as they are based upon reasoned argument as the singular requirement for proper philosophisation.

[2:25:21] The openness of omnigenous may be criticised as allowing different people to distort the message of the founding work, but as a counter-argument, it can be notionised that just because one person contributions to a system of thought and deviates from the original approach does not mean that the original approach is cancelled out by default.

[2:25:22] Now that we have address all the different aspects of origineity, we must properly designate The Philosophy of Astronism and explore the nature of its own origineity which remains the central purpose of this discourse beyond the introduction of several new terms.

[2:25:23] By the present nature of The Philosophy of Astronism, meaning during the period of its founding and during the writing of The Grand Centrality, it can be described as a monogenous philosophy as it only ascribes itself to and justifies itself upon the writings within The Grand Centrality, especially as being founded upon the words within The Omnidoxy.

[2:25:24] Despite the accuracy of this designation, it must also be said that The Philosophy of Astronism holds the potential and the essence to become omnigenous through the process introduced herein as omnigenisation.

[2:25:25] This is only expected to happen after the spread of The Philosophy throughout the people groups and nations of The Earth and beyond and due to the alignment of Astronism with the Philosophical Spirit, there stands no reason to suggest that The Philosophy of Astronism will not one day be omnigenistic in its approach.

[2:25:26] However, in the earliest days of its history, it is expected to remain monogenous and therefore to only use The Grand Centrality and the books, documents, and statements within which as justifications for arguments, as well as sources for knowledge about Astronist Philosophy.

The Appropriate Etiquette, Practice & Approach Towards Philosophical Debate & Argumentation (Approaches to Argumentational Exchange & Argument Theory)

[2:26:1] The centrality of the mastering of the practice of argumentation, which is considered to be a form of art by the Astronist Tradition, can be found throughout Astronist Philosophy as an integral element to keeping alignment with the Philosophical Spirit.

[2:26:2] To that end, there are expected to be a number of approaches to argumentation will develop over the course of its introduction and dissemination as something that is to be practised and mastered and shall form the foundations of Argumentational Exchange which is the practical form of argumentation and Argument Theory which is obviously the theoretical form of argumentation.

[2:26:3] In this discourse, there will be two main derivations of argumentational approach that all other derivations are expected to owe their originations to; these two primary derivations are henceforth known as confrontationalism and non-confrontationalism.

[2:26:4] The former centres itself as the belief orientation holding that The Philosophy of Astronism and its philosophers should remain assertive, decisive, and confident in the face of argumentations with opposing parties; this approach is also known as indominable exchange and is one of the products of indominism.

[2:26:5] Meanwhile, the latter is the belief orientation holding that philosophers of the Astronist philosophical tradition and The Philosophy of Astronism should remain calm and diplomatic in their argumentations with opposing parties. This approach is also known as dominable exchange and is one of the products of dominism.

[2:26:6] By the brief introduction of confrontationalism and non-confrontationalism, we see how their fundamentalities are used to structure argumentation into that which is confrontational and that which is non-confrontational; it is important to clarify that the former of these does not mean to suggest any type of violence is permitted by confrontationalists, but instead it is supportive of a more steadfast, affirmed, and assertive character of argumentation rather than a more passive, submissive, and accepting nature.

[2:26:7] All post-omnidoxical argumentational exchanges are to be categorised as fitting within one of these primary derivations and any that do not fit within one of these, or refuse to be categorised in such a way are to be known as deviants, and are categorised within deviantism as the third, yet lesser form of argumentational exchange classification introduced herein this discourse.

[2:26:8] This discourse has been purposefully brief in outlining argumentational exchanges as the Astronist Tradition expects Astronist philosophers, trilettants, and even dilettants to formulate their own methods and styles in approaching argumentation which will inevitably develop over the course of argumentation's popularity as something to practise and master.

Impositionism & Sophogeny

[2:27:1] The assignment of these two new terms to the rubral of this discourse pertains to the central elements of discussion in this discourse which again, like many other discourses in this sanitological disquisition, is premised on metaphilosophical contemplations.

[2:27:2] Both impositionism and sophogeny, also known as sophogenism, form a metaphilosophical dichotomy which concerns itself with the fundamental purpose of philosophical ideation and discourse.

[2:27:3] Firstly, that which shall henceforth be known as impositionism maintains the belief that the purpose of philosophical ideation and debate is centred on the imposition of one's ideas on others through persuasion by notions of rationality, proof, belief, and observation.

[2:27:4] Therefore, impositionism holds that the spread of philosophical ideas is or should be the primary form of purpose to philosophers and philosophies alike, thus aligning itself with a promulgationist orientation; impositionists are therefore in direct contrast to sophogenists, thus forming the Imposite-Sophogenic Dichotomy.

[2:27:5] In the Astronist philosophical tradition, that which is termed as sophogeny is considered a practice that is to be mastered which involves the creation of fully formed ideas that are able to withstand rational criticism.

[2:27:6] Meanwhile, the belief orientation that stretches beyond this practice is to be henceforth known as sophogenism which holds that the superior, proper, and right (thus including an ethical element) form of philosophical ideation and the purpose of philosophy rests in the creation of ideas itself rather than the imposition of ideas.

[2:27:7] Sophogenists hold that simply the creation of ideas is the purpose of philosophy and what is done with those ideas and how those ideas manifest in the world is a product of organised philosophy, politics, religion, sociology, and ideology rather than philosophy itself.

[2:27:8] The Astronist Tradition maintains that the practice of sophogeny and the belief orientation of sophogenism are the correct metaphilosophical position for the Astronist philosophical tradition to align itself with.

[2:27:9] This is held because of the focus on the creation of ideas, which is what sophogeny essentially expounds, will inevitably lead to the interpretation and implementation of such ideas in the world on people, organisations, and governments through debate, social revolution, and political shifts which therefore manifests itself as the imposition of ideas.

[2:27:10] The Astronist Tradition therefore espouses the notion that philosophical ideas inevitably lead to imposition, but the subject of this discourse pertains to how such ideas

reach such an impositional state, whether by direct or indirect means, the latter of which is found in sophogeny while the former of which is found in impositionism.

[2:27:11] In conclusion, the Astronist Tradition can be considered sophogenic by its nature, though impositionist by its eventual manner, or in terms of the realistic occurrences made between philosophical ideations.

The Importance of Starlore

[2:28:1] Starlore involves the creation and cherishing of mythical and mystological stories about the stars, star patterns (constellations and asterisms), cosmic progeny and phenomena and is classified as a branch of folklore and the Astronist Tradition intends to categorise it as the main branch of Astronist Folklore; it is important to note that starlore is not given the gravity of being rational as it is purely mystological in nature and therefore does not influence the logic of The Philosophy of Astronism itself, but is expected to influence the practices and ideas of individual followers.

[2:28:2] Starloring bases all of its stories and mystological beliefs upon the stars, their movements, their patterns, as well as other cosmic progeny and phenomena, yet it should not be classified as a branch of astrology as its stories and mystologies are not used for divination.

[2:28:3] Some may not see the proximity between philosophers and starlorers but the Astronist Tradition does see this closeness as starloring has a strong influence over our foundational beliefs with regards to The Cosmos; despite the mystological and mythological foundations of such starloring narratives, the allegories that exist beyond such stories are important to the overall culture, philosophy, and the role of The Cosmos.

[2:28:4] Starloring involves the creation of mythological and mystological stories in relation to The Cosmos and its progenies and phenomena, but also included in starlore is the use of such celestials to interpret doctrines or actual events in history.

[2:28:5] Starlore has a very long history and it is this that the Astronist Tradition cherishes and the fact that it has been practiced by almost every culture in recorded history demonstrates the current of cosmocentricity that has existed at the heart of human civilisation since the dawn of our perceptual intelligence.

[2:28:6] The Astronist Tradition contributes the mystological aspects and narratives to starloring in addition to starlore's own pre-Astronist mythologies; it is this philosophical dimension that the Astronist Tradition is most notable for contributing to the tradition of starloring.

[2:28:7] The practice of starloring holds a history in human culture dating as far back as five-thousand five-hundred years ago and was practised by prehistoric cultures with certain myths predating even these, the prime example of which being the Cosmic Hunt.

[2:28:8] The Cosmic Hunt is a mythological story that has been widely disseminated throughout The Earth, taking main different cognate appellations according to the cultures and languages of the peoples it was told to and it is one of the many penchants of the Astronist Tradition to preserve this myth, re-emerge it through modern promulgation, and formulate new myths and mysts inspired by the Cosmic Hunt.

[2:28:9] The story's essential premise is that a large animal is pursued by a group of hunters, or a single hunter after which the animal is wounded and transforms into a constellation, known as the mystical process of theriotranstellation.

[2:28:10] Theriotranstellation is the mystical occurrence in which an animal transforms into a constellation, or some other cosmic, or cosmically related entity while anthropotranstellation refers to a similar occurrence, but this takes place to a human rather than to an animal and a general transtellation is in reference to the same occurrence, but to an object rather than to an animal, or a person.

[2:28:11] Variations of the Cosmic Hunt myth have been disseminated across The Earth which, to the Astronist Tradition, demonstrates the deep resonance and veneration that humans have always attributed to The Cosmos and its progeny and phenomena since time immemorial.

[2:28:12] The Cosmic Hunt, like many of the other starlores predates the many traditions of thought, religion, and ideology that govern our world today, yet it is this very fact that the Astronist Tradition intends to reverse by its belief in cosmocentricity.

[2:28:13] Our ancestors saw the stars and the products of The Cosmos before any other divinical theories arose and although this is not to say that such divinities are not to be entertained with contemplation, yet instead it is to reaffirm the centrality of the stars and the influence they have had on the way in which human civilisation has formed and the way in which our systems of thought have developed.

[2:28:14] The term that is henceforth known as hyperextrapolation encompasses the notion that starlores, The Cosmos, and the philosophical contemplation of cosmic progeny and phenomena have been at the heart of human culture, philosophy, and wonderment since the beginning of human perception and due to this fact, the stars should regain their centrality and supremacy in human civilisation as is proposed by cosmocentrism, especially so over all divinical, spiritual, and other premises for belief systems.

[2:28:15] Essentially, hyperextrapolation uses the long history of starlore and human stellar fascination, observation, and wonderment to justify cosmocentric ideas and to prioritise such ideas above other aspects of thought.

[2:28:16] Hyperextrapolationism, as a belief orientation, goes beyond this by linking The Philosophy of Astronism to these ancient starlores by underpinning The Philosophy as a rational, civilised, and organised system of thought that takes its ancestry back to such early wonderments.

[2:28:17] Therefore, hyperextrapolationists believe that the origination of the essence, purpose, and message of Astronist Philosophy exists in these early starlore myths and therefore designates the true founding of Astronist Philosophy to be undetermined due to

the ambiguity of the first astral myth or starlore, yet certainly preceding all other organised traditions of thought and contemplation.

[2:28:18] Suprahyperextrapolationism takes one step even further by notionising that due to the essence of the Astronist Philosophy being cosmocentricity, the actual premise for Astronist Philosophy rests at the creation of The Cosmos at the point and moment of The Big Bang.

[2:28:19] Suprahyperextrapolationists are expected to notionise that other traditions of thought, whether these be religions or philosophies, hold premises that are either geocentric, anthropocentric, or are divinely intangible and so therefore cannot be measured; essentially, suprahyperextrapolation attempts to connect Astronist Philosophy with that which it holds central to its beliefs and that remains to be The Cosmos rather than humanity itself, The Earth, or some divinal being.

[2:28:20] The original prototype of the Cosmic Hunt myth is considered to have been invented at least fifteen thousand years ago for it to have diffused across the Bering land bridge into the Americas, thus demonstrating the immense history of stellar wonderment and mystical encounterments between humanity and the cosmic, both mentally and physically.

[2:28:21] Astronism supports the re-emergence of the long-established myth of the Cosmic Hunt to become a prominent aspect of Astronist Folklore whilst not losing the essence of its roots.

[2:28:22] Therefore, in this, we see the truth of the great importance that is provided to the Cosmic Hunt myth in Astronist Philosophy and the connection made between our modern philosophy founded herein and such an ancient myth further demonstrates the beliefs of hyperextrapolationism.

Philosophical, Religious, & Ideological Territories

[2:29:1] In the writings of *The Grand Centrality*, I have made a particular point about defining and designating, with clarity, the differences between philosophies, religions, and even ideologies too.

[2:29:2] In this discourse, we are going to build upon this by discussing the various different topics that Astronist Philosophy herein defines to be of philosophical, religious, and ideological natures in order to clarify to the world the areas that these three subjects do study as there still remains a large amount of illusion about what areas of contemplation these three subjects actually cover.

[2:29:3] For the purposes of further distinction, each subject will be assigned its own territory which, in this context, encompasses all the areas of study that are able to be explored by different contemplators namely philosophers, theologians, and ideologists for their respective subjects.

[2:29:4] These territories are expected to change over time for the subjects to which we refer hold a great deal of dynamicity and are therefore in constant shift pertaining to the historical, cultural, political, and societal circumstances.

[2:29:5] However, these territories are designated according to an Astronist point of view and at the time of the writing of *The Omnidoxy*, to which you can apply your own historical, cultural, political, and societal circumstances from your position of retrospect as the reader.

[2:29:6] Before we make the designations for each of the subjects of philosophy, religion, and ideology and define their proper capacities of study according to their territories, we must first introduce some new terminology.

[2:29:7] That which is henceforth described as uniterritorial refers to a subject that is designated to just one group of contemplators, characteristic of most subjects in the context of this discourse though it must be said that uniterritoriality does not pertain to any superiority with regards to the subject itself and this remains the same for biterritoriality and triterritoriality.

[2:29:8] That which is henceforth described as biterritorial refers to a subject that is designated to two groups of contemplators, an example of which is ethics as we shall see later in this discourse.

[2:29:9] That which is henceforth described as triterritorial refers to a subject that is designated to all three groups of contemplators, an example of which is apologetics in its different contexts.

[2:29:10] That which is henceforth described as diterritorial refers to a subject that naturally pervades across many different topics and therefore breaks the territorial designations in this discourse, examples of which would be politics, law, and economics, each of which are also subjects in their own rights of course.

[2:29:11] The final term that we must introduced by our designations of territories begins is that which is henceforth known as a divergatism and this refers to the instance in which a contemplator, especially in his works, deviates from the territories outlined latterly, examples of which can be found herein within The Omnidoxy itself.

[2:29:12] Therefore, The Omnidoxy can be described as a divergatistic document because there are certain elements of The Omnidoxy that touch upon territorially religious topics, such as theology, and eschatology.

[2:29:13] Now that we have outlined some of the key terms in relation to subject territories, we should now begin our designation of the territories themselves and it remains only prudent to begin with the subject of subjects and the one that began all subjects; the philosophical territories are those which we will outline firstly.

[2:29:14] The philosophical territories that we will outline are split into four different categories including traditional territories, pre-Astronist philoments, post-Astronist philoments, and post-Astronist territories.

[2:29:15] We must now define what a philoment is; this is a particular type of subject to which philosophy is applied; the nature of the subject itself may not be philosophical, but a philoments looks at the philosophical aspect of that subject; these are typically appellated as “philosophy of [subject]”.

[2:29:16] A philomentation is a specific type of contemplation that is in direct relation to a philoment and is therefore defined from a philosophisation which is a contemplation in relation to a non-philoment topic.

[2:29:17] A traditional territory is a philosophical subject that was formed before the founding of Astronist Philosophy, examples of which are ethics, metaphysics, epistemology and others; these are not non-Astronist subjects, but are instead pre-Astronist.

[2:29:18] Therefore, a pre-Astronist philoment is the philosophy of a subject that was officially designated before the founding of Astronist Philosophy and its contributions, which are to be known as post-Astronist philoments; it is important to note that some philoments are encompassed by actual disciplines such as the philosophy of perception categorised within ghenology.

[2:29:19] Something that we must also interject here before we continue on with listing the disciplines is the concept henceforth known as Philosophical Expansionism which relates

to the Astronist Tradition's goals of expanding the disciplines categorised within philosophy in order to further popularise the subject and to generally expand it to encompass a greater amount of disciplines.

[2:29:20] See below for a list of all the traditional philosophical territories outlined by the Astronist Tradition:

[2:29:20a] Cosmology

[2:29:20b] Ethics

[2:29:20c] Metaphysics

[2:29:20d] Epistemology (encompassed by contology in Astronist philosophy and is paired with ethics)

[2:29:20e] Aesthetics

[2:29:20f] Logic

[2:29:20g] Axiology

[2:29:20h] Ontology

[2:29:20i] Metaphilosophy

[2:29:20j] Practical philosophy

[2:29:20k] Theoretical philosophy

[2:29:20l] Deontology

[2:29:20m] Mereology

[2:29:20n] Phenomenology

[2:29:20o] Teleology

[2:29:20p] Social philosophy

[2:29:20q] Legal philosophy

[2:29:21] See below for a list of all the pre-Astronist philoments outlined by the Astronist Tradition:

- [2:29:21a] Philosophy of action
- [2:29:21b] Philosophy of art (culture, design, music, and film)
- [2:29:21c] Philosophy of colour
- [2:29:21d] Philosophy of cosmos (known as cosmic philosophy in Astronist philosophy)
- [2:29:21e] Philosophy of dialogue
- [2:29:21f] Philosophy of education
- [2:29:21g] Philosophy of environment
- [2:29:21h] Philosophy of futility
- [2:29:21i] Philosophy of happiness
- [2:29:21j] Philosophy of healthcare
- [2:29:21k] Philosophy of history
- [2:29:21l] Philosophy of human nature
- [2:29:21m] Philosophy of humour
- [2:29:21n] Philosophy of language
- [2:29:21o] Philosophy of life
- [2:29:21p] Philosophy of literature
- [2:29:21q] Philosophy of mathematics
- [2:29:21r] Philosophy of mind
- [2:29:21s] Philosophy of perception (known as ghenology in Astronist Philosophy and is paired with ontology)
- [2:29:21t] Philosophy of religion
- [2:29:21u] Philosophy of science
- [2:29:21v] Philosophy of sexuality

[2:29:21w] Philosophy of social sciences

[2:29:21x] Philosophy of space and time (known as durantology in Astronist philosophy)

[2:29:21y] Philosophy of sport

[2:29:21z] Philosophy of technology

[2:29:21aa] Philosophy of war

[2:29:22] See below for a list of all the post-Astronist philoments created and herein outlined by the Astronist Tradition:

[2:29:22a] Philosophy of conation

[2:29:22b] Philosophy of conformation

[2:29:22c] Philosophy of economics

[2:29:22d] Philosophy of engineering

[2:29:22e] Philosophy of entrepreneurship

[2:29:22f] Philosophy of attire and fashion

[2:29:22g] Philosophy of humanity

[2:29:22h] Philosophy of juralism

[2:29:22i] Philosophy of marketing

[2:29:22j] Philosophy of identity

[2:29:22k] Philosophy of adulthood

[2:29:22l] Philosophy of architecture

[2:29:22m] Philosophy of childhood

[2:29:22n] Philosophy of civilisation

[2:29:22o] Philosophy of media

[2:29:22p] Philosophy of modesty

[2:29:22q] Philosophy of money

[2:29:22r] Philosophy of peoples

[2:29:22s] Philosophy of sentience

[2:29:22t] Philosophy of space exploration (known as expology in Astronist philosophy)

[2:29:22u] Philosophy of spacial law

[2:29:22v] Philosophy of spacial utility (mining, industry, commerce, and transportation)

[2:29:22w] Philosophy of wealth (known as aphnology)

[2:29:22x] Philosophy of wellbeing

[2:29:22y] Philosophy of world

[2:29:22z] Philosophy of writing

[2:29:23] See below for a list of all the post-Astronist territories created and herein outlined by the Astronist Tradition:

[2:29:23a] Omnidoxicology

[2:29:23b] Centralitology

[2:29:23c] Cosmic philosophy (philosophy of cosmos) (also known as compendology)

[2:29:23d] Naology

[2:29:23e] Tiritology

[2:29:23f] Characterology

[2:29:23g] Chronology / horology

[2:29:23h] Futurology

[2:29:23i] Methodology

[2:29:23j] Morphology

[2:29:23k] Somatology

[2:29:23l] Apologetics (philosophical)

[2:29:23m] Maleology

[2:29:23n] Feminology

[2:29:23o] Sanitology (practical, numerical, and applicational forms of Astronist Philosophy)

[2:29:23p] Abettology (philosophy of aid and stewardship)

[2:29:23q] Equitology (philosophy of justice and patience)

[2:29:23r] Xentology (philosophy of ambition and enlightenment)

[2:29:23s] Rhemnology (philosophy of advancement and also involves eschatological practices and notions, thus making it divergatistic)

[2:29:23t] Quillitology (philosophy of peace and acceptance)

[2:29:23u] Prerology (philosophy of imagination and freedom)

[2:29:23v] Aetiology

[2:29:23w] Agathology

[2:29:23x] Agriology

[2:29:23y] Agrology

[2:29:23z] Alethology

[2:29:23aa] Alimentology

[2:29:23ab] Aphnology

[2:29:23ac] Archology

[2:29:23ad] Aretology

[2:29:23ae] Autology

[2:29:23af] Auxology

[2:29:23ag] Chresmology

[2:29:23ah] Ergology

[2:29:23ai] Philorology

[2:29:23aj] Hygiology

[2:29:23ak] Irenology

[2:29:23al] Nomology

[2:29:23am] Paedology

[2:29:23an] Ponerology

[2:29:23ao] Ptochology

[2:29:23ap] Sophology

[2:29:23aq] Synechology

[2:29:23ar] Thanatology

[2:29:23as] Timology

[2:29:23at] Philosophical anthropology

[2:29:23au] Oneirology

[2:29:23av] Positology - study of the nature and concept of belief

[2:29:24] See below for a list of all the religious territories herein outlined by the Astronist Tradition:

[2:29:24a] Ethics

[2:29:24b] Eschatology

[2:29:24c] Biblical, koranic, talmudical and Vedic hermeneutics

[2:29:24d] Divine providence

[2:29:24e] Ecclesiology

[2:29:24f] Missiology

[2:29:24g] Pneumatology

[2:29:24h] Soteriology

[2:29:24i] Theological anthropology

[2:29:24j] Theology proper (including theodicy, apophatics, and cataphatics)

[2:29:24k] Angelology

[2:29:24l] Hamartiology

[2:29:24m] The nature of faith

[2:29:24n] The nature of grace

[2:29:24o] The nature of doctrine

[2:29:24p] Predestination

[2:29:24q] Demonology

[2:29:24r] Christology

[2:29:24s] Mariology

[2:29:24t] Josephology

[2:29:24u] Buddhology

[2:29:24v] Islamology

[2:29:24w] Hierology

[2:29:24x] Martyrology

[2:29:24y] Hagiology

[2:29:24z] Apologetics (religious)

[2:29:25] See below for a list of all the ideological territories herein outlined by the Astronist Tradition:

[2:29:25a] Forms of government

- [2:29:25b] Political philosophy
- [2:29:25c] Polity
- [2:29:25d] Policymaking
- [2:29:25e] Societal structures
- [2:29:25f] Institutions
- [2:29:25g] Economic systems
- [2:29:25h] Worldviews
- [2:29:25i] Environmentalism
- [2:29:25j] Nature of statehood
- [2:29:25k] Propaganda
- [2:29:25l] Political movements
- [2:29:25m] State laws
- [2:29:25n] Apologetics (ideological)

The Mancies of Astronism

[2:30:1] Astronist Mysticism is a branch of pneumovology which is part of compendology in an omnidoxical context.

[2:30:2] Astronist Mysticism, including both its beliefs and its practices, is to be henceforth known as siderealism, followers of which are known as a sidero/siderian.

[2:30:3] The subdiscipline within pneumovology that deals with Astronist Mysticism is henceforth known as sidereology, or siderics.

[2:30:4] Astronist Mysticism encompasses a vast plethora of beliefs, concepts, practices, and notions about the nature of The Cosmos, the sentient interactions with The Cosmos and its progeny and phenomena, as well as the mystical aspects of cosmic devotion, observance, and inspiration.

[2:30:5] Sidereological study and contemplation is universally considered in the context of the Astronist Tradition with a sense of cantication which is to regard something, or a subject according to metaphorical means by default and that if any deviation from this is to be pursued, then that must clearly outlined in one's verbal argument, or in one's writings.

[2:30:6] Therefore, sidereology remains a cantical subject in the Astronist philosophical tradition amongst all other disciplines and subdisciplines of study.

[2:30:7] It is in this discourse that we deal with one of the main aspects of Astronist Mysticism which are collectively known as the mancies; a mancy is characterised by seeking the knowledge of something by ritualistic, mystical, spiritual, or transcendental means rather than purely philosophical, rational, or corporeal means.

[2:30:8] Mancies are both conceptual beliefs and physical practices formed in order to connect an individual to some transcendent element of either themselves or an externality, the most common of which in the Astronist Tradition is a cosmic externality.

[2:30:9] In their conceptual senses, mancies are purely based upon philosophisation, inspiration, and imagination while their physical practices and manifestations often result in rituals, incantations, and other ceremonial events which are not developed herein and are not recognised by the Astronist Tradition for it is only the conceptual aspects of astral mancies that Astronist Philosophy intends to develop.

[2:30:10] A mancy must always have a prefix attached to it in order to designate which objects, person, concept, or event towards which the mancer is expected to draw their inspirations from and towards which they are to direct their philosophisations.

[2:30:11] One of the main characteristics of all mancies are their transcendental, and incorporeal ambitions, especially directed towards and manifested by a spiritual or divinical experience after one has conducted mancing.

[2:30:12] For this reason, it is prudent to introduce the term that is henceforth known as supracelestial which relates to which exists beyond the physical functions and appearances of a celestial entity and relating to its spiritual, ethereal, and divinically connected nature and perceptivity.

[2:30:13] In essence, the state and fact of being supracelestial or holding supracelestiality relates to the aspects of the progeny and phenomena of The Cosmos that are divinical, spiritual, and incorporeal.

[2:30:14] Supracelestialism affirms the belief that all cosmic progeny and phenomena, in addition to their corporeal and material existences, also hold spiritual, divinical, ethereal, and transcendental existences.

[2:30:15] Supracelestialists are not outrightly supported by the Astronist Tradition as the transcendental dimensionality of celestial entities is something that requires faith rather than something that can be proven or rationalised.

[2:30:16] However, in a context of cantication, the Astronist Tradition expresses countenance towards supracelestialism and other related notions of the supralism of cosmic progeny and phenomena as distinct from logical and rationalised forms of contemplating The Cosmos and the entities within it as is found in Cosmic Philosophy.

[2:30:17] The Supracosmos is introduced herein as a type of cosmos that manifests the beliefs held within supracelestialism and relates to the existential realm of existence that supracosmic elements reside within and beyond the physical functions and appearances of The Cosmos itself in relation to its transcendental, spiritual, ethereal, and divinical nature and perceptivity.

[2:30:18] The argument that The Supracosmos should be categorised as either a lesser existence alongside The Chaos, The Mytra, and The Betwixity, or as a higher existence alongside The Cosmos, The Universe, and The Divine is expected to be an area of fierce debate and this area of contemplation is to be appellated as the Supracosmic Existentiality argument.

[2:30:19] The Supracosmos is something that the Astronist Tradition expects those whom contemplate and practice sidereology to explore and it is the discipline of study of sidereology that The Supracosmos remains classified within.

[2:30:20] That which is described as astronic relates to that which is Astronist, cosmic, or philosophic in nature, appearance, and/or manifestation and this is expected to be one of the most popularly used adjectives by the Astronist Tradition.

[2:30:21] A related form of mancy in Astronist Mysticism is that which is henceforth known as cosmosomnia which is the instance, experience, and fact of when a person dreams about The Cosmos, its progeny, or phenomena typically leading to philosomnia.

[2:30:22] Cosmosomnia is also alternatively known as astrosomnia which relates to stellar entities rather than other types of celestial entities and cosmic phenomena and it is astrosomnism that is the belief orientation associated with astrosomnia holding that the philosophisations about stars during sleep are superior to those philosophisations made when one is awake.

[2:30:23] Cosmosomnism is the belief orientation associated with cosmosomnia which holds that people who experience cosmosomnia hold a greater significance than those philosophisations that are experienced and inspired than when one is awake.

[2:30:24] Two more alternative appellations for cosmosomnia and astrosomnia are those which are henceforth known as cosmic sleep and astral dreaming respectively and it these that are expected to be used a colloquial sense rather than the former two which are expected to be reserve for specialised mention.

[2:30:25] Philosomnia is the main product of cosmosomnia and astrosomnia and is characterised as a philosophical idea derived from one's dreams or from times during which they are asleep, and is alternatively known as philosophical sleep, or philosophical dream.

[2:30:26] The belief orientation associated with philosomnia is that which is to be henceforth known as philosomnism, followers of which are to be known as philosomnist, and is characterised as the superiorisation over philosophisations that occur when someone is awake.

[2:30:27] We shall now move on to list each of the different mancies of the Astronist philosophical tradition which are also collectively known as philosophical divinations, philosophical mancies, or astronomical mancies.

[2:30:28] The first of these is henceforth known as cosmomancy which involves one's personal divination of The Cosmos itself, its progeny, and its phenomena by inspirational, philosophical, imaginational, and devotional means.

[2:30:29] Cosmomancy, like all mancies, holds a conceptual aspect as well as practical aspect, the former of which is supported and related to in this discourse while the latter, as aforementioned, is not openly supported by the Astronist Tradition due to its ritualistic tendencies.

[2:30:30] Cosmomancy can also be defined as the instance in which one receives aspiration from The Cosmos itself as a whole and they use such aspiration to forge their personal life,

as well as to influence the lives of others around them; further to this, the different branches of cosmomancy are listed below each of which either relate to a cosmic progeny or phenomena:

[2:30:31] Astromancy - proximate stars, constellations, star patterns, stellar streams, and other formations of stars other than star clusters.

[2:30:32] Sideromancy - distant stars, particularly those that are not visible in the night sky without a telescope.

[2:30:33] Planetomancy - all types of planetary bodies.

[2:30:34] Cometomancy - comets in all their sizes and formations.

[2:30:35] Meteormancy - meteorites in all their sizes and formations.

[2:30:36] Asteromancy - asteroids in all their sizes and formations.

[2:30:37] Selenomancy - The Moon, lunar phenomena, and all other moons.

[2:30:38] Novamancy - novae in all their forms including supernovae and hypernovae.

[2:30:39] Obliviomancy - black holes.

[2:30:40] Nebulamancy - nebulae in all their forms.

[2:30:41] Clusteromancy - clusters in all their forms including globulars or galactic clusters.

[2:30:42] Galactomancy - galaxies in all their different formation types including spirals, irregular, and elliptical.

[2:30:43] Pulsaromancy - pulsars in all their sizes and forms.

[2:30:44] Quasaromancy - quasars in all their sizes and forms.

[2:30:45] Nihilomancy - voids in all their sizes and forms.

[2:30:46] Now that we have listed all of the branches of cosmomancy, we can now move onto one of the other main subjects within sidereology is that which is known as astral magic.

[2:30:47] Astral magic is the practice of rituals, ceremonies, and incantations themed by The Cosmos, its progeny, and/or its phenomena or regarding them in order to invoke the supernatural or to create enchantments.

[2:30:48] Astral magic is defined from the practical applications of cosmomancy and its branches by the proclamation that astral magical practices directly influence specific events in the world and in people's lives while cosmomantic practices are less so specific, and much more generalised about they influence, typically by relating to society as a whole rather than individuals and the specific events in their lives.

[2:30:49] Astral magic is defined as a spiritual branch of sidereological contemplation and practice which, like The Cosmos itself, is arranged by an order of elements: material, celestial and divine.

[2:30:50] That which is categorised as natural magic is reliant on the elements and occult properties of material things and requires a knowledge of natural philosophy.

[2:30:51] However, astral magic, also known as celestial magic, relies on the spiritual connections and causalities of the individuals that are conducting such practices and the extent to which they hold such links to the celestial in subject.

[2:30:52] Astral magic is consistent of two subdivisions with the first of which using astrology to elect times for magical ceremonies, rituals and incantations while the other subdivision of astral magic is the production of astral talismans and amulets which provider their wearers with greater confidence, clarity, and consistency to conduct and realise astral magic practices and beliefs.

[2:30:53] Particularly the latter subdivision of the two is characteristic of the occult as objects are provided with powers of greater influence than beyond their own material means, which are hidden from all others except for the wearer, thus owing to the original meaning of the word occult which relates to that which is hidden from sight and mind's eye.

[2:30:54] The positions of cosmic progeny and the occurrences of cosmic phenomena dictate the appropriate time to conduct astral magic, and it is through the use of talismans and amulets that one's ability to effectively practice astral magic is enhanced.

[2:30:55] There are a number of astronomically themed factors that can be used for talismans, including planetary talismans, lunar talismans, fixed star talismans or observational themed talismans.

[2:30:56] It is of crucial importance that all inclusions of astral magic in the context of Astronist Philosophy and Culture must be considered according to cantication and must therefore not be provided with the same level of rationalisation, criticism of logic, and philosophical argumentation that all incantical elements of Astronist Philosophy are approached with as these practices and beliefs are particularly removed from all incantations as the mystical elements of Astronism are distinguished from the logical and rational elements.

[2:30:57] Furthermore, the Astronist Tradition's views on such practices of mysticism in The Philosophy of Astronism remain adverse to accepting, yet the development of a mystical tradition within Astronism also remains of immense importance if the Astronist philosophical tradition is going to establish itself in a well-rounded and all-encompassing way as is manifested by the principle of all-countenance that is followed in close alignment with the Philosophical Spirit.

The Prepollencies of Philosophies

[2:31:1] Throughout the history of religions and philosophies, each have attempted to dominate those which oppose them through many different elements including population domination, war, money, or through governmental or political means.

[2:31:2] For this reason, the dominancy of systems of thought is an important topic of discussion because if The Philosophy of Astronism is going to be properly implemented into a society and is going to contribute to the civilisation to which it is implemented then it must hold a sense of dominancy.

[2:31:3] There are two divisions of dominancy including microdominancy and macrodominancy; the former of which relates to something that is dominant within a particular sphere, while the latter refers to that which dominates across all or most spheres of society.

[2:31:4] Another aspect of logicology is that which shall be henceforth known as prepollency which measures the extent to which a philosophy holds domitability or indomitability.

[2:31:5] Domitability measures the extent to which a philosophy is open to change, is easily overcome by another force, is quietened by political, cultural, or religious forces, and is able to be brought under control by an external party.

[2:31:6] Meanwhile, indomitability measures the extent to which a philosophy is unchanging, unable to be influenced or controlled by an external party, and resistant to political, cultural, and religious pressures.

[2:31:7] A philosophy that is indomitable is considered to be able to last longer than that which is domitable for that which espouses domitableness is vulnerable to being overtaken, distorted, or eliminated by some external force and due to the ambition that are held for The Philosophy of Astronism, we cannot allow it to be dominated by any externality.

[2:31:8] If we allow that which we create to be dominated by another creation then we betray our creation and once committed, this is something that is virtually impossible to reverse.

[2:31:9] A philosophy that conducts itself indomitably is a philosophy that is secure itself, holds clarity in its mission and purpose, and is not willing to be distorted by the intentions of an externality.

[2:31:10] However, the domitableness of a philosophy does not retract it from the essence of the Philosophical Spirit for the protection of a philosophy from distortion does not

mean that the acknowledgement of new notions cannot be administered; The Philosophy of Astronism prides itself on being an indomitable philosophy from the outset.

[2:31:11] There are two belief orientations associated with domitability and indomitability which are to be known as dominism, followers of which are dominists, and indominism, followers of which are indominists, as regarded respectively.

[2:31:12] Dominism is the belief orientation holding that The Philosophy of Astronism should be open to changing its stances on topics in order to preserve the essence of the Philosophical Spirit, as well as to be open to change as the world around it also changes.

[2:31:13] Oppositely, indominism is the belief orientation holding that The Philosophy of Astronism should remain steadfast, affirmed, and unchanging in its stances on topics in order to preserve itself against those which intend to dominate and distort it.

[2:31:14] The Dominism-Indominism Debate is expected to be one of the most important elements of logicology that Astronist philosophers are to discuss together for it relates to the subject of metaphilosophy, which explores the nature of philosophy itself, of which this particular debate strikes at the core.

[2:31:15] Metaphilosophical explorations continue to pervade throughout the majority of Astronist philosophical debate for the contemplation of philosophy remains central to the understanding of philosophy and without such understanding, we cannot develop our arguments, and nor can be further that which is to be known as the Philosophical Cause.

[2:31:16] The Philosophical Cause is the principle that underpins much of the reascensionist beliefs within Astronism as it proposes that there exists a calling reason for philosophy's recentralisation in the hearts, minds, and souls of the sentient citizens of societies as an irremovable element to the functionality of the society.

[2:31:17] The Philosophical Cause maintains that religion has been the outlet through which the masses have indulged their philosophisations for centuries through being given the convenience of doctrine which they are to either believe or disbelieve.

[2:31:18] However, the Philosophical Cause as a reascensionist principle upholds the notion that the recentralisation of philosophy will beckon an era in which the masses are to think for themselves by the utility of instruments that they are provided and are able to enact practices that are purposefully satisfying.

[2:31:19] The Philosophical Cause encompasses the mission to which reascensionist philosophy is pivoted to advance as it is the Philosophical Cause that is demonstrative of beliefs of reascensionism; essentially, it is the practical and physical elements of reascensionism and without a Philosophical Cause, it is difficult to manifest reascensionist beliefs.

[2:31:20] One must always protect oneself is the motto of indominism while the motto of dominism maintains that one must always change oneself to suit those around them for the betterment of the self.

Conclusionism & Non-conclusionism

[2:32:1] This next discourse concerns itself with the dichotomy of ideas known as conclusionism and non-conclusionism which addresses further metaphysical issues with regards to whether philosophical contemplation is capable of coming to conclusions.

[2:32:2] Conclusionism and non-conclusionism; the former belief orientation bolsters the notion that conclusions can be made in philosophy in general, however the latter maintains that philosophy's purpose is neither to come to conclusions, nor does it hold the ability to come to conclusions about any topic.

[2:32:3] The non-conclusionists hold this view because they hold that the nature of conclusion rests in finality while the nature of philosophy resides in provisionality, as is manifested by the belief orientation of provisionalism, which is not to be confused with provisionism as that is a non-Astronist term, and exists within non-conclusionism.

[2:32:4] Provisionalism is a suborientation within the orientation of non-conclusionism stating that philosophy is forever unfixed and provisional rather than absolute and final, and therefore no conclusions can be made when such debates are approached, or are involved with, or relating to philosophy.

[2:32:5] Non-conclusionists may go a step further by introducing a religio-philosophical argument to justify their orientation by notionising that religions are themselves conclusions while philosophies are the instruments that one may use to come to their own conclusions but are not conclusions themselves.

[2:32:6] So therefore, by this notion, non-conclusionists fail to see the reasons why conclusionists want to downplay, or even remove such a unique characteristic of philosophy, especially so as it remains another distinction between philosophical nature and religious nature.

[2:32:7] Tributarian conclusionism, as a departure from mainstream conclusionist thought, holds the tendency to agree with the non-conclusionists' religio-philosophical argument, yet still maintain that without conclusions, we lose an element of purpose which isn't attractive to human minds that have clung to religions because of the conclusions and sense of meaning and purpose that they provide people.

[2:32:8] Tributarianism, or tributarianist philosophy, as followed by tributarians, maintains that philosophies, religions, ideologies, and all other systems of thought should be what the people, or their adherents need them, or want them to be rather than the people do their bidding, or conform to the wants and needs of the thought system itself.

[2:32:9] Tributarian conclusionists maintain that by supporting conclusionism, they are satisfying the needs and wants of those whom adhere to the philosophy by providing such

people with a sense of purpose and meaning through conclusion rather than by taking an open-ended attitude which non-conclusionists continue.

[2:32:10] Tributarianism maintains that if not for the people to follow systems of thought, there would be no need to create such systems in the first place, and so therefore, such systems must do the bidding of the people, they must cater to their adherents, and they must fulfil the wants, needs, passions, and ambitions of their followers and in return, the ambitions of the thought system will be fulfilled in direct reciprocation.

[2:32:11] Tributarianism has been introduced here due to its inspiration stemming from the conclusionist and non-conclusionist debate, but also pervades many other aspects of Astronist Philosophy and therefore commands its own distinctly separated discussions and contemplations in a general tributarian sense.

[2:32:12] Tributarians are typically concerned with the wants and needs of people generally, or of a particular type or group, and the ambitions and purposes of a system of thought, particularly of a philosophy, and how these two trajectories interact and how they can meet each other's expectations and fulfil each other's wants and needs.

The Panentheistic Principle

[2:33:1] In our aforementioned comparological study and contemplations, we address panentheism and its relationship with The Philosophy of Astronism during which this particular discourse was referenced.

[2:33:2] The Panentheistic Principle, as it is henceforth appellated, involves the notion that in the Astronist philosophical tradition, The Cosmos, The Universe, and The Divine are all transcendent beyond the cosmic laws of space, time, and gravity as well as also existent within all the different cosmoses through physical manifestations and through quiddity.

[2:33:3] In this context, quiddity refers to the manifestations of cosmicity, universality, and divinity within different cosmoses through progeny and phenomena.

[2:33:4] The role of panentheism in Astronism as manifested by the concept of The Divine is therefore also demonstrative of how panentheistic thought is intrinsic to the Astronist Cosmology because beyond cosmicity and universality, divinity is the only existentiality that interpenetrates all the others below it.

[2:33:5] The Cosmos, The Universe, and The Divine are not considered to be equal to one another according to the Astronist Tradition which is a notion to be henceforth known as disproportionalism for The Divine is considered beyond The Universe and The Universe beyond The Cosmos itself and other cosmoses.

[2:33:6] Disproportionalism is not considered to be a universally accepted notion within the Astronist philosophical tradition, although it is considered to be a proper interpretation of the Astronist Cosmology by the Astronist Tradition.

[2:33:7] "Unlike pantheism, which holds that the divine and the universe are identical, panentheism maintains an ontological distinction between the divine and the non-divine and the significance of both," which is interpreted through The Philosophy of Astronism via the notion that The Cosmos and The Universe remain significant even in comparison to The Divine.

[2:33:8] "In panentheism, god is viewed as the soul of the universe, the universal spirit present everywhere, which at the same time "transcends" all things created," which is closely associated with the description of the concept of The Divine and its omnitranscendence throughout all its existence.

[2:33:9] "While pantheism asserts that "all is god", panentheism claims that god is greater than the universe," which is again another accurate descriptor of the relationship between The Cosmos and The Universe towards The Divine, the latter of which is considered to be greater than the two formers according to the disproportionalist view of the Astronist Cosmology.

[2:33:10] The alternative to the disproportionalist interpretation of the Astronist Cosmology is that which shall henceforth be known as commensurationism.

[2:33:11] Commensuration, as manifested by the belief orientation of commensurationism, involves the instance in which the different elements of the Astronist Cosmology are considered to be equal to one another both in size and importance; essentially, commensurationism rejects the notion of a cosmological hierarchy as outlined by disproportionalism.

[2:33:12] Commensurationist approaches to understanding the Astronist Cosmology are therefore inherently characterised by their opposition to any notion of an existing hierarchy between the different realms of existence; for this reason, commensurationism can be described as antihierarchical meanwhile disproportionalism can be described as prohierarchal in orientation.

[2:33:13] "Some versions of panentheism suggest that the universe is nothing more than the manifestation of God and other forms indicate that the universe is contained within God," which are notions that may also be interpreted as holding presences in the Astronist Cosmology, though these are general not considered by the Astronist Tradition with the former notion to be known as universomanifestationism and the latter notion is to be known as divinomanifestationism within the context of Astronist Philosophy, thus showing the great diversity of thought and approaches to panentheism in the Astronist philosophical tradition.

That Which Cannot Now Be Seen Nor Understood (Paleoanthropism)

[2:34:1] The brief discourse addressing paleoanthropism, also known as paleocosmism, is encapsulated by the belief that prehistoric people groups saw astronomical phenomena and progeny, or understood The Cosmos in a way that we shall never see or understand in the present time.

[2:34:2] Further to this, paleoanthropists share the belief that prehistoric people held coherent cosmologies and ideas about the stars, but didn't have the ability to write down their ideas or express them for posterity.

[2:34:3] This inhibited them from extending their beliefs beyond simply notions for they did not hold the mediums of expression that are now so easily grasped in today's world of modernity, though perhaps in the convenience of such mediums we have lost their true gravity.

[2:34:4] Paleoanthropism, as a concept, is created by the Astronist Tradition and is established herein in order to reaffirm the strong connection between cosmic contemplations and observations of prehistoric peoples and the foundations that their cognitions have resulted in for the development of modern cosmic contemplations and observations, thus owing to the founding and establishment of Astronist Philosophy itself.

[2:34:5] Paleoanthropists therefore attribute the foundations of modern cosmology, astronomy, and the philosophies and systems of thought and concepts that have derived from such subjects to the contemplations of prehistoric peoples; this is to be henceforth known as the Paleoanthropic Principle.

[2:34:6] Paleoanthropism can be considered a form of origineity with regards to Astronist Philosophy, but even if this originational argument is not withheld, the Astronist Tradition still considers the wonders of the prehistoric peoples to be essential to the earliest developments of cognition towards The Cosmos.

[2:34:7] Thus, this has lead to the formation of more resonative feelings and concepts present in our current psyches including peace, wonderment, a feeling of the unknown, beauty, divinity, superiority, its marked untouchability, as well as its divine mercilessness.

[2:34:8] Paleoanthropism places a distinct centrality on the thoughts, feelings, beliefs, and actions of prehistoric humans, but also speaks of a wider centrality of prehistoric sentience altogether which its appellation is transferred to paleosentientism.

[2:34:9] This offshoot of paleoanthropism considers there to be a need for a centrality on all prehistoric forms of sentient life on all worlds and their foundational role in the development of present ways of understanding The Cosmos across all civilisations.

The Subjects of The Cosmos & The Affixation of Astric / Cosmic Combining Forms for the Construction of Newfound Disciplines of Study

[2:35:1] It is one of the duties of The Omnidoxy to encompass space and The Cosmos in all ways in which present knowledge and imagination allows and for this rationality of purpose alone, it is prudent to outline subjects that relate to space, human society in space, the expected developments in industry and commerce in space, and the application of pre-existing industries to space.

[2:35:2] Herein listed are the subjects in relation to space and The Cosmos, particularly of a non-philosophical context, that the Astronist philosophical tradition espouses to be significant to the development of civilisation, culture, industry, and commerce in the setting of space.

[2:35:3] It is important to the Astronist Tradition that The Omnidoxy and Astronists are to be accredited with the introductions of some of these subjects, which are also outlined in The Grand Cradle of Astronomy which pertains to the area of Astronist study in which they reside as these subjects below, as aforementioned, are not strictly philosophical by their natures and so therefore, they do not exist within Astronist Philosophy.

[2:35:4] Cosmic Media - the study of the different means of mass communication in space on interplanetary, interstellar, and intercraft levels including broadcasting, publishing, and across digital networks.

[2:35:5] Journalism (Cosmic) - the writing of articles relating to spacial affairs, or may refer to journalism conducted on planets other than The Earth.

[2:35:6] Publishing in The Cosmos - the entirety of books and other published articles either referencing to spacial affairs, or originating from a planet other than The Earth.

[2:35:7] Astromuseology - a branch of study dealing with the planning, construction, and management of astromuseums.

[2:35:8] Information Systems - the study of the information systems utilised by various organisations on different planets other than The Earth itself.

[2:35:9] Computer Graphics - the practice of creating digital graphics that show a number of complex star systems and which a navigator may use in order to reach different stars and planetary systems.

[2:35:10] Cosmic Economics - the branch of knowledge concerned with the production, consumption, and transfer of wealth beyond Earth.

[2:35:11] Cosmic Culture - the entirety of the cultural aspects of all different civilisations on celestial bodies and planets beyond The Earth, and collectively refers to all culture relating to offearth and all culture originating offearth.

[2:35:12] Institutions (Cosmic) - dealing with the various institutions involved in the regulation of space, and those institutions that were established with the purpose of control humanity's exploration of The Cosmos.

[2:35:13] Social Groups - the study of the sociological structure of civilisations and the societies on planets other than The Earth.

[2:35:14] Cosmic Sociology - the overall sociological aspects of a society, or state beyond The Earth on another planet or celestial body.

[2:35:15] Data Storage (in The Cosmos) - the storage of large amounts of data, especially aboard spacecraft, but may also involve the study of the data storage methods and techniques developed by other civilisations on different planets.

[2:35:16] Planetary Land (in The Cosmos) - the study of the landmass of a particular planet, and its topographies.

[2:35:17] Planetary Governance/Regulation/Control - dealing with the governance of a planet and all the regulatory controls that follow this.

[2:35:18] Cosmic Social Order - the overall social order of a civilisation beyond The Earth, or of a society developed beyond The Earth.

[2:35:19] Production (in The Cosmos) - the production of goods on a particular planet, or celestial body, under a governmental authority, and includes the subsequent concepts, ethics, and methodologies involved.

[2:35:20] Manufacturing (in The Cosmos) - the study of the manufacturing industry of a particular planet, space station, or celestial body.

[2:35:21] Planetary Education Management - the management of the education systems of a particular planet as stipulated by the governments of that planet.

[2:35:22] Interspace/Interspatial Law - law relating to the space between planets, celestial bodies, or any other space station.

[2:35:23] Spacial Law (as aforementioned) - the system of laws specific to the issues and jurisdictions beyond Earth compounded for the construction of spacial law.

[2:35:24] Labour & Welfare Law (in The Cosmos) - the study of law in relation to labour and welfare of a government on a particular planet.

[2:35:25] Social Problems & Services - the overall social problems of a civilisation or society on a planet beyond The Earth, and the services provided by that society, or its government intended to combat such problems.

[2:35:26] Cosmic Collection & Preservation - the collection and preservation of materials and resources from beyond The Earth and the laws, regulations, and ethics involved.

[2:35:27] Human Anatomy, Cytology & Histology (in The Cosmos) - the affects on the human anatomy, cytology, and histology when humans are offearth and on different planetary and celestial bodies.

[2:35:28] Health (in The Cosmos) - the attainment of good health for people living beyond The Earth, either on space stations, spaceships, or on other planets where the environments are different to those of The Earth.

[2:35:29] Disease (in The Cosmos) - the outbreak of disease in civilisations beyond The Earth, the greater possibility of diseases beyond The Earth, and the development of new diseases not able to occur on The Earth.

[2:35:30] Food & Drink (in The Cosmos) - the study of the wide-ranging foods and drinks from various different planets.

[2:35:31] Cosmic Engineering - the unique techniques and tools used to build structures beyond the Earth's atmosphere and on other planets.

[2:35:32] Spacial Finance - the study of the financial methodologies and systems of the governments and companies of different planets other than on The Earth.

[2:35:33] Cosmic Architecture - the art and practice of designing and constructing buildings and other structures on celestial entities other than The Earth, for a wide variety of usages.

[2:35:34] Building Materials (in The Cosmos) - resourcing building materials and the general construction issues in space, or on other planets.

[2:35:35] Printing (in The Cosmos) - the printing industry beyond The Earth on other planets, or space stations.

[2:35:36] Marketing & Advertising (in The Cosmos) - the marketing and advertising of space travel, astrotourism, business in space, and generally life beyond The Earth, or on another planet.

[2:35:37] Cosmic History - the total history of interplanetary and interspatial exploration.

[2:35:38] Computer Networks & Systems (in The Cosmos) - the study, construction, and development of a computer network to be used offearth during space travel, and on other planets, and may also involve the study of computer systems on other planets.

[2:35:39] Cosmic Business Ethics - the ethical stances on business conduct and operation held by various non-Earth philosophies and governments.

[2:35:40] Cosmopsychology / Astropsychology - the wide-ranging psychological affairs and issues that arise within a society, or nation state on another planet or celestial body.

[2:35:41] Counselling (in The Cosmos) - practices of counselling on planets other than The Earth.

[2:35:42] Interspatial Urban Communities - the sociological and demographical study of urban communities of different planetary bodies and celestial bodies.

[2:35:43] Community (in The Cosmos) - the communal and social aspects of civilisations beyond The Earth and on other planets.

[2:35:44] Cosmic Environment/Environmentalism - the impacts on worlds other than The Earth due to human civilisations and involves efforts to reduce these affects.

[2:35:45] Human Rights (in The Cosmos) - the overall issues of human rights of different governments and states of planetary and celestial bodies and space stations and spaceships.

[2:35:46] New Age Rights - the entirety of rights that arose after the beginning of humanity's exploration of The Cosmos and typically revolve around spacial settings and the issues that branch from this.

[2:35:47] Astrosport - all the sports that have arisen since the beginning of humanity's exploration of The Cosmos, especially sports that can best be played offworld, or offearth.

[2:35:48] Women (in The Cosmos) - the scholarly study of the various roles, philosophies, and events involving or related to women in a nation state of a planet other than The Earth.

[2:35:49] Gender (in The Cosmos) - topics of gender identity in societies offearth, especially when in relation to the laws laid down by the governments of such societies.

[2:35:50] Language (in The Cosmos) - the overall study of all languages of the peoples of planets, celestial bodies, and space stations other than The Earth.

[2:35:51] Corporation (in The Cosmos) - the wide-ranging study of the operations, organisation, establishment, and institutionalisation of corporations that exist and operate beyond The Earth on other celestial bodies and planets.

[2:35:52] Cosmic Politics - the politics of worlds and political organisations and entities that are beyond The Earth itself.

[2:35:53] Cosmic Citizenship - dealing with citizenship and its nature on different planets, celestial bodies, and space stations beyond The Earth, and citizenship in space between any celestial body or space station.

[2:35:54] Cosmic Statehood - the nature of statehood on different planets, or celestial bodies, or between different governments and states, as well as the various requirements to attain statehood on a particular planet other than The Earth itself.

[2:35:55] Astrotourism - the entirety of tourism in space and all its many aspects.

[2:35:56] Interspatial Business - dealing with overall business practice, policy, conduct, and operation beyond The Earth.

[2:35:57] Constitutional Law (in The Cosmos) - either the application of Astronist Constitutional Law to a cosmical context, or to the study of the constitutional law of governments, organisations, and companies beyond The Earth on all celestial bodies.

[2:35:58] Cosmic Taxation - the entirety of taxation policy of the governments and states of a planet.

[2:35:59] Public Sector (in The Cosmos) - the comparison between the control of an economy by the states of two different planetary bodies.

[2:35:60] Employment Law - the laws of employment of governments and states on planets and celestial bodies other than on The Earth itself.

[2:35:61] Communications Law - the law of communication between worlds, between the people of The Earth and the offworld, and the communications between space ships voyaging through The Cosmos, and draws upon questions of privacy.

[2:35:62] Computer Law - the law of computer construction, utilisation, and configuration, especially for use on worlds and celestial bodies beyond The Earth.

[2:35:63] Information Law - the laws of information and policy relating to information access and distribution of a particular planet, celestial body, or space station and its governing body.

[2:35:64] Business Law - the entirety of business law relating to business conduct, structure, organisation, and management in all systems beyond The Earth.

[2:35:65] Property Law - the study of law relating to property ownership and rights on a multitude of planets, or across a multitude of governmental areas on the same or different planets.

[2:35:66] Restitution - the laws of a state on a different planet relating to the recompense for injury and loss.

[2:35:67] Criminal Law - the established laws and regulations of a government, or another authority, on a planet or celestial body other than The Earth to deal with the punishment of offenders.

[2:35:68] Administrative Law - the study of the relationship between a state and its citizens somewhere beyond The Earth, and also may deal with the study of non-Earth governments.

[2:35:69] Statutory Law - the laws of statute of a government of a state of a particular planet other than The Earth.

[2:35:70] Agricultural Law - the study of the laws of agriculture beyond The Earth on other celestial bodies and in other worlds.

[2:35:71] Aviation Law - the laws of landing and taking off from the surface of The Earth or another planet according to the jurisdiction of the state from which one is taking off from or landing on.

[2:35:72] Banking Law - the entirety of banking methodologies and services conducted offearth, and the banking systems of other world's states, and banks.

[2:35:73] Commercial Law - the laws of commerce on all celestial entities, planets, and worlds beyond The Earth.

[2:35:74] Competition Law - the laws of business competition and competitiveness on worlds and celestial bodies other than The Earth.

[2:35:75] Construction Law - dealing with the wide-ranging stances on the laws of construction on any celestial body or planet beyond The Earth.

[2:35:76] Interplanetary Consumer Protection - the bilateral consumer protection laws between two or more planetary governments.

[2:35:77] Corporate Law - laws presiding over the operations of corporations beyond The Earth and on other celestial bodies and planets.

[2:35:78] Cyberlaw - the wide-ranging aspects of digital laws on planets and celestial bodies other than on The Earth.

[2:35:79] Election Law - the laws of elections of governments and states on planets and celestial bodies other than on The Earth itself.

[2:35:80] Energy Law - the laws of energy utilisation on planets, and celestial bodies other than The Earth, and on space stations and spaceships.

[2:35:81] Entertainment Law - the laws of various entertainment mediums and platforms on planets and celestial bodies other than The Earth, as well as on space stations and spaceships.

[2:35:82] Environmental Law - the laws of the environment as stipulated by the government of a planet, or some other non-Earth state.

[2:35:83] Family Law - dealing with unintegrated and integrated laws on the way in which the family should ideally function and the general role of the family in societies and states on planets other than on The Earth

[2:35:84] Health Law - the laws of health of living offearth as stipulated by some governmental body.

[2:35:85] Immigration Law - the laws relating to immigration policy of a planet, a celestial body, or space station.

[2:35:86] Intellectual Property - the laws of intellectual property of a specific planet, celestial body, or space station as stipulated by its reigning governing body.

[2:35:87] Interspatial Criminal Law - criminal law, conviction, and incarcerations beyond The Earth and between celestial bodies.

[2:35:88] Astronavigational Law - the wide-ranging set of laws surrounding the topic of navigation of ships and other space vehicles beyond The Earth.

[2:35:89] Cosmotime Law - equivalent to Maritime Law, but deals with spacial trade and spacial naval matters.

[2:35:90] Media Law - the study of the law of the media on different planets, celestial bodies, and space stations as stipulated by the governmental body of those areas.

[2:35:91] Military Law - the law of militaries on different planets, celestial bodies, and space stations under jurisdiction of different governmental bodies and organisations.

[2:35:92] Education Law - the educational laws of governments and states on planets and celestial bodies other than on The Earth.

[2:35:93] Probate - the issues of probate and its various interpretations and laws across different governments beyond The Earth on other planets and celestial bodies.

[2:35:94] Sports Law - the laws relating to sports of a particular government, or regulatory authority of a particular planet other than The Earth itself.

[2:35:95] Tax Law - the taxation laws of the government of a planet or celestial body other than The Earth itself.

[2:35:96] Transport Law - the nature of law of transportation in a state of a planet other than The Earth itself.

[2:35:97] Interplanetary Law - the overall laws between two or more planetary governments and includes all other aspects of interplanetary law.

[2:35:98] Trust Law - the nature of trusts and the roles of trustees, second parties, and third party beneficiaries of a particular government on a planet other than The Earth.

[2:35:99] Policing - police conduct, policy, and interaction between two planets and two planetary governments.

[2:35:100] Public Health (in The Cosmos) - the study and comparison of public health on different planets, celestial bodies, and space stations.

[2:35:101] Individual Planetary Law - the study of the entirety of the laws of a planet and the government, or governments, that rule it, and involves many other branches of studies of law.

[2:35:102] Humanic Law - the laws of human interaction with non-human sentient beings.

[2:35:103] Charity - dealing with all aspects of charitable operation, policy, and conduct beyond The Earth.

[2:35:104] Social Policy - the study of the general policies of a state or society that involves sociological contexts and affects.

[2:35:105] Services for young peoples (in The Cosmos) - the study of services for young peoples as provided by a range of different organisations and governments.

[2:35:106] Services for old peoples (in The Cosmos) - the study of services for elderly peoples as provided by a range of different organisations and governments.

[2:35:107] Spacial Hazard & Emergency Management - dealing with the various processes and procedures involved with the management of hazards and emergencies and the comparison of these processes and procedures between different governments of planets.

[2:35:108] Services for poor peoples (in The Cosmos) - the study of services for poor peoples as provided by a range of different organisations and governments.

[2:35:109] Housing & Development - the construction of houses and the development of houses for different planetary bodies, as well as homes on space stations.

[2:35:110] Cosmic Civilisation Development - dealing with the entire development of a civilisation beyond The Earth.

[2:35:111] Services for disabled peoples (in The Cosmos) - the study of services for disabled peoples as provided by a range of different organisations and governments.

[2:35:112] Mental Health Services (in The Cosmos) - dealing with the approaches of different planetary governments to provide mental health services.

[2:35:113] Prison - the policies relating to imprisonments between two or more planetary bodies and governments and their bilateral understandings of the incarcerations of a planetary citizen on a different planet.

[2:35:114] Youth Justice - the nature, and development of a youth justice programme implemented by the government of a nation state on a planet other than The Earth itself.

[2:35:115] Activism - the study of activist activity about space and cosmical affairs, or activist activity taking place anywhere beyond The Earth.

[2:35:116] Health Service Management - dealing with the study of the management of health services in the governments of different planetary bodies.

[2:35:117] Higher Education - the study of the structure and management of a system of higher education on different planets.

[2:35:118] Public Policy - the study of the overall public policy of different planetary governments and this comparisons of these.

[2:35:119] Polity - the overall civil government and constitution of a state that is situated beyond The Earth.

[2:35:120] Spacial Commerce - the study of the overall interactions between people socially, economically, and otherwise when they are offearth.

[2:35:121] Transport Law - the nature of law of transportation in a state of a planet other than The Earth itself.

[2:35:122] Interplanetary Transportation - dealing with aspects of law and conduct in the transportations of people, traded goods, or other cargo between two or more planets, and may involve the study of bilateral agreements made between the governments of those planets.

[2:35:123] Retail - the industry and businesses of retail on different planets, celestial bodies, and space stations.

[2:35:124] Interplanetary Telecommunications - dealing with the types of communication methods used between two different planets.

[2:35:125] Intercivilisation - dealing with the general and specific interactions between two or more civilisations, or governments beyond The Earth.

[2:35:126] Intercivilisational Telecommunications - dealing with the types of communication methods used between two or more non-Earth civilisations.

[2:35:127] Customs - dealing with the customs laws of governments between planetary bodies.

[2:35:128] Etiquette & Social Behaviour - dealing with the various etiquettes and traditional social behaviours of a society and civilisation on a different planet, and the various comparisons to human etiquette and accepted social behaviours.

[2:35:129] New Culture - the study of cultures of different newly discovered planets and the peoples of societies and civilisations of those planets, as well as their similarities and differences to Earth and human cultures.

[2:35:130] Folklore - a discipline dealing with either the folklore of cultures originating from other planets or celestial bodies, or folklore that relates to a cosmic background and context, and is typically closely related to Astronist Folklore.

[2:35:131] Religion - an umbrella term for all the religions founded offearth, and thus, remains entirely distinct from Cosmic Philosophy.

[2:35:132] Fashion & Garmentry - dealing with the fashion styles of peoples on worlds other than The Earth, and also includes clothing required for space travel.

[2:35:133] Primary Education - dealing with the overall education systems at a primary level on different planets and celestial bodies as stipulated by a specific governmental education methodology.

[2:35:134] Secondary Education - dealing with the overall education systems at a secondary level on different planets and celestial bodies as stipulated by a specific governmental education methodology.

[2:35:135] Curriculum Development - dealing with the study of the development of an educational curriculum on planetary bodies beyond The Earth.

[2:35:136] Specialty Education - dealing with the overall education systems at a specialty level on different planets and celestial bodies as stipulated by a specific governmental education methodology.

[2:35:137] Methodologies of Study - the different ways a person can learn, especially in different contexts and environments, and the way by which these methodologies have been implemented into the education systems of different states.

[2:35:138] Teaching & Professorship - the different methodologies and approach to pedagogies and the training of teachers and professors in different education systems of planets other than The Earth itself.

[2:35:139] General Cosmical Principles - dealing with the general principles of the exploration of The Cosmos and of life in The Cosmos on another planet, celestial body, space station, or spaceship, and greatly contributes to the overall Cosmic Philosophy.

[2:35:140] Nutrition (in The Cosmos) - dealing with general wellbeing practices and healthy food and drink on different planets and spacial environments.

[2:35:141] Physical Fitness & Wellbeing (in The Cosmos) - dealing with general physical fitness and wellbeing practices conducted on different planets and in different spacial environments to keep physically healthy.

[2:35:142] Spirituality - dealing with the demographical and sociological study of the spiritual affiliations of different planetary and spacial populations.

[2:35:143] Crystallography - as part of prospection that deals with the studying, finding, and excavating of crystals and other precious stones and gems from planets and celestial bodies other than The Earth, and also involves the recording of one's discoveries.

[2:35:144] Minerals - the discovery, resourcing, and recording of minerals on a particular planet, or celestial body.

[2:35:145] Mining - the industry, concepts, and philosophies of mining on a particular planet.

[2:35:146] Geology - the study of physical structures and substances of a particular planet.

[2:35:147] Hydrology - the study of the properties of water masses on a planet, especially in relation to the planet's landmass.

[2:35:148] Planetary Sciences - an umbrella term for the sciences of a planet.

[2:35:149] Plant Sciences - dealing with the study of the unique flora of a particular planet.

[2:35:150] Horticulture - the study of garden cultivation and management on different planets, celestial bodies, and space stations.

[2:35:151] Botany - dealing with the in-depth study of physiology, structure, ecology, distribution, classification, and the economic value of the plants of a planet.

[2:35:152] Prehistoric Studies (equivalent to palaeontology) dealing with the study of a planet's or celestial's entities prehistoric period, other than The Earth itself.

[2:35:153] Cosmic Evolution - dealing with either the evolution of The Cosmos, or the evolution of worlds other than The Earth.

[2:35:154] Planetary Evolution - dealing with the evolutionary path of a particular planet, both ecologically and anthropologically.

[2:35:155] Funding - dealing with laws of funding projects and companies beyond The Earth on other planets, and between different planetary governments and states.

[2:35:156] Utilities - dealing with the study of public utility services in different planetary states and societies as offered by the government of the area.

[2:35:157] Mechanics - dealing with the industry of mechanics on planets other than The Earth.

[2:35:158] Nursing - dealing with the nursing industry, profession, and services on a particular planet, especially in comparison to those on another planet.

[2:35:159] Engineering Materials - dealing with the finding, resourcing, and recording of the properties of materials used in Spatial Engineering.

[2:35:160] Geriatrics - the medical study of elderly people across different societies across different planets.

[2:35:161] Paediatrics - dealing with the medical study of young people across different societies across different planets.

[2:35:162] Drug Abuse - dealing with the abuse and prevalence of drugs in places offearth, and its various consequences.

[2:35:163] Alcoholism - dealing with the abuse and prevalence of alcohol in places offearth, and its various consequences.

[2:35:164] Cosmopsychotherapy - dealing with the practice of psychotherapy in order to treat psychological issues that have originated from the individual beyond in space, or on another planet other than The Earth.

[2:35:165] Obstetrics - dealing with the medical study of childbirth and midwifery across different societies on different planets.

[2:35:166] Dentistry - a branch of dentistry, dealing with the study of the affects of being in space or on another planet to one's teeth.

[2:35:167] Social Order - dealing with the overall social order of a civilisation beyond The Earth, or of a society developed beyond The Earth.

[2:35:168] New World Development - dealing with the study of the planning, designing, establishment, and construction of towns, cities, and communities in a newly discovered world.

[2:35:169] Surgery - dealing with the conduct of surgery in any form in a particular planet, celestial body, or space station, just not on The Earth itself, and may involve the comparison of surgical procedures between planets.

[2:35:170] Training - dealing with the different methodologies of training for various roles in different planets other than The Earth itself, especially in comparison to the training methodologies used on The Earth.

[2:35:171] Human Resources - the study of the way in which human resources are treated in companies on different planets, celestial bodies, and space stations.

[2:35:172] Cosmic Architecture - dealing with the art and practice of designing and constructing buildings and other structures on celestial entities other than The Earth, for a wide variety of usages.

[2:35:173] Project Management - dealing with the study of the management of some business project taking place on a planet, celestial body, or space station beyond The Earth.

[2:35:174] Accounting - dealing with the study of the methodologies and practices of accounting on different planets other than The Earth.

[2:35:175] Spacial Homeopathy - dealing with the study and practice of homeopathic systems of medicinal treatment on planets and celestial bodies other than on The Earth.

[2:35:176] Spacial Homelessness - dealing with people are homeless, typically with only a spacecraft to their name, or how homeless people are treated in civilisations and societies in different planets.

[2:35:177] Interspatial Social Injustices - dealing with the study of various social injustices found in the societies, civilisations, and states beyond The Earth.

[2:35:178] Pharmacology - dealing with the study of uses, effects, and modes of action of drugs on different planets in different cultures.

[2:35:179] Spacial Aerospace - dealing with the technologies and industries relating to space travel, and the various usages of space ships and space travel.

[2:35:180] Agriculture - dealing with the practice of agriculture and the agricultural industry as a whole on different planets.

[2:35:181] Livelihood - the study of the ways in which individuals make their incomes sufficient enough to support a certain lifestyle, especially of individuals on different planets, space stations, or celestial bodies.

[2:35:182] Cosmic Social Hierarchy & Class - the development of class in civilisations and societies beyond The Earth, and the subsequent effects of this.

[2:35:183] Hospitality - dealing with the entertainment and general reception of guests and how this reflects the cultures and philosophies of the hosts, and specifically relates to this in an offearth context.

[2:35:184] Parenting - dealing with the different cultures of parenting on different planets and in different newly discovered worlds.

[2:35:185] Planetary Leadership - dealing with the study of the leadership of a planet.

[2:35:186] Metallurgy - dealing with the discovery, resourcing, and recording of metals on a particular planet, or celestial body.

[2:35:187] Packaging - dealing with the industry of packaging products, and traded goods, especially for long haul spacial transportation between planets, or between two other celestial bodies.

[2:35:188] Spacial Ventilation - dealing with the provision of fresh air to a building, room, or spacecraft, and involves the subsequent training and studying for this.

[2:35:189] Dictionaries & Encyclopaedias - dealing with the development of dictionaries and encyclopaedias by the integration of terms from cultures, philosophies, and all other aspects of a multitude of other planets.

[2:35:190] City & Town Planning - dealing with the planning, designing, and constructions of towns and cities on planets and celestial bodies other than The Earth itself.

[2:35:191] Civilisation Planning - dealing with the entirety of the planning, organisation, and establishment of civilisations of all different types on any celestial body or world beyond The Earth.

[2:35:192] Music & Instruments - dealing with the music style that arose which identifies its style of being cosmical, and in relation to humanity's exploration of The Cosmos.

[2:35:193] Drama & Entertainment - dealing with the various entertainments relating to being on other worlds, or generally being offearth, and also includes entertainments that originate from beyond The Earth.

[2:35:194] Literature - dealing with the literatures that arose just before and after humanity's exploration of The Cosmos and reference this exploration, or may also refer to the literatures of other civilisations on worlds other than The Earth.

[2:35:195] Furniture, Decor & Interior Design - dealing with the various styles of interior decorating found in buildings offearth and on other celestial bodies and planets.

[2:35:196] Public Buildings (Tectonology) - the study of public buildings and their various usages, architectural styles, and heritages.

[2:35:197] Spacial Home & House Planning - dealing with the planning of individual houses both exteriorly and interiorly on different planets with various different usages and features.

[2:35:198] Spacial Domestic Economics - dealing with the study of the economy of the home and domestic life on planets, celestial bodies, and space stations other than on The Earth itself, and compares the differences between the various domestic economies.

[2:35:199] Spacial Eventing - dealing with the organisation, planning, creating, and executing of an event anywhere offearth.

[2:35:200] Spacial Banking - dealing with the practices and methodologies and system of banking on planets, celestial bodies, and space stations, other than on The Earth.

[2:35:201] Now that we have listed the majority of the cosmically applied subjects, typically those which have either cosmic, spacial, interspatial, planetary, or interplanetary in their names, we now come to list the lesser known ologies that the Astronist Tradition applies a cosmical context or Astronist characteristic to.

[2:35:202] The territorial categorisations of some of these disciplines listed below can be found in the discourse bearing the name of Philosophical, Religious & Ideological Territories.

[2:35:203] Abiology - dealing with the study of all the inorganic and inanimate things of The Cosmos, such as the planets, the asteroids etc. in contrast to the study of the organic and animate entities of The Cosmos.

[2:35:204] Acyrology - dealing with the misuse of Astronist terms and the following consequences.

[2:35:205] Aerolithology - dealing with the philosophical study of meteorites.

[2:35:206] Aetiology - dealing with the establishment of a causation, origination, or reason for a philosophical concept, or a cosmical event, or phenomena.

[2:35:207] Agathology - dealing with the philosophical study of being good and goodness.

[2:35:208] Agnoiology - dealing with the philosophical of the inherent nature of humanity to be ignorant of the larger elements of existence, being, and knowledge, and in particular, those which are known as The Cosmos, The Universe, and The Divine in the Astronist Cosmology.

[2:35:209] Agriology - dealing with the philosophical study of primitivity.

[2:35:210] Agrology - dealing with the science and art of agriculture, and its philosophical concepts and theories.

[2:35:211] Agrotechnology - dealing with the application of technologies to agriculture, especially on another planet other than The Earth.

[2:35:212] Alethiology - dealing with the philosophical study of the nature and concept of truth.

[2:35:213] Alimentology - dealing with the philosophical study of nutrition physically, mentally, and philosophically and the concepts and theories that follow.

[2:35:214] Anthrozoology - dealing with the interactions between humans and animals, especially on another planet than The Earth.

[2:35:215] Antitechnology - dealing with the philosophical stance in opposition to technology, and typically align themselves with nature instead.

[2:35:216] Aphnology - an area of study dealing with the philosophical study of wealth, and the concepts and theories involved with that.

[2:35:217] Archology - dealing with the philosophical study of the governance of something, and the concepts and theories involved.

[2:35:218] Aretology - the same as aretaics, a discipline of study dealing with the philosophical study of virtue, and the surrounding concepts and theories.

[2:35:219] Aristology - dealing with the study of cooking and dining, and the culture surrounding, especially on a different planet.

[2:35:220] Autology - dealing with the philosophical study of oneself, and the surrounding concepts and theories.

[2:35:221] Auxology - dealing with the philosophical study of growth physically, mentally, emotionally, and philosophically, and the surrounding concepts and theories.

[2:35:222] Axiology - dealing with the philosophical study of value, and the surrounding concepts and theories.

[2:35:223] Battology - dealing with the repetition of the same ideas, especially for pedagogic effect.

[2:35:224] Bromatology - dealing with the study of food, and the surrounding philosophical concepts and theories.

[2:35:225] Chaology - dealing with the philosophical study of The Chaos as part of Astronist Cosmology.

[2:35:226] Chresmology - dealing with the philosophical study of prophecies, and the surrounding concepts and theories; it remains similar to prophetics but instead deals with a general contemplation of prophecies while the discipline of prophetics remains specific.

[2:35:227] Clonology - dealing with the study and philosophical understanding of cloning and clones, and the concepts and theories involved.

[2:35:228] Cognitology - dealing with the philosophical study of both the mind and behaviour and their interactions.

[2:35:229] Cometology - dealing with the philosophical study and approaches to the understanding of comets, especially in Astronist Cosmology.

[2:35:230] Committology - dealing with the study of Astronist committees in government and their administrative roles.

[2:35:231] Cosmecology - dealing with the philosophical study of The Earth in relation to cosmic phenomena, especially in relation to cosmocentricity and Astronist Cosmology.

[2:35:232] Cosmochronology - dealing with the philosophical study timescales of the objects and events of The Cosmos.

[2:35:233] Criteriology - dealing with both the philosophical establishment of criteria when dealing with logic, and the study of how philosophical conclusions can be made by a structured criteria.

[2:35:234] Cryology - dealing with the study of low temperatures and subsequent phenomena in relation to cosmical events, and entities.

[2:35:235] Demology - dealing with the philosophical study of state and planet populations, as well as population activities, social conditions, and behaviours across a wide range of societal and civilisational scenarios.

[2:35:236] Dendrology - dealing with the philosophical contemplation of trees and their role as humanity's life source.

[2:35:237] Diplomatology - dealing with the study of diplomats of The People's Constitutional Company of Jesse Millette.

[2:35:238] Dittology - dealing with a twofold interpretation of an Astronist text, especially a philosophical text.

[2:35:239] Dogmatology - not to be confused with the discipline of comparology, dealing with the scholarly study of the comparison between The Philosophy of Astronism and another philosophy, or a religion.

[2:35:240] Dysteleology - dealing with the philosophical study of the stance holding that existence has no final cause from purposeful design.

[2:35:241] Edaphology - dealing with the study of soil sciences on different planets and the influence of soils on living things, particularly plants.

[2:35:242] Entreprenology - dealing with the study of entrepreneurship, especially in the creation of an Astronist related business.

[2:35:243] Ergology - dealing with the philosophical study of work, and the subsequent concepts and theories involved.

[2:35:244] Ethnomethodology - dealing with the study of the methods used for the establishment of a particular social order, typically relating to an Astronist Methodology of social structure.

[2:35:245] Sociomethodology - dealing with the study of the methods used in the demographic calculation of social measures, features, and systems.

[2:35:246] Economethodology - dealing with the study of the methods used in the establishment of a state's economy, and typically relates to the Astronist economic methodology.

[2:35:247] Xenoarcheology - dealing with the physical remains of past peoples and civilisations of a planet, or celestial body, other than The Earth.

[2:35:248] Xenobiology - dealing with the study of the biologies of non-human sentient life on a planet other than The Earth.

[2:35:249] Festology - dealing with the study primarily of starlight festivals, but may be broadened to include the study of all other Astronist events.

[2:35:250] Gerontology - dealing with the study of the social, psychological, philosophical, cognitive, spiritual, and biological affects and aspects of ageing.

[2:35:251] Gnosiology - dealing with the philosophical study of knowledge of The Cosmos in a philosophical context and space in a non-philosophical context, as distinct from epistemology.

[2:35:252] Hemerology - dealing with the study of Astronist calendars, and their philosophical, symbolical, and financial aspects.

[2:35:253] Philorology - dealing with the study of the central texts of a philosophy, especially The Grand Centrality of The Philosophy of Astronism as the central text of Astronism, and Astronist Thought and Philosophy, as well as comparing the central texts of different philosophies.

[2:35:254] Hodology - dealing with the philosophical study of interconnected ideas from any other philosophical discipline.

[2:35:255] Hygiology - dealing with the philosophical study of the preservation of health, especially in Astronist Philosophy.

[2:35:256] Ordology - a discipline of study dealing with the contemplations of the orderity of The Cosmos in Astronist Cosmology and in Cosmic Philosophy with which one may use the instrument of study of orderity in order to study.

[2:35:257] Idiophilosophy - dealing with the study of the ways in which a particular philosophy, or philosophy in general, has had an impact on one's own personal mentality.

[2:35:258] Irenology - dealing with the philosophical study of peace, its attainment, and its interactions with humanity and humanity's inherent nature.

[2:35:259] Kalology - dealing with the philosophical study of the beauty and aesthetics of The Cosmos.

[2:35:260] Macrocosmology - dealing with the philosophical study of The Cosmos on a large scale, or in wholeness.

[2:35:261] Microcosmology - dealing with the philosophical study of The Cosmos on a smaller, narrower scale, or in isolation.

[2:35:262] Neology - the study of the creation of the Astronist Terminologies, and their integrations and interactions with already existing words and terminologies, as well as the creation of new Astronist words after the initiation words listed in The Grand Lexicon of Astronomy.

[2:35:263] Nomology - dealing with the philosophical study of law and its nature in the interaction with the state, the people, and the government.

[2:35:264] Astroceanology - dealing with the study of oceans on planets and celestial bodies other than The Earth.

[2:35:265] Omenology - dealing with the omens and their inclusions, symbolism, and inferences in Astronist literatures.

[2:35:266] Oryctology - dealing with the study of fossils, minerals, and rocks excavated from planets other than The Earth itself.

[2:35:267] Paedology - dealing with the study of child philosophy, as well as the philosophical study of children themselves and their behaviours, and developments.

[2:35:268] Pantheology - dealing with the branch of theology embracing all religions in their philosophical forms.

[2:35:269] Pantology - the study of the entirety of Astronomy, of all its branches, and in all its aspects and forms.

[2:35:270] Pekingology - dealing with the study of all Astronist interactions with the People's Republic of China, especially Astronist Philosophy interacting with Chinese Philosophy.

[2:35:271] Personology - dealing with the specific study of the faces of The Five Astronist Character characters in isolation across a wide-ranging spectrum of representations, and the subsequent symbolism, inferences, and meanings that may be derived.

[2:35:272] Astropharology - a branch of Naology, an Astronist Subject dealing with the study of astronomical lighthouses, known as starhouses.

[2:35:273] Pharology - a major branch of Naology, the discipline of study dealing with the construction, preservation, and management of starhouses, as known in the Astronist Tradition, which are closely related and associated with the general term of lighthouses.

[2:35:274] Pneumatology - dealing with the affects of being in space, or being on another planet, or celestial body other than The Earth, on the human respiratory system.

[2:35:275] Ponerology - dealing with the philosophical study of evil, and the surrounding concepts and theories.

[2:35:276] Ptochology - dealing with the philosophical study of poverty, and the surrounding concepts and theories.

[2:35:277] Sophology - dealing with the philosophical study of wisdom as distinct from knowledge, and the surrounding concepts and theories.

[2:35:278] Synechology - dealing with the philosophical study of theories concerning continuity and universal causation.

[2:35:279] Systemology - dealing with the philosophical study of systems of thought, and the logic that has established such systems.

[2:35:280] Taxology - dealing with the identification, naming, and classification of anything Astronist related.

[2:35:281] Teleology - a branch dealing with the philosophical study of nature according to purpose, direction, and goal, and the implementation of this approach into Astronist concepts, theories, philosophies, as well as other branches and disciplines within Astronist Philosophy.

[2:35:282] Textology - dealing with the study of the journey of a writer in the creation and production of a text, especially a philosophical text, but not always.

[2:35:283] Thanatology - dealing with the philosophical study of death, and the surrounding concepts and theories.

[2:35:284] Timology - dealing with the philosophical study of success and excellence in some specific area, and the surrounding concepts and related theories involved.

[2:35:285] Transitology - dealing with the study of the processes and occurrences involved during the transition from one political regime to another, or from one philosophical association to another.

[2:35:286] Universology - dealing with the philosophical study of the entity known as The Universe in Astronist Cosmology, as distinct from The Cosmos, and involves surrounding concepts and theories.

[2:35:287] Philosophical Anthropology - the study of philosophical institutions in relation to other institutions, and the comparison of philosophical beliefs and practices across cultures, countries, and regions of the world.

[2:35:288] Astrobiology - the discipline of philosophical contemplation dealing with life on planets other than The Earth.

[2:35:289] Astrogeology - the scientific ideas and theories forming the discipline of studying the geology of celestial bodies, and particularly the possibilities for human development and industrialisation.

[2:35:290] Characterology - the study of the representations, depictions and interpretations of Astronist characters and consists of Jesseology, Ellenology, Zarology, Olivology, Harrietology, and Phoenixology.

[2:35:291] Oneirology - dealing with the relationship between dreams and philosophical knowledge and experience, and how one impacts the other.

[2:35:292] Planetology - a major branch of study within Astronology dealing with the naming, classification, scientific study, and the overall study of planets in general from the systems devised in the The Astronist Astronomic, Cosmographic, Cosmological & Astrographic Methodology.

[2:35:293] Xenobiology - dealing with the study of the biologies of non-human sentient life on a planet other than The Earth.

Celestial Spheres, The Eyes Have It & Organic Unity

[2:36:1] This is a three-pronged discourse that covers three distinct, yet somewhat connected topics including the variations and renditions of celestial spheres and their significant utility within Astronist Cosmology.

[2:36:2] In addition to this, this discourse addresses the introduction of ocularism as a subphilosophy pertaining to the centrality and meaning of eyes to Astronist Cosmology, as well as the concept of The Cosmos in Organic Unity.

[2:36:3] Firstly we shall address celestial spheres, also known as celestial orbs, which are a type of cosmological model developed in ancient times and have thus been used throughout the history of philosophy and cosmological contemplation and interpretation.

[2:36:4] The Astronist Tradition does not promulgate any particular version of a celestial sphere within The Omnidoxy in order to leave the creation of celestial spheres open to interpretation and pure creativity.

[2:36:5] The Astronist philosophical tradition does herein introduce the discipline of study of spherology as a branch of logicology which is tasked with addressing the variations in celestial spheres, the symbolisms found on celestial spheres, and the plethora of interpretations directed towards celestial spheres.

[2:36:6] Despite the fact that the Astronist Tradition does not formulate the prototype of a celestial sphere within The Omnidoxy, partly due to the literary conventions of The Omnidoxy, it does still outline some aspects of celestial sphere creation that it does not support, or will not recognise as Astronist versions of celestial spheres once they are created.

[2:36:7] The first of these is the stipulation that all Astronist celestial spheres must at least include some representation of The Divine, The Universe, and The Cosmos as the three higher existences.

[2:36:8] The three lesser existences of The Chaos, The Mytra, and The Betwixity are not obligated to be added to a celestial sphere to make it classify as Astronist, but their addition does strengthen its case to become Astronist and it depends on the artistic style that the spherologist is approaching spherological creation with.

[2:36:9] This is because a minimalist approach would include as small amount of cosmological depiction as possible, therefore only including the three higher existences through obligation to do so, but an ostentationist would including both the three higher and lesser existences and more upon that due to their artistic style being characterised by the indulgence and abundance in depictions.

[2:36:10] Also, for every Astronist celestial sphere, a key must be provided as an obligation so that viewers can associate the symbols to the intended subject as the allocation of symbols is another aspect of spherological creation that remains open-ended by the Astronist Tradition.

[2:36:11] The third and final of the stipulations of the Astronist Tradition regarding spherological creation involves the avoidance of astrological symbols, the depiction of non-Astronist terms, as well as a general focus made on The Solar System itself rather than the wider galaxy or The Cosmos itself.

[2:36:12] This is due to the fact that the majority of pre-Astronist celestial spheres made their spheres focus on planets and phenomena of The Solar System due to their ignorance of the wider galaxy and The Cosmos beyond and due to the cosmocentricity running at the heart of that which is Astronist, it is prudent to focus on the creation of celestial spheres directed towards a depiction of The Cosmos beyond The Solar System, though depictions of the latter are of course not disallowed.

[2:36:13] Other than these three stipulations, the Astronist philosophical tradition holds no regulations regarding the creation of celestial spheres so as to allow for the element of open design, to encourage individual and unique inspirations, and to supplement enthusiasm.

[2:36:14] The Astronist Tradition maintains that celestial spheres can come in three different forms; by illustration, by hologram, or by rendition with the latter of these three obviously taking the greatest amount of time, money, and creativity to construct.

[2:36:15] Unlike the biblical cosmology within which the firmament is conceptually developed and given high regard, the Astronist Cosmology prioritises The Cosmos and therefore does not recognise the existence of the firmament, and neither does it recognise the firmament conceptually.

[2:36:16] The creation of celestial spheres can also be incorporated into an occurrological context by the creation of celestial spheres in the context of astrocrafts, as well as the exhibition of celestial spheres in museums.

[2:36:17] The Astronist Tradition opposes the utility of a celestial sphere as an astrological instrument and attempts to distance celestial spheres from their astrological roots, thus pertaining to the dissuasion of the depiction of astrological symbols and terms on Astronist celestial spheres.

[2:36:18] We must now move on to our second topics of discussion in this discourse which is the ocularism, which is the subphilosophy manifested as the belief that eyes demonstrate a direct connection to The Cosmos, The Universe, and The Divine by representing them in the structure of an eye.

[2:36:19] Ocularists provide a greater cosmical, universal, and divinical purpose to eyes in all of their forms no matter their colour, shape, pattern, and size.

[2:36:20] One of the central beliefs of ocularism is that variations in eyes demonstrate a different way of perceiving The Cosmos, as well as perceiving different cosmoses depending on the shapes, colours, and sizes of the sclera, the iris, and the pupil of the eye.

[2:36:21] This notion supports the idea of the unquity of cosmical perception for every person's or creature's eyes are unique in pattern, size, shape, and colour.

[2:36:22] The Astronist Tradition supports the hybrid of the term "the ayes have it" to mean "the eyes have it" which relates to the significance of eyes and their believed connections to The Divine, The Universe, and The Cosmos.

[2:36:23] The Astronist philosophical tradition maintains that we need only to look in the eyes of another, or ourselves to see the Astronist Cosmology for the sclera is The Divine for it is all-encompassing, yet its scale is unknown for its entirety is never fully visible.

[2:36:24] The iris is considered to be The Universe and the pupil is The Cosmos from the Astronist Cosmology as the former encapsulates the latter yet also displays a unique coloured pattern with an infinite depth that is visible to all whom look into the iris.

[2:36:25] The Cosmos is considered to be the pupil of eyes because the fact that the iris encompasses the pupil just as The Universe encapsulates The Cosmos, but it is the depth of blackness of the pupil that reflects the overall blackness of The Cosmos due to the extent of space and of voids and the relative minuteness of cosmical progeny and phenomena.

[2:36:26] In the Astronist Tradition, we see the metaphorical divinity in the sclera due to its connection to the vitreous which is not visible to us and those whom see us and demonstrates that although we can see a part of our eyes, there exists a much greater part that we shall never see, just as The Divine is perceived by both The Universe, The Cosmos, and everything reside within them.

[2:36:27] It is maintained that in the eyes of humans we see a cosmicality, a universality, and a divinity that we also see in the essences of cosmic progeny and phenomena.

[2:36:28] In the eyes of animals we see a different variation of how existence it to be perceived, but also a differently structured cosmology, but each continue to hold The Cosmos, The Universe, and The Divine centrally.

[2:36:29] When we speak of eyes in relation to cosmology, especially relating to different cosmologies, this should be henceforth referred to as optical cosmology.

[2:36:30] The Astronist Tradition supports the notion that "the eyes are the window to the soul" and takes this quotation as the literality for the eyes of all sentient and non-sentient

beings are considered to hold a divinity and spirituality that stretches far beyond all other corporeal elements.

[2:36:31] It is through our eyes that we perceive the world and so it resonates well that our eyes remain the elements of ourselves through which we can see The Cosmos for in them cosmicality resides.

[2:36:32] The third and final part of this assorted discourse relates to the concept that is to be henceforthly appellated as The Cosmos in Organic Unity.

[2:36:33] In its most essential sense, this concept refers to a composite, holistic and even monistic understanding of The Cosmos that affirms that The Cosmos exists as one organic whole produced as part of and within The Universe by The Divine, which in turn relates to the instrument of organicity, which measures the extent to which something can be considered animate, natural, and alive whether biologically or metaphorically, as well as organic cosmology.

[2:36:34] To state that The Cosmos exists in Organic Unity refers to the wholeness of The Cosmos encapsulated by its wholeness as well as its composite nature monistically governed.

[2:36:35] Organic cosmology pertains to the notion that The Cosmos is ultimately animate referring to the belief that it remains alive, though of course not biologically, but alive and certainly animate in a different way than perhaps humans and other biologically alive entities can understand for we are only capable of understanding our own animateness, though this will change through our explorations and contemplations of Cosmic Philosophy, for as a result of such study, we shall see the ways in which The Cosmos is animately functional, as is encapsulated in the inclusive discipline of compendology.

[2:36:36] Another important element of the appellation is that of unity which points to the fact that The Cosmos, despite its compositeness, does exist unified and does seem to be controlled or functioned from one emanating point, though pinpointing the origin of such a point remains difficult and shrouded in cosmical, universal, and divinical mystery.

[2:36:37] However, despite such enigmas about pinpointing the controlling or functioning element of The Cosmos, we are able to see such functions occur throughout The Cosmos which points to the notion that The Cosmos is monistically functioned and controlled from an external place; here, we begin to delve into intracosmology and ectocosmology.

[2:36:38] The former refers to The Cosmos controlled and functioned from within itself while the latter refers to all notions that The Cosmos is controlled and functioned from outside of itself and it is the nature of these cosmologies and their inclusions and exclusions of existences and entities such as The Universe, The Divine, The Chaos, and others that is of prominent contemplation for Astronists.

[2:36:39] From this single contemplation, we can understand the cosmocentricity of Astronist thought for The Cosmos remains central, affirmed, and solidified while the other realms, entities and existence that are perhaps centralised and solidified in other traditions must fit in around The Cosmos and the cosmology rather than the other way around whereby the cosmology remains subordinate to other elements of contemplation.

[2:36:40] It is by this very notion that we see the staunch difference in the way by which the Astronist philosophical tradition approaches contemplation, as well as the way by which the Astronist thought system prioritises the position and role of The Cosmos and cosmology before anything else; it is herein that we see the true essence of The Philosophy of Astronism, and wider Astronist Philosophy.

The Sophariums of the World (Naology)

[2:37:1] Naology is one of the most important and prominent disciplines of study within the context of Practical Astronism as it encompasses the contemplation of the architectural manifestations of The Philosophy of Astronism as structural representatives of the values, principles, and purposes of The Philosophy.

[2:37:2] Naology is technically the study of philosophical buildings outside of an Astronist philosophical context, but of course the naological discipline is only considered according to an Astronist context in relation to sophariums.

[2:37:3] Not only do naologists theoretically and philosophically study and contemplate the place, role, and nature of sophariums, but they also are responsible for the planning, construction, and management of sophariums as the practical element of the discipline.

[2:37:4] Naology is a major discipline of study because it encapsulates many subdisciplines and connecting to a range of other disciplines of study outside of naology as well as non-naological concepts.

[2:37:5] Many of the greatest traditions of thought, political movements, religious traditions, as well as any other substantial organisations have construct buildings to represent themselves to become part of the societies and communities in which they exist.

[2:37:6] For this reason, it does not remain a puzzle to consider why the Astronist philosophical tradition intends to construct its own buildings to represent itself for buildings are not just bricks and mortar as they remain cornerstones of society both physically as well as philosophically, culturally, religiously, governmentally, and in all other particular senses.

[2:37:7] The societies construct buildings to reflect their beliefs and expressions just as artists do create so do architects which is why naology is also considered to be an art by the Astronist Tradition.

[2:37:8] This discourse will cover some of the foundational aspects of naology, but this is only expected to remain the commencement of naological study for naologists are conjectured to expand upon the omnidoxical beginnings of the discipline.

[2:37:9] Therefore, the terms, concepts, philosophies, and orientations introduced within this discourse shall remain categorised as Omnidoxical Naology due to their origins remaining within The Omnidoxy itself while all that is introduced in relation to naology outside of The Omnidoxy is to be categorised as Post-omnidoxical Naology in order to define the two elements of naological study.

[2:37:10] One of the principle aspects of naological study is the arrangement and organisation of Astronist philosophical buildings which are fundamentally categorised as those which are either compartmented or non-compartmented.

[2:37:11] Compartmentation relates to the official registry of a sopharium as being situated in a particular geographical region, county, or province of a nation state by The Institution of The Philosophy of Astronism.

[2:37:12] Meanwhile, non-compartmentation relates to sophariums that are not officially registered as being situated in any particular geographical region, county, or province of a country, which will inevitably have implications and complications for the maintenance, upkeep, and recognition of planetariums designated as non-compartmented.

[2:37:13] We shall now make a list and explain the operations and potential functions of sophariums in a general sense known as elementations which are variant depending on the size, location, and extent of funding providing to the sopharium in question, most of which are in relation to the commercialisation of sophariums.

[2:37:14] The belief orientation of non-commercialism must herein be introduced for the followers of which, known as non-commercialists, believe that no sophariums should be used for commercial purposes, that they should only be registered as charities, and that they should not charge entry fees, or fees for events and should largely rely on donations.

[2:37:15] For this reason, non-commercialists do not believe sophariums should feature gift shops or hold events in which visitors need to pay to entry for example as these such operations are considered to include sophariums as tourist attractions rather than philosophical landmarks.

[2:37:16] Essentially, non-commercialists believe that the commercialisation of sophariums is an exploitation of the true purpose of sophariums, however, non-commercialism is not expected to be widely adopted due to the realistic barriers of funding in the way of its complete implementation.

[2:37:17] There exists a strong aspect of occurrological study within the discipline of naology as the two remain inevitably connected to one another due to the nature of the two topics they address.

[2:37:18] Within occurrology, there are those elements of a sopharium that are known as elementations which encompass all of the operations of the sopharium, both commercially and non-commercially.

[2:37:19] Events at sophariums are categorised as either astrovents or philovents, the former of which are astronomically related events while the latter are philosophically related events, each of which holding equal popularity and significance.

[2:37:20] The main astrovental events of sophariums include stargazing sessions, nocturations which are all night stargazing, and astropods which are individual pods inside which people are able to sit to learning about astronomy and The Cosmos on interactive screens.

[2:37:21] The main philovental events of sophariums include debatations which are philosophical debates, group philosophisations that are known as congreteries which entail groups of people contemplating together and sharing their ideas, as well as philopods which are pods similar to astropods, but instead the person sat inside them can learn about philosophy, or can practice individual philosophisations.

[2:37:22] Starlight festivals are one of the largest events that sophariums may hold and it is these that are expected to draw the greatest amounts of visitors in one evening and vary greatly size depending upon the level of funding they have received.

[2:37:23] Sophariums are poised to offer a wide range of visitational activities according to the level of commerciality that the sopharium leader(s) wish to associate with their particular sopharium including gift shops, restaurants, exhibitions/museums, tours known as visitations, and allowing the hiring out of the sopharium for festivities like private parties, or non-sopharial events.

[2:37:24] The vast majority of sophariums feature planetariums within them thus forming one of the central components and attractions of a sopharium while some sophariums other feature those which are known stardecks which are observation decks specific angled for the best stargazing observations.

[2:37:25] Another important part of visiting a sopharium is that which is collectivised as promenation, conductors of which are known as promenators, and to promenise involves walking in and around the sopharium.

[2:37:26] Sophariums may also be used as filming locations or they may feature hotels or accommodations within them, or attached to them known as abodations.

[2:37:27] It is important to make sophariums hubs of education suitable for both adults and children and an example of the orientation of sophariums towards children is the promotion of astrocrafting activities.

[2:37:28] The most regular of all events are those which are known as sempitions which are observations of the sky conducted nightly using indoor and outdoor telescopes therefore sempitive activities which are typically more scientific than purely philosophical are important elements of sopharial activity.

[2:37:29] Orreration encompasses all the activities involved in the study, crafting, interactivity, and exhibition of orreries for a range of different ornamented orreries which are expected to take up a large sector in the events and activities in sophariums.

[2:37:30] Lectures in sophariums are to be henceforth known as astrologues which are to be conducted on a regular weekly basis as well as holograms displays which are to remain another important element in the activities and events of a sopharium as part of the higher education aspect of an Astronist philosophical building.

[2:37:31] Holographic shows are expected to be important elements to sophariums due to their multipurpose functions of education, philosophisation, and cosmic devotion; holographers are expected to be expected to lead such shows as part of the general eventation schedule of the sopharium.

[2:37:32] There is a category of elementations within occurrology and naology that are described as nyctogenous which are classified as happening at nighttime as opposed to in the daytime, the events of which are henceforth known as diurgenous activities.

[2:37:33] There are some related terms to nyctogenous and diurgenous starting with diurgeny which is the practice of philosophical or astronomical activities during the daytime while nyctogeny refers to these same practices, but conducted at nighttime.

[2:37:34] In a similar fashion, the qualities of diurgeneity and nyctogeneity relate to the better suitability of an event or practice to the day or to the night respectively while that which is described as nyctohemeral is an event or practice that occurs both in the day and the night.

[2:37:35] A nyctogenous sopharium is a sopharium that only opens during nighttime hours while a diurgenous sopharium is a sopharium that is only open during daylight hours.

[2:37:36] There exists a plethora of terms within naology some of which we shall introduce here and it is these that will also be entered into the original edition of *The Grand Lexicon of Astronomy*.

[2:37:37] That which is domanial relates to the entirety of the estate of an Astronist philosophical building, including all the businesses, properties, and organisations that it privately owns or holds jurisdiction over.

[2:37:38] The extent of a sopharium's domaniality is a reflection of its sophian's wealth, its amount of funding it has received and the level of influence The Philosophy of Astronism holds in the country, or the particular region in which the sopharium is situated.

[2:37:39] In certain naological polities, which are lattermentioned in this disquisition, a sopharium that holds the greatest domaniality is most likely to be the sopharium that holds the greatest leverage and power amongst those in its perimasy.

[2:37:40] The domaniality of a sopharium includes not only the sopharium itself, but all the non-philosophical buildings, businesses, and organisations under its jurisdiction therefore

domaniality is considered to be the greatest example of the commercialisation of sophariums as well as also being more closely tied to corruption in naological management.

[2:37:41] That which is known as encadrement is naology refers to the often lengthy process of choosing the site for an Astronist philosophical building to be built, and getting approval for this from the authorities that hold jurisdiction over that area.

[2:37:42] Encadrating, as it is alternatively known, is one of the most important elements of naological study and practice as the location of a sopharium is tantamount to its success or its failure in achieving its purpose.

[2:37:43] Encadrating is a process that is considered to be testing for any naologist as it involves many elements; being able to work with governmental bodies, holding a good knowledge of the area and its people, as well as managing the funds to realise the sopharium in addition to actually architecting the sopharium itself.

[2:37:44] The encadrating process therefore is one of immense labour as it may take naologists months or even years to pass just one sopharium in an area through building regulations and to gain funding for that particular sopharium.

[2:37:45] It is by the introduction of this process that we truly see the multi-disciplinarity of naologists and the fact that their knowledge and experience must expand to such distances that the mastery of naology as a whole discipline is expected to be reserved for the few rather than gifted to the many.

[2:37:46] On a different note, the term that is known as ensoleillement relates to the period of time consisting of the hours of sunshine cast over an Astronist philosophical building rather than the moonlight hours which are known as nuitamment.

[2:37:47] Ensoleillement, of course being a French originating term as many terms are in Astronist Terminology, is henceforth considered to be a time of rest, practicality, business, and debate.

[2:37:48] Alternatively, however, the hours of nuitamment are considered to be a time of wonderment, reflection, deep emotion, philosophisation, and education for the night, especially a night without cloudcover, is considered to hold and be reserved for superiority, reveration, and almost sacredness to the Astronist Tradition; this differentiation and its belief is to be henceforth known as nyctogenism.

[2:37:49] On the other hand, the daytime is considered to be for the inferiorities including the trivialities of society, commerce, money, business, gossip, frenzy, and all that is associated with noise and practicality and human interaction while the nighttime is reserved for individuality, spirituality, cosmic interaction, philosophy, devotions and personal reflections; essentially, the nighttime is superiorised over that of the daytime in

Astronist Philosophy as is to be expected, yet the daytime is still considered to hold an important role.

[2:37:50] To quickly digress, that which is known as nyctotyphlosis relates to the medical ailment of be blind or partially sight at night; this is metaphorically understood by the Astronist Tradition as the non-Astronist peoples of the world being blind from the beauties, wonderments, and beneficial practices of take notice of, philosophising over, and devoting towards The Cosmos; nyctotyphlosis is considered to be the single greatest problem with the non-Astronist world that the Astronist Worldview positions itself to be the resolver of this problem.

[2:37:51] Moving back to a purely naological context, that which is known as deracination is the process of moving a sophian from one sopharium to another by the authority of The Institution of The Philosophy of Astronism

[2:37:52] Deracinative actions are officially conducted by The Institution in order to shift one sophian from another with relatively rapid succession for the purposes of personal career development for the sophian who wishes to increase their level of responsibility for a larger sopharium, or may be for the reason that The Institution believes that the particular sophian in question would best suit to manage another particular sopharium due to their specific experiences and knowledge in dealing with the issues of that sopharium.

[2:37:53] That which is known as événement is a collective term that relates to all the special events taking place an Astronist philosophical building, particularly the annual or biyearly events such as the Starlight Festivals or an event that does not regularly occur in order to differentiate these events from those of regular occurrence though all sopharial events are given the gift of celestialism.

[2:37:54] Celestialism is the conceptual gift that is given to all events taking place in sophariums recognised, autonomised, or under the jurisdiction of The Institution and provides each of these events with a sense of importance, duty, purpose, and benefit.

[2:37:55] Garniture collectively relates to the interiors and furnishings of Astronist philosophical buildings and the architectural features and renditions on display in such sophariums as a reflection of that particular sopharium's belief orientations.

[2:37:56] Garniture is an important aspect to the aesthetics of sophariums which is a philosophical branch of study applied to sophariums in addition to other studies regarding the nature of Astronist philosophical buildings which also includes the branches of philosophy of epistemology, and axiology, as well as the subdiscipline of naology known as metanaology.

[2:37:57] Metanaology is concerned with the nature of the discipline of naology itself and explores how the subject can be applied, how it can be utilised for betterment and progression, as well as how it interacts with other disciplines of study such as occurrology.

[2:37:58] That which is known as gérance in the context of naology refers to the management faculty of an Astronist philosophical building, especially one that is considered a major landmark of a town, or city as so has a larger faculty than smaller and more rural sophariums.

[2:37:59] A gestion, in differentiation from a gérance, relate to the management faculty of a smaller Astronist philosophical building, typically one in a rural area, or one that remains in an urban area, but does not have an extension hierarchy of staff.

[2:37:60] A grand-place is a subtype of Astronist philosophical building that refers to a sopharium that is located on the main square of a city, or the town square rather than existing a sopharium type itself which it does not, hence the usage of the term subtype.

[2:37:61] Hébergement refers to all areas of accommodation available on the estates of Astronist philosophical buildings, or that are owned by Astronist philosophical buildings.

[2:37:62] Imploration is the official procedure of when the faculty of an Astronist philosophical building must ask a grandee to release funds for a specific purpose which remains essential to the financial functioning of sophariums with polities that rely upon Institutional funds, or those which are run by grandees.

[2:37:63] There remains two more distinctions of character to make about Astronist philosophical buildings which uses the terms of lucrated and nonerated.

[2:37:64] A lucrated sopharium is one that funds itself according to an enterprise that is created inside, on its grounds, or as focusing on it as a destination, and is therefore not purely a building, or site used for philosophical purposes.

[2:37:65] Alternatively, a nonerated sopharium is an Astronist philosophical building that funds itself purely from donations, government-funded grants, or from money provided by The Institution of The Philosophy of Astronism itself, and is therefore a building and site used for philosophical purposes only, rather than a lucrated building, which also has an enterprise branch to its operations in order to fund itself.

[2:37:66] Lucration involves the process of developing a nonerated Astronist philosophical building into a lucrated one, which involves developing the building as both a business or destination as well as a place of philosophical significance and utility.

[2:37:67] Oppositely, noneration is the process of developing a lucrated Astronist philosophical building into a nonerated one, which involves the removal of all commercial

branches of the building and its administration in order to make it a building and place of philosophical significance and utility only, rather for any business purpose.

[2:37:68] A rarer type of Astronist philosophical building is that which is to be known as a natatery is kind a swimming center, or room in which swimming facilities can be found, which are paired with Astrational practices, especially when within a larger Astronist building, or complex, or one that is sponsored by The Institution of The Philosophy of Astronism, or one of its subsidiaries.

[2:37:69] As aforeintroduced, the term of nuitamment refers the period of time consisting of the hours of moonlight cast over an Astronist philosophical building; this term's difference between nocturment is that nocturment relates to the hours of night rather than specifically the hours/periods of physical moonlight cast upon a sopharium.

[2:37:70] It remains important to make such distinctions between terms for if we do not then we risk the interpretation of such similarities in terminology to be conflated with each other, thus resulting in the disuse of terms for their proper meanings and therefore their correct applications have been lost to such confluations.

[2:37:71] Passation is an important term particularly in the context of naological scheduling, location, and management as it pertains to all types of signage found in and around an Astronist philosophical building as well as how they are positioned and funded which remain crucial to aspects of sopharial visitation.

[2:37:72] Though it may seem basic considering the extent of the naological study we have already transversed, we must address the descriptions and differences between the main types of sophariums.

[2:37:73] The most prominent of all Astronist philosophical books are to be the eidouraniums with their soaring towers piercing the night sky offering views unlike any other building and holding purpose greater than any other building too, this type of sopharium is the largest by size in height, capacity in visitors, and in their rarity too for they are to only be found in the largest cities in the world and in no other place shall they be find.

[2:37:74] A grand observatory holds the penultimate place in the Naological Hierarchy, which itself is the appellated system for the categorisation of different kinds of sophariums according to their sizes, capacities, purposes, rarities, and functionalities.

[2:37:75] The grand observatories of the world sit conformably in second position in this hierarchy of sophariums for they are rare, but not to the level of eidouraniums, and although their capacities may rival that of eidouraniums, they do not hold the same extent of significance that eidouraniums do hold and for this reason they remain subordinate.

[2:37:76] However, they do exist as the superior extension of the general observatory which is more commonly found in most of the cities and even some of the towns of the world with the essential difference between a grand and a general observatory being the greater size, capacity, rarity, and functionalities of the former in comparison to the latter.

[2:37:77] The most common of all sophariums are planetariums do range greatly in their sizes, capacities, functionalities, and specific purposes, yet remain solidified by the architectural centrality of the planetarium rather than any other feature.

[2:37:78] Despite the eidouraniums and the observatories being the demonstrators of the mightiness of The Philosophy of Astronism, it is the planetariums that reach the mass of people in the world and it is the planetariums that are most numerous thus pertaining to the great amount of influence they maintain despite their individually lesser size.

[2:37:79] Promontories are another important category of sophariums which hold a unique purpose separate from all the others which is the scientific research aspects of astronomy while the philosophical aspects of astronomy, which all other sopharium types prioritises, remains in a secondary position.

[2:37:80] Promontories resemble non-Astronist, or scientific observatories in their appearances and location with less ornamentation than their other sopharial counterparts, and are typically found in high and remote places often far from the immediate accessibility of visitors while all other sophariums are poised to welcome and be directly accessible to visitors so by only this short outline, we can instantly see the greatest amount of difference between promontories and all other sopharium types with the main driving force of such differences between the divergence in purpose.

[2:37:81] Starhouses, pelleniums, and riverhouses may be described as structures rather than actual buildings, yet they still remain classified as sophariums and places of philosophy and hold positions in the Naological Hierarchy respective to their mentions in this insentensation.

[2:37:82] Starhouses are essentially sophariums constructed beside the coast and may be converted lighthouses whilst still functioning as lighthouses in addition to their philosophical and astronomical purposes.

[2:37:83] Pelleniums are certainly an outdoor structure rather than a building in their own right and resemble a type of cosmically ornamented pavilion with a great variation in size and location.

[2:37:84] Finally, riverhouses are a unique sopharium due to their location on, beside, or overlooking ponds, lakes, rivers, or reservoirs and consist of greenhouse-like appearance with cosmic ornamentation.

[2:37:85] Each of these buildings and structures mentioned are to be collectively known either as Astronist philosophical buildings, sophariums, or as places of philosophy.

[2:37:86] Finally, those which are known as astrotries and telescopetries can be described as places of philosophy, but are not to be described as Astronist philosophical buildings or sophariums for they are not always buildings themselves, yet they are more often rooms or small outdoor structures instead.

[2:37:87] The proper designation of astrotries and telescopetries remains a topic of debate but for the sake of this discourse, we shall continue with the notion that they are multidisciplinary by their natures for they may reside within naology or Astronist Rendition.

[2:37:88] The essential reason for their distinction from actual sophariums is that they are more than often created by lay peoples rather than by a sophian, or The Institution itself as a room in a person's private residence can be dedicated to the functionality of an astrotry or a telescopetry.

[2:37:89] Further to this, they may also be designated within sophariums as rooms, or they may be built as separate buildings as an appendage to the main sopharium therefore these two places of philosophy remain of vast dispensation for their usages and convenience in construction remain vast in parallel with orreriums also serving a similar issue of categorisation and it is these that are provided with the lowest position in the Naological Hierarchy.

[2:37:90] The study of the categorisation of Astronist philosophical buildings is based upon Classification which takes into account the factors that we have touched upon in this discourse for deciding how a type of sopharium should be placed in the Naological Hierarchy.

[2:37:91] Patronship refers to a way in which visitors can interact with a sopharium and is a tactic of philosophical marketing that involves a person giving financial aid to an Astronist philosophical building as part of a scheme of patronship, similar to that of a friendship scheme so that they needn't pay for entry to special events and other perks and it is something to which the non-commercialists are opposed.

[2:37:92] The Astronist Tradition expects these types of marketing and visitational tactics to greatly expand in simultaneity to the strength in the commerciality of sophariums and to decline if non-commercialism dominates.

[2:37:93] That which is described as preservational relates to the collection of activities involved in the preservation of an Astronist philosophical building both architecturally, philosophically, financially, as well as practically in the case of gardening, repairing faults, and other general maintenances that buildings require; the belief orientation of

preservationalism emphasises this aspect of naological management and considers it to be more important than any other aspect of a sopharial function.

[2:37:94] Furthermore, preservationalists hold the view that a sopharium's essential role is to be preserved for what it is; an architectural, renditional, and philosophical masterpiece whose purpose is to stand proudly and to be looked upon and preserved for this reason alone rather than serve any other educational or commercial functions.

[2:37:95] A term that exists within both Astronist Architecture and naology, that which is known as the feeling of sanctimonia which refers to the instance in which one may experience when they stand inside or outside an Astronist philosophical building, and consists of a distinct feeling of gravity towards one's marvel of the building and a deep respect and reverence for the building as an important philosophical centrality.

[2:37:96] Return to an occurrological term by its nature, that which is henceforth known as a starparty a type of event that consists of an organised gathering of either amateur, or professional astronomers, cosmologists, or astrophotographers for the purpose of observing the night sky, and can range in length from just one evening, or up to a work, or even longer, and are usually planned, and managed by sophians of the Astronist planetarium building used as the venue.

[2:37:97] Starparties are expected to be one of the most regular activities to be held at sophariums for they exist as casual stargazing sessions whereby people can also socialise, drink, and eat whilst the event is occurring which does reduce the philosophical intensity of the event, but this softening is expected to be more appealing to dilettants and their families.

[2:37:98] A term that pervades both occurrology, naology, and Astronist Architecture is that of a starroof which is to be known as this from here on in as it is a flat platform built into the roof of someone's private home that is used as an area for private stargazing, starbathing, and starsleeping.

[2:37:99] There is an important aspect of naological contemplation that remains to be addressed and introduced so we shall dedicate the next several insentensations to it; of what I reference are the Naological Appellations as they are collectively appellated.

[2:37:100] These are a collection of ten largely ceremonious, philosophical, and metaphorical names attributed to each of the ten classifications of places of philosophy according to the Astronist Tradition.

[2:37:101] The first of these is the appellation of The Grand Centrality which relates to the classification of eidouraniums and like the document after which the appellation is named, eidouraniums stand as the centralmost, prominentmost, and largest of all Astronist philosophical building types and therefore they are granted with the same appellation as that of the central document of The Philosophy of Astronism.

[2:37:102] The second of these is the appellation of The Grand Seeker which relates to the classification of observatories, both grand and general in this context as they collectivised, and they appellated as this because of their constant penchant to seek knowledge and visuality of the stars as part of The Cosmos, and it is through this motivation of the seeker that humanity and all other sentient species are expected to ignite their own philosophisations and devotions to The Cosmos according to the Astronist Tradition.

[2:37:103] The third of these is the appellation of The Grand Disseminator which relates to the classification of planetariums because this sopharium type are to be spread throughout the entire world and beyond in greatest of abundance possible; their rarity may be non-existence, but the planetariums are the greatest spreaders of The Philosophy.

[2:37:104] The fourth of these is the appellation of The Grand Eye which relates to the classification of promontories because this sopharium type is designated for the purposes of research and therefore, this sopharium type is looking towards The Cosmos and it is the eye through which we are able to see the beauties of space.

[2:37:105] The fifth of these is the appellation of The Grand Illuminator which relates to the classification of starhouses because this sopharium type holds the ability to light up the coastlines and provide astronomical and philosophical services to the population.

[2:37:106] The Grand Framer is the sixth appellation as part of the ten Naological Appellations and refers to the classification of pelleniums because this sopharium type is used as an outdoor structure for socialising as well as philosophical and astronomical practices.

[2:37:107] The seventh of the Naological Appellations is that which is known as The Grand Gatekeeper which refers to the classification of riverhouses because this sopharium type is positioned beside and even on water as the protector and illuminator of the element.

[2:37:108] Eighth in line of the Naological Appellations is that which is to be known as The Grand Enknower which refers to the classification of astrotries because astrotries are primarily responsible for the teaching of the masses about astronomy, especially so when astrotries are placed inside one's home.

[2:37:109] The ninth of these is the appellation of The Grand Revelator which refers to the classification of telescopetries because these are used for both public and private observations and for this reason, telescopetries are revelational in astronomical and philosophical contexts for the ideas they create.

[2:37:110] Finally, the tenth and final of the Naological Appellation is that which is to be known as The Grand Invigorator which encompasses the classification of orreriums because they are used for the invigoration of a person's belief and knowledge in The Cosmos.

[2:37:111] Another appellation that may be used for refer to an Astronist philosophical building is “The People’s” which is used as a means to emphasise the freedoms of belief, knowledge, community, spirituality, and opinion that should always be upheld for those whom enter, or interact with a sopharium and this is the reason why most planetariums are known as The People’s Planetarium.

[2:37:112] The instance of vexillation relates to when an Astronist philosophical building featuring a flag, typically either the flag of The People’s Constitutional Company of Jesse Millette, or/and the flag of the nation in which the building resides.

[2:37:113] Vexillatory practices in relation to a sopharium make a greater proximation to nationalism and patriotism to a nation or a multitude of nations as well as a greater consociation with The People’s Constitutional Company of Jesse Millette.

[2:37:114] In the context of naology and Astronist Architecture, an ablutory is a room within an Astronist building of any sort that is used for washing and toilet facilities; such ablutories are typically cosmically themed.

[2:37:115] That which is to be known as an active planetarium is a subtype of planetarium that is in full and regular usage due to its central location, and the extent of funds which it receives in order to continue its operations, and is in direct contrast with a dormant planetarium which is not in as central a location and therefore, it does not receive as much funding.

[2:37:116] There are many subdisciplines within naology which relate to each of the different sopharial types including eidology, observatology, astropharology, planetarology, and promontology.

[2:37:117] Eidology studies eidouraniums; observatology studies grand observatories and general observatories; astropharology studies starhouses; planetarology studies planetariums; and promontology studies promontories.

[2:37:118] The final subdiscipline of turology relates a wider study including all the subsophariums of pelleniums, riverhouses, astrotries, telescopetries, and orreriums.

[2:37:119] It now remains important to distinguish the omnimentioned term of sopharium throughout this and other discourses as part of disquisition, as well as in others as writing of The Omnidoxy has progressed.

[2:37:120] Essentially, a sopharium is a collective term that makes refers to any type of Astronist philosophical building or place of philosophy without referring to any type in particular, thus it can be used as an alternative term and it is expected by the Astronist Tradition that its usage will only rise due to its colloquial nature.

[2:37:121] There are other subtypes of sophariums that we should also address including those which are known as commercial sophariums which, by the appellation, are clearly supported by the belief orientation and subpolity of commercialism and tend to feature many commercial features such as shops, restaurants, and other commercialities.

[2:37:122] Another subtype of a sopharium is a cafe sopharium in which a cafe is adjoined to an Astronist philosophical building for the purposes of self-funding the sopharium under a commercialist approach.

[2:37:123] We also further categorise sophariums according to the extent of the visitors numbers, the largest of which is known as a megasopharium which must have over thirty thousand weekly visitors.

[2:37:124] A major sopharium must have between ten thousand and thirty thousand weekly visitors; a medianic sopharium must have between one thousand and ten thousand weekly visitors; finally, a minor sopharium is categorised as having one thousand or less weekly visitors.

[2:37:125] In addition to these appellations regarding weekly visitor numbers, we also have a group of familial appellations that are applied in particular circumstances.

[2:37:126] That which is to be known as a father sopharium is a sopharium that is responsible for the funding of a smaller sopharium in addition to itself, typically one that is owned or managed by the same sophian.

[2:37:127] That which is to be known as a mother sopharium is a sopharium that in some naological polities holds the authority to jurisdisce over other sophariums within a compartment in a rotational procedure.

[2:37:128] Meanwhile a sister sopharium and a brother sopharium relates to a sopharium that is in clear association with another sopharium within close proximity to itself, but is typically not owned or managed by the same sophian while it is instead associated with the other sopharium in a philosophical sense rather than a jurisdictional or financial sense.

[2:37:129] Furthermore, a cousin sopharium is a sopharium that is close in physical proximity to another sopharium, but does not share any other similarities in philosophical orientation, polity, beliefs about commercialism and non-commercialism, and so on; essentially, a sopharium that is close by proximity, but in every other sense or in many other senses is greatly distanced from its cousin.

[2:37:130] Lastly, a national sopharium is a sopharium that is designated to be closely associated with the government of a the country in which it resides rather than with its sophian, The Institution itself, or another organisation; essentially, the loyalty of a national sopharium is with the state and its policies and actions above all other influencing parties.

[2:37:131] We now come to our final three terms to be addressed in this discourse on naology with the first of these being that which is henceforth known as a phrontisopharium which is a sopharium or place of philosophy that is built within, is adjoined to, or is directly funded by a phrontistery.

[2:37:132] Additionally, a phrontisopharium is owned and managed by the phrontistery so often, whatever the belief orientations and polities of the phrontistery are, that is greatly influential over the polities and belief orientations of the sopharium it manages; in the case of a phrontisopharium, the leader of the phrontistery is often also the sophian of the phrontisopharium.

[2:37:133] That which is known as sopharium reach relates to the extent to which a particular sopharium interacts and influences the populations surrounding its location with the reach of a sopharium being greatly impacted by its level of funding, the size of the surrounding population, the density of sophariums within the region, and its ability to host events that draw the community to it.

[2:37:134] Finally, that which is designated as a reassigned sopharium relates to a building that been converted into a sopharium from being a non-philosophical building.

[2:37:135] From the extent of terminology that has been outlined in this single discourse, it is clear to understand that discipline of naology and the extent of its discipline to pervade many other areas of contemplation and practice is of great vastness.

[2:37:136] For this reason, embarking on the journey to become a naologist is considered to be a career of difficulty because of the vastness of knowledge one must hold in order to be a successful naologist.

[2:37:137] As aforeaffirmed, one of the most important elements of a civilisation is the building that are erected within it; without such buildings, a civilisation would certainly lose the extent of its ability to characterise and define itself from other societies.

[2:37:138] For this reason, the discipline of naology is considered to be one that is in need of development from its beginnings within The Omnidoxy for the Astronist Tradition intends to construct buildings in the name of Astronism and all its denominations and school of thought that truly do reflect the beauty and essence of its message.

The Physical Manifestations of Astronism

(Practical Astronism)

[2:38:1] By its very core nature, philosophy is abstract, but the Astronist Tradition, from the study and contemplation of other philosophies and religious traditions, has understood the importance of their manifestations.

[2:38:2] This importance is realised in the dissemination of a way of thinking, the physical manifestations of which must reflect the concepts and principles of the philosophy.

[2:38:3] Further, the physical manifestations are central to the mass comprehension of the philosophy; the concepts of a philosophy form its basis, but it is the physical manifestations of the philosophy that the mass of peoples see foremostly.

[2:38:4] For this reason, an entire discourse of The Omnidoxy as part of logicology is dedicated to that which is known as Practical Astronism, categorised as a Level of Astronism, and is therefore not a discipline of study in and of itself, but instead encompasses many different disciplines of study.

[2:38:5] Despite other disciplines holding their own discourses and being introduced in other places within The Omnidoxy, such as naology and occurrology, their true place remains within Practical Astronism.

[2:38:6] It is postulated herein that Practical Astronism is just as important as Abstract Astronism for the physical manifestations of The Philosophy of Astronism are the demonstrators of the concepts of The Philosophy.

[2:38:7] To make a definitional notion, Practical Astronism is encapsulated by the actions as directed by thought, the objects created as motivated by philosophesis, the buildings constructed as determined by belief, and the activities attended by the notions of enknowledge and devotion.

[2:38:8] Naology and occurrology, and to some extent Astronist Architecture and Rendition depending upon one's definition of Practical Astronism and the extent to which it encompasses, are the prominentmost of all the disciplines of study within Practical Astronism.

[2:38:9] However, the first discipline of study that we are to address is cyporeology which concerns itself with the concepts, theories, philosophies, schools of thought, and notions that individuals decide to believe.

[2:38:10] Cyporeological study deals with the reasons for one's belief, the reasons for the popularity of such orientational decisions and is a study that is typically working

according to an individual basis, rather than relating to the orientations of a group; cyporeological study deals with the individual therefore rather than with the group.

[2:38:11] Oppositely, hyporeological study deals with the study of the philosophical and belief orientations of a group rather than an individual; hyporeological study holds the tendency to over simplify the beliefs of population, as is identified by the branch of study known as philosophical demography.

[2:38:12] Cyporeality is to hold an understanding of the world by individuality rather than by grouping; furthererso, cyporealism is the belief that philosophicality should be measured only by individual means rather than by grouping portions of the population together under one banner.

[2:38:13] Cyporealism, despite its alignment with the Philosophical Spirit, also delineates from the subject of philosophical demography which the Astronist Tradition fully embraces; however, the Astronist Tradition also understands the value in cyporealism, and therefore measures both individual philosophicality and group philosophicality.

[2:38:14] The prefix of cypto- first introduced herein relates to that which is individual while the pre-Astronist prefix of hypo- relates to that which is grouped together, or is measured by group rather than by individual.

[2:38:15] Cyporeal approaches to philosophisation understand all concepts according to individuality, or understand concepts, or another subject individually; cyporeal approaches are also characterised by the notion that all concepts eventually return to, or relate to individuality.

[2:38:16] Now we move our thoughts towards the term of Cultural Astronist, or a Cultural Astronist, which relates to a person whom identifies with The Philosophy of Astronism but does not actively engage in any of its practices, and neither do they actively study the philosophy.

[2:38:17] Cultural Astronists or Astronists are expected to form the majority of the population of those whom identify with The Philosophy of Astronism simply due to studying the populations of other adherences around the world.

[2:38:18] Differently, a lapsed Astronist relates to a person that no longer follows the principles and practices of The Philosophy of Astronism, or no longer identifies oneself with The Philosophy of Astronism.

[2:38:19] Unlike its categorisation as a sin in religious traditions known as apostasy, in philosophical traditions, particularly within the Astronist philosophical tradition, apostasy does not exist due to its disalignment with the Philosophical Spirit.

[2:38:20] To lapse from The Philosophy of Astronism holds no contempt from the point of view of The Philosophy for change one's decision, orientations, and identity is the penchant of being human; the ability of one to do so is actually praised by the Astronist Tradition for the essence of philosophicality is to pose questions and change one's decisions of belief.

[2:38:21] The Astronist Tradition detests the notion and instance in which one is persecuted for leaving their philosophical or religious orientation; only disdain is projected from the Astronist Tradition towards such instances.

[2:38:22] One of the main areas for Practical Astronism to address is the distribution and dissemination of The Philosophy of Astronism in all the possible formats and platforms, one of the most prominent of which is known as colportage.

[2:38:23] To colport is to distribute Astronist philosophical books across multiple platforms and across different countries and regions, especially as a job for which one is employed, the primarily book of distribution being the one in which colportage is first outlined: The Omnidoxy.

[2:38:24] Colporting is characterised by both digital and physical distribution of Astronist philosophical books to a wide range of audiences and for different purposes, including versions for children, adults, those of a particular religious faith, or those living in particular regions and countries of the world; essentially, from this we can derive that due to the current globalisation of the world that the job of a colporter, or colportress is in fact to be considered a profession, and it is so when considered under the auspices of the Astronist philosophical tradition.

[2:38:25] An institution for colportage activities is herein introduced and shall be henceforth established under the name of the Astronic Colportage Foundation which is the one and only Astronic philosophical book distribution company subsidised by The Institution of The Philosophy of Astronism, although it is expected that other such companies not directly subsidised by The Institution shall also come into existence which is equally so encouraged.

[2:38:26] Colporters and colportresses must not, however, be confused with those people described as missionaries, pioneers, or evangelists for the role of a colporter/colportress is not to speak in in-depth terms about The Philosophy of Astronism when in their colportage role, but it is instead simplified to just the distribution of the work to the individual purchasing it.

[2:38:27] The role of the discussion of Astronist Philosophy is instead left to philosophers, between other people such as family, colleagues, or friends, or during philosophical debates, but colportage in the Astronist context is instead purely of a distributional nature with the removal of all debatory or conversational methods, especially for those employed by the Astronic Colportage Foundation itself in order to distance colporters and

colportresses from receiving the stereotypes of evangelists and missionaries for their roles differ in a distinct way that has been outlined herein.

[2:38:28] That which is known as the concept of the New Earth, the New World, or the New Cosmos belongs within Practical Astronism due to its importance in its application to the physical world and the realities of human lives and the future of humanity in a wider sense.

[2:38:29] The New Earth/New World/New Cosmos concept is embodied by the notion that humanity's renewed understand of The Cosmos shall form a New Earth/New World/ New Cosmos entirely; the formation of the New Earth/New World/New Cosmos is based upon abstract notions, but it relates to something very important in the real world of how human civilisation functions.

[2:38:30] It represents a change of the entirety of humanity's perception of themselves and lays at the heart of the Astronist philosophical tradition's goals in changing the perception of humanity's position within The Cosmos.

[2:38:31] The New Earth Experience concept is especially prevalent in relation to the instance in which an astronaut or some other form of spacefarers leaves The Earth for the first time and looks back to gaze upon The Earth which is expected to provide them with an entirely different perception of themselves personally, humanity as a whole, and the entire Earth within the grandity of The Cosmos.

[2:38:32] In the context of Practical Astronism, that which is henceforth known as salutationism relates to the way in which one is to greet others in an Astronist philosophical building, or is to greet another Astronistally identifiable person.

[2:38:33] Salutationism is appellated as such due to its orientation as a method of greeting, but the uniqueness of salutationism is that it remains rare in its openness; the Astronist Tradition does not establish greeting practices and therefore salutationism is expected to be developed both others individually, but also by organised groups whom share beliefs in greeting practices, known as salutationists.

[2:38:34] Approaches to salutationism shall demonstrate one's awareness of whom they are greeting, the image they intend to portray of themselves, and the extent of the respect, admiration, or understanding they feel for the person before them.

[2:38:35] Salutationism therefore stands as a rarity in the wider Astronist philosophical tradition as its rests on individual interpretation and non-omnidoxical methodology in the construction of different salutations.

[2:38:36] We now must press ahead and concern ourselves with the concept that is known and appellated as Cosmic Supernaturality which relates to the notion that there exists

entities in The Cosmos that are beyond the physical laws of nature, such as the oblivions of The Cosmos.

[2:38:37] This designation of entities is known as Real Supernaturalism, or Cosmic Supernaturalism, and includes all notions of supernatural entities in The Cosmos, but may also include The Cosmos itself as a supernatural entities, but this is notably not supported by the Astronist Tradition, however, it is important to note that the discussion of the supernatural can exist within philosophical contexts.

[2:38:38] It must be herein affirmed that such which is supernatural is only designated so by the perception of the human mind rather than by the naturalism of The Cosmos and its perception.

[2:38:39] This affirmation clarifies the origin of supernaturality from that which is human rather than that which is cosmically natural for the only reason something is designated as supernatural is because we humans, the ones whom are designating it as such, do not understand its nature and how it suitably fits within the systems and orders of The Cosmos; it is of major importance that we always remember this about supernatural notions for that which is humanly originative is not that which is cosmically originative, the former of which is subordinate to the latter.

[2:38:40] Closely associated with the notion of cosmic supernaturalism is the occurrence of that which is henceforthly known as a cosmic miracle.

[2:38:41] A cosmic miracle is an event, known as a phenomena, that is unexplainable by the laws of nature, or stretches beyond such laws in order to occur; in the Astronist Tradition, traditional cosmic miracles are designated as wormholes, and stellar transmutations.

[2:38:42] However, there are other forms of cosmic miracle, described as mystological, and include phenomena that do not necessarily break the laws of nature, nor do they stretch beyond such laws, but their occurrences are nevertheless considered miraculous and prominently include star creation in nebulae, supernovae, and eclipses.

[2:38:43] In this discourse on Practical Astronism, there should now be no confusion as to the diversity of the topics addressed and if there does still exist doubt about the diversity of this discourse, then such will be disintegrated here for we have just spoken of cosmic miracles, yet now we move onto addressing the topic of antinomianism.

[2:38:44] Antinomianism, the followers of which are known as antinomians, relates to any divergence from the officialised moral, social, legal, and philosophical principles of The Philosophy of Astronism, especially so against those philosophical principles when established and implemented by The Institution of The Philosophy of Astronism.

[2:38:45] Specifically, antinomianism and its followers do not stand in alignment with The Institution of The Philosophy of Astronism rather than The Philosophy of Astronism itself, yet The Institution is supposed to be the greatest reflector of The Philosophy.

[2:38:46] Antinomians can be characterised as disbelievers in The Institution's interpretation and application of and its authority and preservation over The Philosophy of Astronism, and the overwhelming presence of The Institution as the primary organisational representative of Astronist Philosophy, for which it is purposefully created.

[2:38:47] Due to The Philosophy of Astronism's adherence to the principles of the Philosophical Spirit, the protestation against antinomians is not permitted due to their right to express their dislike for the operations and even the entire existence of The Institution.

[2:38:48] Moving on now, we must address an important term that is expected to be used in concentrated means in particular regions and eras known as philosophical renewal, the latter part of which is also present in some religious terminologies.

[2:38:49] In the Astronist philosophical context, it holds a similar definition and relates to the process of the revitalisation of a particular Astronist school of thought, denomination, theory, or another form of philosophical grouping after a sharp decline in its popularity of adherence and/or practice.

[2:38:50] Philosophical renewal is important to the character of Astronist Philosophy and its natural flow and momentum; it is expected that there will be many philosophical declines in the history of the Astronist philosophical tradition with philosophical renewals to counterbalance such declines.

[2:38:51] Philosophical renewals are expected to come with the introduction of new generations to the concepts created and contemplated by their ancestors; the popularity of denominations, orientations, and schools of thought will fluctuate like the waves of the oceans for that is the nature of sentient minds and hearts and so philosophy follows a similar course of nature.

[2:38:52] We now move onto cosmo-environmentalism which is closely related to the notions of stewardship and The Cosmos; cosmo-environmentalists hold the position that all sentient beings must treat The Cosmos as a habitat and an environment that could easily be distorted from the purity it holds closely to its nature.

[2:38:53] Further to this, they also believe that The Cosmos and all its progeny and phenomena should be preserved in such a way that they understand that The Cosmos isn't helpless, yet humanity should do all it can to limit the extent to which it further distances The Cosmos and its progeny and phenomena from their pure and untouched states.

[2:38:54] Cosmo-environmentalism, although not dogmatically adhered to by the Astronist Tradition, is still originative within the Astronist Tradition of course and for this reason, cosmo-environmentalism is regarded to according with great respect for cosmo-environmentalists are praised for their brilliant level of love and devotion for The Cosmos.

[2:38:55] Another aspect of Practical Astronism that we must address herein is that which is known as Non-denominational Astronism which relates to those individuals whom do not intentionally identify themselves within a particular denominations of The Philosophy of Astronism.

[2:38:56] The Astronist Tradition, despite the vastness of the denominations it establishes with the founding of The Philosophy of Astronism, expects the majority of Astronists/ Astronists to be non-denominational; hence, not associated with any particular denomination, and only identifiable to the designators of Astronist, Astronist, or simply philosophical.

[2:38:57] Whether an individual identifies with a particular denomination of The Philosophy or not does not demonstrate any greater amount of philosophicality, but instead demonstrates their ability to designate choices for themselves.

[2:38:58] Finally, non-denominational Astronism does not differ in many ways from denominational Astronism, especially in practice and conceptualisation, but the main differentiator is that non-denominational Astronism can be considered more universal while denominations of Astronism are associated with particular states, regions, politics, economics, languages, people groups, and cultures on The Earth; it can be affirmed herein that non-denominational Astronism is immune from all of these anthropological aspects of society.

[2:38:59] As omniaffirmed throughout The Omnidoxy, the Astronist Tradition identifies as a philosophy firstly and foremostly, yet the Astronist Tradition also understands and accepts that those whom do not respect the Astronist Tradition's self-designation will classify it as something that it does not wish and has not intended to be yet Astronism will continue to identify itself as The Philosophy of Astronism.

[2:38:60] The Philosophy of Astronism rejects any notion of its identification as a religion and to the scholars that have formulated the era of religious and philosophical history known as the New religious movements, which are post eighteenth century founded religions and philosophies, The Philosophy of Astronism will not rests within such a designation.

[2:38:61] Instead, the Astronist Tradition formulates the Astronist movement which is the newly formed era in philosophical history including all philosophies and religious traditions post the founding of The Philosophy of Astronism of the year of two thousand and thirteen.

[2:38:62] Depending on the context of its usage, the term Astronist movement may either be used to exclusively relate to Astronist oriented philosophies, or may relate to the aforementioned, the period in religious and philosophical history post the founding of The Philosophy of Astronism which is therefore inclusive of all religions and philosophies of this new era.

[2:38:63] Now that we have further affirmed the philosophical identity and designation of The Philosophy of Astronism to further distance it from religious designations and identities, we must now address those which are known as philosophical works in the context of Astronist Philosophy.

[2:38:64] These philosophical works are physical activities one may choose to partake in or conduct themselves in order to enknowledge themselves about The Philosophy of Astronism, to gain greater understanding of The Philosophy, to practice its ideas, to debate its concepts and theories, or to demonstrate to others the importance of the Astronist philosophical tradition.

[2:38:65] Philosophical works are to be compared with inner qualities associated with Astronist Philosophy, such as the feelings and experiences of wonderment, laudation, adoration, and others as part of Cosmic Devotion, even though Cosmic Devotion itself is classified as a philosophical act, which is an alternative term for a philosophical work.

[2:38:66] The extent of philosophical works is synonymously with the list of activities associated with the discipline of study of occurrology and although the list of philosophical works that we do make herein is comprehensive, it is in no way entirely complete for the philosophical works associated with the Astronist philosophical tradition are expected to be continually expanding.

[2:38:67] The first and prominentmost of the philosophical works is Cosmic Devotion which rests at the centre of all Astronist philosophical activity for Cosmic Devotion exists as the cornerstone to one's individual and personal emotional, spiritual, and philosophical connection to The Cosmos, its progeny, and its phenomena and in this way, Cosmic Devotion remains three-dimensional by its application; for this reason alone, Cosmic Devotion makes up a large proportion of the philosophical works one is expected to conduct.

[2:38:68] Each of the philosophical works is associated with a newly formulated verb, the first of which is henceforthly known as kortication; this relates to the philosophical act or work involving the visitation of Astronist philosophical buildings.

[2:38:69] To korticate, therefore, is one of the primary activities of philosophy that all ages, knowledges, and people groups can conduct and is an activity that is to always be promoted and encouraged by the Astronist Tradition as the sophariums of the world are to be the beacons of Astronism, known non-denominationally as Astronism, as well as the spiring ambassadors of The Philosophy.

[2:38:70] The next of the philosophical works is henceforth known as enacting melodation which involves the playing of an instrument, or the composition of music, especially of Astronist Music.

[2:38:71] Melodating is considered to be a philosophically enriching activity by the Astronist Tradition; to melodate is to philosophise in a way new and to express one's musical creativity through their philosophising.

[2:38:72] Another of the activities categorised as philosophical according to the Astronist Tradition is that which is henceforth known as indendication which involves either the spectating of a philosophical debate, or the engagement in a philosophical debate.

[2:38:73] Indendicating is one of the greatest philosophical works/activities that one is able to conduct, either in a spectating or an engaging role; indendication is considered to be the greatest form of philosophical enknowledge and the perfect activity to enhance one's personal philosophising.

[2:38:74] Erudation involves the reading of philosophical materials which is considered to be another conducive act for the attainment of enknowledge, as well as one's overall greater philosophising.

[2:38:75] To erudate is to read of other's philosophisations with the intention to gain knowledge and insight into organising one's own; without erudation, one would not be able to read *The Omnidoxy* or any other philosophisation therefore erudation remains central.

[2:38:76] One of the most rewarding forms of philosophical works is that which is henceforth known as insication; to insicate is to teach others of philosophical concepts, theories, and principles.

[2:38:77] To insicate others of a philosophy, particularly of course *The Philosophy of Astronism*, is to demonstrate one's true understanding of the philosophy in question, or even of a particular concept, theory, notion, or principle; insicating is teaching in terms of philosophy.

[2:38:78] A closely associated philosophical work is that which is henceforth known as orbication and involves writing about Astronist philosophy, either in an online capacity, in an essay, or in the creation of an entire book.

[2:38:79] To orbicate is the primary element of philosophisation beyond thinking itself for orbication is the first physical manifestation of thought by through the creative process of writing with the second element of philosophisation being speech which is part of the aforementioned activity of indendication.

[2:38:80] One of the most interesting and unique philosophical acts or works is that which is henceforth known as naolocation and involves the collecting of the uniquely customised and created passes or cards that one receives in every Astronist philosophical building that they visit.

[2:38:81] This form of collecting hobby is, of course, closely associated with the act of kortication, but instead specifically relates to the collection and recording of one's korticative activities; when related to as a hobby, it is henceforth best described as naolatately.

[2:38:82] Calination, the next of the philosophical acts that we introducing herein, relates to the instance in which one plans and embarks upon an astrocamping activity to known darksites with the intention of stargazing.

[2:38:83] Calinating is part of a wider category of philosophical works relating to the outdoors which includes the following: astrobackpacking, cosmobiking, astrosafari, astroclimbing, cosmorogaining, astroparagliding, astrorrafting, astromountaineering, astral hang gliding, and astral orienteering.

[2:38:84] These outdoor philosophical acts are numerous due to their close association with astronomical observation during or as part of the purpose of conducting the sporting activity.

[2:38:85] Furthermore, the act of calination is one that is highly encouraged by the Astronist Tradition due to its close involvement with friends and family, as well as the syncretism between a sporting and an astronomical activity.

[2:38:86] The final entry of the philosophical works to be introduced and outlined herein, but are expected to be further detailed elsewhere, is that which is henceforth known as the process of rendication.

[2:38:87] Rendication involves one's attendance, either alone or with friends, family, or colleagues, at astronomical events such as stargazing nights, astronomical lectures, star parties, observation evenings, and other such related activities.

[2:38:88] To rendicate is again considered by the Astronist Tradition to be one of the most important philosophical works as the more of these events is held, the greater amount of awareness astronomy, philosophy, and all other related topics will receive.

[2:38:89] Furthermore, the promotion of such events as social gatherings for the purpose of philosophical sharing, astronomical learning, and general enknowledgement of related topics will further integrate such topics into the fabric of people's daily lives, thus supporting the ambitions of astronomism which makes such events prominent in importance within the discipline of study of astronomy.

[2:38:90] Rendication therefore, to conclude, is considered central to the furtherance of the cause of the Astronist Tradition with the rendicative tradition being initiated by Astronist Philosophy; a tradition in which astronomical and philosophically related events are the most popular of all events for people to attend which also supports notions made in The Astronomic Revolution.

[2:38:91] Moving onto a new topic new, we come to the address the nature of initiation in the context of philosophy and religious tradition, the latter of which the Astronist Tradition associates initiation with.

[2:38:92] Initiation involves some sort of ritual, which demonstrates the first red flag for The Tradition, as well as being based upon the notion that people are expected to reach a certain point of knowledge, or are to undergo a particular procedure before they can be considered part of the group for which the initiation process was created.

[2:38:93] However, the herein and henceforth, The Philosophy of Astronism must remain firmly a non-initiation philosophy partly due to its intention to further distance itself from the characteristics of religious traditions, but also due to its alignment with the Philosophical Spirit which is not suitable to the latter notions mentioned in the previous insentensation.

[2:38:94] Furthererso, the Astronist Tradition formulates the orientation of initiationism to demonstrate those whom believe in the importance of the implementation of ceremonial initiations in the Astronist philosophical tradition with anti-initiationism forming the oppositism to this orientation, and is the orientation that is of course held by the Astronist Tradition, the former of which exists so as to contradict the principles of the Philosophical Spirit itself.

[2:38:95] By extension to this, the notions of non-ritualism and even anti-ritualism also remain staunchly adhered to by the Astronist Tradition and thus retain their central positions in the Astronist approach to philosophy, as well as adherence, practice, devotion, and enknowledgegement in a wider sense.

[2:38:96] We must now provide a short amount of our discourse to the notion of the paranormality of non-human sentient beings and all other cosmic affairs by some cultural or establishmental force that has apparently taken route in the latter half of the previous century and in turn, seems to have split into the early of the century in which I am now writing The Omnidoxy as a combat to such degressions.

[2:38:97] This involves all notions of sentient beings already having come to The Earth, especially including the notion of abductions by such beings as well as the rise of culture of UFO sightings, conspiracies surrounding, and even the study of ufos in ufology, to which the Astronist Tradition is staunchly opposed and therefore establishes anti-ufology.

[2:38:98] The Astronist Tradition considers these and all related acts as comedicisms of The Cosmos and its progeny, phenomena, and inhabitants, as well as the trivialisation of cosmic affairs, and the inferiorisation of cosmic affairs to which the entirety of Astronist Philosophy is opposed and appalled by.

[2:38:99] If nothing else, Astronist Philosophy considers The Cosmos and all cosmic affairs and related topics and contemplations to be hallowed, which explains the term hollower and its usage to refer to Astronists.

[2:38:100] By this notion, cosmic affairs are revered and respected to the point at which their comedicism is offensive and regressional by all means of its application; this position forms the cosmology of The Hallowed Cosmos and this orientational view of The Cosmos is henceforth known as hallowism which also formulates the viewpoint of the Astronist Tradition towards this matter.

[2:38:101] This goes as far as the Astronist Tradition's dislike of the word alien to refer to sentient beings, as is evidenced by this word's absence from the rest of The Omnidoxy, mainly due to its association with the comedicism of cosmic affairs, and the role of belittlement that it does play by whichever force is pushing this agenda, the identity of which I do not know and do not intend to know, but I do intend to say that humanity's course along such a path will occur no longer.

[2:38:102] For this reason, the Astronist Tradition establishes herein the orientations of alienism and anti-alienism which instead of relating to the existing of sentient beings beyond The Cosmos relates to belief or disbelief in the usage of the term alien, the Astronist Tradition of course orients itself on the latter of these.

[2:38:103] Due to the traditions of paranormality having emerged and integrated themselves as part of human culture throughout the history of humanity, these are expected to also seep into the Astronist philosophical tradition, some of the first examples of which are introduced herein and now.

[2:38:104] The first of these is henceforth known as cosmokinesis which is the supposed ability to know of cosmical events before they occur, or to know and speak of cosmical events that are far enough away from The Earth for them not to be knowable by others, especially astronomers and scientists.

[2:38:105] Due to the natural inability of humans to conduct such activities, this is considered to be part of a paranormal tradition within Astronist Philosophy, collectivised by the term paraphilosophy.

[2:38:106] Cosmokinesis also relates to the ability and practice of cosmoprophecy which involves the prophesying of cosmical events before they occur and the realisation of their truth at some later period in time; again, cosmoprophesying exists as part of the category of paraphilosophy and it is expected that these and other abilities that are not herein

introduced, yet she still be inspired by and exist within Astronist Philosophy, will be of popularity to certain portions of the populous in the nations of The Earth.

[2:38:107] Keeping on this topic of paraphilosophy, another practice and supposed ability to introduced herein is henceforth known as cosmic retrocognition which involves holding detailed knowledge of cosmic events that have occurred hundreds, thousands, or even millions of years prior beyond normal means of knowledge.

[2:38:108] Another aspect of topics we have not yet considered is the concept that is known as the cosmic language; the language of The Cosmos relates to its functions, orderities, systems, and the occurrences within The Cosmos that formulate its naturity; each of these aspects considered collectively formulate the cosmic language.

[2:38:109] However, wherein this topic relates to that of the previous is the Astronist Tradition's designation of the cosmic language as a Divine language which is considered to be directed created by The Divine, remains pre-human, far superiority to human speech, as well as supersedes complete human comprehension.

[2:38:110] Relating to this in some way is the orientation and belief known as transtheism, which is less so known than other theological positions, yet it is transtheism that the Astronist Tradition is most closely associated with in terms of theological orientation, in addition to monotheism, panentheism, pantheism, and cosmotheism.

[2:38:111] Transtheism is characterised, in the Astronist context of its application, as a system of thought and philosophical orientation which is neither oriented towards that which is theistic, nor that which is atheistic, yet remains either subordinate or superior to them both depending on type applied.

[2:38:112] Subordinated transtheism relates to the instance in which The Philosophy of Astronism is considered to be theologically subordinate to both theism and atheism due to its address of them due to its establishment of The Divine in the Astronist cosmology.

[2:38:113] However, superiorised transtheism relates to the opposite instance in which The Philosophy of Astronism is considered to be theologically superior to both theism, agnosticism, and atheism due to the decentralisation of theological belief.

[2:38:114] The Philosophy of Astronism considers itself to be ultimately transtheistic because it is not bound to one theistic or atheistic stance; The Philosophy of Astronism is therefore released from the notions of theology and exists beyond them, yet is still able to maintain the ability of exploring theology whilst remaining transtheistic in the sense that it is not bound to one belief system, as is the case with many of the religious traditions.

[2:38:115] Perhaps it is in this notion that we find another of the great differences between religion and philosophy; the former is bound to a belief orientation and structure while the latter is not; it is in philosophy that we see freedom, and it is this principle that it is

latterdiscoursed in The Final Disquisition of this document concerning the discipline of study of prerology.

[2:38:116] The Philosophy of Astronism is therefore able to confidently identify itself as a transtheistic philosophy because of the feature of its own transcendentalty with regards to theological debate as was the very purpose of the creation of The Divine as part of the Astronist Cosmology.

[2:38:117] In Astronist Philosophy, the pre-Astronist term known as a revitalisation movement relates to a deliberate, organised, and conscious effort made by members of a civilisation or society to construct a more satisfying culture due to the dissatisfaction the citizens feel with their lives in career, family, philosophy, spirituality, and the overall civilisational purpose.

[2:38:118] The Astronist Tradition utilises the term of a revitalisation movement when considering both The Philosophy of Astronism as well as Astronarianism and prophecies that these two sister philosophies with stand at the heart of many different revitalisation movements in different nations, societies, and civilisations if said citizens wish them to take such roles.

[2:38:119] It is expected by the Astronist Tradition that the development of both Astronism and Astronarianism under the auspices of them as revitalisation movements will occur in other books separate from The Omnidoxy, but their origins and simple foundations will always be found herein, specifically within this particular discourse.

[2:38:120] The discipline of study henceforth known as prosopology deals with the general philosophical contemplation of people and their role in, interactions with, thoughts about, and their actions concerned with The Cosmos.

[2:38:121] Also, the study and contemplation of notable individuals in connection to Astronist philosophy, space exploration, or astronomical practice is a major area of study within prosopology.

[2:38:122] Prosopological study contemplates people and their interactions with chosen subjects and the orientation henceforth known as prosopicism is characterised by the belief in the centrality of people/sentient beings in The Cosmos rather than cosmical progeny and phenomena.

[2:38:123] Prosopicism is generally not adhered to by the Astronist Tradition, however, it is nevertheless respected and remains something that prosopologists are expected to discuss and contemplate amongst one another.

[2:38:124] Prosopic notions are therefore characterised by the inclusion of people in any way and although they do originate from within prosopology, prosopic notions are numerous throughout many of the other disciplines of study of Astronist Philosophy.

[2:38:125] That which is known as prosopcity measures the extent to which people/sentient beings or their perceptions are involved in or hold influence over a particular theory or event.

[2:38:126] An important branch of Practical Astronism is that which is henceforth known as occupational philosophy, which is itself a type of philosophy, and refers to philosophy in the context of one's employment in the place of employment, and between colleagues.

[2:38:127] Due to the vastness of occupational philosophy, there exist many areas of contemplations within it including the most prominent questions of how colleagues or the place of employment impact one's philosophical orientation, how the course of one's employment and their experiences affect their philosophy, and how one's employment provides them with new ideas for the formation of concepts.

[2:38:128] These are just some of the most basic questions that occupational philosophy addresses and the Astronist Tradition herein estimates that this form of philosophy is going to mark a large amount of influence over many of the aspects of Astronist Philosophy and not only in the realm of what people think and believe, but also in the realm of what they do and how they action their philosophical orientations.

[2:38:129] This conveniently leads us onto the notion of occupational devotion as a branch of occupational philosophy which despite its appellation in association with Cosmic Devotion, actually relates to all actions in relation to occupational philosophy and how this affects one's actions, appellated in the instance as devotion.

[2:38:130] Additionally, occupational devotion may also relate to the practising of Cosmic Devotion during one's working/employment hours and invokes the principle that employers must take these aspects of one's philosophical belief into consideration and allow adherents to conduct such devotions and philosophisations during their break hour.

[2:38:131] Occupational devotion is a large area of contemplation in and of itself and invokes notions about the devotion during work and the philosophisations one may experience during their working hours.

[2:38:132] Further to this, we come across the Contemplation with Practice idea which relates to the notion that contemplations paired with the practice of work is the best format for the realisation of contemplations for without such a syncretism between practice and contemplation, we will only ever be able to perceive in a one-dimensional field.

[2:38:133] The notion of Contemplation with Practice is of the utmost importance as it relates to the two dimensions of thought; the first of which is the inception of thought and the second of which is the enaction of thought; the former of which always precede the latter, yet the latter enhances the former and lifts it to new heights so that it may multiply.

[2:38:134] That which is known as the term of the philosopher's kid relates to a child of a philosopher of Astronist Philosophy, a theologian, or another scholar not necessarily within an Astronist sphere.

[2:38:135] The introduction of this term relates to the belief of natalism and its associated discipline of study henceforth known as natology; the former of these deals with the belief in the reproduction of life, especially its encouraged by Astronist Philosophy as a philosophical tradition, but also by religious traditions too and the reasons for such similar in views.

[2:38:136] The discipline of study of natology concerns itself with studying how sexual reproduction, the acts of sex, pregnancy, birthing, and parenting are influencers in one's philosophical outlook and how participating in such acts affects one's philosophical orientation.

[2:38:137] Natological contemplations attempt to understand and make conclusions about the ways in which these aspects of life influence one's philosophisations and also explores the philosophisations one may make during these acts.

[2:38:138] That which is known as cosmic predestination is the notion that all events have been willed by The Cosmos in an attempt to link The Cosmos to the events that occur within so as to notionise that it holds primacy over all that does occur within it and is therefore an extension to the notion of cosmic jurisprudence which is the notion from which cosmic predestination derives and holds the notion that The Cosmos holds jurisdiction over itself and although it exists within The Universe, it is held that The Universe exists simply as a canvas for cosmoses to exist within and it is only the notion of The Divine that holds jurisdiction over The Cosmos and its naturity, orderity, systems, and the occurrences within it.

[2:38:139] By this notion, the Astronist Tradition establishes the existence of will in The Cosmos, but this is not so guaranteed within other cosmoses and in this, begins to formulate volitology, the discipline of study dealing with the nature of will, or volition as it it alternatively known.

[2:38:140] To digress from our discussions and introductions for a moment, I must address the unicity of this discourse and the vast diversity of topics it concerns itself with which makes this discourse one of my most favourite in The Omnidoxy and this is proven by the topic of the two previous insentensations of volition and we are now going to address something majorly different.

[2:38:141] That which is henceforth known as a sopherle, also known as a sopherular meeting, is an unofficial and informal meeting of people typically held in public parks, squares, in restaurants and cafes, or in any other non-philosophical buildings for the

purposes of discussing or debating philosophical ideas, is typically attended by dilettants and trilettants, but not genuine philosophers.

[2:38:142] The Astronist Tradition encourages the organisation of sophicles even though they are not conducted in Astronist philosophical buildings due to the important of encouraging all forms of engagement between people and organised philosophisations.

[2:38:143] Sophiculars as they may also be called are important to retaining a sense of spontaneity and informality with people whom do not adhere strongly or regularly to The Philosophy of Astronism and for this reason, the Astronist Tradition expects sophicles to be common occurrences, the exact popularity and frequency of which may not ever be shown in philosophical statistics.

[2:38:144] Sophicles, despite their lack of uniformity with institutional and organised versions of The Philosophy of Astronism, are nevertheless expressions of interest in Astronist Philosophy and for this reason alone, they must therefore be cherished for it is perhaps the sophicles held in public places that will attract the attention of others and it is perhaps the sophicular meetings that will become some of the iconic and dynamic of philosophical debates; it is this potentiality that does excite me the most; the notion that in all of the cities and towns of the world, sophicles will occur to the delight of the Astronist philosophical tradition.

[2:38:145] That which is launched herein and henceforthly known as non-successionism involves the idea that the children of adherents to The Philosophy of Astronism are not expected to succeed in the philosophical orientation of their parents as this would be non-philosophical and against the Philosophical Spirit.

[2:38:146] Successionism, as the oppositism to non-successionism, is the preferred orientation of the majority of religious traditions concerning this matter, however, due to the Astronist Tradition wishing to reaffirm its status as philosophical rather than religious, and that those whom identify themselves with Astronism do so because they wish to do so, then therein we find the reasons why The Philosophy of Astronism remains non-successionist in its orientation and this shall remain so forevermore.

[2:38:147] That which is termed as a sincere admission in the Astronist philosophical tradition relates to the expression of one's belief in their mystical and philosophical communication with The Cosmos as a philosophical and mystical entity.

[2:38:148] Sincere admission involves not only the acceptance of The Cosmos, but one's communication with The Cosmos in both a mystical and philosophical way; it is important to note that The Cosmos is an entity that does not intercede in response to devotion or any type of pray, as is a characteristic of a religious tradition, but is instead an entity that inspires, and motivates due to its immensity and grandness; it is this that sincere admission refers to one's enactment upon.

[2:38:149] In The Omnidoxy, we have introduced many different forms of philosophy and now we come to introduce another henceforth known as primacy philosophy; this relates to all forms of philosophy, or theories, concepts, or denominations that seek to institute a nation governed by an organised philosophy rather than by an ideology, religion, or by some other means of order.

[2:38:150] This may also be known as order philosophy, and the orientation known as primacism holds the belief that this way of the application of philosophy is the greatest, truest, and most efficient utility of philosophy.

[2:38:151] Primacist thought is generally supported by the Astronist Tradition with the disclaimer affirmed herein that the rulers of such primacised nations are expected to deviate from the accorded path set forth herein for the application of an order philosophy; essentially understanding that rulers of nations will not exactly adhered to the unaggressive way in which the Astronist Tradition sees primacy philosophies implemented into nations.

[2:38:152] For this reason, caution is decreed herein and the Astronist Tradition urges The Institution of The Philosophy of Astronism to watch for such deviations for their consequences can be devastating for the reputation of the rest of The Philosophy, as well as seen by the distorted application of communism and socialism in the previous central with both of their reputations, particularly the former's, being tainted ever since.

[2:38:153] The process of primacisation is therefore the social, economic, political, cultural, and ultimately philosophical procedure that a society or civilisation undergoes during the implementation of a primacy or order philosophy; this term, the consequences of its application, the methods of its implementation, and the approaches to it theoretically are all addressed within the sister philosophy to Astronism known as Astronarianism, but primacism as an orientation will always find its origins here within The Omnidoxy.

[2:38:154] We shall now move to introduce that which is henceforthly known as occasionism which is characterised by the notion that some prophecies, theories, and concepts in The Omnidoxy are suited for short-term and others are best suited for long-term applications and fulfilment.

[2:38:155] By this, we understand the theory of Conceptual Disparity which involves the differences in the natures and applications of different concepts, prophecies, and theories of Astronist Philosophy.

[2:38:156] Occasionism, as a branch within Conceptual Disparity, refers as aforementioned to the differences in timescales of applications between different concepts/theories/prophecies/notions and therefore occasionist thought is characterised by an understanding of the applicational and practical aspects of such concepts rather than just their theoretical aspects.

[2:38:157] Now we come to discover two disciplines of study within Practical Astronism that stand in prominence, the first of which is heresiology and the second of which is doxography.

[2:38:158] Firstly, heresiology is the discipline of study concerned with heresy in philosophy, which in itself, is a controversial issue as the Astronist Tradition denies the existence of heresy in philosophy.

[2:38:159] The Astronist Tradition forever aligns itself with the principles of the Philosophical Spirit which does not consider there to exist any form of heresy in philosophy, or philosophical practice due to heresy stemming from religious contexts and traditions, and its overall nature centred on not allowing for the philosophisation of different topics.

[2:38:160] Further to this, heresy invokes notions that are inherently controlling and limiting of thought which fundamentally disaligns with the principles of the Philosophical Spirit.

[2:38:161] The second of the disciplines of study introduced is doxography as aforeintroduced which concerns itself with describing and analysing the differences in the points of view of past and present philosophers.

[2:38:162] Doxographical studies are of extreme importance to the overall develop of not only Astronist Philosophy, but wider philosophy because it encourages learners to understand the orientations of different philosophers and traditions.

[2:38:163] The Astronist Tradition persists that one of the greatest ways to learn is to compare and it is this approach to learning that rests at the centre of doxographical study; doxographers are to be concerned with drawing conclusions about the comparisons they have made, as well as promoting the learning and understanding of the different positions held by philosophers throughout the centuries of philosophical history.

[2:38:164] There exists many alternative terms within Astronist Terminology, as well as so within Astronist Philosophy due to the vast pools of terms created as part of Astronist Philosophy and two of these alternatives terms are home sopharium and family sopharium, each of which exist as alternative terms for an astrotry.

[2:38:165] Home sophariums and family sophariums are just the first of several naological terms that we should address herein for if naological issues and topics are not practical and physical manifestations of The Philosophy of Astronism, then what else is?

[2:38:166] Those which are henceforth known as house planetariums and house observatories relates to a meeting of a group of Astronists who regularly gather for philosophical devotion, debate, and enknowledge in their private homes.

[2:38:167] The Astronist Tradition anticipates there to be many reasons for such choices of philosophisation one of which may include the belief that philosophisation should remain within the auspices of friends and family only rather than a public gathering.

[2:38:168] Whatever the reason for the organisation of house planetariums and house observatories, the Astronist Tradition supports their existence despite their distinct lack of uniformity or their affiliation with official and public philosophical organisation due to the Astronist Tradition's embracement of all ways in which philosophisations take place considering none of these break the Tradition's principles and ethical systems.

[2:38:169] Another type of sopharium is that which is henceforth known as an imperial sopharium which is an Astronist philosophical building connected with an imperial philosophy that is not necessarily entirely associated with The Philosophy of Astronism, and may also be affiliated with a non-Astronist philosophy.

[2:38:170] In a wider sense, an imperial philosophy is a philosophy or philosophical tradition that holds an imperialistic temperament in dominating over philosophies, religions, ideologies, and cultural traditions within a given nation or region; this may or may not relate to The Philosophy of Astronism.

[2:38:171] The final type of sopharium that we are to introduce herein is that which is known as a peace sopharium which is a category of sopharium characterised by a particular and open advocacy for Astronist pacifism, which is an orientation and belief system within Astronist Philosophy that is to be latterintroduced within this very discourse.

[2:38:172] Peace sophariums will notably feature lectures on pacifism, will be lead by pacifist sophians, and will espouse pacifistic concepts and notions by combining and integrating them into other forms of events, especially during astronomical observations, and planetarium shows for example.

[2:38:173] The appellation of Panarium is used in Astronist Philosophy as a descriptor for The Omnidoxy and The Grand Lexicon, both of which are pertained to include all aspects of one subject; Astronist Philosophy.

[2:38:174] The five terms of Cosmic Human, Cosmic Man, Cosmic Woman, Cosmic Girl, and Cosmic Boy all relate to people that experience The Cosmos in the way that is outlined here within The Omnidoxy; they perceive The Cosmos as a mystical, philosophical, and ultimately inextricable entity from the affairs of humanity.

[2:38:175] These terms are collectively appellated as The Five Cosmics and those individuals whom assume such roles are to be regularly depicted in Astronist Art and other visual expressions as The Champions of The Cosmos; those whom see, know, and feel The Cosmos in the way it is intended to be so by Astronist Philosophy characterised by a lasting cherishment, envelopment, and embracement of The Cosmos.

[2:38:176] The belief henceforth known as cosmonentism is characterised by the notion that cosmic entities are existentially higher than humans, or any other sentient being; this falls in alignment with the Astronist belief in the subordinate position of everything within The Cosmos below cosmical progeny and phenomena.

[2:38:177] Within cosmonentism, cosmic progeny and phenomena are henceforth known as cosmonents with humans and other sentient beings henceforth known as dentranents; by these introductions, cosmonentism exists as a great contributor to the overall Astronist Cosmology as cosmonents and dentranents formulate the basic aspects of an Astronist cosmical hierarchy.

[2:38:178] Returning to more naologically characterised notions, we come to the stance that is henceforth known as independentism which is characterised by the advocacy for the local control of philosophical and sopharial matters and typically hold their own philosophical debates and building their own sophariums without any association to The Institution of The Philosophy of Astronism.

[2:38:179] Sophariums that take the orientation of independentism are to be known collectively as independentists or as independents and although they are not encouraged by the Astronist Tradition due to their disassociation with The Institution, the Tradition does not oppose their existence and respects their decision, especially if they still practice and adhered to The Philosophy of Astronism in the way ascribed.

[2:38:180] One of the concepts that stems from the Astronist Cosmology conceptually and manifests itself in human perception is the dichotomy of The Inward Cosmos and The Outward Cosmos.

[2:38:181] The former of these relates to the way in which an individual perceives The Cosmos which is considered to be ultimately unique by the Astronist Tradition; the latter relates to the way The Cosmos actually is which is known as the cosmological standard because it is not based upon individual interpretation and perception.

[2:38:182] This unique dichotomy influences general perceptions of The Cosmos from the Astronist point of view and therefore remains central to the Astronist Tradition's teachings about how Astronists are expected to perceive The Cosmos.

[2:38:183] Thus, it is important that the Inward-Outward Cosmos Dichotomy is properly integrated into the Astronist Cosmology from its introduction here.

[2:38:184] A person that is henceforth known as a professionalist within Astronist Philosophy is a person who earns money from being a philosopher and is different therefore from a trilettant and is much further away from a dilettant.

[2:38:185] The orientation associated with these such individuals is known as professionalism which is characterised by the belief that philosophers should earn money and generate money if they are to contribute properly to the societies in which they exist in order to be taken seriously as well as to form another dimension in which philosophers are able to contribute to society.

[2:38:186] The discipline of study of omnidoxology is the systematic study of the document herein, The Omnidoxy; that which is known as evolvmentism in omnidoxology involves the notion that the latter discourses in a disquisition within The Omnidoxy contain greater accuracy, relevancy, and clarity than the earlier discourses of the disquisition.

[2:38:187] Oppositely, basalism is distinguished by the belief that the earlier discourses in a disquisition within The Omnidoxy contain greater accuracy, relevancy, and clarity than the latter discourses of the disquisition.

[2:38:188] Both of these orientations allow us to begin to study the ways of interpreting the document that I am writing here; The Omnidoxy, and for this reason they should be given places of immense importance as The Omnidoxy remains irrevocably central to The Philosophy of Astronism.

[2:38:189] By extension, those which are known as absolute evolvmentism and absolute basalism hold the notions that everything which is writing in The Omnidoxy is either inferior to that which is latterly mentioned if referring to the former, or is superior to that which is latterly mentioned if referring to the latter of the two.

[2:38:190] Both of these versions also either discount all separations within The Omnidoxy such as insentensations, discourses, disquisitions etcetera and apply their notions to that which is known as The Unorganised Omnidoxy, or they apply their notions to every organised section within The Omnidoxy known as The Organised Omnidoxy which involves a vast amount of derivations that could be made about the truth to either of the opposing sides, which therein forms The Evolvmentist-Basalist Dichotomy.

[2:38:191] With the amount of topics that we are addressing within this singular discourse, the pace at which we must introduce such concepts, orientations, and notions is unseen anywhere else in The Omnidoxy and now it is time to move on to that which is appellatively known as Cosmic Propitiation.

[2:38:192] Propitiationism is the notion that in conducting philosophical debates, enacting cosmic devotions, and astronomical activities, one will please The Cosmos, specifically known as Cosmic Propitiation, or The Divine in which they believe.

[2:38:193] Propitiationists conduct such acts as aforementioned in order to please The Cosmos or The Divine and they do these acts for this as the main reason; this orientation is not one of the most prominent in the Astronist Tradition

[2:38:194] That which is known as solism collectively describes regular individual sessions of Astronist philosophical activities, such as individual observation, cosmic devotion, private enknowledgement or study of The Omnidoxy and describes the orientation that individual acts of philosophisis are superior to those conducted by groups.

[2:38:195] A solist is a person that follows the orientation of solism and finds individual sessions of Astronic philosophisis to be more rewarding, enlightening, and philosophically enhancing than those which are conducted with groups, and is a term used in both naology and occurrology.

[2:38:196] Semblancism is another popular term used in an Astronist philosophical context and holds the orientation that one should declare themselves an Astronist for material benefits rather than for philosophical reasons; of course, this is opposed to by the Astronist Tradition as a distortion of its purpose and due to its disalignment with the Philosophical Spirit.

[2:38:197] People whom conduct such acts or believe in such an orientation are to be henceforth known as semblancers, or semblers, as they are known to practice that which is known as semblancy; the declaration of one's philosophical belief for disingenuous purposes, including for higher material wealth, higher social status, or some other non-philosophically associated purpose.

[2:38:198] Semblancial or semblancist practices are considered to be highly distortive of the essence of The Philosophy of Astronism and are therefore of immense disdain to the Astronist Tradition for the Tradition maintains that the only reasons for one's adherence to Astronism is their love of The Cosmos firstly, and their love of philosophy secondly.

[2:38:199] Moving on now, there does exist a pre-Astronist cosmology that is identified herein to resemble some connection to the Astronist approach to cosmology and the wider Astronist Tradition itself; this is known as the Seven Heavens cosmology and it has been found to be important that we identify the existence and influence of this cosmology on that of the Astronist cosmology.

[2:38:200] The Seven Heavens is an ancient mythological and religious cosmology characterised by the belief in seven layers of the sky and involves the observation celestial entities such as the classical planets and fixed stars.

[2:38:201] It is important to note that the Astronist Tradition does not believe in the Seven Heavens cosmology itself, but instead sees this ancient cosmology that has influenced many of the major religious traditions of the western and eastern worlds to be an influencer of the Astronist Tradition's approach to cosmology.

[2:38:202] The Seven Heavens cosmology is accepted as inspiring to the Astronist Cosmology because its focus is put on astronomical, planetary, and stellar entities rather than on anthropic or geocentric elements and notions.

[2:38:203] The Seven Heavens cosmology is also considered to be one of the greatest influencers in the integration of astronomy in cultural, philosophical, and religious traditions of human thought and action and for this reason, it is praised by the Astronist Tradition.

[2:38:204] The Seven Heavens cosmology is not specifically adhered to by the Astronist Tradition as aforeaffirmed, but additionally it formulates an astronomical influence on religious traditions which pleases Astronist Philosophy due to its ambition for the reascension of philosophy and the integration of astronomy.

[2:38:205] For this reason, the Seven Heavens cosmology is given an praised position which is unique for pre-Astronist and non-Astronist notions which are generally not recognised within the Astronist Tradition; it is also noteworthy, however, that the Astronist Tradition does not recognise the seven underworlds aspect of the Seven Heavens cosmology as it only considers the aspects of the cosmology that feature planetary entities or celestials.

[2:38:206] We shall now briefly return to the aspects of naology that are pervadingly existent throughout much of Practical Astronism as has been aforeconcluded; we return to this with the practice that is henceforth known as indony.

[2:38:207] Indoning and indonation involve the act of employing someone in a sopharium, or employing someone to be a philosopher which is therefore closely associated with the beliefs of professionalism as aforeintroduced.

[2:38:208] Indonial acts are considered to be necessary to the proper functioning and funding of Astronist philosophical buildings and therefore the Astronist Tradition actively encourages the acts of indoners for without them, sophariums would not be able to function and fund themselves.

[2:38:209] Another term of naology is that which is henceforth known as a simultanium which refers to a category of sopharium that is run by people from two or more different denominations of The Philosophy of Astronism.

[2:38:210] Simultaniums are not expected to be popularly existent due to the proper allocation of denominations worldwide, but the Astronist Tradition expects that as the historical development of Astronist Philosophy occurs and now influencers and philosophers contribute their ideas to form new denominations, the frequent of simultaniums is expected to rise, but only in the distant future in the history of Astronism.

[2:38:211] Similarly, but also distinctly, a shared sopharium is a category of Astronist philosophical building that is used for alternative means other than for astronomical and philosophical purposes, especially so by different groups other than The Institution of The Philosophy of Astronism itself.

[2:38:212] Shared sophariums are expected to be much more initially popular than simultaniums and the Astronist Tradition embraces their existence, but only in a regulated fashion and only for sophariums that are not regularly in use; the essential principle for shared sophariums is that philosophical and astronomical activities and events must be prioritised over all other forms of events and activities.

[2:38:213] Related to the topics of paranormality that we had referred to earlier in this discourse is the term of extralism; this is an orientation characterised by the belief that knowledge of The Cosmos and of philosophical matters can be discovered through supernatural means, such as miracles, divine revelation, astrological practice, and all other forms of occultism.

[2:38:214] Extral experiences are not openly encouraged by the Astronist Tradition due to them being inextricably influenced by non-Astronist, pre-Astronist, and occultist philosophies and practices, but the Astronist Tradition nevertheless accepts that such practices are deeply engrained into the mindsets of certain cultures and it would remain an effortsome procedure without reward or intended result to attempt to prohibit such practices and beliefs.

[2:38:215] This is the main reason for the introduction of extralist systems and schools of thought within the Astronist philosophical tradition; despite the reservations that the Astronist Tradition holds about these practices and beliefs, they are still expected to further enhance the philosophicality of people and to help individuals to embrace their association to The Philosophy of Astronism in a greater way.

[2:38:216] We now move on to one of the centralmost aspects and ambitions of Astronarianism; the creation of that which is known as either an Astronist or Astronist state; it is within this context and for this purpose that the ideology of Astronarianism is ultimately constructed.

[2:38:217] For this reason, Astronarianism is characterised by its implementation into the context of a nation as well as by its theoretical aspects, as is characteristic of the majority of other ideologies.

[2:38:218] To differentiate similar definitions, that which is known as an Astronist nation, or an Astronist nation relates to The Philosophy of Astronism rather than Astronarianism therefore, this is a country that recognises a form of Astronism, or Astronism generally as its official national philosophy, which itself is an Astronist denomination that supports the government and is supported by the government.

[2:38:219] An Astronist state and an Astronist nation are similar, yet distinct from one another for a country that is associated with Astronarianism is different from a country identifiable to The Philosophy of Astronism or one of its denominations; this is essentially because Astronarianism, as an ideology, plays an economic, political, and governmental role, however, Astronism, as a philosophy, plays on a cultural, social, and philosophical role.

[2:38:220] In omnidoxiology, the discipline of study dedicated to the concern of this document, exists the term of omnidoxical concordance which is an alphabetical list of the most relevant words in The Omnidoxy and the insentensations in which they occur and is compounded in The Omnidoxical Concordance.

[2:38:221] Moving on to address another term now, this time within the discipline of occurrology, and is known as a narrow stargazer; this is a person that regularly goes to stargazing events and conducts stargazing and other astronomical activities, but does not identify with The Philosophy of Astronism.

[2:38:222] These people refuse to acknowledge the ability of The Philosophy of Astronism to enhance, spiritualise, philosophise, and enliven their stargazing and astronomical activities; they also refuse to identify with The Philosophy of Astronism even though they conduct many of its associated practices and agree with many of its principles and concepts.

[2:38:223] The term in Astronist Philosophy that is henceforth known as taxidoxy really does belong in a discipline of study within compendology due to what it essentially addresses, but we introduce it here because its entirety is based upon the perceptions that the human mind and spirit have of The Cosmos and its progeny and phenomena.

[2:38:224] Fundamentally, taxidoxy relates to both the notion of, and the instance in which celestial entities have an ordered formation, a particular and unique element of procedure, succession, and progression in their formations, as well as a distinct set of standard characteristics that create such courses of celestial formation.

[2:38:225] The taxidoxy of The Cosmos is similar to the aforescoursed Cosmical Schematism and the schema of The Cosmos, but instead relates specifically to the ordered formations of celestials rather than the other periods in their existences.

[2:38:226] That which is henceforth known as taxidology is the discipline of study associated with taxidoxy and studies the notion and instance in which celestial formations hold a particular order of precession; taxidologists attempt to form new notions with a taxidoxical context in addition to making conclusions about how the different taxidoxies of celestials in The Cosmos interrelate with one another and the differences between them.

[2:38:227] Theocentricism in Astronism is characterised by the belief that The Divine from the Astronist Cosmology is the central aspect to The Cosmos and The Universe, usually subordinating the importance of both The Cosmos and The Universe in simultanation.

[2:38:228] Therefore, theocentricity in the context of The Philosophy of Astronism characterised by any greater focus made or importance placed upon The Divine rather than The Cosmos or The Universe from the Astronist Cosmology.

[2:38:229] The Astronist Tradition does not entirely encourage theocentricity as it is considered to distract from one of the central concept of the Tradition which is cosmocentricity which is the centralisation of The Cosmos over all other aspects of the Astronist Cosmology.

[2:38:230] Despite this, the Astronist Tradition understands that those with certain religious beliefs and backgrounds may wish to orient themselves towards theocentricity by applying their religious icons and gods to that which is known as The Divine in the Astronist Cosmology.

[2:38:231] Theocentricist thought focuses on The Divine and its abilities, interactions, and devotions and is the closest aspect of The Philosophy of Astronism to religious traditions and is the realm of Astronist Philosophy in which religious beliefs and practices can be placed and applied.

[2:38:232] There is a term used in the context of the ideology of Astronarianism known as cosmonomy which is introduced herein due to its proximity to Practical Astronism and is defined as a hypothetical Astronist form of government in which society is ruled by Astronist law; this concept and governmental method is to be more greatly detailed as part of the book outlining Astronarianism which is *The Astronist Methodology*.

[2:38:233] Cosmocation which is an Astronist philosophical originative word relates to the transformative process whose aim is likeness to or union with The Cosmos and can be related to either celestial entities themselves or to human/sentient beings themselves in a spiritual and metaphorical way.

[2:38:234] Cosmocational activities and processes hold the metaphorical aim of one's union or likeness with and to The Cosmos, but what exactly does this mean in comprehensive terms?

[2:38:235] Cosmocation firstly involves one's Union in Knowledge of The Cosmos which is described as the extent of one's knowledge of The Cosmos; the idea being that the greater one's knowledge of The Cosmos, the closer they are to the completion of cosmocation, or the greater union with The Cosmos is.

[2:38:236] Secondly, cosmocation involves one's Union in Belief towards The Cosmos which is the extent to which one believes The Cosmos to be divinely inspired, worthy of devotion, and generally important to the nature of existence.

[2:38:237] Thirdly, cosmocation involves one's Union in Action between The Cosmos which is the extent to which one conducts physical action or supports physical activity in relation to the exploration, enknowledgement, dissemination, discussion, or integration of The Cosmos, astronomical notions, and all other Astronist views that relate to cosmocentricity.

[2:38:238] Fourthly, cosmocation involves one's Union in Ambition for The Cosmos which is the extent to which one's ambitions alignment with and hold support for The Cosmos and the Astronist Tradition's views towards the cosmocentric future of humanity and all other sentient species.

[2:38:239] Fifthly and finally, cosmocation also involves one's Union in Spirit with The Cosmos which is the extent to which one whom is spiritual in personality feels a spiritual connection towards cosmical entities including both the progeny and phenomena of The Cosmos, as well as The Cosmos itself.

[2:38:240] These are collectively appellated and known as The Five Unions of Cosmocation in the Astronist philosophical tradition and are of fixtural relevance in one is going to achieve cosmocation; cosmocation remains of immense importance to the topics of Cosmic Devotion, cosmocentricity, astronomy, and holds implications for Practical Astronism which points to the reason for its inclusion here within this discourse.

[2:38:241] We now return to address some naological and occurrological terms, the first of which is that which is described as unsophated; unsophation is the instance in which an individual, but more typically a people group, or a people of a particular town or region who are Astronists / Astronists but not connected with a sopharium.

[2:38:242] These people are to be henceforthly known as unsophates; they have regular encounters with The Philosophy through the insentensations of The Omnidoxy, through advertising, via the internet, and through one's associates rather than via a naological dissemination.

[2:38:243] Unsophative forms of Astronism are expected to be more widespread during the earlier decades and centuries of Astronism's presence in particular countries and regions due to the lengths of time it is expected to take to construct naological structures and buildings in the name of The Philosophy of Astronism, or one of its schools of thought or denominations.

[2:38:244] Unsophism, and its followers known as unsophists, go beyond the general unsophates, who do not necessarily choose to be unsophates which must be remembered,

by believing that unsophation is a superior way of experience, knowing, understanding, and practising The Philosophy of Astronism, or any one of its denominations.

[2:38:245] Unsophists are expected to generally disagree with all naological aspects of Astronist Philosophy typically because such naological aspects are considered to be distractions from the more central conceptual aspects of the philosophical tradition; this remains an issue and contention for naologists to debate.

[2:38:246] We now come to a large area of study that is fundamentally cross-disciplinary and cross-denominational and holds implications for the disciplines of naology, occurrology, as well as Practical Astronism itself for we come to address noctism and diurism as the two primary approaches to Astronist lifestyle, philosophical practice, and occurrological activity.

[2:38:247] The Nocts are a group either within or external to Astronism that are active during the night just as a diuric person would be active during the day, and therefore nocts sleep during the majority of the daytime hours. Despite the vast majority of humans adhering to diurism, those whom practice noctism, especially for cosmic devotional or observational reasons, are considered to be of a much greater awareness of The Cosmos according to the Astronist philosophical tradition.

[2:38:248] The opposite, as aforementioned is diurism, as is followed by the diurs; the Astronist Tradition does not dislike or discouraged diurism for it expects the vast majority of its adherents to follow diurism, but it stresses that individuals as well as wider society should contemplate the opportunities that reside within adherence to noctism as a lifestyle choice.

[2:38:249] The Astronist Tradition does, however, consider nocts to be greater understanders of the pure essence of the Astronist philosophical tradition for they dedicate their daily lives to cosmocentricity; this involves orienting their lives around the phenomena of the astronomical world and living out their lifestyles so as to stay as connected as possible to the astral night sky which involves being nocturnal.

[2:38:250] Noctisation is the process in which something adheres to noctism; the word "something" is used to indicate that noctisation can be applied to almost any entity, thus owing to various forms of the life method; there is personal noctisation which is adherence to noctism by the one individual.

[2:38:251] There is societal noctisation which is the adherence of the majority of the operatives within a society oriented towards noctism, corporate noctisation which is noctism adhered to by particular companies, an example of such an adherence would be keeping open twenty-four hours a day seven days a week.

[2:38:252] Noctology is henceforth known as the discipline of study dealing with noctism, noct people, the variants of noctisation, as well as the activities and lifestyle conducted by nocts, and the study of the demographics of noct people.

[2:38:253] Noctological study can be categorised as a branch of Practical Astronism as part of logicology, but must also be understood as a cross-disciplinary discipline of study as it is also important and implicative to the disciplines of naology and occurrology, as aforeaffirmed.

[2:38:254] A related term is that which is known as a noctle which pertains to a philosophical event that takes place throughout the night, especially under a clear night sky, or some other astronomical event such as stargazing, and usually only ends upon dawn; the essential challenge and goal is to be able to stay up all night; these types of events are collectively known as noctals, and are part of occurrology as well as Practical Astronism.

[2:38:255] Noctles are to be frequently organised and managed by an Astronist group, company, by The Institution of The Philosophy of Astronism themselves, or by a noctic society, and are expected to be popular events by the Astronist Tradition once they are properly funded and organised.

[2:38:256] Noctism is a belief orientation held by noctlists concerned with noctles and it is believed that noctles are the superior form of occurrological events and activities rather than regular occurrological functions; we must always define the distinction between nocts and noctlists for the latter is not always attributive to the former.

[2:38:257] It is also important to note that nocts is a philosophical grouping of people who choose the noctic approach to lifestyle because of philosophical and astronomical reasons and so, those whom are characteristic of a noctic lifestyle for other reasons, such as those whom stay up during the night and sleep during the day because of their working hours are not considered nocts unless their intention for stay up during the night is because of philosophical reasons; if a person is a noct, they will prioritise their career around that fact first rather than the other way around.

[2:38:258] To provide us with a better idea of what a typical noctic person's daily life would look like in comparison to diuric life, we should consider the times of rest and the times of activity for the two groups.

[2:38:259] Diuric people generally awaken between the times of six a.m. and nine a.m. and are generally awake for between fourteen and sixteen hours and conduct their times of rest between the times of nine p.m. and midnight for between seven and nine hours.

[2:38:260] However, nocts are expected to awaken between the times of six p.m. and nine p.m. known as the bestiration, or bestirancy and are expected to take their times of rest

between the times of nine a.m. and eleven a.m. for between eight and ten hours which is a period known as revention, or revery.

[2:38:261] One of the most important aspects of health for nocts is the extent to which they receive sunlight; the Astronist Tradition stresses that nocts should have at least one or two days a week whereby they receive sunlight on their skin due to the health hazards associated with a lack of sunlight; this may be conducted either by adjusting one's hours of rest to allow for some hours of activity during sunlight hours, or it may mean converting to a diuric form of living during the weekends or one or two other days of the week.

[2:38:262] The Astronist Tradition expects a noctic way of living to be best suited for those without families and young children due to the diuric orientation of schools and other institutions.

[2:38:263] Noctism is also characterised by changes with season and nocts vary greatly depending upon where they reside on The Earth due to the times of sunrise and sunset at different points on The Earth; due to this, different variants of noctism are expected to form according to their locations.

[2:38:264] There are a particular group of nocts known as reverent nocts following the orientation of reverentism which is practised by the doctrine that one must only be awake when the sun is set; this also means that one cannot be sleep while the sun is set; this form of noctism isn't generally adhered to by other variants of noctism and is not encouraged by the Astronist Tradition.

[2:38:265] Reverentism is more easily followed in certain parts of the world than others as some countries have less sunlight in general which would makes the adherence to reverentism must more difficult because these people will have much less hours of sleep while those in countries with much more daylight than nighttime will have ample amounts of rest time.

[2:38:266] That which exists in opposition to reverentism is that which is henceforth known as resilism which takes a casual, flexible, and compromising approach to the adherence to noctism.

[2:38:267] Resilists are characterised by the idea that noctism is best practised with a compromising approach and are typically only nocts for half or three quarters of each week while the remaining days they revert to diurism; resilists do not adhere to strict versions of noctic thought, as is adhered to be reverentists.

[2:38:268] Finally, it is also of immense importance to not confuse noctism with laziness, as it is expected to be portrayed by those whom do not practice it; nocts are considered to be much more active during their awakened times.

[2:38:269] Now we shall move on to that which is known as subordinationism which involves the notion that humanity will be forever subordinate to the progenies and phenomena of The Cosmos, as well as to The Cosmos itself.

[2:38:270] Subordinationism is actually one of the centralmost aspects of The Philosophy of Astronism for its undertones are felt throughout The Philosophy and wider Astronist Thought; the subordinationist orientation can therefore be closely compared to general Astronist understandings of the relationship between and the positions of humanity, other sentient species, The Cosmos, its progeny, its phenomena, and The Universe too.

[2:38:271] Subordinationism is characterised by a distinct cosmocentricity paired with a distinct anti-anthropocentricity for it understands The Cosmos according only to its supremacy above all else within it; furthermore, the progeny and phenomena within The Cosmos hold supremacy over that which exists upon them as had been aforeaffirmed as part of the Astronist approach to the cosmical hierarchy.

[2:38:272] Supererogationism is characterised by the belief that one can always do more for humanity, the world, and The Cosmos than what they have already achieved, and is a notion supported by the Astronist Tradition due to its advocacy for progression, advancement of humanity for humanity by humanity, and because of the notion that work for The Cosmos is endless both in reward and load.

[2:38:273] Supererogationist thought is one of the most important aspects of Practical Astronism due to its centrality of constant advancement and progression without completion; this should also be addressed in and categorised as part of the ideology of Astronarianism.

[2:38:274] Before we begin to introduce and contemplate that which is known as The Cosmic-Chaos Dichotomy, we must address World Astronism which relates to the global and extraglobal nature of The Philosophy of Astronism.

[2:38:275] The term World Astronism also collectivises to include all denominations, schools of thought, orientations, theories, and forms of The Philosophy of Astronism present on The Earth and so is not to be confused with Human Astronism or Cosmic Astronism.

[2:38:276] The former of which relates to all of the forms of Astronist Philosophy adhered to by the human species while the latter relates to all forms of Astronist Philosophy adhered to beyond The Earth.

[2:38:277] These three terms formulate the highest levels of categorisation associated with Astronist Philosophy and shall remain terms used to identify Astronism in its most widespread of collectivised forms.

[2:38:278] To contemplate and appellate Astronism in this way demonstrate the enormous ambitions present at the heart of The Philosophy and its tradition as a philosophy that is going to be adhered to by multiple species on multiple worlds.

[2:38:279] That which is henceforthly known and appellated as a Centrality Star in Astronist Philosophy relates to the notion that stars are the progenitors of all life in The Cosmos which is a belief held by the Astronist Tradition particularly due to the central position of stars, their role as life forces for planets, and their general characteristics as organisers, processors, and initiators of cosmical systems.

[2:38:280] That which is known as The Cosmos-Chaos Dichotomy is one of the most important concepts to contemplate within the entirety of Astronist Philosophy as it remains essential to the way in which the Astronist Cosmology is structured in addition to how the Astronist approach to understanding existence is established.

[2:38:281] The Astronist Tradition understands firstly, The Cosmos, as that which is the perfect order of elements; The Cosmos is the initiator of order, the controller of order, and the preserver of order in simultination.

[2:38:282] Secondly, the Astronist Tradition understands The Chaos that which is the perfect disorder of elements; The Chaos is the initiator of disorder, the controller of disorder, and the preserver of disorder in simultination.

[2:38:283] Note here the use of the term perfect in relation to The Chaos; one may have expected the use of the term imperfect but The Chaos is not this; The Chaos is perfect in the opposite direction to the way in The Cosmos is perfect, but this does not The Chaos imperfect.

[2:38:284] Note also the dichotomic language used to describe these two entities; The Cosmos as the perfect order and The Chaos as the perfect disorder; there stands no other comparable duo that are in such greater removal from one another than The Cosmos and The Chaos, yet their interactions are plentiful and in constant occurrence, each side fighting for control of the elements between, one fighting to retain order and the other fighting to lose it.

[2:38:285] The Cosmos-Chaos Dichotomy is in effect everywhere around us; its functions are in a continuous cycle of push and pull; The Cosmos pulling and The Chaos pushing back onto it, attempting to take control of the progeny and phenomena of The Cosmos.

[2:38:286] The Astronist Tradition has always and will always align itself with the notion that The Cosmos is superior and it is towards The Cosmos that support should be provided, however, this does not mean to say that The Chaos is evil and The Cosmos is good.

[2:38:287] Astronist Philosophy rarely invokes such notions of good and evil for there exists no such concepts on a cosmic level of thought; good and evil are human/sentient qualities; neither The Cosmos nor The Chaos can compute with these aspects of action; simply put, The Cosmos does as it is been programmed and so too does The Chaos, but it is due to their opposition in function that they are dichotomised.

[2:38:288] The dichotomisation of The Cosmos and The Chaos is essential to understanding the Astronist Cosmology for without this necessary dichotomy, the Astronist Tradition argues that there would not be the existence as we do know it now for although it is important that The Chaos does not overtake The Cosmos in control, the existence of The Chaos still remains elemental to the structure of The Cosmos.

[2:38:289] Both of these parts to the dichotomy are mystical, physical, conceptual, and philosophical entities, but it is towards these that we can direct our thoughts in order to understand how and why we are here and what is ultimately be beyond where we are; the final point to make regards the chronology of existence.

[2:38:290] The existential timeline is concerned with the future of existence and friction between The Cosmos and The Chaos will result; at this point, we begin to venture in ultimatological territory and generally eschatological ideas, but the essential point is clear that in the Astronist Cosmology, The Chaos will definitely play a role in how The Cosmos comes to any end.

[2:38:291] We must now press on and address a topic of an entirely different nature, but on that we have addressed before in the discourse, further demonstrating the nature of this discourse as erratic, yet all-encompassing by its nature.

[2:38:292] The nature of Astronarianism and its relations with Astronism must be made clear for if they are not, it is feared that the two terms will be forever interchangeable used which is wrong because they relate to differing elements; for those whom understand their differences, please forgive this reiteration, but it is necessary to proceed along this course.

[2:38:293] Astronism is a philosophy by its core nature while Astronarianism is an ideology and it is herein that we discover the first differentiation between the two which has been aforesaid, especially the specific differences between what a philosophy is and what an ideology is.

[2:38:294] Astronarianism is that which is known as a sister philosophy that sits outside of Astronism, but still remains within Astronist Philosophy, which itself is that which is known as a mother philosophy; a term that encompasses, but does not unite, two or more related philosophies/ideologies/thought systems.

[2:38:295] Astronarianism and Astronism are to be applied different because they concern themselves with differing sections of societal function while Astronist Philosophy is an encompassing term that includes both Astronarianism and Astronism and any other

philosophy that identifies itself as Astronist, but does not necessarily sit within either of these two sister philosophies.

[2:38:296] The Astronist Tradition hopes that the differentiation between these has been clarified and that there will no longer be any confusion or mixture of the two for they remain distinct to those whom do not adhere to ignorance.

[2:38:297] The term that is known as astrotransmutation in the context of Astronist Philosophy perhaps does not belong within this discourse due to the topic it addresses, but it was honestly only ascribed to its topic upon the writing of this discourse after the completion of compendology and so, for chronological reasons, it remains within this discourse despite its divergence from this discourse's topic.

[2:38:298] Astrotransmutation refers to a cosmic event in which a star turns into a black hole, categorised as a phenomena due to it being an event rather than entity itself and therefore is not a progeny.

[2:38:299] However, the Astronist Tradition understands the transmutation of a star, which generally succeeds the occurrence of a supernovae, to be the instance in which The Chaos overcomes The Cosmos.

[2:38:300] This belief is due to the fact that black holes are categorised as chaotic by their natures and so, the instance in which a star becomes a black hole is considered to be the occurrence of something cosmical to that which is chaotic; this is henceforth known as the process of chaosisation as opposed to cosmosisation.

[2:38:301] The study and categorisation of such processes is considered to be a philosophically enriching and important area of contemplation for philosophers to address beyond the auspices of The Omnidoxy.

[2:38:302] We should now venture back into topics that directly belong and address Practical Astronism; within the encompassment of Cosmic Devotion comes the term that is known as a personal inspiration, which are known as private revelations in religious context.

[2:38:303] Personal inspirations are not, however, similar to private revelations in the sense that humans and other sentients are to seek personal inspirations and achieve them rather than receive them from some higher entity as is the occurrence in private revelation.

[2:38:304] Personal inspirations can be described as acts of fulfilment that one achieves after they seek out enknowledge from The Cosmos; The Cosmos provides these inspirations, but only after the sentient being has reached out to attain them through action, thought, devotion, or debate.

[2:38:305] Before we begin to list the different variations of personal inspirations, it is important to note the categorisation of personal inspirations in general; they exist within Cosmic Devotion, but are separate from the Cosmic Devotions of wonderment, laudation, adoration, ponderment, and general devotion; instead, personal inspirations are a category in and of themselves which may utilise these devotional types to achieve inspirations.

[2:38:306] Personal inspirations are made easily identifiable by the use of the term cosmic before each of them, and one of the most important of these personal inspirations to address is that which is henceforth known as cosmic locution.

[2:38:307] A cosmic locution is a communication, typically a theory, or idea, to the ear, sight, imagination, or intellect, considered by the individual to come from the exterior world, especially from The Cosmos because of one's own physical or imaginational explorations, and is to be used for philosophical enknowledge and debate, but also originates from them, which is known as autorignation.

[2:38:308] Cosmic locutions are the most important of all personal inspirations for they rest at the centre of what drives and motivates philosophisations and they are therefore central to the application of Astronist Philosophy.

[2:38:309] A cosmic devotion, not to be confused with devotion itself, is the specific form of devotion to The Cosmos for the reason of receiving personal inspirations from The Cosmos while a normal devotion does not hold this intention for the practice of devotion; normal devotion does not expect to receive any inspirations back from The Cosmos when it is conducted.

[2:38:310] A cosmic vision is a form of personal inspiration that includes imagining about The Cosmos and its progeny and phenomena in such a way that the imaginations are palpable for the envisioner; the imaginations become to look and feel and seem real; cosmic visions are only permitted through individuals rather than through groups of people.

[2:38:311] That which is known as a cosmic apparition is the next form of personal inspiration that one may experience and involves seeing a cosmic phenomena with one's own eyes in the sky above them; this is known as one of the most visually inspiring variations of personal inspiration and may either be experienced individually, or by group as part of the lattermentioned cosmic collection.

[2:38:312] A form of personal inspiration that is henceforth known as cosmic collection, also known as group inspirations, is the instance in which one experiences personal inspiration with a group rather than individually.

[2:38:313] There exists no such thing as interior locutions in Astronist Philosophy which do exist within religious traditions because The Cosmos, its progeny, phenomena, The

Universe, or The Divine are not considered to directly communicate with people through speech.

[2:38:314] As omniaffirmed, Astronist Philosophy does not recognise astrology in any of its own traditions, forms, or applications and it is in this notion that the Astronist philosophical tradition holds similarity to the religious traditions however there does exist those which are collectivised as contributions to astrology by the Astronist Tradition.

[2:38:315] In Astronist Philosophy, it is believed that personal inspirations may only come from The Cosmos as also including The Chaos in this instance, rather than from The Universe, or The Divine for these two entities/realms exist beyond The Cosmos and therefore cannot be known to those whom reside within The Cosmos.

[2:38:316] In the context of personal inspirations, The Cosmos is considered to be the inspirer and the person receiving the personal inspirations is considered to be the inspiree; furthermore to the aforementioned cosmic locution, those whom experience such locutions are known as locutors; locutorship is one of the greatest achievements within Astronist Philosophy and people who achieve such a state are considered to be of a higher illumination than those whom have not.

[2:38:317] Posturology is the discipline of study dealing with the effects of posture and techniques of posture during philosophical debates with the aim of winning the debate; posturologists are concerned with the study of how different postures effect one's believability in their argument, as well as their general ability to achieve the supremation.

[2:38:318] A supremation in the context of an Astronist philosophical debate is the moment in which a debater wins an argumentation through the inability for their challengers to respond.

[2:38:319] Posturological notions and concepts revolve around the idea that postures, along with gestures, are just as poignant in the context of a philosophical debate to the words themselves; this is henceforth known as posturism, followers of which are known posturists.

[2:38:320] The Astronist Tradition expects there to be a vast amount of approaches and methodologies towards posturology and its twin discipline of gesturology, in addition to new schools of thought addressing these practices as part of the wider subject of argumentation.

[2:38:321] For this reason, The Omnidoxy is not the place to establish and develop these approaches to the subject of argumentation though a strong connection will always be made with certain verified books and documents on the topics.

[2:38:322] Gesturology is the discipline of study concerns itself with the same, but instead deals with the techniques and effects in using gestures and generally understands that the

gestures conducted during argumentations are just as powerful in convincing as the words of the argument themselves; this orientation is henceforth known as gesturism, believers of which are known as gesturists.

[2:38:323] Due to their close connections with one another, these disciplines may often be paired together to be known as twin disciplines which is not that rare of a discipline in Astronist Philosophy than one might think.

[2:38:324] Posturology and gesturology are two major disciplines of study within the subject of argumentation and although they are introduced within this particular discourse, they are so pervading that they do exist outside of the auspices of The Philosophy of Astronism and rather exist as part of Astronist Philosophy in a wider sense.

[2:38:325] This is the reason for argumentation's designation as a subject with argumentology which is a discipline specifically deals with the way in which one might argue the concepts, theories, and notions within The Philosophy of Astronism.

[2:38:326] Argumentation as a subject is a wider area of study because it encompasses practices of debate which are not tied to just one philosophy as one is able to debate Astronarianism just as much as Astronism; this is why argumentation and the disciplines within it exist outside of The Philosophy of Astronism itself, yet still pervade it entirely.

[2:38:327] There are a wide variety of postures and gestures as part of debating philosophy within the subject of argumentation and the discipline of argumentology, but these will be detailed elsewhere in books and documents dedicated to such subjects for that level of attention is what they do require.

[2:38:328] Despite this, we can introduce a posture that also includes gestures to provide the reader of this discourse with an understanding of the vastness and somewhat complexity of these disciplines; this posture is known as orans.

[2:38:329] Orans involves standing with the elbows close to the sides of the body and with the hands outstretched sideways, and with the palms up which is the gestural aspect of the posture; it important to note that not all, but many of the postures are associated with particular gestures that suit well to them.

[2:38:330] A closely associated discipline of study is that which is henceforth known proxemics which itself is a pre-Astronist term, but in the context of Astronist Philosophy deals with the interactions between philosophers in philosophical debates, or just the ways in which fellow philosophers may verbally or nonverbally interaction with one another in official circumstances, or in casual circumstances, and is both a discipline of philosophical and psychological study.

[2:38:331] The next three terms to be introduced and outlined herein are in relation to and relevance with omnidoxiology; the first of these terms is henceforth known as non-proclamational authorship as contrasted with proclamational authorship.

[2:38:332] The notion that I have never and will never make claims that I am of some higher knowledge or being, and supports the notion of the mystery from where the philosophy of Astronism originates and how it was triggered to become; this is known as the omnidoxiological principle of non-proclamational authorship.

[2:38:333] This is another really important difference between Astronist Philosophy and religious tradition, as well as philosophical traditions in general because the majority of other traditions proclaim their words as truth, or make proclamations that are not necessarily ever going to be provable and therefore associate themselves with proclamational authorship.

[2:38:334] The second term is that which is henceforth known as omnidoxical nonresistance is the notion held by some that the insentensations of The Omnidoxy should not be resisted for the sake of resisting and should only be resisted against if one can present a meaningful argument that supports or justifies the insentensation.

[2:38:335] Omnidoxical inspiration relates to the notion that myself, as the author of The Omnidoxy, and its authorised editors, appointed by The Institution of The Philosophy of Astronism, were led or influenced by The Cosmos with the result that their writings may be designated in some senses as The Word of The Cosmos.

[2:38:336] It is important to note that omnidoxical inspiration is the primary motivator for the creation of The Omnidoxy, as part of The Grand Centrality of The Philosophy of Astronism, but it is important note that the non-omnidoxical aspects of The Grand Centrality were not driven by omnidoxical inspiration.

[2:38:337] Moving on now, we come to the concept known as cosmic conditionalism which is derived from its religiously originative equivalent therefore it is not entirely pre-Astronist.

[2:38:338] Essentially, cosmic conditionalism is the concept that special inspirations and ambitions are gifted to those who believe in The Cosmos and its cosmocentricity rather than those whom do not; the condition for such gifts of inspiration and greater enknowledge is a belief in The Cosmos.

[2:38:339] This concept of belief is based upon the deeper notion that The Cosmos is the provider of inspiration, and aspiration if one wishes to be open to believing in The Cosmos to attain such inspirations and aspirations; by this notion, The Cosmos grants all inspirations and aspirations.

[2:38:340] It is important to note cosmic conditionalism as it reveals to us a side of the nature of The Cosmos that is intrinsic to its purpose and intercessional abilities with humanity and all other sentient species.

[2:38:341] That which is known as ancestral inspiration refers to the notion that the actions, words, and ideas of one's ancestors should be heeded in order to be applied to one's current aspirations; this may also be known as ancestral influence.

[2:38:342] Ancestral inspiration is not considered to be part of Cosmic Devotion, but is instead unclassified and remains miscellaneous in relation to the other concepts; ancestors are provided with this particular place of reverence particular due to the influence of some ancestral traditions found in East Asia which the Astronist Tradition does see value in.

[2:38:343] This belief and practice is closely associated with being inspired and influenced by the lives of philosophers, astronomers, theologians, and scholars whom have died after one learns about their lives, however, this form of inspiration is henceforth known as

[2:38:344] Manumission in the context of Astronist Philosophy refers to the act of freedom that a belief in The Cosmos is purported to provide according to the Astronist Tradition and the greater knowledge, belief, and devotion to The Cosmos, a greater freedom one will be able to attain.

[2:38:345] Manumissionism is characterised by this belief and manumissionists approach their study and practice of Astronist Philosophy within this context; the various different approaches to Astronist Philosophy in this way form Manumissional Philosophy; manumissionism is explored in much greater depth in the twelfth disquisition of the Omnidoxy known as the Dodecadoxy as part of the study of freedom known as amnology.

[2:38:346] This manumissionist approach to understanding The Cosmos is supported by the Astronist Tradition and in tandem, this is expected to be an area of Astronist Philosophy that is to be of vast expansive potentiality for manumissionists to contemplate and discuss.

[2:38:347] There is an aspect of Astronist Philosophy that is structured upon a three-pronged notion of the existence of The Cosmos that is considered to be within all humans by the Astronist Tradition.

[2:38:348] The first of these is Cosmos in the Heart which relates to the presence of The Cosmos in the heart of a person metaphorically; this means that The Cosmos is attuned, intricicated, and intertwined to the emotions, physical contacts, and actions of a person.

[2:38:349] The second of these is Cosmos in the Mind which relates to the presence of The Cosmos in the mind of a person metaphorically; this means that The Cosmos holds an existential influence on one's way of thinking, one's ability to think in certain ways, and especially on one's inspirations, imaginations, and aspirations.

[2:38:350] The third of these is Cosmos in the Soul which relates to the presence of The Cosmos in the soul of a person metaphorically; this means that The Cosmos resides within one's soul due to the interconnectedness of all existential beings within The Cosmos; each and every individual is considered to share this metaphorical element of The Cosmos inside their souls and not without one's acknowledgement of, devotion to, and imaginations about The Cosmos will they be able to achieve the realisation of the Cosmos in the Soul.

[2:38:351] Each of these prongs of the existence of The Cosmos are related to that which is herein appellated as The Presence of The Cosmos; the notion that The Cosmos, in its bilocalational metaphorical and physical form is present within the three main facets of a person's existence; their heart, their mind, and their soul.

[2:38:352] It is important to note here the inclusion of the term and concept of the soul which is not something that is focused upon in Astronist Philosophy in general, but here it is provided with a place of prominence due to its necessity to the concept; particularly, it is the use of the term that is a rarity rather than the notion that there is a soul inside something that is sentient which begins to relate to notions within the discipline of sentientology.

[2:38:353] The Cosmos Within is the appellation for the notion that the spirit of The Cosmos exists within each and every existent entity in a unique way as an extension of the third prong appellated as Cosmos in the Soul.

[2:38:354] These aspects of Astronist Philosophy are very closely related, if not categorised within Astronist Mysticism as they are primarily based upon the mystical and metaphorical aspects of The Cosmos and the beliefs associated with it in this regard, however, these ideas remain introduced within this discourse due to their reference to how Practical Astronism may be manifested in belief, though their true discussion is best placed elsewhere.

[2:38:355] The Astronist Tradition considers astrolatry and astral religion to solve the query of the original religion; the Astronist Tradition considers astral religion, primarily involving the veneration of celestial bodies, to be the precursory religion to all others and the first form of nature worship.

[2:38:356] Furthermore, the Astronist Tradition does associate its the similarities of its own philosophical tradition to that of the religious traditions and practices of astrolatry; the Astronist Tradition has no qualms about admitting that its philosophy derives from the very earliest of religious concepts, devotions, and worships despite not considering itself and not wanting to be classified as a religion.

[2:38:357] However, and to conclude, Astronist Philosophy links itself to the term urreligion as a way of bypassing the notion that its origination exists with the versions of

religion and philosophy that came long after when the first civilisations of The Earth began to rise to prominence.

[2:38:358] Astronist Philosophy considers itself to ultimately be a triadic hybrid; a mixture of three distinction aspects to form a new; these are its derivation from astral religion and nature worship as the original religion (the urreligion); its derivation from newer religious and philosophical traditions by inheriting their characteristics of organisation; finally, its derivation from the knowledges, technologies, and perspectives of the present age which form the uniqueness of the Astronist philosophical tradition for it is able to hold perspectives on topics that past traditions were not able to due to them pre-existing the achievements of the extolled astronomers, cosmologists, and philosophers.

[2:38:359] That which is henceforth known as cosmic animism is the belief that celestial entities are alive, not biologically, but in a divinical, mystical, and philosophical way for the interpretation of sentient civilisations throughout The Cosmos.

[2:38:360] Cosmic animism stands as a present day manifestation originating from the notions that the Astronist philosophical tradition derives from nature worship and astral religions from ancient times.

[2:38:361] Cosmic animists within Astronist Philosophy believe that celestial entities have both the ability to do, as well as the ability to intercede, and because of this, they are considered to be “with soul” rather than without soul for within cosmic animism, these are the two criteria for being with soul; the ability to take action and the ability to intercede in the existences of others with such actions.

[2:38:362] That which is known as the concept of Cosmic Light, or the Light of The Cosmos relates to the notion and belief upheld by the Astronist Tradition that The Cosmos as a mystical, personal, and philosophical entity is the light for sentient civilisations existent throughout it.

[2:38:363] Cosmic Light is the metaphorical notion that The Cosmos is the guide for sentient action, thought, and feeling through imagination, inspiration, ambition, and belief and exists as this for all forms of sentience existent within its boundaries.

[2:38:364] The Light of The Cosmos notion is manifested in one’s belief that The Cosmos is one’s personal, natural, and all-encompassing guide due to the fact that one lives entirely within The Cosmos and cannot escape The Cosmos; the Cosmic Light notion exists as part of both Practical Astronism and Astronist Mysticism.

[2:38:365] It belongs within Practical Astronism because the Cosmic Light notion is a form of belief that may be manifested in practice, but its true theoretical and philosophical root rests within Astronist Mysticism which is generally characterised by a belief in the mystical, transcendental, intercessional, and spiritual aspects of The Cosmos.

[2:38:366] That which is known as an Astronist mission in the context of the discipline of study of tiritology is an organised effort to spread The Philosophy of Astronism either conducted by The Institution of The Philosophy of Astronism itself, by a partner organisation, an unaffiliated organisation, or an individual and may be done either practically, or digitally.

[2:38:367] All that has been expounded within The Omnidoxy forms Astronist Philosophy, but what of the term known as the Astronist or Astronist worldview? How is this to differ from that which is known as Astronist Philosophy?

[2:38:368] The Astronist/Astronist worldview refers to the framework of ideas and beliefs through which an Astronist/Astronist individual, group or society interprets the world and interacts with it, as influenced by the Astronist philosophical tradition.

[2:38:369] By this definition, we understand the Astronist worldview as something that is moulded around, is interpretational, subjective, and something that is influenced by Astronist Philosophy and therefore exists in an even higher terminological position than the term Astronist Philosophy because it extends beyond in a way that relates to every single individual, every group, and every society in simultination while Astronist Philosophy as term is something that can only be contributed to, but cannot be moulded like a worldview can be.

[2:38:370] Astronist pacifism is the belief categorised and considered within Practical Astronism as well as also being touched upon in Astronist philosophy that all forms of war and violence are unjust and that by laying down one's arms, one is superior in character, thought, and integrity.

[2:38:371] Astronist pacifism as a belief orientation is not entirely adhered to or practised by the Astronist Tradition, however, its general principles of non-violence and the end to war are of course supported.

[2:38:372] However, the Astronist Tradition looks to the periods eras of human civilisation on The Earth and also takes into consideration the stubborn nature of humans when it takes the stance that those whom are threatened must take action to defend themselves against aggressors; entire cultures, philosophies, religious traditions, and people groups have been wiped off the face of The Earth because they could not or would not defend themselves and this cannot and will not happen to the Astronist cultural, philosophical, and societal spheres upon their establishment.

[2:38:373] The Astronist Tradition agrees that it is true to be the nature of humans to fight one another, but the Tradition argues also that it is the nature of humans to want to defend themselves against the threat or instance of attack; both of these are natural

[2:38:374] The Astronist Tradition praises Astronist pacifism for its principles and does support civilisations built and founded by pacifist doctrines and is also willing to assimilate with such civilisations upon their establishment.

[2:38:375] However, the Tradition remains doubtful that such civilisations will, firstly, ever be able to withstand the threat and attacks posed towards them and secondly, will ever be able to sustain themselves for a substantial amount of time.

[2:38:376] Herein we welcome Astronist pacifists to debate with the skepticisms of the Tradition, but by no means does this make neither Astronist Philosophy nor the Astronist Tradition supportive of militarist notions, despite the irony of the similarity of their appellations, which is one of the main gripes of the entirety of Astronist Philosophy and such associations with militarism due the similarity between names are considered both infantile, ignorant, and plainly incorrect.

[2:38:377] An Astronist territory is a region that is not necessarily confined to a particular country and is characterised by an adherence to The Philosophy of Astronism, or any one of its denominations by the majority of the population of the region in question; this is a highly interchangeable term that is not necessarily associated with politics, but may also easily be integrated into a political context; many term in Astronist Philosophy, especially within Astronarianism are of this interchangeable nature.

[2:38:378] Before we introduce many new aspects of occurrological activity, we must first addressing that which is known as the concept and process of denominational union; this involves the instance in which two or more denominations of The Philosophy of Astronism form together to create a hybrid denomination, also known as a neodenomination.

[2:38:379] There exists a variety of process types in relation to unions in this context; the primary one of which is denominational union, but there also exists those of school union, conceptual union, and philosophical union.

[2:38:380] The former relates to the union of two or more schools of thought known as a neoschool; the medier relates to the union of two or more concepts, theories, or notions known as a hybrid concept; finally, the latter relates to the union of two or more entire philosophies, thus forming a hybrid philosophy, also known as a neophilosophy.

[2:38:381] Finally, an item of noteworthiness is that which addresses the official recognition of such unions; it must upheld, in order not to be fraught with inaccuracies, that only The Institution of The Philosophy of Astronism or a prominent and verified philosopher are able to conduct such processes and to succeed in their recognition.

[2:38:382] Only these variations of union will be officially considered by Astronist Philosophy to be unionised; the unionisation of denominations, schools, philosophies, and concepts is a demanding process for a philosopher/scholar due to the need for the

interconnection and suitability of the two or more elements in question; for this reason the process of unionisation must be protected by The Institution and so only itself and the philosophers it trusts are able to conduct such scholarly processes and have them officialised by The Institution and its leadership.

[2:38:383] A new batch of occurrological terms and topics can be introduced which have been directly created during the period of the writing of this discourse.

[2:38:384] Therefore is the term for the brightest star in the night sky on a given observation or during a particular stargazing session; this is to be henceforth known as the *corusca*.

[2:38:385] The action of looking directly and vertically upwards from one's standing position at the night sky with one's head is that which is henceforth known as *acclivation*; to *acclivate*; *acclivative* observation; an *acclivator*.

[2:38:386] That which is henceforth known as a falling star in the context of occurrology is a star that one is observing to be very low in the night sky, so much so that it is hardly visible due to its proximity to the horizon.

[2:38:387] The action of staring at one spot in the night sky, or on one celestial for a long period is henceforth known as *espication*; *espicators* are considered to experience wonderment in a concentrated way; *esplicative* practices are determined by their individuality and their personalism for those practitioners.

[2:38:388] The action of switching off all lights in order to see the stars more clearly is henceforth known as *extrilation*; *extrilators* conduct this practice in order to maximise the visibility of The Cosmos during any given observational session; *extrilative* practices are important to the overall practice of *deambiguation*.

[2:38:389] The action of doing all one can to make the night sky as clear as possible is henceforth known as *practising deambiguation*; *deambiguous* preparations and precautions are of extreme importance to the success of an occurrological activity, particularly one of an observational nature.

[2:38:390] *Deambiguationists*, followers of *deambiguationism*, go a step further than general *deambiguation* as they are characterised by the belief that *deambiguation* is the most important aspect of all occurrological activities and should also be applied in a conceptual sense to the entirety of The Philosophy of Astronism.

[2:38:391] The removal of distortions, distractions, and obstacles in philosophy wherever they arise is considered to be most element to *philosophisation*; the clarification and demystification of philosophy is considered to be the greatest task and the most important of all the duties of philosophers.

[2:38:392] That which is henceforth known as astromeditation involves the practice of meditation in any of its approaches or methods outside during the night, especially when the stars are out; astromeditators can either conduct their practices in groups or alone.

[2:38:393] Astromeditation is a praised practice by the Astronist Tradition and one that the Tradition is expected to influence other traditions of meditation and the Tradition encourages the influence of this.

[2:38:394] Astromeditational techniques are to be studied as a branch of occurrology and are only really to be conducted when there are no clouds overhead.

[2:38:395] Nepholas, also known as cloud wisps, are wisps of clouds that look like wisps of gas and dust as part of the galaxy and The Cosmos during an observation; these are categorised as optical phenomenas rather than a cosmical phenomena.

[2:38:396] Moving on now, a cosmic song, as is manifested by astrosinging is the action of singing during an astronomical activity, particularly during a stargazing session; to astrosing is considered to be both an occurrological, mystical, and philosophical activity.

[2:38:397] Astrosingers are often characterised by their low tones and the lyrics they often choose are from the Astronist Music tradition, particularly those of a Cometanic style; astrosinging can either be conducted individually or in groups and the practice may also be known as cosmic chanting which is more commonly done in groups.

[2:38:398] That which is known as an orisatra, before we explore that which it actually is defined as, demonstrates the first instance in The Omnidoxy of the use of suffix -atra which is to be used henceforthly in an Astronist context and is going to be one of the main characteristics and stylisations of Astronist words to distinguish them from other styles.

[2:38:399] The actual meaning for an orisatra is characterised and alternatively known as a cosmic prayer and involves either speaking or thinking in repetitive motions about how The Cosmos may drive them to be better, to be enknowledgeed, to be inspired, and to be of faith.

[2:38:400] Many other instances of the use of the suffix of -atra are to be developed both throughout Astronist Philosophy henceforth as well as in all other topics of an Astronist character.

[2:38:401] Moving forward we must address the fear of the dark known as nyctophobia and the Astronist Tradition upholds the belief that this should be banished because it does not allow for astronomical activities, especially for children because they are scared of the dark.

[2:38:402] Nyctophobians are considered to present an obstacle in the furtherance of astronomy and so, any nyctophobic inferences or tendencies depicted in film, art,

television, or any other visual medium are generally discouraged by the Astronist Tradition because of the influence this holds over children and their beliefs about nighttime.

[2:38:403] This leads us on to a wider discussion of phobias in relation to Astronist associated topics; the main phobias involved in which are related either to a fear of space-related, astronomy-related, or philosophy-related topics and may be expressed as fear, anger or another negative emotion towards the topic.

[2:38:404] In addition to nyctophobia, we shall consider all the other forms of phobia that impede with the ambitions, beliefs, and principles of the Astronist philosophical tradition; the first of these is henceforth known as cosmophobia.

[2:38:405] Cosmophobians are those whom hold an irrational fear of cosmic phenomena including meteor showers, supernovae, auroral lights, and even solar and lunar eclipses; these people are considered to be anti-Astronist due to their fear, or otherwise negative emotions exerted towards cosmic phenomena and oppositely, the Astronist identity structured upon such so Astronists are to be naturally opposed to cosmophobic views.

[2:38:406] Spaciophobia is the irrational fear of space exploration, typically because of the possibilities that may be realised once space exploration is established and developed to the point at which it is organised and procedured for specific purposes and goals.

[2:38:407] Spaciophobians are those whom wish not for humanity to explore space because of the potential dangers of space exploration, but primarily because of the damaging impacts that space exploration will inevitably have on the established systems, beliefs, and hierarchies on The Earth presently.

[2:38:408] The Astronist Tradition is, of course, entirely opposed to all such spaciophobic notions as it instead embraces space exploration and in fact holds space exploration as one of its main tenets; furthermore, any rationalities for spaciophobia are not recognised by Astronist Philosophy for all reasons for spaciophobia are considered to be regressive in nature and supportive of obstacles in human advancement and enknowledgegement.

[2:38:409] Another phobia to address is that which is known as siderophobia which is the irrational fear of stars, either visually and physically, or even in thought, or depiction; such siderophobians are also considered to be obstaclers to the Astronist philosophical tradition's beliefs in stars and their cosmicalities, beauties, and integralities to life.

[2:38:410] Siderophobic attitudes are especially confusing for the Astronist perspective because stars are considered to be the providers and sustainers of life in The Cosmos so fear, anger, or any other negative emotion directed towards stars is neither considered rational, nor understandable by the Astronist Tradition.

[2:38:411] Sentienophobia is more understandable from the Astronist perspective and involves the irrational fear of sentient life on other planets, or even its presented notion; sentienophobic attitudes are not as abhorred by the Astronist Tradition as other phobias in this discourse are.

[2:38:412] Instead, Astronist Philosophy intends to teach sentienophobes about the possibilities of sentient life on other worlds, the potentiality of cooperation with such civilisations, the enormous change in human culture, belief, and civilisation when such sentient discoveries are made, and the ways to approach sentient civilisations without offending or instilling fear in them or our own populations.

[2:38:413] To digress further for a moment, as a subdiscipline of study within sentientology, that which is henceforth known as enconology, deals with the various different potential methods of approach to meeting, interacting, and initially forming an understanding with sentient civilisations other than our own.

[2:38:414] The Astronist Tradition expects this particular subdiscipline to be of vast public interest and philosophical debate and for there to be established a wide-ranging plethora of philosophical methods, beliefs, orientations, and approaches to this topic.

[2:38:415] Moving on now from our digressions, we come to that which is known as astrophobia which is the irrational fear of celestial objects or other celestials surrounding them; this is entirely abhorred by the Astronist Tradition as an obstacle to people's love and devotion to The Cosmos and its systems and orders.

[2:38:416] The Astronist Tradition sees no room for astrophobes in the future of humanity for their negative feelings directed towards the celestials and the ways in which they function and interact with one another should be something that is championed, heralded, and devoted to rather than feared, angered, or negativised.

[2:38:417] Philosophobia is the next of the phobias identified to be obstacles to the Astronist philosophical tradition and this particular phobia is characterised by a fear, anger, or general negativity of emotions towards philosophy, philosophical debates, thinking deeply or philosophically, and may also be directed towards the Philosophical Spirit itself.

[2:38:418] Obviously, this particular phobia is absolutely in opposition to the Astronist philosophical tradition, but also the Astronist identity, worldview, and way of life as it opposes the entirety of philosophy and due to the synonymisation of that which is Astronist to that which is philosophical, one who is philosophobic is also Millettophobic and against the Astronist thought system and culture by default.

[2:38:419] As aforeaffirmed, Millettophobia, as felt by Millettophobes, or Millettophobians, is synonymous with philosophobia, but is itself specifically related to a fear, anger, or

general negative feeling towards those whom identify themselves as Astronist, Astronists, or any other demonym associated with Astronist philosophy, culture, lifestyle, or identity.

[2:38:420] Millettophobia can take many forms; some followers direct their Millettophobic feelings towards The Philosophy of Astronism specifically, or any one of its particular denominations, or Millettophobic feelings may be directed towards the idiosyncrasies of Astronists, The People's Constitutional Company of Jesse Millette or any of its associated companies or organisations.

[2:38:421] The term may also be directed towards Astronist arts, architecture, entertainment, rendition, literature, or anything else can be described as Astronist as part of Astronist Culture.

[2:38:422] Moving on from Millettophobia, we come to address that which is known as selenophobia which is the irrational fear of moons and The Moon and along with meteorophobia, the irrational fear of meteors, cometophobia, the irrational fear of comets, and heliophobia, the irrational fear of The Sun, these are all grouped with the aforeintroduced cosmophobia and all of which are not understood, recognised, or to be rationalised by the Astronist philosophical tradition due to their roles as obstaclers.

[2:38:423] The final phobia that we must address is that which is henceforth known Melanoheliophobia which is the fear of black holes due to their chaosity; like sentienophobia, melanoheliophobic attitudes are not considered to be entirely irrational, and nor are melanoheliophobes abhorred by the Astronist Tradition for their emotions towards the subject of their phobia.

[2:38:424] The Astronist Tradition understands melanoheliophobic attitudes and in some instances, Astronist Philosophy even attributes such attitudes to itself and its own perspectives on black holes due to the unknownness, chaosity, and the destructive characteristics that oblivions do express.

[2:38:425] To return to the first phobia we addressed in this discourse, instead of enlivening the ideas of nyctophobia and instilling these into people, especially children, the Astronist Tradition supports the notion that darkness and the night, especially the night sky of stars should be loved.

[2:38:426] The Astronist Tradition in general supports the love of darkness, known as nyctophilia, and therefore aligns itself with the belief orientation of nyctophilism; the notion that darkness, and the night, especially in association with the stars and The Cosmos should be loved and embraced by all people; similarly, the Astronist Tradition supports cosmophilia, and its associated orientation of cosmophilism, also known as astrophilia, or astrophilism; The Philosophy of Astronism can therefore easily be described as a cosmophilian, or astrophilian philosophy.

[2:38:427] The Philosophy of Astronism upholds the notion that darkness and the atmosphere of the night in general allows us all to see in a much different, yet clearer way; for Astronist Philosophy, darkness and especially nighttime are associated with clarity due to the removal of the distortions of the world and its lights, as well as the natural lights that outshine the lights of the stars; by this notion, we understand how Astronism shares nyctophilic beliefs and how it can be classified as a nyctophilian philosophy.

[2:38:428] Apologies for the digression into a discussion concerned with phobias and phobias and then onto the Belief Orientation System, but in it is in these digressions of philosophisations that we perhaps find the purest of thoughts, as is believed and upheld by digressionists, as part of the orientation of digressionism in the discipline of study of omnidoxiology.

[2:38:429] Before we return to our discussion of occurrological terms, it must said herein that The Five Astronist Characters, in alignment with nyctophilism, should never be depicted (visual) or represented (written) as fearful at night, especially when the stars are out.

[2:38:430] Depictions and representations of their fearfulness are only permitted when there is cloudcover because, to link it to the philosophy beyond such a stance, the stars and indeed The Cosmos is not able to directly visually guide the characters during the times when the clouds are covering the night sky.

[2:38:431] Returning to our discussion of new occurrological terms, we come to address the various excuses in support of not conducting astronomical or stargazing activities, which are known as inconclinances in the context of Astronist Philosophy.

[2:38:432] In the context of a stargazing activity, examples of inconclinances would be to say it is too cold, too dark, or too scary to conduct the astronomical event; other inconclinations are understandable such as too rainy, too windy, or that there exists too much cloudcover.

[2:38:433] An aphiosophical act is one that does not align with the basic principles of the Philosophical Spirit; being open to a greater knowledge, understanding, and activity of philosophy and The Cosmos.

[2:38:434] That which is considered an aphiosophical act is the act of going to bed/sleep when the stars are out and not observing them for at least a few minutes when they do appear; such an act is henceforth known as rendiscation.

[2:38:435] Rendiscatry is considered immoral and aphiosophical by the Astronist Tradition and all rendiscative acts are discouraged and are what the entirety of Astronist Philosophy is tasked with dispensing.

[2:38:436] As the oppositism to the act of rendiscatry, that which is henceforth known as ospicatry as manifested by the belief orientation of ospicism, and as followed by ospicists, is characterised by the notion that if the stars are out then one must stay up all night to wonderment and philosophise about them.

[2:38:437] Moving on now from our occurrological insentensations we come to briefly address planetary collisions which are considered to be one of the most chaotically inspired yet cosmically resulting phenomena of The Cosmos and are more frequent in the creation of the cosmical system than perhaps we know; this occurrence in the context of Astronist Philosophy is to be henceforth known as the process of transconfliction; this categorised as a cosmochaotic occurrence.

[2:38:438] And we must now press forward onto a penultimate topic of this discourse which concerns the presence of legalism in Astronism and its implications and applications within Astronarianism, which is latterly addressed and its principles outlined.

[2:38:439] Legalism holds a wide variance of forms across different regions of the world due to the vastity of its applications and rather than creating a new brand of legalism in an Astronist context, as is the typical occurrence when a pre-Astronist or non-Astronist system of thought or philosophy is addressed, we shall instead only look to apply legalism in one of its particular forms to an Astronist way of governance; the difference herein is the act of application rather than that of amendment.

[2:38:440] Legalism is the political philosophy based on the idea that a highly efficient and powerful government is the key to social order; in the context of Astronarianism, legalism is applied and integrated in forms of Astronarian government by this simple principle and is characterised by a heightened presence of authority in all political, economic, social, and cultural spheres.

[2:38:441] From the Chinese tradition of philosophy, legalism may also be applied to The Philosophy of Astronism, but in this context, instead relates to the notion that the most efficiently applied, easily understood, and conveniently followed of philosophy is that which heightened the authority of its governor; in this case, the governor is The Institution of The Philosophy of Astronism.

[2:38:442] This application of legalist thought to The Philosophy of Astronism forms a tradition of legalism that can be applied to all philosophical, religious, and ideological systems of thought.

[2:38:443] The goal of legalism in whichever realm it is applied is greater efficiency, order, stability, and security for those it serves; legalist thought has formed its tradition on the idea that the best way of realising this principle is through a greater presence of an authority in whichever context.

[2:38:444] Legalism in the context of Astronarianism ignores questions of morality about how societies should ideally function as such rules are believed to have been formed by others and are therefore either distortional or distractive no matter the context.

[2:38:445] We can identify many ways in which to achieve the legalist's goal of greater efficiency, order, stability, and security in the context of anything that needs governing, and it is these different methods of achieving the vision of legalism that the Astronist philosophical tradition, especially in the context of Astronarianism, finds most interesting.

[2:38:446] Furthermore, legalism maintains that humans are ultimately selfish by their natures; therefore, the only way to preserve the social order is to impose discipline from an overarching authority, as is manifested by the strict enforcement of laws; this can be henceforth known as Traditional Legalism.

[2:38:447] The forms of legalism that are expected to be produced after the Astronist philosophers have contemplated and discussed the methods of legalism are to henceforth collectivised as New Legalism, or Neo-legalism.

[2:38:448] One of the aspects of legalism that Astronarianism shows especial interest and association with is the legalist's exaltation the state above all, seeking its prosperity and martial prowess over the welfare of the common people.

[2:38:449] Essentially, the preservation of the state is the preservation of the common people as a derivation of the state itself; this relates to the wider idea that preserving or saving something will automatically save all that exists within it; this is henceforth known in an Astronist and political context as automationism, and in the context of The Philosophy of Astronism, it is henceforth known as defaultism.

[2:38:450] Another area of interest for Astronist philosophers to contemplate and debate regarding legalism is its great influence on the philosophical basis for the imperial form of government, imperialism as a political philosophy itself, as well as the imperialistic methods of acting, thinking, and systemising.

[2:38:451] Finally, well within the context of The Philosophy of Astronism, that which is henceforth known as philosophical legalism relates to the idea that an adherence to the laws and procedures put in place and authorised by The Institution of The Philosophy of Astronism is superior when in comparison to personal religious faith and it is the latter that should take precedence.

[2:38:452] The application of legalism in this context is expected to be of great debate for Astronists as support for The Institution is of encouraged, but the way in which this support is implemented by legalist thought strays dangerously close to being non-philosophical, and therefore not in alignment with the Philosophical Spirit.

[2:38:453] To clarify about Astronarianism, it formulates a distinctly separate philosophy addressing the social, economic, political, and somewhat cultural aspects of existence from its sister philosophy of The Philosophy of Astronism.

[2:38:454] Astronarianism is therefore only outlined in The Omnidoxy and is not elaborated upon due to its separation from The Philosophy of Astronism, though it remains forever inspired and fundamentally connected to Astronism as its sister philosophy.

[2:38:455] *The Astronist Methodology* addresses Astronarianism in the same depth and coverage as The Omnidoxy addresses and introduces all aspects of The Philosophy of Astronism.

[2:38:456] However, it seems prudent herein and now to clarify some of the most controversial, yet essential discussions to be made about our civilisation and the way it functions, and the reason for the brief inclusion of these Astronist points of view herein is to make the fundamental and inspirational connection between Astronarianism and Astronism.

[2:38:457] It must first be explained that the Astronarian views on controversial topics are organised into five distinct categories, or approaches including concurred, indiffrention, dissuaded, opposed, and ambiguous.

[2:38:458] In this context, the category of concurred relates to the Astronist view of agreement, or to be of the same opinion of a topic and what it entails.

[2:38:459] Indiffrention, however, relates to the Astronist view of indifference to the topic in question; this is characterised by not disagreeing with the act in question, but not encouraging the act to be conducted.

[2:38:460] This, however, differs from the category of dissuaded which is characterised by both a disagreement and discouragement of the act in question although certain forms or versions of the act may be permitted in particular circumstances.

[2:38:461] That which is categorised as opposed in this context is both disagreed with and discouraged without any exceptions in any circumstances and that which is categorised as ambiguous relates to the instance in which the Astronist view is multi-faceted when addressing the topic in question; essentially, the Astronist view holds two or more approaches to the topic and refers its views are ambiguated.

[2:38:462] The first and foremost of the topics to be discussed is that of abortion to which The Philosophy of Astronism is opposed in all its forms and at all stages of pregnancy for the simple reason that new life must always be prioritised over all social, cultural, or political circumstances.

[2:38:463] For the fact that these parameters of society, culture, and politics can change and even though a mother may be absolutely against completing her pregnancy under one set of circumstances, another set of circumstances may change her opinion; we mustn't let the surrounding circumstances of the pregnancy affect the pregnancy itself and it is this that The Philosophy of Astronism is advocating to preserve.

[2:38:464] Even if the mother is adamant that she doesn't wish to be a mother and wants to abort, The Philosophy of Astronism maintains that the children certainly must not be aborted as there are alternative means of life for that individual; adoption and fostering are two examples this.

[2:38:465] The Philosophy of Astronism considers the foetus to be a sentient being from the moment of conception for this is the natural creation of life, however, it is important to note that Astronism does not oppose abortion in the same way that religious traditions do, or for the same reasons.

[2:38:466] Some religious traditions oppose abortion because their God has condemned it, or for other divine reasons while Astronism takes the naturalist stance and considers abortion to be against new life as well as entangling humanic, societal, or cultural circumstances with the processes of nature which is deemed to be explicitly wrong by all accounts.

[2:38:467] Even under medical grounds, The Philosophy of Astronism still remains at least suspicious of the practice of abortion for it remains opposed to abortion in all forms and at all stages of the pregnancy; it maintains that several unbiased doctors must verify the condition of the embryo before it is terminated for medical reasons.

[2:38:468] Further to this, The Philosophy of Astronism contributes newly formed factors to support its stance on abortion as has been aforeaffirmed in previous and latter discourses, one of the most prominent known as potentialism.

[2:38:469] Potentialists oppose abortion because the practice halts the potential for the life of a human being that may have contributed to the world in a way that, once the abortion has been conducted, we will never know.

[2:38:470] The principal issue that Astronist Philosophy holds with abortion is its termination of potential; a person isn't just a person in eyes of Astronist Philosophy; they also encompass their contributions to the world, the children they conceive, the ideas they generate, the people they help, and the inspirations in others that their life initiates.

[2:38:471] Potentialists understand this concept entirely and orient their stance on abortion around this due to this being the primary reason for the Astronist opposition to abortion for no matter the social, cultural, or political circumstances at the time of the child's birth, they could contribute to the world in ways that we cannot imagine just as many of the world's great philosophers, entertainers, politicians, writers, and a whole host of other

successful people have come from broken homes, poverty, homelessness, abusive relatives, war-stricken regions, and many other tragic and unpleasant circumstances.

[2:38:472] Therefore, it is in potentialism that the essence of the Astronist opposition to abortion is revealed to us and it is by this notion that we understand difference between the Astronist stance on abortion and other philosophical and religious stances on the topic.

[2:38:473] One of the main arguments often used in debates to distract from the vast majority of cases of abortion almost as an argument to justify all abortions is the question of rape and incestuous pregnancies.

[2:38:474] Even in this case, the principles of potentialism still maintains its stance for such circumstances are categorised as part of humanic, societal or cultural circumstances and are therefore not given medical classifications and from the perspective of The Philosophy of Astronism, are not deemed to justify the act of abortion.

[2:38:475] When the example of rape and incestuous pregnancies is raised, one must immediately identify the tactics of the opposing debater as attempting to justify the entirety of abortion by using the marginal and extreme examples of rape and incest for grounds to justify the entirety; this argument must be immediately identified for what it truly is; distortive and illegitimate.

[2:38:476] In the particular case wherein a choice must be made between the mother and the child at the later stages of pregnancy, Astronist Philosophy maintains that all mothers should want to provide their child with life even if this means sacrificing their own life, however, depending upon the context of this particular circumstance, Astronists are provided with an opportunity of choice.

[2:38:477] If the mother is conscious and is able to make a sound decision for herself, then she can elect to either sacrifice her life for the birth of her child, which is known as sacrificialism, or she can choose to abort the child; this is considered to be an abortion within justifiable medical grounds.

[2:38:478] In a case wherein the mother is unconscious and isn't able to make the decision for herself, several unbiased doctors are required to analyse the mother and the child's state and determine which of the two are more likely to survive healthily, and from there, the decision becomes the responsibility of the medical team.

[2:38:479] If both the mother and the child have an equal chance of survival and the mother remains unconscious to make the decision for herself, then the decision rests with the father of the child in close association with the medical team analysing the case; by the explanation of this notion, we understand the Astronist view on abortions in the case of maternal life concerns.

[2:38:480] Astronist Philosophy does not accept the grounds for abortion in the cases of foetal defects, general health concerns, or mental health defects; for to this, Astronists are expected to absolutely oppose and hold abhorrence for sex-selective abortions and discourages this practice in regions of Asia where it remains common.

[2:38:481] One notion that we must take away from our brief discussion of the Astronist view on abortion is the differentiation made between the Astronist/philosophical reasons for the stance taken on the subject when compared to the reasons provided by other philosophical and religious traditions; Astronists always wish to differentiate their reasons from other groups on certain topics in order to demonstrate the unique of the Astronist view on controversial topics as not exactly aligning with the traditional sets of views associated with the left, right, centre, or otherwise.

[2:38:482] As we move on to the topic of euthanasia, we shall continue this principle of differentiation in reason, and on this topic, which Astronist Philosophy herein considers to be the hardest of all topics to approach and to make a firm conclusion on which points to the reason for the Astronist stance on euthanasia remaining ambiguous.

[2:38:483] The ambiguity of the Astronist approach to euthanasia rests in the particular forms of euthanasia and the Astronist philosophical tradition's rejection of certain forms of the practice, and its acceptance of others.

[2:38:484] The first Astronist approach to euthanasia is known as unnaturalism and holds that death is a natural occurrence, but human culture, societal establishments, and portrayals of death in media have distorted the fact that death is a natural occurrence and is the subsequent, irreversible, and inescapable part of life; that both life and death are fundamentally tied without any exceptions for extrication.

[2:38:485] For to this, the unnaturalist stance holds that the emotions stirred up that the vast majority of humans now engage in are distortive of the true essence, occurrence, and purpose of death; unnaturalists understand the human view of death to be unnatural rather than death itself being unnatural and something to be feared, opposed, or purposefully obstructed against.

[2:38:486] An Astronist that is oriented as an unnaturalist prefers to allow nature, particularly as it is considered to be a derivation of The Cosmos, to take its course and therefore euthanasia cannot be permitted under this belief orientation.

[2:38:487] Especialism is the next of the Astronist belief orientations approaching the topic of euthanasia and holds that the act of euthanasia is an individual and personal act of compassion for the receiver asking to be euthanised.

[2:38:488] This should only be allowed, however, under a controlled passive form of euthanasia so as not to allow for the distortion and extrication of the practice, which is so easily done as again, euthanasia is a private and personal act and one that is usually

conducted within the privacy of one's home which makes the practice difficult to regulate; this is the main gripe concerned with the specialist approach to euthanasia.

[2:38:489] The view of the cosmicist in this context, rather than existing as a belief orientation in and of itself, considers whether one is euthanised or not, does not negatively affect the wider functionalities of The Cosmos, and it should therefore be allowed, or not should not even concern Astronists depending on the specific beliefs of the cosmicist in subject.

[2:38:490] From the short outlining of these approaches and stances on euthanasia, the ambiguous Astronist stance on euthanasia is clarified and its ambiguation is affirmed, but to further categorise the Astronist view on euthanasia, we identify passive euthanasia, active euthanasia, and assisted suicide.

[2:38:491] The former is concurred by Astronists, the medier is opposed, and the latter is also opposed and the topic of euthanasia is expected to be contemplated further in *The Astronist Methodology*, as well as fiercely debated amongst Astronists due to its status as ambiguous and that itself is a rare status to hold in the context of Astronist Philosophy.

[2:38:492] We now move on to the topic of the death penalty, or capital punishment as it is officially known; the Astronist philosophical tradition is generally opposed to capital punishment on all accounts expect for one circumstance wherein the application of the death penalty is not only concurred with, but it is encouraged.

[2:38:493] This would be in the case of an act of terrorism which Astronist Philosophy defines as a pre-planned, physically violent, mass murderous, and/or destructive act conducted by an individual, or a wider organisation that targets either a specific group, or the general public for the purpose of sending a political, ideological, or religious message.

[2:38:494] Terrorism can be categorised as an appendage to murder, but the main aspect of terrorism that defines it from murder alone is that it is conducted to spread an idea, or a message to the wider public sphere rather than for individual gain or purpose, as is sometimes the reason for murders to occur, for example a shooting in which the murderer wishes to steal something, or a stabbing that has taken place for vengeful reasons.

[2:38:495] The Astronist philosophical tradition holds steadfast in its decision to support the conduct of capital punishment for the terrorists of the world, but only permits this via a lethal injection and by no other means of execution.

[2:38:496] Furthermore, Astronist Philosophy concurs with the notion and wishes to develop the practice of life or permanent rehabilitation for those whom have committed capital crimes, or felonies, an example of which would be murder.

[2:38:497] In addition to this, and on a similar note, the Astronist philosophical tradition advocates for the reinstatement and reinstitutionalisation of psychiatric hospitals as an

extension to its concurrence with life or permanent rehabilitation as those whom are mentally ill, or induce psychiatric illness due to drug taking.

[2:38:498] One of the main deviations that Astronist philosophy steadfastly maintains in opposition from the rest of the world is its concurrence with the activities of sentient cloning, or the cloning of human beings.

[2:38:499] The Astronist philosophical tradition does not mean to suggest any type of system or ethics code for human/sentient cloning, or even the potentialities of this practice, but instead wishes to explore the practice of cloning both on a sentient and non-sentient level; at this stage, Astronist Philosophy only wishes to explore the practice theoretically and philosophically.

[2:38:500] In close association with the practice of cloning comes the practice of mass robotics which the Astronist philosophical tradition is also in an orientation of concurrence towards due to its expected benefits for domestic life, as well as economic, industrial and commercial activities.

[2:38:501] Further to this, Astronist Philosophy also supports notions of the ethics of robotics and wishes to be fundamental in the development of ethical robotics, as well as the legal, social, and cultural state of robots in an Astronist society.

[2:38:502] The Astronist philosophical tradition understands both the practices of cloning and mass robotics to be part of the future humanic civilisations as well as pinnacle points of philosophical contemplation and debate for all Astronists, and is to be further explored in *The Astronist Methodology*.

[2:38:503] In addition, the practice of cryonics is also concurred by the Astronist philosophical tradition and this has been aforeaffirmed and omnimentioned in *The Omnidoxy*, but its political, social, financial, and commercial aspects are discussed and categorised in much greater depth within Astronarianism.

[2:38:504] Moving on now we come to the topic of homosexuality which, for the last fifty years at least, has been one of the largest points of contention for all of the religious traditions especially as the governments and societies around them have become more tolerant of the sexual orientation, but only recently has this debate ventured into the realm of philosophical contemplation and debate.

[2:38:505] The Astronist perspective on homosexuality, and the majority of all the other sexualities is heavily influenced by the cosmicistic view which pertains that the sexuality of an individual, or even a group of people will not negatively impact upon the functionalities of The Cosmos.

[2:38:506] In addition, The Philosophy of Astronism is not founded in a country or an era in which different sexualities from heterosexuality are persecuted for freedom is provided in the nation in which I sit to write The Omnidoxy.

[2:38:507] As is explored and discussed in the discipline of study of prerology, the primary goal of the human body, mind, and spirit is to attain freedom from oneself, from those around oneself, from the objects surrounding oneself, and the thoughts from within oneself by alleviating suffering, hardship, struggle, tragedy, torment, and turmoil.

[2:38:508] With this prerological principle set in motion, Astronist Philosophy sees no logic in attempting to stop a relationship between two individuals that happen to be of the same gender; Astronist Philosophy does not hold the prejudices of other traditions and sees no logical argument against allowing same-sex relationships and marriage.

[2:38:509] The same is applicable for all other sexualities including transsexuality, bisexuality, queer/questioning, intersexuality, asexuality, and pansexuality as each of this is not to be considered harmful, and neither are they logically or rationally detestable.

[2:38:510] Two more sexualities are also of Astronist concurrence which include omnisexuality which relates to a person with multiple sexualities throughout their life, as well as demisexuality which is a person who does not experience sexual attraction unless they form an emotional connection.

[2:38:511] The Astronist perspective on sexuality in general is that the exploration of one's sexuality is a positive and progressive act for themselves if they do so wish to explore such avenues of their person and they should be respected for this, but equally, those whom wish not to explore other variations of sexuality must not be targeted or ridiculed, but respected for their opposite decision.

[2:38:512] Artificial contraception is concurred by the Astronist philosophical tradition, however, only those forms of contraception that do not act by killing the fertilised egg or prevent implantation are permissible as the Astronist Tradition believes life to begin at the moment of conception so for the contraception to be permissible it must only act in preventing the conception rather than in any other format.

[2:38:513] The Astronist approach to the topic of pornography is characterised by dissuasion as watching pornographic films is considered to hold a negative impact on the watcher in relation to their own physical, and mental wellbeing and for this reason alone, the Astronist philosophical tradition cannot concur, and it certainly cannot encourage the watching of pornography.

[2:38:514] However, it also does not go so far as to make pornography and the watching of pornography to be attributive to an illegal act as is the case in some nation states, and as it is considered to be according to various religious traditions; herein, we discover the

difference of severity between that which is dissuaded by the Astronist philosophical tradition, and that which is opposed, with the latter, of course, holding greater severity.

[2:38:515] The addiction of smoking, including all its alternative forms such as shisha, is provided with a response of indifference from the Astronist philosophical tradition so therefore it is never to be encouraged, but it is tolerated under instances of small dosage use due to its insignificance.

[2:38:516] The act of smoking is not impactful upon the wider functionalities of The Cosmos, or even the society in which one resides which relates to the general cosmicist view of an act, as well as considering the fact that smoking has been a pass-time of many cultures, and has often been at the centre of socialising, and even debating; for this reason, it exists within indifference rather than dissuasion.

[2:38:517] The Astronist Tradition only authorises that smokers should be courteous of the smoking preferences of those around them; for instance, if there people within one's proximate vicinity, it would be best to smoking away from them, or do it in a discreet way, especially so in asking permission if you wish to smoke inside someone's house, or car.

[2:38:518] In addition, people should not smoke around children, smoking should certainly not be glorified, it should not be done around those with pre-existing chest issues, and the Astronist Tradition is dedicated, in alignment with the operations of The People's Constitutional Company of Jesse Millette and its subsidiary organisations, in ending the targeting of vulnerable individuals to become smokers by tobacco companies which is deemed absolutely immoral.

[2:38:519] The stance of indifference is taken by the Astronist Tradition also because of the notion that tobacco products will always be available so its dissuasion is fruitless due to the temptations of man, but also it will not affect the functions of The Cosmos as has been influenced by the cosmicist view.

[2:38:520] As we now move on from the act of smoking, we come to the act of voting as part of the political process of a society which the Astronist view finds to be fundamental to the structure of a community, society, and civilisation at increasing levels of size respectively.

[2:38:521] In the context of Astronarianism, the perspective on voting is concurred with at the age of fifteen which is expected to be integrated into the laws as the official public age of voting.

[2:38:522] The reason for such a reduction from the average of eighteen is because this is believed to ignite an already present interest and understanding of politics for people of age fifteen and older; providing such a young people with the power of vote gets them to understand the concept of responsibility.

[2:38:523] A responsibility for the society in which they reside and when such votes they could have or did contribute to hold consequences for the way they live, they will understand that the actions they conduct are consequential to both themselves and those around them; their actions hold gravity and this is an important lesson to learn for all people and the younger this lesson is learnt the better according to the Astronist philosophical tradition.

[2:38:524] Astronists believe in the power of the minds and hearts of young people and believes that they should hold the ability to interact with and be part of decisions for the society in which they reside which is expected to propel young people forward and make them think about their own actions, what they say to others, and how they interact with their community and the wider society in which they reside.

[2:38:525] Astronists argue that if people of the age fifteen and up are interested enough and intelligent enough to make a decision about a political vote and to physical go to vote, then their vote should not be considered in any inferiority to the votes of those whom are older.

[2:38:526] Furthermore, Astronists hold that a political vote is likely to impact upon the lives of the youth more than any group for they are the beacons of the future and so to provide them with the ability to determine their futures rather than leaving such decisions solely to the minds of other generations.

[2:38:527] Astronist views on voting will perhaps be condemned by those of older age, but the stance still remains strong in the notion of why we should not trust the youth to lead the way in society for the youth are the embodiment of the future and it is this group that we must cherish, guide, and support for the betterment and security of the future of the society and wider civilisation.

[2:38:528] Astronarianism is made distinct by its focus on the youth of a society as it seeks to empower the youth to form the society they wish to live in and they wish their own children to live in rather than the society that their ancestors lived in; juvenility is considered a great power in Astronarianism and is granted with a position of superiority above all other groups due to its association with the future of the civilisation.

[2:38:529] For this reason, juvenism, which is a Astronarian-originating belief orientation and system of state governance wherein the youth, the needs of the youth, the issues of the youth, and the majority of the opportunities are provided to the youth rather than other generations, typically considered to be those under the age of thirty, but may be lower than this depending on the application.

[2:38:530] Juvenism as an ideology is much more greatly explored in *The Astronist Methodology* but its essential premise is based upon the notion that the youth should be prioritised in governmental policies and other societal instruments because they demonstrate the future security of the nation and so, holds the notion that the youth

should be preserved in a way that allows each and every young person to achieve their greatest potential to further the society.

[2:38:531] Juvenism, as aforementioned, exists an ideology within Astronarianism and is expected to be commonly associated with youth-oriented government policies, greater funding for youth organisations and other youth-focused programmes, as well as juvenocentric forms of propaganda, media, philosophical orientation, and wider culture.

[2:38:532] We now come to one of the most hotly debated topics outside of the country in which I write this disquisition and that is the topic of the availability, role, and usage of guns in a society.

[2:38:533] The Astronist philosophical tradition holds a position of opposition to the role of guns in society and to notions in support of guns and gun violence, the Astronist Tradition sees it only as a notion of logic to remove the initiator from the occurrence for the removal of the initiator is considered to halt the unwanted occurrence; the simplicity of this logical notion cannot be convincingly argued with expect if guns are integrated into a cultural sphere of a people and the nation in which they reside.

[2:38:534] Therefore, when we speak of the removal of guns, we do so by the notion that they must be removed from all aspects of a society, both the commercial and the legal, and but most importantly, the cultural.

[2:38:535] From the perspective of the country inside which I write this disquisition, we do not hold any gun culture; it simply isn't a factor that enters the minds of those whom have been integrated by such a culture.

[2:38:536] The political and cultural disintegration of guns from all societies in which there exists gun cultures will inevitably lead to the civilisational disintegration of guns which is then expected to reduce their usage, their ability to be obtained, and therefore the reduction in mass shootings, but this is also expected to have a positive effect on other aspects of crime in societies including gang culture, drug-trafficking, and domestic abuse.

[2:38:537] Such lobbies that support one's right to hold arms are the progenitors of shootings for they allow individuals to possess the instrument with which the shooting is made possible and so therefore, they are to be blame; again, the only logical notion is to remove that which ignites the unwanted occurrence and with the increased frequency of shootings, such pro-gun lobbies cannot hold individuals to blame, but instead their ability to obtain guns and the cultural integration and approbation of them; whatever the case, the Astronist philosophical tradition opposes all forms of guns, either their physical availability, or their representation and depiction in forms of media such as films, books, art, and television series.

[2:38:538] The next of the topics to be considered by the Astronist philosophical tradition is that of suicide which Astronists hold a stance of indifference towards which is in divergence from many of the religious and ideological traditions on the same subject.

[2:38:539] Suicide is not considered to be an immoral act as the application of philosophical mercy is applied to the Astronist approach to suicide and instead of associating suicide with immorality, considers it accordingly to compassion, thoughtfulness, and the human desire for freedom from their worldly troubles which relates suicide to a prerological issue.

[2:38:540] The Astronist philosophical tradition holds a stance of indifference on suicide because it is believed that those attempting to or those whom have committed suicide should not be stigmatised for this act, but should instead be welcomed by those around them so as to comfort and protect them from themselves and their own distorted thoughts.

[2:38:541] The organisations dealing with suicide and suicide attempts, as well as those close with a person they know is suicidal should hold unfading compassion for the individual to try and understand the reasons for them wanting to commit suicide which are typically for medical reasons including one's diagnosis with a terminal illness or suffering from mental health issues, or for societal reasons including finances, for the political situation such as one's residence in a totalitarian state, in the case of war, bullying, depression, anxiety, or some other cultural, societal, social, or personal issue

[2:38:542] To commit suicide is therefore not condemn as an immoral act for the association of cultural and societal disdain for suicide is not expected to stop its occurrence, but in the Astronist Tradition, it is considered a personal act and the loneliest act to commit in the world for to live in such a state whereby one considers one's life to be without hope of improvement is a state of extreme introversion, loneliness, emptiness, and purposelessness.

[2:38:543] In the Astronist philosophical tradition, death is known as the instance in which one becomes One with The Cosmos and this term is also used to relate to suicides in the same way.

[2:38:544] Instead of focusing on the morality of the individual that is suicidal or that has committed suicide, the Astronist Tradition instead looks to the surrounding factors for one's suicidality and condemns those aspects rather than the individual themselves.

[2:38:545] Another form of suicide that has been aforementioned is the instance in which a mother knowingly sacrifices herself for her baby in the context of pregnancy or birth which is known as sacrificialism, and is considered a form of suicide.

[2:38:546] Overall, the Astronist Tradition approaches the topic of suicide with a stance of indifference because the person that commits the act of suicide is not considered condemnable for their act for they are not considered to be in a sane state during their

attempt, or the completion of the act of suicide; they are not considered to be their true selves during such times.

[2:38:547] The topic of cannabis usage is the next topic to address in this discourse and from the perspective of Astronarianism, it takes a stance of dissuasion towards this recreational act, but one's particular conduct of the act itself is not to the detriment of others.

[2:38:548] Yet equally, depending on one's beliefs, the usage of cannabis may be considered to enhance one's ability to philosophise, although this is opposed by the belief orientation of abstinence which is latter introduced and of which the Astronist Tradition is a staunch supporter.

[2:38:549] A different stance is extended to the consumption of alcohol, however, which is considered according to indifference by the Astronist philosophical tradition to being a means of socialisation, but is not considered to be means of greater philosophisation in the same way that forms of cannabis could be interpreted.

[2:38:550] Either way, both forms of recreation are not encouraged by the Astronist philosophical tradition, but are considered to be accompaniments to socialising and for this reason, are not opposed, but are nevertheless not encouraged by the Tradition as that would be immoral as these two forms of recreation are not considered to be the healthiest or most ethically uplifting forms of leisure.

[2:38:551] However, the Astronist philosophical tradition does recognise the ability of alcohol to loosen people's nerves as a means for greater honesty in debates and in socialising leading to greater philosophisations through discussion, but it is important to note that in this way, alcohol is only considered a secondary factor of greater philosophisation rather than a primary, or direct factor like the consumption of cannabis may be believed to exist as.

[2:38:552] Further to this, we must not fall into the trap of the glorification of the excessive consumption of alcohol, smoking, and cannabis through corporations, advertisements, and wider media such as in films, and television programmes.

[2:38:553] Lionisation is the official term for this process; the belief orientation known as lionisationism, or lionism for short, is when someone believes that an act or a product should be given mass public attention and approval through its glorification in media.

[2:38:554] Oppositely, the belief orientation of antilionisationism, or antilionism, is when someone believes that an act or a product shouldn't be given mass public attention and approval through its glorification in the media; the Astronist Tradition holds this antilionist view when it addresses the acts and products of alcohol, smoking, and cannabis.

[2:38:555] It holds this antilionistic viewpoint not for theological reasons, but for consequential and circumstantial reasons of the physical, emotional, mental, societal, and familial consequences associated with the glorification and promotion of the proliferation of such acts and products.

[2:38:556] It can be fairly stated that the antilionistic application to certain topics is taken as an alternative to directly opposing them and is typically coupled with the standpoints of indifference and dissuasion.

[2:38:557] If the Astronist Tradition is indifferent or dissuasive of something then it will typically call for the removal of it from the mass media, providing corporations that deal with such objects or services the power to influence through sponsorships, as well as restrict the times and places in which such products and services can be bought and experienced.

[2:38:558] Entirely differently, drugs in the context of recreation and habit, except alcohol, are absolutely opposed to by the Astronist philosophical tradition due to them being considered the epitome of evil for the impacts they hold over the takers and those around them.

[2:38:559] Therefore, all forms of drugs other than alcohol and to a lesser extent cannabis are opposed to in any forms that they are taken due to the totalitarian domination that they develop to hold over the individuals that are sadly caught up in an addiction to them.

[2:38:560] The taking of harder drugs than alcohol and cannabis on a mass scale is considered to be the greatest threat to civilised society by the Astronist philosophical tradition, and a costly one at that for such individuals are not thought to ever be returnable again to their pre-addiction states of mind and being.

[2:38:561] Particularly it is the affects the act of taking hard drugs holds on the family and the correlation between broken homes, fostered children, domestic abuse, poverty, and child malnutrition with the taking of drugs is horrid and is only considered to worsen with the continual liberalisation, normalisation, and approbation of drugs and drug-taking activities.

[2:38:562] The statement of differentiation that the Astronist Tradition makes between alcohol, which it is indifferent to, and cannabis, to which it is dissuaded, and the taking of harder drugs, to which it is opposed, is that the former two are taken with much less severity for addiction and they are conducted in social settings for greater social engagement and celebration.

[2:38:563] However, the latter is considered to be taken for reasons of pure addiction, they are largely illegal, both the selling, the buying, and the consumption of, as well as it being widely known that most class A, B, and C drugs are addictive to the brain from the

moment they are first consumed, after which the person is hardly ever successful in abstaining from consuming them again.

[2:38:564] The Astronist Tradition does not leave the topic of the taking of both drugs and drinking alcohol at that for instead, Astronarianism attempts to address the reasons for people's need of escapism from their lives in modern society and attempts to define conclusions regarding this, as well as making the distinction between escapism and freedom in this context; this is something discussed in *The Astronist Methodology*.

[2:38:565] There exists two belief orientations association with taking of heightening drugs such as cannabis and alcohol specifically that subsequently form a dichotomy; these are inebriationism and abstinism.

[2:38:566] To explain the dichotomy, inebriationists belief that consuming cannabis, alcohol, or smoking heightens one's ability to perceive The Cosmos and therefore, better positioned to contemplate its vastness and think of new ideas.

[2:38:567] Oppositely, however, that which is known abstinism oriented on the belief that abstaining from drinking alcohol, taking drugs, or smoking will provide one with a clearer mind to observe and contemplate The Cosmos.

[2:38:568] Abstinists are particularly characterised by a sense of purity within their minds having not been influenced by intoxicants during times of philosophisation; the essence premise of abstinism rests in the notion that those whom take intoxicants for the purposes of greater philosophisation only think their minds expand to a greater extent, but in reality, this expansion is an illusion.

[2:38:569] These two belief orientations are expected to dramatically divide Astronists on the proper application of philosophy in practical and social senses; the Astronist Tradition, however, firmly takes the side of abstinism in this dichotomy as it is considered to hold greater moral upstanding than inebriationism so therefore the Tradition holds a abtinist position on this particular dichotomy, however, some expected to argue in favour of the inebriationist approach as they argue that they cannot knowingly disagree with the truth of the practical enhancements that are provided by inebriating intoxicants, but also considered is the fact that the dependence upon such intoxicants demonstrates unhealthiness and a sense unethicity; it is herein that we find the powers of partition that this dichotomy hold over its contemplators thus pertaining to the reasons for its divisive abilities between Astronists; in our address of abstinism, we must not confuse it with the practice of some within Astronism and that which is to be known as contranarcotism, biotism, probioticism, or organic purism which has been aforestudied and aforeexplored within the inclusive discipline of abettology as part of the Duodoxy, specifically as part of our consideration of the nature of aid and the role of medicaments.

[2:38:570] Finally, there also exists the concept that is considered to be part of Astronist Mysticism, but is introduced herein due to its proximity in association to the topic of

external intoxicants that we are herein addressing, but the subject of the concept we are about to introduce refer to an intoxicant of a different source and much purer nature.

[2:38:571] This concept is known as cosmic intoxication which relates to the notion and belief that someone who becomes high over cosmic thoughts, as if part of some sort of ecstasy, is the purest way of achieving the greatest philosophisations.

[2:38:572] Cosmic intoxication as a concept is essentially characterised by one's intoxication of The Cosmos itself which is something that is both concurred and believed by the Astronist Tradition and this is also something that the Tradition's believes can happen to any person whose mind is open to it; the instance in which this happens may be alternatively known as cosmic ecstasy, as part of a larger category of philosophical occurrences known as philosophical elations.

[2:38:573] Philosophical elations are closely related to cosmic devotions, but are instead results of cosmic devotions rather than existing as cosmic devotions themselves and are characterised by a personal and individual experience of complete and utter awe for The Cosmos, or some other philosophically related concept, or entity.

[2:38:574] Philosophical elations are also categorised within Astronist Mysticism due to their mystical natures and can be said to be equivalent to religious ecstasies, but are distinctly philosophical in that there is no transcendence of one's body, but only transcendence of one's mind through imagination, inspiration, or visual or physical contact with a cosmic entity.

[2:38:575] However, philosophical elations and religious ecstasies do remain similar in the sense that they are both characterised by a loss one's awareness of the world around them; due to this aspect, philosophical elations may also be described as intoxicants as they subvert one's surrounding environment in place of the elational emotions and aspirations that do replace one's awareness of both themselves and the world around them.

[2:38:576] The topic of prostitution is next on the agenda for us to approach under the auspices of an Astronist philosophical view.

[2:38:577] The Astronist philosophical tradition remains opposed to both the industry, the act, and the organising of prostitution and is sickened by its prevalence in many countries of the world, and to the most vulnerable of both men and women.

[2:38:578] The Astronist philosophical tradition sees no purpose or betterment to the allowance of prostitution in a society for it is considered to promote the degradation of women, especially the most vulnerable women in our societies.

[2:38:579] By the same principle of this notion, we must not forget the vulnerable men whom are groomed to the trade of their own bodies to survive in grossly unpleasant conditions.

[2:38:580] The essential premise is that the Astronist Tradition asserts that order must be maintained for the sanity and proper functionality of the society in subject and by allowing the most vulnerable men and women of our civilisation sink to such levels of self-depravity cannot happen.

[2:38:581] Furthermore, it is not enough to simply outlaw the practice of prostitution for although this removes it from common public view and awareness, the practice will still remain to continue; the most important aspect is to stop the vulnerable people in danger of being prostitutes from feeling as though such a choice is their own hope for survival.

[2:38:582] Astronarianism is a major advocate for the adoption of freedom of movement globally and supports the notion for the granting of world citizenships for individuals whom wish not to associate themselves with any particular nation state and are only able to maintain such citizenships by constant travelling and not staying in a country for more than a year.

[2:38:583] Astronarianism supports the notion of globalisation, although it recognises the potential dangers to the process and therefore supports the notion of the freedom of movement for all those whom wish to have it.

[2:38:584] It is the concept of worldship that Astronarianism creates and supports; worldship is encompassed by the idea that each individual on The Earth holds a right to explore every area of the planet, be a citizen of the planet as a whole, and to associate with The Earth itself or to be Earthian in identity; worldship is essentially citizenship on the scale of a planet rather than a country.

[2:38:585] The entirety of Astronist Philosophy is open and proud to be oriented towards environmentalism for being so is considered to remain central to the sustainability of the future of human civilisation both on The Earth and offworld.

[2:38:586] Further to this, the mentalities associated with environmentalism are considered to be just as imperative to this end than the practice of environmentalism itself; for this reason, the Astronist philosophical tradition is dedicated to working towards the reduction of all pollutants in whichever form they do arise.

[2:38:587] Two of the major forms of pollution that the Astronist philosophical tradition holds particular vexation with the pollutions of noise and light due to characteristics of obscuration and obstacle that they do possess in relation to astronomical observation, as well as the general health and wellbeing of people.

[2:38:588] The Astronist philosophical tradition considers noise pollution to play a central role in the and therefore the Tradition provides this form of pollution with a wide definition to encompass all its many different appearances.

[2:38:589] Noise pollution is considered to be, in its commonest form, the noise of engines from cars, the chatter of people in the world, the information from the media being spouted on a constant basis, as well as the opinions that come from the mouths of others about what they think other people should be doing culminating into idle gossip.

[2:38:590] All such noises are considered to be distractions from properly understanding the world around them in order to philosophise in a way that holds greater clarity; noise pollution is considered to be the second most form of pollution as it is the cause of the distortion of the mind and one's emotions.

[2:38:591] The worst form of pollution for the Astronist philosophical tradition is light pollution as this is the singlemost distorter and obstacle for astronomical observation, and subsequently, greater and more frequent philosophisations and cosmic devotions.

[2:38:592] For this reason, light pollution is the greatest abhorrence to Astronist Philosophy and it is to be indefinitely and relentlessly opposed, advocated again, as well as practically reduced by all Astronist organisations.

[2:38:593] From the perspective of the Astronist philosophical tradition, the greatest barrier between humanity and The Cosmos are the pollutants of light that humans have themselves created for they outshine the stars of the night sky.

[2:38:594] The proximity that the lights of our world make us blind to realising the beauty of lights that have the greatest of distances from us; it is this fact that inhibits the ability of humanity to perceive the stars as the Astronist Tradition hopes and encourages them to.

[2:38:595] For this reason alone, the Astronist philosophical tradition as well as all other Astronist companies and organisations advocate for the reduction of light pollution and supports notions of anti-light pollution through finding alternative means of light such as the use of red lights or other means of less disruptive light sources.

[2:38:596] Of course, there will always be light pollution for the practicality of civilisation function depends on us to be able to see, and we do accept this reality, but this only reiterates the importance of preserving our dark sites, as well as ensuring their greater accessibility for astronomical, philosophisational, and occurrological purposes.

[2:38:597] The next of the topics to be addressed herein is the activity of gambling to which Astronist Philosophy is opposed due to such activities entertaining the ideas of a monecentric society, a people dominated by money, addiction to money, as well as the glorification and in some instances, the deification of money and one's addiction to such.

[2:38:598] Further to this, the activities of gambling also demonstrate a large amount of social and community issues including the ruination of families, greater levels of domestic violence, and the increase in the unhappiness of people when they don't win, as well as a marked increase in debt-related worries and even suicides.

[2:38:599] Approaching gambling from a different perspective, yet still reaching the same opinion of opposition, gambling is considered by the Astronist Tradition to be a supporter materialism, especially so over that of philosophism and spirituality.

[2:38:600] Despite the opposition that the Astronist philosophical tradition maintains towards gambling, it is not believed that gambling should be made illegal, but it should nevertheless be heavily restricted to certain Gamble Cities which would be an area in which gambling can take place, but the mass commercialisation of gambling is opposed.

[2:38:601] Antilionistic approach applied to gambling is implemented herein and henceforth as an extension of the Astronist perspective on gambling as an act that should be opposed, and should certainly not be lionised or widely publicised.

[2:38:602] The Principle of Restraint must hold supremacy over all the inebriants addressed and it is this principle that is augmented into a belief orientation to be henceforth known as containmentism which involves the practice of remembering to contain one's own urges to conduct activities that they know will hurt their own mentilities and those around them.

[2:38:603] Prohibition only initiates illicit trading and breeds contempt for the authority and the philosophy by which it operates and therefore the Astronist philosophical tradition does not support the prohibition of activities in specified campaigns, but instead stresses containmentism in support for the health and wellbeing of individuals, those around them, and the societies in which they live.

[2:38:604] That which is known as mentility is the extent to which one's emotional mind, physical body, and philosophical heart is sustainable for itself, is responsible for itself, can work in conjunction with each of the component parts mentioned, and holds the ability to respect those with whom one interacts, as well as towards the community and wider society in which one resides.

[2:38:605] A mentility test is that which measures one's capacitation to restrain themselves; this tests the extent to which one holds control over one's desires and actions, as well as the extent to which one fulfilling the aforementioned aspects of mentility.

[2:38:606] Instead of fearing or submitting to some higher power as the reason for restraint, Astronism provides the rationality of self-condition, familial stability, and mentility testing as the main driving reasons for restraint.

[2:38:607] In The Omnidoxy, The Astronist Methodology is included after The Grand Canon of Astronism and it is therefore present in this original edition of the Omnidoxy.

[2:38:608] In the Variations of The Centrality, there exists also The Grand Centrality of The Philosophy of Astronism which notably does not include The Astronist Methodology; it is

these variations, inclusions, and exclusions that formulate the belief orientations of compilationism and non-compilationism.

Antiprofessionalisationism

[2:39:1] As one of the longest words in *The Omnidoxy*, antiprofessionalisationism is unique and distinct in its appearance and it holds a new stance on philosophy and its role in the world from a markedly Astronist point of view.

[2:39:2] The belief orientation of antiprofessionalisationism stems from the Astronist and Cometanic stance that philosophy has been obscured in the previous century during the process of its professionalisation which the Astronist philosophical tradition opposes.

[2:39:3] This is not for the reason that philosophy is without worthiness to be a profession, but is instead based upon the premise that with the professionalisation of philosophy has also come its obscuration from wider society for in the present times, philosophers are considered to play prominent roles in society as they once did just like politicians, doctors, judges, and teachers; the Astronist philosophical tradition detests this and finds this isolation of philosophers within university and their subsequent seclusion from wider society to be something that should be reversed.

[2:39:4] Antiprofessionalisationist belief is also encompassed by the the notion that philosophers should not only be inside institutions, but should also play a large and prominent role as part of the society in which they reside.

[2:39:5] According to Astronist Philosophy, the daily works of philosophers should consist of teaching the mass public about philosophy and its many branches in a brief way for them to learn more on their own views on philosophical topics to spark greater debates rather than exclusivising philosophy.

[2:39:6] By this notion, we come to address the process that the Astronist philosophical tradition proclaims to have already occurred and this is henceforth known as the exclusivisation of philosophy.

[2:39:7] The exclusivisation of philosophy is characterised by the subversion of the subject by making it accessible, or perceivably understandable to only a select group of people.

[2:39:8] However, it is of the volition of the Astronist Tradition to notionise that this process of exclusivisation, which seems to have occurred in tandem to its professionalisation in the previous century, does not follow the true nature and purpose of philosophy for it has always been, since its ancient foundings, a subject for the people for public scrutiny and involvement.

[2:39:9] The exclusivisation of philosophy has lead to its further obscuration from wider society which further retracts from the view of how philosophy should be positioned in society according to the Astronist perspective.

[2:39:10] For this reason, the Astronist Tradition also holds the stance of antiexclusivism which actively opposes the process of exclusivism with the purpose of reversing the process and relieving philosophy from exclusivity in order to attain its inclusivity through the process of inclusivism as part of inclusivism.

[2:39:11] Notionism is a belief orientation characterised by the idea that philosophy should remain a subject of open public discussion, interpretation, dissection, and contribution and therefore opposes the process of the exclusivism of philosophy.

[2:39:12] Notionists believe that only through the preservation of the discussion of philosophy through mass notionism can we maintain the inclusivism of philosophy which is also considered to be closely associated with reascensionism and the societal return to philosophy.

[2:39:13] Notionism remains in alignment with the Astronist perspective on what philosophy is, was, can, and will be for society in the future as part of contemplations on the subject area of metaphilosophy.

Subservientism

[2:40:1] Another belief orientation that is present throughout much of The Philosophy of Astronism is that of subservientism which maintains that there exists an unrelenting nature of the human heart, the human mind, and the human soul to remain subordinate to an authority.

[2:40:2] In this context, the term and concept of authority is given a wide ranging definition and is considered to exist both in context of spiritual authority, mental authority, societal authority, governmental authority, and physical authority.

[2:40:3] Furthermore, subservientists maintain that subordination is part of the intrinsic nature of humanity and that humans are happier when in subordination to a greater entity of authority, thus pertaining to the creation of the concept of a god since time immemorial.

[2:40:4] The most important aspect of subservientism is that it is the responsibility and duty of the authority to allow for the freedom for humans under their authority to act as they please to maintain their own happiness within the moral codes laid out by the authority.

[2:40:5] If the authority restricts the freedoms of humanity translated as an abuse of the authority's power then this will cause the degradation of that which is known as the Humanic-Authority Relationship.

[2:40:6] In subservientist philosophy, the authority is the provider of the provider of the freedoms for the humanity that choose to exist under such an authority; the extent to which authorities provide freedom is elemental to the role of the authority for without this responsibility, authorities cannot exist as authorities.

[2:40:7] Subservientists persist that the Humanic-Authority Relationship is characteristic of all humans; to remain in service for, accountable to, and under the jurisdiction and auspices of an authority in whichever form such an authority may take whether this be in mind, in government, or in faith.

[2:40:8] We see examples of subservientism in many concepts and theories within Astronist Philosophy including the very foundations of humanity's relationship with The Cosmos in the Astronist Cosmology for humanity remains subservient to The Cosmos in all ways for it exists within it and depends upon it entirely.

[2:40:9] The dependency and the extent of the subservience of The Cosmos is a topic of particular interest for subservientists due there remains dispute as to the true level of dependence that The Cosmos has for The Universe and The Universe for The Divine.

[2:40:10] The real subordinate relationship between the six different existences within the Astronist Cosmology remains something that the Astronist Tradition has deliberately left open for the debate as part of a wider discussion about the nature of such existences.

The Astronist Contributions to Astrology

[2:41:1] In comparology, we touched upon the Astronist approach to astrology and the stance that Astronism takes on what astrology is, what it should be classified as, and the distinct difference between Astronism and astrology: typically concluding that the two share only a theme rather than anything more.

[2:41:2] It must first be made clear that Astronist Philosophy in its entirety does not accept astrology for the divinations its prescribers seem to have associated with it across the course of its history.

[2:41:3] The Astronist Tradition, however, intends to make its mark on astrology; to cosmify it and to further promote cosmocentricity which the theme of astrology is conveniently positioned to advance.

[2:41:4] The Astronist Tradition therefore establishes twelve new astrological symbols associated with each of the pre-Astronist western astrological symbols corresponding to each month of the year.

[2:41:5] These twelve new Astro-astrological symbols are assigned automatically to a person in addition to their traditional astrological symbol and are not in association with any particular constellations and are not used for purposes of divination, only for philosophical purposes.

[2:41:6] That which is appellated as The Astrological Hierarchy in the Astro-astrological tradition formulates a structure of authority and status for the different signs associated with each symbol according to their physical positioning.

[2:41:7] The Astro-astrological tradition introduces a new physical sign of cosmos which is to be associated with each of the twelve new symbols it has created so no matter what the pre-Astronist astrological sign is associated with physically, it always holds a cosmic version of itself no matter if it is a fire, earth, water, or air sign.

[2:41:8] The Astrological Hierarchy places the fire signs at the bottom of its hierarchy to represent the cores of worlds and the tremendous amounts of heat that they do generate.

[2:41:9] Secondly comes the sign of earth meaning land due to its encapsulation of the core and the heat below its surface and thirdly, the sign of water which does both rest upon the surface of The Earth as well as existing in the skies as clouds.

[2:41:10] Above this is the sign of air which floats to the highest possible reaches of the atmosphere of The Earth until it is reduced to a thinness that does not allow its own existence and finally, and most important for the Astro-astrological tradition, comes the newly introduced cosmos sign which exists at the top of hierarchy and stands as the encapsulator of all the other pre-Astronist signs of astrology.

[2:41:11] Now has come the time to introduce the twelve new Astro-astrological signs associated with each of the traditional Western astrological signs, as well as the cosmic entities to which each new sign of cosmos they are connected.

[2:41:12] The Astro-astrological tradition is always to be defined from the pre-Astronist astrological traditions, and is also to be known as Cosmic Astrology or Astronist Astrology.

[2:41:13] In the Astro-astrological tradition, that which is known as a xatra, or a xatral associate, refers to the cosmic entity to which each cosmic sign is cognated for in this context cognation is the process of connection between two or more abstract elements, particularly in the contextualisations of symbols.

[2:41:14] Each Astronist sign is associated with a xatra and it is the xatra that is the cosmic reflector of the sign itself.

[2:41:15] It is also important to note that in Astronist astrology, prefixes and suffixes are given a particular importance for each are unique and refer to a specific quality or representational concept that is notably not particularly in relation to the person of the sign, but instead the reflects the xatra to which their sign is associated; by these notions, we begin to witness some of the distinct differences between traditional Western astrology and the Astronist additions to the astrological system as a result of astrology's cosmification.

[2:41:16] Now we shall introduce each of the new cosmos signs of the Astro-astrological tradition according to their Western astrological equivalents.

[2:41:17] The cosmic sign for Aries (March 21 to April 19) is henceforthly known as the Epiodox, the xatra associated with which is a pulsar.

[2:41:18] The prefix of epio- relates to the characteristic of rapidity in whichever form it does take and in whichever context it is applied.

[2:41:19] The cosmic sign for Taurus (April 20 to May 20) is henceforthly known as the Ospartra, the xatra associated with which is a planet; both planets in particular and also those in general when considered collectively.

[2:41:20] The prefix of osp- refers to the instance of habitation as well as the quality of being habitable or being a habitator, particularly of a planet or some other celestial entity.

[2:41:21] The cosmic sign for Gemini (May 21 to June 20) is henceforthly known as the Piondia, the xatra associated to which is a comet.

[2:41:22] The prefix of pion- refers to the act of wandering, either of a person, or of some other object, and also refers to the quality of being a wanderer, particularly to suggest someone or something that is lost.

[2:41:23] The cosmic sign for Cancer (June 21 to July 22) is henceforth known as the Vendora, the xatra associated with which is a quasar.

[2:41:24] The prefix of ven- refers to that which is inordinate meaning that which is excessively large in extent and in the context of a person, usually refers to their creativity or their emotions.

[2:41:25] The cosmic sign for Leo (July 23 to August 22) is henceforth known as the Molatra, the xatra associated with which is a meteor.

[2:41:26] The prefix of mol- relates to the instance and characteristic of volatility in all its contexts and applications as a reflection of the qualities of meteors.

[2:41:27] The cosmic sign for Virgo (August 23 to September 22) is henceforth known as the Yanodia, the xatra associated with which is a galaxy.

[2:41:28] The prefix of yano- means order and relates to the instrument of orderity as well as the cosmical system and the general order that The Cosmos is structured upon and functions by and its xatral sign is a galaxy because galaxies are the greatest representatives of cosmical order.

[2:41:29] The cosmic sign for Libra (September 23 to October 22) is henceforth known as the Eliodora, the xatra for which will always be a nebula.

[2:41:30] The prefix of elio- means creation due to the central function of nebulae being the creation of stars and other celestial formations in The Cosmos; this does not mean to say that all Libras are creative, but instead pertains to the idea that they may be characteristic of some aspect of creation for example, being balanced as is the traditional pre-Astronist association with Libras, or of being patient, or wise.

[2:41:31] The cosmic sign for Scorpio (October 23 to Nov 21) is henceforth known as the Oblivutra, the xatra for which is a black hole, also known as an oblivion.

[2:41:32] The prefix of obliv- relates to that which devours or is devouring by its nature and although this may be initially negative in its connotations, philosophical interpretations of the meaning could change such connotations perhaps to mean all-encompassing, obsessive, determined, or steadfast in oneself and one's beliefs and actions.

[2:41:33] The cosmic sign for Sagittarius (November 22 to December 21) is henceforth known as the Ampidora, the xatra for which is a star either a generalised collection of stars, or a particular star to which a name or an association is ascribed.

[2:41:34] The prefix of ampi- relates to the quality of being dutiful just as stars are conscientious of their functionalities in the order of The Cosmos and its proper systemic operations.

[2:41:35] The cosmic sign for Capricorn (Dec 22 to Jan 19) is that which is henceforthly known as the Omnisophy which is always to be associated with the xatra of a stellar stream.

[2:41:36] Omnisophy is characterised by the uniqueness of its suffix of -sophy as distinct from other cosmic signs as the suffix holds greater primacy over the prefix and so, the suffix pertains to perceptivity which further relates to wisdom, knowledge, and insight.

[2:41:37] The cosmic sign for Aquarius (January 20 to February 18) is that which is henceforthly known as the Subbura, the xatra which for which is a moon, either The Moon itself, a generalisation or collectivity of moons, or another particular moon to which an appellation is applied.

[2:41:38] The prefix of subb- relates to the instance of someone or something being an acolyte; a follower or assistant to a leader.

[2:41:39] The cosmic sign for Pisces (February 19 to March 20) is that which is henceforthly known as the Preroment, the xatra for which will always be an asteroid.

[2:41:40] The prefix of prero- means freedom which pertains to the quality of an asteroid being free from chaosity unlike its two close associates of meteors and comets, as well as the travelling nature of asteroids.

[2:41:41] There are a range of suffixes associated with and used for the cosmic signs of the Astro-astrological tradition which are listed below with their associated qualities.

[2:41:41a] -dora (creativity)

[2:41:41b] -artra (obedience)

[2:41:41c] -atra (experience)

[2:41:41d] -dia (locus)

[2:41:41e] -utra (harmony)

[2:41:41f] -ura (tranquility)

[2:41:41g] -ment (purpose)

[2:41:41h] -dox (vocation)

[2:41:41i] -sophy (capacity)

[2:41:42] One of the greatest elements of the Astro-astrological tradition is its philosophical undertones and the Astronist Tradition encourages the philosophisation of the various different signs and their associative meanings.

[2:41:43] It is this philosophical nature and character that Astronist Astrology wishes to be known for and is encouraged to promote by the Astronist philosophical tradition and is also supported by the Tradition.

[2:41:44] It is particularly the combinations of the different prefixes and suffixes to form the appellations for the cosmic signs that are interesting as they the suffixes and prefixes are sometimes contradictory to one another, but other times their meanings exist in harmony to each other; this makes the way for the formation of Philosophical Astrology, as it shall be henceforth known.

The Codification of Astronism

[2:42:1] The process of the codification of The Philosophy of Astronism involves the entire process of interpreting The Grand Centrality, the extraction of all concepts and beliefs, and the subsequent organisation of such aspects of The Philosophy, especially done for its clarity as well as mass understanding.

[2:42:2] This process is considered to be of major importance, especially succeeding the original publication of The Grand Centrality for the codification of the book involves its arrangement according to a particular philosopher or tradition of philosophers within wider Astronist Philosophy, thus forming new traditions within the tradition of Astronist Philosophy.

[2:42:3] Essentially, the codification of Astronism can be described as its official interpretation by a group, an individual, or an organisation of philosophers, lay peoples, or another type of occupational title; without its codification, a philosophy will remain only abstract and not applicable to its surrounding environment.

[2:42:4] The first example of the codification of Astronist Philosophy is in fact intertwined into the writings of The Grand Centrality itself and is appellated as the Astronist Tradition for the Astronist Tradition interprets Astronist Philosophy in its own particular way.

[2:42:5] It is always important to make the distinction between these two terms of the Astronist Tradition and The Philosophy of Astronism itself; the former is based upon a coherent set of interpretations of the latter.

[2:42:6] For this reason, codifiers must be aware of their responsibility to separate the words of the Astronist Tradition from those of The Philosophy of Astronism itself when analysing The Grand Centrality; this is henceforth known as decodification, or to decodify, which involves the disentanglement of the Astronist Tradition from The Philosophy of Astronism.

[2:42:7] There exists a belief orientation that is herein introduced and that is associated with the codification of Astronism and this is known as codificism, or codificationism, followers of which are to be known as codificists and they hold strong to the the notion that only after the codification of Astronism has occurred will the superior version of Astronism emerge.

[2:42:8] We must note that this does not include the decodification of The Omnidoxy which is instead ascribed to by the belief orientation of decodificism, or decodificationism which holds that the process of decodification is superior to that of the codification, should precede the codification in all attempts, and that only after the decodification has fully occurred that one can conduct the codification to form the pure form of Astronism.

—

[2:42:9] Philosophy is not truth, but is instead a means of achieving or realising truth for a time, until a greater truth is revealed and until an even greater truth is revealed after that; therefore, philosophy remains a chain of truths that each build upon the truth they succeed.

[2:42:10] Philosophers do not search for the truth instead they search for reality.

[2:42:11] Either I think too much, or the rest of the world doesn't think enough.

Naological Polity

[2:43:1] There exists a subdiscipline within the discipline of naology that is henceforth known as naological polity which involves the study and contemplation of the different methods of approaching the way in which Astronist philosophical buildings, known as sophariums, should be managed and organised.

[2:43:2] Naological polity is transitory by its nature as it is both a theoretical and a practical discipline for there exists a wealth of theory in relation to the different approaches to sopharium management, but this also concerns the way in which such approaches are to be practically implemented as part of wider naology.

[2:43:3] In this short discourse, we shall make introductions for ten polities that approach sopharium management which will in turn formulate the foundations of the subdiscipline of naological polity and shall inevitably inspire many other methods of polity in relation to sophariums and their organisation.

[2:43:4] The ten methods outlined herein within this discourse go by the appellation of The Ten Omnidoxical Polities, or may alternatively be known as The Ten Methods of Naology, the former of which is appellated as such due to their first mentionings within The Omnidoxy itself.

[2:43:5] The first of these ten approaches to naological polity is that which is henceforth known as jurisdictionism which refers to the governance of a sopharium according to and jurisdictionised over by The Institution of The Philosophy of Astronism.

[2:43:6] Here we come across the verb of jurisdictionise which we must shortly digress in order to explain for this refers to the apparatuses of The Institution to administer a sopharium entirely without any separation; essentially, to jurisdictionise is to practice the jurisdiction held by The Institution over a particular sopharium.

[2:43:7] Jurisdictionists believe that The Institution of The Philosophy of Astronism should hold jurisdiction over all sophariums by default upon their constructions and that The Institution should jurisdictionise in order to maintain the proper functionalities of the sopharium.

[2:43:8] Jurisdictionists are also characterised by their belief in the authority and the abilities of The Institution to be the superior and most effective and efficient administrators for a sopharium.

[2:43:9] Jurisdictionistic thought is applied in the context of The Institution as the organisation responsible for the proper management of sophariums and sees any other organisations or individuals as inferior administrators.

[2:43:10] For this reason, jurisdicists do not recognise and may not even enter sophariums that are not jurisdised by The Institution.

[2:43:11] The second of the ten approaches to naological polity is that which is henceforth known as presidencism, alternatively known as presidence polity, which notably encompasses the previous polity of jurisdicism, as it entails sopharium management and governance as presided over by an organisation.

[2:43:12] However, this organisation does not necessarily have to be The Institution of The Philosophy of Astronism, and it is in this specificity that we witness the divergence of jurisdicism from presidencism.

[2:43:13] Presidencism is more encapsulating by its nature as it is satisfied with the administration of a sopharium by any organisation as long as it is not an individual, and as long as the organisation is governed by a council.

[2:43:14] Presidencists are particularly concerned with the nature of governments becoming corrupted and so opts for a structure of independent, equal, and rotating councils without a leader holding final authority for the administration of sophariums in order to curtail any temptations for corruption to take place.

[2:43:15] It is in this notion that we find the particularity of presidencism as it will only accept organisations that follow this councilial structure to preside over the administration of a sopharium.

[2:43:16] Presidencists are also characterised by their advocacy for sophariums to be registered as charities rather than as businesses for the execution of the former is expected to reduce the probability of sophariums being corrupted or exploitative for the purposes of pursuing profit which many presidencists disagree with in principle either way for they see sophariums as places that should be devoid of the practices of profit-making.

[2:43:17] The third of the ten naological polities introduced in this discourse is that which is henceforth known as autarchism and involves sopharium governance wherein each sopharium provides itself with complete and is able to jurisdise over itself with the typical management structure consisting of a sophian to lead the sopharium and its administration.

[2:43:18] In opposition to both jurisdicism and even more so against presidencism, autarchists opt for the registration of sophariums as private businesses rather than charities as it is maintained that this is the only way to provide sophariums with proper management, and sees the charitisation of sophariums as neglecting sophariums as there will not be the sufficient funds, or the reliability of funds required for the successful running of such buildings.

[2:43:19] Autarchistic polity is also in opposition to autonomisationism and some autarchist sophariums adhered to sophianism which is a greater association with the interpretation of The Philosophy of Astronism by the sophian of the sopharium rather than with the Astronist Tradition's interpretation of The Philosophy.

[2:43:20] The fourth approach to naological polity is that which is henceforth known as autonomisationism which is obviously based upon the process and practice of autonomisation.

[2:43:21] Autonomisation involves the instance in which a sopharium is granted autonomy by The Institution of The Philosophy of Astronism to administer itself in whichever polity they desire with the typical polity chosen to be a form of autarchism known as autonomised autarchism; autarchism that is granted by The Institution.

[2:43:22] Autonomisationism is the polity associated with this and is similar to autarchism as aforementioned, but autonomisationists are characterised by seeing autarchists are inferior to them and not to be recognised as they have not gain the legitimacy that autonomised sophariums have.

[2:43:23] Autarchistic sophariums hold a polity that is self-granted rather than granted to them by the authority of The Institution and for this reason autonomisationists consider only their form of autonomy to be legitimised for they still do respect The Institution and its authority while autarchistic polities tend not to hold the same respect.

[2:43:24] That which is henceforth known as agglomerationism is the next of the polities to be addressed in this discourse and is characterised by the arrangement of sophariums being clustered together within a particular region henceforth known as a perimasy; perimasies are administrative districts for arranging sophariums within.

[2:43:25] Agglomerationists base their polity along the jurisdising of these sophariums within their perimasies; this jurisdiction is held by one of the sophariums within the perimasy on annual basis rotating year after year between different sophariums.

[2:43:26] This is an alternative to giving jurisdiction to an external organisation, a sophian, a national body, or to The Institution of The Philosophy of Astronism, however, The Institution may employ the agglomerationist polity in some regions and autonomises such sophariums in order to allow to gain autonomy from The Institution, but still to remain respectful of The Institution

[2:43:27] The next of the omnidoxical polities is that which is henceforth known as compartmentationism which entails sopharium governance in which all compartmented sophariums in a country are cooperatively governed, jurisdised, and communally responsible for each other's proper governance.

[2:43:28] This stands as another alternative to the jurisdiction of The Institution, an external organisation, or by a sopharian, as sophians may be alternatively known.

[2:43:29] Compartmentationist approaches to naological polity allow sophariums to jurisdiction over themselves and are distinct from agglomerationism by the fact that there isn't a rotating leader, but instead, there exists a councilary structure whereby each sopharium holds a vote to decide about subjects that affect the sophariums externally as a group, but also the operations internally of sophariums.

[2:43:30] The allowance of other sophariums to hold votes on what happens internally in other sophariums is promoted because of support for anti-corruption in sophariums and to ensure that each sopharium in the compartment is run efficiently and to the honour of The Philosophy of Astronism as well as in alignment with the principles of the Philosophical Spirit.

[2:43:31] It is important to note that not all sophariums within a compartment may choose to join the compartmentationist polity and will therefore run the sopharium in a different way and not hold a vote to decide what happens in other sophariums and for sophariums collectively.

[2:43:32] The most important part of compartmentationist approaches to polity is the cooperative aspect for each sopharial leadership must trust the responsibility and integrity of the other sopharial leaders which in turn leads to greater cohesion and supports communitarian values as well as advocating for transparency between sopharial leaders and the way in which they run the sopharium under their management.

[2:43:33] Compartmentationist is expected to be a popular naological polity for The Institution of The Philosophy of Astronism as it allows for the respect of The Institution and its global and ultimately authoritative and jurisdiction role, but also allows for sophariums to decide between themselves about their internal and collectively affairs within a particular compartment as part of a communitarian style approach to polity.

[2:43:34] Alternatively, that which is henceforth known as non-compartmentationism is characterised by an approach to sopharium governance wherein all non-compartmented sophariums are free to practice self-governance, but compartmented sophariums are not.

[2:43:35] Essentially, this means that only non-compartmented sophariums are able to practise compartmentationism while compartmented sophariums are not and must remain jurisdictioned over by The Institution of The Philosophy of Astronism.

[2:43:36] It is by this notion that we see a shift in the level of authority and jurisdiction by The Institution as it asserts itself to a greater extent over the compartmented sophariums while it leaves the non-compartmented sophariums to autonomy by officially autonomising them.

[2:43:37] The seventh of the ten omnidoxical approaches to naological polity is that which is henceforth known as omnidoxism which a form of sopharial governance according solely to the writings of The Omnidoxy without any organisational influence, especially not from The Institution or similar organisations.

[2:43:38] Such omnidoxist polities are characterised by their rejection of all Institutional interferences in sopharial administration, as well as any other organisations and insist that sophariums should be run only as charities and on the basis of volunteership rather than by any paid sopharians; this form of naological polity may also be known as omnidoxical polity.

[2:43:39] Confederationist polity, also known as confederalism, is the ninth and penultimate form of naological polity to be introduced and briefly addressed in this discourse and entails an administration of sophariums by an agreement between sophians to join their sophariums together in financial, jurisdictional, and philosophical union.

[2:43:40] As aforeinferred, this form of polity is only functional when the leaders of the sophariums in question share similar philosophical values and belief orientations, as well as similar ambitions to one another therefore confederalist polity is dependent upon the relations and similarities between sophians rather than by any other factors as other polities are.

[2:43:41] If relations between sophians are positive, their ambitions and orientations do alignment, and they sign an official Declaration of Confederation their sophariums will all be confederalised into collectivities known as sopharial confederations.

[2:43:42] These confederations will be headed by confederalional leaders with equal say, typically the sophians whom signed the Declaration of Confederation, or those whom were later added by amendment, and from that point on, no matter how many sophariums the sophians used to administer, they now hold equal decision making authority with their confederative partner(s), even if that partner contributed less sophariums than themselves.

[2:43:43] Confederalists are particularly opposed by the influence of The Institution as the purpose of sopharial confederations are to created encapsulated collectivities of sophariums wherein the sophians can hold egalitarian authority over a much larger group of sophariums; by this notion, we can see how some implementations of confederationist polity are more beneficial to some sophians than others.

[2:43:44] However, confederationist polity remains a powerful system for sophians to gain much greater authority in regions in which confederationist forms of polity are commonplace as they are able to band together with likeminded sophians to create their own greater influence, thus demonstrating one of the main benefits of confederalism in naological polity.

[2:43:45] Despite the general opposition to the influence of The Institution of The Philosophy of Astronism from the perspective of confederationist polity, there is expected to be a varied amount of orientations on the proper role of The Institution in naological polity amongst confederalists with some wanting to gain the legitimacy from The Institution and others wishing to distance themselves and their confederations as far away from The Institution as possible.

[2:43:46] The tenth and final form of naological polity is that which is henceforth known as observatorism and/or eidouranism which refers to an approach to sopharial governance in which The Institution of The Philosophy of Astronism holds only direct jurisdiction over the eidouraniums, grand observatories, and observatories in a compartment, or in an entire country.

[2:43:47] This form of polity purposefully leaves out planetariums due to their much greater abundance and typically leaves those to be administered by other forms of polity.

[2:43:48] Eidouranists believe that The Institution should only directly jurisdise over eidouraniums in a country while observatorists believe that The Institution should directly jurisdise over both eidouraniums, grand observatories, and observatories therefore the latter is more expansive than the former.

[2:43:49] This is expected to be a popular and realistic form of polity for The Institution of The Philosophy of Astronism as these types of sophariums considered to be the most costly to maintain and the most heavily visited therefore they should be prioritised to be jurisdised over by The Institution rather than the planetariums which are distinctly smaller and less popularly visited than their eidoural and observatorial cousins.

[2:43:50] This final naological polity is perhaps the polity wherein the least amount of jurisdiction held by The Institution, especially in its influence outside of the largest sophariums in a country, and the polities to be implemented to the planetariums in this situation are left open by this discourse therefore leading the way for the application of the other polities aforeintroduced or of new polities of course.

—

[2:43:51] In relation to, yet distinct from, the subdiscipline of naological polity is a belief orientation that permeates to a wider breadth and this is known by three different optional appellations including sophism, sophianism, or sopharianism, however, sophism is primarily an alternative term for Astronism or Kosma in a wider Astronist terminological context.

[2:43:52] Sophists, sophianists, or sopharianists (depending on the term used) all hold the same belief and this rests in giving primacy to the interpretations of The Philosophy of Astronism held and expressed by a particular sophian/sopharian typically in opposition, or in order to undermine the interpretations of the Astronist Tradition.

[2:43:53] Sopharianism is considered to be departing from the Astronist Tradition to form a new tradition of The Philosophy of Astronism as based upon the interpretation of the individual.

[2:43:54] Sopharianism provides a greater extent of authority and primacy in philosophical affairs rather than strictly naological affairs, as is the generally accepted role for sophians therefore we see here how sopharianism shifts the fundamental responsibilities and jurisdictions of the sophian by widening his/her ability to interfere in philosophical concerns.

—

[2:43:55] We now move on to that which shall be known as resonationism which encapsulates the principle that one who follows The Philosophy of Astronism will inevitably resonate with certain practices, beliefs, and traditions of thought rather than resonating with the entire philosophy itself which remains a rare choice of adherence.

[2:43:56] Resonationist belief advocates for the ability of Astronists to be within their rights, due Astronism remain a philosophy rather than a religion, to pick and choose the most resonatory aspects of The Philosophy and due to the nature of philosophy, this resonationist approach is not to be so quickly dismissed.

[2:43:57] Resonationism remains in alignment with the principles of the Philosophical Spirit, and also is expected to be popular amongst adherents who also follow a religion alongside The Philosophy itself.

[2:43:58] For these individuals, they will be able to formulate their own personal hybrid according to an interconnected and combined version of their religion and The Philosophy of Astronism; this is expected to be cherished by some, but met with abhorrence from others, especially those whom do not believe in the application of syncretism which is what resonationism fundamentally supports.

—

[2:43:59] I can transverse the most complex of all questions with ease and confidence, yet sustaining the relationship with the girl of my dreams is the most arduous of tasks my mind to both handle and comprehend.

[2:43:60] The aim is of The Omnidoxy is to achieve a successful exercise of past traditions with modern notions.

Omnitericism

[2:44:1] An important designation for religious and philosophical traditions, as well as systems of thought in general, is their categorisation as either esoteric or exoteric, the former of which pertains to special knowledge and the latter pertains to general knowledge.

[2:44:2] This dichotomy of knowledge is present throughout all systems of thought and traditions and remains a complex dichotomy to apply for within a tradition, depending on the level in the hierarchy that they have achieved, their knowledge will streamline rather than scatter, thus their knowledge becomes specialised.

[2:44:3] Therefore, within a tradition or system of thought, there exists an intertwined set of elements that are both esoteric and exoteric.

[2:44:4] The Astronist Tradition maintains that the esoteric-exoteric dichotomy is rooted in religious traditions, cults, and secret societies due to their hierarchies premised on the accessibility and ability to understand higher levels of knowledge, however, where does this leave philosophy if the esoteric-exoteric dichotomy remains non-philosophical.

[2:44:5] Therefore, we address the form and categorisation of knowledge that the Astronist Tradition persists to be inherent to philosophy, especially Astronist Philosophy, and this shall henceforth be known as omnitericism.

[2:44:6] Omniteric knowledge is that which remains open and accessible to all people depending upon their own ambition and enthusiasm to discover.

[2:44:7] Omnitericism maintains that people are responsible for their own ambition to want to achieve knowledge, yet that such knowledge also holds the responsibility to remain obtainable to all, and so rejects both esoteric and exoteric forms of knowledge.

[2:44:8] As a result, The Philosophy of Astronism remains firmly omniteric in orientation for omniteric knowledge is considered to be more philosophical than the esoteric or exoteric forms as omnitericism leaves the attainment of knowledge to all as dependent on their enthusiasm to achieve it rather than their attainment of a position within a hierarchy, as is demonstrated in religious traditions such as the leader of a church often holding much greater knowledge than the adherents of the church.

[2:44:9] Therefore, as esoteric and exoteric knowledge split knowledge according to one's stature in a hierarchy, omniteric knowledge breaks this dichotomy by focusing on the attainment of knowledge according to ambition instead.

Philosophical Seeker Behaviour

[2:45:1] People in the context of philosophical marketing must and are considered with disparity from how they are considered in mainstream marketing, or non-philosophical marketing, and this is proven through the differences in nouns used to refer to different people in the context of philosophy.

[2:45:2] Just as the customer is centre of mainstream marketing, that which is known as the emptor, or the follower are central element that philosophical marketing wishes to achieve for these are people that have made the decision to align themselves with a philosophy, especially The Philosophy of Astronism.

[2:45:3] Emptors, or followers, are the driving force of philosophical marketing, and beyond, strike at the heart of the very existence of philosophies in a metaphilosophical and ontological sense for emptorship/followership is the metaphorical currency of growth and influence in the context of philosophies and is therefore the primary element of focus for the context of philosophical marketing.

[2:45:4] A similar but distinct term is converted from the mainstream marketing term of consumer and is to be henceforth known in a philosophical context as a seeker which is someone who enjoys the benefits of a philosophy yet continues to search for greater knowledge both within said philosophy and in others.

[2:45:5] Seekership can be considered the middleground between followership and avertership as seekers are the potential individuals for alignment to The Philosophy of Astronism while followers/emptors are already aligned to The Philosophy and averters are people opposed to The Philosophy.

[2:45:6] In the context of philosophical promulgation and seeker behaviour, philosophy is a hybrid of a product and a service which is to be known as a conject.

[2:45:7] A conject is a set of ideas that are promulgated that people have the choice to believe and enknowledge themselves about in exchange for their alignment to the philosophy to which the ideas belong.

[2:45:8] This can be considered a product in the sense that the ideas have been crafted for a particular purpose and to achieve a particular end means, but may also be considered a service in the sense that the philosophy is servicing its followers by providing them with such ideas, hence the hybridisation of the two to form a conject.

[2:45:9] The etymology of conject derives from the term conjecture to mean that which is not yet complete so as to pertain to the nature of philosophies as never being complete and always in motion of expansion and development.

[2:45:10] Therefore, this conjectural nature pertains to another distinction between religions and philosophies as the former expresses its completeness while the latter is predicated upon its incompleteness.

[2:45:11] This particular notion is encapsulated by the belief orientation that is henceforth known as conjecturalism and is one of the priority elements of distinction for a philosophy from religions for the Astronist Tradition to expound.

[2:45:12] Conjecturalism pertains to one of the most intrinsic characteristic differences between philosophies and religions and for this reason, it remains one of the most prominent aspects to remind ourselves of when we considered metaphilosophy and the relationship between religion and philosophy.

[2:45:13] For whatever a person does, there are always a set of different reasons for their conduct of such actions and choosing to align with a philosophy is not exemption from this and the following set of terms pertaining to different reasons have been created in order to define some of the possible different reasons for a person to align themselves to a philosophy.

[2:45:14] The first of these is to be known as prodemination which pertains to when a person aligns to a philosophy in order to meet and achieve their own need and wants and the second of these terms is to be known as settication which involves a person aligning to a philosophy in order to resolve a crisis in their life or in someone else's life by trying to help them by applying to philosophy to their lives.

[2:45:15] The third of these reasons is to be henceforth known as resposition which is to align to a philosophy in order to provide a sense of comfort and wellbeing either for someone else or for oneself, which is to be known as autoresposition.

[2:45:16] The fourth of the possible reasons addressed herein is to be known as heteration which involves aligning to a philosophy in order to provide benefits to those whom will be effected by the decision, such as a person's family, friends, colleagues, employers, or the wider society.

[2:45:17] The fifth reason for philosophical alignment is to please those around them and is to be known as chandisation meanwhile, and in a similar vein, the sixth of these reasons involves improving one's social standing which is to be henceforth known as varnition.

[2:45:18] The final of the reasons for one's alignment to a philosophy addressed herein is to enhance one's knowledge on a particular area that the philosophy deals with which is to be known as profication, but there are expected to be mainly more reasons for philosophical alignment which are to be introduced post-omnidoxically.

[2:45:19] There are also different types of philosophical alignments with variances in gravity, the two extremities of which are a fickle alignment and a solemn alignment, the

former of which relates to a philosophical alignment that is not taken seriously, or is expected to be easily changed after a short period of time while the latter is characterised by a much greater sense of seriousness and consequentiality for the aligned person, their identity, and how this will effect others around them for years to come.

[2:45:20] Of course, for The Philosophy of Astronism, it is always the intention to encourage solemn alignments, but there does exist an acknowledgement that there will always be those whom are less solemn in all aspects of their lives, not just specifically fickle with regards to their philosophical alignment.

[2:45:21] A person may interact with the philosophy to which they are aligned or another philosophy in many different ways, but that which is known as a philosophic decision involves the instance of when a person decides to take an action that effects their own philosophical alignment, or of those with whom the person holds an influence over.

[2:45:22] When a person holds an influence over another person in a philosophical context, this is to be known as decisional supremacy, examples of which include a person's child, or someone that they are responsible for either medically, or financially, and therefore the person's philosophical alignment may effect those over whom they hold decisional supremacy.

[2:45:23] Philosophic decisions are therefore centre to the purpose of promulgation which seeks to encourage such decisions to be made, of course in the favour of aligning to The Philosophy of Astronism with particular focus.

[2:45:24] In addition, a philosophic, or philosophical alignment is a form of philosophic decision and can be described as when a person publicly identifies as being part of a philosophical group that promotes a particular brand of philosophy, this is both secured through self-identification and through state censuses (the inclusion of philosophies on which The Institution intends to advocate for on a worldwide basis).

[2:45:25] But it is no shock to us to know that our decisions that we make impact ourselves and those around us and this is no different for a philosophical alignment and therefore, we herein introduce that which shall be known as an alignment impact.

[2:45:26] This is the idea that a change to our philosophical alignment will inevitably impact those around us including our family, friends, business partners, the environment itself, the philosophy we are aligned to, and the philosophies we are not aligned to, as well as the other followers of the philosophy to which we are aligned.

[2:45:27] Understanding the general capacity of an alignment impact allows us to realise the severity of the decision of a philosophical alignment because what we align to, or whether we align at all effects who, what, where, when, and how others are about to focus, including both people and philosophies themselves and the institutions that govern them,

hence demonstrating the notion that all philosophical alignments hold severity whether they are fickle or solemnly kept to.

[2:45:28] This all encompassed by that which is known as philosophical behaviour which is a central element to understanding not only seeker behaviour, but follower and averter behaviours which philosophical behaviour entirely encompasses.

[2:45:29] Philosophical behaviour refers to the activities that people undertake when making decisions regarding their philosophy and other philosophies, mainly including the actions of indagation, alignment, interaction, tiriton, and disalignment.

[2:45:30] The first of these actions, indagation, stands out due to its terminological uniqueness and its introduction herein and involves all the activities that lead up to a person aligning with or disaligning from a philosophy, including searching for information about the beliefs, concepts, denominations, schools of thought, and disciplines of study within the philosophy, how the philosophy approaches different topical issues, and involves the evaluation of those which are to be addressed as the known alternatives.

[2:45:31] Therefore, even from this brief definition of indagation, we understand its incredible impact on the processes involved with how a person is to align with or disalign from a philosophy, but also with regards to the idea of enknowledgement, which is a central element to The Philosophy of Astronism.

[2:45:32] In a previous insentensation, we introduced the term of known alternatives and to place a definition to this term we can understand it as the notion that all the possible alternatives of a philosophy, namely other philosophies, may not be known to a seeker so they must choose from these known alternatives and remember that other alternatives may present themselves in the future through greater levels of enknowledgement.

[2:45:33] This idea of known and unknown alternatives with relation to a philosophy is closely associated with the notion of a philosophy being more a product by its nature rather than a service as a philosophy can be considered a bundle of benefits which is the primary definition of a product.

[2:45:34] Whether this notion upstands for a promulgator is of debate, but it does remain important as whatever the promulgator categorises the philosophy as, whether it be a product, a service, the newly hybridised conject, this is expected to greatly impact their approach to the promulgation of the philosophy and therefore remains integral to promulgative success.

[2:45:35] As we have converted, or philosophised terms such as seeker, follower, and conject, and in the main philosophical marketing discourse previous to this, we introduced promulgation as the philosophised, or converted version of profit for the context of philosophies, we also now must address and convert the idea of payment so that it becomes philosophised.

[2:45:36] And so, a payment in terms of philosophy is to be herein known as a remission which refers to a person's valuable alignment or followership to a philosophy in exchange for the conjectural services and product provided by that philosophy as greater levels of followership are presumed to be the primary goal of every organised philosophy.

[2:45:37] People exchange the ideas gained from enknowledging themselves about a philosophy and align to that philosophy, and after which they attempt to practice that philosophy and enknowledge others whom show interest.

[2:45:38] There are three primary forms of remission identified herein with the first of these being aforementioned alignment/followership, which is underpinned by the also aforementioned Followership Growth Principle in which all organised philosophy are presumed to be predicated on the notion that a growth in followers or aligners is their primary goal to achieve year on year in a similar way to how businesses seek and exist to achieve greater levels of profit annually.

[2:45:39] The second of the forms of remission is that which shall be henceforth known as autopromulgation which has also be aforeinferred and involves when a person tells others of their alignment to a philosophy which subsequently causes others to eventually align to the philosophy as well through their ignited interest from the person they know.

[2:45:40] Autopromulgative instances remain the ideal scenarios for promulgators because they act as a snowballing effect which is essentially word of mouth dissemination of the philosophy which does not cost anything extra to The Institution in terms of financial resources, yet still, the philosophy is promulgated, and is expected to be so in an even more influential way than promulgative materials can achieve.

[2:45:41] However, the main issue for autopromulgation is exactly its snowballing effect which does not allow The Institution to control what is said or believed about The Philosophy which will inevitably lead to greater levels of philosophical distortion and although this is not against the Philosophical Spirit, it does make the job of The Institution as the chief promulgator more difficult in the sense that it may need to promulgate the fact that certain fabricated beliefs about Astronism are distortions that have arisen through autopromulgation that exists without authentication from The Institution which certainly demonstrates autopromulgative occurrences as a double-edged sword.

[2:45:42] The final form of remission is that which shall be known as contributory remission which entails the common characteristic of a philosopher, scholar, or academic providing a philosophy with new terms, concepts, and schools of thought which further develop the philosophy and keep its promulgation continuing, but such people aren't necessary required to be aligned with the philosophy.

[2:45:43] This is considered a form of remission because such people are still contributing to the tradition of the philosophy in subject which The Institution receives many benefits

from, but such people are also not required to be followers of the philosophy which defines this form of remission from the previous two which do generally require alignment, especially of the first form.

[2:45:44] We must accept that from the inception of Astronism, there will be those individuals, groups, and even governments that do not accept it as an existent philosophy in their countries and for this reason, we must now introduce that which shall be known as cryptophilosophy.

[2:45:45] A cryptophilosophy is a philosophy that is organised and practiced underground out of the sight of the government due to the government's prohibition or general dislike of the philosophy.

[2:45:46] A cryptophilosophy can also be described as a philosophy that is actively being chased by authorities to end its presence in their country and the philosophers and followers of which continue to be persecuted, thus they must adhere to the philosophy in secret.

[2:45:47] A closely related idea to cryptophilosophy is that which shall be known as cryptism which is encapsulated by the notion that those whom have experienced cryptophilosophy hold a deeper connection to their philosophical adherence than those whom haven't because such people associate greater levels of emotion, hardship, and suffering in their adherence to the philosophy, thus raising their attachment to it.

[2:45:48] Of course, this does not pertain to the encouragement of cryptophilosophies, but it does suggest one of the possible positive outcomes of the existence of cryptophilosophies, yet they fundamentally exist out of a necessity to reside within certain countries for those whom require them as this is their primary function which they should fulfil.

[2:45:49] Due to the fact that this discourse and its related discourses are definitional in writing style, we shall continue with the introduction of terms so as to formulate the subject of promulgation in its entirety.

[2:45:50] Therefore, that which is known as conjecting, as derived from the aforeintroduced term of conject involves the ways in which people use the ideas of a philosophy in their lives, whether through speech and action, and is subcategorised according to who, what, when, where, why, and how these actions or speeches are conducted.

[2:45:51] Here we see an extended meaning for conject itself as it is turned into a verb and related to the core of philosophical practice and belief themselves as speech and action are central to human interaction with the world and others around them and it is by this notion that we understand the importance of the word conject and its increasingly pervading nature as we delve deeper into the subject of promulgation.

[2:45:52] In a similar vein, to allotment, or for allotmentation to occur refers to when a philosophy is conjected in a way that was not intended by the philosopher that created it, or the institution that manages and hold proprietorship over it.

[2:45:53] Allomenting demonstrates a disconnection between how a philosophy is considered to be officially applied to people's lives and how it is actually applied in the context of reality; due to the freedom that followers of Astronism enjoy, allotmentation is expected to be a common occurrence .

[2:45:54] Like we have already affirmed, there exists many different ways in which a person can exercise their interaction with philosophy, particularly the philosophy to which they are aligned and one of these ways is to be known as philosophic disarticulation which is when a follower of a philosophy becomes disenchanted by that philosophy and therefore they do not regularly enknowledge themselves about it and they begin to forget its ideas and terms, or do not continue its practices often.

[2:45:55] Philosophic disarticulation is considered to be a gradual process that eventually leads to the final disalignment, but may continue on indefinitely, especially if the person is disenchanted from philosophy in general which is why philosophic disarticulation can be understood as a type of limbo between alignment and disalignment.

[2:45:56] There also is herein introduced that which is known as philosophic desertion which is another term for disalignment and involves a follower of a philosophy disaligning from that philosophy in an official capacity (which is how it is terminological defined from general disalignment), usually after a period of disarticulation, whether that period is long or short is down to the individual.

[2:45:57] Philosophic desertion is a form of disalignment because does go beyond general philosophic disalignment in the sense that it refers to when a person no longer registers themselves as aligned to that particular, especially during consensuses.

[2:45:58] A similar but also distinct term is that which is to become known as philosophic disaffiliation which refers to when a follower of a philosophy speaks publicly about their desertion and disalignment from a philosophy, especially by speaking of the reasons why they left, but is notably not as harsh or negative as philosophic aversion.

[2:45:59] Philosophic aversion goes beyond philosophic disaffiliation and entails when a previous follower of a philosophy is openly hostile to the philosophy specifically, or to wider philosophy in general because of the ideas and opinions that have formed in their mind about that philosophy or philosophy generally due to their own experiences, or the experiences of those they know.

[2:45:60] Philosophic aversion is also characterised by the encouragement of others to leave the philosophy as well as the discouragement of others to join and is therefore

demonstrative of a deeper dislike or even hatred for the philosophy that they have left and it is from this that the Astronist-originative term of averter is derived.

[2:45:61] Now that we have defined some of the most basic forms of philosophical interactions, we can begin to explore other ways in which people interact with their philosophy, as well as how the philosophy, and the institution that holds proprietorship over it can interact with their followers, seekers, philosophers and even their averters.

[2:45:62] For this reason, we come to the term to be known as follower centrality (follower-centrism), or seeker centrality (seeker-centrism) which refers to the notion that the followers or the seekers of a philosophy should be at the centre of everything the philosophy and its institution does and provides for the needs of such groups which is a principle that is considered to exist at the centre of all successful promulgative materials.

[2:45:63] Not quite oppositely, but certainly an alternative outlook that may be closely associated with this is that which shall be known as intraphilosophicalism which is designated as a belief orientation that entails the notion that the ideas of the philosophy itself should be at the centre of everything the philosophy does rather than the followers of the philosophy.

[2:45:64] Intraphilosophicalist approaches can be described as idea-centric because the ideas, or contents of the philosophy are considered to be the most elements rather than other surrounding elements, such as the physical manifestations of the philosophy, or the people that follow the philosophy.

[2:45:65] In addition to this approach, it is also important there we introduce here that which shall be henceforth known as Individual Astronism which can be described as a form of Astronism that is unique to each and every individual in accordance to how they interpret The Philosophy, and is a tactic typically employed to establish individuality in The Philosophy without compromising on a sense of unity.

[2:45:66] Therefore, Individual Astronism is considered to be something that is all-pervading throughout the entirety of Astronism and it is from this form of Astronism and its predications that the many post-omnidoxical philosophies, approaches, and traditions within Astronism are to be formed.

[2:45:67] It always remains important to emphasise the establishment of individuality in the context of Astronist Philosophy because this falls in alignment with the principles of the Philosophical Spirit and how each individual person is not only expected but provided with the freedom to take their own unique approach to The Philosophy.

[2:45:68] Equally so, it is by no mistake that we must also re-emphasise unity amongst the followers of Astronism both because of this shared freedom of individuality in philosophical approach, but also in the shared principles, ideas, beliefs, and practices that made The Philosophy of Astronism initially attractive to those whom now follow it.

[2:45:69] Therefore, the perfect balance between individuality and unity, both of which expound intrinsic principles of the Philosophical Spirit, is considered to be of an eminent degree of importance for these two elements formulate what it means to be Astronist in one's identity for a gradation of individuality is eternally permitted while also an equal gradation of unity is ignited due to our shared vision; this is to be known as the Individuality-Unity Concord.

[2:45:70] As we now move onto another topic, we come to that of propinquity which refers to the principle of seeking to establish long-term relationships with followers rather than focusing on the single instance of alignment, either can either be manifested as principles of concordance within the philosophy or via the policies, polity, and promulgative activities of The Institution that holds proprietorship over the philosophy.

[2:45:71] The associated belief orientation with the principle of propinquity is that which shall be known as propinquism which involves the notion that the establishment of a proximate and long-term relationship between a philosophy and its followers is a better way of retaining followers rather than focusing on the people's initial alignment.

[2:45:72] Therefore, propinquism can be described as a form of retentionist policy with regards to the positioning and promulgation of a philosophy as its central focus remains to retain followers through the establishment a relationship between the follower and his or her philosophy of alignment; propinquistic activities are herein vested as the responsibility of sophians and their employees and volunteers to conduct and maintain with individuals are part of the creation of a sopharial community.

[2:45:73] There are some methods of raising propinquity that are outlined herein, but many are expected to be founded during the practice and further development of propinquism and philosophical promulgation.

[2:45:74] However, one of the methods of propinquism that is appellated and introduced herein as the Path to Followership involves the initial set of steps involved in one's official assent to the status of being a follower or adherent of The Philosophy of Astronism, but this is not mandatory and remains an optional element of adherence, usually for the purpose of raising propinquity.

[2:45:75] Again, the development of a programme of a Path to Followership is herein given as a responsibility of sophians and so, there are expected to be countless different approaches to how Paths to Followership are to be constructed for sopharial communities and for the wider Astronist community whether this be physically or digitally conducted.

[2:45:76] Nevertheless, the Path to Followership can trace its origins to The Omnidoxy and specifically this sanitological discourse which further raises the importance and credibility of how the idea of a Path to Followership programme can be successfully implemented to achieve propinquism as inspired by and part of retentionism.

[2:45:77] Similar to this is the method of raising propinquity that is manifested as an alignment pack which is a series of information packs provided to new followers of The Philosophy of Astronism, especially those that have registered with a particular sopharium as these, because they are of a propinquitous nature are managed by sophians and their jurisdiction.

[2:45:78] Now that we have started to explore propinquism and have introduced a couple of potential methods to realise it, we must introduce its oppositism which is to be known as alignmentism which of course focuses on the alignment of followers to a philosophy rather than building a long-term relationship between the follower and their philosophy.

[2:45:79] Therefore, alignmentism is itself in alignment with promulgationist ideals rather than resembling retentionist policies about how a philosophy is to consider its followers and seekers.

[2:45:80] In order to more equally understand the divide between propinquism and alignmentism, we shall now list these differences so that all are able to understand the stark contrasts existent between the two.

[2:45:81] Propinquism is characteristic of the following:

[2:45:81a] Orientation towards follower retention.

[2:45:81b] Orientation on the benefits of a philosophy.

[2:45:81c] Longer timescales.

[2:45:81d] Higher emphasis on interaction between the philosophy and its adherents.

[2:45:81e] Higher commitment established between the philosophy and its followers.

[2:45:81f] Consistent contact and personal connection between the institution or sophian and the followers of the philosophy.

[2:45:82] Meanwhile, alignmentism is characteristic of the following:

[2:45:82a] Orientation towards focusing on the features of the philosophy.

[2:45:82b] Focus on the single alignment of a person to a philosophy.

[2:45:82c] Shorter timescales.

[2:45:82d] Little emphasis made on a personal relationship between a philosophy and its followers.

[2:45:82e] Limited commitment established between the philosophy and its followers.

[2:45:82f] Moderate contact between the institution/sophian and the newly aligned follower.

[2:45:82g] Little emphasis on interaction between the philosophy and its adherents.

[2:45:83] Whether a sophian takes the alignmentist or propinquist approach, which are really only derivations or remanifestations of promulgationism and retentionism respectively, the Astronist Tradition acknowledges the fact that both could be implemented successfully in relation to the management of a sopharial community and therefore purposefully does not herein state a preference for either as they both serve to achieve different goals.

[2:45:84] Now that we have addressed the many ways of interaction between followers, seekers, the institution, and the philosophy itself, it is important for us to continue our contemplations and consider the management of promulgative activities.

[2:45:85] With this notion in mind, we come to that which shall be known as promulgative planning which is the initial aspect of promulgation that is to be applied to all promulgative activities, either in brief or thorough depth.

[2:45:86] Essentially, promulgative planning can be described as the management of the philosophic portfolio to the best of its potentiality which involves strategic decision-making in order to achieve such potentiality.

[2:45:87] The ways in which promulgative planning may be manifested is through the development of new abstracts, an example of which is new concept development, launching new abstracts, and the management of the concept life cycle which are all elements that must be upheld in good promulgative planning practice.

[2:45:88] Also existent within the process of promulgative planning is the explanation of the philosophy's features and its benefits, the consideration of these by promulgators, and their subsequent promulgation in a series of different ways.

[2:45:89] But before we continue our discourse, we must address and define an important word that has appeared in its plural form known as abstracts which collectively referring to one or more of the following: concepts, schools, disciplines, movements, notions, approaches, methods, and theories which themselves collectively make up the contents of all philosophies and therefore the use of the term abstract(s) is of particular importance.

[2:45:90] Another term that has also been mentioned is the philosophic portfolio which refers to the range of terms, concepts, belief orientations, disciplines of study, and schools of thought existent within a philosophy that are unique to the philosophy and are thus of incredible promulgative, identitural, and even financial value.

[2:45:91] The philosophic portfolio is that which is managed as part of philosophical promulgation and is strategically governed by the institution that holds proprietorship over the philosophy in subject; it is herein argued that without a philosophic portfolio, an organised philosophy cannot exist for the portfolio is the organisation of the abstracts of a philosophy which remain simply as abstracts without their quantification and arrangement.

[2:45:92] As we now begin to delve deeper into promulgative management and aspects of seeker and follower behaviour, we come to the term that is to be known as philosophic selection which refers to the choice made to follow a philosophy when one is unable to align themselves to both available alternatives.

[2:45:93] Despite the fact that The Philosophy of Astronism upholds the notion that philosophies are not exclusive and followers of philosophies can follow a multitude of philosophies, as a defining aspect of a philosophy from a religion, this is not expected to be the case for non-Astronist philosophies and even some individuals are expected to feel as though they must pick one philosophy to align to.

[2:45:94] Therefore, the philosophic selection may either refer to one's self-imposed inability to align to a multitude of alternatives, a governmental inability, an inability caused by lack of knowledge, or an inability caused by the exclusivity of another philosophy that does not share the same principles to which Astronism is bound as it aligns itself with the Philosophical Spirit.

[2:45:95] However, the Astronist Tradition, in the context of promulgation theory, staunchly upholds that which shall be known as the philosophic competition principle which notionises that all philosophies are competing with all other philosophies for the seeker's attention and alignment.

[2:45:96] Working on this principled assumption, the use of limited resources (e.g. knowledge) in aiming to satisfy one's needs is the primary goal and purpose of an organised philosophy and the central signifier of the interaction between a philosophy, its seekers, and its followers which is ultimately a metaphilosophical notion.

[2:45:97] It is prudent to mention here that much of our contemplations and discussions about promulgation will inevitably express notions of a metaphilosophical nature, therefore the study and development of promulgative management and theory may be one of the central components to understanding what philosophy is in a world that is post-omnidoxical and post the founding and establishment of Astronism.

[2:45:98] This remains an important note to remember as it draws a relevant link between these two seemingly unrelated topics and in addition, it also allows us to understand the true breadth of the study of promulgation and its integrality in all areas of how a philosophy transcends its abstract self and enters the physical world.

[2:45:99] We must now address one of the interesting practices that may be conducted in this context which is to be known as abgeny, or abgenism.

[2:45:100] Essentially, to be abgenous is to tactically create a concept, typically enacted by an institution or a philosopher, that remains similar to one that was previously unique to another philosophy.

[2:45:101] This is done in order to superiorise over the rival philosophy by removing its unique features as part of its philosophic portfolio and it is this that we would describe an institution or a philosopher as being in a state of abgeneity as they are conducting abgeny / abgenism.

[2:45:102] However, the continuous enactment of this practice may begin to draw contentions from the morality aspects of the Philosophical Spirit which would consider consistent performance of this practice to be an abuse of the incredible power this practice holds in achieving the deuniquity, or the deuniquation of a philosophy.

[2:45:103] By our address of abgenism, we solemnly understand that there exists practices within promulgative theory that are able to create incredible real world consequences that are perhaps irreparable for the entity that such consequences are afflicted upon.

[2:45:104] In the context of seeker and follower behaviour, feelings are of central importance as they direct seekers and followers alike in all of their behavioural tendencies, but it is one particular feeling that comes to the forefront when we consider behavioural tendencies and this is dissatisfaction.

[2:45:105] Dissatisfaction is considered to be the initiator of all actions within philosophy as dissatisfaction remains at the heart of what motivates every individual to change their life towards their ideality.

[2:45:106] The task promulgator is to balance both ends of dissatisfaction, which does exist for us as a double-edged sword as there exists dissatisfaction towards the philosophy, but equally there exists dissatisfaction away from the philosophy.

[2:45:107] For a person to be dissatisfied in a philosophical context pertains to how they became disenchanted with their aligned philosophy which causes all motivations therein to change their philosophical alignment.

[2:45:108] Promulgators must therefore manage how they navigate dissatisfaction and how they are able to balance its two extremities, one of which exists in favour of the philosophy

and one of which does not and essentially, a promulgator's role is to attempt to reduce as many people from sliding towards the latter of these extremities as much as they possibly can.

[2:45:109] A promulgator will use that which is known as philosophic motivation as their primary tool to explore the different possible reasons of why a person may follow a philosophy, or why they may disalign from their philosophy which is expected to result in a multitude parameters.

[2:45:110] The primary two of which, however, are need and want and the first of these pertains to a perceived lack of something and the second of these pertains to a desire to possess something, both of which parameters are themselves measured along a scale of necessity, often with a true need holding high necessity depending on its nature and a want holding lower necessity due to its more peripheral nature.

[2:45:111] To underpin these abstract ideas together, we form the discipline of philosophical marketing whose primary purpose involves activating needs and directing wants, especially so towards The Philosophy of Astronism for our context and this activation of need and direction of want can be considered the essence of promulgation also and all of its theories, derivations, and methods that reside under its auspices.

[2:45:112] Now that we understand what philosophic motivation is, it is only prudent to consider the different types of motivations through defining the different reasons for philosophical adherence through those which are known as seekings.

[2:45:113] Seekings are collectively the particular reasons for which a person may seek a philosophy, and the first of these is adventure-seeking which involves a person wanting to achieve and ignite a sense of adventure in their lives which is marked by change, newness, progression, travelling (both in physicality and in mind), as well as enknowledge as a form of adventure.

[2:45:114] Experience-seeking is the next of the seekings and relates to a person wanting to experience philosophy in their lives, such as through their attendance at occurrological events, enacting cosmic devotion, visiting sophariums around the world, and engaging in philosophical debatations.

[2:45:115] Knowledge-seeking is another of the seekings and relates to a person's fundamental desire to want to enknowledge themselves in a philosophical way, to explore deeper questions than the consumer can provide, and ultimately achieve levels of knowledge that will allow them to come to their own logical conclusions about the questions that pose the greatest importance to them.

[2:45:116] Social-seeking, which may also be termed as disinhibition, refers to a type of seeking that involves a person wanting to achieve a greater sense of socialisation in their lives through their alignment to a philosophy which is bolstered through knowing they

will become part of the *astroso*, as well as a *sopharial* community, and is manifested through them meeting fellow followers, philosophers, *sophians*, and even philosophical and institutional leaders, employees, and volunteers.

[2:45:117] Boredom is considered to be the next seeking and is characterised by a sense of dissatisfaction and disjection with the state of one's current life due to the lack of change, newness, exploration, and enknowledgement that is involved with their everyday existence; importantly, boredom in this context is also associated with a lack of a sense of meaning for oneself.

[2:45:118] The next of the seekings is that which is to be known as consolation-seeking which entails a person's desire for comfort after a bereavement or some disappointment and it is towards philosophy that people look to resolve their troubles.

[2:45:119] Finally, that which is known as comfort-seeking refers to the desire for comfort generally so not just comfort for the purpose of resolving troubles after disappointment or bereavement as consolation-seeking addresses.

[2:45:120] Comfort-seeking may be comforting a broken heart after the collapse of a relationship, comforting a person whom has lost their money, their job, their house, or their possessions, or comforting a person whom has struggled through emotional times.

[2:45:121] It is important to note that each of these seekings is fundamentally interconnected to each other for they each form and feed from one another due to the overlap of needs and wants which pertains to the pervading nature of different seekings.

[2:45:122] As we continue to explore the interactions between seekers, followers, and philosophies, we must address that which is known as philosophical hedonism which refers to the act of following a philosophy for the purpose of achieving pleasure for oneself in some way e.g. for the reason of social acceptance, or to comfort oneself against one's fear.

[2:45:123] Philosophical hedonism is not universally applicable as it manifests itself different according to different situations and despite the fact that some would suggest that hedonistic reasons for philosophical alignment is wrong, the Astronist Tradition does not generally take this stance with regards to philosophical alignment, although the wider hedonistic worldview is less so accepted by the Astronist Tradition.

[2:45:124] The reason for the lax of the Astronist Tradition towards hedonistic reasons for philosophical alignment is due to the personal nature of philosophical alignment and so almost all forms of philosophical alignment could be considered hedonistic in their own way which cancels out the ability of the Tradition to be against philosophical hedonism.

[2:45:125] An alternative to philosophical hedonism, however, is philosophical utilitarianism which involves following a philosophy for the purpose of achieving some

means of practical result e.g. using the principles and practices of the philosophy to assist in the non-philosophical aspects of one's life.

[2:45:126] Whereas philosophical hedonists join a philosophy to fulfil their own personal, emotional, and possessional desires, philosophical utilitarians follow a philosophy for its practical applicability or to achieve success in practical circumstances.

[2:45:127] That which is known as new concept development holds an important place in promulgative theory, but also in wider Astronist Philosophy and in the responsibilities and activities of The Institution of The Philosophy of Astronism.

[2:45:128] New concept development, acronymised as NCD, involves an official process enacted by The Institution for the development, introduction, and promulgation of a new concept and involves the official incorporation of a concept into the philosophic portfolio of The Institution and the recognition of such a concept as part of The Philosophy of Astronism.

[2:45:129] New concept development continues to remain one of the prominentmost responsibilities of The Institution of The Philosophy of Astronism that it is herein vested with by omnidoxical authority.

[2:45:130] During a person's philosophical alignment, they address many other questions and goals in addition to the central goal of actually aligning to the philosophy itself.

[2:45:131] These other questions are known as subgoals which a person may or may not possibly address and includes the following:

[2:45:131a] Which denomination?

[2:45:131b] Which school of thought?

[2:45:131c] What belief orientations will one align with?

[2:45:131d] How will one practice?

[2:45:131e] Which discipline to study?

[2:45:131f] Where will one practice?

[2:45:131g] Which sopharium will one visit?

[2:45:131h] Which concepts will be focused on?

[2:45:131i] Will one contribute to the philosophy through NCD?

[2:45:131j] Who will one practice with? or will one practice alone?

[2:45:131k] Why is one aligning to a philosophy?

[2:45:131l] How will one align? publicly or privately?

[2:45:132] These questions formulate a person's approach to the philosophy of their alignment and can be said to make a person's philosophical alignment more well-rounded as they address aspects of a person's philosophical alignment beyond the act of the alignment itself.

[2:45:133] In the spirit of considering all aspects of philosophical alignment, especially those aspects that transcend the actual act of aligning, we come to address the idea that philosophical alignment is process rather than a single act and it is a process that takes many forms, lengths, natures, and can be speeded up, interrupted, or halted depending on the circumstances of the day.

[2:45:134] By this notion, it remains prudent to introduce that which shall be known as a consideration set which is a group of philosophies that the seeker believes will meet his or her needs and wants, and which are therefore seriously being considered for alignment to which demonstrates how philosophical alignment is a process of high involvement.

[2:45:135] As we have mentioned alignment interruption, we consider this in relation to three stages including the goal, the interruption, and the outcome; the first of these is the goal which pertains to the fact that a person wishes to align to a philosophy.

[2:45:136] The second of these is the interruption which pertains to the instance in which a person is distracted by other elements of their life and deprioritises their alignment to a philosophy so that they become temporarily non-seeking.

[2:45:137] Finally, we come to the outcome which pertains to the instance in which the distractions have passed, the person resumes the prioritisation of their philosophical alignment.

[2:45:138] This process of philosophical alignment dimensionalises the activity and shows that it is not just one act, but a set of acts that form the end alignment to the philosophy.

[2:45:139] We have mentioned the act of deprioritising and it is important to define this in the context of philosophical alignment and philosophical interactions in general and deprioritisation forms one of the three forms of priority.

[2:45:140] Deprioritisation is when one's philosophy is permanently not considered to be a priority in their life, typically not due to distractions (which relate more to reprioritisation), but because they hold a disenchantment or even a contempt for their philosophy or for philosophy in general.

[2:45:141] Prioritisation is when one's philosophy is given an important place in their life as measured by the extent to which they contemplate it, practice it, and speak about it to others.

[2:45:142] Finally, that which is known as reprioritisation involves when a person's philosophy was previously prioritised, but isn't any longer due to some distraction in their life that has taken the place of priority, but this is typically a temporary occurrence before one's philosophy is prioritised again, but it may equally lead to full deprioritisation.

[2:45:143] To further explore philosophical interactions as part of seeker and follower behaviour, we must address the different forms of risk that are associated with philosophical alignment as cumulatively negative stances on why a person may experience doubt or hesitation during their philosophical alignment, all forms which are listed as follows:

[2:45:144] Medical risk - fear of mental or physical damage to oneself in following the precepts of their philosophy.

[2:45:145] Financial risk - losing or wasting money on a philosophy that one believes will not help them to achieve their end goals.

[2:45:146] Functional risk - fear of when one aligns to a philosophy, that it will not fulfil their needs or meet their idealised understanding of what being a follower of that philosophy would be like.

[2:45:147] Isolatory risk - fear of being ostracised by friends, family, and wider society because of one's philosophical alignment.

[2:45:148] Existential risk - fear of being persecuted by the government, its partner institutions, or another group due to one's philosophical alignment.

[2:45:149] Psychosocial risk - fear of looking strange or foolish to others because of one's philosophical alignment.

[2:45:150] Each of these forms of risk ever-present wherein philosophical alignment and interaction are involved and it is the mitigation of these risks to ensure seekers and followers of themselves and their actions that is considered to be the most important role of promulgators, sophians, and fellow followers, all of whom are directed by The Institution.

[2:45:151] As we continue to contemplate the nature of philosophical alignment and the process of actions involved in this part of followership, it is important that we introduced that which shall be known as alignment heuristics which involves the establishment of rules for aligning to a philosophy in order to simplify and structure the process.

[2:45:152] Closely related constructs are those which are to be known as search heuristics and evaluative heuristics, the former of which is characterised by sopharium selection which involves tendencies of always go to a sopharium that one feels comfortable in visiting which may not always be the larger or most grand of sophariums available.

[2:45:153] Also involved as part of search heuristics is source credibility which involves finding out information about the philosophy from a trustworthy source that is non-bias which may therefore not always be sophians, philosophers, or fellow followers, but The Institution can always be trusted to provide neutral support as its intentions are to only welcome followers that true know and understand The Philosophy.

[2:45:154] As aforementioned, evaluative heuristics is the next construct and involves more elements to it, the first of which is to be known as mission criteria which involves examining what a philosophy's mission or end goal is and determine whether this fits with one's own end goal, or ideals for both oneself, humanity, and the wider world.

[2:45:155] The next element is to be known as topical resemblance which pertains to an examination of a philosophy's approach to topical issues and determines whether such approaches align with one's own personal views.

[2:45:156] Meanwhile, that which is to be known as conceptual affinity involves one's examination of the main concepts and ideas that a philosophy holds and expounds in order to determine whether these are of interest or alignment to oneself and one's own beliefs.

[2:45:157] A negative angle provides more weight or focus to the elements of a philosophy that do not align with one's own beliefs or ideas when making one's final decision to align rather than those that do align with one's own ideas and is the next element of evaluative heuristics.

[2:45:158] The second to last of the elements of evaluative heuristics is that which is known as minimal disaffinity which refers to the principle that if all other known philosophies hold divergences from one's own views, choose the philosophy that holds the least amount of disaffinities with one's own ideas and approaches.

[2:45:159] Finally, as we complete our introduction of evaluative heuristics, we address that which is to be known as the becoming criteria which upholds the principle that if a philosophy holds concepts and approaches to topical issues that do not align with one's own views, then look towards becoming a person that holds such concepts and approaches by changing for the philosophy.

[2:45:160] These different elements that make up evaluative heuristics are important to apply and study for promulgators as they provide us with insight into the minds of seekers, aligners, and followers and the different options they hold during the alignment

process which promulgators can use in the creation of promulgative materials by addressing one or more of these evaluative heuristic elements.

[2:45:161] Before we introduce another form of heuristics, we must quickly introduce the terms of metation and autometation, the former of which involves making a philosophy change so that it suitable applies to oneself while the latter of which involves oneself changing one's own ideas or behaviours for a philosophy.

[2:45:162] These are collectively known as metative thoughts and beliefs and are important contributor to the overall discussion of the relationship between philosophies and their followers and it is in these metative concepts that we are provided with the space to contemplate and discuss whether one feels that a philosophy should or should not change to suit oneself.

[2:45:163] As aforementioned, we shall now introduce that which is to be known as choice heuristics which involves a set of parameters that measure one's ability in choosing between the different alternative philosophies.

[2:45:164] The first of the elements of choice heuristics is superior functionality which is a parameter holding that the philosophy that provides the highest level of utility and affinity in one's life as well as the philosophy that assimilates to one's lifestyle the best is the philosophy that the person should align with.

[2:45:165] Secondly, we come to that which shall be known as the affection decision parameter which involves choosing a philosophy that one simply likes best due to the notion that the philosophy is perceived to hold the largest number of favourable aspects and therefore is a parameter that is directed by emotion and is perhaps quite easily distorted.

[2:45:166] The third element and parameter within choice heuristics is influential choice which involves choosing a philosophy that someone close to oneself chooses such as a member of one's family (familial influence), their friends (peer influence), or someone they hold considerable respect and trust for (admirer influence); familial, peer, and admirer influences are also designated as subparameters of influential choice.

[2:45:167] The fourth element and parameter of choice heuristics is the risk averse rule which involves one's choice to align with the philosophy that is perceived to hold the least amount of accumulated risks which are aforelisted in this discourse.

[2:45:168] Gnostic choice is the next element to address and it is this that involves aligning with a philosophy that one believes they hold greater knowledge about, especially knowledge that isn't known to others.

[2:45:169] Meanwhile, that which is to be known as the rule of patience involves the principle of only aligning with a philosophy after someone you know or someone you trust has aligned with the same philosophy and they provide a positive experience.

[2:45:170] Lastly, we come to the element and parameter of choice heuristics known as expert consultation which involves consulting a person that has scholarly knowledge about a philosophy in order to derive whether that philosophy is the best choice for one's alignment the expert usually being a philosopher themselves, a sophian, or an institutional staff member.

[2:45:171] We have demonstrated by the many forms of choice opportunities for individuals the dimensionality of philosophical alignment is further deepened and broadened which only further bolsters the notion that philosophical alignment certainly is a process rather than just a single act.

[2:45:172] Now that we have introduced many aspects of interaction that a person may have with a philosophy, whether they are aligned to it or not, we must now move on so as to introduce the aspects of seeker behaviour that are based around people's personality, during which we shall gain further metaphilosophical insight into the interactions between a philosophy and a person from the perspective of the individual's personality and characteristics.

[2:45:173] In this new section of the discourse, we must introduce that which is to be known as the integrated whole which refers to a personality as an entirety of connected and sometimes contradictory elements of an individual that promulgators have the task of trying to create materials to which such emotionally complex beings as us can relate to, at least one element of ourselves that is.

[2:45:174] A closely related term that is now to be introduced is autoattainment which refers to how a personality facilitates the attainment of the needs and goals of the self and the ability of one's personality to orient itself on meeting one's own needs.

[2:45:175] The conceptual notion residing within autoattainment holds an important note for promulgators to both contemplate and incorporate into their plans and strategies as with this notion, they are directed to put people's personality at the forefront of promulgative material making which is always a difficult task due to the individualistic and unique nature of personality.

[2:45:176] Not only are our personalities individual and unique, but they are also overt, even for the most introverted of us for our personality is expressed through our behaviour and introverts demonstrate their personality through their reserved and withdrawn behaviour in social settings.

[2:45:177] Consistency of personality is another aspect of the nature of personality that promulgators must remember as one's personality is a consistent element of themselves

that is slow-changing and is often only altered through the occurrence of major life changes so promulgators can rely upon personality as a consistent parameter for promulgative targeting and segmentation.

[2:45:178] In order to understand the applicability of people's personalities, we must study personality and its nature for philosophical purposes which draws upon four subtypes that can be considered different approaches of studying personality for the purposes of insight for a philosophy and particularly for its promulgators.

[2:45:179] The first of these is psychoanalytic that involves the study of the confrontation of life events that shape one's personality; the second is typology which refers to the study of personalities by grouping them into different classified types.

[2:45:180] The third of them is known as trait and factor theories which involves how individual traits of the personality are studied and involves the examination of these individual traits in the construction of the whole personality and finally, psychographics which involves the study of personality according to the measurement of behavioural tendencies in order to infer personality traits.

[2:45:181] There have been many different approaches to the identification and classification of personalities, many of which methods were developed in the previous century to the founding of Astronism and the writing of The Omnidoxy, therefore it is important that we note herein of our utility of pre-Astronist and non-Astronist originative theories and methods in order to study personalities.

[2:45:182] Another approach to understanding personalities is through the different personality dimensions which are essentially extremities of one another and including the following:

[2:45:182a] Extrovert and introvert

[2:45:182b] Sensing and intuitive

[2:45:182c] Thinking and feeling

[2:45:182d] Judging and perceptive

[2:45:183] Promulgators can use these different extremities of personality traits in order to orient their promulgative materials and messages so that they are more receptive for certain personality types.

[2:45:184] Those people that are described as innovators are those whom are first to align to a philosophy in a particular group, whether this group is their family, their set of friends, work colleagues, business partners, or some other group.

[2:45:185] Depending on the group, the innovator role may change because a person may borrow the idea from one group and introduce it into another group so that they achieve the role of the innovator in said group which is to be henceforth known as the practice of innovator borrowing.

[2:45:186] We can also categorise people and their personalities according to what they are driven by and we can use the three basic parameters of inner-directed, traditional, and outer-directed in order to formulate.

[2:45:187] Inner-direction refers to when people are driven by internal factors, such as their emotions while traditional direction refers to when driven by their past experiences and finally, outer-direction is when a person is driven by the opinions of others whom are also known as influencees.

[2:45:188] Now that we have applied some basic parameters for studying personalities, we began to apply pre-Astronist methods that are larger scope, the primary one of which that is used herein is the Primary Factors and Descriptors Method in Cattell's 16 Personality Factor Model (Adapted from Conn & Rieke, 1994).

[2:45:188a] Descriptors of low range

[2:45:188b] Primary factor

[2:45:188c] Descriptors of high range

[2:45:189] Each of the combinations of personality traits listed below are organised in relation to the parameter above and each of these combinations, each of which demonstrate extremities according to different aspects, topics, and circumstances, can be used by promulgators in order to create promulgative materials that can be directed towards particular personalities types, or certain aspects of the philosophy can be emphasised to suit people according to the personality that they have.

[2:45:190] However, we must remember the concept that is herein introduced as cryptopersonality which upholds the notion that personalities are aspects of a personality that initially hidden and are formed over time according to the perceptions that we hold of the person which are influenced by the person's actions, both in what they say and in what they do.

[2:45:191] Essentially, cryptopersonality postulates that a person's personality is not immediately identifiable like their race, gender, and nationality might be, but is instead something that is perceived and is formed over a long period, especially because we may never know what a person's personality truly consists of because people often do and say things that we do not expect to and these things often do not correspond to the constructed personality that we ascribe to that person; by understanding this notion, we

must now introduce the idea of the particularity of personality, or it may be known as perceptocentrism.

[2:45:192] Essentially, the particular of personality, or perceptocentrism, holds that there exists not universality when considering people's personalities because personality is essentially a construct of each individual's perception of another individual and so there may be unity in shared perceptions of a person, but it is unlikely that there will ever be a universality when it comes to considering a person's personality due to the plurality of perception.

[2:45:193] For something to be perceptocentric, it is based upon, or centred on perception and personality is one of the greatest examples of this, likely many other concepts are also perceptocentric in their natures like conceptuality as a whole is arguably perceptocentric.

[2:45:194] We can only draw upon what we know, what we see, and what we hear of a person to construct our perception of their personality which makes the trueness of personality something almost impossible to achieve an understanding of; a person would have to enter the mind of other person in order to understand what their true personality is.

[2:45:195] Now that we can return from that short digression, let us take a look at the many different factors and descriptors that we can use to attribute labels to different personalities and remember, the structure of these descriptors is based upon the aforementioned structure of the two extremities sandwiching the middleground by hyphens.

[2:45:195a] Impersonal, distant, cool, reserved, detached, formal, aloof - Warmth - Warm, outgoing, attentive to others, kindly, easy-going, participating, likes people

[2:45:195b] Concrete thinking, lower general mental capacity, less intelligent, unable to handle abstract problems - Reasoning - Abstract-thinking, more intelligent, bright, higher general mental capacity, fast learner

[2:45:195c] Reactive emotionally, changeable, affected by feelings, emotionally less stable, easily upset - Emotional Stability - Emotionally stable, adaptive, mature, faces reality calmly

[2:45:195d] Deferential, cooperative, avoids conflict, submissive, humble, obedient, easily led, docile, accommodating - Dominance - Dominant, forceful, assertive, aggressive, competitive, stubborn, bossy

[2:45:195e] Serious, restrained, prudent, taciturn, introspective, silent - Liveliness - Lively, animated, spontaneous, enthusiastic, happy go lucky, cheerful, expressive, impulsive

[2:45:195f] Expedient, nonconforming, disregards rules, self-indulgent - Rule-Consciousness - Rule-conscious, dutiful, conscientious, conforming, moralistic, staid, rule bound

[2:45:195g] Shy, threat-sensitive, timid, hesitant, intimidated - Social Boldness - Socially bold, venturesome, thick skinned, uninhibited

[2:45:195h] Utilitarian, objective, unsentimental, tough minded, self-reliant, no-nonsense, rough - Sensitivity - Sensitive, aesthetic, sentimental, tender minded, intuitive, refined

[2:45:195i] Trusting, unsuspecting, accepting, unconditional, easy - Vigilance - Vigilant, suspicious, skeptical, distrustful, oppositional

[2:45:195j] Grounded, practical, prosaic, solution oriented, steady, conventional - Abstractedness - Abstract, imaginative, absent minded, impractical, absorbed in ideas

[2:45:195k] Forthright, genuine, artless, open, guileless, naive, unpretentious, involved - Privatness - Private, discreet, non-disclosing, shrewd, polished, worldly, astute, diplomatic

[2:45:195l] Self-Assured, unworried, complacent, secure, free of guilt, confident, self-satisfied - Apprehension - Apprehensive, self doubting, worried, guilt prone, insecure, worrying, self blaming

[2:45:195m] Traditional, attached to familiar, conservative, respecting traditional ideas - Openness to Change - Open to change, experimental, liberal, analytical, critical, free thinking, flexibility

[2:45:195n] Group-oriented, affiliative, a joiner and follower dependent - Self-Reliance - Self-reliant, solitary, resourceful, individualistic, self-sufficient

[2:45:195o] Tolerates disorder, unexacting, flexible, undisciplined, lax, self-conflict, impulsive, careless of social rules, uncontrolled - Perfectionism - Perfectionistic, organised, compulsive, self-disciplined, socially precise, exacting will power, control, self-sentimental

[2:45:195p] Relaxed, placid, tranquil, torpid, patient, composed low drive - Tension - Tense, high energy, impatient, driven, frustrated, over wrought, time driven.

[2:45:196] From these various different characteristic descriptors, we are able to derive how personality can be a very useful parameter for promulgative activities and as a way of segmentation.

[2:45:197] There does of course exist differing approaches to associating personality as a form of segmentation as there exists different methods or viewpoints for almost all elements that we do discuss.

[2:45:198] In this context, however, we consider the propersonality approach which involves the concentration of philosophical marketing and advertising to attract specific personality types as this is considered to be the most effective way to reach people and their emotions.

[2:45:199] Oppositistically, the antipersonality approach refers to the deconcentration of philosophical marketing and advertising on attempting to attract specific personality types as these are not considered to be practical or realistic attributes to the development of marketing campaigns.

[2:45:200] Instead, they are considered to be too individualistic for mass advertising and therefore opts for other attributes of people to be focused on, such as people's ambitions, their psychographics, their relational ties with others, and their beliefs regarding topical issues as greater attributers of people's identities that can be practically incorporated into promulgative management and planning and subsequent promulgative materials.

[2:45:201] Much of seeker behaviour and promulgative theory is based around the categorisation and arrangement of concepts in order to more clearly understand what they mean and what they are saying to us.

[2:45:202] For this reason, we now approach the notion that there of course exists a multitude of forms of philosophy all and more of which have been referred to throughout The Omnidoxy, but herein and now it is important that we list and define these different forms for promulgative theory purposes.

[2:45:203] The first of the forms of philosophy is perhaps the newest of them all and that is virtual philosophy which is synonymous with the form of philosophy known as digital philosophy which both relate to the presence of philosophy in an online, computerised, and non-physical technological platform and environment, such as on websites, on social media networking sites, in digital archives, and in all other forms of digital platforming and this overall process may be known as philosophical computerisation, or sophocomputerisation.

[2:45:204] The next of the forms of philosophy is that which is to be known as practical philosophy which involves all forms of practicing a philosophy, which is especially prominent in the context of Astronist Philosophy, primarily by the practice of Cosmic Devotion, and this form of philosophy notably does not include debatement.

[2:45:205] The next of the forms of philosophy is manifested by The Grand Centrality and The Omnidoxy themselves as literary philosophy is the form and it remains the primary form of philosophy, despite all the new technological developments occurring in the era of The Omnidoxy's writing, the word remains still the primary form of our communication, hence the resounding importance of literary philosophy.

[2:45:206] Vocal philosophy is the second most important form of philosophy considered so by the Astronist Tradition and encapsulates all the instances in which philosophy and any of its constituent parts are spoken of instead of being expressed through the written word; the spoken word, also known as word of mouth, still remains the most powerful promulgation tool to master.

[2:45:207] An Astronist-origivative form of philosophy is that which shall be known as occurrological philosophy which pertains to all of the different events that individuals can attend that are conducted in the name of Astronist Philosophy; if one wishes to refer to philosophy in the form of non-Astronist events then they should refer to this as eventive philosophy instead of occurrological philosophy as the latter is specifically Astronist in character.

[2:45:208] The next of the forms of philosophy is debatory philosophy which refers to the manifestation of philosophy in the form of debates, especially so in the context of the Astronist philosophical tradition, and this form of philosophical can be considered a tridimensional hybrid of three other forms: practical philosophy, vocal philosophy, and occurrological philosophy.

[2:45:209] Next we have immersive philosophy which refers to instance in which a philosophy may immerse a person either physically, as manifested by the visitation of a sopharium, especially by entering a planetarium, or mentally, as manifested through personal inspirations, and other forms of higher experience that are granted by the Astronist Tradition to exist.

[2:45:210] The final form of philosophy to consider herein is that which shall be known as interactive philosophy which refers to instance in which the constituent elements of a philosophy are learnable through technological devices, such as through mobile applications; essentially, interactive philosophy refers to all instances in which a person is able to explore and learn about the philosophy for themselves through means of touching and listening to an externality of some sort.

[2:45:211] These different forms of philosophy help to form the basis of how we are to understand the scope of a promulgator and he or she is able to transverse across these different forms of philosophy in order to promulgate the philosophy in its entirety or a particular aspect of it in the most suitable way.

[2:45:212] Not only do these forms of philosophy serve a purpose for promulgators and promulgative theorists, but they also serve a purpose for post-Astronist metaphilosophers in their understanding of what philosophy, the transformations it can take, and the abilities it holds to morph into the different mediums of current availability which ultimately demonstrates the flexibility and overall potentiality of philosophy as a coniect.

[2:45:213] The self-concept is of course closely associated with the concept of the personality, but distinctly, the notion of the self-concept is of particular importance as a

philosophical institution must be aware of how different people considered and view themselves, their own roles in society, and their futures.

[2:45:214] One's alignment to a philosophy should suit the enhancement of their own self-concept; it should embrace and encapsulate how people view themselves, seek to enhance such this self-view, and lead its followers to make decisions that will better their lives.

[2:45:215] The extent to which the philosophy achieves this can be primarily measured through the extent of one's knowledge, openness to new ideas, physical health, mental wellbeing, financial stability, their ethicality, and their life achievements.

[2:45:216] For these reasons, we understand how the notion of the self-concept is integral to understanding how a philosophy assists a person in finding themselves and who they wish to be in the world and what they wish to contribute to the world and other people's lives; the right philosophy for each of us should tell us these things, or at least allow us to be aware of them, but whether we actual enact them is another consideration to hold.

[2:45:217] Therefore, The Philosophy of Astronism must draw upon aspects of self understanding in order to consider how its own place exists in the lives of individuals and how it is considered to accord everyday life, its applicability to everyday life as well as the extent to which it is wished to be savoured for its application to extraordinary elements of our lives rather than the everyday; the former of these is to be known as Common Astronism, while the latter is to be known as Momentous Astronism.

[2:45:218] In addition to the notion of the self-concept, we come to the conscious self which involves the actual, objective self that only oneself fully knows and understands and it is this type of self that a philosophy can only hope to be accepted into by the individual rather than a self that can be promulgated to and this is therefore dependent upon philosophical trust.

[2:45:219] Thirdly, there is that which is known as the hetero-self which refers to the self that others see and perceive based upon our own behaviour, appearance, and beliefs; this may be individually unique to each other person, or it may be collective if different people's perceptions of a person match.

[2:45:220] Meanwhile, there exists the term of self-image; this is the subjective self, as we see ourselves rather than how other's perceive us, but this is distinct from our conscious self as all aspects of our self may not be included in our self-image as our self-image is more idealised than that of our conscious self.

[2:45:221] Penultimately, we have the ideal self; this is the person we wish to be which is either rationally attainable or irrationally unattainable.

[2:45:222] This self is either constructed through the media we consume, especially influenced by our idols, or by those we interact with socially, those whom we see in

society or, and most importantly for promulgators, it may be influenced by the philosophy we ascribe ourselves to.

[2:45:223] Finally, we come to the type of self known as the looking-glass self which involves the way we think other people see ourselves which is often distorted from the reality of how people actually perceive us which may either uplift or deflate our own egos.

[2:45:224] One may now be wondering why these different selves have been introduced here and to satisfy such a ponder, we come to address the notion that if Astronism and its founding text and subsequent promulgators do not have at least a basic understanding and respect for the different existent selves, then how are we to address ontological questions?

[2:45:225] The answer is that we cannot answer those questions if we do not at least acknowledge the different existentialities of the self for one of the many alternative appellations of Astronism is to be known as the People's Philosophy and if this appellation is to be upheld and realised then we must have a strong idea of whom these people are, what makes them who they are as individuals, and how can Astronism contribute to their existences to enhance them; not only are these promulgative questions, but they are also metaphilosophical and ontological questions that The Omnidoxy herein acknowledges and attempts to address.

[2:45:226] It is time for us now to introduce some more Astronist-originate terms and to provide them with definitions; the first of these is that which shall be known as the philosophic maven which refers to a self-appointed expert about a particular philosophy; such people practice that which is to be known as mavenry which is largely considered to be false by the Astronist Tradition.

[2:45:227] Mavenry involves the practice of The Philosophy of Astronism in such a way that a person proclaims to know things about The Philosophy, or claims to practice The Philosophy in such a way that no other person is able to teach other than them; mavenry is characterised by self-proclamations of extra abilities to know or practice Astronism.

[2:45:228] In addition, mavens are considered by the Astronist Tradition to attempt to formulate their own quasi forms of The Philosophy through extra practices and beliefs that are not considered to be part of the mainstream or traditional version of The Philosophy and they usually train themselves to become very charismatic and persuading individuals in order to attract convinced followers.

[2:45:229] The Astronist Tradition expects the practice of mavenry to become widespread in certain regions while sparse and unheard of in others and it can herein be said that despite the fact that most mavens may be harmless, their practices and beliefs of The Philosophy of Astronism, depending on the extent of the disparity and bizarritiy of their proclamations from the traditional and mainstream, are not considered to be honest or credible by the standards of The Institution of The Philosophy of Astronism.

[2:45:230] Despite this, The Institution of The Philosophy of Astronism may accept and even sponsor certain mavens, also known as mavenists, depending on what they proclaim about their knowledge and abilities of belief and practice within Astronism.

[2:45:231] Moving on now we come to the term of self-monitoring which involves the practice of controlling one's own behaviour in the context of their philosophy, how they interact with their philosophy, and how they communicate with their fellow followers.

[2:45:232] Self-monitoring is an important practice in the upkeep of one's persona, self-image, and may be used in the construct of one's ideal-self and therefore remains a useful technique to adopt in a variety of different social circumstances.

[2:45:233] That which is another integrally important element to understanding seeker behaviour is to be known as philosophical brand perception which pertains to the principle that a promulgator's aim is to develop the most favourable perception of the philosophy through working with its strengths, whether these strengths lie in its direct benefits for followers, its betterment for others and wider society, or because of the affinity that one may feel for the concepts and ideas that the philosophy addresses.

[2:45:234] The management of the philosophical brand perception is the primary element of a promulgator's responsibility for they are tasked with how the different publics (seekers, followers, organisations, governments etc.) see and understand The Philosophy of Astronism and how it exists and how it is to be.

[2:45:235] Now we come to a group of branches of seeker and follower behaviour that are cobranches because they also exist as branches of naology and include sopharial atmospherics, sopharial proxemics, sopharial kinesics, and sopharial paralanguage.

[2:45:236] Sopharial atmospherics is the study of the factors that create the overall ambience in a philosophical environment, primarily inside a sopharium.

[2:45:237] Sopharial proxemics refers to the use of physical space inside a sopharium to convey a perceptual stimulus while sopharial kinesics involves the interpretation of non-verbal communications related to body movement and the use of these between sophians and sopharial volunteers with visitors.

[2:45:238] Sopharial paralanguage is the communication carried out in a manner other than through words in the context of a sopharium, an example of which is through the display of explanatory videos on screens.

[2:45:239] Another of the essential roles of the promulgator is to reduce risk for the seekers of a philosophy so that they are more likely to align to it; this is encapsulated by the notion that the purpose of learning about a philosophy is to reduce risk.

[2:45:240] The more one knows about the philosophy they are considering to align to the lower the level of risk there will be and therefore the seekers in subject will be more likely to align to it.

[2:45:241] This is why some individuals may resort to being influenced by those they know or those they trust, or by attending expert consultation in order to understand the risks and benefits of a philosophy.

[2:45:242] Knowledge of the features and benefits of competing philosophies is also key to establishing a sense of distinction and comparison between the two philosophies in subject which, depending on the nature of the features and benefits of other philosophies and how they are promulgated, will lead seekers to make the right decision for them as to which philosophy they choose to align to.

[2:45:243] Perception of the value of the philosophy is always under consideration for any seeker and the value of the philosophy that they perceive is in regular fluctuation as they learn more about the philosophy.

[2:45:244] In order to formally define this, that which is known as philosophical value which involves an accumulation of abstract beliefs and perceptions attached to a particular philosophy that demonstrate its own worth and which formulates the extent to which its followers, philosophers, or non-followers attribute positive elements.

[2:45:245] We can identify herein that there are many different sources of information for promulgators, some of which are entirely controllable and some of which are not.

[2:45:246] Some of the prominent sources that can be described as promulgator-controlled are sophians, sopharial and Institutional volunteers, Institutional staff, paid endorsers and to a certain extent, the followers of The Philosophy.

[2:45:247] The extent to which promulgators can control followers of The Philosophy as a source of information is dependent upon the extent to which the promulgator has faith in the followers of The Philosophy to speak positively about it as well as the extent to which such followers understand The Philosophy as it is exactly promulgated and taught.

[2:45:248] Meanwhile, impersonal sources that are controlled by promulgators include the philosophy itself and all its contents, point-of-philosophy materials and interactions, advertising and other promulgative materials, catalogues, archives, websites and other digital media, as well as dictionaries and other forms of written text published after the inspection of The Institution of The Philosophy of Astronism or published by The Institution itself.

[2:45:249] Philosophical value is one part of that which is to be known as the philosophical attitude which is formed by all the different factors involved with seeker and follower behaviour and therefore each philosophical attitude is unique, but there are commonalities

to the formation of philosophical attitudes which greatly impact upon the way in which a person interacts with the philosophy to which they are aligned.

[2:45:250] The process of the formation of a philosophical attitude is divided into three different elements including antecedents, processing, and consequences, but it also important to note that before we introduce the subelements within these three that we note that philosophical attitudes are fluid and flexible and that they are bound to change over the course of a person's life demonstrated by highs and lows.

[2:45:251] Firstly, we come to the subelements grouped within the wider element appellated as the antecedents which involves a philosophical attitude beginning with a need or want whether utilitarian or expressive.

[2:45:252] The next step of the formation of a philosophical attitude is initiated by the motivation to process information about the philosophy in subject and there are two existent external elements effect this process which include one's ability to process philosophical information and one's opportunity to process philosophical information.

[2:45:253] The final subelement of the antecedent element refers to the extent of a person's exposure to advertisement and promulgative material stimulus which also effects their motivation for processing information about the philosophy in subject.

[2:45:254] The second of three elements of philosophical attitude formation is that known as processing which involves the extent of a person's concentration span to perceive and interpret philosophical information which is more likely fairly in-depth information that does require extensive focus in order to fully or even partially understand.

[2:45:255] There are only two subelements within processing and now we come to the second of these which involves one's capacity to both intake and understand the information that has been presented or promulgated them so as to apply such information to themselves; to achieve the cognition of information involves making such information mean something to oneself rather than it just simply existing.

[2:45:256] The final element of the formation of a philosophical attitude is appellated as the consequences which collates five different subelements or responses including cognitional responses, emotional responses, familial/peer responses, governmental responses, and institutional responses.

[2:45:257] These five different responses in turn effect other abstracts such as philosophical value, philosophical perception, philosophical loyalty, philosophical belief, and philosophical understanding which demonstrates interconnected and dependence of these different abstracts upon one another.

[2:45:258] These also have a meaningful and lasting effect on physical actions such as philosophical alignment, philosophical retention, philosophical practice, and one's motivation for greater levels of enknowledgement.

[2:45:259] Therefore, without the formation of a philosophical attitude, it is difficult to pinpoint how a person's responses and their subsequent actions and mentalities will be able to consider a philosophy, hence the integrality of a philosophical attitude for each individual due to its role as the glue between these different abstract and physical elements.

[2:45:260] That which is to be henceforth known as value importance refers to the level of satisfaction the follower of a philosophy gains from the achievement of a particular value that they had previously felt unfulfilled in; the achievement of such values is therefore central to the achievement of a positive philosophical attitude and perception for the philosophy.

[2:45:261] Also, that which is to be known as perceived instrumentality refers to the degree to which an action of philosophy, or a philosophy itself is thought to be useful in a practical way which is considered to be a determiner of how a person perceives the applicability of a philosophy to their everyday lives which will in turn impact their overall philosophical attitude and perception.

[2:45:262] To consider the functionality of a philosophy in the manner of its applicability to the practical elements of a person's life only does remove some of the essence of the philosophy itself as philosophy is, by its core nature, not entirely made just for practical applicability and certainly, the nature of philosophical contemplation and debate is not everyday practical, but instead extraordinarily romantic and idealistic.

[2:45:263] Taking a purely practical perception of a philosophy can provide seekers and followers with considerable benefits that others may not receive, but it also takes away the contemplative, romantic, and somewhat mystical nature of philosophy, especially The Philosophy of Astronism.

[2:45:264] Returning to philosophical attitude and its dimensions, we must consider the different functionalities of the philosophical attitude in order to formulate an idea of how the different functions of an attitude can be applied to receive certain results.

[2:45:265] The first of these is the instrumental function of a philosophical attitude which involves how the individual can use the attitude to obtain satisfaction from the philosophy which is to also be known as the Obtainment Principle.

[2:45:266] The Obtainment Principle involves the notion that a philosophy exists to be used and for information to be obtained from it, applied to the world, contemplated, debated, criticised, reapplied, and then perhaps even rewritten; the Obtain Principle is useful

because it provides a clear and realistic functionality of a philosophy and it can and mostly will be interacted with by its followers and seekers, as well as philosophers and critics.

[2:45:267] To shortly digress, we often make the distinction between a “professional” philosopher that follows Astronism and a “professional” philosopher that does not and the differences between them, but in order to provide more clarity for whenever this point is mentioned, it is important that we introduce two new terms.

[2:45:268] The first of which is an astronier which is an academic or “professional” philosopher whom is aligned to The Philosophy of Astronism and the second of which is a nomener which refers to an academic or “professional” philosopher whom is not aligned to The Philosophy of Astronism.

[2:45:269] The introduction of these two new terms should clarify our address of them and create more concise insentations when we write of them because despite the shared “profession” of an astronier and nomener, their approaches, contemplations, discussions, and criticisms of The Philosophy of Astronism are expected to diverge from one another greatly.

[2:45:270] Next of the functions of attitude is the ego-defensive function which protects against internal conflicts and external dangers in the context of a philosophy in this case which could pertain to emotional conflicts for internal and persecution for the external dangers.

[2:45:271] Another of the functions of philosophical attitude is the value-expressive function which is the opposite of ego-defensive function and involves the drive for self-expression and therefore considers one’s philosophical attitude as an expression of themselves in the current and like each of us, we change throughout our lives and our philosophical attitudes change with us.

[2:45:272] The penultimate function of philosophical attitude is to be known as the knowledge function which involves the drive to seek clarity and order in relation to one’s philosophy through the establishment of one’s philosophical attitude which they use to interpret and decipher the philosophy as a prominence of its multifaceted nature.

[2:45:273] Finally, we come to the function of attitude towards promulgative materials and one’s attitude towards the actual philosophy itself as a partiality or as a whole; despite the fact that these are paired together, they hold differences in their manifestations.

[2:45:274] The disparity between a promulgative material and the philosophy itself is a constant risk factor for promulgators as they are tasked with constantly trying to close the gap between these two elements in order to try and proximate the two together.

[2:45:275] The principle that promulgative materials should always reflect the actuality of the philosophy must always be upheld by promulgators in order to avoid distortion of

what the philosophy is, however, in practical circumstances, this is expected to not always be achieved.

[2:45:276] For this reason, a person may receive a promulgative material and understand the wording of such a material in the way that a promulgator may not have intended which is to be known as an interpretative distortion, and as a consequences of this, the receiver relates this interpretation to the entirety of Astronism thus resulting in that which is known as a distorted conclusion.

[2:45:277] Before we address the changes in one's philosophical attitude, we must introduce three more categories of designation for identify attitudes, the first of which is to be known as a general attitude which refers to a liking for philosophy in general.

[2:45:278] Then, we have a specific attitude which refers to a liking for a particular philosophy (e.g. Astronism) and lastly, we have a hyperspecific attitude which refers to a liking for a particular component of a philosophy such as a belief orientation, a school of thought, a discipline of study, or a concept.

[2:45:279] Again, with the introduction of these different forms of a philosophical attitude, we understand that there exists a distinct tridimensionality here that remains unavoidable to notice.

[2:45:280] We have mentioned repeated that philosophical attitudes change according to different circumstances and now we shall address the four instances in which a philosophical attitude may change.

[2:45:281] The first of these instances is the addition a new salient belief as is encapsulated by the institutional process of new concept development which is considered the primary way in which one's philosophical attitude may change, especially when the new concept addresses a topical issues.

[2:45:282] The next instance refers to the change in strength of a salient belief which focuses on how a person holds affinity to a philosophy rather than the ways that they hold a disaffinity to the philosophy.

[2:45:283] Changing the evaluation of an existing belief is another instance of philosophical attitude and involves the explanation and justification of why the philosophy holds certain beliefs that may be dissimilar to those of the individual in question in order to convince the person of why the philosophy holds such beliefs so as to persuade them to accept the stance taken by the philosophy.

[2:45:284] Finally, make an existing belief more salient is essential to the change in philosophical attitude as this involves the promotion a particular concept within a philosophy in order to create greater awareness and discussion of it, especially of a

concept that was previously not considered to be important, or that had not be widely known due to lack of promulgation.

[2:45:285] This process of churning different concepts and prominising them during different periods is a really important practice for promulgators to follow as it creates diversity of enknowledgement and it also allows different concepts to come to the forefront of public knowledge; this entire process is to be henceforth known as prominisation in the context of promulgative theory.

[2:45:286] An attitude compromise refers to the instance in which a person changes their belief in order to suit those of the philosophy that they are aligning themselves to; this is an act that is considered to be integral to a person's real-world alignment to a philosophy as Astronism remains so vast that a person's complete assimilation to it entirely is not considered to be a common occurrence.

[2:45:287] Now that we have considered seeker behaviour and promulgation with regards to individuals, it is important that we now look toward seeker behaviour in collectivities and apply this to promulgative theory.

[2:45:288] One aspect of this is to be known as subcultural promulgation which, in promulgative theory, refers to the advertisement of a philosophy directly towards a subcultural group through the use of ideas, depictions, or targeting practices.

[2:45:289] There exists a few different forms of subculture that promulgators need to be aware of and are listed as follows:

[2:45:289a] Geographic (the distribution of people across different regions)

[2:45:289b] Age (the distribution of populations according to their age in different regions)

[2:45:289c] Ethnic (awareness of attitudes towards ethnic groups according to the norms in different countries)

[2:45:289d] Gender (awareness of attitudes towards gender in different cultures)

[2:45:289e] Sexuality (awareness of attitudes towards sexuality in different cultures)

[2:45:289f] Virtual (the creation of forums, digital societies, and the use of social networks)

[2:45:289g] Interest identities (goths, punks, and other groups)

[2:45:289h] Class (awareness of class systems across different cultures)

[2:45:290] An understanding of how these different subcultures are related to changes in promulgative strategies and materials is integral for the success of different promulgators, hence the reason for the prominence they are provided with in this part of the discourse.

[2:45:291] In the context of a philosophy, that which is termed as normative compliance involves the disagreement between the followers of a philosophy and the philosophy itself, as ignited by the differences in beliefs and approaches to certain topics, however, such followers continue to follow the philosophy even if they may not entirely agree with all of its beliefs.

[2:45:292] As has been aforeinferred, the extent of the occurrence of normative compliance is expected to be widespread due to the understanding that individuals, because they are unique by their natures, will not and should not assimilate their ideas and beliefs to The Philosophy.

[2:45:293] Another important element to contribute to our discussion is that which is known as the trickle-down theory which, in the context of philosophy, states the notion that the wealthy and educated will align to a philosophy first before those with less wealth or less education, whom will follow on afterwards in imitation.

[2:45:294] According to the Astronist Tradition, this will only occur if the promulgators, by the acceptance of The Institution of The Philosophy of Astronism, target wealthier people to promulgate the philosophy to; rather than existing as a reality, the Astronist Tradition considers the trickle-down theory to be a potential technique for promulgators to apply in their activities.

[2:45:295] Whether the trickle-down theory will actually occur is dependent upon that which is known as homophilany; homophilous interactions involve speaking to people whom are in the same subculture or social standing in society about The Philosophy of Astronism, or philosophy in general.

[2:45:296] Homophilous interactions will inevitably disseminate the ideas of Astronism to an entire group through word of mouth, but depending on the class and wealth of such groups, the trickle-down theory may be defied and the bottom-up theory may reign supreme with this alternate theory stating that the lower classes and poorest in society will adopt the philosophy before the richest and elite upper classes whom will adopt it later on; this is what happened for many of the worlds religious systems, but it is not the role of The Omnidoxy to foretell the future for Astronism and how it will disseminate itself.

[2:45:297] That which is to be known as philosophic autoenhancement, or just autoenhancement refers to the expression of one's knowledge about their philosophy, or philosophy in general, in order to make themselves feel and look superior to others.

[2:45:298] In the same vein as these subjects is a branch of promulgation that focuses on the different forms and ideas regarding the word of mouth dissemination of The Philosophy of Astronism.

[2:45:299] The first form of this is manifested by the creation of advisory roles between sophians or philosophers to followers or seekers which will allow both of these audiences feel a personal connection to their philosophy which encourages followers and seekers to discuss Astronism and feel comfortable in doing so.

[2:45:300] The next of the forms of word of mouth promulgation is encapsulated by the encouragement of the audience to think about a question, encourage them to discuss this with others, and provide them with two known options to answer the question.

[2:45:301] The prime example of the application of this would be when an advert asks its audience to ponder the question of whether they believe in intelligent life on others planets, known as the belief in sentientism in an Astronist philosophical context.

[2:45:302] This type of advert or promulgative material encourages people to discuss this with others, and at the end, the advert infers two options for answering the question; either the person does believe (Astronist) or the person does not (non-Astronist or unAstronist) which also makes deciphering Astronist identity much more efficient as this type of advert allows people to understand if they hold Astronist views on particular topical issues or not.

[2:45:303] The next aspect of word of mouth promulgation is negativity diffusion which involves on the technique of promulgators which focuses on the positive aspects of a philosophy, usually by the employment of idealism; this form of word of mouth promulgation is considered to be important in the initiation of positive philosophical discussion rather than hateful, offensive, or negative argument.

[2:45:304] The second to last form of word of mouth promulgation to be introduced herein is the use of shock tactics to ignite discussion and although this is considered to be something reserved for official promulgators only, this is also expected to be something that is practiced by individuals as well.

[2:45:305] Finally, we come to the encouragement of satisfied followers to show their friends the philosophy and ignite discussions and talks about the philosophy which is considered to be the single-most powerful and pure form of philosophical dissemination that no organised form of promulgation is ever considered to be able to match, but the role of promulgation is to ignite this for followers to engage in.

[2:45:306] One element of seeker and follower behaviour that has not yet been addressed is that of children and how children are considered to behaviour in relation to philosophy, the central aspect to which is paedalignment which involves the alignment of a child to a philosophy, usually through the influence of their parents, other relatives, or friends.

[2:45:307] Meanwhile, that which is to be known as paedopromulgation refers to the instance in which a child convinces their parent(s), their friends, or someone else to follow, or at least take notice of a philosophy, either intentionally or unintentionally on the part of the child.

[2:45:308] In order to further explore the nature of paedopromulgation, we herein introduce the different methods of paedopromulgative activity, the first of which is pressure tactics during which the child makes demands about the philosophy to convince parents, friends, and others of some notion.

[2:45:309] Additionally, there is that which is known as upward appeal and involves the instance of when the child seeks to persuade through mentioning the approval of a trustworthy member of the family or society, such as their teacher, their grandparent etc.

[2:45:310] Another form of paedopromulgation is exchange tactics which involves when the child makes an implicit or explicit promise to provide some sort of service in exchange for following a philosophy.

[2:45:311] Ingratiating tactics refers to when the child seeks to get the person in a good mood or think favourably of him or her before asking the person to comply with their request for alignment.

[2:45:312] Meanwhile, that which is known as rational persuasion involves how the child uses logical arguments or factual evidence in order to persuade their parents, friends, or another person of a philosophically related notion.

[2:45:313] That which is considered to be the most powerful form of paedopromulgation is known as inspirational appeals which can be defined as when a child makes an emotional appeal or proposal that arouses enthusiasm by appealing to the other person's interests or values and linking those with the philosophy in question; this is considered to be something only achievable for older children due to the greater level of complexity involved.

[2:45:314] Finally, we come to consultation tactics as the last form of paedopromulgation to be introduced herein which refers to the instance in which the child seeks the person's involvement in making the decision to follow the philosophy rather than making a proposal or demand.

[2:45:315] That which is to be known as the familial promulgative tactic involves the depiction of families in promulgative campaigns, advertisements, and materials in order to create a universality of familial love and to link this to the values of the philosophy being promulgated, especially in relationship to the role of the family in the context of The Philosophy of Astronism.

[2:45:316] This form of promulgation is part of specific word of mouth promulgation, but it can be considered a technique or approach to the creation of promulgative materials with the main intention of taking this approach being to achieve that which is to be known as familial alignment which involves the instance in which an entire family or household align to a philosophy.

[2:45:317] As we have come to the contemplation of the nature of the family in a promulgative context, it is prudential for us to introduce the different roles in family decision making applied to philosophical alignment.

[2:45:318] For this, we understand that family decision making is split into eight different elements, each of which are manifested as roles, the first of which are appellated as the influencers which refers to family members that hold advisory roles, but are not necessarily involved in the alignment decision.

[2:45:319] The second of the roles are appellated as gatekeepers whom are family members that are the main source of information about the philosophy for the rest of the family members so they are given an authoritative position in the decision making process.

[2:45:320] There is also the family members known as deciders whom have the final say on whether other family members or the household should align to the philosophy and those known as buyers are the family members that actually initiate the process of aligning to the philosophy.

[2:45:321] Also, there are the preparers whom are family members that transform the philosophy into something that is interpretable for other members of the family to understand as not all members of the family will have the same level of philosophical awareness.

[2:45:322] Sixthly we come to the group known as the users whom are the family members that actually adhere to the philosophy while the maintainers are family members who will ensure that the philosophy is in good condition for the others to adhere to it smoothly and without major setbacks.

[2:45:323] Finally, there are those known as the disposers whom are family members who have the job of removing the philosophy from the household upon the disalignment of the household or part of the household from the philosophy.

[2:45:324] Without understanding the different roles that family members can take in relation to the family's interactions with a philosophy we cannot hope to achieve familial alignment and the vast majority of family-oriented promulgative materials are based upon these specified family decision-making roles.

[2:45:325] Before we begin to address those which are collectivised as pre-alignment activities, we should introduce two different psychologies that are herein applied to the

context of a philosophy, the first of which is known as the psychology of complication which refers to the tendency for people to make their lives more complex, and therefore more interesting by aligning with a philosophy.

[2:45:326] Oppositistically, there is that which is known as the psychology of simplification which refers to the tendency for people to make their lives less complex and therefore less stressful by either disaligning from a philosophy or aligning with a philosophy.

[2:45:327] These opposing psychologies are of course vying for different goals with the commonality in this context being that interaction with their philosophy contributes a significant portion of how they are to reach such goals.

[2:45:328] We now come to address those which are to be known as pre-alignment activities which are activities collectivised together due to the fact that they share the commonality that they are to be conducted before a person aligns to a philosophy, however, each of which are not mandatory therefore one does not need to have conducted them in order to align to a philosophy.

[2:45:329] However, the Astronist Tradition firmly upholds the notion that by engaging in these pre-alignment activities will allow for a much smoother, more clarified, and lower risk philosophical alignment.

[2:45:330] The first of these is to be known as philosophical searching which involves researching for information about a philosophy before aligning to it in accordance with the principle that the greater amount one knows about a philosophy, the lower the level of risk there is for a potential aligner.

[2:45:331] The second of the pre-alignment activities involves limits on the information search which includes motivation to continue searching, financial cost, time cost, and the perceived value of the information about the philosophy as obstacles to a successful search for information.

[2:45:332] That which is to be known as the replenishment approach refers to the marketing approach of a philosophy to suggest that it holds replenishing qualities for seekers and followers meanwhile the alignment length refers to the extent of time that a person is aligned to a philosophy, or a particular belief orientation, school of thought, or denomination within that philosophy; these both exist not as pre-alignment activities, but certainly as pre-alignment considerations.

[2:45:333] Also, there does exist that which is to be known as an unsought philosophy which refers to the instance in which a philosophy is not being sought by a seeker to be aligned with which is an area to be addressed by promulgators as to how to ignite the seeker to begin seeking and to understand the reasons why potential aligners are not making the decision to align to the philosophy in subject.

[2:45:334] But as we consider these different elements of how a person is to interact with a philosophy, we come to introduce that which is to be known as philosophical involvement which is itself an abstract determining the extent to which either a seeker or a follower feels a personal attachment to a philosophy, as typically measured by a multitude of different factors.

[2:45:335] The first of these factors is whether the philosophy has been passed down through generations of family members while the second of these factors is predicated on whether a person has spent their valuable time, money, energy, or emotion on contemplating or practicing the philosophy.

[2:45:336] Another factor is whether the philosophy has been the driving force in a person's life e.g. such as getting them through a difficult time, but also whether the person still has friends, family, and other close to them that are aligned to the philosophy.

[2:45:337] Also, whether the philosophy is succeeding in creating betterment for the world which the person contributed to in their own individual way whether by volunteering, donating, or raising awareness is another factor to consider in this context.

[2:45:338] Lastly, that which is known as alignment length is the final factor which itself is divided into four different types ordered according to short to long alignment length, the first of which is a capricious alignment which is less than a year.

[2:45:339] The second of which is a brief alignment which consists of between one and five years while the third of which is to be known as an extensive alignment which is for more than five years and finally, we have that which is to be henceforth known as a panalignment which refers to the instance in which a person is aligned to a philosophy throughout their life.

[2:45:340] The aforeintroduced term of philosophical seeking holds five different techniques for ignition, the first of which refers to need recognition and involves how sophians, philosophers, or adherents activate the need in a seeker by asking questions about the individual's current circumstances.

[2:45:341] Information search involves how sophians, philosophers, or adherents may provide a presentation or lecture explaining the philosophy's features and benefits which seekers are invited to and these types of lectures to be known as paradations.

[2:45:342] Thirdly, that which is to be known as the evaluation of alternatives involves how sophians, philosophers, or adherents themselves may point out to unsought seekers the inferiorities of the alternatives to the philosophy.

[2:45:343] Choice decision refers to how sophians, philosophers, or adherents may use a phrase or technique that elicits a yes or no decision from the unsought seeker to either

agree to learning more about the philosophy, to alignment to the philosophy, or to do neither of these things.

[2:45:344] Finally, there exists that which is to be known as post-decision evaluation and refers to how the sophian, philosopher, or adherent returns to the unsought seeker to ask whether they have conducted the decision they had previously made if their answer was yes, and if they had reconsidered their decision if their previous answer was no.

[2:45:345] Another form of promulgation and philosophical dissemination is that which is to be known as philosophical transmission which remains distinct from promulgation, astronomy, and trition which are organised efforts to disseminate The Philosophy of Astronism while philosophical transmission refers to the natural dissemination of The Philosophy which is primarily through word of mouth that isn't directly managed by The Institution.

[2:45:346] Philosophical transmission is considered to be one of the most exciting elements of how a philosophy is disseminated, but the nature of its occurrence is only traceable through the means of historical chronology and the way in which a philosophy is transmitted is encapsulated by the discipline of study of transmutology.

[2:45:347] That which is to be known as a circumstantial targeting decision is a term first introduced herein and refers to when an individual means of promulgation is enacted in order to target people according to the circumstances of their lives.

[2:45:348] An example of this would involve targeting people that are alcoholics, targeting people that are married, targeting people that feel socially ostracised, or targeting people that are homeless.

[2:45:349] The five elements under the collective appellation of attribute adoption are principles that a successful philosophy must know to follow and the first of these is the relative advantage which refers to the notion that a philosophy must have some advantage over the other philosophies known.

[2:45:350] The next of the five elements is compatibility and refers to the philosophy must fit in with the seeker's and/or follower's lifestyle while complexity is the next of these elements and refers to the philosophy must not be too complex for the seeker and/or follower to understand.

[2:45:351] Trialability is of extreme importance especially to The Philosophy of Astronism as it focuses on the principle of the manifestation of belief and holds that philosophies that can be demonstrated through acts and practices are more likely to succeed.

[2:45:352] Finally, observability is the final element of attribute adoption and refers to the principle that the more observable the philosophy in society the quicker the diffusion

process because if seekers are able to see the philosophy in practice, this is bound to raise interest in it.

[2:45:353] As further contemplations and extensions to metaphilosophical understanding, we address that which shall be known as philosophical quality refers to an abstract measuring the extent to which the different disciplines of study of a philosophy are accessible and interactive for followers of the philosophy engage in enknowledgement and the extent to which they are open to being contributed to.

[2:45:354] We have previously addressed the pre-alignment activities and interactions with a philosophy and now we must address that which is collectively appellated as post-alignment and refers to the period directing following a person's alignment to a philosophy and the activities and feelings occurring during this period.

[2:45:355] Post-alignment evaluation involves three component parts and refers to when a philosophy exceeds expectations as a positive disconfirmation, the second of which refers to the instance in which a philosophy matches expectations as satisfaction.

[2:45:356] Finally, that which is to be known as negative disconfirmation refers to the instance in which a philosophy does not meet expectations but there are also considered to be five different consequences to post-alignment evaluation which are herein introduced.

[2:45:357] Firstly, we hold the notion that one's further enknowledgement of the philosophy is essential to a greater understanding and post-alignment experience.

[2:45:358] Another expectedly regular occurrence for post-alignment activities is a person's reorientation within the philosophy in addition to common expectation that post-alignment followers may begin to either praise or complain about the philosophy to others.

[2:45:359] The final two elements of post-alignment evaluation are word of mouth recommendation which is expected to common depending upon the personality of each individual and the other element pertains to no change in behaviour or the instance in which there is no significant course of action taken during the post-alignment.

[2:45:360] A term derived from roots in psychological is applied here, known as cognitive dissonance, and refers to the psychological tension that results from holding two conflicting ideas at the same time about one's philosophy.

[2:45:361] That which shall henceforth be known as philosophical performance refers to the extent to which a follower of a philosophy considers the philosophy to have achieved what they had expected of it.

[2:45:362] There are different measures to philosophical performance, the first of which is to be known as expected performance which pertains to the instance in which the

philosophy meets the level of quality of benefits that a person expects from following their philosophy.

[2:45:363] Secondly, that which is known as ideal performance refers to the highest level of the quality of benefits that the follower of a philosophy expects meanwhile that which is to be known as minimal performance involves the minimum level of the quality of benefits that the follower of a philosophy expects.

[2:45:364] Importantly, that which is known as dissonancy refers to the degree of disparity between the minimal performance, the expected performance, and the ideal performance of a philosophy.

[2:45:365] Returning to the topic introduced at the head of this discourse, there are several different features of a conject that hybridise services and products to form that which we understand to be a conject which are as follows:

[2:45:365a] Abstract elements dominate.

[2:45:365b] People are primarily important.

[2:45:365c] Explored through enknowledge and experimentation.

[2:45:365d] Abstract elements physicalised through practices.

[2:45:365e] Impossible to stockpile.

[2:45:365f] Difficult to tailor.

[2:45:366] As this discourse on seeker and follower behaviour begins to come to an end, we address a some new terms that closely relate to the topic, the first of which is that which is to be known as the philosophical inventory.

[2:45:367] A philosophical inventory refers to the contents of abstract elements (concepts, theories, disciplines, beliefs etc.) that make up a philosophy when considered collectively as a commodity of value that forms the identity of the philosophy.

[2:45:368] There also exists two different approaches to promulgation in a wider sense, the first of which is appellated as the affluent approach which the approach to the promulgation of a philosophy that involves disseminating the philosophy to only those people in a society that are financial wealthy and of higher social standing before disseminating the philosophy to the masses.

[2:45:369] This is done in the hope that the philosophy will retain respect amongst affluent members of society that will be best positioned to donate to the philosophy to held promulgate it faster later on when it is disseminated to the masses.

[2:45:370] An alternative approach to promulgation is that which shall be henceforth known as the initial mass approach which involves the approach to the promulgation of a philosophy that involves dissemination the philosophy to all wealth levels and social levels and classes of a society from the initiation of the philosophy.

[2:45:371] This is done in the hope that the philosophy will retain both its respect amongst affluent members of society as well as gaining mass adherence simultaneously, but this requires greater means of funding from the initial stages of the establishment of the philosophy.

[2:45:372] Further to this, that which is to be known as philosophical value analysis is a post-alignment activity involving one's decision to systematically consider the value of one's philosophy in their lives by incorporating all aspects of their life and how their alignment to that particular philosophy has lead to the enhancement of their life in some way (positive value), has added no enhancement to their life (neutral value), or is perceived to have made their life worse (negative value).

[2:45:373] Finally, to end this discourse, we introduce a unique term, sophosocialisation, which is a post-alignment experience in which a person becomes more accepted in their social circles directly because of their alignment to a particular philosophy.

[2:45:374] This may either be autoperceived, which refers to the instance in which something is true to oneself, but is not true to reality, or it may be the reality of the situation and in this we see how there may be some disparity between the reality and the perceived reality.

[2:45:375] Sophosocialisation is a form of support for the homogenisation of a society in a friendship, colleague, or familial setting because it progresses the notion that people will become united through a shared alignment to a philosophy despite the fact that each individual will hold different combinations of belief orientations, approaches, and will want to focus on certain aspects of the philosophy than others.

Strategic Promulgative Management

[2:46:1] That which shall henceforth be known as strategic promulgative management refers to the planned managerial process designed to oversee and control the various promulgative advertising activities involved in a program to communicate with a philosophy's targeted seekerbase and which is ultimately designed to influence the seeker's alignment decisions.

[2:46:2] The establishment of the discipline of strategic promulgative management is essential to the overall development of promulgation and promulgative theory for without it, the organisation of all the different activities, concepts, and methods of promulgation would be non-existent.

[2:46:3] Central to the establishment of strategic promulgative management is notion that competition is key for philosophies to continually enhance and position themselves in the context of the wider world.

[2:46:4] Competition is vital to the establishment of an arena in which philosophies can participate alongside one another in the race to achieve greater levels of promulgation and followership; this is to be known as the competition principle as it notionises that philosophies are competitive by their nature, but only through the respectful means of promulgation.

[2:46:5] Philosophical competitors are existent in order to progress the entirety of philosophy itself, as well as to encourage the mutual progression of different competing philosophies by comparing themselves with one another and through the critique of one another in order to further development themselves for it is only by the consideration of each other that we are able to evolve in our own rights.

[2:46:6] In the context of promulgation, advertising is considered to exist as a technique of promulgation; the role of advertising in the context of promulgative efforts remains to raise more awareness of the philosophy, concept, discipline of study, or school of thought being advertised and to increase the followership of a particular denomination, or the overall philosophy itself than would be obtained in the absence of advertising.

[2:46:7] Therefore, in order to reaffirm the importance of advertising to the processes of promulgative and the overall development of promulgative plans through strategic promulgative management, we herein establish four points which are to be known as the Essentialities of Promulgative Advertising.

[2:46:8] The first of these points pertains to the notion that a person must have the opportunity to see or hear the message of promulgation directly, or be told the message from another party which are known as direct promulgation and indirect promulgation respectively.

[2:46:9] The second of these points pertains to the notion that a person must pay attention to the promulgative advertising piece while the third point notionises that a person must understand what is being presented in order for the promulgative message to be received and perceived as intended.

[2:46:10] Finally, the fourth point pertains that a person must act upon the message in the desired manner that the promulgator intended which is most typically to enknowledge themselves further about the information as ignited by the advertising piece with the final intention of achieving their followership.

[2:46:11] As inspired from mainstream, non-promulgative, or non-philosophical advertising theory, there are different levels of involvement in relation to a purchase with a high involvement often paralleled to a larger cost or a greater emotional connection to the product being purchased meanwhile a low involvement purchase is characterised by a lack of solemnity, usually because the purchase holds little consequence.

[2:46:12] In the context of promulgative theory, a philosophical alignment is considered to be a high involvement decision from the official institutional perspective because although no cost is involved, the emotional connection and consequential circumstances of aligning to a philosophy are arguably higher than most other actions.

[2:46:13] However, even with this category of high involvement decision-making, there exists two subcategories, the first of which involves high involvement decisions driven by negative motivations while the second involves high involvement decisions driven by positive motivations; one's philosophical alignment may be reside in either of these subcategories, however, of course, The Institution of The Philosophy of Astronism hopes that the majority exist within the latter subcategory, but also acknowledges that some will not and will fall in the former subcategory and shall therefore remain outside of institutional control.

[2:46:14] Alternatively, from non-institutional perspectives, a philosophical alignment may be considered a low involvement decision depending on the solemnity to which people associate their philosophical beliefs which often runs parallel to the role of philosophy in a person's life.

[2:46:15] A low involvement decision of philosophy is characterised by the disproximation of an individual's perception to the philosophy in question, short periods of alignment to a particular philosophy, and only exhibiting a tepid interest in their philosophical alignment.

[2:46:16] The consideration of the level of involvement for seekers is instrumental to their approach to the consideration of philosophy as an entirety as well as for particular different philosophies, of which a seeker's involvement may differ for each depending upon the extent of their knowledge and the nature of their perception about such philosophies.

[2:46:17] The extent to which a seeker holds involvement for their philosophical alignment is dependent upon their current circumstances, including their financial, familial, romantic, emotional, and social situations as these elements are influential to the extent of priority that a person associates with their own philosophical alignment; by this notion, we understand that involvement is synonymous with the extent to which something is prioritised in a person's life.

[2:46:18] That which is to be known henceforthly known as a message appeal in the context of a philosophy refers to the extent to which a particular promulgative advertising piece appeals to the specific needs and wants of an individual seeker, especially by coincidence, as in catching the attention of a seeker because of their issues in the moment that they see the advert.

[2:46:19] This may also be known as coincidental promulgation as it is dependent upon the coincidence of a seeker coming across a particular promulgative material and receiving the promulgative message as intended in such a way that corresponds the seeker's present circumstances at the time of their reception of the advert.

[2:46:20] This, of course, is considered to be an uncontrollable form of promulgation that can only be hoped for by promulgators, but it cannot be relied upon by those forming promulgative plans and the strategic management of promulgation because it isn't a consistent form of promulgative reception, however, its existence is acknowledged and its influence is understood herein.

[2:46:21] One of the most modern forms of promulgative materiality is the use of social media and therefore philosophical advertising and promulgation on social media is essential to the overall strategic promulgative management process.

[2:46:22] The establishment of official channels for The Philosophy of Astronism on social media is entirely controlled internally by The Institution which is to have a dedicated team to manage the representation of Astronism and dissemination across all different social media platforms.

[2:46:23] The ways in which The Institution intends to utilise the tools of social media in order to bolster its promulgative efforts are vast and exist largely in parallel to those techniques adopted by non-philosophical entities such as companies, charities, and public figures.

[2:46:24] Social media is herein considered to be the primary way in which Astronism is to establish itself as a digital philosophy and the use of social media is expected to be the most important of the initial forms of promulgation utilised by The Institution as it is relatively low cost and remains controllable.

[2:46:25] The place and role of advertising in philosophical promulgation is also considered in promulgative theory in order to derive ideas about the consequences of using advertising in the context of a philosophy.

[2:46:26] Advertising may be considered desacralising for religions, but because philosophies do not hold this same obstacle, especially so in the Astronist philosophical tradition, an entirely new industry of philosophical advertising is herein founded which, despite its inspirations from mainstream product advertising, is expected to have its own unique features and approaches.

[2:46:27] Within this meta discussion of advertising in relation to philosophy, the ethics in philosophical advertising is also addressed and is of the utmost importance to develop in order to protect the integrity of the philosophy being advertised.

[2:46:28] The advertising of philosophies should be regulated just as vigorously as the advertising of a products because misrepresentation of philosophies is ethically wrong and due to the presumption of the high involvement of philosophical alignment that The Institution takes, the consequences of the distortion or misrepresentation of a philosophy could have harmful effects on followers.

[2:46:29] One of the main questions of ethics in philosophical advertising is the notion that advertising a philosophy creates unnecessary desires or fears that a person's current philosophy, or their aphilosophicality is not correct for them, or that they could be enhanced through realigning to the advertised philosophy.

[2:46:30] This argument is generally opposed to the practice of philosophical advertising on the grounds aforementioned and this is to be known as the False Prescription Argument as it entails that there exists an immorality in attempting to instil desires and fears in people that had previously that held the specific ones that exist in relation to philosophy; it is the instilling nature of philosophical advertising that the False Prescription Argument is opposed to.

[2:46:31] However, the False Prescription Argument is always to be distinguished from that which is to be known as illusionary promulgation which involves the depiction of a philosophy in a certain way that forms a false reality of what being adhered to that philosophy is like; this is defined from the False Prescription Argument because the instillment of emotions does not necessarily pertain to the creation of illusionary promulgative materials.

[2:46:32] However, the main counternotion to that of illusionary promulgation is that people create their own images of what it is like to be adhered to a philosophy so it is therefore their own responsibility to be realistic when faced with idealised forms of advertising; this is to be henceforth known as autorealism.

[2:46:33] The main notion of autorealism is that receiver of a promulgative advertising piece should expect the material to be in favour of the particular philosophy that it is advertising by the very nature and purpose of advertising itself.

[2:46:34] The autorealist approach defends the creation of all types of promulgative materials and justifies its stance by the notion that receivers are not ignorant of the context in which they receive a promulgative advert and they should therefore be aware of the nature of the materials they are receiving which are majoratively biased towards that which is being promulgated.

[2:46:35] One of the most important elements within strategic promulgative management, and also significant for the astronic metaphilosophers, is that which is to be henceforth known as the philosophical economy.

[2:46:36] The philosophical economy is a collective term relating to the translation of philosophical adherence into monetary value via the cumulative incomes of institutions managing different philosophies and philosophically-associated organisations thus forming an economic bubble that interacts with other sectors of the non-philosophical economy.

[2:46:37] The establishment of the philosophical economy is one of the primary goals and responsibilities herein omnidoxically vested to The Institution of The Philosophy of Astronism as the first of its kind and the initial disseminator of the notion of a philosophical economy.

[2:46:38] Additionally, the role of advertising in the philosophical economy is another prominent question for promulgators to consider, especially whether philosophical advertising has a positive or negative effect on the philosophical economy which The Institution considers to it to hold a positive effect.

[2:46:39] The philosophical economy is central to understanding how The Institution of The Philosophy of Astronism perceives the role of philosophy in the modern industrial world, and how the Astronist view of philosophy is distinct from its predecessors and it is important to note that the philosophical economy is to be explored and further developed within strategic promulgative management as well as within metaphilosophy.

[2:46:40] Furthermore, that which is latterintroduced in this discourse as industrial philosophy is directly descendent from the philosophical economy concept and it is this concept that forms a suprainstitutional purpose to the promulgation of a philosophy because the philosophical economy is encouraged to be bolstered as a sector of the economy comprising of different philosophies and their proprietorship-holding institutions.

[2:46:41] That which is to be henceforth known as the process of philosophical glocalisation refers to a technique of marketing of a philosophy so that seekers perceive

the philosophy in such a way that it not only acknowledges local customs, languages, and cultures, but incorporates them into its particular denominations whilst also holding global considerations and a humanwide scope.

[2:46:42] Non-philosophical entities, such as multinational corporations, have seen great successes in the implementation of the process of glocalisation to reach their goals of profitability so it is not illogical to notionise that a philosophy would also reach its goal of promulgability through its own implementation of the process.

[2:46:43] Before we address the many different forms of objectives in promulgative advertising, we must introduce a tactic that is expected to be used in philosophical advertising which involves repetition.

[2:46:44] Repetition is a tactic used to continually reinforce messages through repeating them so as to ensure seekers take action on the messages advertised and it is this that is considered to be the most efficient way of ensuring an promulgative advertising message is communicated and received by the target group of seekers in the way that the promulgator and The Institution had intended.

[2:46:45] Promulgative advertising objectives are the goals that a promulgator may have when they are setting out their plans for an promulgative advertising piece or campaign and they are expected to hold at least one of these for a promulgative material is not considered to exist that does not have an objective.

[2:46:46] The first of these objectives is simply to promulgate which involves spreading the message or existence of the philosophy to the widest amount of people possible, which is also known as increasing philosophical awareness, but promulgation is notably referential to a more strategic and institutionally managed aspect of general philosophical awareness.

[2:46:47] To promulgate is expected to be the most popular of all the objectives and the majorative progenitor of all the other objectives herein mentioned, and the second of which involves the generation of demand for philosophy in general with the intention that this will coincide with a greater demand, interest, and awareness for The Philosophy of Astronism, or one of its denominations or another of its constituent parts specifically.

[2:46:48] The next of the advertising objectives is that which is to be known as adherent generation and involves directly increasing the followership of a philosophy through advertising efforts which can be considered a derivated end goal of the advertising objective of promulgation.

[2:46:49] One advertising objective involves the engagement of seekers through information, entertainment, and participation with the philosophical brand; this reduces the perceived distance between seekers with the philosophical brand which remains important to the establishment of a relationship between a philosophical brand and seekers and followers.

[2:46:50] Retainment of existing followers of the philosophy is a major advertising objective herein introduced that is of course a proponent of the retentionist approach to promulgation and promulgative advertising is expected to be one of the primary ways in which the ideas of retentionism can be applied.

[2:46:51] The next of the advertising objectives introduced herein involves the engagement of influencers which entails the technique of engaging a group that have influence over others that could help with promulgation and the increase of followership; this involves raising awareness of the philosophy amongst such groups with the intention that they will use their influential voices to speak of the philosophy in a positive manner, or ideally, to align with the philosophy as the greatest demonstration of their preference for it.

[2:46:52] That which is to be known as the ignition of seekership involves the initiation of people to become interested in philosophy, thus igniting a person's seekership as defined from intending to ignite their followership of a particular philosophy.

[2:46:53] Seekership ignition is considered to be the necessary precursor to the encouragement of followership, or alignmentship as it may also be termed, due to the fact that every person is a seeker before they are a follower/aligner to a philosophy and so therefore it is prudent for promulgators to intend to target non-seekers to ignite their seekership with the greater intention of encouraging their followership at a later date.

[2:46:54] Obviously, the ignition of seekership objective is necessary in the early introduction of post-Astronist philosophy to a society and therefore it is expected to be the initial method and objective of promulgation that The Institution of The Philosophy of Astronism is to undertake.

[2:46:55] The next of the promulgative advertising objectives is persuasion which of course involves advertising designed to convince audiences about a particular topical issue of current affairs that the philosophy in question holds a particular view on; this is considered a derivation of either the aforementioned retainment, or general promulgation objectives.

[2:46:56] The second to last of the promulgative advertising objectives introduced in this discourse is that which focuses on reputation which involves building or repairing the positive reputation of a philosophy, or its institution in the eyes of seekers, followers, or another public.

[2:46:57] The final form of a promulgative advertising objective is that which focuses on the informative powers of promulgative materials and involves advertising designed to inform seekers about the philosophy, particularly in the brief explanation of a certain concept and a unique term from within the terminology of the philosophy; this may also be labeled as the objective of clarification as revolves around clarifying and explaining what particular constituent elements of a philosophy exist as and is a useful technique of

advertising, especially if there is considerable disparity in the public or mainstream spheres about what the constituent element of the philosophy pertains to.

[2:46:58] Each of these promulgative advertising objectives are essential to the foundations of promulgative theory as they determine the approach taken to the creation of promulgative materials as they ascribe why a particular material is being created and they therefore play a role of necessity in the overall process of promulgation.

[2:46:59] As we now move on through our discourse, we come to the point at which we must review a promulgative plan which is directly inspired by a mainstream marketing plan and in this review, we shall largely pose questions according to the five main areas as this is considered to be the best way of explaining the different aspects of promulgative plans in a universal sense.

[2:46:60] The first of these involves the description of the philosophy, concept, and service and so the question is posed of what is being advertised/marketted?

[2:46:61] The description of that which is being promulgated involves attempting to get an unfamiliar person to understand exactly what is being advertised for the presumption of the audience's knowledge and understanding of what is being advertised is expected to be a common error for promulgators to make.

[2:46:62] The second of these areas involves the market assessment which is the overall assessment of the size, circumstances, orientations, and opinions of the current market of seekers, or one of the segments of the market of seekers which is an essential aspect of any promulgative plan as promulgators must understand the nature of the market to which they are promulgating the philosophy to.

[2:46:63] Thirdly, that which is known as the source of results is the next of the essential areas or aspects of a promulgative plan and primarily poses the question of where are the intended results, after the execution of the promulgative plan, expected to come?

[2:46:64] Essentially, this is asking from whom to the promulgators or the institution expect to receive some result from? from seekers? from followers? from non-philosophical consumers? from business owners? from fellow philosophical institutions? from the government?

[2:46:65] This aspect of the promulgative plan is rooted in the establishment of the target audience and there is most likely to exist a multitude of different sources of results due to the multi-faceted objectives and intentions for the promulgative material in question.

[2:46:66] The fourth aspect of any promulgative plan involves a competitive evaluation which involves the question of how are other philosophies marketing themselves?

[2:46:67] Derivated questions inspired by this question involve the following: what techniques are they conducting in order achieve their goals? are their techniques succeeding? should and could The Institution and its promulgators adopt similar techniques of promulgation?

[2:46:68] Finally, and perhaps most essentially, marketing or promulgative objectives, as aforeaffirmed, are obligatory for any promulgative plan and the primary question for which is: what are objectives for the specific advertising piece as well as the philosophical brand in its entirety?

[2:46:69] Additional questions for promulgative objectives that echo the aforeintroduced promulgative advertising objectives include the following: more adherents? greater awareness? introduction of the philosophy to a new region? reparation of the philosophy's reputation? presentation of The Institution in a particular way as a community-building organisation that stands a beacon for freedom of belief?

[2:46:70] Each of these questions and more must be considered as part of the promulgative plan and the ones of particular prominence should be answered within the promulgative plan in order to consider the plan a completed entity.

[2:46:71] Moving on now, there exists a pair of interconnected principles that stand prominently within promulgative theory, the first of which is to be henceforth appellated as the Abundance Principle which states that the greater amount of contents there is within a philosophy, there will be a greater probability of an increased number of followers due to the Follower Interest Dispersion Principle.

[2:46:72] Therefore, the Follower Interest Dispersion Principle, as it shall be henceforth appellated refers to the notion stating that a philosophy that encompasses and explores a vast range of topics will be more attractive to a greater amount of seekers as they are able to disperse themselves across the philosophy depending upon which aspect of the philosophy they are particularly interested in therefore supporting the Abundance Principle.

[2:46:73] These two interdependent principles are prime examples of how followers can interact with a philosophy and how the extent of their interactions is dependent upon the extent of the contents of the philosophy in subject.

[2:46:74] Another foundational aspect of strategic promulgative management involves the definition of the markets for promulgation (the term, market, in the context of promulgative theory relates to countries), each of which are introduced and briefly described herein in order to determine how they are to be promulgated to.

[2:46:75] The first of these are the high risk markets and these include countries that have strict regulations on the activities of philosophical institutions and are therefore restrictive for the presence of philosophies in their non-institutional senses.

[2:46:76] Oppositely, those which are known as low risk markets involves countries that don't have strict regulations on the activities of philosophical institutions and are therefore amenable to the increased presence of a philosophy in their non-institutional sense.

[2:46:77] Those which are to be henceforth known as obstinated markets are countries and regions that are religiously and culturally conservatism and traditional and therefore pose greater difficulty in succeeding in promulgative activities.

[2:46:78] Obstination is a term introduced herein that relates to instances of cultural homogeneity, conservatism, and traditionality, either of a person, a particular group, or an entire country.

[2:46:79] Obstinated markets are considered to be some of the most difficult to both enter and certainly to navigate due to their restrictive nature and the often philosophical or their even anti-philosophical orientations of the governments and powerholders present there.

[2:46:80] The next type of market to introduce are those which are to be known as progressive markets which pertains to countries and regions that are secular and culturally liberal and therefore pose greater accessibility and ease in succeeding in promulgative activities which is due to the fact that they have less restrictions for promulgators and philosophical institutions to conduct their operations, but the scarcity of progressive markets means that their supramarket scope is some what limited in comparison to the global potential.

[2:46:81] Those which are to be categorised and known as isolated markets refers to countries that do not have wide internet access, countries whose governments do not allow the advertising of philosophies in any form, or countries that are politically and economically isolated from the rest of the world.

[2:46:82] Isolated markets are the most difficult countries for philosophies to have any existence in and so any presence that The Philosophy of Astronism does have there is expected to be severely persecuted, oppressed, and actively extinguished; it is the reduction of these countries that are promoters of belief persecution that The Institution of The Philosophy of Astronism maintains as one of its main goals to achieve.

[2:46:83] Those which are known as either hyperreligious markets, philosophical markets, or philosophy-averse markets are similar to obstinated markets by their nature, but do remain distinct in that they refer to countries that are of a particularly high religiosity in their orientation, especially when religion plays a prominent and/or integrated role in the government, and therefore the introduction of different philosophies into the country is considered suspicious, or is outright banned.

[2:46:84] These markets are also expected to be difficult for The Philosophy of Astronism to make considerable headwinds in initial stages of its promulgation globally, but with the implementation of the process of the philosophisation of the country, such circumstances are intended to change.

[2:46:85] As the final type of market to define herein, we have the susceptible markets which are described as countries that are found to be generally easier to promulgate the philosophy to because of less governmental intervention or because of a general need and/or want for a revitalising philosophy in the society, typically due to social, political, religious, cultural, or economic unrest, misidentity, or general discontentment with the current circumstances of the country.

[2:46:86] Such countries are typically characterised by their overwhelmingly young populations that are ruled by older elites; it is to the youth that promulgators should look to target in these markets in order to establish a presence for the philosophy their that remains long-lasting.

[2:46:87] Now that we have a much better idea of the different types of markets there are all around the world for promulgators to disseminate the philosophy to, we can address to belief orientations and/or approaches that are closely associated with the definitions of these different markets.

[2:46:88] The first of these is panhumanism which is used elsewhere in the context of Astronist Terminology, but it is used here to refer to the notion that all of humanity is a potential target seeker to be promulgated to and this is generally the approach undertaken by The Institution of The Philosophy of Astronism for the promulgation of The Philosophy over which it holds proprietorship.

[2:46:89] The second of these is to be known as obstinationism which involves focusing on promulgation in countries that are particularly religious and culturally conservative, especially by presenting the philosophy as a beacon of freedom of belief, practice, and expression which is expected to something that many members of the populous of such countries are desperately in need and desire of; this, therefore, can be considered a powerful technique of promulgation to reach the often difficult to enter obstinated and hyperreligious markets.

[2:46:90] It is always important to categorise in order to organise our ideas and to formulate them in such a way that others can not only understand them, but apply them; a way in which this is manifested is through the derivation of philosophy in terms of product categorisation.

[2:46:91] So, the product category is philosophy in general which encompasses all forms of philosophy and exists as a product category alongside all others which are either synonymous with an industry or represent different products/services within an industry; in the case of philosophy, it is considered an industry.

[2:46:92] The next type of categorisation is a subcategory as a derivation of the product category which, in this context, refers to organised philosophy in general meanwhile the subcategory division refers to Astronist philosophy and so this derivation pertains to the different traditions of philosophy that we are all familiar with.

[2:46:93] The third to last derivation for the purpose of product categorisation is the omnimentioned philosophical brand which, in this case, is manifested as Astronism and the second to last derivation, known as a hyperbrand, refers to a comprehensive form of Astronism within which many other denominations are collectivised, examples of these include Saamism, Setarism, and Prosveticism.

[2:46:94] The last derivation before we begin to delve into contental forms of the philosophy is that which is known as the sub-brand which pertains to the different denominations of the philosophy, examples of which in an Astronist context would be Hanazavaism and Prabodhanism.

[2:46:95] The categorisation of the different components of philosophy in the context of Astronism in this way allows us to better understand the relationship between the different components and how they are positioned in the hierarchy which in turn helps us to see how and why Astronism is designated as an organised philosophy.

[2:46:96] As we now move on, we come to the different approaches of positioning; positioning remains integral for all that is to be placed before an audience to be bought, entrusted, or aligned to and for this reason, the positioning of a philosophy that is to be promulgated is an essential element to gain success in strategic promulgative management.

[2:46:97] One of such ways to positioning to be known as follower-oriented positioning which is an approach to the marketing or positioning of a philosophy that is to be applied when marketing to a specific segment, or when social approval is the primary alignment motivation.

[2:46:98] Meanwhile, there also exists that which is to be known as philosophy-benefit-oriented positioning which is expected to be applied in all cases and it is in this that the philosophy's characteristics are the message while in the former, the user characteristics are the message and in this definition, we can see the subtle different between the two approaches.

[2:46:99] Essential to success positioning of a philosophy, or any product or service for that matter is the presentation of the benefits of that which is being positioned and in this context, we introduce that which is appellated as the Emphasisism of Appropriate Benefit which encapsulates a number of different notions about the presentation of the benefits of a philosophy for its successful positioning.

[2:46:100] Promulgators should want to select the benefits that will distinguish the philosophical brand they are promulgating from competitor philosophies in a way that is important to the target audience.

[2:46:101] This can be achieved via five most prominent ways, the first of which involves reinforcing or building a uniqueness for the philosophical brand on important benefits such as followers will receive greater happiness in their lives, their lives will be enriched and enhanced by their followership to the philosophy, and they will become part of a worldwide community of people that think and believe and share the same values as they do.

[2:46:102] The second of these involves capitalising upon competitor's weaknesses and turning these into important benefits for a person that aligns to the philosophy and closely connected to this is emphasising important benefits that one's philosophy delivers better than the known or available others.

[2:46:103] Another important element involves focusing on increasing the importance of benefits that one's philosophy delivers better than those known or available others while also decreasing the importance of benefits that one's philosophy does not deliver better than others; this practice to be henceforth known as proportionism.

[2:46:104] We speak of benefits and their importance to successful strategic promulgation, but what are benefits and what different aspects of benefits exist?

[2:46:105] Herein identified are three main elements to that which can be considered a benefit, the first of these is an attribute which is an objective component of the philosophy and in Astronism's case, would involve how it focuses on space, involves cosmocentricity, has many disciplines of study, and holds a wide variety of scope for further academic and scholarly expansion as space exploration continues; these different abstracts can be considered attributes and form the majority of benefits in relation to a philosophy.

[2:46:106] It is the transmission of these attributes to the audience and to gain the intended understanding of the audience towards such attributes is the most important, but also the most difficult element of a promulgator's role.

[2:46:107] The second of these three main elements is a characteristic which is manifested as a subjective claim about the philosophy, for example proclaiming that the philosophy is a beacon of the freedom of belief, extensive in scope, easy to understand etc.

[2:46:108] These characteristics also hold incredible importance for the persuasion of the audience to do as the promulgator intends and they can always be defined from attributes due to their proclamational nature.

[2:46:109] Finally, we come to the final aspect of benefits involving emotion which is a feeling associated with the philosophy, such as excitement, wonderment, love, hope etc.

and is also closely associated with people's personal experiences of the philosophy, their journey of followership of the philosophy, and is also closely associated with cosmic devotion.

[2:46:110] Now that we have introduced the different aspects of benefit, we can address the different focus options of benefit which are split into two forms characterised by negative motivation and positive motivation.

[2:46:111] Negative motivation for the focus options of benefit involve drawing attention to an attribute, or a multitude of attributes if dealing with an expert audience while another approach involves drawing attention directly to a subjective characteristic of the philosophy.

[2:46:112] Two other focus options of benefit involve using an attribute to support a subjective characteristic of the philosophy as well as dispelling a negative emotion or problem with a subjective characteristic associated with the philosophy.

[2:46:113] As aforeaffirmed, there also exists positive motivations of benefit focus options which would involve using a subjective characteristic to draw attention to the emotional consequences of following the philosophy.

[2:46:114] A final option may involve simply delivering an emotion and linking this emotion to the philosophy through different scenarios that involve the particular emotion delivered; these different focus options for benefits are essential to the application of benefits to promulgative activities and materials.

[2:46:115] Before we address the different objectives of communication and media strategy in the context of promulgation, we should briefly address the notion of the positioning of the philosophy in relation to the product category which may either be executed through the employment of strong market leader positioning, or through differential positioning.

[2:46:116] Also, the approach of the positioning of the philosophy in relation to competitive philosophical brands and in this case, a philosophy-benefit-oriented positioning should be adopted here as this approach is primarily based on the comparison of philosophies.

[2:46:117] Collectivised under the heading of communication objectives are five different objectives that are focused on why a promulgator may communicate, the first of such objectives is the category need.

[2:46:118] This first communicative objective involves an objective only when it is necessary to remind the seeker of his or her need for the category or when the promulgator must sell the seeker the need for the existence of the category and in this case, refers to the need for the existence of philosophy.

[2:46:119] The second of the communicative objectives is philosophical awareness itself which is an obvious objective and is always an objective in order to enable the seeker to identify the philosophy in enough detail to follow, or enknowledge themselves about it.

[2:46:120] Philosophical awareness of course refers to the extent to which a person both knows and understands a philosophy with the information available to them.

[2:46:121] The next of the communicative objectives of promulgation is philosophical attitude which is also always an objective, just like philosophical awareness, because there must be some reason to select one philosophy over another and the philosophical attitude is the set of reasons for why a person chooses to follow one philosophy over another as influenced by the nature and extent of their knowledge, experience, and perception of the philosophy.

[2:46:122] The second to last communicative objective is known as philosophical follow intention which is not often a specific objective applied for advertising except when the philosophical attitude is positive and a “reason to follow” is required, but this always remains an objective for promotions.

[2:46:123] Finally, we have institution image advertising which focuses on positioning the institution that manages the philosophy in a positive light with the philosophy itself being a secondary focus in this case.

[2:46:124] Closely associated with communicative objectives is the wider media strategy for the promulgation of a philosophy; without having a media strategy, a philosophy cannot hope to establish itself in the minds of the public and there perhaps exists no truer statement in the context of promulgation that the promulgator is at the beckoning call of those whom hold the power to make his/her job easier or tenfold in difficulty.

[2:46:125] The establishment of a media strategy is therefore essential to the promulgation of a philosophy, hence our introduction of the different approaches a promulgator can take to the creation of his/her media strategy and the appropriate types of media to use for the the respective objective.

[2:46:126] The first of these approaches involves the recognition of brand awareness which should avoid radio because the seeker audience can't see the philosophical brand through imagery, symbols, or other forms of visuality that philosophical brand recognition is dependent upon; of course, this is said with the exemption of jingles which are generally not brand attributes that are expected to be utilised by promulgators.

[2:46:127] The second of these approaches is recall brand awareness which is appropriate for all media are appropriate as this can be transmitted through the use of terms, such as Astronism, or a concept within it that is being promulgated.

[2:46:128] The next set of four approaches are focused on brand attitude, the first of which is low-involvement informational materials which all media are appropriate for, while the next is low-involvement transformational brand attitude and for this, it is suggested to avoid radio because of the requirement for visual content to make the transformation occur more efficiently.

[2:46:129] The next two of this set of four are high involvement, the first of which focuses on informational brand attitude which it is suggested herein to avoid broadcast media for because of the time needed to process the message by the audience.

[2:46:130] Meanwhile, that which is known as high-involvement transformational brand attitude is suggested to avoid radio because, again, there exists a need for visual content to secure the transformation of the brand attitude.

[2:46:131] One of the most important distinction to make between different forms of media is the linear and non-linear divide, the former of which pertains to traditional broadcasting while the latter of which involves digital media like YouTube, iTunes, and Netflix.

[2:46:132] Promulgators of a philosophy are expected to be able to handle both of these forms of media sufficiently in order to achieve a well-rounded success at promulgative media strategy, especially regarding the non-linear media which is becoming more and more popular as in current times while linear media is declining from its popularity before the rise of digital non-linear media.

[2:46:133] We can see that the trend is going towards seekers and followers constructing their own personal media networks by choosing the channels that they regularly watch due to the large variety of existent channels and platforms available; if promulgators are going to succeed in this trend, they must ensure that the philosophy, or the constituent part of the philosophy they are tasked with promulgating is available on all possible channels and platforms to ensure the greatest probability of it being seen by seekers and followers.

[2:46:134] There are many existent terms in the context of non-philosophical advertising and promulgative theory alike, one of which is known as reach which pertains to the percentage of the entire seeker audience exposed to an advertisement of a philosophy in a given time period.

[2:46:135] This, however, is not to be confused with frequency which is a term relating to the number of times an individual member of the audience is exposed to an advertisement of a philosophy, or one or more of its constituent elements in a given time period.

[2:46:136] For promulgative purposes, the reach pattern should be to advertise as much as can be afforded in order to reach as many people as possible; this is to be henceforth known as Maximum Affordability Principle and is closely associated with the overall idea of promulgation.

[2:46:137] In order to clarify the particular utilities of different media platforms and types, we shall now list how to use different media platforms effectively for the promulgation of a philosophy; of course, these are merely guidelines that are expected to change beyond this writing, but they do serve as an important basis for promulgators to.

[2:46:137a] List of elements for television:

[2:46:137b] Endorsements

[2:46:137c] Advertisements

[2:46:137d] Follower / founder interviews

[2:46:137e] Documentaries and feature programmes

[2:46:137f] Rendition advertisement

[2:46:137g] List of elements for radio:

[2:46:137h] Advertisements

[2:46:137i] Follower / founder interviews

[2:46:137j] Debates

[2:46:137k] Conceptual explanations

[2:46:137l] Event advertising

[2:46:137m] Rendition advertisement:

[2:46:137n] List of elements for newspapers:

[2:46:137o] Dedicated articles

[2:46:137p] Advertisements

[2:46:137q] Sponsored content

[2:46:137r] Event advertising

[2:46:137s] Rendition advertisement

[2:46:137t] List of elements for magazines:

[2:46:137u] Dedicated articles

[2:46:137v] Advertisements

[2:46:137w] Sponsored content / native advertising

[2:46:137x] Event advertising

[2:46:137y] Rendition advertisement

[2:46:137aa] Concept explanations

[2:46:137ab] event advertising

[2:46:137ac] Rendition advertisement

[2:46:137ad] List of elements for digital:

[2:46:137ae] Use of online encyclopaedias (e.g. wikipedia and wikia) and other article or page-based editable platforms in order to create opportunities for greater in-depth enknnowledgement about the philosophy as an indirect and neutral form of advertising.

[2:46:137af] Website design

[2:45:137ag] Website advertisements

[2:45:137ah] Rendition advertisement

[2:45:137ai] Screen display advertising

[2:45:137aj] List of elements for direct mail:

[2:45:137ak] Event advertising

[2:45:137al] Dedicated articles

[2:45:137am] Rendition advertisement

[2:45:137an] Conceptual explanation

[2:45:137ao] List of elements for the internet:

[2:45:137ap] Online video content

[2:45:137aq] Widgets

[2:45:137ar] social media

[2:45:137as] List of elements for mobile:

[2:45:137at] Mobile application dedicated to the philosophy (either directly or indirectly)

[2:45:137au] In-game advertising

[2:46:138] As we are discussing the nature of the utility of different media platforms for promulgators to use, we must address two approaches to promulgation and philosophical advertising in particular that are expected to exist as a convenient categorisation of different forms of promulgative material.

[2:46:139] The first of these is to be henceforth known as the approach of declarativism which holds that promulgators are best declaring the intentions of the advertising, or promulgative material to the audiences in order for them to more clearly receive and understand it.

[2:46:140] Secondly and oppositistically, we come to non-declarativism which holds that promulgators are best not declaring the intentions of the advertising, or promulgative material to its audiences in order to avoid distrust and a sense of discontentment with the promulgative materials they are receiving.

[2:46:141] There are a range of different emotional utilities that can be used in the context of promulgative advertising and in other promulgative materials that are expected to be used by promulgators to achieve certain objectives and these emotions are as follows:

[2:46:141a] Humour

[2:46:141b] Shock

[2:46:141c] Narration

[2:46:141d] Sorrow

[2:46:141e] Wonderment

[2:46:141f] Lust

[2:46:141g] Honour

[2:46:141h] Clarity

[2:46:141i] Mystery

[2:46:141j] Belief

[2:46:141k] Distrust

[2:46:141l] Hope

[2:46:141m] Nostalgia

[2:46:141n] Newfoundness - the feeling that something is new, refreshing, recently founded, and able to be developed to a greater extent.

[2:46:142] One of the principles that a promulgator must adhere to is the consistency in message and the consistency of the visual elements of the philosophical brand as an imperative element of his/her approach to promulgative activities.

[2:46:143] An important practice for promulgators to consider is known as crowdsourcing which is very helpful to deal with the task of arranging labour and funds for the execution of promulgative activities.

[2:46:144] Crowdsourcing involves the practice of obtaining information, or input into a particular project involving a philosophy by enlisting the services of a large number of people, either paid or unpaid, typically initiated by the institution managing the philosophy or by individual promulgators via the Internet.

[2:46:145] Crowdsourcing activities can also be seen outside of a strictly promulgative context in relation to wider philosophy by the notion that crowdsourcing can be applied to help with project initiated by a philosophical institution to gain interest for labour and funding for the project at its inception.

[2:46:146] Moving on now from the forms and approaches to promulgative advertising, we come to address the process involved in contemplating an advertising message from the perspective of the audience to which the advert is directed.

[2:46:147] Chronologically, the first of these is known as the pre-contemplation which refers to the instance before the message of the advert is contemplated while the second of these is the contemplation itself during the audience of the advert contemplate it after they have received it.

[2:46:148] The next stage is the preparation which involves the decision of whether to act and put in place what is instructed in the advert which is always followed by the action which involves engaging in the instructions made by the advert.

[2:46:149] As the final stage of the chronology, we come to the confirmation which involves committing to the engagement of the new behaviour derived from the advertisement without returning to the old behaviour that is characteristic of the pre-contemplation stage.

[2:46:150] Like in many of these discourses, they are definitional by nature and premise due to the huge amount of that is required to be introduced within them and this next part of the discourse is not exempt from this characterisation.

[2:46:151] That which is to be henceforth known as a philosophic show, or colloquially and commercially known as a sophoshow, refers to a large scale exhibition at which institutions managing different philosophical brands bring together expert representatives to perform in debates with other philosophical representatives in the overall effort to promulgate their philosophy.

[2:46:152] This type of event which is notably not occurrological by designation also features stallholders for companies and organisations connected to philosophies, particularly those that are representing projects or selling philosophical products and renditions, or these spaces may be taken up by the philosophical institutions themselves where they own institutional staff and volunteers can bring promulgative materials to further promulgate the philosophy, or philosophical denomination that they are representing.

[2:46:153] That which is to be henceforth known as a philosophic placement is the practice in which institutions of philosophies gain exposure for their philosophical brands by paying for them to be featured in films and television programmes.

[2:46:154] This is expected to be a popular form of raising philosophical awareness and brand recognition, but this is not considered to be effective for the explanation of a philosophy or its contents and therefore can be considered a superficial form of promulgation, but due to its expensiveness, this type of promulgation is expected to only take place after the philosophical institution has gained a considerable amount of following, funding, and budget allocated to promulgative activities such as this.

[2:46:155] That which is known as philosophic packaging involves the cumulative way in which a philosophical brand is conceptually parcelled in advertising, symbolisation, and in other forms of marketing strategy and forms of branding; the creation of packaging for philosophies is essential and is therefore a prominent element of wider strategic promulgative management.

[2:46:156] A category of promulgative marketing is that which shall henceforth be known as rendition marketing which is herein designated as the branch of philosophical marketing and advertising that focuses on the positioning and selling of renditioned

products associated with Astronist Philosophy, especially manufactured decorative products or items that assist in forms of devotion.

[2:46:157] Essentially, rendition marketing is the marketing of physical philosophical products as defined from the marketing of the philosophy itself as a conceptual entity and although rendition marketing as a term is herein founded in the context of Astronist Philosophy, it does have routes in religion and ideology as it is practiced in the selling of religious devotional items and in the selling of propaganda products.

[2:46:158] Rendition marketing can be approached by mainstream marketing and advertising theories because renditions are essentially products which is what mainstream marketing and advertising focuses on, but renditions are defined from normal products by the fact that they exist for, or in the name of a philosophy or another system of thought rather than merely existing for some utility.

[2:46:159] That which is to be henceforth known as philosophical configuration involves the positioning of a philosophy in the correct language to suit a population, emphasising particular beliefs that are poignant for that country, and promulgating a philosophy in such a way that does not compromise the integrity of the culture of the country into which the philosophy is promulgated.

[2:46:160] Philosophical configuration is herein provided with significance as the respect of foreign cultures and particularly The Philosophy of Astronism's respect of, as well as its integration and syncretisation into non-Astronist cultures is expected to be one of the best ways to promulgate The Philosophy into such cultures that may be initially skeptical of its existence there.

[2:46:161] There certainly exists a distinct history of marketing and there are many periods in this chronology and the period that the Astronist philosophical tradition and subsequently, The Institution of The Philosophy of Astronism, introduce and intend to establish that which is to be known as the philosophical period in the history of marketing.

[2:46:162] The philosophical period is considered to have started from 2013 and onwards, notably in parallel to the founding of The Philosophy of Astronism in the same year.

[2:46:163] Essentially, the philosophical period in the history of marketing is expected to focus on the marketing of conceptual entities, primarily philosophies, and form newfound marketing and advertising theories around how to market concepts specifically, primarily through the use of promulgation, as inspired by promulgative theory and its origins from within The Omnidoxy.

[2:46:164] In parallel to the founding of this philosophical period in the history of marketing, it is essentially that philosophy in general is provided with a designation as being both a product and a service, thus hybridising to form that which was

aforeintroduced as a conject; this provides the context for philosophy to enter the sphere of marketing.

[2:46:165] As an additional notion, The Institution of The Philosophy of Astronism considers philosophy to be a staple element in one's consumer existence just as there exists staple products and services that people must regularly purchase due to their essential need for them.

[2:46:166] Those which are to be known as dyadic marketing exchanges collectively refers to the different ways in which promulgations may be directed to and from different entities in a society which demonstrates the symbiotic, interconnected, and mutual nature of the relationship between these different entities and how they provide value to one another.

[2:46:166a] Institution <—> philosophy <—> seeker

[2:46:166b] Institution <—> philosophy <—> follower

[2:46:166c] Institution <—> follower

[2:46:166d] Institution <—> seeker

[2:46:166e] Non-institutional philosophical organisation/group <—> seekers/followers

[2:46:166f] Institution <—> other philosophical institutions

[2:46:166g] Institution <—> government

[2:46:166h] Institution <—> companies

[2:46:166i] Institution <—> averters

[2:46:166j] Institution <—> philosophy <—> averters

[2:46:167] That which is to be henceforth known as the servicescape refers to the entirety of the services provided by a philosophy as distinct from its contents, known cumulatively as the contentscape.

[2:46:168] Meanwhile, the productscape refers to the entirety of the products provided by a philosophy as distinct from both the services and the contents it provides, and this is majoratively manifested by various forms of rendition and other physical philosophical products.

[2:46:169] As we continue with our definitional sequence, that which is known as relationship marketing in a philosophical or promulgative context refers to a manifestation

of retentionist approaches to marketing that focuses on follower retention and satisfaction by directly addressing followers of the philosophy, addressing their needs and wants, and directly targeting followers of the philosophy in a way that isolates non-followers, averters, and seekers.

[2:46:170] That which is to be known as service-dominant logic in a philosophical marketing context, pertains to the framework that a philosophy can apply its competences to benefit followers of the philosophy while followers can apply their competences to benefit both the philosophy and its institution.

[2:46:171] Subsequently this creates a symbiotic relationship between philosophies and followers which, under the service-dominant logic framework, should then be manifested through promulgative marketing materials.

[2:46:172] That which is to be known as cocreation, or cocreationism in the context of philosophical marketing refers to the marketing practice of a philosophical institution in which it organises events to bring together philosophers, theologians and scholars in the effort of achieving new concept development.

[2:46:173] It may also entail bringing together followers, seekers, sophians, and institutional volunteers and staff for the purpose of creating a symposium to discuss issues within The Philosophy of Astronism, or to answer questions from followers or seekers.

[2:46:174] This may either be used as a form of retentionism, or promulgationism depending on how it is oriented which demonstrates it as multiorientational and holding a definite multiutility.

[2:46:175] That which is to be henceforth known as interactive marketing refers to the use of two way communication channels for followers and seekers of the philosophy to connect with both the philosophy, its followers, sophians and/or its institution, or the volunteers and employees of the institution which can be used both as a form of retentionism and promulgationism depending on how it is used.

[2:46:176] Omnimentioned throughout the entirety of the Omnidoxy is the notion of the differences between the fundamental nature of philosophies and religions and this discourse is no exemption from this tradition, but instead we shall apply these differences to marketing and promulgation which is manifested through their application to that which is known as the marketing mix.

[2:46:177] The marketing mix is a non-philosophical and pre-Astronist form of that which is to be known as the promulgative mix in the context of Astronist Philosophy, but it is to the marketing that we shall apply Astronism as the most prominent form of philosophy and later we shall apply the Christian religious tradition to this same marketing mix in order to derive differences between this religion from The Philosophy of Astronism.

[2:46:178] There are several elements of the marketing mix to which Astronism will now be applied and the first of these is the basic seeker need which is defined herein as their discontentment with consumer items alone so they require greater philosophical enrichment, hence the fact they are seeking.

[2:46:179] The Institution of The Philosophy of Astronism always takes a stance of universality and inclusivity when it comes to the notion of the target market for The Institution maintains that the entirety of humanity are seekers and potential aligners of Astronism no matter a person's nationality, sexuality, race, ethnicity, wealth, religion, or class.

[2:46:180] That which can be defined as the offering of Astronism in order to continue with the application of the marketing mix refers to the definitive and unique cosmocentric worldview that Astronism and all its denominations hold dear due to the achievement of a distinct Astronist identity in doing so.

[2:46:181] We identify herein that there exists a multitude of different offerings from Astronism which also include philosophical guidance, a greater sense of ontological meaning, enknowledgement of The Cosmos in a way that focuses on meaningfulness, occurrological events, cosmic devotional practices, and solves a longing to be part of something that concerns itself beyond materialistic culture which many feel discontent with.

[2:46:182] Price in the context of philosophy perhaps confuses some as they do not see how price can ever be applied to the context of a philosophy, but the Astronist Tradition maintains that the essential currency powering a philosophy are those whom choose to align to the philosophy.

[2:46:183] In this, we identify price as one's alignment to a philosophy as a form of commitment and in this context we see how price is not only correlated to involvement, but is attached to the different levels of involvement as a greater price, in this context, means a greater level of time, money, energy, and knowledge to be devoted to the philosophy of one's alignment.

[2:46:184] By applying the promotions element of the marketing mix to philosophy, there are number of different results including the bookselling of The Omnidoxy, tiritational activities, digital forms of media, the Internet, social media, occurrological events, and promulgative advertisements and materials.

[2:46:185] Meanwhile, and perhaps the most important and most relatable element of the marketing mix for a philosophy is that of distribution which can be split into two derivations, the first of which focuses on the distribution of The Omnidoxy via bookstores and online book retailers, e-books, audiobooks etc. while the second refers to the distribution of The Philosophy itself via websites, advertisements, social media, debates, music, online encyclopaedias, and leafletting.

[2:46:186] Distribution is essential promulgation, but it can be considered a non-philosophical term that refers more to how physical products may be distributed through supply channels than specifically how a philosophy, or any set of ideas is distributed, which is instead presided over by the concepts of promulgation, tirition, and dissemination.

[2:46:187] The processes element of the marketing mix is also important to philosophies and for the context of Astronism, the process consists of the following: bring one's attention to Astronism, provide them with an overview of Astronism, allow them to make a decision to alignment (either a short or long period), and accept their alignment to Astronism, or equally their non-alignment.

[2:46:188] Perhaps one would think that the physical element of the marketing mix would be difficult for Astronism to relate to, but this is not the case because there are ample amounts of physical manifestations of Astronism.

[2:46:189] Some of these physical manifestations include The Omnidoxy itself, renditions, devotionals, verbal affirmation, debate, and one's attendance at occurrological events and regular visitations to sophariums.

[2:46:190] Finally, people are central to everything for the promulgation and physical existence of Astronism and upon applying Astronism to the marketing mix, this is demonstrated further by the following list of types of people involved.

[2:46:191] These include philosophers, Institutional staff, sopharium volunteers, Institutional volunteers, philosophical founder, Institutional leader, sophians, followers, seekers, and averters.

[2:46:192] By this application of Astronism to the marketing mix, we understand how philosophy is integratable into mainstream marketing theory, but also, how a philosophy is organised according to the different factors of marketing, which we shall now do as we apply Christianity to the marketing mix according to the same measure.

[2:46:193] As previously, we shall begin with the basic adherent need which, despite its absence from mainstream marketing mixes, is essential to the application of a philosophy or a religion to a marketing mix.

[2:46:194] This involves one's fear of death and hope for the afterlife, one's need for redemption after sinning, feeling the need to want to belong to a community, and wanting to believe in something that far outweighs their own existence.

[2:46:195] As proponents of the religion have said since its founding, the target market is all peoples of all nations which, despite our presumptions that all religions are the same in this aspect, this isn't true as other religions are certainly not as ambitious in their

acceptance of all people in their faith, examples of which include some smaller religions such as Judaism, Sikhism, and Jainism.

[2:46:196] The offering of Christianity is identified as the following: a rich theological system and a compelling narrative that provides approaches to theological, ontological, and soteriological issues as manifested by saints to which adherents are able to devote and a figure to which they can worship and grow a deep emotional and spiritual connection with through prayer.

[2:46:197] Again, similar to the price in the context of a philosophy, conversion to the religion as to become exclusively adherent though this is distinct from a philosophy by the notion of exclusive adherence as philosophies are not required to be exclusively adhered to unlike religions, which demonstrates an important differentiation between the two.

[2:46:198] The identified principal promotional tools that Christian churches have used throughout their existences include missionaries, evangelisation, preaching, church-building, nationalisation of churches, empire-building, records of saints and martyrs, church leadership, through association with schools.

[2:46:199] Meanwhile, there are distribution channels are distinct from these and include more modern elements, such as websites, and social media, but then they also include parish-building, parish newsletters, literature, religious items, television networks, and music.

[2:46:200] There are a number of different processes that are identified as holding an important position within the Christian religious tradition that can be applied to the marketing mix, some of which include Christening, sacramental programme, holy communion, and familial conversion.

[2:46:201] Meanwhile, the physicality of the religion, again similar to that of Astronism, is predicated in such elements as one's purchase of The Bible, religious ornaments, verbal affirmation, and one's regular church attendance.

[2:46:202] Finally, the Christian religious traditions holds a vast and complex network of people that make up its many different denominations and although the titles of such people vary across denominations and although some do not exist in certain denominations, we can identify some important ones here including parishioners, priests, the pope, bishops, cardinals, theologians, and nuns.

[2:46:203] Through the application of Astronism and Christianity to the marketing mix, we see clear structural similarities between the marketing mix for a philosophy (Astronism) and a religion (Christianity), but we also see that there are many unique differences between the two which further bolsters the Astronist Tradition's effort of distancing Astronism from that of a religious designation.

[2:46:204] That which is to be henceforth known as the process of the servitisation of philosophy involves the orientation of a philosophy towards becoming a service, certainly rather than a product, and rather than a hybrid of the two, known as a conject, the latter of which is the designation provided to Astronism by the Astronist Tradition as demonstrated here in The Omnidoxo.

[2:46:205] Therefore, the process of the servitisation of philosophy opposes the notion of the designation of philosophy as both a product and a conject and this notion therefore opposes the Astronist Tradition itself and its view and designation of the philosophy.

[2:46:206] As an extension to the notion of the process of servitisation, a service can be described as something that cannot be protected by a patent, does not make use of physical packaging (though in the context of philosophical marketing, there does exist packaging in a conceptual sense as aforeintroduced), but a service does not hold a lack of physicality due it can often be physically sense, but it is not something that can be physically touched, a good example of which is when a hairdressing is cutting one's hair; you can see them cutting the person's hair as the service, but they are not providing the person with a physical product.

[2:46:207] As have just mentioned patents and their lack of the ability to protect services, it is prudent that we address the issue of patents and subsequent proprietological issues for a philosophy within the context of strategic promulgative management and for this, we must pose questions for promulgators and proprietologists to explore.

[2:46:208] Can concepts/schools of thought/denominations/disciplines of study be copyrighted or patented? Should they be if they can be? Such questions bring to our awareness the topics of copyrighting law and its variance across different countries, as well as the major topic of ethics in relation to patenting and other proprietological matters which promulgators must always take into consideration, usually by the guidance of The Institution.

[2:46:209] Is it the appellations that are best protected or is it the contents of the appellations? Should The Institution be responsible for the management of such patents? Could content and appellation patenting be used as an alternative income for The Institution? What is the nature and extent of the ethicality of this type of income?

[2:46:210] How long will such patents and copyrights of contents and appellations last for? The Institution will need to conduct copyrighting and patenting for all different countries, but will the cost of doing so for each constituent part of The Philosophy be reasonable? By extension to this notion, which appellations or contents of The Philosophy be prioritised for its patenting? Should the Astronism Symbol be copyrighted?

[2:46:211] The patenting of The Philosophy in its entirety, as well as its various constituent elements is herein vested as a joint responsibility of The Institution of The Philosophy of

Astronism, which shall provide the monetary and organisational means to conduct copyrighting and patenting.

[2:46:212] In addition, proprietologists, whom shall be vested with the academic responsibility of contemplating the different issues and questions involved with philosophical patenting and copyrighting and finally, promulgators will be vested with the responsibility of actually conducting the processes involved with patenting and copyrighting.

[2:46:213] There are herein identified three different scenarios for the promulgation of a philosophy and they are collectivised under the appellation of Dissemination Scenarios and includes that which is known as top-down, bottom-up, and rear-front.

[2:46:214] The first of these, top-down involves the instance of when the masses are highly influenced by their political leaders, thus if the political leaders are aligned to the philosophy then so will the vast majority of the masses which makes a top-down scenario easier for the dissemination of the philosophy.

[2:46:215] The second of these disseminative scenarios is bottom-up which refers to when the masses of a society are not highly influenced by their political, social, or cultural leaders which makes it more difficult to disseminate the philosophy because the alignment of a leader is less influential in this scenario.

[2:46:216] The last of the disseminative scenarios is to be known as rear-front which refers to when a philosophical minority gains greater representation in governmental leadership roles as well as wider coverage in the media discussing the issues of the minority as a way of disseminating their philosophy to non-minority members; the version of this that is designated a promulgative technique is to be known as minoritism.

[2:46:217] The codification of religions, philosophies, and ideologies remains the most pivotal element of their creation with there existing a set of similar categories of codification that we must now address as this remains of concern for promulgators of Astronism.

[2:46:218] It is herein postulated that the codification of a system of thought is predicated on six essential elements which are listed as the appellation(s), the founder, the founding text, era of founding, the followers, the designation, and the central precept.

[2:46:219] Each of these elements is essential to the founding of any system of thought and this has been of clear awareness to the Astronist Tradition and The Institution of The Philosophy of Astronism from the very inception of Astronism, hence its inclusion within this discourse of The Omnidoxy.

[2:46:220] In order to put these seven elements into context, we shall apply each of them to some of the world's most well known systems of thought, including each of the designations of philosophy, religion, and ideology.

[2:46:221] The algorithm: Appellation(s) - Founder - Founding Text - Tradition - Era of Founding - Followers - Designation - Place of Worship/Philosophy (applicable only to religions and philosophies respectively) - Central Precept(s) shall be used herein as the basis for each of the applications to the seven elements with each hyphen demonstrating the start of the next element while a slash demonstrates a multitude of something, such as multiple appellations, or a system of thought that does not fit into one designation; it is also important to note that the use of the slash is a demonstrator of equality among the listed so as to mean that multiple appellations of a system of thought hold not superiority over one another.

[2:46:222] After these applications have been demonstrated, we shall gain an even greater understanding of the nature of the codification of such systems of thought.

[2:46:223] Astronism/Kosma/Millettism/Cosmism/Sophism - Cometan (Brandon Taylorian) - Omnidoxy - Astronist/Astronic - 21st century (2013) - Astronists/Kosmans/Millettarians/Cosmists/Sophists - Philosophy - Sopharium - Cosmocentricity/Reascensionism

[2:46:224] Astronarianism - Brandon Taylorian (Cometan) - The Astronist Methodology - Astronist/Astronic - 21st century (2017) - Astronists - Ideology - Cosmocentric civilisation

[2:46:225] Islam - Muhammad - Quran - Abrahamic - 7th century - Muslims - Religion - Mosque - Monotheism

[2:46:226] Christianity - Jesus Christ - Bible - Abrahamic - 1st century - Christians - Religion - Church - Monotheism

[2:46:227] Buddhism - Siddhartha Gautama - Tripitaka - Dharmic - 5th century BC - Buddhists - Religion/Philosophy - Temple - Escape from Samsara/Alleviation of suffering

[2:46:228] Calvinism/Reformed Christianity - John Calvin/Reformation Theologians - Institutes of the Christian Religion - Abrahamic - 16th century - Calvinists/Reformed - Denomination - Church - The Five Points

[2:46:229] Marxism - Karl Marx - The Communist Manifesto - Marxist - 1844 - Marxists - Ideology - Revolutionary socialism

[2:46:230] Nazism - Adolf Hitler - Mein Kampf - Fascist - 1933 - Nazis - Ideology - anti-Semitism/Aryan superiority

[2:46:231] Confucianism - Confucius - Four Books and Five Classics - Chinese - 5th century BC - Confucianists - Philosophy - Temple of Confucius - Pursuit of the unity of the individual self

[2:46:232] Mormonism - Joseph Smith - The Book of Mormon - Abrahamic - 1820s - Mormons - Denomination - Temple - Restoration of the Christian faith

[2:46:233] Wicca - Gerald Gardner - Book of Shadows - New religious movement - mid 20th century - Wiccans - Religion - Magic circle - Practice of pagan witchcraft

[2:46:234] Taoism - Laozi - Tao Te Ching - Chinese - 4th century BC - Taoists - Religion/Philosophy - Temple - Live in harmony with the Tao

[2:46:235] Sikhism - Guru Nanak - Guru Granth Sahib - Dharmic - 15th century - Sikhs - Religion - Gurdwara - Monotheism

[2:46:236] Bahá'í Faith - Bahá'u'lláh - Kitáb-i-Aqdas - Abrahamic - 19th century (1863) - Bahá'ís - Religion - House of Worship - Omnism

[2:46:237] Methodism - John Wesley - The Bible - Abrahamic - 18th century - Methodists - Denomination - Chapel - New birth, an assurance of salvation, imparted righteousness, the possibility of perfection in love, the works of piety, and the primacy of Scripture.

[2:46:238] Of course, there are many other philosophies, religions, ideologies, and denominations that we can apply the seven elements of codification to, but upon applying it to these examples, it is felt that the purpose of the exercise is achieved as we now understand the chain of similarities that exist in the codification of different types of systems of thought which demonstrates both their similarities in structure, but their differences in character.

[2:46:239] That which is to be known as a sophoblogger refers to a person that regularly writes blog posts on their website or another online platform about their philosophy or discussing philosophy in general or different philosophies.

[2:46:240] Meanwhile, a sophovlogger refers to a person that regularly posts videos on social networking sites speaking or debating about their philosophy or philosophy in general.

[2:46:241] In addition, that which is to be known as promulgative sensing refers to a philosophical institution's ability to gather, interpret, and act on strategic information from seekers, followers, and competitor institutions/philosophies.

[2:46:242] The Institution of The Philosophy of Astronism will, from its inception, employ a multichannel marketing strategy through the use of multiple synchronised platforms to interact with followers and promulgate Astronism to seekers and averters.

[2:46:243] Aforeintroduced is the notion that philosophy is or should be a staple element of every person's life, but the term known as non-staple is not to be confused with the opposite to this as it refers to a concept within The Philosophy of Astronism that is considered minor, or not essential to followership.

[2:46:244] These non-staples, as they are to be known, can be considered specialist areas of Astronism that only scholars, or those with an excessive interest in the particular area of Astronism and its deeper philosophical aspects.

[2:46:245] Despite the definition previously ascribed to the term staple, in this particular context, it refers to a concept within The Philosophy of Astronism that is considered major, or essential to followership, examples of which include cosmocentricity, sentientism, and others.

[2:46:246] It remains important to mention that even these staple concepts are still not considered to be exclusionary so a person can still be consider and consider themselves to be a follower of Astronism without accepting one or more of these concepts because Astronism isn't a religion and does not demand belief in specific concepts, but by using staple and non-staple labels, we are able to categorise concepts according to their considered importance within the context of Astronist Philosophy from the perspective of the Astronist Tradition.

[2:46:247] Netnography is an important concept in the context of philosophical marketing that refers to the study and practice of the tracking of the behaviours of people on the Internet when they interact with The Philosophy of Astronism, or its associated organisations in order to build insights and statistics; this is something that The Institution of The Philosophy of Astronism is tasked with managing and it must convey its findings to aid promulgators.

[2:46:248] One of the most important notions and terms within this discourse that exists within the discipline of appellatology and the term to which we are referring is to be henceforth known as trade appellation.

[2:46:249] The trade appellation of The Philosophy of Astronism is Astronism which means that Astronism or a derivation of that term, such as Astronist, or Astronic, will be used as the primary way of referring to Astronism in commercial settings, such as in promulgative materials and on official social medias, although the term is expected to be less common in academic, scholarly, and philosophical debatory contexts.

[2:46:250] This is why Astronism remains one of the main appellations as it is considered the forepart, anterior, and commercial appellation for The Philosophy while Kosma, Cosmism, and Sophism among others are more philosophical and scholarly appellations for the philosophy.

[2:46:251] The reason for Astronism's designation as the trade appellation for Astronism is due to the more obviously and immediate association it has with core concept of Astronism which is cosmocentricity as Astronism is derived from the term astronomy.

[2:46:252] In addition to this, the appellation of Astronism used in a front-facing and commercial sense disproximates The Philosophy away from the fictional character of Jesse Millette as well as avoiding the aforementioned inapronymous issues that are expected to exist with regards to the appellation of Millettism.

[2:46:253] That which is known as procurement in the context of strategic promulgative management refers to the department within The Institution of The Philosophy of Astronism dealing with the purchasing of other institutions, organisations, philosophies, concepts, theories, and their patents and copyrights.

[2:46:254] This is considered to be integral to the functionality of The Institution of The Philosophy of Astronism and although it relevantly exists within strategic promulgative management and is herein and now introduced, it is to be studied and explored within the discipline of study of proprietology as part of the inclusive discipline of sanitology, to which this discourse is dedicated of course.

[2:46:255] Now comes the moment to introduce a new term which is to be known as transvection which refers to the instance in which a philosophical institution directly cooperates with another philosophical institution in order to achieve a shared goal.

[2:46:256] A primary example of a transvection would be the joint funding of a philosophical debate between the philosophers of each institution in order to promulgate each of their philosophies and to create media coverage for philosophy in general.

[2:46:257] Transvections are of an immense important to promulgators as they hold great utility for they promote the sharing of costs across institutions for the mutual goal of promulgating philosophy in general, as well as specific philosophies which is of untold help for smaller institutions which are not considered have the available monies to fund all their own occurrological and debatory events.

[2:46:258] That which is to be henceforth known as transvectionism refers to the belief orientation holding that cooperation with different philosophical institutions for mutual promulgation is the superior way of approaching and realistically achieving the ambitiousness of the belief orientation of promulgationism.

[2:46:259] Transvectionism is herein introduced and advocated by the Astronist Tradition as an extremely help way for institutions to realistically function, especially in their formative years, both in pre-establishment and post-establishment periods, and for this reason The Institution of The Philosophy of Astronism as transvectionist in its approach.

[2:46:260] Due to this discourse's focus on mainstream marketing and advertising theory, it should be no surprise that we now apply the context of a philosophy, particularly The Philosophy of Astronism of course, to Maslow's hierarchy of needs in order to conclude how Astronism holds a place for each of these identified needs.

[2:46:261] The most basic level of Maslow's hierarchy of needs refers to physiological needs which involves food, water, oxygen, and shelter from the elements; this need is perhaps the most difficult to apply Astronism to, however, alignment to a philosophy is considered to be an emotional and psychological need.

[2:46:262] These are direct elements of physiological needs because if a person does not feel mentally, emotionally, or philosophically secure then they will struggle to achieve the highest potentials, or even the most basic levels of their physiological needs.

[2:46:263] The next basic level of Maslow's hierarchy are safety needs which involves a predictable non-threatening environment for one's emotional, physical, and psychological safety and security.

[2:46:264] In all sophariums, the atmosphere is relaxed and even in the context of a philosophical debate, despite the fact that they will sometimes become fierce, the ability of a person to express their opinion is protected by the Philosophical Spirit which ethereally governs philosophy and its practice.

[2:46:265] The medium level of Maslow's hierarchy of needs refers to belongingness needs which involves affection, attachment, and friendship for a person from other people; it is this element that is considered to be one of the most important for philosophies as it is the sense of belongingness that one gains from aligning to a philosophy that is one of the most prominent reasons for their alignment.

[2:46:266] Aligning to a philosophy means that a person joins the community of followers and philosophers that are already aligned to that philosophy which in turn will bring the sense of belongingness that remains precious to every person.

[2:46:267] The penultimate level of Maslow's hierarchy of needs are esteem needs which involves the need and desire for value and respect for oneself, for others, by oneself, and by others.

[2:46:268] Being aligned to a philosophy demonstrates one's ability to comprehend the philosophy and due to philosophy's already highly esteemed status and aversion from dogmatism, aligning to a philosophy is set to create self-value and generate respect from others.

[2:46:269] The highest form of Maslow's hierarchy of needs are self-actualisation needs which refers to the need to fulfil our own potentials and a philosophy provides this

through a person's enknowledge and how they become emotionally, spiritually, and philosophically fulfilled through a greater knowledge of The Cosmos.

[2:46:270] There are countless ideations that have been introduced via new terms within The Omnidoxy and one of these is belief and practice by habit which relates to the idea that human beings are dependent upon their habits and thrive upon them to receive pleasure which also translates to their philosophical beliefs and practices so this is why it may be difficult to persuade a person of an idea or theory if they have had a different or opposing theory for some time.

[2:46:271] Those which are to be henceforth known as philosophical mores refers to the customs and manners or etiquette of Astronists when regarded collectively meanwhile those which are known as new entrants refers to philosophies that are newly founded, typically referring to the first ten years of their existence.

[2:46:272] An important concept to address as part of the development of strategic promulgative management was that of competition in terms of philosophies, but to extend this further, we come to the concept of competitorship.

[2:46:273] Competitorship refers to the principle that the existence of competition within the context of different philosophies is healthy for such philosophies in their growth and development and it is competitorship that philosophical institutions should mutual cooperate to protect.

[2:46:274] That which shall henceforth be known as portfolio analysis refers to the process whereby an institution looks at the philosophies it holds jurisdiction over and considers them according to a SWOT analysis of strengths, weaknesses, opportunities, and threats in order to determine the overall position of the institution and assists in the creation of marketing campaigns and strategic planning initiatives.

[2:46:275] One of the most important elements of strategic promulgative management involves the practice of creating and applying different types of audits, the most important types of these audits is to be known as an institutional audit.

[2:46:276] This is a type of audit that involves an institutionwide analysis and inspection is performed on a philosophical institution in order to determine the competitiveness, the position, the credibility, the viability, and the accessibility of the institution and the philosophies it jurisdises over.

[2:46:277] There does, however, exist many different branches of institutional audits that must be executed in order to complete a full audit of a philosophical institution, the first of these is an environmental audit which refers to external environments that the institution is expected to and the extent of the ability to perform in such environments.

[2:46:278] There also exists another branch known as the promulgative strategy audit which refers to an analysis of the missions, goals, and the overall strategy of a philosophical institution across different measured time periods, primarily across a three year period due to the Astronist tradition known as truncation introduced in The Astronist Methodology.

[2:46:279] Another branch includes that which is to be known as a promulgative organisational audit which involves a deep analysis of the extent of the structure of an institution to withstand the realities of its operations as well as an analysis of the organisation of the various members and hierarchies of personnel in a philosophical institution.

[2:46:280] Meanwhile, that which is to be known as a promulgative systemic audit refers to an analysis that focuses on the extent of the utility of information and the ability of planning and control systems to be applied to operations.

[2:46:281] As the final element that forms an institutional audit, we come to that which is to be known as a promulgative functions audit which involves the analysis of the products, services, disseminative techniques, packaging, and promotions executed by a philosophical institution and despite the fact that it is mentioned last in this list of the elements of an institutional audit, it is considered to be the most important and largest part of an institutional audit.

[2:46:282] As has been evidenced through the exploration of promulgation in this discourse, there exist many different elements to promulgation and despite its exploration herein, there exists many more elements of its nature that are expected to be discovered post-omnidoxically.

[2:46:283] Promulgation is multifaceted and this is demonstrated by the large amount of new concepts introduced in this discourse and other discourses that are associated with it and as in most cases, The Omnidox is to be considered the seed from which many plants grow and by this notion, the exploration of the nature and application of promulgation is merely started here while future texts are expected to be dedicated to its contemplation; this type of notion is exemplified throughout much of The Omnidox, hence one of the most common alternative appellations for The Omnidox being The Seminality.

[2:46:284] That which is to be known as promulgative receptivity refers to the extent to which an institution's promulgative activities are received by the intended audience and the extent to which that audience does as the promulgative material suggests or instructs.

[2:46:285] The higher the promulgative receptivity, the greater success the promulgative material is considered to have had on achieving the promulgative goal.

[2:46:286] Due to it being mentioned, it only seems prudent to provide an official definition of a promulgative goal which involves the intended goal of a singular piece of promulgative material, or of an entire promulgative campaign.

[2:46:287] The greater efficiency in the achievement of the promulgative goal is the central determiner of the capabilities of a promulgator and is primarily measured by promulgative receptivity.

[2:46:288] Meanwhile, that which is to be known as a promulgative message refers to the narrative of a promulgative material, the extent to which it is successfully expressed to the audience by the promulgator in the way that it is intended to be perceived is to be henceforth known as promulgative expressivity.

[2:46:289] One of the most common terms throughout this discourse and proximate related discourses is promulgative material which itself refers to an individual source of promulgation, examples of which are adverts, posters, or a website and is therefore from a promulgative campaign which refers to a series of promulgative materials that may hold different physicalities, but they share a common message, intended purpose, or are promulgated simultaneously to each other.

[2:46:290] The PESTEL Analysis is considered to be an integral part of how philosophical marketing and advertising practices are effected by wider and often uncontrollable factors and therefore, it is important to apply Astronism to each of the components of the PESTEL analysis in order to develop greater understanding about how each of its components could impact the operations of The Institution and the overall development of The Philosophy of Astronism.

[2:46:291] Of course, the components of PESTEL are political, economic, sociocultural, technological, environmental, and legal; all of which are expected to hold considerable impacts on both the presence of a philosophy in a particular country or region, as well as the operations of The Institution, its partner organisations, and of promulgators too.

[2:46:292] Therefore, before any type of promulgative activity is conducted, it is suggested herein that a PESTEL analysis of the country, in which the promulgative activity is expected to occur, should be executed, especially so if the country in subject is one that The Institution is not accustomed to operating in, or a country in which The Philosophy of Astronism holds little to no presence.

[2:46:293] The execution of a PESTEL analysis, like for any entity entering some environment, is ultimately helpful to the navigation of such an environment for it is the diversities in environments that is considered to be the most difficult aspect for promulgators to plot a course through for their campaigns and other activities to succeed.

[2:46:294] However, even if The Institution is well accustomed to operating in a particular country, and even if The Philosophy of Astronism, or one of its denominations holds a

strong presence in the country in subject, it is still advisable that a PESTEL analysis is conducted because PESTEL analyses do not only allow promulgators to understand the current affairs of the country or region, but they also allow promulgators to grasp a better idea about the direction(s) towards which the country is heading through the use of the analysis of current trends as a forecasting tool for future occurrences which is self-evidentially fundamental to long term strategic promulgative planning.

[2:46:295] Also identified herein are four basic factors that form the strategic promulgative context and the first of which is the target audience which remains essential for all promulgators to designate during their creation of promulgative campaigns and materials with the three major countries of which including seekers, averters, and followers.

[2:46:296] Also, there exists the external environment, the consideration of which, as aforeaffirmed in our insentensations regarding the PESTEL analysis, is necessary for any promulgative campaign or material to be success in countries, regions and other forms of environment the philosophy or its institution may not be accustomed to holding a presence or operating in respectively.

[2:46:297] The final two factors of consideration for strategic promulgators are the availability of resources and capabilities at the disposal of the philosophical institution or the promulgators, and the competitors of the philosophy that one is attempting to promulgate.

[2:46:298] Raising the factor about resources and capabilities demonstrates the need to understand the nature of the disposality of such elements as resources can either be scarce or abundant, but they can also be easily utilised, or not so, as well as the fact that they can also be easily obtained, or equally not so; by these notions, we see how resources can hold varying levels of disposality.

[2:46:299] Meanwhile, capabilities take many forms, but in this case may primarily refer to the capabilities of the institution to oversee the process of the promulgation as well as the specific capabilities of individual promulgators, as some will have greater experience and knowledge in certain specialty areas than others, and while some promulgators may excel in the creation of promulgative materials and campaigns, others may instead excel in the creation and management of the distribution channels through which these materials are disseminated; again, we see the potential disparities in the disposality of capabilities here.

[2:46:300] To put this into context, disposality refers to the extent of which something, whether that be a person, an object, an organisation, or a piece of information, is able to firstly be accessed and secondly be utilised for the purpose of its creation and by this notion, we develop how there can exist two extremities of disposality.

[2:46:301] One of these extremes is to be known as positive disposality which refers to when resources, capabilities, or some other entity or group of entities that is to be used is able to be so with a lesser amount of further resources being rendered to accomplish its

utility which is characterised by the proximities of resources, greater accessibility to such resources, and the abundance of usable resources.

[2:46:302] Oppositely, a negative disposality would involve a greater amount of further resources being required to achieve the utility of the original resource and is characterised by the disproximities of resources to promulgators or the institution itself, as well as lower levels of accessibility to such resources, and certainly a distinct scarcity of usable resources for promulgators.

[2:46:303] By this set of notions, we are able to understand the difficulties facing both philosophical institutions and their promulgators in the navigation, contemplation, and management of disposality with the constant need to prevent the circumstances of reaching a negative disposality, but in reality, this is expected to be an often uncontrollable occurrence.

[2:46:304] Like all organisations, a philosophical institution holds a mission and it is important for promulgators to consistently remind audiences of this mission, both directly and indirectly through promulgative materials and campaigns.

[2:46:305] Within the wider mission of a philosophical institution, which despite this often being reflective of the beliefs and missions of the philosophy that it holds proprietorship over, there are also expected to exist institutional goals which are the goals of the philosophical institution as distinct from the goals of the philosophy itself as these institutional goals are considered from the perspective of the institution as a separate entity from the philosophy over which it holds proprietorship.

[2:46:306] Whenever a philosophical institution is conceptually separated from the philosophy over which it holds proprietorship like this, this is to be henceforth known as the process of suprietation.

[2:46:307] Another more physical process involved with the operations of a philosophical institution is that which is known as departmentalisation which involves the segmentation of the operations of a philosophical institution.

[2:46:308] The associated form of polity to this process is to be henceforth known as departmentalisationism which remains focused on departmentalising all operations of a philosophical institution in the belief that it will function more efficiently than in the instance of when a non-departmentalised polity is applied.

[2:46:309] Departmentalisationism is advocated for by the Astronist Tradition because of the ability it holds in the clarification of the operations of The Institution and it also holds the ability to prioritise the different segments of the operations of The Institution in hierarchies of immediacy, relevancy, and applicability.

[2:46:310] Departmentalisationism, due to it being one of the available polities applicable to The Institution, is to be explored by those whom are to be known as politists which are to be classified as a type of scholar that study all the different potential polities by which a philosophical institution may run; these are defined from naological politists whom are a subdivision that focus on the study of the different polities available to run sophariums.

[2:46:311] The aim and role of politists is compare and contrast different forms of institutional polity so as to determine the most superior form of polity that is to be applied and executed in a certain period, usually due to the external circumstances and environment of the time which is a notion that in itself demonstrates the motionality of institutional polity and the fact that its nature is neither stationary, nor stagnant.

[2:46:312] That which is to be henceforth known as a trilateral strategy refers to the notion that there exists a highly potential relationship between the institution, the philosophers, and the followers of a philosophy that creates a trisymbiotic experience whereby each of the three parties is bolstered towards their end goals by the other party via the commonality which is the philosophy in this case.

[2:46:313] The trilateral strategy is considered to be one of the key ways of approaching a more strategic understanding of the relationship between an institution, its philosophy, and the followers of its philosophy in a distinctly optimistic way to see only potential for the utilisation of the elements of the trilateral strategy.

[2:46:314] That which is to be known as the philosophical share refers to the share of the entire potential philosophical audience or seekers that a philosophy claims to have membership for; it is considered to be part of the promulgative principle that a philosophy should always hold the intention to not only increase its philosophical share, but to maximise it which therefore demonstrates how the philosophical share is to be used as a catalyst for the advocacy for the approach of promulgationism.

[2:46:315] As part of the strategic approach to understanding promulgation and the measurement of the performance of promulgative activities, we must introduce and explore those which are to be henceforth known as promulgative metrics.

[2:46:316] Promulgative metrics refers to the ten different measures applied after a promulgative campaign has ended in order to assess its performance and includes the following metrics that are used to determine the success of a promulgative campaign:

[2:46:316a] Disseminative availability / accessibility.

[2:46:316b] Follower advocacy and satisfaction.

[2:46:316c] Increased seeker interest.

[2:46:316d] Averter reduction.

[2:46:316e] Number of new concept developments.

[2:46:316f] Increased philosophical share.

[2:46:316g] Increased awareness (this particular metric is confirmed by the use of polling).

[2:46:316h] Relative followership (the comparison between the number of followers from before a campaign to after its completion).

[2:46:316i] Renditional sales.

[2:46:316j] Increased promulgability (an increase in the ability of a philosophy to be accepted as openly promulgated by governmental organisations and the general public which involves the normalisation of philosophical promulgation).

[2:46:317] The results derived from the application of these different promulgative metrics are set to influence the nature of that which is to be known as the promulgative plan.

[2:46:318] A promulgative plan is a comprehensive document or blueprint created by a philosophical institution that outlines promulgative advertising and marketing efforts for the coming year for a particular philosophy, or philosophical brand, and is typically split according to the different countries or regions in which The Institution conducts its operations or where one or more of its philosophies hold a presence and therefore require promulgating.

[2:46:319] A complete promulgative plan describes promulgative activities involved in accomplishing specific marketing objectives within a set time frame, usually either across a year, as aforementioned, but more than likely across three years due to the principle of truncation.

[2:46:320] Further to this, a promulgative plan also includes a description of the current marketing position of a particular philosophy, a discussion of the promulgative audience and a description of the marketing mix that an institution will use to achieve their promulgative goals, known as the promulgative mix in this context.

[2:46:321] Moving on now, it is herein stated that categories are assigned to each of the inclusive disciplines of The Philosophy of Astronism, as demonstrated by the following list:

[2:46:321a] Compendology - Cosmic philosophical foundations.

[2:46:321b] Sanitology - Logic thoughts and actions, institutional operations, and real-world manifestations of the aforementioned philosophical foundations.

[2:46:321c] Abettology - Environmental and social consciousness and responsibility.

[2:46:321d] Equitology - Justice, advocacy, activism, and righteousness.

[2:46:321e] Xentology - Personal achievements of knowledge, happiness, and dreams.

[2:46:321f] Ghenology - The depths of self-contemplation and traditional philosophy.

[2:46:321g] Expology - The philosophical and practical aspects of space exploration.

[2:46:321h] Rhemnology - Futurocentrism, personal and civilisational advancement, and the approaches to the commemoration of loss.

[2:46:321i] Contology - What to do and what not to do.

[2:46:321j] Durantology - The depths of contemplation on space, time, and physical existence.

[2:46:321k] Quillitology - The achievement of inner peace and acceptance through overcoming adversities.

[2:46:321l] Prerology - The contemplation, achievement and preservation of freedom.

[2:46:322] When the operations of The Institution are organised and departmentalised according to the inclusive disciplines, this is known as categorianism and is a form of institutional polity that is to be studied and contemplated by politists.

[2:46:323] Categorianism, as advocated and managed by categorians, refers to the management of The Institution of The Philosophy of Astronism according to the different categories of inclusive disciplines which are considered to be independent and autonomous departments from one another within the wider Institution due to their differences in philosophical topicality and address.

[2:46:324] That which is to be henceforth known as the process of philosophical diversification refers to the instance in which a philosophical institution begins enlarging or varying its jurisdiction over a philosophy through new concept development, conceptual procurement, or by the expansion of the operations of the institution into new territories.

[2:46:325] This is considered to be the most important process in the development of philosophical promulgation for without it, there is no point to the promulgative process if diversification is not sought by the institution and remains one of the centralmost concepts of orientation of promulgationism.

[2:46:326] Philosophical diversification, despite the fact that it may not be directly referred to in all the instances of its occurrence, it does exist throughout the majority of concepts introduced herein, albeit within the roots of those concepts and as part of their undertones that may not be instantly recognisable to untrained eyes.

[2:46:327] There are herein identified a number of different criteria by which seekership and the identity of seekers can be measured which are to be collected into three different groups, including behavioural, psychological, and profile categories which allow for a greater organised form of identifying, clarifying, and segmenting different types of seekers which holds untold utilities for promulgators.

[2:46:328] The first of these collectivities is the behavioural group which including the following metrics, each of which focus on the extent of the topic raised:

[2:46:328a] Enknowledgement

[2:46:328b] Alignment

[2:46:328c] Application

[2:46:328d] Interaction

[2:46:328e] Media usage

[2:46:328f] Technology usage

[2:46:329] Next is the psychological collectivity which instead of focusing on how people do and act which is focused upon in the behavioural category, this category focuses upon what people do and therefore includes the following metrics:

[2:46:329a] Lifestyle

[2:46:329b] Personality

[2:46:329c] Perceptions

[2:46:329d] Attitudes

[2:46:329e] Motives

[2:46:329f] Benefits sought

[2:46:330] The final category is titled as the profile and this involves how a person fits and interacts with the wider environment and what the combination of their behaviour and

psychology is shared with others in order to form populaces that share commonalities, and so the metrics to use for due endeavours include:

[2:46:330a] Demographic

[2:46:330b] Socioeconomic

[2:46:330c] Geographic

[2:46:330d] Ideological

[2:46:330e] Religious

[2:46:331] To continue on in our address of the nature of seekers both individually and collectively, it is imperative that after we have formatted groups and collectivities of seekers that we later segments such groups, hence the emphasis now of the importance of the segmentation of seeker audiences.

[2:46:332] Here, instead of actually segmenting different seeker audiences themselves, for this is not considered to hold relevancy for future readers and promulgators, we shall instead form four elements in how to approach the segmentation process.

[2:46:333] The first of these concentrates on distinction and poses the following question to promulgators and segmenters: is each segment clearly different from other segments? If so, different marketing and promulgative mixes, will be necessary as these different identified segments will require differentiated approaches to promulgation.

[2:46:334] The second of these concentrates on accessibility and mainly poses the following question to promulgators and segmenters: can seekers be reached through appropriate promulgative activities and distribution channels? The appropriateness element here pertains to whether promulgators would realistically be able to conduct their activities through the identified segments.

[2:46:335] Thirdly, we come to concentrate on the measurability of segments which poses the main question of whether these segments are easy to identify and measure? The measurability of something remains key to its aforementioned accessibility and applicability, therefore the measurability of a segment can be considered the precursor to these both.

[2:46:336] Finally, we must address the final element which is the promulgability of segments which presents the question of whether the identified segment sufficiently large and practically reachable to get promulgative materials to and for such materials to be understood by the intention of their creation?

[2:46:337] In addition to this, it is important not only to segment seeker audiences, but also to differentiate between the five brand categories, the first of which is omnimentioned throughout this and other related discourses and is known as a philosophical brand which refers to the brand encompassing a philosophy in its entirety such as that of the appellation of Astronism.

[2:46:338] The next of the brand categories is to be known as a denominational brand which encompasses distinct denominations of a philosophy and in the case of Astronism, includes the denominations such as Hanazavaism, Qīshì'ism, and Prabodhanism.

[2:46:339] Also, there exists school brands which pertains to the brands of the different schools of thought that exist within The Philosophy of Astronism, but also there is to exist conceptual or notional brands which pertain to brands of individual concepts and notions within Astronism.

[2:46:340] Finally, an important brand category is titled as a disciplinary brand for it pertains to the brand of a discipline of study of The Philosophy of Astronism and usage of such a brand to promote the study of a particular discipline.

[2:46:341] As part of our contemplation and discussion of the various elements that make up strategic promulgative management, it is essential that we address the different forms of philosophical positioning strategy, the two primary forms of which include the functional strategy and the expressive strategy, each of which include three substrategies.

[2:46:342] The first of these of our strategy pertains to functionality, the first substrategy of which focuses on the physical features of the philosophy to use in promulgative materials as a major technique which primarily includes the physical manifestations of the philosophy.

[2:46:343] These physical manifestations of The Philosophy of Astronism are expected to include its followers, its sophariums, its organisations, The Institution, its renditions, and its occurrological events.

[2:46:344] The next of the substrategies as part of the wider functional strategy for philosophical promulgation is to be known as conceptual quality which focuses on the extent to which an individual is personally drawn to the philosophy, its narrative, its worldview, its concepts, and its structure mainly through the concepts, theories, and ideations that it does express.

[2:46:345] The final of the substrategies within functionality involves utility and includes the technique of using one's alignment of a philosophy for something, an example of which would be to improve's lifestyle, or to achieve greater enknowledge; this strategy of promulgation is solely based on what the philosophy and one's alignment to it can be used for and also includes the feelings that one will experience and perhaps benefit

from during their adherence to the philosophy as these are considered a utility in this sense.

[2:46:346] The second of the two main strategies of philosophical promulgation focuses on the expressive elements of the philosophy, the first of the substrategies of which revolves around the societal.

[2:46:347] The societal substrategy involves focusing on one's alignment in order to express an image of oneself to others, or to fit within or not fit within a wider group which is considered to be one of the main forms of people's reason for alignment to a philosophy in real world terms.

[2:46:348] The second substrategy under the expressive strategy involves that of benefit which revolves around the usage of promulgation to highlight the personal benefits that one gains from being aligned to the philosophy that is being promulgated which is again, considered to be one of the most important of all the promulgative strategies outlined herein.

[2:46:349] The final substrategy for the wider expressive strategy revolves around the notion of heritage which uses promulgative materials to focus on the fact that the promulgated philosophy is the traditional philosophy of one's people, or family, one may wish to start their own traditions by refreshing the older traditions.

[2:46:350] Generally, the expressive approach to strategic promulgative management is expected to be more efficient in achieving the goals of the promulgation than that of the functional strategy for philosophy is itself expressive by its very core nature rather than merely functional therefore from the Astronist Tradition's perspective, the adoption of an expressive strategy is more suited to the nature of philosophy itself rather than that of the functional approach.

[2:46:351] Much of this discourse, as all its readers will have understood up to this point, is not only definitional by its core nature, but it is also categorisational for we have spent many insentensations categorising different elements of the whole strategic promulgative management process, but despite the dominancy of this throughout the discourse, we shall not discontinue for we have further elements that require clear arrangement and categorisation.

[2:46:352] That which is to be henceforth known as institutional categorisation refers to the process of comparing different philosophical institutions by the number of philosophies they jurisdis and hold proprietorship over and the number of followers those philosophies hold collectively in order to segment institutions according to size, influence, as well as geographic scope and distribution.

[2:46:353] As part of the categorisation process of different philosophical institutions, there exists a system of categorisation that is unique to The Institution of The Philosophy of

Astronism that involves those which are to be known as institutional derivations, each level of which shall be introduced here and refers to the different scales of The Institution largely based around geographic parameters.

[2:46:354] The first of them is to be known as globality which refers to The Institution of The Philosophy of Astronism on a global scale that encompasses all other derivations as well as all existent forms of The Philosophy of Astronism that hold a presence on The Earth and the operations of The Institution on The Earth.

[2:46:355] The second of these is to be known as continentality which refers to a branch of The Institution of The Philosophy of Astronism that holds jurisdiction over a continent refers to the presence of Astronism on a particular continent and the entirety of operations of The Institution on that continent.

[2:46:356] The next of the institutional derivations to be known as multinationality which refers to a collectivity of national institutions that share commonalities in language, culture, polity, and philosophical denominationality with one another, but are not commonly jurisdised over like transnationality.

[2:46:357] Additionally, that which is to be henceforth known as the institutional derivation of extranationality refers the operations of The Institution and the subsequent presence of The Philosophy of Astronism in digital channels and platforms as another form of the transcendence beyond national borders; this institutional derivation may alternative be known as either cybernationality, or technonationality.

[2:46:358] One of the most important institutional derivations is that which is to be henceforth known as transnationality which refers to a collectivity of national institutions brought together under a single overarching jurisdiction to create a uniformity of polity and denominationality.

[2:46:359] Furthermore, as we continue we introduce smaller institutional derivations, we come to that of nationality which refers to a branch of The Institution of The Philosophy of Astronism that holds jurisdiction over a single country.

[2:46:360] Two more Institutional derivations are introduced as regionality and locality, the former of which refers to a branch of a national institution that holds jurisdiction over a region/ province/ county/ state within that same country.

[2:46:361] The latter of which involves a branch of a regional institution, as aforeintroduced, that holds jurisdiction over designated areas within the region, usually by the vote and choice of the local populous.

[2:46:362] The final form of an institutional derivation is that which shall henceforth be known as a metrality which involves a branch of a regional institution that holds special jurisdiction over a single city and its boroughs, especially an exceptionally large city, or

one that is culturally distinct from the rest of the county, or country within which it resides.

[2:46:363] There is a great variability in the abundance and usage of these derivations according to the popularity of The Philosophy in certain areas with the general principle concerning this holding that the greater the population of followers comes the greater need for more derivated organisation while lesser populations of followers require only nerivated organisation.

[2:46:364] Nerivation, or nerivative organisation as it may be alternatively known, is a term introduced and originating herein as part of this discourse so as to contrast with the term derivation because to be nerivated is to be without or with little derivation of the main entity, and in this context would involve only regional or national institutional organisation rather than more concentrated derivated forms of organisation such as locality and metrality.

[2:46:365] In this discourse, we have introduced a huge plethora of forms and methods of promulgation, but one of the elements that we have not yet addressed is the organising of promulgative efforts according domesticity and internationality, but we shall do so here and now.

[2:46:366] Domestic promulgation of course involves the promulgation of a philosophy or one of its constituent elements within a country and the following list includes some of the most pertinent elements that an institutional and its promulgators must both be aware of, conducted analyses upon, and be able to apply to their operations in order to be success in the domestic market in subject:

[2:46:366a] Native language.

[2:46:366b] Dominant culture and religion.

[2:46:366c] Research relatively straightforward.

[2:46:366d] Relatively stable environment.

[2:46:366e] Single currency.

[2:46:366f] Business conventions understood.

[2:46:367] Alternatively, that which is to be known as international promulgation obviously refers to promulgation of a philosophy or its constituents beyond and between nation states, with some of the most important factors for the institution and its promulgators to considered including:

[2:46:367a] Many languages.

[2:46:367b] Many cultures and religions.

[2:46:367c] Research is complex.

[2:46:367d] Frequently unstable environment.

[2:46:367e] Requires departmentalisation for different countries entered.

[2:46:367f] Differences in political, social, and economic affairs.

[2:46:367g] Conventions are diverse and unclear.

[2:46:368] Understanding promulgation in a general sense is one approach, but to understand and execute promulgative activities across the aforesaid domestic and international contexts of promulgation presents another dimension, hence the fact that strategic promulgative management is expected to often be segmented according to these two different forms of promulgation as these both set the ultimate precedent for how a promulgator is to plan and conduct promulgative actions.

[2:46:369] That which is to be henceforth known as the notion of polycentrism refers to the suggestion that due to the globality of The Institution of The Philosophy of Astronism's operations, there exists a multitude of epicentres for its operations and its potential areas for promulgation rather than a singular epicentre.

[2:46:370] By this notion and by the nature of its suggestion, polycentrism can be considered a form of institutional polity in its infancy and therefore one that is in need of further development.

[2:46:371] As we discuss various approaches to the contemplation, planning, and subsequent management of the promulgative process, we come to understand that there exists two particularly important approaches, which are to be known as adorientation and panorientation.

[2:46:372] The first of these, adorientation, refers to a promulgative approach that involves pursuing separate marketing strategies in each country, or set of countries (depending on their similarities) and considers how to compete on the basis of each country rather than by panorientational approach; in mainstream and non-philosophical marketing theory, this process and approach would be known as differentiation.

[2:46:373] Oppositistically, there exists the approach of panorientation involves pursuing standardised marketing strategies across different countries despite their lack of similarities rather than considering how to compete in each country on an individual basis; in a non-philosophical and mainstream marketing sense, this approach would be known as standardisation.

[2:46:374] An integral element of promulgation, and especially so to the achievement of the ideals of the orientation of promulgationism, is that which shall be henceforth known as the philosophies of scale principle.

[2:46:375] This is a play on words from the term “economies of scale” and relates to the principle that there will be a proportionate increase in followers gained by a constant level of promulgation that will offset unretained followers.

[2:46:376] Therefore, the philosophies of scale principle supports the orientation of promulgationism as it advocates for the constancy of promulgative activities to which the approach of retentionism is of course opposed as that orientation focuses on retaining the followers that the philosophy already has rather than supporting a churning notion of a philosophy whereby a philosophy becomes a constant churn of new followers entering and unretained followers exiting.

[2:46:377] Essentially, retentionism advocates for a more balanced, harmonious, and less dynamic operation for a philosophy whereby fewer followers leave the philosophy, but due to promulgative funds majoratively being directed towards the retention of such followers, fewer new people align to the philosophy; this creates a calmer set of operations for a philosophy rather than the more rapid and dynamic approach advocated by promulgationists.

[2:46:378] Furthermore, to understand the core of the promulgative principle is to postulate that a promulgationist upholds the notion that those whom leave a philosophy must always be replace by those whom align to it so as to avoid decline in followership which is to be avoided through the proliferation of promulgative activities.

[2:46:379] In this discourse and particularly in the last dozen or more insentensations, we have considered domestic and international promulgative approaches as well as the divergences between how a promulgator is to conduct himself/herself in such environments.

[2:46:380] However, one instance that we have not yet introduce is that which is to be known as the market of origin which refers to the country in which a philosophy originated in promulgative terms so as to mean that such a philosophy will have a greater presence and understanding of the people and environment there rather than in other countries.

[2:46:381] The principle of the market of origin also holds that the relationship between a philosophy and its market of origin must always be emphasised and prioritised by the national institution, and even the derivated regional, local, or metral institution which pertain to the specific region, locality, and city of the philosophy’s origination.

[2:46:382] Upholders of the market of origin principle postulate that the promulgation of the philosophy to those living and proximate to the geographic origination of the philosophy should be prioritised which, as we are currently seeing with the decline of the Christian religious tradition in the Middle East, is an important principle for promulgators to both consider and implement so that the same fate does not occur with The Philosophy of Astronism in the context of England in the nationality, Lancashire in the regionality, South Ribble in the locality, and Preston in the metrality.

[2:46:383] As we introduce and discuss the nature of different markets for philosophical promulgation, it is important that we address the different criteria for the selection of a market which is to be promulgated to, which includes the following elements:

[2:46:383a] Market size.

[2:46:383b] Market growth rate.

[2:46:383c] Market access.

[2:46:383d] Geographical proximity.

[2:46:383e] Psychological proximity.

[2:46:383f] Market accessibility and promulgability.

[2:46:384] Furthermore, the expansion of a philosophy into international markets is considered by the Astronist Tradition to be an essential and natural process for any philosophy or system of thought regardless of the many extra motivations for international market development, but despite this view, the most prominent of these motivations are herein introduced and defined.

[2:46:385] The first of the motivations for international market development is international liberalisation which involves catalysing a general global trend towards national and supranational democracies, greater levels of interconnectivity, cultural exchange, the reduction in governmental oppressions, and the increase in the levels of respect for human rights, the prominentmost of which for the context of philosophy is of course the freedom of philosophical expression, belief, and practice.

[2:46:386] The second motivation involves the aforeintroduced principle of the philosophies of scale which is considered to only be achievable through the expansion of a philosophy to international regions beyond its market of origin; by this notion, we see how the proliferation of the principle of the philosophies of scale could clash with the principle of the market of origin.

[2:46:387] The next of the motivations for international market development and subsequent international promulgation for an institution and the philosophy over which it holds proprietorship is to be known as conceptual advantage.

[2:46:388] Conceptual advantage postulates that the quicker that a philosophy expands its contents internationally, the quicker it will be able to achieve conceptual uniqueness which is when a philosophy retains its uniqueness and distinction from other philosophies in a particular market.

[2:46:389] Conceptual advantage suggests that the slower a philosophy is at expanding international and acting commandingly in its uniqueness, the more at risk the philosophy is to being copied by others and thus losing conceptual uniqueness; conceptual advantage maintains that international market development and promulgation is the superior way to retaining a philosophy's conceptual uniqueness.

[2:46:390] The next two motivations for international market development include limited growth in domestic market and the excess of resources which are considered to be prominent drivers of for the expansion of a philosophy and the operations of an institution internationally.

[2:46:391] Another important motivation that we should now introduce is that which is to be known as historical impotential; impotential means not achieving the highest possible potential available and in this context refers to the tendency of an institution to be forgo the achievement of the highest potential for itself and the philosophy it holds proprietorship.

[2:46:392] It is postulated as part of the next motivation that companies and charitable organisations find that through international market development, greater levels of sustainability in their operations are achieved and we can relate this principle to the context of a philosophical institution by the idea of organisational sustainability.

[2:46:393] An institution that holds international operations more clearly understands the issues effecting different regions of the world, it is an institution that holds a global view of the world and its role within it rather than keeping confined to a national view of the world, the latter of which is not a positive approach for a philosophical institution to undertake as the nature of philosophy remains all-pervading through its conceptual nature so from the beginning, a philosophy is internationally, especially through its achievement of extranationality via digital channels.

[2:46:394] The application of traditional market segments always involves the area of international markets and which of promulgative theory and practice is predicated on an international approach to promulgation by its very nature.

[2:46:395] From the retentionist perspective, the development of international markets also involves the improvement of a philosophy's follower relationships as a philosophy with a

greater expansive scope and diversity is considered to sustain the interest of followers to insist in that growth as well as providing the opportunity for followers to speak with fellow followers in other countries which further contributes to the notion of international interconnectivity as part of the process of international liberalisation.

[2:46:396] Technological changes as well as the need for philosophy in international countries are the two final motivations that are introduced herein, the former of which is considered to be immediately true for the current era as technology is changing at a rapid pace in different countries.

[2:46:397] The latter of which is a basic motivation that holds resonance for any organised philosophy as it postulates that The Institution of The Philosophy of Astronism is especially responsible for meeting the needs of those in countries whom require the increased presence of Astronism in their country; this responsibility is herein and now postulated to be one of the solemn duties of The Institution to hold itself accountable to.

[2:46:398] A closely associated term to the development of international markets for promulgation is that which is to be known as the promulgative potential which refers to the total number of people in a country that are identified as being accessible by the promulgative channels presently available to The Institution.

[2:46:399] As the accessibility to the Internet increases throughout all the countries of the world, the promulgative potential is expected to increase in correlation, however, due to certain oppressive governments to the freedom of belief remaining in power in many countries globally, this is expected to decrease the promulgative potential; promulgative potential can be envisioned as tug of war of promulgability with different external factors negatively impacting upon an institution to promulgate.

[2:46:400] As an appendage to our discussion of the extent to which an audience is promulgatively accessible, we must introduce the dichotomous terms of promatim and inpromatim, the former of which collectively relates to people that promulgative materials directly reach and influence action.

[2:46:401] Meanwhile, the latter of the terms collectively refers to people that promulgative materials do not directly reach, but they are reached by indirect means, primarily through word of mouth from someone they know who tells them about the philosophy, or directs them to see promulgative materials.

[2:46:402] In reality, the extent of the promatim and the inpromatim populations are difficult to measure due to the inability of an institution to monitor how people come across the philosophy and its contents so therefore polls and other forms of post-promulgative performance parameters are essential to understanding how a promulgative material has been received in the environment in which it has been promulgated.

[2:46:403] That which is to be henceforth known as institutional flexibility refers to the extent of the ability of a philosophical institution in being able to enter a market, but then easily leave the same market due to misunderstanding of the market potential or market entry procedures without receiving much long-term damage, either financially or reputationally.

[2:46:404] Also connected to the processes involved in how a philosophical institution may enter different markets is the practice that is to be known as philosophical franchising.

[2:46:405] This involves the practice of a philosophical institution allowing another institution, organisation, or society to promulgate the institution's philosophy in a country that remains difficult to enter for the outsider institution.

[2:46:406] In this case, the institution may officially give up its proprietorship of the philosophy in that country, which is to be henceforth known as the act of abscension, however, according to the the Astronist Tradition, this is not considered to be the ethical option to take as The Institution of The Philosophy of Astronism is not considered to hold the right to provide its proprietorship of Astronism to another institution as The Omnidoxy, The Grand Centrality, and nor does The Grand Constitution grant The Institution such an ability.

[2:46:407] Alternatively, The Institution may just authorise the insider institution/organisation/society to promulgate the philosophy without them holding any jurisdiction or proprietorship over the philosophy which is to be henceforth known as the act of bestowment.

[2:46:408] For the insider institution/organisation/society, they would gain funding from the outsider institution for conducting such practices which hence reveals their motives for agreeing to such terms.

[2:46:409] Whatever an institution's approach to philosophical franchising may be, this is not considered to be of common practice either way, and is only permitted by the Astronist Tradition in extreme circumstances and in the context in which The Institution partners with only the most trustworthy and accountable of partners.

[2:46:410] To briefly digress, that which is to be known as a renditional store holds a prominent place in the context of rendition marketing for this relates to a shop in which renditions associated with The Philosophy of Astronism, one of its denominations, or one of its constituents are sold, but also these types of shops may also be more commonly referred to as renditionals in a collective sense.

[2:46:411] As we now return, we must introduce that which is to be known as a proposition and in a strategic promulgative management context refers to when an institution is approached by a philosopher, or another philosophical institution and is presented with a

new concept, philosophy, theory, or notion that is requested to be proprieted and jurisdised over by the institution that is proposed to.

[2:46:412] The instance in which this occurs is expected to grow in abundance as the fame and expansion of The Philosophy of Astronism grows to greater levels, but the writings herein purposefully do not prescribe any procedures for an institution's dealing with this instance as this is to be left to the institutional leaders, trusted philosophers and scholars, as well as the followers of The Philosophy of Astronism to judge as to whether the proposed philosophy/theory/concept/notion is suitable to be proprieted by The Institution.

[2:46:413] Nevertheless, there is expected to develop many different approaches to dealing with this occurrence post-omnidoxically from various different philosophers, institutional leaders and other verified contributors.

[2:46:414] That which is to be henceforth known as a propositional augmentation refers to the changing of an original proposition by The Institution that proprieted it in order to make it suit the rest of the portfolio of the philosophical institution.

[2:46:415] This process is expected to make the creation of propositions more feasible for their integration into the portfolio of an institution which will in turn create greater popularity for propositions.

[2:46:416] That which is to be known as digital value involves the subjective amalgamation of valuable assets of a philosophy that are only digital, such as the extent of its website network, the philosophy's combined number of social media followers, or the combined number of search engine searches for the philosophy or related topics.

[2:46:417] In mainstream marketing theory, there is that which is known as the product lifecycle which details the stages through which a product goes during its existence, and the same theory is applied here, but to the context of a philosophy and so we develop that which is to be known as the philosophical lifecycle, the stages of which are listed as follows:

[2:46:417a] Development

[2:46:417b] Establishment

[2:46:417c] Introduction

[2:46:417d] Growth

[2:46:417e] Maturity

[2:46:417f] Decline

[2:46:417g] Reascension

[2:46:418] It is predicted herein that all organised philosophies will go through each of these stages, some of which will take longer than others to enter through, including The Philosophy of Astronism which is also expected to go through each of these different stages.

[2:46:419] To grasp an understanding of the philosophical lifecycle will inevitably achieve a greater understanding of philosophy in general and therefore the philosophical lifecycle can be considered a metaphilosophical concept as well as a promulgative concept, hence it can be described as a crossdisciplinary concept.

[2:46:420] The hybridised category of product and service that was introduced in this discourse known as a conject holds many different aspects to its contemplation and without the discipline of strategic promulgative management, it is important to the nature of a conject is extrapolated and its forms introduced and subsequently analysed.

[2:46:421] The first of the forms and concepts of a conject that is to be introduced is that of the conject mix which pertains to the entire range of conject items that are encompassed by a particular philosophy which involves a mixture of different types of conject items that make the philosophy and are subsequently encapsulated by it.

[2:46:422] The next concept and aspect of a conject is that which is to be known as a conject item which collectively make up the conject mix and involves a distinct single conject within a conject line, an example of this would be a single concept, theory, or belief orientation.

[2:46:423] As aforementioned and now introduced, a conject line is constructed so as to refer to a group of closely related conjects, such as the concepts, theories, or belief orientations within a discipline of study, or a denomination.

[2:46:424] The two elements of a conject line are the conject line length and the conject line depth, the former of which refers to the number of conjects available in different conject lines while the latter of which the number of variations available within the conject line, such as different interpretations and orientations on the concept, theories, and topics within the conject line.

[2:46:425] By extension to the aforedefined conject mix, we introduce the conject mix width which refers to the number of conject lines within the wider conject mix.

[2:46:426] Understanding these different elements and aspects of a conject allow promulgators to grasp a greater idea about the nature of conjects generally, but also how they are synonymous with philosophy in a promulgative context, hence the centrality

given to the category of conject as demonstrated from the beginning and throughout this discourse.

[2:46:427] For many instances in this discourse and others, the notion and process of new concept development, acronyms known as NCD, has been contemplated and explored, but we have come to the point in this discourse that we should explore the process of how a NCD is undertaken and the various different elements and processes involved with the wider NCD process.

[2:46:428] The very first stage of NCD always revolves around the generation of the idea of new concept for without the completion of this stage, the rest of the stages and subsequently, the entire process of NCD would not be able to occur.

[2:46:429] This idea generation stage can either be conducted in an intrainstitutional context which refers to the generation of a concept within an institution, such as by an institutional staff member, volunteer, sophian, or institutional leader.

[2:46:430] Alternatively, the idea generation stage can be conducted in an extrainstitutional context which involves to the generation of a concept from outside of the boundaries of the institution, such as by a follower of a philosophy, a seeker, a philosopher, a non-philosophic person, or even an averter.

[2:46:431] The next stage of NCD is to be known as screening which is to be conducted by institutional philosophers that are verified as holding the knowledge, experience, creativity, trustworthiness and credentials and the institutional leaders.

[2:46:432] The screening stage involves how the newly proposed concept is applied to the overall institutional strategy and is contemplated as whether it fits in with the overall orientation of the philosophy as well as within particular denominations or disciplines under the jurisdiction and proprietorship of the institution.

[2:46:433] The next two stages involves the analysis of the promulgability of the concept as well as the conjecturation of the concept which involves the process of making a concept or an entire philosophy promulgable after its promulgability has been determined and the conjecturation stage typically consists extensive periods of planning and experimentation through trial and error.

[2:46:434] The next stage of new concept development is to be known as introductory promulgation which is to involves the introduction of the concept to select groups and populations of of seekers, followers, averters, and institutional volunteers in order to gain feedback about the new concept, primarily in order to ascertain whether it does belong within the portfolio of the institution and the contents of the philosophy.

[2:46:435] If the introductory promulgation is successful and the institution receives positive feedback from the populations it introduces the new concept to then the next

stage of NCD is initiated which is to be known as the asseveration which involves the institution officially announcing, recognising, categorising, and beginning to promulgate the new concept which is considered to be the longest of the stages of NCD and the stage that requires the largest amount of preparation for.

[2:46:436] After the asseveration, we come to the stage of NCD that is to be henceforth known as involving the process of avalation which involves how the philosophers, followers and seekers of a philosophy become aware of the newly asseverated concept and begin to incorporate it into their overall belief orientations and subsequently, they begin to use it in debates.

[2:46:437] There is a final stage to the NCD process, but it may better be described as an alternative scenario to that which has already been outlined and involves the process of repudiation wherein a large amount of philosophers, followers, and seekers reject the introduction of the new concept and may also actively work towards its disinsertion which involves the process of an asseverated concept being officially removed from the contents of a philosophy and the portfolio of the philosophy's institution due to popular vote to take such action.

[2:46:438] An important related term to introduce herein is that which is to be known as the avalation rate refers to the speed at which philosophers, followers, and seekers become aware of, accept, and begin to incorporate the newly asseverated concept into their debatory discourses.

[2:46:439] There are some different contributors to the avalation rate which are herein listed in order to further develop the concept and these contributors are almost perfectly symmetrical of the different types of people involved when the introduction of a new product is announced and they are as follows:

[2:46:439a] Innovators

[2:46:439b] Early adopters

[2:46:439c] Early majority

[2:46:439d] Late majority

[2:46:439e] Laggards

[2:46:440] The need for philosophy has been identified throughout this discourse as one of the major determiners of The Institution's actions and operations and this type of notion is to be known as philosophical demand which pertains to the extent to which a country is considered to be in the need for a philosophy, or a new philosophy to enter and hold presence in the country as is determined by the views of the citizens of the country in subject through those which are to be known as ballots which specifically ask citizens of

country about their anonymous opinions regarding the state of their lives in their country and whether change is required.

[2:46:441] A closely associated concept to philosophical demand is that which is to be known as the circumstantial elasticity of philosophical demand which relates to the ability of a philosophy to regain followership and governmental support after a major political, economic, sociocultural, religious, environmental, or technological change to the country.

[2:46:442] That which is to be known as promulgative elasticity refers to the measurement of a promulgative material's ability to increase the followership of a philosophy and it is the role of promulgators to increase the promulgative elasticity to the greatest extent possible for the increase in the elasticity will lead to the greater efficiency of promulgative materials to fulfil their purposes.

[2:46:443] There are three different types or categories of people that are herein identified to being integral to the worth of mouth promulgation of a philosophy, the first and arguably most important of these is the opinion leader category which involves non-academic individuals with a heightened voice of influence in a particular topic.

[2:46:444] Secondly, this is the category of the opinion formers which includes people such as a philosopher, sophian, academic, scholar, or institutional leader and finally, there exists the category of the opinion aligners which are people who look towards the opinions of others in order make a decision as to whether they should align to a philosophy or not and it is this last category that the majority of people reside within.

[2:46:445] Grasping an understanding of the dynamics of how different types of people effect the promulgation of a philosophy through what they say, how they say it, and to whom they say it allow promulgators to navigate the word of mouth with the ultimate goal of wanting to utilise word of mouth as the primary tool for promulgation.

[2:46:446] Word of mouth remains the most powerful of all communication forms in the context of philosophy which is casually manifested in private discussion and conversation of a philosophy, and is formally manifested and managed by The Institution through debatabations which are used in order to ignite word of mouth communication about the philosophy in all the most prominent of topics.

[2:46:447] As we now move on, we come to the notion that there exists a definitive structure, process, and procedure through which every person travels with a particular philosophy and this process is exemplified through the chain of stages identified below:

[2:46:448] Awareness -> Enknowledgegment -> Liking -> Preference -> Conviction -> Alignment

[2:46:449] Each of these stages is considered to be uniquely manifested for each individual person due to each person's own uniqueness, but also these different stages are considered

to hold different meanings and greater potency for different people because of their own experiences.

[2:46:450] Further to this, each stage of this chain is considered to be changeable in length for each person also because one person may take much longer at the enknowledge stage before they take a liking to the philosophy, but they may take much less time to travel through the preference and conviction stages leading to alignment because they had previously spent longer in enknowledging themselves about the philosophy so their conviction for that particular philosophy was much stronger at an earlier stage so the later stages were passable at a much greater speed.

[2:46:451] We have addressed many different concepts and theories of intellectual depth and brilliance in this discourse, but we have yet to address the theoretical dichotomous pair known as strong theory and weak theory.

[2:46:452] Strong theory is to be henceforth characterised by the notion that promulgative advertising is considered to be a direct contributor to the increase of the followers of a philosophy.

[2:46:453] Alternatively, weak theory involves the notion that promulgative advertising is considered to be best employed as a defence mechanism to retain followers and to increase philosophical interaction.

[2:46:454] A common term in the context of marketing theory is call-to-action which, in promulgative terms, pertains to the instance in which a person is prompted to conduct an action after seeing, reading, or hearing a promulgative material.

[2:46:455] A related term is that which is to be henceforth known as direct-response promulgation which refers to when a promulgative material instructs a person to do something directly after or during their consumption of the promulgative material, such as thinking of an idea, or asking themselves, or someone else, a question.

[2:46:456] In a similarly related context, we refer to that which is to be known as promulgative reciprocity which refers to the extent of the mutual interpretation, perceptuon, and subsequent understanding of a promulgative message across a group of individuals.

[2:46:457] When a higher level of promulgative reciprocity is achieved, the promulgative message is considered to be a success so promulgative reciprocity can be considered the primary parameter for the measurement of the successful of a promulgative material, or even an entire campaign.

[2:46:458] Promulgative reciprocity is, however, reliant upon post-promulgative polls and surveying techniques which may not always be accurate representations of the entire population that had received the promulgative material so the accuracy of the methods

used to determine promulgative reciprocity do inhibit the actual applicability of promulgative reciprocity itself.

[2:46:459] That which is to be henceforth referred to as audience fragmentation involves the expansion of the audiences' choice of promulgative materials, either by their own accord or by the accord of the institution or the promulgator directing and instructing the audience to complete such actions of expanding the range of promulgative materials they do come across.

[2:46:460] As we have briefly addressed the nature of promulgating messages, it remains important that we now address their different forms, of which there exists four main derivations.

[2:46:461] The first of these derivations are to be collectively known as informationals which refers to promulgative messages that focus on the impartation of information about a philosophy, or any of its constituent parts without any inclusion of emotive elements.

[2:46:462] The second of these derivations are to be collectively referred to as emotionals which pertains to promulgative messages that focus on the impartation of emotion-filled narratives regarding a philosophy, or any of its constituent parts that may also blend, but does not prominently display information.

[2:46:463] The third of these derivations are to be collectively described as demonstrationals which involves promulgative messages that focus on the impartation of information about a philosophy, or its constituent parts through the demonstration of such elements.

[2:46:464] The fourth of these derivations is to be henceforth known as comparatives which refers to promulgative messages that focus on the creation of comparisons between two comparative elements within the philosophy, or between two philosophies.

[2:46:465] As was evidenced in our introduction and contemplation of media strategy in this discourse, the importance of media is central to the successful creation and application of promulgative materials and the campaigns to which they are part of.

[2:46:466] In order to further organise our understanding of media, it is important to classify the different types of media available for promulgators to use to their advantage and these different classifications of media can be considered according to the following list:

[2:46:466a] Broadcast (television and radio).

[2:46:466b] Print (newspapers and magazines).

[2:46:466c] Out-of-home (billboards, street furniture, and transit).

[2:46:466d] Digital media (internet, social media, auctions, billboards, and apps).

[2:46:466e] In-store (point of purchase and packaging).

[2:46:466f] Other (cinema, exhibitions and events, product placement).

[2:46:466g] Ambient (litter bins, washrooms, petrol pumps).

[2:46:466h] Guerrilla (flyposting).

[2:46:467] With these different considerations, we can understand that the navigation of media is complex, hence the need for a dedicated branch of strategic promulgative management to be directed to the development of a media strategy for a philosophy so that promulgators are able to position different materials towards different media, allocate funds to different media channels for promulgation, and subsequently measure the results of such decisions so as to improve those decisions for future campaigns; this can be considered and known as the strategic media process.

[2:46:468] Of course, in addition to the use of media for promulgative purposes, there does exist other forms and methods that one may employ in order to achieve promulgation, some of which alternative methods may include:

[2:46:468a] Philosophical sponsorship.

[2:46:468b] Philosophical brand placement.

[2:46:468c] Conceptual packaging.

[2:46:468d] Field marketing.

[2:46:468e] Exhibitions.

[2:46:468f] Viral marketing.

[2:46:468g] Crisis communications.

[2:46:469] The media elements of the promulgative mix demand the application of these alternative medias for promulgation as it is these alternative methods that complement the main media strategy and are considered to be often intertwined with the media strategy rather than as separate constituent parts.

[2:46:470] Another set of elements of promulgation that should now be organised are the various different branches of digital marketing which itself includes digital marketing as its cornerstone branch and the others of which include those listed below.

[2:46:470a] Direct marketing.

[2:46:470b] Interactive marketing.

[2:46:470c] E-marketing.

[2:46:470d] Internet marketing.

[2:46:470e] Search marketing.

[2:46:470f] Content marketing.

[2:46:470g] Mobile marketing.

[2:46:470h] Social marketing.

[2:46:470i] Social media marketing.

[2:46:471] Part of the contemplation of digital marketing in relation to a philosophy is that which shall be known as the digitalisation of philosophy which is considered to be a transformative process during which a philosophy becomes majoratively digital in its promulgative activities and in its overall identity.

[2:46:472] Each of these different forms of digital promulgation is essential to the overall promulgative process as the digital aspects of marketing have largely begun to dominate the entirety of marketing theory and activity.

[2:46:473] We have mentioned the importance of the practice of crowdsourcing to the execution of general philosophical promulgation, but also of importance is the application of this practice to the next of new concept development, the five main points for which promulgators much consider include:

[2:46:473a] The role of the crowd.

[2:46:473b] The goal.

[2:46:473c] Renumeration.

[2:46:473d] The size of the crowd.

[2:46:473e] The diversity of the crowd.

[2:46:474] These different elements of crowdsourcing are considered to be essential to the realistic execution of new concept development, especially in an extrainstitutional context

as those outside of an institution whom are attempting to achieve NCD are expected not to have the same funding and support as intrainstitutional actors.

[2:46:475] Throughout this entire discourse and in related discourses, we have spoken of the philosophical brand and the centrality of the philosophical brand for the purposes of the establishment of strategic promulgative activities, but now we must pose and answer the question of why the philosophical brand is important?

[2:46:476] The first of the answers to this question refers to the assistance of people to identify a philosophy which is the most fundamental function of a philosophical brand for this can be considered the face of the philosophy; the element of the philosophy that people will most frequently encountered for it is the in-depth conceptual and contental elements of a philosophy that will be most frequently encountered, it is the philosophy's appellation, its symbols, and perhaps its most prominent and definitive concepts.

[2:46:477] The second of the answers to this question involves the reduction of levels of perceived risk and increased follower experience which can be considered a two-pronged functionality of a philosophical brand, the former of which is important as any instance of heightened risk is considered to be damaging to the alignment rate.

[2:46:478] The latter of which is also fundamental to the functionality of a philosophical brand for the way in which a philosophy is most publicly represented must be the grandest, purest, greatest, and most prominent representation of the philosophy so that followers will not only feel proud and satisfied to be followers of that philosophy, but also that they will feel enthused to speak of the philosophy in a positive light to others which shall in turn raise the alignment rate amongst those with whom they speak.

[2:46:479] The next element of the importance of a philosophical brand focuses on gauging philosophical orientation and worldview which the correct construction of a philosophical brand should reflect upon its reception to different audiences, hence the establishment of the trade appellation of Astronism for Astronism as the former is more astronomically and spacially themed than the latter so the former is considered to be a clearer representative of the astronomical theme that Astronism holds.

[2:46:480] Additionally, the reduction of the rates of confusion between philosophies is another important aspect to the development of a philosophical brand as the functionality of distinction is elemental to the purpose of philosophical brands for conceptual uniqueness isn't always the easiest to convey in brief instances so other forms of distinction are required, hence the development of a philosophical brand.

[2:46:481] The fifth answer to the question of the importance of philosophical brands pertains to the psychological reassurance and reward found in the development of such types of brands for followers of philosophies which are both contributors to the reduction of the levels of risk associated with one's alignment to a particular philosophy as a greater brand association for a seeker or follower demonstrates a reduction in risk for alignment.

[2:46:482] Finally, philosophical brands hold an important function of informing audiences of the source of concepts, belief orientations, and theories of the philosophy as audiences, especially so in commercial rather than academic or actual philosophic settings, are expected to place and associate certain concepts with certain philosophical brands.

[2:46:483] These brands are expected to take this weight as this remains one of their primary functions, including the huge amounts of criticism that the philosophy is expected to receive as well as the enormous amounts of attacks, threats, and public relations issues that are to face the philosophy and its institution; all these are to be weighted on the philosophical brand and the entity that is seen to be front-facing to the public in these matters will most often be the philosophical brand, though it may also be the philosophical institution if the severity of the issue is especially high.

[2:46:484] The philosophical brand and the philosophical brand appellation are distinct from one another as the former pertains to the philosophical contents such as concepts and theories while the latter pertains to the name provided to this collection of the contents of a philosophy.

[2:46:485] It is upheld herein that all philosophical brand appellations should achieve the following set of criteria for them to be considered as successful appellations:

[2:46:485a] Be easily recalled, spelled, and spoken.

[2:46:485b] Be strategically consistent with the institution's branding policies.

[2:46:485c] Be indicative of the major characteristics of the philosophy.

[2:46:485d] Be distinctive in both spoken and written word.

[2:46:485e] Be meaningful to the widest audience possible.

[2:46:485f] Be capable of registration and protection.

[2:46:485g] Be translatable for a wide variety of different languages.

[2:46:485h] To hold longevity in meaning and representation.

[2:46:486] These eight elements that form a successful philosophical brand appellation are to be applied to the different appellations within the Astronist philosophical tradition as a means of the critical analysis of the chosen appellations for the different constituent elements of the tradition.

[2:46:487] The Astronist Tradition upholds the notion herein and now that the philosophical brand appellation, which exists as an area of contemplation within both

strategic promulgative management and appellatology, is the most fundamental part of a philosophy to apprehend and apply as the philosophical brand appellation can be considered the face of the philosophy.

[2:46:488] It is the main element of the philosophy that all the world will see and so it must represent the philosophy to which it is appellated in an accurate way that demonstrates an ability to hold a certain longevity that other appellations may not grasp.

[2:46:489] In the process of the development of philosophical brand appellations, there is an element known as grasping that can best be defined as the achievement of the conceptual underpinnings that are required to achieve appellational success.

[2:46:490] It is also important to note that the development of appellations for philosophical brands is firstly considered to be a process that is expected to consist of the introduction and removal of appellations that are found to be unsuccessful as well as the exercise of trial and error tactics in order to achieve a certain harmony for the collection of appellations finally chosen.

[2:46:491] It is also noteworthy to mention that over the course of the development of the contents and focus of a philosophy, its appellation(s) are expected to change which has been immediately demonstrated by the polynymous tradition set forth by The Philosophy of Astronism with regards to its own appellations, of which, from its very founding, there have been a multitude, hence the development of the discipline of study of appellatology and it is from this that the notion that Astronism is a philosophy known by many names to many different peoples comes from.

[2:46:492] This polynymous and flexible attitude in approaching appellations for The Philosophy of Astronism from its inception perhaps best predicates the future of The Philosophy in being so vast in its traditions, concepts, beliefs, and forms that it is difficult to be encompassed by a single name while for many other philosophical and also religious traditions, this notion of appellational polynymity is much less common.

[2:46:493] Whether this polynymous approach for The Philosophy of Astronism is deemed successful is a conclusion that is yet to be reached, but it remains solemnly important that we continue on in our endeavour to formulate a philosophy that is so wide in scope that it requires a polynymous approach to define and encompass it for this is our tradition and this is what we must stand in alignment with if we are to establish distinct traditions from other systems of thought.

[2:46:494] Now that we have explored the essential nature of the philosophical brand and the philosophical brand appellation, it is important for us to relate to the fact that there herein exists three major philosophical branding strategies.

[2:46:495] The first of these strategies is to be known as individual branding which refers to the marketing and branding of a philosophy in such a way that it is able to stand

independent from its wider tradition, as well as exist as a separate entity from that of the institution that holds proprietorship over the philosophy.

[2:46:496] The second form of philosophical branding strategy refers to that which is to be known as tradition branding which involves a particular approach wherein the philosophy is positioned in such a way to emphasise its place within a wider philosophical tradition and utilises its position within this wider tradition of philosophy as a point of attraction for further promulgation.

[2:46:497] The third and final form of philosophical branding strategy is to be known as institutional branding which involves a greater emphasis of presenting the closeness between a philosophy and the institution that holds proprietorship over the philosophy, or may entirely focus on the marketing of the institution instead of directly marketing philosophy which would remain secondary to the institution in that instance.

[2:46:498] To continue on with the definitional and introductory nature of this discourse we shall now introduce and define a large amount of new terms that are integrally related to the development of strategic promulgative management, the first of these terms shall be henceforth known as brand salience.

[2:46:499] Brand salience refers to the extent to which the philosophical brand is recalled when a particular triggerword is mentioned which, in the case of Astronism, would include such words as philosophy, astronomy, or cosmic by the presumption that the synonymisation of Astronism with these words is successful which the nature of the brand salience will demonstrate after it has been analysed.

[2:46:500] Also, that which is to be known as brand performance refers to the extent to which people associate themselves with a philosophical brand or like that brand so that they will engage with that brand in a positive and intended way which is largely motivated through that which is known as brand imagery which collectively refers to all the extrinsic properties of the philosophy which itself is synonymous with term of philosophical packaging.

[2:46:501] Those which are collectively known as brand judgements in a philosophical context refers to a distinct focus on each followers' own personal opinions and evaluations about the philosophy.

[2:46:502] Further to this, those which are to be known as brand feelings refers to each followers' emotional responses and reactions with respect to the philosophy when prompted by communications or triggerwords; this is defined from brand recall as it focuses the feelings that one associates with a brand and feelings that are experienced upon one's thoughts directed towards a particular philosophical brand.

[2:46:503] Defining that which is known as brand resonance from brand salience, we understand the former of these refers to the nature of the relationship that followers have

with the philosophy to which they are aligned and the extent to which they feel loyal to that particular philosophy in comparison to those which they are not aligned to.

[2:46:504] The measurement of the extent of this is a measurement of a philosophy's brand resonance and therefore considers one's alignment to a philosophy to be the primary driver of their loyalty to that philosophy due to their own personal commitment to the philosophy to which they have aligned themselves.

[2:46:505] That which is to be known as intrainstitutional branding, as a subbranch of the aforeintroduced institutional branding strategy, refers to the branding function of marketing The Institution of The Philosophy of Astronism within its own auspices towards its employees, volunteers, philosophers, and towards sophians rather than the aforeintroduced institutional branding which is extrainstitutional by its nature.

[2:46:506] Those which are to be known as the brandscope and the brand equity are two important terms in the critical analysis of a philosophical brand, the first of which here refers to the overall influence and power of a philosophical brand while the second of which involves the encompassed measure of the value and strength of a philosophical brand.

[2:46:507] Meanwhile, that which is to be known as brand parity the perception of some people that all philosophical brands are equivalent due to their distinct unquities and they are therefore also incomparable; this element is vehemently disagreed with by the Astronist Tradition as the unquities of each philosophy are not considered to be on equal footing or measure to one another.

[2:46:508] The concept of utility has held a prominent place throughout our discussions of promulgation, but now we shall introduce the four main forms of utility that the Astronist Tradition herein omnidoxically identifies to hold the greatest prominence and subsequently the greatest implication for the successful promulgation of a philosophy.

[2:46:509] The first of these different utilities is to be known as place utility which refers to the greater convenience for seekers or followers according to the proximity of the location of a philosophy conceptually, but also its location physically, such as in the proximity of manifestations of philosophy like publications, renditions and sophariums.

[2:46:510] The next of the utilities identified herein is to be referred to as time utility which involves a greater convenience for seekers or followers according to time placement such as the importance of person's ability to schedule time for philosophical enknowledgegment, for sopharial visitations, and for attending local philosophical debates.

[2:46:511] The third utility is to be known as ownership utility which involves a distinctly greater convenience for seekers or followers according to the notion of follower ownership upon alignment which pertains to the principle that followers own the philosophy to which they have aligned and they maintain the freedom to make that philosophy suitable

to them as long as they respect each other's person to do the same, even if such people do not change the philosophy as all.

[2:46:512] The instance in which a person changes a philosophy, emphasises certain elements of a philosophy, or entirely removes elements of a philosophy to which they are aligned is to be known as metamendation and the right protecting all followers of The Philosophy of Astronism to allow them to do this freely is to be known as the metamendative principle.

[2:46:513] Metamendation is considered to be a controversial practice and is expected to be so for many instances in the post-omnidoxical world where this practice will be disseminated into.

[2:46:514] Of course, it is the penchant of the Astronist Tradition to want all of the followers of The Philosophy of Astronism to feel that they needn't change The Philosophy and metamendation is certainly not a practice that is encouraged by the Tradition, but its existence is important, especially as another defining factor between the nature of Astronism as a philosophy as a beacon of freedom from the nature of various religious traditions which are predicated on dogma and doctrine to which followers are expected to be obligated.

[2:46:515] The final form of utility that is to be introduced herein in the context of promulgation is information utility which refers to the greater convenience for seekers or followers according to the accessibility of information, the extent to which is expected to correlate to a philosophy's promulgative rate and as a direct result, the philosophy's alignment rate also.

[2:46:516] As has already been referred to is follower ownership which involves the notion that once a follower aligns themselves to a philosophy, they become a part owner of the philosophy due to their status of followership to the philosophy.

[2:46:517] Omnimentioned throughout this discourse has been the notion of philosophical packaging which is considered to reside as one of the central element of the way in which a philosophy is to exist in a promulgative context which is herein and now further developed by the introduction of the different forms of philosophical package.

[2:46:518] The first of these forms is classification involves the organisation of the constituent elements of a philosophy including its concepts, belief orientations, notions, discipline of study etc. into different topics, quantities, relevances, and categories within the different inclusive disciplines as the four major descriptors.

[2:46:519] The second of these forms of philosophical packaging involves accumulation and relates to the process of bringing together different constituent elements of a philosophy to form the packaged category.

[2:46:520] The third of these forms of philosophical packaging refers to allocation and involves allowing the constituent elements of a philosophy to be mixed together to form unique combinations which are to be henceforth known as amalgamacies.

[2:46:521] The final form of philosophical packaging involves the element of assortment and refers to the assembling of the constituent elements of a philosophy in such a way that they are better understood or receive by seekers and followers because they conceptually work well together rather than focusing on aesthetic resemblance.

[2:46:522] These four different forms of philosophical packaging are fundamental to understanding how a philosophy is to be marketed as philosophical packaging ultimately involves how a philosophy is to be presented to seekers and followers, in what way is it to be organised, and how this assembly is to be depicted and represented to different seeker and follower segments.

[2:46:523] That which is known as channel intensity is a term inspired from mainstream marketing theory and is herein applied to the context of a philosophy and is split into three different forms, each of which demonstrate an intensity for the promulgation of a philosophy, which is what channel intensity refers to in this context.

[2:46:524] The first of these is the intensive form which refers to promulgation through every reasonable outlet available mean while the second form of channel intensity is to be described as selective which involves promulgation through multiple, but not all available reasonable outlets.

[2:46:525] Finally, the third form of channel intensity in a promulgative context can be described as exclusive which involves the choice to promulgate a philosophy only through a single outlet out of many reasonable outlets available.

[2:46:526] Whichever form of channel intensity is chosen is demonstrable of the nature and character of the particular campaign and sets a precedent for the rest of the campaign as the choice of a greater channel intensity is expected to most often correlate with a greater amount of finances required to sustain such a campaign.

[2:46:527] The contemplation, discussion, and management of intermediaries in the context of the promulgation of a philosophy is another element of the entire strategic promulgative management process that essential to understanding the different positions and functions of individual entities between philosophical institutions and the philosophy itself.

[2:46:528] Intermediaries, in this context, are non-institutional or extrainstitutional entities that are somehow involved with the process of the promulgation of a philosophy, which may include the national or local government, promulgative material suppliers, agencies used for outsourcing different elements of the promulgative process, or institutionally-

connected though jurisdictionally separate organisations from the institution itself, such organisations are to be described as unjurisdised entities.

[2:46:529] That which is to be known as disintermediation involves the reduction in the use of intermediaries between The Institution and its promulgation of a philosophy to seekers and followers which The Institution is herein obligated to make the public aware of at least on official institutional websites so that the public cannot be fooled into being told an intermediary still holds involvement in the promulgation of a philosophy as to allow this to happen would be ethically wrong.

[2:46:530] The process of intramediation refers to the approach of funding promulgation from the funds of The Institution alone rather than some extrainstitutional financial source like a bank.

[2:46:531] Oppositely, that which is to be known as the approach of extramediation refers to the action of entirely funding promulgative activities from outside sources separate from the funds of The Institution, such as a bank.

[2:46:532] Finally, we come to introduce that which is to be henceforth known as the approach of semediation which involves partially funding promulgative activities from outside sources and from institutional funds.

[2:46:533] That which is to be known as grey promulgation refers to an approach to promulgation that involves the promulgation of a philosophy without the knowledge or consent of The Institution that holds proprietorship over the philosophy, usually manifested through guerrilla marketing activities by non-institutional societies and organisations.

[2:46:534] In this discourse, we have introduce the hybridised version of a product and a service which, as we know, is to be known as a conject, but what we haven't conducted yet is an introduction of the five different parameters of the characteristics of conjects, but we shall address this now.

[2:46:535] The first of these characteristics of conjects refers to intangibility which pertains that the contents of a philosophy does not hold a physical presence and therefore cannot be said to be entirely product, but neither can it be said to be entirely a service, hence the invention herein of a conject.

[2:46:536] The second characteristic refers to perishability which involves the extent of the lifelength of a conceptual element of a philosophy which is measured by the extent to which the conceptual element is popularly followed, institutionally verified and the extent to which it is used in the context of philosophical debates.

[2:46:537] Thirdly, we come to the characteristic of variability of conjects which refers to the extent to which a conceptual element of a philosophy varies due to different

approaches and interpretations which is not considered to be a characteristic of a product and although variability may be a characteristic of a service, conjectural variability is considered to be distinct of the service version of variability.

[2:46:538] The fourth characteristic of a conject refers to inseparability which refers to the extent to which the conceptual elements of a philosophy are able to be separated from the philosophy itself in its entirety the minds of people which is expected to be varied between different individuals.

[2:46:539] Finally, we come to the fifth characteristic of a conject which is to be henceforth known as propriety which, as a term, refers to the extent to which a conceptual element of a philosophy, or the philosophy as a whole, is able to be owned, or how such ownership can be manifested and involves considerations of the different of ownership as inspired by proprietological approaches.

[2:46:540] That which is to be known as the process of productionisation in the context of a philosophy refers to the process of turning a newly developed concept into a version that can be more easily mass-promulgated by The Institution that holds proprietorship over the philosophy to which the concept belongs, or by employed promulgators whom are directed by The Institution.

[2:46:541] This process is considered to be a major element of the overall series of processes involved in new concept development and in addition, this particular process of productionisation is expected to be fundamental to the strategic positioning of a philosophy as the process of productionisation can be considered a strategic filter through which all newly developed concepts must endure wherein each concept is applied to its suitability of the overall strategy of the philosophical institution.

[2:46:542] Before we begin to enter the realm of communications mixes for philosophical institutions and the approaches and forms of ethics in the context of promulgation, it is important for us to preface these contemplations by addressing that which is to be known as philosophical loyalty.

[2:46:543] Philosophical loyalty refers to the extent to which a follower of a philosophy holds loyalty to that particular philosophy, the reasons for their loyalty to that particular philosophy, the nature of that loyalty, and the impacts on the follower-philosophy relationship by the extent and nature of philosophical loyalty identified.

[2:46:544] Philosophical loyalty is expected to maintain an important role in understanding how a follower perceives different philosophies and the philosophy to which they are aligned and the different natures, impacts, and extents of philosophical loyalty are to be addressed post-omnidoxically, however, the four main forms of philosophical loyalty are herein introduced, each of which pertain to the different ways in which a philosophical institution may achieve follower loyalty.

[2:46:545] The first of these is to be known as emotional loyalty which is considered to be the truest form of loyalty manifested by real values and benefits perceived by the follower of the philosophy.

[2:46:546] Secondly, we come to that which is to be henceforth known as promulgable loyalty which refers to a form of loyalty achieved through excessive forms of promulgation so that the follower learns more about one philosophy than any other.

[2:46:547] Thirdly, that which is known as incentivised loyalty refers to loyalty achieved through offering physical benefits and rewards to a person in exchange for their loyalty which is itself to be known as the practice of loyalty exchange.

[2:46:548] Fourthly and finally, there is to exist that which is to be known as monopolised loyalty which pertains to the achievement of loyalty through the philosophy being the only philosophy that offers its contents and is dependent upon the often widely promulgated notion of the true uniqueness of that particular philosophy, or denomination.

[2:46:549] That which is to be known as institution-to-institution promulgation is a form of promulgation that focuses on the promulgation an institution's philosophy, or one or more of the constituent parts of its philosophy, to another institution with the intention of persuading the institution to align with, or recognise the promulgated philosophy or notion.

[2:46:550] This type of promulgation may also be conducted in order to create more commonalities between the different institutions to build an interinstitutional relationship, generally greater relations, and more dialogue.

[2:46:551] Alternatively that which is to be known as institution-to-philosopher promulgation refers to the promulgation of an institution's philosophy, or one or more of the constituent parts of its philosophy to a philosopher with the intention of persuading the philosophy to align with the promulgated notion, usually because of the influence that the philosopher holds.

[2:46:552] All companies and organisations predicate themselves on that which is known as the communications mix and philosophical institutions are expected to be no exception, hence the creation of the institutional communication mix, of which there are ten associated elements.

[2:46:553] The first of these elements is manifested as symbolic which pertains to institutional communications concerning the visual aspects of the institution.

[2:46:554] These encompass appellations, symbols, emblems, letterheads, logos, signage, colour schemes, architecture, and the overall appearance of all the design aspects of the philosophical institution.

[2:46:555] The second element of the institutional communications mix involves management which pertains to communications by institutional leaders and sophians who have a responsibility for the deployment of resources.

[2:46:556] These communications may be directed at intrainstitutional or extrainstitutional audiences and typically hold a non-creative and formal atmosphere and are usually manifested by statements and other official documents rather than marketing or advertising materials.

[2:46:557] Thirdly, marketing demonstrates a major element to the institutional communications mix which pertains to communications designed to engage follower-oriented audiences with regard to the promotion of an organisation's products and services and in the context of a philosophical institution, its conjects.

[2:46:558] The fourth element of the institutional communications relates to organisational communications which are aimed at a range of stakeholders within a philosophical institution and outside an institution not just followers or seekers that are designed to build identification, commitment, and relationships with an organisation, and are not promulgatively oriented.

[2:46:559] Behavioural communications demonstrate another prominent element of the institutional communications mix and involves communications that emanate from the interactions, decisions, tone of voice, and overall empathy between institutional staff and volunteers with others outside the auspices of the institution.

[2:46:560] The sixth constituent part of the institutional communications mix pertains to cause-related promulgation which is expected to involve a campaign where a philosophical institution is linked to a charity or social cause with the express intention of building its own public, follower, and seeker relations

[2:46:561] This is achieved by providing the charity or social cause with an increased level of resources and for the institution, an increase in followership or an improvement to the institution's reputation so this element of the communications mix can be considered symbiotic by its nature as it mutually benefits both the cause and the institution.

[2:46:562] The seventh element of this particular mix introduces the term that is to be known as depromulgation which refers to the use of promulgative materials to discourage audiences in believing or agreeing with a certain topic, or notion due to the stance of disagreement or disbelief that the philosophy holds with the topic or notion in question.

[2:46:563] Depromulgative materials remain a very important element to the overall promulgative strategy as it is often just as powerful to say what the philosophy does not agree or believe in than what it does agree with or believe in.

[2:46:564] Depromulgationism refers to the belief orientation that depromulgative materials are more powerful and effective than standard promulgative materials and therefore depromulgationists advocate for the increased use of depromulgative tactics and materials across an institution's promulgative strategy.

[2:46:565] That which is to be henceforth known as necessitated resumption pertains to the seventh element of the institutional communications mix and involves an extension to the previously element regarding depromulgation.

[2:46:566] Necessitated resumption is predicated on the principle that depromulgation must be followed with what a person should believe instead rather than leaving the audience without a belief, which itself is to be henceforth known as unresolved resumption, and is considered to be an incomplete promulgative material if the necessitated resumption principle is not applied and therefore remains an important aspect for depromulgators to address and fulfil.

[2:46:567] The ninth element of the communications mix for a philosophical institution focuses on sustainable promulgation which refers to a type of promulgation that is able to operate independently from external sources of funding and support for a prolonged period and also involves promulgative activities that does not hold harmful aftereffects and consequences on external parties, such as the environment.

[2:46:568] Finally, the tenth element of the philosophical institutional communications mix is encapsulated by ethical promulgation which refers to a type of promulgation that focuses only on executing promulgative activities or creating promulgative materials that are considered to uphold and keep in alignment with the moral principle of The Philosophy of Astronism and The Institution that holds proprietorship over The Philosophy.

[2:46:569] Now that we have introduced the branch of promulgative theory that deals with ethics, it is important to consider promulgation according to the different forms of ethics that can be applied to promulgation, as is manifested by different belief orientations and approaches.

[2:46:570] The first of these four forms of promulgative ethics is normative ethics which is applied due to its concern with the rational enquiry into standards of right and wrong, good or bad, with respect to character and conduct which ought to be accepted by all individuals rather than by particular sects and groups.

[2:46:571] It is herein advised that all promulgative campaigns and materials adhere to normative ethics as a default position as all campaigns and materials that do not conform to these types of ethics are to be henceforth known as incongruous promulgation.

[2:46:572] Secondly, social, cultural, and religious ethics are expected to play an important role in our approach to promulgative ethics and demonstrates a normative approach to

ethics that, instead of being based on rational enquiry, is instead based on an ideological, cultural, or religious source or tradition of ethics.

[2:46:573] This type of ethics is expected to be most prominent in a philosophy's expansion into different countries, each of which is expected to hold its own unique structure of ideological, cultural, and religious ethics.

[2:46:574] That which is to be known as self-reflectant promulgation refers to the third form of promulgative ethics which is predicated on the notion that The Institution must always conduct its promulgative activities according to its own ethical codes so as to reflect its own principles that itself expounds.

[2:46:575] This is also to be known as an example of metaethics which involves practicing the ethics that oneself expounds and this remains not only an important element for a philosophical institution to uphold, but also remains a prominent principle for followers, philosophers, sophians, and institutional staff to observe.

[2:46:576] As the final form of promulgative ethics that holds an omnidoxical origin, that which is to be known as the orientation as survivarianism and pertains to the principle that The Institution cannot commit wrongful actions as long as it is protecting its own survival and so the survival of The Institution is placed at the forefront and provided with supremacy over all other instances.

[2:46:577] As we now move on from our introduction and address of the different forms of promulgative ethics, we turn to a major topic with promulgative theory and strategic promulgative management which is to be henceforth known as cross-cultural promulgation.

[2:46:578] There exists two approaches to cross-cultural promulgation that are to be introduced herein, the first of which is to be henceforth known as methodisation and as one of the two approaches to cross-cultural promulgation, it is characterised by standardising a philosophy's identity across different cultures, therefore not changing its appearance, contents, language, or appellations to suit different countries; it is important to note that this is not the approach taken by the Astronist Tradition.

[2:46:579] The second of the two approaches to cross-cultural promulgation is to be known as demarcation which, as one of the two approaches to cross-cultural promulgation, is characterised by differentiating a philosophy's identity across different cultures, therefore changing the appearance, contents, language, and appellations of the philosophy to suit the different countries into which it is introduced.

[2:46:580] It is argued herein that through the approach of demarcation we achieve the concept as the Plurality of Philosophy, or the diversification of a philosophy and it is to this approach to promulgation that the Astronist Tradition aligns itself and applies to as aspects of its existence as possible.

[2:46:581] That which is to be henceforth known as promulgative network collectively refers to all of the organisations, procedures, campaigns, techniques, and approaches to cross-cultural promulgation considered to be a network of interconnected elements that form the whole process of promulgating a philosophy beyond the boundaries of its origin country or beyond its origin culture.

[2:46:582] Philosophical institutions are encouraged by the Astronist Tradition to become the primary institutions that form, enrich, and manage a culture and a society due to the philosophical institution's ability to organise people into different groups and promulgate ideas in ways that are unachievable by other types of organisations.

[2:46:583] Astronism can be considered to be a hybridisation of Brahmanism and Confucianism, as two eastern philosophies, as it equally emphasises the importance of spirituality and self-reflection and learning (characteristic of the former) as well as the importance of materiality and achievement (characteristic of the latter), but with a uniquely cosmic worldview and a focus on enknowledge.

[2:46:584] Cultural studies and the shifts in such cultures is of extreme importance in order to achieve success in cross-cultural promulgation because one must be able to understand the distribution of cultures, the commonalities between different cultures, the interactions and relations between cultures, and the trends impacting on the constitution of such cultures.

[2:46:585] We have already introduced the term of economies of scale, but now we come to address that which shall henceforth be known as the economicity of philosophy.

[2:46:586] The economicity of philosophy refers to the establishment of philosophies or contents within philosophies with the intention of creating wealth.

[2:46:587] This concept and its associated practice is considered to be unethical and non-philosophical by The Institution and solemnly claims to never conduct such practice herein and now in the solemnity of this discourse in The Omnidoxy.

[2:46:588] However, the economicity of philosophy remains an important concept for promulgative theoretical purposes as it demonstrates that which The Institution does not wish to be and that which something is not often just as important to address as that which something is.

[2:46:589] There are countless different ways to interpret The Philosophy of Astronism and there remains a multitude of approaches, two of which we shall now introduce, the first of these is to be henceforth known as monochronism.

[2:46:590] The monochronist approach refers to a preference to consider the different contents of a philosophy one at a time and not to contemplate another constituent element

of a philosophy until the prior is considered to be fully understood and can be considered both an approach of personal philosophy, or as an educative approach to philosophy.

[2:46:591] Alternatively, that which is to be henceforth known as polychronism refers to a preference to consider the different contents of a philosophy simultaneously and to contemplate different constituent elements of a philosophy even if prior constituents are not considered to be fully understood and again, can be considered both a choice for a person's individual approach to their philosophy, or as a pedagogic approach to the teaching of philosophy.

[2:46:592] In addition to these two approaches to addressing and interpreting The Philosophy of Astronism, we shall also introduce another form of interpreting Astronism, but in this instance, focus on interpretation according to chronology.

[2:46:593] This chronological interpretation is based upon a categorisation of different thought and belief systems according to the extent of their orientations towards the past, the present, and the future according to their structure, their conceptual focus, their functionality, and their general positioning.

[2:46:594] The first of these categories focuses on past-oriented thought systems which is considered to include Christianity, Islam, Judaism, Hinduism, and Buddhism.

[2:46:595] Secondly, those which are examples of present-oriented thought system can include Consumerism, Confucianism, Humanism and Marxism meanwhile future-oriented thought systems are encapsulated as Environmentalism, Transhumanism, and Astronism.

[2:46:596] That which is to be known as the process of personalisation refers to the procedure of intentionally changing Astronism in such a way that personalises it to suit each individual's ambitions, personality, interests, needs, and wants which is considered to be a major distinction of Astronism as a philosophy from all the religious traditions that do not share or apply this principle in their systems.

[2:46:597] In addition to this, the process of personalisation is considered to be a fundamental human right for all those whom align to a philosophy which is herein bestowed to all as an affirmation within The Omnidoxy.

[2:46:598] That which is to be henceforth known as autopersonalisation refers to the notion that Astronism as a philosophy is so vast in expanse that people will be able to personalise the philosophy to themselves by learning about its constituent elements and by being naturally drawn to the particular elements of their interest rather than The Institution actively attempting to personalise the philosophy through promulgative efforts.

[2:46:599] As an alternative aspect of the process of personalisation is introduced that which is to be known as depersonalisation which involves the promulgation of a

philosophy so as to dehumanise and deindividualise it, either intentionally, or coincidentally as part of the achievement of the overall process of promulgation.

[2:46:600] That which is to be henceforth known as the act and process of territorialisation involves the consideration of philosophies and the institution that holds proprietorship over it according to the physical territories of land that they own or hold influence over.

[2:46:601] To territorialise is to make a distinct focus on the land claims of a philosophy according to the dominance of the demographics living in such lands and is expected to be a prominent element of the overall process of assessing promulgative success according to course of different time periods.

[2:46:602] There are many different elements to a society, and these are most often manifested by the main institutions that play a prominent role in the development of a society, some of which include the State, the Church, and the Trade Unions as colloquial appellations to collectively refer to the entirety of the institution addressed.

[2:46:603] We shall herein introduce three more of these types of appellations with an Astronist origination, the first of such is to be known as the Philosophy which collectively refers to the philosophies of a country as an institution, or especially the national philosophy of a country that is interconnected with a government.

[2:46:604] The second of these is the Phrontistery which collectively pertains to the extent of the Astronist education system present in a particular country and the third of these types of appellations introduced herein is the Sopharium which collectively refers to philosophical buildings as an institution in a particular nation state.

[2:46:605] The most dominant affectant for the entrance of a philosophy into a country is the extent, nature, and potency of a particular cultural orientation that said country has, the two most prominent categories of which are collectivist and individualist cultures.

[2:46:606] These two types of cultures will inevitably effect the ability of The Philosophy of Astronism to be able to enter the country as The Philosophy will need to change its appearance, promulgative campaigns, and the emphasis of certain concepts within it if it will succeed in either of the types of culture.

[2:46:607] Of course, collectivist culture dominates in China, Japan, and Korea especially while individualistic culture dominates in the United Kingdom, the United States, and continental European countries; considering these different mentalities, it is important for The Philosophy to reflect this if it is to be understood and if it is to be found attractive.

[2:46:608] Previously, we have introduced the different geographic distributions and levels of categorisation for The Philosophy of Astronism, but it only seems prudent to further categorise these within two more encompassing categories, the first of which is to be

henceforth known as microphilosophy and the second of which is to be known as macrophilosophy.

[2:46:609] Microphilosophy includes a metralised, localised, regionalised, or nationalised version of a philosophy while a macrophilosophy pertains to a extrainstitutionalised, transnationalised, multinationalised, or globalised version of a philosophy.

[2:46:610] The main purpose of a promulgator is to ensure the smoothest entry of a philosophy into a country as possible and therefore all promulgators must seek to avoid an instance of aversionism.

[2:46:611] Aversionism refers to a resistance to the entrance of a new philosophy into a country by the citizens of that country, typically because of the closed-mindedness of the citizens, or the oppressive, manipulative, or censorial nature of the government.

[2:46:612] Aversionists are those whom actively support the aversion of citizens to the entrance of a philosophy and they may take many roles and forms in a society and are considered to be the greatest threat to the success of a promulgative materials in a country.

[2:46:613] Aversionism is of course an Astronist-origivative term that is introduced herein as part of this discourse in The Omnidoxy and in relation to Astronism and wider philosophy in general, but a multitude of instances of aversionism can be seen throughout history in relation to different religions and ideologies.

[2:46:614] Perhaps some of the publicised instances of pre-Astronist aversionism was the aversion of the entrance of Roman Catholicism into Japan in the 16th century and most recently, the entry of Islam, Hinduism, and other non-Christian belief systems into Western countries in recent years as part of pluralisation efforts which are considered to be inevitable consequences of the process of globalisation.

[2:46:615] From these examples, we can see how aversionism has been prevalent in almost all areas of the world throughout much of history and it can be characterised as holding a distinct commonality of a citizens' or government's resistance to change for fear of their own culture or traditional philosophy being undermined during the process of the entry of a new philosophy.

[2:46:616] That which is to be henceforth known as conceptual equivalence refers to the instance in which a concept holds a equivalent meaning in different cultures due to the similarity in language or mentality and therefore, when the concept is presented to that culture from another, it does not need to be reappellated.

[2:46:617] Oppositely, that which is to be known as conceptual contrariety refers to the instance in which a concept does not hold equivalent meanings in different cultures due to the differences in language and therefore, when the concept is presented to that culture from another, reappellation needs to occur in order for that concept to be understood.

[2:46:618] Closely associated with these instances is that which is to be known as distranslation which also refers to an instance, particularly one in which a concept or a constituent element of a philosophy is translated into a word that does not accurately represent that which the concept, or constituent element pertains to and this is expected to occur due to inexperienced translators attempting to translate complex concepts, especially into languages where there may be no equivalent word for that which the concept is pertaining to.

[2:46:619] Due to the expected prevalence of distranslations in the context of the dissemination and promulgation of Astronist Philosophy to different languages and cultures, there is a discipline of study herein introduced and henceforth known as transmutology.

[2:46:620] Transmutology is to be particularly concerned with the entire process of the translation, inculturation, and adaptation of a philosophy for it to succeed in a particular country or region, or amongst a particular ethnic group or subculture.

[2:46:621] The goal of a transmutologist is to reduce the amount of distranslations as possible and it is the responsibility of the institution that holds proprietorship over a philosophy to employ, oversee, and guide transmutologists so that they transmute the philosophy in the intended way of the institution.

[2:46:622] Transmutology is considered to be a major branch of promulgative theory and is an essential precursory element to the activities of promulgators as promulgators rely upon the terms provided by transmutologists for the creation of promulgative materials and campaigns.

[2:46:623] One of the central concepts within transmutology is known as representability which refers to the extent to which a philosophy is accurately representative of itself when it enters a new country and this is therefore the primary designator of the success of a transmutologist in their translation of the philosophy.

[2:46:624] The higher the representability of a philosophy in a new country, the higher the success that the transmutologist is considered to have achieved during the process of transmutation which itself is a term that relates to the entire process of the preparation of a philosophy for its entry into a new country.

[2:46:625] The role of a transmutologist is herein demonstrated as involving one closely working with both institutional staff and promulgators to achieve a success promulgation plan that involves a fully and accurately translated version of the philosophy for the particular country in question.

[2:46:626] Another central term for transmutologists to consider is that which is to be henceforth known as interculturality which is to refer to the instance in which a

philosophy holds great disparity between different countries due to the differences in culture of those countries.

[2:46:627] Interculturality is considered to be a positive aspect for The Philosophy of Astronism in particular as it demonstrates the great diversity that a philosophy is able to hold across different countries which contributes to the overall plurality of a philosophy and to show such diversification is demonstrative of the flexibility of a philosophy to assimilate into different cultures as well as the extent of the globality of the particular philosophy.

[2:46:628] That which is to be known as an intercultural encounter in the context of transmutology refers to the instance in which two followers of a philosophy that experiences interculturality encounter one another and understand the disparities between their understandings of the philosophy they follow.

[2:46:629] That which is to be known as cultural independence in transmutology refers to the instance in which a philosophy remains independent of the culture of the country in which it resides.

[2:46:630] Alternatively, that which is to be known as cultural dependence in the context of transmutology relates to the instance in which a philosophy remains dependent upon the culture of the country in which it resides.

[2:46:631] As another transmutological term, that which is to be known as cultural incompatibility refers to the instance in which a philosophy remains unsuited to a particular country due to its incompatibility with the country's culture.

[2:46:632] Yet another important term for transmutologists is that which is to be known as conceptual universality which pertains to the instance in which a concept or a constituent element of a philosophy is globally understandable by people from all or most cultures.

[2:46:633] Finally, that which is to be known as the transmutological approach of non-particularism refers to the instance in which a philosophy or a constituent element of a philosophy that is purposefully transmuted so as to hold the least amount of cultural cues in order to increase is universality.

[2:46:634] In many instances within marketing and advertising theory, there are different algorithms and acronyms devised in order to make educating marketing theory easier and to make often complex and possibly overwhelming and this approach to structure of promulgative theory is also taken.

[2:46:635] An example of these is that which is to be known as The Nine S's of cross-cultural promulgation, each of which demonstrate essential elements to the entire process of cross-cultural promulgation and includes the following:

[2:46:635a] Seekers

[2:46:635b] Socioculturality

[2:46:635c] Substance (character)

[2:46:635d] Stock (capital)

[2:46:635e] Spread (promulgability)

[2:46:635f] Staking (competition)

[2:46:635g] Successivity (the extent to which the philosophy achieves needs and wants)

[2:46:635h] Stability (consistency)

[2:46:635i] Supervision (control)

[2:46:636] Each of these parts of the cross-cultural promulgation process must be considered and properly implemented by promulgators if they are interested in achieving success in their promulgations to countries from which the philosophy they are promulgating does not originate as all of these elements combined are considered to penetrate each aspect of the entire process, in turn securing the process.

[2:46:637] A very important parameter in the context of transmutology is that which is to be known as transferability which refers to the extent to which a philosophy can enter another country with a different culture successfully without the need for the philosophy to be adapted.

[2:46:638] Adaptation for cross-cultural promulgation is expected to be a costly process, both in time, labour, funds, and other resources and so avoidance of deep adaptation is expected to be preferred by The Institution in accordance to its efficient management of such resources and its tendency to want to allocate resources according to the potentiality and promulgability of different markets.

[2:46:639] Therefore, less adaptation needed demonstrates a higher transferability for the philosophy, or its constituent element because the transmutation can occur much more fluently in a high transferable scenario; promulgators are also expected to seek markets with higher transferabilities first before markets with lower levels of transferability as those markets are expected to be more costly and time-consuming in terms of planning and execution for the philosophy to successfully enter and disseminate itself into.

[2:46:640] That which is to be known as the Global-National Dichotomy refers to the relationship between a national or transnational denomination of Astronism and the global version of The Philosophy in terms of their compared similarities and disparities.

[2:46:641] It is expected herein that national and transnational denominations of Astronism will have their own unique concepts, beliefs, appearances, and practices, some with syncretic aspects intertwined due to the prevalence of other cultures and belief systems.

[2:46:642] These intertwined elements will make subglobal denominations of Astronism quite different from that of the global version of The Philosophy which in turn forms a dichotomy between the global and denominational versions of Astronism, the extent of

the differences and similarities between different denominations of Astronism and its global, original, supradenominational, or Cometanic version as it may also be termed, is considered by the Global-National Dichotomy.

[2:46:643] That which is to be henceforth known as parameter of multiperceptionality refers to the quality of The Philosophy of Astronism whereby it is able to hold national, regional, and even local significance whilst also maintaining a global identity for the majority of the populous.

[2:46:644] To achieve multiperceptionality is a prominent goal for promulgators as it demonstrates their ability to speak to populations in context, knowing that such populations understand the differences between the global and the denominational version of Astronism in their country and being able to speak of them in both a separated and combined context.

[2:46:645] In promulgative theory, there is a plethora of different belief orientations relating to various different aspects of promulgation and the nature of its design and application, and one of these belief orientations is to be henceforth known as antioriginism.

[2:46:646] Antioriginism refers to any negative belief orientation directed towards Astronism that criticises aspects of its origin, including its country of origin, the United Kingdom, its creator and founder, Cometan, and/or the circumstances of The Philosophy's founding, a young man aged eighteen years old.

[2:46:647] Antioriginist sentiments are expected to be rife throughout all eras of the existence of Astronism for all founders of belief systems have been scrutinised in all possible ways, as is any person that lives out of their life and achievements in a public manner.

[2:46:648] Typically, though, antioriginists go beyond scrutiny and are characterised by a vehement dislike of any one of the aspects of the origins of Astronism as well as attempting to spread doubt between the followers of The Philosophy towards Astronism by using the circumstances of its founding as ammunition for undermining the relevance and credibility of The Philosophy.

[2:46:649] Of course, promulgators must consider antioriginist sentiments as a threat to the successful achievement of the promulgation of The Philosophy in the designated market, but also acknowledging that antioriginists withhold the right to express their opinions and this is to be snuffed out by promulgators, but it is to be challenged with the use of rational arguments that push back against antioriginist notions.

[2:46:650] Not only are there many belief orientations within all the academic and philosophical aspects of Astronism, but also many movements and schools of thought, one of which, in the context of promulgation, is to be henceforth known as transpositionism.

[2:46:651] Transpositionism is a movement formed upon the basis of the belief orientation that a derivated form, usually a denomination, of The Philosophy of Astronism is superior to The Philosophy supradenominationally in its beliefs, practices, and systems, so much so that the denomination should take the place as the universal version of Astronism.

[2:46:652] It is from this movement that appellation of Supradenominational Astronism is originated and refers to the universal version of Astronism; a version that is both synonymous, but also transcendent of the global version of The Philosophy for it is the version of The Philosophy that is designated herein and could also be known as Omnidoxical Astronism; it is the purest version of Astronism free any syncretisations and remains the version of Astronism that is considered and studied by scholars in their professional capacities.

[2:46:653] In many instances, this discourse has been deeply metaphilosophical as it has explored not only the nature of philosophy itself, but also the nature and circumstances of a philosophy's entry into the world beyond the text of its founding; by this notion, we can see how promulgative theory is inherently metaphilosophical by its core nature.

[2:46:654] In the organisation of The Philosophy of Astronism in preparation for its promulgation to the world, it remains vitally important to outline its many levels of existence which are to be organised in different categories, and collectively to be known as philosophical assemblages.

[2:46:655] The first of these categories that forms the wider Assemblage of Astronism, as it is to be appellated, is that which is to be henceforth known as genericity which refers to the generic category of a product, service, or coniect in which Astronism is designated; of course, as is concluded in this discourse, Astronism is a philosophy and therefore it is a coniect.

[2:46:656] Secondly, that which is to be known as the institutional appellation refers to the name provided to the governing body of The Philosophy which is of course to be known as The Institution of The Philosophy of Astronism.

[2:46:657] The third category within the wider Assemblage of Astronism involves the six major categories of appellations with which one may refer to Astronism which itself is to be known as the philosophic appellation for the philosophy and is expected to be the primary way in which philosophers and scholars to refer to The Philosophy in their writings and in debates.

[2:46:658] The official appellation of Astronism is to be known as The Philosophy of Astronism while that which has already been established as the brand or trade appellation of The Philosophy of Astronism is to be Astronism.

[2:46:659] The next of the subcategories within the wider category which is then part of the wider Assemblage of Astronism which formulates a structure of Astronism that is essential

to understand for promulgative purposes are those which are to be known as major subappellations.

[2:46:660] These types of appellations for Astronism are characterised by common usage transdenominationally and include Kosma, Cosmism, and Sophism, but Astronism is also considered to be a major subappellation of course with its own particular appellation category unique to it; these major subappellations are how Astronism is expected to be referred to in everyday usage and in non-scholarly discourses.

[2:46:661] We now come to the subcategory of the minor subappellations which are characterised by less frequent utility than their major counterparts, but they still remain significant and they do reveal different elements of Astronism that are perhaps not demonstrated in any of the major subappellations and include Astronistism, Astrony, Celesta, Cosmica, Cosmicism, and Cometanism.

[2:46:662] Cometanism is herein designated as a minor subappellation, but The Omnidoxy herein foresees a time whence this appellation may be transitions and upgraded to the status of being a major subappellation due to the dissemination of the mononymous name, Cometan, for the founder of Astronism.

[2:46:663] The final subcategory for this category are the denominational appellations which pertains to all the different appellations associated with the denominations of Astronism, of which there are a huge variety.

[2:46:664] The next category making up the Assemblage of Astronism is that which is to be henceforth known as originicity which refers to the circumstances of the origin of a philosophy particularly where, when, and by whom the philosophy was founded and of course, for Astronism this pertains to United Kingdom in the 21st century by Cometan as its originicity.

[2:46:665] Additionally, that which is to be known as transfericity refers to the extent of the spread of a philosophy as some philosophies and systems of thought are present on just single continents or even single countries while others hold a worldwide presence and in the future, some philosophies will hold multiplanetary transfericities.

[2:46:666] That which is the next category of the Assemblage of Astronism is feasibility which refers to the extent to which the introduction and promulgation of a philosophy into a particular country, region, or locality is financially viable, as is determined in a promulgability audit and therefore, depending upon the financial viability, The Institution may halt official entry of The Philosophy and wide promulgation of The Philosophy into that country.

[2:46:667] It is desirability that is the next category within the Assemblage of Astronism and this category pertains to the extent to which the people of a country desire Astronism,

or one of its denominations, or constituent elements to be promulgated in their country which is expected to be most often achieved through surveys, both physical and digital.

[2:46:668] The final category of the Assemblage of Astronism pertains to transportability of the philosophy which refers to the extent to which a philosophy is able to be promulgated or tirted in a country as is determined by the bureaucracy of the government, the number of obstacles to entry, the accuracy of the translations of The Omnidoxy, and the extent of the enculturation of The Philosophy into the country and therefore transportability is an amalgamation of these various different elements of the promulgation and transmutation of a philosophy into a country that is often not its country of origin.

[2:46:669] The terms that are herein introduced as omniblogging and omnivlogging are terms that are derived from digital language, the first of which pertains to the practice of blogging with a specific focus on studying and discussing The Omnidoxy and is considered to be a major element of digital promulgation and is something that is encouraged for both promulgators and followers alike to be engaging in.

[2:46:670] The second of these two terms, omnivlogging, pertains to a video channel with a specific focus on studying and discussing The Omnidoxy on a social networking site which is again, in the context of digital promulgation, expected to be a major element to the successful of digital promulgative activities.

[2:46:671] We begin to see the end of this major discourse for the establishment of strategic promulgative management, we come to the practice that is to be henceforth known as a philosophical boycott which pertains to the instance in which the government of a country actively stops a philosophy from entering or being tirted and promulgated in their country, often due to the lack of liberties such as freedom of philosophy, belief, religion, practice, and more generally, freedom of expression which are most often paired with oppression, censorship, and the repression of other fundamental human rights.

[2:46:672] In this discourse on promulgative theory, we have set out the many different approaches and methods that one may apply in order to achieve successful promulgation, but one of these methods that we have not yet introduced, but we shall do so here, is to be henceforth known as metanarian promulgation.

[2:46:673] Metanarian promulgation is of course lead by those individuals that are to be known as metanarians which are representatives of The Institution of The Philosophy of Astronism go into different schools, colleges, and universities and host events focusing on a variety of topics centred on or related to Astronism, such as astronomy, usually with a philosophical theme with the intention of promulgating Astronism.

[2:46:674] Metanarians may either be volunteers or paid members of institutional staff and are expected to have varying levels of experience and specialty according to their own personal interests, the level of their own education, and the extent of the autodidactic knowledge they have left about Astronist Philosophy and other related topics.

[2:46:675] In addition to this, metanarians are expected to build up their own profile and reputation so that education institutions will book them for their particular specialties and influence and it is expected that many metanarians will attain fame, though not celebrity status as that would be considered a dishonourable title for metanarians and would be considered to be undermining of the metanarian profession.

[2:46:676] Metanarianism is the belief orientation associated with metanarian promulgation and holds that this particular method of promulgation is the superior method as it allows alignment to Astronism to be done through direct forms of education which is distinct from marketing and advertising forms of promulgation and therefore metanarian promulgation is considered to be a more philosophical and purer way of promulgating The Philosophy.

[2:46:677] Slightly unrelated to promulgative theory, but nevertheless important as an identifying factor for defining divergent elements of thought systems that which is to be known as gastrocentrism, or gastrocentricity.

[2:46:678] This is of course an Astronist-originative term pertaining to the notion that certain systems of thought, particularly religions, focus on the dietary habits of their followers as opposed to Astronism which is largely absent of such doctrines due to the fact that dietary habits are not considered to be of philosophical concern.

[2:46:679] Despite this, there is that which is to be known as Astronist gastronomy which is a branch of study within wider Astronist Philosophy and Culture that is focuses on the dietary customs and habits of those whom follow Astronism, but these such customs and habits are notably not omnidoxically related or omnidoxically originative and remain a subsequent element of Astronist denominational syncretism and the assimilation of Astronism into different cultures and lifestyles.

[2:46:680] It is important to say that Astronism, however, is not gastrocentric as The Omnidoxo does not prescribe rituals or dietary customs as other systems of thought and practice do and this makes The Philosophy non-gastrocentric, but the establishment of Astronist gastronomy demonstrates an acknowledgement for the importance of food in people's lifestyles, despite it not being strictly of philosophical concern which is a notion that the Astronist Tradition continues to concur with.

[2:46:681] That which is to be henceforth known as an ethnic philosophy, or indigenous philosophy as it may alternatively be known is a form of a philosophy, or one of the denominations of a philosophy, that is associated with a particular ethnic group.

[2:46:682] Ethnic philosophies are often distinguished from universal philosophies which claim to not be limited in ethnic or national scope, such as the appellations of Astronism, Astronism, Kosma, Sophism, and Cosmism while many denominational forms of

Astronism are predicated on the notion of ethnic and language groups as the main elements of their founding and unification as a distinct denomination of The Philosophy.

[2:46:683] In the context of Astronism, the denominations are majoratively used to distinguish branches of Astronism from the universal appellation and are practised solely by certain ethnic groups and have additional and sometimes unique, but also divergent practices and beliefs, usually as a result of a process of syncretisation between the philosophical denomination and the local culture and pre-Astronist beliefs and practices of the population.

[2:46:684] Those which are to be known as the process of commercialisation and marketisation of philosophy refers to the notion that Astronism supports the utility of philosophy to create finances as well as to use finances gained in order to promulgate and proliferate The Philosophy, or certain constituent aspects of it.

[2:46:685] This is expected to be one of the main criticisms directed towards the Astronist approach to philosophy in the context of its promulgation, but we herein reject this notion as promulgation is not motivated by profit, it is simply stimulated by it.

[2:46:686] Herein, for the preservation of the dignity and nature of philosophy, we present profit as a necessary utility to be reinvested rather than the end goal, and the generation of wealth is only addressed for the achievement of the functionality of the philosophy because it is herein postulated that a modern day philosophy cannot be disseminated or exist without the injection of funds into its expansion and it is from this that we should not and cannot turn away for doing such would be a denial of reality and to conduct such an action would also not be Astronist in its nature.

[2:46:687] The Astronist Tradition does not reject the term marketisation in relation to its practices with regards to promulgation, but it does reject the term commercialisation because commercialisation suggests that a philosophy is principally run for financial gain which is solemnly rejected here for the Astronist Tradition predicates Astronism only on the utility of finances rather than the optimisation or maximisation of finances as it focuses further on the maximisation of promulgation.

[2:46:688] Another form of philosophy that we shall conclude this discourse with addressing is that which is to be known as industrial philosophy which relates to the application of philosophy to different industries and explores how different philosophies are proponents of different notions that either support or oppose certain industries.

[2:46:689] Industrial philosophy formulates that which is to be known as proponentalism which refers to the notion that the application of different philosophies to different industries in order to determine whether they are proponental (supportive) of the industry or deproponental which refers to a philosophy that is opposed to a particular industry while that which is known as non-proponental refers to a philosophy being impartial to an industry so neither being supportive nor opposed to the industry in subject.

- [2:46:828] Teachers/Education (Astronism is proponential)
- [2:46:829] Telecom Services & Equipment (Astronism is proponential)
- [2:46:830] Telephone Utilities (Astronism is proponential)
- [2:46:831] Textiles (Astronism is proponential)
- [2:46:832] Tobacco (Astronism is deproponential)
- [2:46:833] Transportation (Astronism is proponential)
- [2:46:834] Trucking (Astronism is proponential)
- [2:46:835] TV Production (Astronism is proponential)
- [2:46:836] Unions (Astronism is proponential)
- [2:46:837] Vegetables & Fruits (Astronism is proponential)
- [2:46:838] Venture Capital (Astronism is proponential)
- [2:45:839] Women's Issues (Astronism is proponential)
- [2:46:840] From this discourse, we have now gained a much clearer understanding of strategic promulgative management and we have founded the discipline as the central branch of promulgative.
- [2:46:841] This is especially as a consideration for metaphilosophers and adopting branches of disciplines in order to enhance and provide context to the discipline which is essential for promulgators.
- [2:46:842] Promulgators are expected to take the majority of their inspirations for their application of promulgative theory from this particular discourse and are considered to hold the responsibility to positively and accurately reflect the theory introduced in this

discourse in their practice of promulgation in alignment with the wishes and guidance of the Astronist Institution.

Persecution of Belief & Practice

[2:47:1] This discourse addresses the philosophical approach to the concept and conduct of religious persecution and outlines the responsibility of the institution practically and Astronism philosophically to work and become beacons towards the end of religious and philosophical persecution worldwide for the betterment of humanity.

[2:47:2] Philosophy is ultimately predicated on the notion and nature of freedom for it is to practice philosophy that one also practices freedom, both for others and for oneself; there are various different forms of freedom within the context of systems of thought.

[2:47:3] The first group of forms that we shall address are the basic forms which includes the freedom of thought which pertains to one's right and ability to think without the application of pressure from others to do so in a certain way.

[2:47:4] Also included are the freedoms of expression and belief, the former of which involves the freedoms of speech and action, the most prominent example of which is through the freedom to debate, while the latter pertains to one's right and ability to amalgamate their ideas and conclude with a set of accepted truths to them.

[2:47:5] Furthermore, as part of the basic forms, there is the freedom of practice which of course involves a person's right and ability to live out their beliefs, both privately and publicly without fear of persecution or ostracism.

[2:47:6] Finally, there also exists that which is to be known as the freedom of mission which pertains to the freedom of one to achieve that which one wishes or that which a philosophy wishes.

[2:47:7] The second type of form of freedom in the context of thought systems are those which are to be categorised as specific forms, the most prominent of which for this context is the freedom of philosophy which involves every person's right and ability to enknowledge and align themselves to a philosophy and reserve the right to speak to others and teach others about the philosophy to which they have aligned.

[2:47:8] The pre-Astronist notion of the freedom of religion of course follows the same general course as the principles within the freedom of philosophy with some of its own distinctive characteristics, such as the freedom to proselytise, the freedom to convert to another religion, and the freedom to worship; in this context, the differences between the freedom of philosophy and religion are largely appellational rather than contental.

[2:47:9] Finally, that which is to be known as the freedom of ideology refers to every right and ability to privately and publicly adhere to a particular political ideology.

[2:47:10] On this particular element of freedom, the Astronist Tradition maintains a metanative approach; metanation refers to the instance in which a principle is applied to

itself and in this context pertains to the notion that those whom follow an ideology are free to express it as long as the ideology itself also upholds all the principles of freedom herein introduced.

[2:47:11] However, in many of these instances of upholding the principles of freedom, the Astronist Tradition herein identifies a consequential commonality that is to be henceforth termed as freedom stalemate.

[2:47:12] Freedom stalemate refers to when different conflicting parties hold the freedom of expression and mission, yet there exists no resolution until one of those parties defies the principles of freedom by oppressing the other parties in order to achieve its mission.

[2:47:13] This is identified as the reason for the cyclical nature of conflicts in the context of systems of thought because we can see in multiple instances in history wherein one of a few different thought systems has dominated because it has oppressed others and often in the process also defying its own principles of freedom; obviously, this pertains to the aforeintroduced concept of dominationism.

[2:47:14] As aforeaffirmed, the Astronist Tradition considers there to be no way of breaking this cyclical nature of thought systems because the only other alternative remains that of a linear nature which would involve the existence of only one thought system which firstly, isn't applicable to our circumstances and secondly, does not provide sentience with the diversity of thought that is not only required, but that is natural.

[2:47:15] Therefore, the cyclical nature of thought systems under the guise of dominationism is expected to continue, however, there are ways in which we can attempt to reduce the oppressions and persecutions involved with the transitions between dominant thought systems and the application of powers by those same dominant thought systems.

[2:47:16] To shortly digress, to suggest that the secular world has managed to escape the cyclical nature of thought systems is preposterous for instead, the secular world simply replaced the thought systems of a religious nature with those of an ideological, corporate, and monetary nature; God no longer rules the world for that power has been given to money.

[2:47:17] Dominationism asserts that pluralism is either simply an illusion or a temporary fixture dependent upon the perspective that one takes to see pluralism; furthermore, dominationism maintains that there exists no ability in pluralism to uphold permanency.

[2:47:18] Dominationism does admittedly form a harsh picture of society and although individuals may not see it in their daily lives, it does exist all around us because it has to exist; the dominant thought system, whether it be in religion, ideology, or philosophy, holds an integral role in the establishment and cementing of every society.

[2:47:19] Pluralism holds a goodhearted nature no doubt and there does exist instances in which pluralism takes a microcosmic role and has been successful in such instances, but the dilation and derivation of thought systems to the national and international level holds no purpose.

[2:47:20] Two examples of thought traditions that are to be admired are the Dharmic thought traditions of India and the Taoic thought traditions of China; there exists much greater plurality in these two countries than in many other countries combined from a religious and philosophical perspective that is.

[2:47:21] This is because these countries and those around them that their philosophical and religious traditions have influenced predicated on traditions that allow pluralism to flourish within them; while the Abrahamic thought traditions have allowed their differences to demarcate boundaries, these two traditions have allowed the long history of derivation and dilation of the traditions to enhance the overall tradition.

[2:47:22] For example, in India, we witness many schools of Hinduism including Brahmanism, Shivaism, and Vaishnavism and even though schools such as Buddhism and Jainism have broken into separate thought systems, they still hold identity with their Dharmic originations and their core shared beliefs and appreciate their differences in a way that remains foreign to those of the Abrahamic tradition.

[2:47:23] This is because the Abrahamic tradition is ultimately predicated on exclusivity and doctrine while the Dharmic and Taoic traditions are much more inclusive, explorative, and open to derivations within them due to their more philosophical nature which is perhaps why some scholars do not label most thought systems within these two traditions like Hinduism, Buddhism, Taoism, and Confucianism as religions, but instead, consider them to be philosophies, especially when compared to the characteristics of the systems that exist within the Abrahamic tradition and the great disparities between them.

[2:47:24] The Astronist/Astronic tradition of thought is established herein to resemble more of the Dharmic and Taoic traditions in their approaches to functionality and treatment due to the philosophical natures that these two traditions share with the Astronist/Astronic tradition.

[2:47:25] Not only the acceptance but the encouragement of derivations and differences within the Astronist/Astronic tradition demonstrates an attempt to halt any grounding of ideas that support exclusivity and doctrine within the tradition, hence reducing persecution and ostracism from within the tradition as a result for we cannot establish a tradition that holds the same issues that the Abrahamic tradition does with regards to intolerance to differences in viewpoints.

[2:47:26] Astronism is herein introduced and shall be henceforth known as a beacon of freedom for the oppressed, the ostracised, the undermined, the fearful and the discontented.

[2:47:27] It is herein and now stated that The Philosophy and The Omnidoxy will never shy away from the principles of freedom for although we acknowledge that persecution between sentient beings shall exist no matter what planet upon which they reside as part of the Tribalist Cycle, that does not mean that we cannot continue to endeavour to make our community as inclusive and persecution free as possible.

[2:47:28] As a wider principle, it is important to understand that we cannot change others justly for we can only maintain our own principles in the face of opposition and know that we have upheld that for which we stand and know and believe is morally right and/or factually correct.

[2:47:29] As we bring our discussion of persecution to current affairs, we shall address the disappointment of the Astronist Tradition towards the newest set of Sustainable Development Goals of the United Nations that were established in 2015.

[2:47:30] Disappointment in the United Nations SDGs is expressed by the Astronist Tradition because there was no specific goal created for belief persecution which remains one of the primary igniters of other forms of inequality and wider societal issues.

[2:47:31] It is herein suggested in this discourse of The Omnidoxy that the United Nations, as a major global organisation, add the reduction of the persecution of belief to their Sustainable Development Goals and this is a suggestion that is made by the entirety of the Astronist philosophical tradition for a sustainable world is one in which every person is not only granted with the right for freedom of belief and practice, but that this right is manifested in policies and in the actual occurrences in society and government.

[2:47:32] This new Sustainable Development Goal will cover all the forms of persecution that have been highlighted in this discourse and shall intend to specifically focus on the day-to-day issues that people are facing the world over with regards to the persecution of their beliefs and practices and how all the different types of persecution negatively impact upon the everyday lives of those effected, whether it be social ostracism, violence, government oppression, or defamation.

[2:47:33] Most religious traditions advocate for peace having been grounded in pacifism by their founders in writing, but the manifestation of this religious peace is not all too common when we look back in history whole ideologies are predicated upon conflict and division by their political natures, but it is an interest metaphilosophical discussion to have, especially while considering persecution, about where philosophy in general stands on the idea of peace.

[2:47:34] Of course, in an Astronist context, there is established herein the discipline of study of quillitology that addresses the nature of peace from an Astronist perspective, but the consideration of peace from a broader philosophical perspective means analysing the nature of peace and although this is considered to be something that philosophers are

responsible for the address of, the presence and notion of peace is much more associated with religious texts that directly attend to the topic.

[2:47:35] The Astronist/Astronic tradition of philosophy calls for a much clearer orientation of organised philosophies on the discussion of peace and how, particularly by the application of the nature of philosophy to the topic of peace, we can achieve peace much more swiftly and sustainably.

[2:47:36] We shall now conclude this short discourse by introducing a group of terms that are closely related to the persecution of philosophical beliefs, practices, and expressions; learning about the different elements of philosophical persecution shall allow us to grasp a greater understanding and ability in achieving the reduction of persecution levels.

[2:47:37] The first of these important terms is that which shall henceforth be known as philosophical subsumption which refers to the notion that people must assimilate to the philosophical group that they were born into, that they must share the views of the dominant philosophical majority in their society, and that they should conform no matter their own individual beliefs and ideas.

[2:47:38] Of course, philosophical subsumption is grotesquely aphiosophical in character and much more characteristic of a religion or ideology rather than that of a philosophy, let alone an Astronist one at that; for this reason, philosophical subsumption is opposed to by the Astronist Tradition though its existence is still expected to reside in some parts of the world and understanding the factor contributing to subsumptive circumstances is productive in trying to putting an end to the practice from within families, societies, governments, and institutions.

[2:47:39] That which shall be known as the practice of sophostereotyping refers to an oversimplified view of the beliefs, practices, or philosophy of individuals according to the way they look or behaviour, or considering followers of a philosophy to look, behaviour, or believe in a certain way when in fact, the diversity of the followers of a philosophy is much greater in reality.

[2:47:40] Sophostereotyping is not considered to be a form of persecution so as not to undermine the severity of the term itself, but it is considered to be a mild form of social ostracism by the Astronist Tradition which is itself a derivation of philosophical persecution.

[2:47:41] That which shall henceforth be known as intrapersecution refers to a type of persecution that exists as the persecution of beliefs within families, friendships, and other social groups rather than via the government, an institution, or some other non-relational or non-familial entity.

[2:47:42] Alternatively, that which shall be known from here onwards is panpersecution which refers to the persecution of beliefs by the government or by state-sanctioned organisations and authorities.

[2:47:43] In a similar, but distinct fashion to the practice of sophostereotyping, that which is to be known as belief presumption refers to presuming one's beliefs because of their race, gender, nationality, sexuality, or by any other identifiable trait which is again, another mild form of social ostracism which is itself a derivation of philosophical persecution.

[2:47:44] That which shall henceforth be known as the practice of paedoprescriptivism refers to the instance of forcing children to follow the religion or philosophy of their parents, or the traditional religion or philosophy of their family either when ascribed in law or conducted in private familial settings.

[2:47:45] This involves stopping children from questioning the religion or learning about other forms of belief, either other religions, by exploring philosophies, or having no beliefs at all which is considered to be a severe abuse of the role of a parent, especially those that consider themselves to follow a philosophy as this is considered to be aphilosophical behaviour by the Astronist Tradition.

[2:47:46] The constitutions of many countries prohibit forced religious instruction, forced participation in religious ceremonies, or taking oaths that run counter to an individual's religious beliefs and the Astronist Tradition intends for this to be applied to the context of a philosophy as well.

[2:47:47] We shall now introduce two belief orientations that rest at the heart of our address and discussion of philosophical persecution and the first of these shall be henceforth known as ascriptionism.

[2:47:48] Ascriptionism refers to the belief that religions, philosophies, and other forms of belief orientation are the main cause for the dividing of human beings and therefore belief orientations in all forms should be avoided because the removal of organised belief in society is considered to be a major step towards societal peace, mutual acceptance, and principally, reduction in the rates of belief persecution.

[2:47:49] Ascriptionism is obviously not adhered to by the Astronist Tradition, in fact the Tradition opposes ascriptionism and is considered to be pessimistic, reactive without a solution, absolutist in character, and most importantly, it is not realistic.

[2:47:50] That which opposes ascriptionism is to be henceforth known as the inventionism which pertains to the belief that despite one of the main characteristics of organised belief being predominantly divisive, this opens an opportunity for interfaith and interphilosophical dialogue.

[2:47:51] Additionally, it also opens the opportunity to work towards the reduction of persecution rates according to beliefs through the creation and implementation of policies of acceptance (rather than just toleration) as well as by resembling a philosophical approach to the acceptance of all ideas as directed by the principles of the Philosophical Spirit.

[2:47:52] The Astronist Tradition is an adherent of the belief orientation of inventionism and considers it to be optimistic and proactive through the advocacy of acceptance and understanding of different beliefs rather than the ascriptivist approach which resemble the exact opposite.

[2:47:53] Finally, that which is to be known as belief cleansing, as derived from the practice of ethnic cleansing refers to the abhorrent practice of the removal of a population from a certain territory solely based on their beliefs which may be enacted in a justified manner (the removal of Nazi sympathisers), but is mainly enacted as a form of religious, philosophical, or ideological persecution and is of course entirely opposed to by the Astronist Tradition, but again, we must identify that we oppose just as much as we identify that which we agree with.

—

[2:47:54] That which is to be henceforth known as contributionism refers to the notion that Astronism is not only best poised to contribute to pre-Astronist religious philosophies, but that this remains one of the central purposes of Astronism.

[2:47:55] Astronism will contribute to all forms of religious philosophies by encouraging philosophers of those religious traditions to apply and incorporate aspects of the Astronist philosophical approach to the religious philosophy in subject which will involve taking a unique viewpoint of the religion as well as assessing its compatibility with that of the Astronist philosophical tradition.

[2:47:56] Contributionist or contributist approaches are expected to insight greater levels of harmony and interrelation between Astronism and religions which shall hopefully result in the reduction of persecutions directed towards Astronism from such religious traditions.

[2:47:57] Cometanism as an alternative appellation of Astronism is to be used in the context of its application and integration into other philosophies and in religious philosophies and is therefore inextricably linked to contributionism.

[2:47:58] The development of contributionism is of magnificent importance as it demonstrates outreach to non-Astronist traditions of thought which is important because this highlights the transferability and applicability of the main ideas of Astronism to non-Astronist traditions and the fact that they do transcend beyond Astronism itself which remains relevant to demonstrate.

[2:47:59] The principles of contributionism are predicated on the notion that there exists a definite need for Astronism to apply its ideas to non-Astronist traditions of thought which will not only help Astronism itself to develop, but also to enhance the ideas of other traditions of thought that are perhaps not accustomed to the new ideas that Astronism expounds.

United Humanity

[2:48:1] One may describe Astronism as a humanistic philosophy and although the Astronist Tradition does not prefer this description for The Philosophy, the Tradition does understand the connection made for Astronism does act in the name of humanity as an entirety in many instances, especially so in the context of the writings of The Omnidoxy herein.

[2:48:2] But Astronism introduces and its Tradition subscribes to that which shall henceforth be known as United Humanism which can be categorised as an Astronist contribution to humanism and branch of humanism.

[2:48:3] United humanism is predicated on the notion that all projects must be conducted in the name of humanity rather than for the benefit of single nations or groups of nations, especially applied to the context of space exploration, and involves the advocacy of the use of the world flag rather than national flags, for which all Astronist institutions, companies, and organisations are advocates of using.

[2:48:4] United humanism focuses itself the practical accomplishments and activities of humans, especially so in the context of space exploration as that remains the main theme consistent throughout Astronism.

Hypercapitalism

[2:49:1] There are many elements of the current that the Astronist Tradition finds fault, abhorrence, and discontentment with and many of these have been expressed here within the disquisitions of The Omnidoxy.

[2:49:2] One of these such abhorrences is the current infatuation of so many with money and the growth of economies and enterprise and the personal wealth they do then receive as a consequence.

[2:49:3] For this reason, we now introduce that which shall henceforth be known as hypercapitalism and encapsulates the notion that we are currently living in societies that favour profitability above their own moral principles and over the ethics upon which their nations were founded.

[2:49:4] Further to this, hypercapitalism expounds the notion that profitability should supersede the upholding of human rights, environmental protection, persecution, and oppression as well as over art, aesthetics, architecture etc. and so both the Astronist Tradition and Astronarianism, in which a further introduction and discussion of hypercapitalism is conducted, propound that we are living not in a capitalist world, but instead a hypercapitalist world wherein ethics are superseded by the possibility of profitability.

Additional Cosmic Devotions

[2:50:1] There exists a very strong tradition of cosmic devotion at the heart of the Astronist philosophical tradition which is particularly ornamented through The Philosophy of Astronism and due to the vastness of the tradition of cosmic devotion, we must construct a secondary discourse to introduce some additional variants of cosmic devotion.

[2:50:2] The first of these is that which shall henceforth be known as iconosy which involves any instance in which a person devotes to an image or depiction of The Cosmos, or any of its constituent elements, such as celestials as the most prominent example.

[2:50:3] The second of these is to be henceforth known as echosy which refers to devotion through the repetition of a words or sentences until it sinks deep into one's mind and is expected to be most commonly manifested in the context of the recitation of The Omnidoxy, though it remains important to note that not every instance of omnidoxical recitation is considered to be an example of an echosy.

[2:50:4] Additionally, that which is to be henceforth known as invenosy refers to a type of devotion through imaginative contemplation of what The Cosmos or any of its constituent parts could be like due to our inability to witness presently and physically what distant celestials look like without any telescopic observation.

[2:50:5] As part of this discourse, we shall also introduce another type of cosmic devotion that is to be henceforth known as the conceptual devotions which is a category of cosmic devotion which firstly introduces that which is to be henceforth known as the Love of Cosmos.

[2:50:6] Love of Cosmos refers to a devotion of love of Astronists for The Cosmos, the love of The Cosmos for all that exists within it, and the mutual love that all humanity shares for The Cosmos no matter our beliefs or alignments; the Love of Cosmos disseminates everlasting, transcending, cosmic love.

[2:50:7] The second of the conceptual devotions refers to the Vision of Cosmos which involves holding a distinct vision of what The Cosmos is, what has been, and what shall be, both to oneself individually and personally, as well as to humanity, to all sentience, to all non-sentience, and to The Cosmos itself as the different cosmoperceptions, two of which are also known as macrocosm and microcosm.

[2:50:8] That which is to be henceforth known as the Perfection of Cosmos refers to the assertion that The Cosmos exemplifies perfection in all possible senses for it is directly divine and is beyond the singular capacity of humanity.

[2:50:9] Furthermore, the conceptual devotion that is to be known as the Reflection of Cosmos refers to the instance of trying to live one's life as a reflection of The Cosmos and

is characterised by bringing order and sequence to one's life and may also involve one living their life by the notion of destiny which may also be known as cosmic destiny.

[2:50:10] Accepting that those things do happen to us, both good and bad, are cosmically destined as part of a wider sequence of events beyond our singular selves.

[2:50:11] Knowledge of Cosmos, also known as Cosmos' Knowledge, refers to one of two possible, and often interconnected topics and can be considered an Astronist epistemological issue due to its highlight of knowledge as the central theme: one addresses how Astronists come to know The Cosmos, the other focuses on the knowledge of The Cosmos about the world.

[2:50:12] These additional forms of cosmic devotion are set to further expand devotological practices as well as the theory behind cosmic devotion and further centralises the importance of cosmic devotion at the heart of The Philosophy of Astronism.

The Polynymous Nature of Astronism

[2:51:1] From the inception of Astronism herein under the auspices of The Omnidoxy, the philosophy has been spoken of under many appellations and is set to be further hyperappellated in the context of The Grand Lexicon and even further so upon the introduction of The Philosophy to the world and the development of its history.

[2:51:2] Astronism is polynymous by its very core nature because it is a philosophy that is not encapsulated by just one appellation for it pervades onomatological labels and exists in a transcendent state of conceptuality.

[2:51:3] For this reason, Astronism, The Philosophy of Astronism, Kosma, Astronism, Cosmism, Sophism, or whatever other appellation that is provided to the philosophical system that is herein ascribed exists also in a state of polynymity.

[2:51:4] Astronism is essentially polynymous due to the symbolism that polynymity provides to The Philosophy as it demonstrates that The Philosophy is not epitomised by words and allows us to see the utility of words, but not to focus upon such words beyond that of the beauty and wonderance of The Cosmos.

[2:51:5] The polynymous nature of The Philosophy of Astronism is expected and encouraged to continue throughout its establishment and its historical development way beyond the auspices of The Omnidoxy.

[2:51:6] That which is henceforth known as philosophonymy is the practice of naming of philosophers or philosophies, or as philosophomastics which is a branch of Astronist onomatology dealing with the study of the names of philosophers and philosophies, especially Astronism itself and it is within this branch of Astronist onomatology that we are able to explore the nature of the polynymity of Astronism.

[2:51:7] Another important branch of Astronist onomatology is that which shall be henceforth known as cosmonomastics which refers to the study of the names given to cosmic progeny and phenomena and cosmonymy involves the practice of appellating such cosmicals which remains an important practice as it humanises cosmicals because it allows people of all ages and intelligences to relate to those entities that exist so far away from our insignificant selves.

[2:51:8] This is the primary purpose of the establishment of appellations because they allow us to relate to that which may not be so easily related to without labels and names and categories and organisations which not only pertains to cosmical progeny and phenomena, but also to the elements of Astronist Philosophy itself.

[2:51:9] Philosophomastics, in addition to being categorised within onomatology, can also be described as existing within philosophical marketing and advertising, especially with relation to the construction of a philosophical brand as the appellation of a philosophy is

central to derivated terminology, its coherency for a vast range of people with different literacy levels, and the appellation has to mean something to them because a connection has to be made between the appellation and the person following the philosophy.

[2:51:10] The appellation of a philosophy could be described as the philosophy's face while the contents of a philosophy is its body, and the ambitions and goals of the philosophy are its heart, mind, and soul if we are to considered a philosophy metaphorically.

[2:51:11] In order to return to the main topic of this discourse, we know that Astronism specifically has many different appellations ascribed herein for different circumstances which are voiced by different individuals according to who they are, where they are, and for what reason they are mentioning or addressing the philosophy.

[2:51:12] The first of these appellation types is that which is known as the legal appellation which, in the context of Astronism, is The Philosophy of Astronism, and it is this appellation that the governmental authorities address and know Astronism by.

[2:51:13] The appellation of The Philosophy of Astronism is not only the legal appellation for The Philosophy, but also incorporates the official appellation of Astronism which is reflected in how The Institution of The Philosophy of Astronism recognises this appellation which is to be primarily used by The Institution in reports, official documents, and in other instances, such as when used in speeches.

[2:51:14] The appellation of Millettism, however, is not expected to be the most commonly attributed as for that we have that which is known as the popular appellation of Astronism which itself is the primary addressor to the philosophy is expounded in The Omnidoxy.

[2:51:15] Astronism as an appellation is expected to be the most widely understood appellation for the philosophy, especially due to its usage in practically all forms of marketing, advertisement, and promulgation for The Philosophy.

[2:51:16] However, as another appellational derivation, we herein establish the category of primary appellations which are appellations of The Philosophy that also expected to be popularly used and despite their slightly less inferiority to the use of Astronism, they continue to be widely disseminated appellations and these include Kosma, Astronism, and Sophism; we shall explain a little later on in this discourse the potential reasoning for the creation of this appellational category and specific reasons for choosing these three appellations.

[2:51:17] We now move onto address another appellational category which encompasses those which are known as alternative appellations which includes the appellations of Astronist Tradition, Cometanism, Astrony, Cosmica, Celesta, or Astronistism which are all expected to be less popularly used, but still remain prominent addressors of The Philosophy.

[2:51:18] The next of the appellational category is that which encompasses denominational appellations which includes the appellations of the many different denominations of Astronism that are existent around the world, two examples of which are Hanazavaism, and Prabodhanism.

[2:51:19] The difference for denominational appellations is that even though they may still be addressing Astronism in one of its forms, they are not directly addressing philosophical Astronism which is the content of Astronism and the philosophical structures and systems of Astronism as denominational appellations are formed by the practices and the unique concepts of those denominations that may not always be in total uniformity to philosophical Astronism, despite still existing with it.

[2:51:20] The last of the appellational categories is that which shall be known as indirect appellations, the primary example of which is when we address Astronism as The Philosophy which is an appellation that is most commonly used directly preceding the use of term Astronism, or one of its primary or alternative appellations.

[2:51:21] The use of the indirect appellation of The Philosophy is significant because it allows for a colloquial discourse to be had regarding Astronism and also supports in the ambition for the synonymisation of Astronism with philosophy.

[2:51:22] Not only is this discourse discussing the polynymity of Astronism, but also addressing some of the other onomatological aspects of Astronism and it is in notion that we address the expected existence of cryptonyms in Astronism.

[2:51:23] The existence of cryptonyms is realistically expected due to the harshness of some societies for those whom follow Astronism to reside within and for this reason, such peoples shall create cryptonyms wherein they feel they do require them in order to avoid philosophical persecution and ostracism by belief and practice; this is a reality of the world in which we reside and demonstrates the acknowledgement of the way the world is by both the Omnidoxy herein, but also by philosophical Astronism.

[2:51:24] Also within this discourse we shall now briefly address the presence of anthropomorphism in Astronism which, in an Astronist and cosmical context, relates to the instances in which humans are attributed to cosmical progeny and phenomena, or to The Cosmos itself.

[2:51:25] This type of practice and conceptual construction is not supported by the Astronist philosophical tradition as it is held that to anthropomorphise is to lower the cosmicals from their brilliancy in position, role, and function.

[2:51:26] For this reason, anything that anthropomorphises cosmical progeny and phenomena cannot be said to be Astronist in characteristic and therefore should be categorised as something else, or as non-Astronist.

[2:51:27] In this discourse, we have addressed not only the existence of the polynymity of Astronism, but also integrality in the development of the Astronist philosophical brand, but also must notion herein that the development of the entire Astronist onomatological tradition is hinged on and inspired by this very polynymity of the Astronist philosophical tradition; the two are symbiotically linked and shall remain so through the development of further Astronist terminologies.

[2:51:28] Staying with the topic of the Astronist onomatological tradition, we consider the fact that the majority of Astronist names are oriented towards unisexuality, known as unisexuality, which is again another instance of divergence from other naming tradition in addition to the Astronist preference for a mononymous naming tradition.

[2:51:29] There also exists a strong tradition of the use of toponymic names in the context of the Astronist philosophical tradition, especially in the context of denominational appellations, two examples of which would include British Astronism and Iranian Astronism as toponymic appellations for Astronism as they are associated with a particular country or region.

[2:51:30] In addition to the polynymous nature of Astronism, we must also address the notion that Astronism exists also in an inapronymous nature and there is a strong proclamation of the inapronymity of Millettism herein and now in The Omnidoxy due to the expected confusion and closeness in word structure to the terms of militarism, military, and militant.

[2:51:31] It is interesting to see that the entirety of the Astronist philosophical tradition notably avoids any mention of military involvement, military symbolism, or even any references to military action which are somewhat common in other thought traditions.

[2:51:32] This is due to the inapronymous nature of the appellation of Millettism because it is believed that Millettism as a term is appellationally close in written and vocal forms to military related words which hold connotations of violence and war and it is the continuance plight of The Institution of The Philosophy of Astronism to want to distance The Philosophy from this association with militarism or military action, despite the similar in word structure.

[2:51:33] This inapronymity of Millettism is perhaps expected to be one of the primary causes for the polynymity of Astronism in order to associate it with more astronomically and philosophically sounding terms, hence the introduction of the primary appellations category of Kosma, Astronism, and Sophism.

[2:51:34] Hence also the emphasis on the etymological origins of the term, Astronism and how it does not originate from a militaristic background, but is instead derived from the French word for a seller of millet; this etymological distinction remains of extreme

importance for the Astronist philosophical tradition to continue to disseminate in order to protect its appellational identity.

[2:51:35] That which is henceforth known as an inaptronymous fault is when a person falsely prejudices Millettism according to its appellation, the primary example of which is when someone confuses the military sounding appellation of Millettism and equates this to Millettism being militaristic in orientation and nature when in fact the opposite is true.

[2:51:36] Within the branch of Astronist onomatology of philosophomastics, there exists the practice relating to the nominal identity of Astronism which refers to the identification of Astronism according to its different appellations alone, thus purposefully missing out its contents.

[2:51:37] Therefore, nominal approaches to the identification of Astronism remove the contents of The Philosophy and looks purely towards its many different appellations in order to extrapolate its identity; this puts an immense specific focus on the appellations of Astronism and often leads to the over-exaggeration of the symbolisms and metaphors of appellations beyond realistic means.

[2:51:38] However, the nominal identity of Astronism remains an important practice and element of philosophomastic studies as it highlights the real significance of labelling in human society for identification purposes.

[2:51:39] There does also exist a presence of eponymity in the Astronist philosophical tradition which is seen in the use of the terms Cometanism and Taylorianism, but despite the small role that it does play in the present form of Astronism, eponymity is expected to much further increase in popular when more philosophers contribute to the Astronist philosophical tradition.

[2:51:40] Therefore, the potential for the eponymous tradition within Astronism holds a vast expanse which will develop naturally over the course of the history of the Astronist philosophical tradition like many other onomatological aspects of Astronism.

[2:51:41] As we begin to come to close this short discourse, we must address a belief orientation within Astronism that is specifically concerning onomatology and the appellation of Astronism and is to be known as denominationalism.

[2:51:42] Denominationalism, in the context of Astronism, refers to a person's particular adherence to a denomination of The Philosophy of Astronism, but in such a way that overrides their identification and association with wider Astronism.

[2:51:43] Essentially, to a denominationalist, their denomination is superiorised over that of Astronism itself as an all-encompassing name, usually because such people more closely and deeply identify with the appellation of the particular denomination they follow and its unique concepts, practices, and the connections it holds with the language,

nationality, ethnicity, and familial heritage of the person which is an understandable concept and preference for such individuals to align themselves with denominationalism.

[2:51:44] That which is known as appellational interchangeability refers to the common practice of people familiar with the different appellations of Astronism to refer to them interchangeably without need to explain the different appellations and why they exist.

[2:51:45] In addition, that which is known as appellational emphasis refers to the use of a particular appellation of Astronism in order to emphasise and denote a certain characteristic of Astronism, such as the use of Kosma to refer to a more devout following of the philosophy and the use of Astronism to refer to a less rigid and devout following of the philosophy.

[2:51:46] Also, that which is known as non-institutional misconception refers to the instance in which a person or group judges Astronism or one of its constituent elements according to the actions of its followers or associated organisations and societies rather than by fault of The Institution itself and these instances are sadly expected to be a common occurrence in the reality of how Astronism transverses through the world.

[2:51:47] Finally, as part of this onomatologically themed discourse, we come to that which is known as the Multifaricity of Astronism which is designated as a concept that relates to the vast multitude of forms of Astronism that are introduced in The Omnidoxy and are expected to be even more vastly expanded post-omnidoxically.

[2:51:48] There are expected to be a vast array of existent forms of Astronism that are expected to expand beyond the forms that are herein introduced as part of The Omnidoxy which will run parallel to the history of Astronism and which will be formed by other philosophers and contributors throughout the chronology of Astronism.

[2:51:49] With multifaricity pertaining to a state of a multitude of elements of a single entity, such as the multitude of concepts, denominations, and belief orientations within Astronism, it is a characteristic of The Philosophy of Astronism that is herein ascribed to become the responsibility of The Institution to protect.

[2:51:50] The multifaricity of Astronism is therefore not only a concept, but a personality characteristic of what makes Astronism what it is and that, it shall remain; a vast plethora of ideas formed according to the unity of a cosmocentric worldview and work towards the understanding, interpretation, and enknowledge of The Cosmos as that which is known as the shared eidolon which is the collectively concurred vision of all the followers of The Philosophy of Astronism which forms community of peoples known as the astrosa.

Pre-Astronist Cosmocentricities (Retronism)

[2:52:1] Retronism is a minor branch of Astronism that focuses on devotion and philosophical writings about pre-Astronist cosmocentricities that may or may not be of a solely philosophical nature as the majority were scientific.

[2:52:2] This particularly involves the space race as well as the Copernican and Galilean revolutions, and superiorises these pre-Astronist cosmocentricities above the Astronist and post-Astronist cosmocentricities.

[2:52:3] By this notion, we understand cosmocentricity not just as an abstract concept or tenet of Astronism, but we broaden its meaning to suggest that it could pertain to a specific period in history wherein cosmocentric ideas prevailed, or amongst a group of people or organisations, or across an entire nation or government.

[2:52:4] In the context of retronism and wider Astronist Philosophy, the term retron is a pre-Astronist cosmocentricity of any kind or form that it may take.

[2:52:5] Additionally, a person that is to be henceforth known as a retronist is a follower of retronism as a branch of Astronism either in parallel to Astronism itself (which is to be known as pararetronism) or in superiority and priority to Astronism (which is to be known as surretronism).

[2:52:6] The Astronist Tradition encourages the development of a rich tradition of retronic art post-omnidoxically and also expects the infusion of retronic depictions into Astronist forms of art which scholars will need to differentiate between upon their creation.

[2:52:7] Up to now in this discourse, we have described retronism as a branch of Astronism which remains ambiguous of retronism's true categorisation within The Philosophy, but we shall herein state that retronism is actually categorised as one of the omnidoxical Forms of Astronism.

[2:52:8] Others may wonder why the development of retronism as part of Astronism is important and the answer is that to ignore the pre-Astronist instances in which the world or large groups of societies were cosmocentric in their worldviews and imaginations, despite the fact that the circumstances of how such societies reached that way of thinking is not preferable, the events that took place were nevertheless demonstrative of how topics related to The Cosmos hold a distinct universality that remains unrivalled by any other topic whether that be politics, religion, or money.

[2:52:9] The art tradition influenced by retronistic thinking is expected to be instrumental to the overall development of Astronist Art and so in this, we see the importance of the development of retronist philosophy.

[2:52:10] Retronism involves any form of art expression, whether in writing, philosophising, singing, drawing, painting, or any other artform, in which the artist represents or at least gives reference to pre-Astronist instances of cosmocentric thinking.

[2:52:11] In order to establish retronism as a Form of Astronism, the final important element to contribute to this short discourse involves listing the different pre-Astronist cosmocentricities that can be considered retronic by their categorisation whenever they are represented or inferred, and includes all in the following list.

[2:52:11a] The 20th-century competition appellated as the Space Race.

[2:52:11b] The 16th-century paradigm shift appellated as the Copernican Revolution.

[2:52:11c] The 17th-century works of Galileo Galileo and his challenge to the religious establishment at the time which is herein provided with the appellation as the Galilean Revolution.

[2:52:11d] The moment that Apollo 11 landed on The Moon.

[2:52:11e] The photograph taken of Harrison Schmitt and the first observation of The Earth from The Moon during the Apollo 17 mission.

[2:52:11f] Yuri Gagarin becomes the first to orbit The Earth.

[2:52:11g] The discoveries of Edwin Hubble in the early 20th-century.

[2:52:11h] Robert Goddard launches the first rocket powered by liquid fuel.

[2:52:11i] In the late 19th-century, Konstantin Tsiolkovsky publishes his first article on the possibility of space flight.

[2:52:11j] The 17th-century discoveries of gravity and laws of motion by Isaac Newton.

[2:52:11k] The publication of Johannes Kepler's New Astronomy in the early 17th-century.

[2:52:11l] The 12th-century translation of Islamic and Indian works in astronomy into Latin for their dissemination in Europe.

[2:52:11m] In the 11th-century, Chinese astronomers record the sudden appearance of a bright star, later understood to be the Crab supernova exploding.

[2:52:11n] Aristarchus of Samos, in 270 BC, first proposes heliocentrism as an alternative to the Earth-centred universe.

[2:52:12] Each of the retrons listed above is officially recognised by the Astronist Tradition and considers each of these to form the basis of retronism and encourages the representation and discussion of these in all forms of art in order to further develop the Form of Astronism of retronism.

Analysis & Interpretation of The Omnidoxy (Omnidoxical Hermeneutics)

[2:53:1] Not only central to the development of The Omnidoxy is the writing of The Omnidoxy, but is the interpretation and analysis of The Omnidoxy from a scholarly and academic perspective, hence forming a branch of omnidoxicology that is to be known as omnidoxical hermeneutics.

[2:53:2] The development of an hermeneutical tradition for The Omnidoxy raises The Omnidoxy to the status of all the other major literary texts that have founded their own systems of thought and have significantly contributed to human civilisations thereafter.

[2:53:3] The interpretation of The Omnidoxy through a systematic, algorithmic, and methodised set of techniques and principles will enrich The Omnidoxy and its ability to structure the Astronist philosophical tradition and to contribution to human civilisation therefore and will also make the text comparable to other major texts, thus further deepening its development.

[2:53:4] Without the interpretation and analysis of The Omnidoxy, it remains a text that lacks depth for interpretations and analyses from different scholars discovers new aspects of the text that had previously remained unexplored.

[2:53:5] An alternative term for omnidoxical hermeneutics is omnimeneutics and those whom have dedicated their education and study to omnimeneutics are to be henceforth known as omnimeneuticists which is a scholarly profession within Astronist Philosophy that holds particularly high standing.

[2:53:6] It is also important to note the structured of these different branches of scholarly interpretation of Astronist works; omnimeneutics resides within the wider branch of study known as Astronist hermeneutics.

[2:53:7] Astronist hermeneutics covers a wider area of scholarly and systematic interpretation of texts as it includes all works categorised within Astronist literature and so includes both philosophical and non-philosophical works as well as cometanic and non-cometanic works, and omnidoxical and post-omnidoxical literary works.

[2:53:8] There are therefore many different branches of Astronist hermeneutics and this branch of study is considered to only broaden further and further as the extent of Astronist literature widens as it is contributed to by more authors that formulate their own versions and perspectives on the Astronist literary tradition.

[2:53:9] That which is to be known as Cometanic hermeneutics is a branch of the wider discipline of Astronist hermeneutics just as omnimeneutics is, but omnimeneutics is also

considered to be a branch of Cometic hermeneutics as *The Omnidoxo* is written by Cometic.

[2:53:10] Cometic hermeneutics is a wider discipline because it deals with exegeses of all the works of Cometic, both of fiction or non-fiction as well as omnidoxical, but also post-omnidoxical.

[2:53:11] That which is to be known as an omnimeneutical centre is an Institutionally-sponsored building for the purposes of omnidoxicological study and omnimeneutic interpretation and analysis and may or may not be adjoined to sophariums.

[2:53:12] We shall now introduce the term that is to be known as frameworking which is an alternative colloquial term for when an omnimeneuticist studies and practices omnimeneutics and so a frameworker is therefore an alternative colloquial term for an omnimeneuticist.

[2:53:13] Frameworking, or the scholarly study and practice of omnimeneutics, is considered to be a set of skills that are to be mastered over the course of a person's career and require immense levels of literary knowledge as well as creativity in order to interpret and reinterpret abstract concepts.

[2:53:14] Before we introduce the many different methodisations for omnimeneutic studies, I must introduce that which is to be appellationed as *The Inclusivity Principle* which pertains to the notion that each of the omnimeneutical frameworks is not exclusive of being applied alongside the other omnimeneutical frameworks and so paraframeworking can take place in omnimeneutics.

[2:53:15] The core structure of this discourse revolves around the introduction of those which are collectively known as the *Omnimeneutic Frameworks* which are set of methods used and applied by omnimeneuticists during the interpretation and analysis of *The Omnidoxo* for a greater understanding of the text and to draw conclusions about its structure and the meanings of its contents.

[2:53:16] The first of these frameworks is that which is to be henceforth known as *thematism* which refers to the interpretation of *The Omnidoxo* according to its themes, the primary four of which are a cosmocentric humanity, the exploration of *The Cosmos*, philosophical reascension, and the belief in sentient life on other worlds.

[2:53:17] *Thematist* approaches to omnimeneutics only consider the contents and structure of *The Omnidoxo* according to these four primary themes which means that thematists interpret all contents of *The Omnidoxo* through these four themes so everything that exists within *The Omnidoxo* must connect in some way to the four themes.

[2:53:18] Thematistic approaches to omnimeneutics can be considered narrow because they do not allow for the interpretation of The Omnidoxy and its contents outside of these four primary themes.

[2:53:19] Thematism is also closely associated with that which is to be henceforth known as tenetism which is a wider orientation characterised by a vehement adherence and belief in The Seven Tenets of Association of The Philosophy of Astronism, especially in the form of applying some or all of the tenets to all aspects of Astronism such as in the instance of thematism.

[2:53:20] The potential of thematism to become a comprehensive omnimeneutical framework is challenged by other orientations of omnimeneutics and even from the perspective of the Astronist Tradition, for thematism to reside alone with its incorporation to other frameworks is doubted.

[2:53:21] The second of the Omnimeneutic Frameworks is that which is to be henceforth titled as practicalism which involves interpreting The Omnidoxy by the notion that it serves as the primary function for the spread of Astronist ideas only and considers The Omnidoxy through this promulgative scope at all times.

[2:53:22] This is typically done in order to separate The Omnidoxy from The Philosophy of Astronism which is in opposition to the orientation that is to be henceforth known as indivisibilism which is the orientation to which the Astronist Tradition is aligned.

[2:53:23] Indivisibilism upholds the notion that The Omnidoxy and The Philosophy of Astronism are indivisible and to attempt to separate them from one another is tantamount to the degradation of them both according to the Astronist Tradition and therefore any attempt to do so is considered to be ethically wrong and should be policed by The Institution.

[2:53:24] However, putting practicalism's anti-indivisibilistic nature aside, it does hold a significantly interesting and unique interpretative method as it understands the entirety of The Omnidoxy through the lens of promulgation and how The Omnidoxy's primary function and purpose is for promulgation of The Philosophy of Astronism.

[2:53:25] The counteraction to indivisibilism arises when The Omnidoxy is interpreted in such a way because in doing so, the interpreter considers The Omnidoxy to be a promulgative function of Astronism rather than an intrinsic founding element of Astronism as the Astronist Tradition considers it to be.

[2:53:26] Practicalism, despite its divergence from the Astronist Tradition, remains an imperative element to omnimeneutics because it considers The Omnidoxy according to its promulgative and disseminative functionality as the central text of The Philosophy which, without entering into anti-indivisibilistic territory, does remain its primary purpose.

[2:53:27] The next of the Omnimeneutic Frameworks is that which is to be henceforth known as expedientism which involves interpretation The Omnidoxy purely according to the different usages and applications of The Omnidoxy in the economies, societies, and politics of the world.

[2:53:28] Expedientists are closely associated with practicalists as they do prioritise the practical and physical functionalities of The Omnidoxy over its conceptual and philosophical dimensions, but they differ in that expedientists focus on the application of The Omnidoxy to the external world while practicalists focus on The Omnidoxy purely as an instrument of promulgation for The Philosophy of Astronism and The Institution to utilise.

[2:53:29] Expedientists are to focus on how the different elements within The Omnidoxy and how the nature of its contents can become useful in its application to the external world such as in economics and politics through the interpretation of omnidoxical contents in particular ways.

[2:53:30] That which is to be known as the Historical-grammatical Principle refers to the proposition that all ventures in omnimeneutics are to be based in a historical, sociopolitical, geographical, cultural, and/or linguistic/grammatical context for them to become viable for if they are not then become difficult to apply and this is a principle that should be followed by all omnimeneuticists.

[2:53:31] That which is to be henceforth known as omnidoxical dispensationalism refers to the notion that The Omnidoxy is characteristic of a dispensation that acts as the precursory to the Humanic Exploration of The Cosmos.

[2:53:32] Despite the occurrence of the space race in the previous century and the rapid developments and progressions in space technology and engineering in the present century so far, the Astronist Tradition continues to maintain that the Humanic Exploration of The Cosmos is yet to be completely initiated.

[2:53:33] Therefore, The Omnidoxy acts as the necessary precursor to the Humanic Exploration of The Cosmos and argues that the Humanic Exploration of The Cosmos could not practically occur on a cultural level without the publication of The Omnidoxy due to the essential requirement for the Astronomic Revolution to occur prior to commencement of the Humanic Exploration of The Cosmos.

[2:53:34] Omnidoxical dispensationalism also expounds the notion that the publication and the subsequent dissemination and promulgation of The Omnidoxy is a natural progression for humanity, world literature and philosophy due to the concerns of the time and the needs of the world and humanity at the present time, especially so before the initiation of the Humanic Exploration of The Cosmos.

[2:53:35] Omnidoxical dispensationalism, also known as omnidoxodispensationalism, is therefore an important element in the development of omnimeneutics as omnimeneuticists can incorporate this belief orientation into their analyses of the text and although it does not exist as an independent framework itself, it is applicable to each of the frameworks.

[2:53:36] Before we return to list the different Omnimeneutic Frameworks, we introduce that which is to be known as anthropic mutualism which involves the notion that The Omnidoxo serves as a non-binding, but representative entity of contract that humans can agree to stand in alignment with in order to achieve mutual benefit, agreement, and progression.

[2:53:37] Anthropic mutualism, which may also be known as omnidoxomutualism, proposes the notion that aligning with or at least acknowledging The Omnidoxo is more progressive and positive than opposing acknowledgement or alignment with The Omnidoxo.

[2:53:38] Therefore, a positive action in this regard is the chosen path for progression is the key to betterment and achievement and it is towards these ideals that we all do strive no matter our philosophical, religious, or ideological alignments.

[2:53:39] Returning to our introduction of the different Omnimeneutic Framework, we introduce that which is to be known as Cometanocentrism, which is also to be henceforth known as authorial centrality is the framework holding the author of The Omnidoxo, Cometan, as the central figure of Astronist Philosophy and interprets The Omnidoxo purely through the thoughts, feelings, and circumstances of Cometan.

[2:53:40] The term of Cometanocentrism originates from within omnimeneutics, but the notions within the orientation are present throughout The Philosophy of Astronism and remains a foundational concept to the development of the Astronist philosophical tradition.

[2:53:41] Cometanocentricity is characterised by a distinct emphasis on the figure of Cometan as the founder of the Astronist philosophical tradition and the writer of The Grand Centrality and The Omnidoxo within it and in an omnimeneutic context pertains to the analysis of The Omnidoxo through the lens of Cometan as the author.

[2:53:42] Many other instances of Cometanocentric thought can be found throughout the entirety of The Omnidoxo and are to be interpreted post-omnidoxically by omnimeneuticists.

[2:53:43] The next of the Omnimeneutic Frameworks is that which is to be henceforth known as anthroposegmentationism which involves the framework holding that The Omnidoxo is right to be promulgated and divided according to the different segmentations of human society, including by race, ethnicity, nationality, class, sexuality, gender, age, psychographics, religiosity, and ideology.

[2:53:44] Anthroposegmentationism focuses on the many denominations, branches, schools, and orientations of The Philosophy of Astronism and understands The Omnidoxy through this lens at all times and also understands one of the utilities of The Omnidoxy to segment humanity.

[2:53:45] We shall now introduce the next of the Omnimeneutic Frameworks which is to be henceforth known as undeliverance which pertains to the framework holding by the proclamation that The Omnidoxy is not fulfilling or has not fulfilled the promises, prophecies, and ideas that it expounded and neither does The Institution of The Philosophy of Astronism reflect the principles of The Omnidoxy which is to be known as Institutional disparity.

[2:53:46] Omnimeneuticists applying the undeliverance framework will be interpreting one of the discourses or collection of insentations of The Omnidoxy and then analysing whether the promises, prophecies and theories within The Omnidoxy have materialised as they were foretold and whether The Institution of The Philosophy of Astronism has fulfilled the writings within The Omnidoxy and is the perfect emulation of omnidoxical principles and beliefs.

[2:53:47] That which is to be henceforth known as applicationalism refers to an Omnimeneutic Framework holding that only after the conclusion of the reality has been found can the application of principles and notions of truth be applied because an incorrect interpretation of the reality automatically causes a misapplication of truth.

[2:53:48] Therefore, like in any scientific or academic material, an omnimeneuticist must base their conclusions about reality on fact and experimentation and only after this are they able to propose the truth of their argument or to suggest that their theory is the truth because their theory has been concluded to be the reality.

[2:53:49] In an Omnidoxical context, any notions made about The Omnidoxy that suggest truth must therefore be based on facts and experiments of reality in order for the suggestion to be worthy of the descriptor of truth.

[2:53:50] The next of the Omnimeneutic Frameworks is that which shall henceforth be known as proximism and refers to the framework holding that the insentations, discourses, and disquisitions that are in proximity to one another are suggestive of the insentation, discourse, or disquisition that is being interpreted.

[2:53:51] Omnimeneuticists that follow the proximistic framework analyse The Omnidoxy through this lens that those elements of The Omnidoxy that are proximate to one another in the overall chronology of the text.

[2:53:52] Proximist approaches to omnimeneutic frameworking suggest that the elements of The Omnidoxy that are close to another in the overall structure of the text hold

particular connections and interrelated meanings with one another and it is through this principle that proximists consider The Omnidoxy.

[2:53:53] That which is to be henceforth appellated as the Initiality Principle is another of the Omnimeneutic Framework holding that the first address of a topic in The Omnidoxy is the most accurate account of that topic and therefore stands in opposition to the Consecutivity Principle.

[2:53:54] The Initiality Principle notionises that second, third, and later addresses of a topic are less accurate than the first address and in this context, an address of a topic pertains to its mentioning in different insentensations that are not consecutive to one another so a topic may be mentioned across a group of insentensations which would count as its initial address, however, if there is a gap between its next mentioning in a different group of insentensations or a single insentensation then that would count as its second address.

[2:53:55] Essentially, in this context, a separate address of a topic is considered so by a gap between insentensations infilled by another topic, however, the Initiality Principle is challenged by the Consecutivity Principle which states that the former is fundamentally irrational due to its bias for that which chronological occurs first in The Omnidoxy rather than the quality and accuracy of the writing itself.

[2:53:56] By this notion we see a fundamental flaw of the Initiality Principle because it disregards the actual words of the different addresses and considers them only according to the chronology of their mention rather than the actual quality and accuracy of the writing itself.

[2:53:57] Meanwhile, that which is to be appellated as the Consecutivity Principle is the framework holding that the succeeding addresses of a topic in The Omnidoxy display the most accurate accounts of that topic rather than the initial address of the topic and notionises that the more a topic is addressed the greater accuracy and quality it is provided with.

[2:53:58] This stands in stark contrast with the Initiality Principle because it notionises that not only do the latter addresses of a topic hold superiority of accuracy, but that the more times a topic is addressed the greater the level of accuracy and superiority those addresses hold.

[2:53:59] However, there does exist principle frameworks within omnimeneutics in addition to the two already addressed and one of the most prominent of these is that which is to be known as the Comparativity Principle.

[2:53:60] This is the framework holding that both the initial address and consecutive addresses of a topic in The Omnidoxy must be considered as a whole and deduced according to their actual logicalities rather than their logicalities presumed according to the chronology of their address.

[2:53:61] The Comparativity Principle focuses on the actual quality and accuracy of the writing rather than its placement in the chronology of The Omnidoxy and therefore can be considered the most rational of the different principle frameworks of omnimeneutics.

[2:53:62] As we now introduce more principle-based frameworks, we address that which is to be henceforth known as Concentrative Principle and pertains to the framework holding that anything addressed in The Omnidoxy is not only worthy of being an important element in philosophical life, but is vital to a whole understanding of Astronist Philosophy.

[2:53:63] This is as opposed to that which is not addressed in The Omnidoxy which are not considered important elements, and certainly not vital to philosophical life or important to gaining a whole understanding of Astronist Philosophy; this may also be known as the Essentiality Principle.

[2:53:64] This framework is important for omnimeneuticists to apply because by doing so they show how individual elements of The Omnidoxy, even as small as a single insentensation, is essential to some aspect of philosophical life and wider Astronist philosophical understanding; this framework is predicated by the notion that everything that resides within The Omnidoxy holds significance and essentiality to be there and so there exists no excess elements for all vital and so this principle holds a third potential appellation known as the Vitality Principle.

[2:53:65] Another of the principle-based Omnimeneutic Frameworks is that which is to be appellated as the Contradictory Principle and pertains to the framework holding that The Omnidoxy has contradictions and it is the analysis of these contradictions that is the most informative of what Astronist Philosophy is.

[2:53:66] The Contradictory Principle holds that the contradictions of The Omnidoxy are the most important elements of the entire text and it is believed that by studying such contradictions that an omnimeneuticist holds a unique opportunity to understand elements of Astronism and the wider Astronist philosophical tradition that other scholars and studiers would never hold the chance to.

[2:53:67] Additionally, that which is to be henceforth appellated as the Literalistic Principle is another of the principle-based Omnimeneutic Frameworks holding that that which is said in The Omnidoxy is what is literally meant.

[2:53:68] The Literalistic Principle is predicated by the notion that all within The Omnidoxy is literal and therefore should be interpreted in such a way by omnimeneuticists and non-scholarly readers and so literalistic conclusions about theories and notions are therefore created by literalistic interpretations of The Omnidoxy through the application of this principle.

[2:53:69] The next of the principle-based frameworks to introduce as part of omnimeneutics is that which is to be henceforth known as the Fourfold Principle which involves an interpretative framework of The Omnidoxy according to four predications.

[2:53:70] These four knowledge predications include knowledge from the past, knowledge from the present, knowledge from the future, and knowledge unknown and each of which can be applied to omnimeneutic analyses of The Omnidoxy in order to categorise the particular elements of the text in terms of the type of knowledge that the notions of the text are based upon.

[2:53:71] These four different predications about omnidoxical knowledge are of particular interest as they pertain to the purposes of notions and suggest how such notions can be applied to different contexts for some notions will hold future knowledge and so they can be applied to topics regarding the future while also knowledge of the past may also be applied to topics regarding the future.

[2:53:72] Of course, these four knowledges are also closely linked to the development of the Astronist cosmology because unknown knowledge is the central theme of the lesser existence known as The Chaos while The Divine is an emulation and encapsulation of these forms of knowledge.

[2:53:73] Terminologically, it is also important to note that each of these forms of knowledge also hold alternative appellations including proknowledge (knowledge from the past), epiknowledge (knowledge from the present), transknowledge (knowledge from the future), and nonknowledge (knowledge unknown).

[2:53:74] That which is to be henceforth known as the Repetitive Principle pertains to the omnimeneutic framework holding that that which is repeated in The Omnidoxy demands greater attention and propounds greater significance and are manifested in the text as paranotions.

[2:53:75] The Repetitive Principle is considered to be logically justifiable by the notion that it does not proclaim superiority between different notions, but instead proclaims superiority of the topic of notions the more that that topic is mentioned and repeated in The Omnidoxy.

[2:53:76] As we move on from the principle-based Omnimeneutic Frameworks, we come to introduce the two approach-based frameworks, the first of which is to be henceforth known as the lexical-syntactical approach, also known as the linguistic approach, which essentially focuses on the words used in The Omnidoxy and the way in which such words are used rather focusing on the contexts, purposes, and meanings of such words.

[2:53:77] The linguistic approach includes the focus on the different order of the insentences of the discourses in The Omnidoxy, the differences in punctuation, and the

tense of the verse are all aspects that are emphasised in the lexical syntactical method of omnimeneutic analysis.

[2:53:78] Essentially, an attempt is made to use the linguistic features of the words and collection of words and insentences of The Omnidoxy in order to link them to conceptual meanings and inferences so as to derive further purpose to the way in which words of The Omnidoxy have been structured, the positions in which they have placed, and the punctuations and other ornamentations that have been ascribed to them for further emphasis for the derivation of meaning.

[2:53:79] The second of the two approach-based Omnimeneutic Frameworks is that which is to be known as the contextual approach which proposes the notion that an insentensation out of context can often be taken to mean something completely different from the intention and therefore this approach prioritises the function and essentiality of the context of all the insentensations and other elements of The Omnidoxy as part of the wider omnimeneutic analysis.

[2:53:80] The contextual approach understands the contextualisation of The Omnidoxy and its composite elements to be an inextricable constituent of the entire process of omnidoxical criticism, contemplation, and investigation and is notably distrusting of all proposals and conclusions pertaining to The Omnidoxy or one of its composite elements that do not involve at least some inclusion of contextualisation.

[2:53:81] This method focuses on the importance of looking at the context of a insentensation in its discourse, disquisition and even in a wider extraomnidoxical context in order to derive meaning about itself; this process of contextualisation is considered the paramount element of omnimeneutic investigation.

[2:53:82] That which is to be henceforth known as nonaffirmationalism refers to another of the Omnimeneutic Frameworks and principally stands as a reminder that The Omnidoxy is not an affirmed or stationary document but a motional and interpreted document.

[2:53:83] Therefore, it considers post-omnidoxical documents that are Institutionally recognised to be contributory to future people's interpretations of The Omnidoxy as society and people's mentalities change and certain elements within The Omnidoxy become void of rationality or relevancy.

[2:53:84] It is this nonaffirmationalistic approach that is one of the primary signifiers of The Omnidoxy's designation as a philosophical document rather than one of a religious or ideological nature because it is subject to alterations and authorised rectifications according to the changes in the surrounding world so that it may hold that which is appellated as Continued Relevancy.

[2:53:85] Nonaffirmationalism is one of the most important contributions made by the subdiscipline of omnimeneutics because it pervades importance throughout the entirety of

The Philosophy of Astronism and allows Astronism to reaffirm itself as a philosophy so nonaffirmationalism is omnimeneutic by official categorisation, but it also holds metaphilosophical utilities.

[2:53:86] That which is to be henceforth known as post-omnidoxism is the Omnimeneutic Framework holding that the contributions of philosophers, sophians, scholars, and Institutional leaders to The Philosophy of Astronism post-omnidoxically are the most significant sources for omnimeneutical study.

[2:53:87] Post-omnidoxist ideas place superior importance on the contributions of academic and non-academic individuals, groups, and Institutional organisations on the omnimeneutic investigations undertaken because these different parties are instrumental to the development of notions and concepts of omnimeneutics which is a discipline of study that can only be truly practiced post-omnidoxically of course and not by myself as Cometan.

[2:53:88] The penultimate framework of omnimeneutics is that which shall be known as the intentionalist framework which holds that The Omnidoxy should be considered according to the intentions of its author, Cometan, rather than through the lens of others or by the surrounding context of The Omnidoxy's authorship.

[2:53:89] The intentionalist framework may be considered a branch of Cometanocentrism, or authorial centrality, as it places much greater focus on Cometan as The Omnidoxy's author, but focuses on a specific aspect of Cometan as the author; his intentions.

[2:53:90] It is important to note herein that my intentions as the author of The Omnidoxy are shared only post-omnidoxically and any element of intention that is derived from within The Omnidoxy is therefore separated from post-omnidoxical intention, or reflective intention as it may also be known.

[2:53:91] Essentially, instead of focusing on other aspects of The Omnidoxy and its authorship, the intentionalist framework drills down into and emphasises the intentions of myself as Cometan and the specific reasons for which I have written The Omnidoxy which is expected to draw upon a wide range of philosophical, literary, sociocultural, and even theological topics.

[2:53:92] The final entry of the Omnimeneutic Frameworks is that which shall henceforth be known as Omnidoxical minimalism which pertains to the framework notionising that the ambitions and goals of The Omnidoxy for the dissemination of Astronism and for the betterment of the wider world are set by default and should be separated from what The Omnidoxy states are its own goals.

[2:53:93] Omnidoxical minimalism subsequently holds that the ambitions of Astronism cannot be trusted when they are interpreted and spoken of by anybody other than

Cometan and so stands in complete opposition to the previous introduced intentionalist framework.

[2:53:94] As we have now introduced each of the Omnimeneutic Frameworks which form the foundational basis of the subdiscipline of study of omnimeneutics, we shall move on to introduce various different surroundings elements.

[2:53:95] That which is to be henceforth known as hyperemphasis, of which there exists three versions including discorsal, disquisitional, and insentencial, refers to the exemplification of the words or topics of a discourse by a person either in a debate or for alternative and intentional reasons that is used in a distortive way so as to suggest that it represents the entirety of Astronism.

[2:53:96] This may also be known as omnidoxyal distortion as it revolves around distorting small elements of The Omnidoxy, making them seem more significant to the entirety of Astronism than they had perhaps been intended, and involves focusing upon such elements as a way to justify one's point in an argumentation, but this is considered to be an untrustworthy and unethical way of argument justification.

[2:53:97] Omnimeneutics is itself cross-disciplinary by its own nature as it is closely associated with many other disciplines and in some instances, there does exist overlaps into other disciplines, an example of which is the subdiscipline of argumentology to which omnimeneutics is particularly associated.

[2:53:98] That which is to be known as discorsal projection in the context of argumentology and in the application to omnimeneutics pertains to a particular discourse and its words, principles, or concepts for the purpose of justifying or supporting one's argument, or to suit their own end goals and intentions.

[2:53:99] In order to succeed in discorsal projection, one will require a good understanding of omnimeneutics in order to decipher the most pertinent elements of The Omnidoxy that best support their end goals and intentions for the argument.

[2:53:100] Disquisitional projection in a similar capacity in the context of argumentology focuses on a particular disquisition and its words, principles, or concepts for the purpose of justifying or supporting one's argument, or to suit their own means.

[2:53:101] Again, that which is to be known as insentencial projection in argumentology focuses on a particular insentensation and its words, principles, or concepts for the purpose of justifying or supporting one's argument, or to suit their own means.

[2:53:102] From these different terms originating from within argumentology, we understand that omnimeneutics is an integral discipline to study in order to gain success in other areas of Astronist Philosophy, hence the position of high regard that is afforded to omnimeneuticists.

[2:53:103] We now turn to other elements of omnimeneutics that remain important to the wider development of the subdiscipline, the first of which is antikindredism which is a belief orientation holding that neither Astronist Philosophy, nor its founding document, The Omnidoxy, are akin to any other philosophical, religious, or ideological traditions and constantly reaffirms the uniqueness and originality of both Astronist Philosophy and The Omnidoxy.

[2:53:104] Antikindredist movements are expected to rise and fall in popularity over the course of the history of the Astronist philosophical tradition but are expected to be particularly prevalent during times when Astronism or any other branch of the wider tradition is compared to something that is not preferable to the Tradition or The Institution.

[2:53:105] Antikindredism is particularly elemental to the development of comparological opinions regarding Astronism and other traditions of philosophy, religion, and ideology, thus extending this omnimeneutic orientation into a comparological discussion and therefore demonstrating the cross-disciplinarity of omnimeneutics.

[2:53:106] That which is to be known as rigorium refers to a form of omnidoxical commentary in which a commentator, or omnimeneuticist analyses insentensation by insentensation of a single discourse, an entire disquisition, or a multitude of disquisitions in the derivation of conclusions by the use of one of the Omnimeneutic Frameworks.

[2:53:107] Of course, by its nature, rigorium is considered to be the most thorough of all omnidoxical commentary forms and is expected to take years to master and many months to execute due to the thoroughness of how it is to be conducted as a rigorist is expected to spend twice as long analysing one insentensation than a standard omnimeneuticist would.

[2:53:108] Another form of omnidoxical commentary is that which may either be termed as interdiscursality or interdisquisitionality depending upon the element to which it is ascribed, and involves the analysis, linking, and comparison of insentensations from different discourses or disquisitions.

[2:53:109] This is a form of omnidoxical commentary that attempts to draw upon contrasting differences between the insentensations of different disquisitions and discourses, typically as an attempt to highlight the differences of writing styles, the development of disciplines of study, and also to demonstrate the differences in meaning, purpose, and context of insentensations from different disquisitions and discourses.

[2:53:110] In order to form the direct oppositism to the aforeintroduced literalist framework, we introduce that which shall henceforth be known as the belief orientation of tropological omnidoxism which essentially notionises that The Omnidoxy is completely figurative.

[2:53:111] Tropological omnidoxism understands The Omnidoxo in complete figurativity and does not consider there to be any elements of the text to be literal and certainly not intended to be literal.

[2:53:112] Those whom adhere to tropological omnidoxism support their central notion of the complete figurativity of The Omnidoxo by the notion of the philosophical nature of the text as intended by myself as Cometan.

[2:53:113] The Omnidoxo is fundamentally designated as a philosophical text and self-perpetuates this throughout the majority of its disquisitions therefore tropological omnidoxists notionise that to suggest that The Omnidoxo is rigid and literal in its meanings is to ignore its philosophical nature.

[2:53:114] The tropological omnidoxist and literalistic debate is expected to rage on way after the completion of The Omnidoxo and its resolution is not expected to materialise due to its own inherently philosophical nature.

[2:53:115] That which is known as the process of conditionalisation in the context of both omnimeneutics and transmutology, again showing the cross-disciplinarity of the former, involves the process of emphasising certain aspects of The Omnidoxo and The Philosophy of Astronism in order to retain relevance in different cultural settings.

[2:53:116] An example of conditionalisation would be to emphasise reascensionism in a country whose population feels dejected with current religious, ideological, and philosophical affairs; the concepts of Astronism and The Omnidoxo that are emphasised are perfectly constructed to suit the context into which they are injected.

[2:53:117] Conditionalisation is expected to be a very powerful tactic for transmutologists to undertake, but a strong understanding of omnimeneutics is required for the success of this because transmutologists must know which concepts truly do hold the most relevance when applied to societal, cultural, and political circumstances.

[2:53:118] Not only this but transmutologists must also consider the fact that the application of a concept or belief orientation to such circumstances in theory may not gain the same result when put in practice so experimentation of different instances of conditionalisation is also recommended herein in order to ensure that the most appropriate concept or belief orientation is finally decided.

[2:53:119] Another important process within the context of omnimeneutics is that which is to be known as dephilosophicalisation which pertains to practice of intentionally separating scientific astronomical and cosmological theories and claims from those of a purely Astronist philosophical, ethical, or mystical nature.

[2:53:120] Dephilosophicalisation is a type of reinterpretation that removes scientific astronomical and cosmological theories from Astronist philosophical notions and remains

an important forms of exegesis to exercise for omnimeneuticists because, especially within the inclusive discipline of compendology, the lines between the scientific and the philosophical are blurred and so this can make dephilosophicalisation a very difficult process for omnimeneuticists conduct.

[2:53:121] That which is to be henceforth known as omniotics resides as a subdiscipline within omnidoxicology and is closely connected to omnimeneutics as it deals with the study of the authenticity of The Omnidoxy.

[2:53:122] Omnioticists concern themselves both with The Omnidoxy as a whole as well as its constituent parts, including disquisitions, discourses, and groups or even single insentensations thus suggesting that the authenticity of different constituent elements shall change across those different types of elements.

[2:53:123] Omniotics forms an important dimension to the overall development of omnidoxicology and it also remains important to note that omniotics as a subdiscipline should not be approached or perceived negatively because it analyses the authenticity of The Omnidoxy, but should instead be seen as a positive subdiscipline that seeks to further understand the authorship and the context in which The Omnidoxy and its constituent elements were written rather than as a subdiscipline that seeks to defame or devalue The Omnidoxy as the most prominent philosophical work.

[2:53:124] Now that we have introduced omniotics, we can return to omnimeneutics and in doing so we must introduce the process that shall be known as periodisation which, in an omnimeneutic context, involves the practice of splitting the writings of The Omnidoxy into different periods of chronology according to the differences of writing style within the same disquisitions and discourses and across different disquisitions, discourses, and other elements.

[2:53:125] The process of periodisation holds major significance for the development of omnimeneutics and the post-omnidoxical understanding of The Omnidoxy as this process allows for the categorisation of different elements within The Omnidoxy according to different parameters.

[2:53:126] These different parameters for periodisation include positioning which pertains to the positions in which each element within The Omnidoxy is placed consecutively in relation to another and also includes chronology which pertains to the actual time in which each part of The Omnidoxy was written and may not always coincide with the final consecutive positioning of each of the elements.

[2:53:127] Other parameters for periodisation shall include the writing styles used in The Omnidoxy and their categorisations and collectivisations with one another as well as topics addressed in different disquisitions and their collectivisations with one another, especially when topics/discourses/insentensations from different disquisitions are grouped together due to the similarities in their address.

[2:53:128] In addition to the process of periodisation, there is also another process of omnimeneutics that is to be known as omnieisegenesis which involves the process of interpreting The Omnidoxy or one of its constituent parts in such a way that the process introduces one's own presuppositions, agendas, or biases into and onto The Omnidoxy.

[2:53:129] It is of incredible importance that all omnieisegetic documents are clearly designated as such and that they are therefore kept separated from those of an omniexegetic nature as those works are not permitted to include the interpreter's own biases.

[2:53:130] In order to define the two forms of omnidoxical criticism, omnieisegenesis can be described as an opinionated piece of writing in which the writer is able to inject their own thoughts and ideas based on their own personal beliefs, agendas, and biases without the next to prove or in any case justify their own presuppositions.

[2:53:131] Meanwhile, omniexegetic is characterised by a distinct adherence to the rules of justification in the context of criticism and most notably, omniexegetic writers are not allowed to inject their own beliefs, agendas, or biases into the critical piece about The Omnidoxy or one or more of its constituent elements.

[2:53:132] That which is to be henceforth known as the omnimeneutic circle refers to the idea that one's understanding of The Omnidoxy as a whole is established by reference to the individual parts and one's understanding of each individual part by reference to the whole thus forming a unique type of symbioticity.

[2:53:133] Neither the whole of The Omnidoxy nor any individual part can be understood without reference to one another, and hence, it is a circle; a symbiotic circle for both are dependent upon one another mutual existence.

[2:53:134] Additionally, that which is to be known as omnidoxical openness the fact that The Omnidoxy allows multiple or mediated interpretations by its readers which makes it a philosophical text.

[2:53:135] Oppositely, textual closure is characteristic of a religious or ideological text as those types of texts are bound to doctrine while philosophical texts are not and are therefore generally more interpretative before their nature.

[2:53:136] That which shall be henceforth known as omnidoxical universalism refers to the instance in which The Omnidoxy is provided with a systemised interpretation by a philosopher who then translates and promulgates such an interpretation to form his or her own school of thought, or injects this into a particular denomination.

[2:53:137] The combination of omnidoxical openness and omnidoxical universalism shall allow philosophers to freely exercise their imaginations and formulate new versions and

schools of thought in order to further contribute to the Astronist philosophical tradition beyond that of The Omnidoxy's foundations.

[2:53:138] This remains of imperative importance in order to establish an enriched tradition of philosophy that allows philosophers to contribute to it and to enable to it to evolve as the world evolves.

[2:53:139] The Omnidoxy, The Philosophy of Astronism, and The Institution are well aware of the changing world and the need for the Astronist philosophical tradition to autoevolve so as to keep up with this world, the changes in which are only expected to only increase in both their frequency and abundance.

[2:53:140] As the final element of omnimeneutics that is to be omnidoxically introduced, that which is to be known as omnidoxical harmony refers to the instance in which two positionally disproximate insentensations in The Omnidoxy share parallel ideas.

[2:53:141] Or that those two disproximate insentensations share the same terms in the same context in order to demonstrate a sense of interconnectedness of insentensations throughout The Omnidoxy and in order to emphasise a particular topic by reusing the same terminology.

Designations, Recognitions & Astronist Syncretism

[2:54:1] It remains important for the Astronist philosophical tradition as an entirety to differentiate itself from other traditions of thought, belief, and practice, and it is particularly important, as omnimentioned, for The Philosophy of Astronism to maintain the affirmation of its designation as a philosophy.

[2:54:2] For reasons focusing on clarity, designation, recognition, and general categorisation, this discourse is herein created in order to develop a unambiguous demonstration of the different traditions and systems of thought are considered to be categorised according to the Astronist philosophical tradition under the four categories of religions, philosophies, organised philosophies, and syncretisms.

[2:54:3] The designations of each tradition/system of thought can be considered omnidoxically and Institutionally approved which provides greater levels of authenticity, but also demonstrates that the possibility of these designations to change is minimal.

[2:54:4] Considered to be religions by the Astronist philosophical tradition are the following in not particular order: Christianity, Islam, Judaism, Jainism, Chinese folk religions, Falun Gong, Cheondoism, Korean shamanism, Caodaism, Sikhism, Buddhism , Hinduism, Meivazhi, Bábism, Bahá'í Faith, Druze, Gnosticism, Rastafari, Yazdânism, Zoroastrianism, Modern paganism, New Thought, Hermeticism, Western esotericism, Spiritism, African traditional religions, Vietnamese folk religion, Mongolian shamanism, Bon, Wicca, Voodoo, and Shinto.

[2:54:5] Herein considered to be philosophies by the Astronist philosophical tradition rather than the post-Astronist categorisation of organised philosophies are the following: Confucianism, Taoism, Humanism, Aristotelianism, Platonism, Feminism, Environmentalism, Hedonism, Kantianism, Legalism, and Transhumanism.

[2:54:6] The category of organised philosophy is an Astronist-origivative term and the exploration and contemplation of the nature of organised philosophy is omnidiscussed throughout this document and Astronism is considered to be first true organised philosophy of an Astronistically defined nature despite other philosophies, particularly Confucianism and Taoism, demonstrating close similarities, they remain outside of the category of being organised philosophies.

[2:54:7] Finally, we come to the category that is to be known as syncretisms which, of course, is Astronistically-based due to our focus on the Astronist philosophical tradition, and the officially recognised forms of syncretisation include the following: Astro-Christianity/Astro-Christianity (Astro-Orthodoxy/Astro-Orthodoxy, Astro-Catholicism/Astro-Catholicism, Astro-Protestantism/Astro-Protestantism), Astro-Islam/Astro-Islam (Astro-Sunnism/Astro-Sunnism, Astro-Shiism/Astro-Shiism, Astro-Sufism/Astro-Sufism, Astro-Ibadism/Astro-Ibadism), Astro-Judaism/Astro-Judaism, Astro-Jainism/Astro-Jainism, Astro-Chinese folk religions/Astro-Chinese folk religions, Astro-Falun Gong/

Astro-Falun Gong, Astro-Cheondoism/ Astro-Cheondoism, Astro-Korean shamanism/ Astro-Korean shamanism, Astro-Caodaism/ Astro-Caodaism, Astro-Sikhism/ Astro-Sikhism, Astro-Buddhism/ Astro-Buddhism (Astro-Theravada/ Astro-Theravada, Astro-Mahayana/ Astro-Mahayana, Astro-Vajrayana/ Astro-Vajrayana) and Astro-Hinduism/ Astro-Hinduism (Astro-Shaivism/ Astro-Shaivism, Astro-Vaishnavism/ Astro-Vaishnavism, Astro-Shaktism/ Astro-Shaktism, Astro-Smartism/ Astro-Smartism).

[2:54:8] Also included as part of the category of officially recognised syncretisations between Astronist Philosophy and non-Astronist traditions and systems of thought include the following minor religious traditions and systems of thought: Astro-Meivazhi/ Astro-Meivazhi, Astro-Bábism/ Astro-Bábism, Astro-Bahá'í Faith/ Astro-Bahá'í Faith, Astro-Druze/ Astro-Druze, Astro-Gnosticism/ Astro-Gnosticism, Astro-Rastafarianism/ Astro-Rastafarianism, Astro-Yazdânism/ Astro-Yazdânism, Astro-Zoroastrianism/ Astro-Zoroastrianism, Astro-Paganism/ Astro-Paganism, Astro-New Thought/ Astro-New Thought, Astro-Hermeticism/ Astro-Hermeticism, Astro-Western esotericism/ Astro-Western esotericism, Astro-Spiritism/ Astro-Spiritism, Astro-African traditional religions/ Astro-African traditional religions, Astro-Vietnamese folk religion/ Astro-Vietnamese folk religion, Astro-Mongolian shamanism/ Astro-Mongolian shamanism, Astro-Bon/ Astro-Bon, Astro-Wicca/ Astro-Wicca, and Astro-Voodoo/ Astro-Voodoo.

[2:54:9] The final group of additions to the syncretisms list include the following: Astro-Confucianism, Astro-Taoism, Astro-Humanism, Astro-Aristotelianism, Astro-Platonism, Astro-Feminism, Astro-Environmentalism, Astro-Hedonism, Astro-Kantianism, Astro-Legalism, and Astro-Transhumanism.

[2:54:10] As has been demonstrated, the identification of a syncretism can be achieved through the use of prefix of Astro- attached to that which the Astronist philosophical tradition is syncretised with.

The Etidoxy (Astronist Etiquette)

[2:55:1] The way in which one conducts themselves in behaviour, appearance, and social interaction is tantamount to a reflection of the belief system they follow, and therefore, it remains prudent to formulate a system of etiquette that is herein omnidoxically deemed to be characterful of Astronist individual.

[2:55:2] Etiquette must also, however, be herein defined from notions of ethics for the two may be easily combined in error as the latter holds a greater philosophical and emotional gravity than the former due to etiquette being based on one's representation to others, as defined by the thoughts and opinions of others.

[2:55:3] Good etiquette is therefore demonstrative of an awareness of those around oneself, but to the change from etiquette from culture to culture, it does not remain a system of universality while ethics, which contemplates that which may be deemed morally good and morally bad, is much more applicable to a universal field, despite notions within the orientation of relativism.

[2:55:4] Etiquette is cultivated according to a cultural sphere while ethics, despite it also holding origins a cultural sphere, is wider reaching and more fundamental in nature than its counterpart of etiquette, and although it remains important to keep the two distinguished from one another, they nevertheless interconnected with one another.

[2:55:5] Astronist Etiquette, as both a discipline of study of Astronist Philosophy and a system of belief in its own right within The Philosophy of Astronism, encompasses a code of behaviour attributed to the characteristics of that which may be described as Astronist.

[2:55:6] Astronist Etiquette is premised upon a system of expectations for one who may identify as an Astronist, or as any of its derivative or alternative appellations, about how such individuals are expected to act when they are in the company of others so as to uphold their own dignity, as well as the integrity of The Philosophy to which they are aligned.

[2:55:7] There are many different approaches both in practising and contemplating Astronist Etiquette which form themselves as belief orientations that are set to articulate how a person is to become who they wish to be because etiquette is considered to be intrinsically connected to the construction of one's identity.

[2:55:8] The first of these belief orientations of etiquette to introduce is that which shall henceforth be known as conventionism which encompasses the notion that it remains primarily important for the establishment of a convention of attitudes and behaviours to form Astronist Etiquette with such conventions.

[2:55:9] Conventionists maintain that *The Omnidoxo*, and specifically this discourse on Astronist Etiquette must remain the foremost prescriber of the conventions of Astronist Etiquette rather than post-omnidoxical authors.

[2:55:10] Therefore, all post-omnidoxical authors contributing to Astronist Etiquette, from the conventionist point of view, are creating their own conventions within Astronist Etiquette rather than following the actual Astronist convention of etiquette.

[2:55:11] Conventionism adheres to the notion that etiquette must be predicated on conventions, codes, and rules rather than be predicated on a relativistic basis which, in the context of Astronist Etiquette, would be characterised by the belief that each and every individual should hold their own interpretation of the conventions of Astronist Etiquette and practise their own interpretation rather than adhere to a universality.

[2:55:12] Conventionism holds that the literal and uncompromising words of this discourse of *The Omnidoxo* should be taken as the conventions of Astronist Etiquette and therefore to identify with the Astronist Etiquette, one should not deviate from the codes of behaviour ascribed herein.

[2:55:13] It is important to note that conventionists do not oppose the encouragement of post-omnidoxical philosophers interpreting the herein ascribed conventions of Astronist Etiquette for in doing so, they would be opposing the Philosophical Spirit, but instead, conventionists hold that post-omnidoxical philosophers' interpretations of Astronist Etiquette remain their own conventions within Astronist Etiquette rather than the Astronist convention, or the omnidoxical convention, as it may alternatively be known.

[2:55:14] That which is opposed to conventionism is known as differentiationism which principally holds that one's adherence to the conventions of Astronist Etiquette must first be predicated on the specific and individual circumstances of the moment.

[2:55:15] Differentiationism is to be split into two halves; one half pertaining to one's surroundings and the other half pertaining to one's company.

[2:55:16] The first of these is to be known as ambidifferentiationism which holds that one's adherence to the conventions of Astronist Etiquette is principally dependent upon the setting in which one is conversing which will determine the type of etiquette one is expected to undertake which may not always conform to the Astronist convention of Astronist Etiquette.

[2:55:17] The second of these is to be known as demodifferentiationism which holds that one's adherence to the conventions of Astronist Etiquette is principally dependent upon the people with whom one is conversing which will affect the type of etiquette one is expected to undertake which may not always conform to the Astronist convention of Astronist Etiquette.

[2:55:18] Differentiationist thought prides itself on taking a realistic and practical approach to conduct of etiquette whilst conventionist approaches to Astronist Etiquette are primarily characterised by their stronger predication on idealism.

[2:55:19] Differentiationists continue to derive from The Omnidoxy and particularly this discourse herein for their beliefs and practices of etiquette, however, they also maintain that the reality of the execution of etiquette is dependent upon the circumstances of the moment rather than adherence to a set convention of etiquette which isn't as applicable to everyday life.

[2:55:20] It remains important to distinguish relativism and differentiationism for the latter does not advocate for the adherence of one's individual interpretations of conventions like the former, but instead encourages adherence to conventions whilst also predicating that such conventions may not always be practically applicable and they must therefore be altered during their applications whilst also acknowledging this deviation from convention.

[2:55:21] These of the belief orientations directed towards Astronist Etiquette are collectively known as The Dispositions of Astronic Etiquette and are all collectivised together due to their shared focus on the inherent qualities of individuals and their subsequent executions of etiquette, thus forming many dispositional belief orientations, which also be collectively known as dispositionals of which there are eighteen introduced herein.

[2:55:22] The first of these is henceforth known as dispositionalism which is the precursory for all the rest of the dispositionals and holds principally holds that each individual will inevitably hold their personalities and preferences influencing their behaviours and beliefs as they themselves are influenced by one's ambitions, experiences, and the extent of their knowledge.

[2:55:23] Dispositionalist approaches to Astronist Etiquette are therefore characterised by the notion that a person may hold the intention to follow the omnidoxical conventions of Astronist Etiquette, but it is inevitable that one's own internal individuality will inevitably make it difficult for them to continue to conform to the conventions of etiquette.

[2:55:24] Dispositionalism is the deriver orientation of all the dispositionals of Astronist Etiquette for all the other derived orientations of dispositionalism are inspired by this and are connected to how someone balances their personal internality with the conventions of etiquette.

[2:55:25] A deriver orientation can be described as being a belief orientation that encompasses a collection of others that are inspired from or related to the deriver orientation, of which there are many examples within the Astronist philosophical tradition.

[2:55:26] Dispositionalists are neither aligned to conventionism, nor are they aligned to differentiationism as they form their own approach to Astronist Etiquette that is distinct from these two other approaches.

[2:55:27] The goal of dispositionalism is to achieve codispositionalism which refers to the instance in which a person achieves a good balance between the extent to which they allow their personal internalities and omnidoxical conventions influence their ability to adhere to the conventions within Astronist Etiquette.

[2:55:28] The second of the dispositionals is that which is to be known as predispositionalism which pertains to when a person does not adhere to etiquette conventions due to a medical issue, either physical or mental and is therefore not deemed to be their own fault, but as cause of their upbringing, the environment in which they live, and those they come in contact with.

[2:55:29] That which is to be henceforth known as hyperdispositionalism refers to when a person overtly allows their ambitions, experiences, and knowledge to impact on the extent to which they follow etiquette conventions, especially in an exaggerated and expressed way.

[2:55:30] As aforeaffirmed, codispositionalism refers to the approach to Astronist Etiquette whereby a person manages to achieve and manage a good balance between the extent to which they allow omnidoxical conventions and their personal inferences to influence their adherence to the conventions of Astronist Etiquette.

[2:55:31] Additionally, that which is to be known as antidispositionalism encompasses all notions opposed to the idea that one's ambitions, experiences, and knowledge should (ethical) or could (existential) hold any influence over one's adherence to the omnidoxical conventions of Astronist Etiquette.

[2:55:32] Meanwhile, that which is to be known as exdispositionalism pertains to the instance in which a person used to allow their ambitions, experiences, and knowledge to affect their etiquette, but now they do not allow this, typically because of their adherence to conventionism, or because of their increased levels of consciousness of how others perceive them; essentially, the person may have become more tactical in how they present themselves.

[2:55:33] Infradispositionalism is another form of dispositionalism and when a person's personality stands in opposition to their preferences, which includes one's ambitions, interests, and ethics, in the context of one's attempt to achieve conformity with the omnidoxical conventions of Astronist Etiquette.

[2:55:34] Oppositely to this, that which is to be known as interdispositionalism pertains to when one's personality and preferences suit the conventions of the present social

circumstance, thus making it easier to follow the omnidoxical conventions of Astronist Etiquette.

[2:55:35] Furthermore, macrodispositionalism refers to the instance in which a person's personality and preferences, collectivised as their personal inherences, hold greater influence over one's approach to Astronist Etiquette than omnidoxical conventions.

[2:55:36] The opposite form to this is microdispositionalism which relates to the instance in which a person's personality and preferences hold smaller influence over one's approach to Astronist Etiquette than omnidoxical conventions.

[2:55:37] Meanwhile, that which is to be henceforth known as omnidispositionalism concerns itself with the belief orientation holding that all approaches to Astronist Etiquette are of reasonable utility and importance and should be used according to different circumstances in order to socially, financially, and culturally progress towards one's end goal.

[2:55:38] The instance in which one does not follow the omnidoxical conventions of Astronist Etiquette, but they admit this in a social setting especially because of their tendency to follow their own conventions through their personality and preferences is to be henceforth known as paradispositionalism.

[2:55:39] Redispositionalism involves the instance in which one consciously changes their personality and preferences in order to suit the omnidoxical conventions of Astronist Etiquette while subdispositionalism relates to the instance in which one hides their true identity and conforms to the omnidoxical conventions so as to progress through social circles; essentially, using omnidoxical conventions of etiquette in order to earn wealth and social status.

[2:55:40] That which is to be henceforth known as transdispositionalism pertains to the instance in which a person takes a tactful approach to Astronist Etiquette by acting the way in which other's wish for them to act in order for them to progress, or to receive a reward; this may also be known as utilitarian dispositionalism.

[2:55:41] Also, we shall introduce here and define monodispositionalism which involves the instance in which a person only allows their personality, their preferences, or the omnidoxical conventions to influence their approach to Astronist Etiquette, typically changing across different circumstances.

[2:55:42] Further, that which is to be known as tridispositionalism concerns itself with the instance in which a person allows both their personality, preferences, and the omnidoxical conventions to influence their approach to Astronist Etiquette, and therefore is left with the task of managing these three different aspects.

[2:55:43] Duodispositionalism, as it shall be henceforth known, refers to the instance in which a person allows two of the three elements, including their personality, their preferences, and the omnidoxical conventions, to influence their approach to Astronist Etiquette, and therefore they must manage these two elements.

[2:55:44] Penultimately, that which is to be known as predilectionism relates to an opposing orientation to omnidoxical conventions and conventionism due to one's the pursuit for happiness which the individual does not believe to be prioritised in such conventions; one's preference for their own happiness rather than the social suiting of others.

[2:55:45] Finally, that which is to be henceforth known as productionism pertains to the creation of one's conventions of etiquette and the expression of these conventions to others in order to convince them to agree to such conventions in a social setting as means of opposition to the present dominant etiquette conventions.

[2:55:46] The conventions of Astronist Etiquette and the distinct style of etiquette expounded by Astronist to be for the utility of a civilisation or society as a whole, or a social class, company, group, family, individual, or some other interconnected group of individuals such as friends, business partners, or lovers.

[2:55:47] Now that we have addressed the many different approaches to Astronist Etiquette, we can begin to express the omnidoxical conventions of the Astronist tradition of etiquette.

[2:55:48] The first of these is expressed through the notion that one is not permitted to read not while in the presence of others with whom you are to socially converse for this is considered to be a solitary act, yet write amongst others is permitted for the words of others shall feed your own.

[2:55:49] However, it is herein cautioned to those that intend to write while in the social presence of others that one must maintain a fluency of conversation whilst writing so not to appear rude, nor should they cause the conversation to dissolve into triviality as it may do without their contribution.

[2:55:50] This leads us onto our next element of convention which herein states that if one's option is to discuss rather than trivialise, then one must always choose the former over the latter for the latter contributes nothing, neither to the conversation, to the minds of those conversing, and nor to the wider world.

[2:55:51] However, in the context of a social setting, playful quips and intrusory witticisms are not only permitted, but encouraged in order to keep individuals attuned to their highest awareness of those around them, as well as improve their overall ability to converse with those whom way be difficult to deal with socially.

[2:55:52] Despite this, rudeness is, of course, not permitted and the line between witticism and rudeness is fine and remains an endeavour of societude to truly master for one of the main tenets of Astronist Etiquette is politeness which, in the present world, is sorely lacking due to the intrusions in vulgar subjects in social settings.

[2:55:53] Societude refers to the entire journey that an individual continues along in the effect of pursuing and achieving their ideal social status, typically a position of respect and an ideal image that they wish to be perfectly reflective.

[2:55:54] One's societude encompasses all of their beliefs, behaviours, practices, and approaches in etiquette, as well as all the events that have taken place in their pursuit of achieving their ideal social image and status.

[2:55:55] One of the main cornerstones of Astronist Etiquette is self-consciousness which is closely associated with empathy, but focuses on one's perception of themselves from the perspective of those around them.

[2:55:56] If one predicates their behaviours, actions, and expressions of etiquette according to self-consciousness, they are continuously aware and concerned with how other's perceive them and subsequently come to conclusions about them and their character.

[2:55:57] However, one of the main flaws of self-consciousness is one's presumption of how other's perceive them which may be entirely disparate from how they are actually perceived by those other individuals.

[2:55:58] For this reason, caution is expounded towards focusing on self-consciousness as the main predicator for one's etiquette except in the instance that one holds that which is known as a default negativity which states that one's presumption of other's perception of them is automatically negative and in need of improvement then that will encourage oneself to continuously improve themselves which is a positive element indeed.

[2:55:59] However, this is an existent oppositism here that is to be known as the default positivity which holds that one's presumption of other's perception of them is always to be positive so as to comfort oneself about the opinions of those around oneself.

[2:55:60] This is closely associated with the habit of today's present social etiquette that we, as individuals, should not be concerned of the opinions of those around us about ourselves; such is rejected is by the conventions within Astronist Etiquette and is replaced with the notion that the opinions of others about ourselves do remain imperatively important.

[2:55:61] This rejection of the present social habit is defended by the notion that the opinions that people hold of someone present a definite influence over the extent to which they are willing to help, speak well, or think highly of the individual in question.

[2:55:62] If one is to progress in this increasingly competitive world, one must understand the value of one's reputation, which will be more specifically addressed later, because the opinions of others about oneself hold power in how that person is to progress through the hierarchies of the world.

[2:55:63] In short, to be in the situation whereby others, especially those of integrative importance to the achievement of one's ambitions, hold good opinions of oneself and express those opinions to others, thus creating greater opportunities, is clearly a superior scenario to widespread bad opinion of oneself amongst those of integrative importance.

[2:55:64] This does not mean to say that one should change who one is to succumb to the opinions of those with power for this is incorrect; those with power have often come from origins whereby they held none at all so they understand the journey and struggles of wanting to achieve one's ambitions.

[2:55:65] Being oneself is another social habit that is spearheaded in the present society and this is something that is supported by the Astronist conventions of etiquette, but it is stressed that one should be oneself in a humbleness and frankness that is both admirable and intelligible for it is these qualities that those with integrative importance will admire for they shall see themselves in you.

[2:55:66] The next of the cornerstones of conventions within Astronist Etiquette is that which shall be known as self-imposition which is characterised by the practice of constantly reminding oneself of one's surroundings and one's company so as not to succumb to distractions which is easily done when one becomes comfortable in the presence of others, especially those one has known a for a longer time.

[2:55:67] Self-imposition is of immense importance as it can be used as an instrument of self-correction and self-direction in social instances that require strength in identity and a sense of conviction in belief so as to justify and convince others of why one believes what one does.

[2:55:68] Self-imposition involves the practice of mentally imposing upon one's the context of the social scenario which they reside through reminding themselves of the circumstances of the scenario.

[2:55:69] Self-imposition is to be conducted in the presence of others, but should not be so deeply conducted that others notice one's conduct of it which will inevitably cause others to hold suspicion of one's intentions and grow curious of one's tendency to reverie which may result in harmful conducts of research into trivial matters regarding one's personal circumstances.

[2:55:70] The next of the cornerstones to the conventions within Astronist Etiquette is that of compromission which is a term herein introduced and derived from the practice of compromising.

[2:55:71] Compromission is considered to be one of the best demonstrators of a person's intellectual and social wisdom for they both see and know when the circumstances of a discourse begin to turn too impassioned to the point at which they become dangerously close to the outbreak of physical confrontation.

[2:55:72] However, it is emphasised herein that compromission must only be conducted so as to avoid unnecessary confrontation during social discourse rather than a means to diffuse discussion for that is seen as a distorted use of the instrument as it is may also be easily used as an instrument to achieve such diffusion before the circumstances do demand it which is opposed by the Astronist convention of etiquette as an attempt to extinguished discussions.

[2:55:73] The second to last of the cornerstones of Astronist Etiquette is encapsulated as self-restraint which can take many forms, one of which is the aforementioned compromission, but it may also take the form of discourse reorientation, diffusion tactics, integrity retention, as well as formality retention and many others.

[2:55:74] Self-restraint is perhaps most useful in the instance whereby an individual presents an intrusory witticism; one devaluates one's position in the discourse if they counter such witticisms with outright rudery and especially if they resort to physical confrontation or threat.

[2:55:75] Self-restraint is used a tactic to retain one's own social standing amongst a group and upon its practice, it is considered to be the more morally upstanding of all forms of countering witticisms and other similar forms of remark.

[2:55:76] Finally, we come to the cornerstone of Astronist Etiquette encompassing reputation which is provided with the highest level of importance for all persons to focus on and to continue to master and it is in this context that reputation is considered to be the general consensus about someone according to their associates in a collectivised sense.

[2:55:77] Reputation is an abstract element of an individual that follows their person throughout their lives; once tarnished it is almost impossible to regain, but equally, once massly promulgated into the minds of many it is not easily changeable which can either be a good or bad element of its nature.

[2:55:78] Reputation is something that is omnipresent throughout all the social interactions and especially so during formal discourses; reputation must always be the priority for protection and conservation in a social setting for there will be moments when one's reputation comes under attack from others, either with higher, equal, or lower reputations of the person in question according to a multitude of intentions.

[2:55:79] Reputation is the prominentmost element of Astronist Etiquette that is to be continuously preserved for the betterment, for the progression, and for the retainment of the integrity of the character of the individual in subject.

[2:55:80] That which is henceforth known as permissionism relates to the instance in which omnidoxical conventions are knowingly relaxed in a particular location or at a particular time, typically characteristic of a philosopher's garden.

[2:55:81] Permissionism is imposed during times or places whereby an informal atmosphere of discourse can dominate the social setting and so therefore permissionist policy is enacted in various different establishments so as to ease the severity and formality of the circumstances.

[2:55:82] The imposition of permissionism is expected to be a popular policy enacted by small establishments in order to create informality in social spaces, however, the Astronist convention of etiquette maintains that imposition of permissionism has occurred on a mass societal scale that has gone too far and therefore its imposition should be regulated.

[2:55:83] Returning from other digressions onto permissionism, we come back to another of the key elements of Astronist Etiquette which maintains that excessive talking at length without allowing the imposition of other voices is not considered to be best practice, the only exception for which is during a debate.

[2:55:84] The Astronist convention on etiquette here insists that etiquette is entirely dependent, reflective, and upheld upon culture and therefore, Astronist Culture must be protected for its identity, its role, and its ability in society.

[2:55:85] It can herein be remarked with certainty that the evolution of Astronist Etiquette will simultaneously develop with the evolution of Astronist Culture, Philosophy, and Ideology as interconnected derivation of this multitude of elements that form the Astronist Identity.

[2:55:86] And as we explore what Astronist Etiquette is and how it is, it is prudent to introduce its many different branches for they demonstrate its breadth, but they also introduce a profusion of new concepts and aspects of etiquette which are expected to influence non-Astronist forms of etiquette.

[2:55:87] The Branches of Astronist Etiquette is the appellation used in the collectivisation of all the different tributaries flowing from Astronist Etiquette and the first of these is to be henceforth known as Naological Etiquette.

[2:55:88] Naological Etiquette concerns itself with the behaviours that both visitors, sophians, and volunteers at any given sopharium are expected to enact to stay within the Astronist convention on etiquette.

[2:55:89] Naological Etiquette is expected to be one of the most important forms of Astronist Etiquette, if not the most important, as it is applied in the most important places to the Astronist philosophical tradition and due to this, it is expected to be more strictly enforced dependent upon the views of the sophian leading the sopharium, its estate, and its occurrological activities.

[2:55:90] The next branch of Astronist Etiquette is that which shall be known as Codations and deals with the study of the difference in the ways in which Astronist Etiquette is presented and disseminated, as well as its physical manifestations in the world, including its practical applications.

[2:55:91] This branch is also closely related to Comparological Etiquette which itself deals with the comparison of all the different etiquettes derived from all the different cultures and traditions of the world and all the other worlds with that of Astronist Etiquette which itself is cross-disciplinary by its nature because it of course also resides within comparology.

[2:55:92] Debatorial Etiquette is the next branch of Astronist Etiquette to be introduced herein and remains of immense importance to develop and master as debate remains at the heart of the Astronist philosophical tradition and Debatorial Etiquette involves the proper etiquette to be enacted during a philosophical debate.

[2:55:93] Similarly though distinct from the previous branch, that which is to be known as Philosopher's Etiquette refers to the behaviours and attitudes expected to be observed by a philosopher as formative element of their identity as a philosopher, especially an Astronist philosopher.

[2:55:94] As distinct from the branch of Comparological Etiquette, that which shall be known as Non-Astronic Competence refers to the interactions between Astronist Etiquette itself, or those whom follow enact it, and non-Astronist etiquettes, or those whom follow them; specifically, it draws its interest on how these differences etiquette interact with one another rather just exploring them abstractly through comparological apparatuses.

[2:55:95] There exist four other smaller branches of Astronist Etiquette that are to be introduced herein which include Table Manners, Coworker Etiquette, Netiquette, and the role of Respection in Astronist Etiquette.

[2:55:96] These four minor branches make up the final branches of Astronist Etiquette which, when considered all together, form the basis of the identity of Astronist Etiquette.

[2:55:97] Closely linked with these branches and even wider Astronist Etiquette as a whole is that which shall henceforth be known as protocolism, or protocolist thought, which is a futural branch of Astronist Etiquette that cannot yet be established as a branch for the reason that it is not yet in actual occurrence.

[2:55:98] Protocolism encompasses the etiquette mechanised within different forms of robotics according to their prescribed roles in human society and protocolist thought concerns itself with how robots of all different kinds should behave and how they should interact with different sentient beings in civil society; essentially, the fundamental relationship between robots and sentients is brought into concern.

[2:55:99] Before we address the final branch of Astronist Etiquette, we come to address that which shall henceforth be appellated as the Order of Precedence which pertains to the existence of a definite hierarchy within the Astronist cultural sphere which directly impacts upon Astronist Etiquette.

[2:55:100] The herein prescribed Order or Precedence places philosophers at the top of the hierarchy, wherein philosophers are unanimously considered to be the most prominent people within any given society due to their wide ranging and fundamental contributions to the arts, politics, science, civilisation development, societal identity, religion, and of course philosophy itself as an element of social order.

[2:55:101] In the Order of Precedence, the trilettants hold a median position for they take one step towards becoming philosophers, but they do not allow themselves, or they cannot go the entire way either because of a lack of ability, vocation, or conviction, or because they hold commitments in other aspects of their lives that they feel they cannot balance with their talents for deeper contemplation so they settle for the middleground, as trilettanism is often alternatively known as.

[2:55:102] Finally, we come to the dilettants which hold the lowest place in the Order of Precedence hierarchy, which may also be termed as the Astronist Hierarchy, and it is this group that take their at the bottom because of both their disinterest, disproximity, and disability to even briefly engage with philosopher, astronomy, or any higher thought of any kind for instead they opt to isolate themselves from such a life of either prolific or moderate contemplation in exchange for focusing on just our immediate material existence and the trivialities that are paired with that which are characteristic of dilettanism and the thought and belief orientations residing within it.

[2:55:103] The final branch within Astronist Etiquette is that which shall be known as Astronist Business Practice which involves all forms of etiquette that are applied in the context of business partnerships and related activities.

[2:55:104] The Astronist convention on etiquette for business practices takes inspiration from both Chinese and Western business etiquette, thus mixing them together and forming a hybrid, the former of which is resonative to the nature of Astronist Business Practice while the presence of the latter is due to the location and culture of where and when the Astronist philosophical tradition was founded.

[2:55:105] “A notable difference between Chinese and Western business etiquette is conflict handling,” and the Astronist convention on etiquette towards business practices takes a middleground between the two.

[2:55:106] “Chinese businesses prefer to look upon relationship management to avoid conflicts – stemming from a culture that heavily relies on guanxi (personal connections) – while the west leaves resolution of conflict to the interpretations of law through contracts and lawyers.”

[2:55:107] The Astronist business etiquette herein states that the adoption of the Chinese inspired measure is to be conducted firstly and if the conflict cannot be resolved through relationship management, different methods of which are to be introduced in post-omnidoxical etidoxies, then the Western approach of the implementation of contracts and lawyers is to be invoked as an alternative final measure thus forming a hybrid system and middleground between these two different approaches.

[2:55:108] “In China, a person who takes the last item of food from a common plate or bowl without first offering it to others at the table may be seen as a glutton who is insulting the host's generosity.”

[2:55:109] Because of the orientation of food in Astronist Culture, it is not based upon common plates and bowls like in Chinese Culture, therefore this does not apply to eating in Astronist Etiquette.

[2:55:110] Despite this, in a general sense, it is considered to be bad manners of etiquette regarding food to take from another person's plate, or to even lay one's hand on or close to another person's plate or bowl in Astronist Etiquette which also includes the taking of another person's food even after they are full and you still remain hungry.

[2:55:111] “In Hausa culture, eating while standing may be seen as offensively casual and ill-omened behaviour, insulting the host and showing a lack of respect.”

[2:55:112] In the Astronist convention of etiquette, this is a principle of social eating that is also agreed with as standing while is not considered to be good for one's digestive system, and neither is it best social practice.

[2:55:113] “In the United States of America, a guest is expected to eat all of the food given to them, as a compliment to the quality of the cooking.”

[2:55:114] In the branch of Astronist Etiquette dealing with food, this topic demonstrates a point of diversion from as this is outrightly disagreed with by Astronist Etiquette, especially the element that one must eat all of the food given to them, however, complimenting the cooking vocally is something that is encouraged even if one does not eat it all; essentially, in Astronist Etiquette, when one is full one is full and they should not feel pressured in overfilling themselves to suit the demands or insecurities of others.

[2:55:115] In Astronist Etiquette, the support for the consumption of alcohol is demonstrated throughout for not only does alcohol provide one with the escape from reality that they perhaps need, but it also allows for the relaxation of social groups, thus breaking down the strict social barrier between different classes and individual of different backgrounds, cultures, and belief; essentially, the consumption of alcohol unites according to love, friendship, and relational value due to the removal of stigma and judgement from one to another.

[2:55:116] Although only social drinking is permitted a formal functions in Astronist Etiquette, greater levels of alcohol consumption are permitted at establishments that uphold permissionist policies, the most notable example of which would be philosopher's gardens in an Astronist context.

[2:55:117] Arguments against the consumption of alcohol are expected to also be rife throughout wider interpretations of Astronist Etiquette with the main counterargument maintaining that the excessive consumption of alcohol causes the degradation of sensible and civil debate.

[2:55:118] The Astronist convention of etiquette agrees with this notion which is why, during formal functions, it permits only social drinking like during a debate, or at a dinner, but as the night continues on and discussions of philosophical topics begins to fade, the consumption of alcohol beyond social drinking is not discouraged, especially in permissionist establishments.

[2:55:119] The main counternotion to the argument from the Astronist conventional perspective is that the greater consumption of alcohol leads to more open and honest conversation and discussion and therefore alcohol plays a pivotal role in the eradication of people's inhibitions and nerves that create obstacles for them to open up about their true opinions.

[2:55:120] It does remain true that alcohol allows for an atmosphere of informality in social settings, but this does remain acceptable in order to a gain

[2:55:121] However, in actual debataions, the consumption of alcohol, while allowed, remains cautioned against, or limited to social drinking measures, so as to stifle any chance of the debaters from becoming too informal as debataions must remain formal, proper, and a beacon for intelligence and civility which the consumption of alcohol may not allow for.

[2:55:122] In some cultures, "it is traditional for the host and guests to take turns filling each other's cups and encouraging each other to gulp the alcohol beverage down."

[2:55:123] Similar in principle to the Astronist convention of etiquette while eating, this tradition is opposed to because filling someone else's drink for them puts pressure on

them to drink which is prohibited in Astronist forms of social etiquette; each individual must provide vocal consent for greater amounts of anything, whether it be food, an alcohol beverage, or a non-alcoholic beverage.

[2:55:124] In Astronist Etiquette, a person may be encouraged to drink in some social settings such as in permissionist establishments like philosopher's gardens, but they should never be forced or pressured into drinking and they should always be allowed to engage in every other aspect of the social setting despite their abstinence from either food or drink as the Astronist convention on etiquette realises that some individuals may prefer not to consume food and drink in the presence of others.

[2:55:125] "In all literate civilisations, beginning with Greece and Rome, philosophers were often tasked with developing rules for proper social conduct and Confucius included in his works rules for eating and speaking along with his more philosophical sayings," and it is from these forephilosophers that the Astronist convention on etiquette takes its inspiration for the construction of its own system of social conduct.

[2:55:126] The Astronist convention on etiquette firmly believes that the development of etiquette is a sign of the sophistication of a civilisation and a culture which is why Astronist Etiquette is promoted herein as a part of sanitology in The Omnidoxy which demonstrates its own prominence especially as it resides alongside prominent elements of the Astronist philosophical tradition.

[2:55:127] In this same spirit, the belief orientation that is to be henceforth known as sophisticism, or sophisticationism, which itself contemplates the nature of sophistication which is considered to rest at the heart of the Astronist approach to etiquette for the upholding and maintenance of sophistication is agreed to be the main goal of etiquette convention.

[2:55:128] In addition, that which makes sophisticism a belief orientation that exists within Astronist Etiquette is the fact that it maintains the notion that sophistications rests at the centre of organised society, and thus forms what can be described as civility in society.

[2:55:129] Sophisticationists contemplate the nature of sophistication and in the Astronist Tradition, sophistication is considered to be composed of four main elements with the first of these pertaining to the bidimensional structure of sophistication as determined according to an individual context and a societal context.

[2:55:130] The second of these is an awareness of others on both an individual and societal level as predicated on the previous bidimensionality of sophistication; an individual's awareness of others demonstrates their understanding, care, and respect for how they are to be perceived, and how they represent their own culture and society from which they originate.

[2:55:131] The third of these is both the sensitivity to knowledge and the accessibility to knowledge for the Astronist convention on etiquette maintains that there exists a correlation between the extent of one's accessibility to knowledge and their tendency for sophistication in social and personal settings.

[2:55:132] Fourthly and finally, the Astronist convention on etiquette maintains that the nature of sophistication is entirely dependent upon the conventions of etiquette in the society in subject thus is dependent upon relative understanding of a society in comparison to the structures of others, thus pertaining to the notion that etiquette is predicated on the establishment of universals, encapsulated as conventions in Astronist Etiquette.

[2:55:133] Briefly returning to an aspect of etiquette practice, the Astronist convention on etiquette upholds the principle that pointing at someone is universally unsophisticated in all contexts.

[2:55:134] As readers should have foreseen at the beginning of this discourse, its rubral is The Etidoxy, but the term etidoxy relates to a category of Astronist books that deal with etiquette, the original of which of course remains within The Omnidoxy.

[2:55:135] Etidoxical books are characterised by their premise on the interpretation of the Astronist convention on etiquette by post-omnidoxical authors and philosophers, usually following productionism so as to establish new forms of etiquette convention within Astronist Etiquette.

[2:55:136] If etidoxies refer to the written elements of etiquette convention and practice then the related term of an etidom is proper in its reference to the extent to which a particular etiquette convention holds dominance in a region or specified locality.

[2:55:137] The subject of profanity is one of deep debate in Astronist Etiquette as there are varying approaches to the use of profanity depending upon the social setting and not only those with whom one is conversing, but where they are conversing and whom may hear them conversing.

[2:55:138] There is a strong protestation against profanity in Astronist Etiquette, especially so in philosophical debates for such instances are seen as sophisticated arenas of speech while profanity is considered to be fundamentally unsophisticated, inarticulate, and unintelligent speech and therefore holds no place in a debatement.

[2:55:139] Furthermore, the use of profanity in non-personal and other social settings is opposed, such as when in the company of individual(s) with whom one does not have a close personal relationship with therefore one does not know the sensitivities that said individual will have towards the use of profane language.

[2:55:140] Additionally, the use of profanity in front of family members both young and old is not permitted, and neither is the use of profanity in front of children in general, whether they are of one's relation or not for this sets a bad precedence for such children to be hearing language that is not becoming of their character.

[2:55:141] The Astronist convention on etiquette also considers the use of profanity in sophariums to be an act of disrespect for both the sophian of the building, as well as the volunteers there, the others visitors, and any followers of Astronism in proximity, which is why it is dissuaded against.

[2:55:142] The only two instances in which profanity is permitted to be used according to the Astronist convention on etiquette is firstly in the privacy of one's home either when alone or amongst suitable individuals so as not to defy the previously stated principles.

[2:55:143] Secondly, in the setting of a permissionist establishment after the consumption of alcohol and again, only amongst those with whom one has a personal relationship, not in front of children, or the elderly for such indecencies are not flattering for one's image, especially around those of considerable sensitivities to such uses of language.

[2:55:144] Now comes the point in the discourse when we must address the different non-Astronist etiquettes of the world and offer an Astronist viewpoint to some of the main parts of these world etiquettes.

[2:55:145] Before we begin, it is important to note that we shall only address the prominentmost elements of these different non-Astronist etiquettes or the most pertinent for the Astronist Tradition to address and so we understand that the etiquettes of which we speak here hold much greater depth, breadth, and complexity than is perhaps demonstrated in this part of the discourse.

[2:55:146] In African forms of etiquette, it is polite to pretend to agreement with another's point of view, even if one does not agree with the other's viewpoint, but from the Astronist perspective, this is considered wrong because it deviates from the core of what philosophy is which is to challenge opinions, even if oneself has an opinion or not.

[2:55:147] Albeit this challenging of opinions must be conducted in a sophisticated way that makes use of one's abilities to justify, persuade, rationalise, and explain one's opposing point of view.

[2:55:148] The Astronist Tradition appreciates that not in every situation would it be prudent to agree with another person's point of view, depending on the environment, the nature of the topic, one's own knowledge and identity, as well as the stature of the person with whom one disagrees, but the essential premise held is that if the situation is appropriate, the topic not overly sensitive, and one's counterargument is briefly justifiable then, as a follower of the Philosophical Spirit, one not only should disagree with another's viewpoint, but they have a duty to do so in order to teach others of the philosophical way.

[2:55:149] Therefore, to conclude, the Astronist Tradition concedes that in some instances, the practice of that which is known as a false agreement, is acceptable but this should be considered the exception rather than the normality and repetition of the practice is deemed to signify one's disalignment with the Astronist tradition of etiquette.

[2:55:150] Next we move on to the Asian tradition of etiquette which is extremely diverse and will certainly not be encapsulable in this portion of the discourse, but as aforeaffirmed, we shall only focus on the prominentmost elements of the tradition in order to develop the Astronist responses to the tradition.

[2:55:151] In the vast majority of the Asian tradition of etiquette, old people are always treated with deference and that it is considered rude for a young person to be direct and opinionated when talking to his elders.

[2:55:152] The Astronist approach to etiquette stands in partial opposition to this principle of Asian etiquette by the notion that elderly people should understand that young people are still forming their ideas, identity, and views of the world and it is natural and healthy for them to want to debate and discuss topics both of a sensitive and non-sensitive nature.

[2:55:153] To hold a deference for elderly people is certainly not a condemnable principle to adhere to, but the Astronist Tradition notionises that elderly people, having once been young themselves, should understand the processes through which young people go during the development of themselves and therefore should want to help younger individuals form their opinions and ideas rather than force them into submission of the traditional ways or of the views held by their elders.

[2:55:154] This counterargument presents a radically new way of thinking for the majority of etiquettes and their cultures, but it is markedly more philosophical to question and oppose the views of one's elders, albeit it be conducted politely, rather than quieten oneself into submission which will lead to one's inability to build confidence, one's lack of development of a clear worldview and a general lack of vigour, identity, and passion for topics if they are not brought up in a culture and etiquette that values polite opposition rather than blind and forced submission.

[2:55:155] In the Chinese tradition of etiquette, eating and eating out is one of the most common ways to honour guests, socialise, and deepen friendships and the whole process of eating is a dominant element in the culture unlike for the Astronist Culture in which eating is not as prioritised.

[2:55:156] With this divergence in orientation of the Astronist and Chinese cultures with regards to the prioritisation of food and eating in the latter as opposed to the former, there exists a fundamental differences in many other aspects of etiquette in relation to food and eating.

[2:55:157] One of the most prominent examples of these differences is found in the notion that in most traditional Chinese dining, dishes are shared communally while in Astronist cuisine, culture, and etiquette, due to its origins and residence coming from the Western culture, dishes of food are to be eaten singularly rather than shared communally.

[2:55:158] There are many conservative elements of the Astronist approach to etiquette and these typically manifest themselves in a generally polite character and nature that is associated with overall Astronist Culture.

[2:55:159] One of the examples of this that demonstrates an intersection with traditional Chinese etiquette and culture is the importance one's considerate of other people's dignity and the condemnable act of shaming or humiliating people in public which is considered extremely rude and has become a much more common element of Western cultures, particularly across certain personality types and traits.

[2:55:160] The Astronist tradition of etiquette however aligns itself with the Asian tradition of etiquette in this case as any form of humiliation is not considered to be becoming of the humiliator and is tantamount to the development of a culture of defamation which, as aforementioned, has risen to prominence in many forms in Western culture; this is neither considered progressive, positive, sophisticated, nor polite in the Astronist tradition of etiquette.

[2:55:161] Another custom in Asian etiquette is the use of one's right hand in the majority of circumstances including when shaking hands, offering a gift, handing or receiving something, eating, pointing or generally touching another person and this practice is concurred by the Astronist tradition of etiquette.

[2:55:162] It is considered improper to show affection (such as kissing) one's partner or spouse in public as it is not showing modesty and piety which, despite them being traditional characteristics and qualities, are valued in Astronist Etiquette.

[2:55:163] Specifically in Astronist Etiquette, the practice of excessive kissing or affection between couples of any gender is considered unsophisticated in certain settings, such as when in the company of children, one's employer, or older relatives, during philosophical debates, in philosophical buildings, or in front of elderly people.

[2:55:164] In Astronist Etiquette, there is no differentiation between the actions and attitudes of males and females, especially so in a biased way therefore if women are to be modest in dress and manner, then so must men.

[2:55:165] This is to be known and henceforth appellation as Etiquette Equality and is one of the most distinguishing elements of the Astronist tradition of etiquette as most other forms of etiquette hold an institutionally and deeply entrenched inequality that stands in favour of men in which they hold more freedom to dress, act, and say as they wish.

[2:55:166] An important and unique part of Astronist Etiquette is that which shall henceforth be known as a philosophy card which is similar to a business card, but displays one's specialities and interests in Astronist philosophical study, typically given out before or during philosophical debates or in sopharial buildings in general.

[2:55:167] It is a stipulation as part of Astronist Etiquette that philosophy cards be given and accepted with both hands and it is also expected that the card will immediately be inspected and admired, then placed in a cardholder and this action should be shown to the giver to reassure them of the card's acceptance and safety.

[2:55:168] Therefore, we understand that all philosophy cards should be stored respectfully and should never be placed in one's back pocket or be treated in such a way that rips or damages them and to keep within the moral codes of Astronist Etiquette, one should not write on a business card.

[2:55:169] If one wishes to be taken seriously at a meeting or philosophical debate as a philosopher, one must possess philosophy cards and when one gets them out, they should be in a cardholder and as aforementioned, they should be placed into a cardholder upon their reception.

[2:55:170] In Astronist Etiquette and in an Astronist society, the main dictation of social standing, honour, precedence and title is the extent of an individual's philosophicality and this is set to pervade throughout the entirety of Astronist Culture and remains one of the most distinctive characteristics of Astronist Culture from all other tradition of culture.

[2:55:171] A person's philosophicality pertains to the extent to which they contribute to the philosophical aspects of the society, the amount of times they attend philosophical debates, or the extent to which they are known for their contributions to philosophy in general; this is known as dictationism, or philosophicalism.

[2:55:172] That which is to be henceforth known as the act and practice of pretendation refers to one's pretence in front of others for the purpose of alignment with the dominant tradition of etiquette if one does not personally agree with said etiquette.

[2:55:173] Pretendation is considered aphilosophical in the majority of the instances in which it occurs because it does not allow for the challenge of opinions, but it remains allowable when a person has not yet developed a strong enough identity or does not have the confidence or enough justifiable counterarguments in order to count that which has been stated.

[2:55:174] Guests are honoured delightfully and treated with love and respect so, relatives, colleagues, friends and people from neighbourhood feel happy and cheerful to meet and stay connected with each other in order to structure and secure a community of people that all follow Astronist ideas of etiquette.

[2:55:175] It is expected that those whom follow the Astronist Etiquette, guests visiting another person's house will inform that person before their arrival so that someone's routine is not disturbed which demonstrates sophistication for the visiting party and retains harmony for the host.

[2:55:176] Furthermore, uniquely in Astronist Etiquette, perambulations for the discussion of business, personal issues, and philosophical issues is not only common, but it is important because if a person only sits down in a meeting with a person without any perambulations either before or afterwards, this demonstrates that they are not interested enough in that which has been agreed or is to be spoken about.

[2:55:177] According to the Astronist tradition of etiquette, to perambulate after a meeting is to seal the deal while to perambulate before a meeting is to demonstrate one's interest in that which shall be spoken about.

[2:55:178] In Astronist Etiquette, those whom are philosophers and those whom are inspired to attain the title of a philosopher, which is attained through others' regardence of one as holding this title, are to be the most respected of all people in the society.

[2:55:179] Therefore, that which is known as regardency, which is the extent to which other people regard one as holding and deserving the title of philosopher, is the most important and most exclusive way of reaching the highest stature in an Astronist society and to have a high regardency in which the majority of people regard one as a philosopher is most prominent stature to reach in the Astronist tradition of etiquette.

[2:55:180] Turning to forms of etiquette found in Oceania, spitting in the street or on the footpath is considered to be extremely bad manners as it demonstrates a lack of respect for the sightliness of the street itself as well as a general disregard for others walking past; to do this is considered a definite divergence from Astronist Etiquette.

[2:55:181] "Common restaurant manners include using the knife and fork properly, refraining from burping and placing elbows on a table, placing your napkin on your lap and leaving it folded on the table after use, and eating neatly," and all of these elements of etiquette are considered to be common practice and expected by default within the context of Astronist Etiquette.

[2:55:182] "Chewing open-mouthed (including chewing gum), slurping loudly, flatulence and talking with a full mouth are considered very rude and if you do any of these things accidentally, say "pardon me" or "excuse me," and these parts of etiquette practice are also elemental to Astronist Etiquette.

[2:55:183] Furthermore, it is considered bad manners to pick one's teeth with the fingers in public and this is concurred with the Astronist tradition of etiquette.

[2:55:184] We now move onto the unique etiquette of the Middle East and in many cases, people of the same sex holding hands while walking is considered an ordinary display of friendship without romantic connotations and this is agreed with in Astronist Etiquette as long as the individuals are comfortable to do so.

[2:55:185] Affection between men is prohibited in the Middle East and this is disagreed with by the Astronist Etiquette because two men hugging is normalised and showing affection to one another is normal for men as part of the development of neomascularity.

[2:55:186] Many in the Middle East do not separate professional and personal life as a part of their overall culture and therefore doing business revolves much more around personal relationships, family ties, trust, and honour and the Astronist tradition of etiquette is also highly supportive of this element of Middle Eastern etiquette as it is considered to be a positive approach to the development of business and lifestyle.

[2:55:187] There is a tendency to prioritise personal matters above all else and it is therefore crucial that business relationships are built on mutual friendship and trust in the context of the Middle East, but this is also to be transferred into Astronist Etiquette as, again, it is considered to be a positive contribution to the overall development of Astronist Etiquette's approach to business.

[2:55:188] As we now move onto the etiquette of Europe, it is important to understanding the context of the origin of Astronist Philosophy and Etiquette which rests in the United Kingdom in Europe and so European culture and etiquette is entrenched in the Astronist Philosophy due to my own origination as the author of The Omnidoxy and although Astronist Philosophy is certainly not an emulation of European culture, the Cometanic influence in the philosophical tradition is certainly of a European nature.

[2:55:189] Talking or asking about one's personal wealth, possessions or success in business is widely viewed as vulgar which is in fact disagreed with and justify in the Astronist approach to etiquette.

[2:55:190] This is agreed with because Astronist Etiquette intends to remove the almost sacredness of this topic so as to demonstrate its non-importance because to superiorise the topic is to provide it with importance as the Astronist Tradition considers wealth, possessions, and success in business not to be important, especially in comparison to one's family, health, philosophicality, knowledge, and spirituality.

[2:55:191] Finally, as part of European etiquette, it remains impolite to ask colleagues about their salary and in some places of work it is forbidden and this is agreed with in Astronist Etiquette due to the exception of the workplace in the discussion of personal elements of a person's life and their successes because of how it causes friction and hostility between workers which is detrimental to the overall functionality of the business.

[2:55:192] We now move onto the etiquette on the continent of South America which demonstrates a generally more relaxed and casual behaviour and every person is encouraged to become more comfortable with loud talk, exaggerated gestures and physical contact.

[2:55:193] Therefore, it is common to greet known people by kissing him/her on the cheek and the Astronist tradition of etiquette agrees with greater physical contact though not overt public kissing that ventures into territory of vulgarity, but this greater level of physical contact is expected to increase people's overall confidence and their ability to philosophise and debate together.

[2:55:194] Many Latin American people have a smaller sense of personal space than other people and for Astronist Etiquette, especially in informal circumstances of socialisation, is an important element to adopt as close contact talking is considered to be a sign of a deeper discussion or of mutual philosophical understanding and it is therefore deemed a positive contribution.

[2:55:195] "At some finer restaurants, it may be considered rude for the staff to bring a customer the check without the customer first requesting it," and this is agreed with in Astronist Etiquette as waiters/waitresses that are too assertive are considered to be impolite and should not receive tips; the only instance in which assertiveness is accepted is if the restaurant is soon due to close and the party is being disrespectful of the staff's time.

[2:55:196] "It is considered impolite to "toss" objects to people instead of directly handing it to them," which again is concurred by the Astronist tradition of etiquette which demonstrates an abundant adoption of Latin American etiquette customs into the Astronist Etiquette.

[2:55:197] "Haitians take proper behaviour seriously and this includes good manners, clean appearances at all times, a moderate tone in one's speech and avoidance of any profanity or public "scenes", as these are all important indicators of one's social class," and this is another element of Latin American etiquette that is highly concurred by the Astronist tradition of etiquette, especially in the context of philosophical debatement.

[2:55:198] Unlike the majority of the cultures and etiquettes of the world, a large emphasis is not placed on eating in Astronist Culture and Etiquette, as aforementioned, and eating is certainly not considered a social event, while a philosophical debate or astronomical observation would be considered as such and this is one of the defining characteristics of that which can be described as Astronist culture.

[2:55:199] At restaurants, the one who extended the invitation pays the bill and this is considered to be common practice in the context of Astronist Etiquette also, especially in a formal setting if one is meeting with people that aren't their friends or close relatives.

[2:55:200] Additionally, unless another woman is present, a woman should not buy dinner for a man and making arrangements for payment before the meal is considered especially polite and this is particularly concurred by the Astronist tradition of etiquette, but if the party dining are acquaintances rather than romantically involved or are of familial relation, then the man is not expected to pay; if there are multiple men and these circumstances apply then the men should split the bill between them.

[2:55:201] In the context of Astronist Etiquette, while dining, for making a toast, the most common toasts include, "to your dreams", "to your ambitions", "to your achievements", "to The Cosmos" or most importantly, "to contemplations" or "to our contemplations" and these forms of toasts are unique to Astronist Culture.

[2:55:202] Toasts remain the most important element of any social gathering and they are considered to be a time in which a philosophical statement or something of deeper meaning can be conveyed to the group and for this reason, a social gathering without a toast is not considered to be a proper social gathering in the eyes of the Astronist tradition of etiquette and the responsibility for the inclusion of a toast into the event is herein placed with the host.

[2:55:203] "Friends, family and close acquaintances usually share a light kiss on the cheek" upon meeting and greeting one another and this is an element that is certainly another element of Latin American etiquette that is concurred with by Astronist Etiquette as it demonstrates love, acceptance, appreciation, and physical comfortability which is considered to lead to philosophical and social comfortability.

[2:55:204] When attending a philosophical debate, or entering a philosophical building, one's best clothes should be worn, but one should feel they are free to express their fashionability in Astronist philosophical buildings as long as they clothes they wear are both presentable and are some what formal.

[2:55:205] "Punctuality in an informal setting is not highly valued and being late is usually not considered rude," in the Latin American tradition of etiquette, but this is opposed to by Astronist Etiquette as punctuality is considered to be one of the most defining elements of a person's character and is a sign of the extent of their interest, respect, and value of others and their time; in Astronist Etiquette, punctuality is provided with the highest degree of importance.

[2:55:206] It is also common for people of the same sexes to hold hands in the context of Latin American etiquette and this is concurred by the Astronist tradition of etiquette despite its stark divergence from European forms of same sex interaction and etiquette as holding each others' hands in the European context is provided with a much more romantic connotation.

[2:55:207] Children under the age of thirteen are to be seen and not heard; not to draw attention to themselves and are certainly not to speak until spoken to and this principle is

especially pertinent in Astronist philosophical buildings and anybody under the age of fourteen is generally not allowed into to philosophical debates and one must be at least sixteen years of age before they are allowed to speak or contribute in any way to a philosophical debate.

[2:55:208] Children are considered to be vessels for philosophical educative means and their purpose is to be educated, for them to process such learning, and for them to learn only to ask questions in a polite and sophisticated manner and other than this, they should be seen and not heard until they are of age and until they have developed their own worldviews and justifiable opinions about topics.

[2:55:209] Children are encouraged to question in order to align themselves with and become familiar with the Philosophical Spirit so that they are raised in a philosophical way of thinking rather than another way of thinking which may be aphilosophical or non-philosophical.

[2:55:210] “Flatulence, when company is present, is very rude and should be done in another unoccupied place,” and this, as the final element of our address of Latin American etiquette, is also concurred with by the Astronist tradition of etiquette, but it is also understood that those with whom one is comfortable, such as very close friends and family, it is not only acceptable for flatulence in this instance, but it is considered natural as it is only opposed to in formal situations or in situations that do not include close friends and relatives.

[2:55:211] In order to form the final element of our consideration of the different traditions of etiquette around the world and their comparability to that of the Astronist tradition of etiquette, we now address North American etiquette and its main parts.

[2:55:212] “One should attempt to suppress yawning in polite company, concealing the mouth with the back of the hand,” which remains an entrenched element within Astronist Etiquette also, especially during philosophical debates and when in company with whom one wishes to impress.

[2:55:213] “Also, sneezing into a hanky, tissue, or side of your sleeve is expected, rather than turning or sneezing into the open air,” which is again concurrable for the Astronist tradition of etiquette.

[2:55:214] In the context of a party or some other social gathering to which one is invited, guest hold the responsibilities of dressing appropriately to the occasion and providing one's own transportation and lodging for the duration of the gathering while food, drinks, and all other consumables and excursions of entertainment or otherwise are to be vested as the responsibility of the host and as a courtesy, the host may include dress instructions.

[2:55:215] Furthermore, in Astronist Etiquette, guests of a party should always bring with them some form of gift whether it be handmade or bought, but instead the greater

monetary value of the gift suggesting greater love and friendship, the more time that is spent on making, buying, or creating the gift is the superiorised demonstration of one's interest, friendship, attraction, or relationship with the gift receiver.

[2:55:216] "In public transportation or waiting areas, it is proper for people in good health to offer their seats to an elderly person and to those with special needs, such as the frail, disabled, people with infants, and pregnant women," and this is firmly concurred with by the Astronist tradition of etiquette.

[2:55:217] In Astronist Etiquette, one must not speak of another's sexuality, gender identity, relationship status, or the status of their virginity unless the individual raises the subject about themselves and even then, the conversation relating to that topic should not be continued further unless the consent of the individual of whom the conversation is referring to is clearly provided.

[2:55:218] However, the discussion of philosophical and religious beliefs is considered essential to furthering of relationships and friendships and this is considered a common practice within Astronist Etiquette.

[2:55:219] The Astronist Etiquette opposes and remains confused about all notions pertaining to the prohibition of speaking about religion and politics and points to a Masonic influence on wider society as Freemasons are also not allowed to speak of religion and politics with one another and the Astronist Tradition considers this to be the reason why wider European and American societies are not to speak of religion and politics.

[2:55:220] Instead, Astronist Etiquette embraces the discussion of politics and religion, either in a formal or informal setting and certainly philosophical talk is essential to understanding a person and therefore it's importance in discussion remains of the highest degree; philosophical talk encompasses all dialogue between individuals that references or even remotely pertains to a philosophical nature or subject.

[2:55:221] In Astronist Etiquette, when one is sitting, one must maintain themselves by trying to remember to sit like a pianist sits upon their stool with their back up straight and especially for men, their chest expressly made large by the inhalation of air and the tensing of one's chest muscles and a certain sternness of face.

[2:55:222] Women are to also sit with their backs upright and straight, but they are not to inhale so as to express their chest more, but are to instead curve their back inward slightly so as to emphasise their buttocks which can also be a requirement for how men are to sit as well.

[2:55:223] By this address, we understand that the differences in the posture of sitting for both men and women is of significance for the Astronist tradition of etiquette, especially in such a way that expresses certain body parts as for men this includes the size of their legs,

chest, and the fitness of their waist while for women this includes the size of their buttocks, the fitness of their waist and the length of their neck.

[2:55:224] However, the exposition of one's body is not considered to be offensive, especially in hot countries and due to the principle of Equality of Etiquette, both men and women are permitted to expose their bodies according to their own personal comfortabilities rather than women being told to be modest while men are more free to expose their bodies as is the case in many etiquettes around the world.

[2:55:225] Each of these elements of Astronist Etiquette outlined herein, when combined, form the character of the Astronist tradition of etiquette and each element may be adhered to strictly or not so strictly depending on the person, the setting, their family, and other forms of influence.

[2:55:226] An overall commentary is required of the ways in which Astronist Etiquettes mixes different aspects of etiquette from different parts of the world and which world etiquettes have most influence the Astronist form with the most common inclusions being the European, Latin American, and North American forms of etiquette.

[2:55:227] A branch of Astronist Etiquette involves personal hygiene, known as Hygiene Etiquette and for those following the Astronist way of etiquette, the following are preferred though not essential and this is rarely the only place where men and women are distinctly differentiated.

[2:55:228] As the final portion of this discourse to introduce Astronist Etiquette, it is important to herein and now list the different ways in which men and women are expected to maintain themselves in the context of personal hygiene, fitness, and general appearance which strongly pertains to a person's overall identity as an Astronist.

[2:55:229] Firstly, we shall begin with men and in the Astronist tradition of etiquette, it is encouraged that males of all ages maintain their face as clean shaven at all times to retain their youthfulness, to present themselves as clean, presentable, smart and formal.

[2:55:230] Secondly, the moderate removal of armpit hair regularly is an aspect of Astronist version of personal hygiene so that it does not extend beyond the armpit itself though the surgical removal of armpit hair is not encouraged and one's regular upkeep of deodorisation is of particular importance; the shaving of armpit hair is another way of maintaining one's cleanliness as excessive armpit hair is not considered to be a demonstration of being hygienic.

[2:55:231] Thirdly, regular shaving of private areas is considered central to personal hygiene; a general consideration of one's genital hygiene and shaving is of importance.

[2:55:232] The strengthening of one's arm muscles, the broadening of one's shoulders, and the padding, broadening, deepening, and emphasis of one's chest, which is to be known as

prepotation, is encouraged for the purpose of the development of one's posture, although excessive fitness routines are considered to be addictive, unnecessary, and distracting but one is instead encouraged to focus on the fitness, strength, and confidence of one's mind and their philosophicality which is prioritised over the excessive fitness of one's body although the benefits of regular exercise for both sexes is latter mentioned at the end of this discourse; the reasons for such exercise and emphasis of certain areas of one's male body are to be purely based upon the benefits of good posture in order to improve one's mental and physical health as the conduct of these acts for the purpose of egoism is considered to be wrong and the display of such body types in the media to encourage the masses to strive for a certain look of perfection is also considered to be unethical by such organisations; of course, the display of Jesse and the other Astronist Characters as the effigies of Astronism, is a common occurrence within Astronist Art, although it remains crucial to say that in Jesse, although we may wish to strive to achieve his aesthetics, true followers of Astronism understand that it is Jesse's strength and perfection in mind, philosophicality, knowledge, personality and understanding that are the true and most important elements for which a person may wish to strive; we must retain our strength in our neomasculine minds to see beyond the perfect aesthetic expectations that are presented before ourselves; for this reason, Cometanism emphasises the development of a good posture as a demonstrative measure of one's mental and physical wellbeing rather than the pure bodybuilding elements; the words at the beginning of this insentensation have been said for the improvement of one's own physical and mental health rather than for physical aesthetics because improving one's posture is such a way is considered to be highly beneficial to one's overall health; of course, no specificities are provided herein which demonstrates the natural need for bodily diversity amongst neomasculines; again and finally, one must remember that it is not the body type that is prioritised here, but it is instead the posture of one's body for no matter if one's body type is skinnier or larger by nature, if their posture is correct then one's physical wellbeing is considered to be greatly improved by one's focus on posture rather than bodybuilding despite the latter of which being the present craze; ultimately, neomasculines and neofeminines hold the choice to become the greatest versions of themselves, a version that is not just in conformity with the ideas of aesthetics propounded in society, but instead a version of oneself that can enjoy moderated gluttony, feels strength and confidence flow through them by their posture, can enjoy the attire they dress themselves in, can enknowledge themselves with the wonderances of The Cosmos through the building of their philosophicality for we must look towards the enhancements we can make to the development of our minds and philosophicalities as the primary areas of our ambition and most importantly, that people can actually live their lives without and become who they wish to be without being distracted by the notions of physical beauty that are displayed to us; instead of considering or judging a person for the extent of their aesthetics, we should instead look towards the fitness of their minds and philosophicalities which shall teach us far more about whether they are individuals to admire and to strive to akin to.

[2:55:233] Other elements of an Astronist man's personal hygiene does involve cutting toenails and fingernails often and regular shaving within the nostrils, ears, and trimming of eyebrows so as to avoid a monobrow is expected.

[2:55:234] Circumcisions are not required for this is considered pre-Astronist, religious, ancient, and without meaning or benefit to philosophy and is therefore considered to be non-philosophical and even bordering on being aphilosophical which is another way in which philosophical forms of personal hygiene and appearance differ from those of a religious nature.

[2:55:235] There is a practice as part of the Astronist Etiquette's approach to personal hygiene that is herein introduced as bracation which involves attempting to pair urination and defecation before showering, or soon showering after defecation especially in order to maintain one's cleanliness at all times.

[2:55:236] Cleaning, straightening, and whitening teeth as part of a general respect for dental hygiene is encouraged to be saved up for if the health service of a person's country does not provide this to those whom need it for free as good dental hygiene is also a sign of greater neomascularity according to Astronist Etiquette.

[2:55:237] Now that we have addressed the different elements of male personal hygiene, we need to address the different aspects of personal hygiene for women, the most important element of which is for women to have the least amount of body hair as possible.

[2:55:238] The surgical removal of armpit hair is permitted if preferred by the individual but all other areas of hair grow should be frequently controlled and shaven.

[2:55:239] Cutting toenails and fingernails regularly is considered to be common practice for women, but growing longer fingernails is preferred by the Astronist tradition of etiquette due to the femininity associated with longer fingernails as defined from short fingernails for men.

[2:55:240] The least amount of cosmetic use as possible with preference to the individual is a prominent element of the Astronist tradition of etiquette as it is believed that women, especially young women, wear too much make-up which is detrimental to the healthiness of their skin.

[2:55:241] Instead, the care for one's skin in the removal of blemishes, the smoothening of the skin, and the maintenance of acne and pimples is considered the superior way of achieving beauty for women with only natural, organic, and vegan forms of cosmetics permitted by the Astronist Tradition and typically only for more formal occasions.

[2:55:242] Attempting to pair urination and defecation before showering, or soon showering about defecation especially, which is aforeintroduced in this discourse and is known as bracation is also a requirement for women in addition to men as well.

[2:55:243] Cleaning, straightening, and whitening teeth as a general respect for dental hygiene is considered to be the same requirement for women as it is for men as well and so is women's regular shaving within the nostrils, ears, and a particular care for one's eyebrows is expected for women to retain a feminine appearance.

[2:55:244] Excessive attention to skinniness or the attempt of a woman to be skinnier than her natural body weight is not considered to be healthy and is therefore highly discouraged while other elements such as posture, skincare, dental hygiene, and one's physical health are prioritised over stigmas on the appearance of heavier body weight.

[2:55:245] As aforementioned, we shall now address the topic of fitness and exercise in relation to personal hygiene for both men and women and regular exercise is prioritised by the Astronist tradition of etiquette for both men and women, but this is prioritised so for philosophical reasons rather than for hedonist, vane, egoistic or materialistic reasons.

[2:55:246] These philosophical reasons primarily include the belief in the greater ability of a person to think and feel and comprehend if they regularly exercise as well as the notion that a person that is physically fitter is set to contribute greater levels of betterment to the wider society, to create healthier families, and to be able to feel more content with their own identity so that they are able to contribute to the development of Astronism as well as hold greater roles during the Humanic Exploration of The Cosmos; the basing of physical exercise and fitness on philosophical and religious grounds shall be henceforth known as exertionism or as the wellness movement.

[2:55:247] Some may wonder why a particular importance and a fairly lengthy discourse has been dedicated to the topic of the establishment of Astronist Etiquette, but as we have seen, the development of a distinct etiquette, or way of acting, being, saying, and doing, is fundamental to the development of a wider culture and mentality, hence the centrality of Astronist Etiquette to Astronist Culture.

[2:55:248] Not only this, but with the development of this distinct tradition of etiquette that transcends national borders and continental boundaries comes a new form of etiquette and culture; one that is attached to, rooted in, and entrenched by an organised philosophy; the Astronist Culture, of which Astronist Etiquette is part, and Astronist Philosophy are the primary determiners of the overall Astronist identity and worldview; their definition and establishment herein is not only important, it is necessary.

[2:55:249] The etiquette of a person or a group of people is demonstrative of their values, is a signifier of their beliefs, and can be considered an extension of the way in which they practice their philosophy and manifest their ideas; etiquette is one important way in which the philosophy of a person, which is of course majoratively conceptual, can be practically applied and physically manifested, thus further pertaining to its overall integrality to the development of Astronist philosophical practice and the Astronist identity.

[2:55:250] To conclude, without the development a distinct system and tradition of etiquette for an organised philosophy, it is difficult to describe a philosophy as organised for etiquette is a direct manifestation of belief and principle so I herein make the metaphilosophical statement that every organised philosophy should hold its own unique and distinct system of etiquette if it is to be officially recognised as an organised philosophy.

The Astronomic Revolution in Digital Technology

[2:56:1] The Philosophy of Astronism embraces digital technology into the arena of philosophy and explores how philosophical devotion, experience, investigation, and debate can be applied in terms of digital technology, social media, and digital applications.

[2:56:2] This is how The Astronomic Revolution can be applied to digital technology and it is therefore how astronomical study can be associated with technologies of the digital sphere in order to further disseminate and integrate The Philosophy of Astronism and its concepts into a digital technological context; this is part of occurrology, but it is introduced herein as part of Practical Astronism.

[2:56:3] The first example of this is the approximation of mobile phones to be suitable for astrophotography and for taking astrophotos; it is argued herein that if the cameras of people's mobiles are improved and adjusted to taking astrophotos easily then a vast amount of people will be able to appreciate The Cosmos in the way that astrophotographers do.

[2:56:4] By this notion, people will be able to experience and practice that which is known as astrophotographic devotion; a type of cosmic devotion involving adoration, laudation, and wondermentation that are directed solely towards astrophotographs.

[2:56:5] Another familiar aspect is the installation of the Stellarium application, or a similar application, into all mobile phones so that the mass public can learn about astronomical observation and the positions of celestials in the sky.

[2:56:6] In addition, all weather applications on mobile phones should also be redefined for the utility of astronomers, particular dilettant stargazers, and should be set to displaying the areas where stargazing is best suited as well as nights when the sky is clear for stargazing and the areas which are clouded and those which are not.

[2:56:7] Some other ideas regarding the incorporation of astronomy into digital and mobile technology are astronomical themed filters and backgrounds in the cameras and photos on mobiles, as well as astronomical themed phone cases, clock faces, emojis, and other aspects of the mobile device.

[2:56:8] The key element is that every new invention, idea, or product should be applied to an astronomical theme by default, however, this type of natural thought process must be instilled in those creating such products, but that is one of the missions of The Astronomic Revolution; to bring the stars, the planets, the galaxies, and wider Cosmos into the thoughtframes of people.

[2:56:9] In the midst of our discussion of astronomical integration of digital technologies, there should also be numerous stargazing, philosophical, and general astronomical

applications to provide choice, but there should also be a default application to be known as Discover Stargazing.

[2:56:10] This application would feature a compass and map to direct where it is best to observe the night sky, but it would also involve providing information about how best to practice stargazing, astronomical observation, and other occurrological activities as part of philosophical devotion and activity.

[2:56:11] The creation of this application and its default place in all mobile devices would bring astronomical observation, cosmic devotion, and philosophical occurrology to a much wider group of individuals and would put these activities as one of the centre aspects of one's life.

[2:56:12] In addition to this, the creation of a Find Stargazers social media networking website and application would be tailored towards stargazers, astronomers, philosophers, and all dilettant adherents to Astronism that wanted to go to occurrological events, or want to discuss with others their philosophicalities and the methods of cosmic devotion, philosophical experience, and to host debates online about Astronist Philosophy, but also wider philosophy.

[2:56:13] These suggestions are expected to be contributed to across the development of Practical Astronism and occurrology, but by reading this short discourse, one is able to grasp the future towards which The Astronomic Revolution strives; the implementation of astronomy and philosophy into almost all aspects of our lives, our actions, our societies, and our products.

The Centrality of Addiction

[2:57:1] It is so awful to lose such addictive minds and hearts to alcohol and drugs and so such minds should be preserved even more so due to their vulnerabilities, but also due to their great amount of potentiality.

[2:57:2] We shall now introduce the notion that there exists two distinct dimensions of addiction, the first of which is constructive addiction and the second of which is deconstructive addiction.

[2:57:3] Constructive addiction involves the type of addiction that I have experienced during my personal inspiration for the development of The Philosophy of Astronism and the subsequent writing of The Omnidoxy which I have termed as indrucy.

[2:57:4] Constructive addiction is a type of addiction in which someone is obsessed with achieving some end goal that is not initially destructive to their physical or mental health, or degrades their social standing or would lead to their arrest and the exemplar of which is my vocation to the development of The Philosophy of Astronism and my creation of The Omnidoxy.

[2:57:5] Deconstructive addiction pertains to a type of addiction in which someone is addicted to a synthetic substance and depends upon this substance for their mental stability or for continued psychedelia for the purpose of escapism.

[2:57:6] This second form of addiction is one that seems to be dominant in the modern world of materialism, alcoholism, drug abuse, and other forms of material and external escapism and hallucination which may lead to decrease in social standing, isolation from one's community, rehabilitation, or in the most extreme cases ending in the person's arrest.

[2:57:7] The essential difference between these two forms of addiction is that the former is self-sustaining and requires no external substance to execute it for it is based upon a person's ambitions, ideas, imagination, enthusiasm, faith, knowledge, and love for that which they are pursuing while the latter is entirely dependent upon external, synthetic, and material substances for its continuance and is deconstructive in the sense that it does not better one as a person as the former can do if it is controlled by oneself, but instead it destroys oneself both in body and in mind and we see this when we look at the drug addicts, the homeless, the alcoholics, and the depressed of all kinds.

[2:57:8] The identification of these two forms of addiction are pertinent to the current issues facing humanity as we navigate a hypercapitalist world and the effects that this type of world is having on our collective and individual mental wellbeing.

[2:57:9] The Astronist philosophical tradition propounds herein that the current world is dominated by the deconstructivist worldview due to the dominance of materialism and

the need for constant never-ending cycles of consumerism that are neither fulfilling, nor are they valuable.

[2:57:10] The Astronist philosophical tradition herein proposes that humanity should move towards that which shall henceforth be known as constructivism which, in this context as separate from its other philosophical, artistic, and mathematical meanings, refers to a world that is predicated on the constructive internal rather than the deconstructive external.

[2:57:11] Out of the entirety of The Omnidoxy, it is perhaps this Constructive-Deconstructive Dichotomy that demonstrates the greatest divergence in the Astronist worldview from the presently dominant worldview.

[2:57:12] Addictive minds and hearts are those which create the most unique of ideas and become the most dedicated and motivated to achieving such ideas, to let the entire world become enknowledge of their ideas and ambitions.

[2:57:13] Those whom fail to become obsessed or addicted to anything are those lack the ability to sink below and beyond the shallow waters.

[2:57:14] A pattern is quite easily derivable about the greatest of achievers; all of whom seem to have experienced addiction in that which they have made their achievements in.

[2:57:15] It remains a harsh truth of achievement that all that is not obsessed upon is that which cannot ever be fully realised, or achieved to its highest, or most perfected extent.

[2:57:16] A most brilliant balance must be maintained of the addictive mind and heart; a balance struck that requires a constant fine-tuning of one's surroundings and associates, in the effort of furthering one's progressions and goals.

[2:57:17] Positive addictivity is only fed with a sense of progression and goal-scoring, and so, it is this that the balance must strike if the stability of the addict is going to continue.

[2:57:18] And from this notion, we approach the most important aspect of addictivity, and that is stability; one must control one's obsession by always staying one step ahead of it; by interpreting the wants and needs of one's own addiction before one has even feel those very wants and needs; by this notion, we also press upon the concept of apprehensibility; the extent to which one can apprehend one's own requirements before one has even felt them.

[2:57:19] The most important concept to understand with the mind and heart of the addict is that they themselves are a separate entity from the obsession, or addiction itself; understanding, defining, and maintaining this separation is another way of creating stability.

[2:57:20] Getting high from ideas about the future is the greatest form of ecstasy for it is not synthetic, it is natural and although it may be obsessive and dangerous to some degree, it remains attainable by the extent of one's enthusiasm and one's ability and interest to work towards the realisation of such ideas.

The Centrality of the Chain Reaction

[2:58:1] All of existence has come from existence beforehand, and this shall commence on in order, until the initiator of the chain halts what had begun.

[2:58:2] The greatest of chain reactions we see around us is life itself; from the smallest seed comes the largest tree; from the tiniest cell comes the complexity of humanity; but the greatest of All is The Cosmos; from the most infinitesimal point came the most grand, the most wondrous, and the most vast creations.

[2:58:3] When we look at The Chain Reaction of Life, it is easy to wonderment life in all its greatness for it is to see what was, to what is; a perspective few are gifted.

[2:58:4] Perhaps once ignited, the chain reaction of The Cosmos could not be stopped by any force.

[2:58:5] It is a logical argument to suggest that The Cosmos created itself, and is itself its own initiator, and thus, its own destroyer; in consequence, this leaves humanity in a precarious position.

[2:58:6] It is easily found that all things that do exist, do so in a chain; from their beginning to their end.

[2:58:7] It could be said; everything that must exist must begin, and everything must begin, must also end.

[2:58:8] It could be said; everything that was created must begin and end, but the creator is all-existing in all-time.

[2:58:9] Finally, it could be said; everything that was created was do so by its own self, and in this way, the creator is too, the destroyer, but also, the logic that there must always be a beginning and an end still stands in this circumstance.

[2:58:10] In all of this, one aspect does still loom in shadow; that of meaning; why would The Cosmos create itself only to destroy itself?

[2:58:11] It could be said; The Cosmos is doing as The Divine destined it.

[2:58:12] It could be said; The Universe created itself without any purpose for purpose is merely a human mind construct; there is no need for purpose; it is just as it is.

[2:58:13] It could be said; The Cosmos created itself for the purpose of only being; its chain reaction demands that it create itself, it live, it die, and then, it initiates its rebirth.

[2:58:14] It must be said in peroration that The Cosmos became, but it will in one time cease; whether it returns is another matter, but what is clear is its chain; the sequence of all its existence; that is something that is shared by all that does exist.

The Centrality of Cosmical Time

[2:59:1] Everyday, we look down at our watches; we know the date; we know the year; it is time to renounce these humanly constructs of time as we introduce Cosmical Time; The True Time; The Time of The Universe.

[2:59:2] The time by which we run our lives is on human time and geo-time, or Earth time, and even though we will be connected to this structure of time for our everyday lives, it is the penchant of Astronism due to its cosmocentric leaning, to have humanity think cosmically and in terms of cosmical time whilst simultaneously living by geo-time.

[2:59:3] It is important for Astronists especially to consider anything they learn, read, or hear to be filtered through the prism of cosmical time; this is done in order to make a contrast between occurrences and problems in our lives in comparison to the wider cosmos.

[2:59:4] This is to be known as cosmotion which involves the practice of dealing with situations and dilemmas in our lives and consider them alongside the grand and largely incomprehensible timespans, astronomical sizes, and celestial occurrences taking place in The Cosmos.

[2:59:5] Cosmotion can be described as a coping mechanism to understand that no matter how dreadful or intense the problems in our lives are and how they make us feel in a singular moment, they cannot withstand in their significance in comparison to the grandness of The Cosmos which will continue to function long after our problems and our entire selves have subsided; this is expected to be the most common application of cosmotion, but there will inevitably be others which will be created as part of the practice.

[2:59:6] It is in this way that remains the main manifestation in which cosmical time is applied to the context of practitioners lives of those whom follow Astronism and is expected to be included as part of the wider development of Astronic coping mechanisms which are dotted throughout the philosophy and will subsequently be collected together to form under the banner of Astronic coping mechanisms.

[2:59:7] Each such coping mechanisms will hold different origins, but their function will be what unites them; to allow us to cope with the trials and tribulations of our lives and to see and understand that what we feel and what we experience is not to be fretted too deeply about.

[2:59:8] This is an epochological contemplation but focuses on the integration of cosmic time or at least its remembrance and consideration into human society, especially during and after the Humanic Exploration of The Cosmos, rather than using religious or humanic forms of timekeeping.

[2:59:9] An observance of cosmical time is a general consideration that the time scales by which human society follows cannot ever compare to that of cosmic time and neither is human society currently predicated on time according to The Cosmos, but instead religious or humanocentric forms of timekeeping and understanding of time while actual cosmic time is far greater in size and complexity.

[2:59:10] Astronism calls for the full reorientation of human society and our concept of time towards cosmic time and the entire integration of cosmic time into all human organisations and procedures with the replacement of humanic, religious, and even secular forms of timekeeping which are considered to be all non-cosmic.

The Centrality of Deep Time

[2:60:1] Deep time is the concept of geologic time; the modern philosophical concept was developed in the 18th century by Scottish geologist James Hutton (1726–1797).

[2:60:2] The age of the Earth has been determined to be, after a long and complex history of developments, around 4.55 billion years, and it is from the concept of deep time that the aforesaid concept of cosmical time arises.

[2:60:3] Without the concept of deep time, the concept of cosmic time, or cosmical time cannot have arisen; the notions and concepts of deep time teach us that we cannot perceive time through the lens of our own perceptions anymore if we are to truly understand the nature of the universe, for instead, we must consider the temporal dimension of existence through the scale of that in which we reside and that which time is intertwined with.

[2:60:4] If we are to better understand the functionalities of The Cosmos, it does seem to logical to suggest that the consideration of everything through the prism of temporal equivalence to The Cosmos, namely cosmical time, presents a conceptual mechanism through which we are able to better understand our place within The Cosmos as well as functionalities and operatives of The Cosmos itself, hence the centrality of deep time to thinking astronomically.

[2:60:5] The exploration of the spiritual implications for the concept of deep time is to remain a hot topic of debate going forward; there are proposals stating that a deep understanding of the history and functioning of the evolving universe is a necessary inspiration and guide for our own effective functioning as individuals and as a species.

[2:60:6] It is this particular view that has taken a greater influence over the development of deep ecology and ecophilosophy.

The Centrality of Destiny (Destinology)

[2:61:1] Astronists are to be firm believers in the concept and physical manifestation and implications of destiny which is affirmed largely due to the importance of destiny to Astronic eschatology which holds the notion that it is humanity's destiny, as well as the destiny of every other sentient species in The Cosmos to explore The Cosmos and discovery all that is to be known about The Cosmos, its progeny, and its phenomena within it.

[2:61:2] Therefore, the concept and notion of destiny rests at the heart of the Astronist faith as The Cosmos is considered to be the driver of destiny and the destiny's singular proprietor.

[2:61:3] Understanding this stance, Astronists would largely stand in agreement with the stoics, who believed that human decisions and actions ultimately went according to a divine plan devised by a god; furthermore, stoics claimed that although humans theoretically have free will, their souls and the circumstances under which they live are all part of the universal network of fate.

[2:61:4] However, Astronism would state that The Cosmos as a directly divine manifestation of God is the proprietor of destiny, although Astronism does still support the notion of what it terms as free will to the inevitable extent.

[2:61:5] The notion of free will to the inevitable extent affirms that both sentient and non-sentient beings hold wills do as they wish, but that the extent of their wills is narrowed without their knowledge by the forces of destiny to allow for the destinies of some chosen few to lead forward the destiny of humanity in The Cosmos; essentially, the notion states that we do have free will, but only in the extent of our trivial daily lives, and when the time comes for destiny to take its course, the extent of our wills is narrowed until we make the inevitable decision to move ahead according to the destiny of The Cosmos, but we may also see this type of destinal application in occurrence in our day-to-day lives too when we are forced to come to decisions about lives which eventually in turn pushes us further in the direction of our destiny.

[2:61:6] In the context of Astronism, there are two manifestations of destiny, the first of which is divine destiny and the second of which is cosmic destiny; divine destiny refers to the plan of the creator of The Universe for the creations that it has created; it is a notion of logical to suggest that the creator of a creation would hold both the desire and the ability to guide its creations towards an intended direction; this type of destiny is present in the majority of religions and may be known as Godly destiny, or theological destiny, and is based on the notion that God is the sole proprietor of destiny.

[2:61:7] Secondly, cosmic destiny is the manifestation of destiny that is most pertinent within the philosophy of Astronism due to the fact that The Cosmos is believed to be the sole proprietor of destiny which means that The Cosmos is single-handedly responsible for and able to influence the directions of the entities that reside within it; this is to be henceforth known as cosmic destiny and it is this form of destiny that is most often referred to within the context of Astronism due to the cosmocentric orientation of the philosophy.

[2:61:8] That which is termed in Cometanic love to be destined love refers to the instance in which a person believes that the circumstances in which they meet and fall in love with a person are too great to be considered a coincidence; this is considered to have occurred with the falling in love of Cosma and Cometan as that is considered to have been a destined love.

[2:61:9] Predestination in Astronism involves the notion that The Divine has predetermined all that does occur and is closely related to cometanology because it relates to the notion that Cometan was always predetermined to be born and to be infused with personal inspiration for the creation of The Omnidoxy and the subsequent development and establishment of the philosophy of Astronism.

[2:61:10] Therefore, predestination holds an integral position within the foundations of The Philosophy, but additionally to this, depending on one's theological orientation, it is also held that the Humanic Exploration of The Cosmos has been predetermined by The Divine and that Cometan's birth and subsequent personal inspiration occurred just prior to the beginning of the physical Humanic Exploration of The Cosmos for the purpose to spread the belief of transcensionism, cosmocentricity, sentientism, and other core tenets to Astronism.

[2:61:11] Ultimately, therefore, destiny and predestination play a hugely important role in the foundational beliefs of Astronism for destiny as concept is vehemently supported by the Astronist Tradition and is also herein advocated for by omnidoxical authentication.

[2:61:12] The centrality of destiny in The Philosophy of Astronism is manifested in that which is known as The Ultimatum, or the belief orientation of transcensionism because in the belief orientation, the study and contemplation of which officially resides within prerology, upholds that it is humanity's destiny to enknowledge, explore, and unite itself with The Cosmos both physically, mentally, and philosophically as the ultimate purpose for humanity's existence within The Cosmos.

[2:61:13] By this notion therefore destiny is intrinsically tied with purpose which provides destiny with an ability to manifest itself; that which provided destiny is referred to as The Cosmic Narrative, of which the transcension of humanity is a minute part in comparison to the entirety of The Narrative, although from humanity's perspective, its transcension is essential and absolute in extent and purpose.

The Centrality of Existence & Non-existence

[2:62:1] In Astronism and in accordance with the Astronic cosmology, existence is that which resides as within a cosmos and is something that holds a limited existentiality.

[2:62:2] This is because anything that resides outside of a cosmos, whether it be The Cosmos in which we reside or another cosmos in The Universe, is infinite and it is considered that an infinite object cannot hold an objective reality.

[2:62:3] Therefore, The Universe, The Omniverse, and The Divine themselves do not hold objective reality and therefore do not technically exist when using the term existence as it does pertain to how we exist within a cosmos.

[2:62:4] However, the fact that The Universe, The Omniverse, and The Divine do not exist as we do should not be confused with the state of non-existence.

[2:62:5] Non-existence in Astronism pertains to all that does not yet hold objective reality because it is a future event or object, or once held objective reality, but not any longer because it has occurred in history.

[2:62:6] Non-existence is still existence within The Cosmos, but non-existence is commanded by temporality while the term existence assumes presentness in one's existence in which temporal progression is not considered into the equation for existence.

[2:62:7] However, The Universe, The Omniverse, and The Divine are all considered to be in a state of transistence which is beyond both existence and non-existence because they hold infinite existences.

[2:62:8] Existentiality is a term devised by myself as Cometan which ignites the question of what is the purpose of something's existence; the essence of a thing's existence is measured by its existentiality.

[2:62:9] Inexistentiality, also known as non-existentiality, are the pair of terms coined to dichotomised existentiality and refer to the extent of an entity's non-existential features; the inexistentiality of something attempts to decipher the elements of the subject that display inexistential features.

[2:62:10] Furthermore, both inexistentiality and non-existentiality also pertain to the question of what is the purpose of something's non-existence/inexistence, hence these are terms that ignite a debate about what it means to existence and what it means not to exist by questioning the purposes of such.

[2:62:11] Astronism is all about what we term as enknowledge; the seeking, finding, and receiving of knowledge for the betterment of ourselves, those around us, and for

greater humanity; knowledge is manifested through skill, talent, and creativity, and ultimately leads to progression.

The Centrality of Faith

[2:63:1] It is healthy to have faith and perhaps this is the reason for the mental health epidemics raging across the world and the general illness of the mentality of humanity for the majority of those in the developed world have lost their faith.

[2:63:2] The correlation between the demolition of faith and the centrality of the church and the degradation of the mentalities of millions into states of depression, psychedelic addiction, and the expungement of mystery from the world is too large of a correlation to accept without any suspicion.

[2:63:3] The Astronist Tradition considers faith to be the most fundamental emotion of humanity for it pervades the majority of other emotions and can be interpreted in a multitude of different dimensions from the negative to the positive or in terms of abundance and scarcity.

[2:63:4] We can see elements of faith exist within hope, love, trust, acceptance, anticipation, anxiety, desire, ecstasy, contentment, and the vast majority of other emotions as aforementioned which demonstrates the integrally pervading nature of faith.

[2:63:5] There is that which is termed as religious faith and this is existent in all four corners of The Earth in a plethora of different forms and is manifested by a multitude of practices and beliefs in which we have faith, however, there is that which I herein introduce as philosophical faith.

[2:63:6] Philosophical faith can be considered somewhat of an oxymoron in that philosophy has traditionally be considered a pioneer of rationality and logic while faith is often considered a pioneer of belief and trust in belief to extend beyond the bounds of reason and logic.

[2:63:7] Philosophical faith is therefore the amalgamation of these two seemingly opposite conceptals, the result of such a combination births the notion that faith is indeed suitable to philosophy; philosophical faith pertains to the trust and confidence to which we assign the justifications of our beliefs; all focus is based on how we justify what we believe and the extent of the trust and confidence that we hold what how we justify and what we justify our beliefs with and for; this demonstrates the centrality of justification to philosophy whilst also incorporating the important notions of confidence and trust.

[2:63:8] In the context of religion, faith can be defined as confidence and trust in the notions of a particular system of belief and like anything of measurement, faith holds a parameter from high to low and all the in-between.

[2:63:9] However, in the context of philosophy, and particular the philosophy of Astronism, faith is defined by trust in the justifications of our belief and this is essentially what philosophical faith is.

The Centrality of Fallacy

[2:64:1] Centralising the importance of fallacies may initially seem aphiosophical by the nature of fallacies, but without fallacies, one cannot be taught what is philosophical in nature.

[2:64:2] One must know that which is aphiosophical in order for them to gain an even greater understanding of that which is philosophical in nature rather than just being told about that which is deemed philosophical.

[2:64:3] It is aphiosophical to just accept what we have been told; instead, it is philosophical to challenge what we have been told, to make inquiries into what we have been told, and to make an understanding of why we have been told what we have, whether we should hold trust and confidence in what we have been told, and if we were to be challenged by another person about what we profess about what we have been told, that one would be able to justify oneself appropriately.

[2:64:4] To understand what fallacy is, where to find it, and how to confront it remains one of the most important topics of Astronist philosophy to be discussed and explored further post-omnidoxically.

[2:64:5] With reason and logicity, there must always be a dichotomised opposite and that is fallacy; faulty reasoning and the use of deception in arguments with the intention of fooling others.

[2:64:6] A fallacious argument is most often deceptive in its appearance as it appears to be logical and rational, but in reality, after inquiry, it turns out to be grounded by faulty rationality, or without rationality at all.

[2:64:7] It is important for us as philosophers to be able to identify fallacies when they appear, but we should always take the positive approach to anything which means that even in the case of a fallacy, we should always attempt to reconfigure and repair the broken logic or fallacious rationality rather than disregarding the argument completely for doing so without first attempting to repair that which is conceptually broken or deceptive cannot be considered philosophical.

[2:64:8] The intention of the centrality of fallacy is of course not to eradicate such forms of illogicality and broken arguments for these will always exist as they must always exist in order for there to be rational and logical arguments; this is the nature of dichotomies, no matter how ugly, deceptive, and malignant one side of the dichotomy is, the other side remains dependent upon it; this is the same for the dichotomy of good and evil for in order for good to exist, there must always be evil; this notion is to be henceforth known as the dichotomic essentialism.

The Centrality of the Future

[2:65:1] We are that which we are now, in this very moment until the next moment comes and we are something different entirely for in no two moments is any one thing the same as it self the moment prior and this is simply the nature of The Cosmos in which we reside.

[2:65:2] This does not mean to say that this state of reality and existence will be the same in every other cosmos for it is believed that every cosmos in The Universe will hold a different make-up of reality largely due to the notion of isolated evolution; the idea that which is not connected physically and biologically cannot and will hold similar properties with one another.

[2:65:3] The nature of the future is exactly that; whatever the future is which we do not know; we think that by our actions we can change the future, but we do not know for sure the extent to which we will change the future or whether the actions we have conducted were truly our own decisions or part of a greater plan by which the future is predetermined.

[2:65:4] The topic of the future is considered by Astronists to be one of the most important areas for philosophical contemplation because the future remains so prone to a plethora of contemplations largely due to the fact that the future is itself one of the major embodiments of unknownness in all existence; just like oblivions are physical unknownnesses, the future demonstrates temporal unknownness.

[2:65:5] We cannot ever know what will happen in the future, but we know that the future will be and that is for future, but in saying this, we contradict our own knowledge because we know the second will come, we do not know if that second will be our last and there is no way to know this until we have lived through that next moment.

[2:65:6] Therefore, the problem that we have with the future is that we attempt to project our knowledge upon it, yet due to the infinitesimality of our knowledge, we are unable to make any accurate conceptions about what the future really holds; it is my belief that we should stop trying to impress our knowledge upon the future and instead allow the future to flow through us by doing what we ought or feel we wish to do to make our own futures.

[2:65:7] In Astronism, the future is all that is considered to be real because the present is not provided with an existential reality; literally, there is no present for the moment you state that the present is now, the moment has passed and that is now the past and we are in the future and this is why in Astronism, we speak only and believe only in the figurative present; the present which exists in the wide scope than a single moment and commands a large clump of temporality than a single second.

[2:65:8] Futurology is herein redesignated as a branch of philosophy rather than a branch of science; according to the Astronist philosophical tradition, futurology is to be henceforth categorised as part of the territory and a discipline of study of philosophy.

The Centrality of Immemorial Time

[2:66:1] Immemorial time refers to that which occurred way before the development of human society and even that which occurred even before the creation of The Earth and involves many different notions, some of which are outlined in this short discourse.

[2:66:2] The fact that there are countless events that have occurred before the creation of The Earth and subsequently humanity that humanity will either never gain knowledge of or will never completely comprehend and by extension, involves the acceptance of this and this is to be henceforth known as cessationism.

[2:66:3] The notion that there may be occurrences happening elsewhere in The Cosmos or in The Universe that will either have positive, detrimental, or no impacts on humanity, but we do not know of these occurrences and we shall not ever know of them and it is this that shall be henceforth referred to as astrotupor, or cosmotupor.

[2:66:4] That which is herein introduced as cosmonihilism refers to the denial of the real existence of The Cosmos itself in which we reside largely due to the fact that due to our residence within The Cosmos, we will never be able to physically exit and see The Cosmos in its entirety, hence we will never truly know or be able to prove its existence empirically therefore supporting the notion that The Cosmos does not hold any real existence in alignment with the rest of nihilism.

[2:66:5] Cosmoamnesia is the belief that humanity holds knowledge of The Cosmos from a past existence, but that we have now forgotten such knowledge and is to usually be linked to a lack of cosmic devotion and observation as to reason for our collective amnesia as we have forgotten how important The Cosmos is to our own existentiality.

[2:66:6] Immemorialism refers to the notion that the past epochs of The Cosmos hold patterns and answers about the events of the future, especially the end times of The Cosmos.

[2:66:7] Additionally, that which is herein introduced as reverencialism pertains to the notion that The Cosmos and its celestial entities are to be revered and devoted to by all sentient beings though not worshipped as godly entities and so a difference is emphasised between worshipping something and revering something; the connection between reverencialism and immemorial time is the notion that the celestials precede humanity and so all that precedes something must always be revered by that which comes later which is itself to be known as the Precedent Principle.

[2:66:8] That which is to be herein introduced as the term cosmodreamtime or astrodreamtime is inspired by the Australian Aboriginal belief system, and pertains to a time and place before humanity existed on The Earth and the celestials resided in harmony without humanic or synthetic interference.

[2:66:9] All of these notions and beliefs and all which will be introduced through New Concept Development post-omnidoxically are all to be organised into the niche discipline of study that is to be henceforth known as immemoriology which is the study and philosophical inquiry into immemorial time.

The Centrality of Inference

[2:67:1] If logic and rationality are central philosophy, which they are, then we must study, as philosophers and lovers of philosophy, what forms the structure of logic and rationality and these be what we know as inferences.

[2:67:2] Inferences are steps in reasoning, moving from notion to notion to achieve logical consequences and so it is these series of inferences that form completed logics; logics are a series of inferences based upon rational inquiry.

[2:67:3] Philosophical inferences are those types of inferences first introduced herein which are based upon justification so we form notions of logic upon the justifications we present for we think, believe, say, or do.

[2:67:4] To justify oneself is itself considered to be made of up inferences for defence of our ideas, beliefs, and actions logically is essential to the development of our philosophicalities for the extent of our philosophicality is based upon the extent of our

[2:67:5] Inferences should be made to justify the inferences that we have already made about a subject; inferences are self-manifestant; inferences require inferences for them to be justified and to be considered adequate.

—

[2:67:6] We are but hairless chimps living in houses thinking we are better than all the nature around us when in reality we are entirely dependent upon that which we remain so ignorant of.

The Inner Star & The Outer Star

[2:68:1] In the Astronist tradition of mysticism, there is a strong injection of the mystical nature of The Cosmos at its core and one of the main products of Astronist mysticism is the dichotomised concepts of The Inner Star and The Outer Star.

[2:68:2] Essentially, each sentient being in The Cosmos is considered, in this particular school of Astronist mysticism or Astronic mysticism as it may also be referred to, to have been provided with that which would be equivalent to a soul, the primary characteristic of which is a person or a creature's sentience.

[2:68:3] This is to be known as one's cosmic soul due to its cosmical nature, but it is split into two distinct parts thus making and forming a dualistic nature, the first of these is that which is to be henceforth known as The Inner Star.

[2:68:4] Here, the term star pertains to one part of the perfectly equally halved cosmic soul and The Inner Star is all that exists within ourselves and our internal consciousness including our unexpressed thoughts, emotions, ideas, ambitions, interests, fantasies, beliefs, and opinions.

[2:68:5] Oppositely, that which shall henceforth be known as The Outer Star pertains to all that exists on the external side of ourselves rather than the internal and includes our physical appearance, our perceptions of the world, others' perceptions of us, and all our expressed elements of The Inner Star.

The Centrality of Interpretation & The Centrality of Liberation

[2:69:1] Interpretation is at the centre of all perception and informs the entirety of our being for our interpretations of the world around us are entirely dependent upon our knowledge, the breadth of our mind, and the extent to which we believe or disbelieve; interpretation is everything.

[2:69:2] Religious interpretation and similarly religious self-interpretation define a section of religion-related studies (theology, comparative religion, reason) where attention is given to aspects of perception.

[2:69:3] This is where religious symbolism and the self-image of all those who hold religious views have important bearing on how others perceive their particular belief system and its adherents; the interpretations of those who are not Astronists on the topic of Astronism remains an important area of study and contemplation for how we interpret a religion or philosophy informs what we say about it and what people say about Astronism will hold incredible effects on the ability of Astronism to flourish.

[2:69:4] Interpretation is fundamentally related to how one perceives those elements of existence surrounding them; interpretation is the driving force of knowledge for by which we interpret is by which we know and vice versa.

[2:69:5] Philosophical liberation is one's liberation through the practice of philosophy; with philosophical liberation, one feels freed when they practice philosophy accurately and they conduct argumentation correctly; philosophisation is considered by Astronism to be a freeing experience for the mind and it is this that philosophical liberation pertains to.

[2:69:6] Spiritual liberation is the liberation of our spirits from what we receive as limitations to awakenings; our spirits are our guiding forces that remain integrated to our destinies and without them, we are not whom we are and you are not whom you are because your spirit is you and your spirit is unique to you; it is this uniqueness that I am myself on a quest to liberate; I am fascinated by the notion of our individual uniquenesses and I believe that each and every one of us is liberated through locating, receiving, and accepting our uniqueness.

[2:69:7] Mental liberation is the liberation of mind/thought, belief, and practice and also involves a journey to uniqueness which is central the unquitarian beliefs as part of the undercurrents of Astronism and again, it finding our uniqueness that will lead to our liberations.

[2:69:8] Political liberation is the liberation of our minds and bodies from the trappings of political systems that have been purposefully created to undermine our uniqueness and to silence our voices.

[2:69:9] Social liberation is the liberation of our minds and bodies from the social traditions and trappings that have been used to oppress and control us by the governments under which we live; social liberation is about understanding one's uniqueness and making the changes in one's household and in one's social groups to show demonstrate one's uniqueness to receive respect, dignity, and recognition for whom we are.

[2:69:10] Liberation holds a major place within Astronism and is mainly manifested as such within the discipline of study of prerology and its contemplation of the nature of freedom and humanity's undying ambition to achieve freedom, but liberation also exists in some form throughout all of the disciplines of Astronist Philosophy.

[2:69:11] Liberation philosophy is the identification of different oppressed people and is about making suggestions about how philosophical thinking and more specifically Astronism can help them e.g. Palestinian liberation philosophy or Armenian liberation philosophy; these different liberation philosophies will be further developed and established post-omnidoxically; liberation philosophy can be described as a synthesis of Astronist philosophy and Marxist socio-economic analyses that emphasises social concern for the poor and the political liberation for oppressed peoples as well as our mental, intellectual, spiritual, and philosophical liberations to realise and attain our uniquenesses.

[2:69:12] Liberation philosophy gives rise to a Form of Astronism that is to be henceforth known as Social Astronism which encompasses the entirety of the non-Astronist interventions of Astronist Philosophy into social, political, and economic settings and is essentially how Astronism alone without Astronist influences interacts in different social settings from a philosophical standpoint rather than from an ideological standpoint as Astronarianism resides as.

[2:69:13] Branches, concepts, and ideas forming Social Astronism as a Form of Astronism are existent in the following list.

[2:69:14] Development philosophy is the first of these and refers to the instances in which an organised philosophy, particularly Astronism, can provide a strong basis in the development of a country's social, economic, political, and cultural identity and stability.

[2:69:15] Essentially, pertaining to the role and identity of Astronism in a developing country rather than a developed country and how the functions, appearance, and role of Astronism has to change between a developed and an undeveloped country.

[2:69:16] Astronist/Astronist/Astronic anarchism refers to the synthesis of the social, political and economic theory of anarchism with the beliefs of societal organisation found in Astronist philosophy and is to be developed and established as a co-branch of Astronist and anarchist philosophy in post-omnidoxical works.

[2:69:17] Astronist/ Astronic humanism is the combination of the beliefs of Astronism with those found in humanism and usually makes inferences about how Astronism is ultimately a humanist religion due to its general move away from the centralising God in its philosophy; this is, again, expected to be developed post-omndoxically both in Cometanic and non-Cometanic works.

[2:69:18] Social Omnidoxy is a term which shall henceforth refer to the direct application of quotations from the Omnidoxy in order to help assist in the creation of policies to deal with social issues, especially issues of social justice such as economic inequality, poverty, alcoholism, crime, racial tensions, slums, unclean environment, child labour, inadequate labour unions, poor schools, and the danger of war.

[2:69:19] Astronist/Astronistic socialism is a form of philosophical socialism and a philosophical and political theory based upon the view that the teachings within Astronism and the Omnidoxy compel those following Astronism to support social as the ideal social system usually by quoting insentensations from the Omnidoxy and interpreting them in such a way as to derive socialistic ideas.

[2:69:20] Astronist/Astronistic communism is again, like Astronist socialism, form of philosophical communism and a philosophical and political theory based upon the view that the teachings within Astronism and the Omnidoxy compel those following Astronism to support communism as the ideal social system usually by quoting insentensations from the Omnidoxy and interpreting them in such a way as to derive communistic ideals.

[2:69:21] Postcolonial philosophy in relation to Astronism refers to the application of postcolonial criticism to Astronist philosophy and is expected to be an interesting area of study considering Astronism was founded in a postcolonial era; often, the work in this field will look into how elements of Astronism may be reflective of its origins in the United Kingdom through the undercurrents of its beliefs and their juxtaposition to other cultures.

[2:69:22] Black Astronism, or Black philosophy refers to the contextualisation of Astronism towards those of African descent in such a way that orients Astronism towards their needs, wants, and ideals as a particular race; Black philosophy seeks to liberate non-white people from multiple forms of political, social, economic, philosophical and religious subjugation and views Astronist philosophy as a philosophy of liberation.

[2:69:23] Precarity is a precarious existence, lacking in predictability, job security, material or psychological welfare; the social class defined by this condition has been termed the precariat and it is these whom we must help to demonstrate their uniquenesses; as teachers, parents, leaders, philosophers etc. we must work to encourage such people to seek out their uniquenesses, realise them, and build their life upon them; this is what can be henceforth termed as the Uniquitarian Way.

[2:69:24] Philosophical dignity refers to the legal and social status of being able to express one's philosophical views openly and without fear of ostracism or retribution; this is also

involves the ability for one to freely challenge and argue against views that are considered the authority because being able to do so is in alignment with the freedom sought after by the Philosophical Spirit.

[2:69:25] Astronist communitarianism refers to the synthesis of the unquitarian beliefs of Astronism with those of the social and political theory of communitarianism which shall remain a major element to the development of liberation philosophies.

[2:69:26] Astronist distributism pertains to the synthesis of the unquitarian beliefs of Astronism with the economic theory of distributism about the world's assets being distributively owned rather than concentratively owned which is a principle that is herein agreed to by Astronism and should be reflected in the operations of The Institution henceforth.

[2:69:27] Astronist social teaching are the various sets of principles, quotes, and beliefs regarding the way in which society is believed to be best run from an Astronist or Astronist perspective and is also closely tied to the disciplines of Astronist/Astronic ethics.

[2:69:28] Astronist communalism refers to the combination of the beliefs about social organisation found within Astronism and the social theory of communalism which states that society should be organised into federated communes.

[2:69:29] Pecuniarism refers to the notion in which adherents promise to dedicate their lives and material substance to the philosophy to which they are adhered to and it is inevitable that we shall see this type of action being directed towards Astronism from its most devoted of followers.

—

[2:69:30] Theologically, liberation is at the core of the beliefs of Astronism and the liberation theology of Astronism is rooted in the notion that we as a collective humanity are trapped upon and bounded by The Earth and separated from The Cosmos.

[2:69:31] It is, therefore, the ultimate ambition of Astronism to unite humanity with The Cosmos through space exploration and it is the belief of Astronism that humanity will achieve an ending series of transcensions through their exploration of The Cosmos to attain higher states of intellect, physicality, mentality, and philosophicality.

[2:69:32] This is closely linked to the theological positioning of Astronism towards that of a manumissionist theology which states that we humans are free to act, say, think, believe, and be as we wish but that we are accountable to ourselves and liable to the collective which is humanity as a whole.

[2:69:33] Post-omnidoxically, I will devise that which will be known as the Manumissionist-Submissionist Spectrum which will visualise the differences between manumissionism and submissionism.

[2:69:34] Herein though, it remains important to explain that Astronism advocates for the salvation, deliverance, and liberation of humanity through the exploration of space and the enknowledgement of all humanity about The Cosmos.

[2:69:35] Humanity will be released through cosmic exploration and discovery from the shackles that bound her to The Earth presently, but the best way to understand the theological differences between Astronism and other religions is to make comparisons.

[2:69:36] So, two other religions which I interpret to be manumissionist in their orientations are Buddhism and Jainism because each of these advocate for the notion that liberation can be found from within oneself and one's actions and this is the same stance that Astronism takes in its own theology.

[2:69:37] Buddhism advocates for the notion that liberation is found through the alleviation of suffering and Jainism advocates for the notion that liberation is found through the conquering of oneself via strict asceticism.

[2:69:38] However, Buddhism and Jainism are not considered to be as far down the spectrum towards manumissionism than that of Astronism because Buddhism and Jainism advocate for liberation of oneself rather than for the collectivity.

[2:69:39] Meanwhile, Astronism advocates not for the liberation of oneself, but the liberation of the collectivity which in this case refers to humanity as a whole; each individual is seen as a contributor to the overall liberation of humanity rather than each person being concerned with their own liberation, they are instead liberated through the wider liberation of humanity.

[2:69:40] This pure form of manumissionism is largely due to Astronism's majorative orientation of naturalism which states that there exists no afterlife and therefore there is no such thing as liberation of individuals to achieve a place in heaven or some other paradise; instead, a focus is placed on the liberation of humanity as a whole through our individual contributions to the wider endeavour of cosmic discovery, enknowledgement, and exploration.

[2:69:41] Oppositely, both Christianity and Islam present submissionist theologies in that they advocate for the achievement of liberation through one's submission to God or some other higher power which will grant that liberation; therefore, we can understand the core difference between manumissionism and submissionism to be that the former advocates for liberation achievable through one's own actions, thoughts, and beliefs while the latter advocates for liberation's achievement through faith in God and acting according to a prescribed morality.

[2:69:42] Not only does the Astronist form of manumissionism present a new form of theology, but it also presents a new form of religion because Astronism does not maintain any link between The Divine (God) and our individual moralities, or even the morality of humanity as a whole because the only identification of god in Astronism is that god created The Universe, but beyond this, no other role is prescribed to god other than god's interpenetration of The Universe and all of the cosmoses that reside within The Universe which is why celestial entities are considered to be directly divine within Astronism.

[2:69:43] Astronism is predicated upon the notion that we receive our salvation, liberation, and deliverance from ignorance through The Cosmos and our exploration of it which is why Astronism is cosmocentric in its fundamental theme and orientation.

[2:69:44] This also explains why Astronism is focused on the belief of transcensionism because transcension is believed to be equated to our liberation; the greater we become in our physicalities, mentalities, philosophicalities, and intellects, the more liberated we are.

The Centrality of Life

[2:70:1] The first and only reality of life; that death will follow it, and this cessation nature is true for all things of cosmic existence.

[2:70:2] Humanity can devise all the possibilities of death and thereafter, but none can truly be known, but death itself.

[2:70:3] Survivalism exists in the very core nature of humanity, so to prolong, to extend, and to try and create new realities is simply part of human nature, though to what end these new realities bring other than a false reality, is quite obscure.

[2:70:4] Necrosy/necrosies/necrosial - a practice of a philosophy or religion that focuses on those whom have passed away and states that certain acts or observances will allow for a person to come into some sort of contact with.

[2:70:5] Necronicism/necronic - the belief that a person will revisit or come in some sort of contact with those that have passed away.

[2:70:6] Necrocentrism/necrocentric/necrocentricity - the belief in the centrality of death in the context of a philosophical or religious system.

[2:70:7] Astronism is non-necronic so it does not focus its system of thought about regaining contact with people that have passed away.

[2:70:8] Non-necronicism or anecronic/anecronism refers to the belief orientation introduced and followed by Astronism and states the rejection of any form of reconnection with dead relatives in the afterlife, which is something that is itself also denied.

The Centrality of the Moral Nature

[2:71:1] Natural morality refers to a manifestation of morality that is centred on how humans evolved, rather than a morality acquired from societal developments or religious teachings.

[2:71:2] Morality in Astronism is provided with an untraditional view taking to mean that although Astronism does prescribe a set of ethics, these ethics are not intertwined with divine punishment if not precisely followed as is the case for Christian and Islamic ethics.

[2:71:3] Instead, Astronism advocates for manumissionism which states that freedom of action, thought, and belief should be protected, however, that we remain accountable to ourselves and liable to the wider society and collectivity of humanity.

[2:71:4] Natural morality is something that is advocated for by Astronism in the sense that we should look at what is natural and unnatural when faced with decisions, but also Astronism diverges from natural morality by stating that social, religious, and ethical teachings are also important to the civilised humanity.

The Centrality of Motivity & Intentionism

[2:72:1] Motivation and motivity is perhaps the most deceptive of all conceptals to exist because our motivations are directly and singularly concerned with the achievement of our individual desires rather than concerned with the desires of the collectivity.

[2:72:2] Motivation is elemental to our being as I see sentience being deeply connected with an ability to desire in such a way that one holds motivations involving planning and execution to achieve our desires.

[2:72:3] However, we must always be aware of motivations because they are very deceptive; they can and do change us and they are not always easy to spot until the desire of the motivation has been achieved, after which it is too late to change.

[2:72:4] That which I term herein to be known as intentionism refers to the notion that all actions, thoughts, beliefs, and speeches are conducted with intention to achieve desire with no exemptions, but it whether we reveal this intentions either accidentally or intentionally that allow others to understand our intentions.

[2:72:5] Intentionism also refers to the notion that humans individually and collectively are driven by intention to achieve either our individual or collective desires and crucially, intentionism, denies the existence of charity without intention or the ability of humans to be trully altruistic because altruism is not considered to be achievable if intentions exist for the furtherance of something, or the achievement of a desire.

The Centrality of Neoteric Time

[2:73:1] That which is known as neoteric time is in complete opposition to the already discoursed topic of immemorial time for neoteric time refers to temporality that is known, is now, or holds a recency.

[2:73:2] That which is occurring now and recently is of less ignorance to us in the details known about the subject, however, our perceptions of what is occurring now are fundamentally distorted by the fact that they are happening whilst we are alive.

[2:73:3] When something happens for you to have experienced or at least to have been effected by it, there is a sense of potency that is lost over time, but this potency can also cause distortions in our minds about the true reality of the events that have unfolded for we often exaggerate or oppositely we may downplay that which has occurred so we must not forget that we can be just as ignorant towards current occurrences as we are to those occurrences which have happened so long ago that they are classified as immemorial.

[2:73:4] Modernity is the recent developments and improvements we have made in our civility in contrast to those which have been made some time ago, but we must not think that just because we have attained certain developments and advances in our civility, that they are the most important, the most innovative, or the most crucial to our wider civility.

[2:73:5] We must always remember that those innovations made prior were greater than ours because those whom initiate those innovations held less knowledge and less tools than we do presently assume.

[2:73:6] That which I herein introduce as neomodernity refers to modernity that has not yet come into realisation and may also be referred to as futural modernity, or the modernity of the future that is being developed in the metaphorical present for future times; to be neomodern is to believe in things, to create things, and to be attracted to things that are not yet compatible or are beyond the current capacities of our society.

The Centrality of Philosophia

[2:74:1] Philosophia is a term herein introduced to mean the love of philosophy, the love of practising philosophy, one's love of philosophising, and one's belief that philosophy is not only important, but is integral to our progressions, both individually and collectively.

[2:74:2] Astronism's view of this type of obsessive fondness of philosophy and its utility for a philosophy and its encouragement amongst many; as people love their religion, as people love their ideology, people will love their philosophy and of course, the philosophy that I wish for them to love is Astronism.

[2:74:3] Those whom experience philosophia will be the driving forces of the popularisation of philosophy so that philosophy becomes just as engrained into society as religion has become, but not so engrained that it loses its connection to a society as has happened with religion in many instances.

[2:74:4] I, as Cometan, boldly encourage philosophia because what better love is that of philosophy for a man, woman, or even a child?

[2:74:5] What better developer of knowledge, wisdom, understanding, inquiry, and belief is there than a person's obsessive love for all that is philosophical?

The Centrality of Love & Cometanic Love (Amatology)

[2:75:1] Love pervades the world and so it must be no surprise to any of us that love also pervades The Cosmos, hence the centrality given to love in the context of the development of Astronist Philosophy.

[2:75:2] With this notion, we construct this discourse concerned with the centrality of love perceived and in doing so, we subsequently created the discipline of study that is to be henceforth known as amatology.

[2:75:3] Amatological contemplation and study is two-pronged by its nature as it focuses on the exploration and development that which is to be known as cosmic love as well as the exploration and development of cometanic love.

[2:75:4] The former of these pertains to love that is felt for, reciprocated by, and found in The Cosmos while the latter pertains to the type of love expressed by and manifested in myself as the person of Cometan especially in the form of contrast with platonic love.

[2:75:5] Therefore, amatology can officially be defined as the discipline of study within the Astronist philosophical tradition dealing with contemplations about the nature of love in relation to and for The Cosmos and also encompasses the form of love introduced in The Omnidoxy known as cometanic love.

[2:75:6] Love in Astronism is perhaps not such a central theme as the same concept resides in some religious traditions such as through concepts of God's love and "love thy neighbour", but of course a centrality to the notion of love is still provided as love is considered to be the driving force of human motivation and society.

[2:75:7] However, love is considered strictly a sentient emotion and is therefore not ascribed to any higher being due to the anthropomorphism that pervades such notions, but where then does this leave the notion of cosmic love which is the primary formulation of love in the context of Astronism?

[2:75:8] That which is known as cosmic love, or as cosmolove or astrolove, is the love that an individual or a group feels for The Cosmos, is reciprocated by The Cosmos, and is found exemplified in The Cosmos and so by this notion we can understand how cosmic love is three-pronged.

[2:75:9] But by this notion of the reciprocation of love by The Cosmos, do I not contradict my own words when I say that in Astronism, we do not collate love with that of any higher existence than humanity and other sentients?

[2:75:10] My meaning here is that love is a product of sentient emotion and although it is true that Astronism does not attribute love to The Cosmos, what I speak of in cosmic love reciprocation is human or wider sentient perception of the reciprocation of love for sentients are always considered to be searching and desiring love so these reciprocations that I speak of are merely interpretations of cosmic love rather than actual demonstrations of love by The Cosmos due to the avoidance of anthropomorphism in Astronist Philosophy.

[2:75:11] Despite these reciprocations of love existing as interpretations by sentients, this in no way reduces their impact, their manifestations through further reciprocations, or the consequences that they cause for the emotions, thoughts, ambitions, and inspirations of sentients that receive such reciprocations.

[2:75:12] Cosmic love is the love we feel for The Cosmos as subordinate progenies of The Cosmos as manifested through forms of cosmic devotion to express our fascinations, wonderment, and veneration for the existence within which we reside and so cosmic devotion and cosmic love can be considered symbiotic as the former describes the manifestation of the latter through acts, thoughts, and emotions.

[2:75:13] The Astronist Tradition considers cosmic love and its nature as interpretation through a cycle that is ever-revolving beginning with the feelings of love that one feels for The Cosmos as an entire entity, but also as the existence in which we reside and for the progeny and phenomena that we reside amongst.

[2:75:14] These feelings are then reciprocated through The Cosmos by the demonstration of further fascinations via the progeny and phenomena so astronomical events and other cosmic-related entities and occurrences are interpreted to be reciprocations of love conducted by The Cosmos and perceived and interpreted as such by sentients.

[2:75:15] These reciprocations further bolster an individual's personal connection to The Cosmos which subsequently forms a tradition of mysticism in relation to Cosmic Philosophy by the notion that one's cosmic love is unique for although we all see the cosmic progenies and phenomenons, we interpret such reciprocations of love differently which makes our cosmic love personally and unique for we see that which we wish to see and that which we wish to interpret for the furtherance of our own connection to The Cosmos as an entire yet composite whole existence.

[2:75:16] With these ideas regarding cosmic love, we form an identity of The Cosmos that is closely associated with love and personal cosmic interaction that achieves a sense of individuation that the cosmocentric mission of Astronism has always considered to be one of its goals for cosmocentricity is predicated on the proximation of The Cosmos from being an unknown and obscured existential entity to bring it closer to sentient hearts and minds by making it relatable, observable, and personable.

[2:75:17] Therefore, we understand that love, despite its differentiated application in comparison to religious traditions, is the binding force between sentience, namely humanity, and The Cosmos and although The Cosmos does not actually physically express love, its interpretations of love are so powerful for the human emotional system that they form an integral element to the whole interconnection of the Astronist cosmology and this single emotion also provides a clear position for humanity within the Astronist cosmology that would perhaps not be as clear without the introduction of love into the cosmology as the glue between the component parts.

[2:75:18] Not only this but with amatological study and its directions to the consideration of The Cosmos, we learn about aspects of The Cosmos that would be lost without this injection of the emotion of love for by contemplating cosmic love we learn more about the nature entire of The Cosmos, hence drawing upon the importance of the discipline of study of amatology and its crossdisciplinary applications.

[2:75:19] Without cosmic love there would be no cosmic devotion and so by this notion, we state that cosmic love is the necessary precursor to cosmic devotion.

[2:75:20] Emphasising this presence and integrality of love for the development of the connection between humanity and The Cosmos is essential to the overall development of the Astronist philosophical tradition and its practices because without these fundamental philosophic and Astronist emotions of wonderment, adoration, laudation and other forms of cosmic devotion, the subject around which the Astronist school of philosophy pivots is coldly scientific as non-philosophical astronomy can be described.

[2:75:21] The injection of this element of emotion and personal connection to the astronomical phenomena and progeny that are observable forms another deeper dimension, connection, and purpose for humanity's attention to be directed towards The Cosmos and its progeny and phenomena beyond that of just scientific experimentation.

[2:75:22] This aspect of the Astronist and philosophical approach to astronomy remains vitally important to remind ourselves of regularly because without the injection of emotion, we do not grasp the deeper dimension and we do not place upon these magnificent progenies and phenomenons the human need for love.

[2:75:23] The culmination of the cycle of cosmic love is considered, by the Astronist Tradition, to be the manifestation of The Philosophy of Astronism for it is through the study and mastery of this tradition of philosophy that one's love for The Cosmos is achieved on levels higher than simple observation could ever attain.

[2:75:24] The culmination of the cosmic love cycle is the duty felt by humanity to explore The Cosmos as prescribed by the Astronist philosophical tradition to be the purpose of humanity's existence; therefore, the Astronist Tradition understands the exploration of The Cosmos to be the ultimate manifestation of cosmic love and therefore, we make a strong connection to the Astronist approach to soteriology.

[2:75:25] The application of our amatological contemplations to the context of the Astronist soteriology composes an understanding of Astronist soteriology through the lens of love and makes the connection between the notion that the purpose of humanity is to explore The Cosmos and the notion that humanity's love for The Cosmos is best manifested through cosmic exploration in order to lead to the salvation of humanity as a whole rather than to the salvation of individuals through the promise of an afterlife.

[2:75:26] The Astronist Tradition considers one's adherence and revolvment around cosmocentricity to be the foremost demonstration one's love for The Cosmos; essentially, cosmocentricity is love from the perspective of the Astronist Tradition.

[2:75:27] As aforementioned, the development of a tradition of mysticism in relation to The Cosmos is instrumental to the introduction of the dimension of emotion into the topic of astronomy and the entire formation of cosmic philosophy itself; by cometanic decree herein, there must remain a mystical element to The Cosmos forevermore as this forms the purpose for the philosophical contemplation of The Cosmos and this mysticism is centrally attributed to the injection of the notion of our personal connection with The Cosmos and the belief in its ability to interpenetrate our existences as we reside within it.

[2:75:28] Cosmic love may also be interchangeably and synonymously referred to philosophical love which is primarily used in order to contrast the love spoken of and expressed in the context of Astronist Philosophy from the love expressed within a religious tradition such as Christianity.

[2:75:29] The essential difference between philosophical love and religious love is manifested through the subject to which our love is granted for in religious love we direct our feelings of love towards some supernatural essence or force that is believed to be the manifestation of love and actually physically reciprocates divine love to all.

[2:75:30] Meanwhile, philosophical love is characterised by the devotion of our love to natural essences such as the progeny and phenomena alone rather than a higher supernatural force and these entities to which we devote our love do not actually reciprocate our love for they do not hold the ability of sentient emotionality, but their further magnificence is considered to be a manifestation of reciprocated love.

[2:75:31] There are many forms of the latter (philosophical love) and due to the Astronist philosophical tradition's introduction of philosophical love, it is essential to the introduce these different forms of philosophical love in tandem with philosophical/cosmic love's own introduction.

[2:75:32] The first of its forms is to be henceforth known as cosmoinfatuation which is herein defined as one's continuous obsessive love for The Cosmos as manifested through a vehement defence for the notion of cosmocentricity and its dissemination as the concept of the Astronist philosophical tradition; it remains important to note that these forms of

cosmic/philosophical love are distinguished from being cosmic devotions as cosmic devotions are themselves forms of cosmic love, but as collectivised together to form one entry and so therefore remain distinct from these other forms of cosmic love.

[2:75:33] Cosmoinfatuation is the manifestation of one's obsessive love for The Cosmos and its progeny and phenomena through the vehemency of one's promotion of a person's revolvment around The Cosmos and ultimately, the expression of cosmocentricity through one's everyday actions, thoughts, and articulations to others.

[2:75:34] Cosmoinfatuation is expected to begin with one's introduction to The Philosophy of Astronism and the unique ideas it encompasses and is expected to occur instantaneously rather than gradually via that which is to be known as neoncy.

[2:75:35] Neoncy, as both an action and a culmination of emotions, refers to the instance in which a person feels an instantaneous attraction to the ideas and beliefs of the Astronist philosophical tradition which is considered to happen to individuals that have never come across similar beliefs before; the neoncy as a state of mind that may quickly lead to cosmoinfatuation or it may lead to a moderate form of cosmic love.

[2:75:36] That which is to be henceforth known as astrobonding refers to another form of the expression of cosmic love that involves holding a particular wonderment, fascination, and veneration for a particular progeny as superiorised above one's love for The Cosmos in its entirety or its progeny and phenomena in a collectivised or categorised sense.

[2:75:37] Astrobonding, despite its name, does not solely refer to one's particular love for a star, but any type of progeny with the most common type of astrobond being felt towards planets which is especially bolstered through discoveries about what such planets are like or that they may harbour sentient or non-sentient life.

[2:75:38] Therefore, astrobonding is a very personal and unique occurrence with each individual expected to have different triggers for their astrobonds, but it is also important to distinguish that unlike the majority of all other elements of Astronism and the entire culture of Astronist Philosophy to express one's feelings and aspects of their philosophicality, one's astrobonds are considered to be best kept private and personal to each individual and so it is considered wrong to encourage or expect somebody to tell others about their astrobonds.

[2:75:39] This is one element of one's overall philosophicality that is expected to stay private and therefore is not to be debated, although amatologists are still encouraged to study and contemplate the nature and diversity of astrobonds and why, when, how, and where astrobonds are formed in order to formulate patterns of astrobonding behaviour with astrobonding expected to be prevalent in one's childhood if they have been introduced to Astronism from a young age or during the early stages of Astronist philosophical exploration in adolescents, adults, or even seniors; amatologists are considered to be responsible for the study of this.

[2:75:40] The next of the forms of expression of cosmic love is that which is to be known as astrocompassion which involves a person's sympathy for the neglect of The Cosmos by the ignorances of humanity and usually culminates one's vocation to the dissemination of Astronism as the reverser of this neglect and/or one's commitment to cosmacy.

[2:75:41] Cosmacy is a practice to demonstrate one's deep expression of cosmic love that is characterised by one's choice to develop themselves to their philosophicality by abstaining from sex, alcohol, smoking, drugs, music, social media, and even books (except those with a philosophical or astronomical theme) in order to devote oneself completely to their own development of their philosophical exploration of The Cosmos in isolation from all distractions.

[2:75:42] Cosmacy is practiced by those known as cosmanists and is associated with the belief orientation as known as cosmanism which considers the practice of cosmacy to be the greatest way of achieving the highest form of cosmic love, enknowledge, and philosophicality.

[2:75:43] However, the Astronist Tradition disagrees with this belief orientation for it instead aligns itself with augmentism which notionises that the greater amount and diversity of experiences that a person has, the better poised they are to experience, understand, and love The Cosmos in opposition to cosmanism.

[2:75:44] The Astronist Tradition considers music, all literature, alcohol, and sexual relations, though notably not smoking or drugs, to be ways of enriching one's connection with The Cosmos as the Astronist philosophical tradition in general does not provide a superiorised ethicality or higher knowledge to those whom practice different forms of abstinences.

[2:75:45] Therefore, the Astronist Tradition considers indulgences in these different forms of desire to greatly enhance one's imagination, to further one's ambitions, and to widen one's overall experiences and therefore they are not be suppressed, but are instead to be embraced in the formation of individuals that hold a maturity and a sense of broader experience that those whom practice abstinence do not hold the same extent of experience, enknowledge, and emotional, philosophical, and social enrichment which is what augmentism essentially advocates for.

[2:75:46] That which shall henceforth be known as conjugalism is another form of one's expression of cosmic love that involves when a couple marry because of their shared love for The Cosmos or for The Philosophy of Astronism and the cause and message that The Philosophy does portray.

[2:75:47] Conjugalism notionises that a couple's love for one another can be intertwined with their shared love for The Cosmos if they are adherents of The Philosophy of Astronism but of course, due to the process of marrying remaining a religious duty and

ceremony, there is no set formula for the marital ceremony in the Astronist philosophical tradition.

[2:75:48] We have just referenced an important element of our amatological discussion that should now address fully before we continue with the introduction of different forms of cosmic love; the notion that for one to enact conjugalism, one must be an adherent of The Philosophy of Astronism.

[2:75:49] The notion that for one to experience, practice, believe, or be a part of something in the context of Astronist Philosophy that one must be adhered to The Philosophy of Astronism is to be henceforth known as abidism meanwhile that which is to be known as disabidism formulates the oppositism to abidism.

[2:75:50] Regarding the topic of whether the Astronist Tradition follows disabidism or abidism, the Astronist Tradition takes a circumstantial view because depending upon the circumstances of the subject, a disabidist approach or an abidist approach may need to be taken.

[2:75:51] That which is known as recommended abidism is one of the most common stances of the Astronist Tradition on this topic as recommended abidism states that it would be recommended for a person to be adhered to The Philosophy of Astronism rather than demanding that they be adherents as is held in the ordinary abidist view.

[2:75:52] That which is to be henceforth known as courtism is another of the forms and expressions of cosmic love that is to be introduced herein and refers to when a couple decide to continue dating one another because of their shared love for The Cosmos and is considered to be the precursor to conjugalism.

[2:75:53] Courtism is like conjugalism as it is predicated on the notion that cosmic love is intertwined with the romantic attraction, sexual desire, and premarital love and in the case of conjugalism, is intertwined with marital love.

[2:75:54] Cosmic friendship is a prominent and low involvement form of the expression of cosmic love that is characterised by the development of a personal connection that one holds with The Cosmos that is evolved through the development of their own philosophicality.

[2:75:55] Cosmic friendship therefore pertains to a general relationship or connection with The Cosmos that one knows exists between them and The Cosmos and they regularly pursue and manifest this connection, but not obsessively or with any vehement convictions.

[2:75:56] The postulation or concept that is to be henceforthly known as interpersonality refers to the notion that two or people can hold similar, though never exact understandings or connections with The Cosmos and through these similarities of cosmic

love and vision, they are able to share artistic endeavours and philosophical ideas with one another.

[2:75:57] It is important to note here that the Astronist Tradition considers The Cosmos, including its progeny and phenomena to be the largest resource for artistic and philosophical inspiration even beyond the other major artistic resources such as love, sensuality, god, and mythology.

[2:75:58] To further bolster the Astronist Tradition's belief in The Cosmos in this way, the appellation of Cosmic Vitality is created which manifests this belief that The Cosmos is the ultimate resource for artistic and philosophical from which all creative individuals can derive their creations from no matter the medium.

[2:75:59] This remains an important contribution to how the Astronist Tradition perceives the identity, utility, and role of The Cosmos in relation to humanity which departs from the majority of understandings of The Cosmos in Astronist Philosophy as the majority on predicated on humanity's identity in The Cosmos and the role of humanity and what humanity can contribute to The Cosmos which is known as encosmism rather than how The Cosmos can contribute to and be utilised by humanity which is to be henceforth known as procosmism, neither of which are aligned to by the Astronist Tradition as these are not necessarily considered to be belief orientations.

[2:75:60] We shall now introduce that which is to be known as the instance of love at first wonderment which is inspired by the notion of love at first sight and pertains to the occurrence of when a person observes a cosmic progeny or phenomena for the first time and immediately holds love for The Cosmos in a way that extends beyond scientific appreciation, but holds a deeper emotionality and formulates a mystical element to one's personal connection to The Cosmos.

[2:75:61] The instance when a love at first wonderment moment occurs is considered to be one of the most pivotal aspects of the development of a person's individual philosophicality and the Astronist Tradition encourages all people to make a note or write in greater depth about when they have experienced love at first wonderment in notes, or written pieces that are to be henceforth known as a premity.

[2:75:62] The meaning of the term premity is also broadened here so that it refers to when a person first feels love for the particular philosophy that they are adhered to and is considered to be the beginning of an individual's philosophical journey.

[2:75:63] That which is to be henceforth known as a cosmic love triangle refers to the instance in which a couple both hold love for The Cosmos and The Cosmos holds a place in their relationship/marriage as the third element and is considered therefore to be the essential element to conjugalism and cosmic conjuality.

[2:75:64] That which shall be henceforth known as unconditionalism refers to one's unconditional love for The Cosmos which is manifested by one's love for The Cosmos despite the mercilessness of the natural world; contemplations regarding unconditionalism form an interest notion of unlimited love for that which remains limited by its nature.

[2:75:65] Unconditionalism may also be characterised by one's unlimited affection for The Cosmos as manifested through more extreme and obsessive forms of devotion to The Cosmos rather than moderate forms, thus an example would be cosmoinfatuation.

[2:75:66] Unconditionalism manifests itself throughout various forms in the entirety of the Astronist Philosophy and it is decided herein that the study, contemplation, and expansion of unconditionalism as an orientation of cosmic love is to be conducted by amatologists post-omnidoxically.

[2:75:67] Cosmic love can also be considered a form of unrequited love because The Cosmos does not have the capacity to love back as has been omniaffirmed throughout the entirety of this discourse due to the avoidance of the anthropomorphism of The Cosmos by the entire Astronist philosophical tradition.

[2:75:68] Obsessive cosmolove is defined as when one person feels an overwhelming obsessive desire to possess and protect The Cosmos toward which one feels a strong affection, with an inability to accept failure or rejection and is considered to be a combination of both the intensiveness of cosmoinfatuation as well as holding the same longevity as cosmolimerence.

[2:75:69] The function of love serves for the progression of sentients towards desires and goals; our love for people occurs when we love what our future with those people can be imagined as; our love for ideas occurs when we love how those ideas will manifest and benefit both ourselves and others in the future; finally, our love for objects occurs when we wish to use those objects to achieve a goal that we have set in our minds, either physical, such as a professional career for which the objects of uniform clothing is essential, or conceptual, such as happiness which one may mistakenly believe that money is the determiner of.

[2:75:70] The function of love in the context of Astronist Philosophy can therefore be considered as the primary connector between the sentient and the cosmic and the formulator of the explorative nature, purpose, and role of humanity in The Cosmos as part of the overall approach of Astronist minds to soteriology and eschatology.

[2:75:71] The abstraction that is love can be described but it cannot be understood until it is actual experienced and this is the same for all forms of love for love is best felt rather than spoken of.

[2:75:72] The irrationality of love is perhaps the singlemost transcendent element of the emotion which one would immediately presume contradicts the principles and methods of enquiry founded in philosophy which is the progenitor of rationality as we understand it.

[2:75:73] Love injects irrationality and it is this that I have been referring to throughout this discourse when I speak of the introduction of a tradition of mysticism for the context of The Cosmos.

[2:75:74] To understand my train of thought here, one must first understand that the Astronist philosophical tradition considers there to be a scale of rationality with irrationality on one end of the spectrum and with proof, observation, verifiability, and experimentation on the other meanwhile justification, exploration, and postulation reside as the median between these two extremities.

[2:75:75] Religious traditions and notions involves supernaturalism like magic, spiritualism, and other connected traditions and practices are considered to be positioned on the irrationality extremity of the spectrum while science is placed on the proof, observation, verifiability, and experimentation extremity of the spectrum.

[2:75:76] The Astronist philosophical tradition herein places philosophy in the centre as aligned with justification, exploration, and postulation as it considers philosophy not to be dependent upon supernaturalism like religion, but also not vigorously bent on achieving verifiability like the scientific community, but instead justification, the exploration of ideas, and the articulative postulation of these are the three main priorities for philosophy which further contributes to our understanding of the Astronist approach to metaphilosophy.

[2:75:77] To return to the topic of love, we can apply this spectrum by notionising that with the injection of love into Astronist Philosophy we make it philosophical rather than solely mnemonic because we behold a sense of mystery that is confirmed by the elusive nature of the cosmic personal connection.

[2:75:78] According to the Astronist philosophical tradition, love is presented as a very mystical element of the human soul and the desire of sentience for affection to be given and to be received.

[2:75:79] Throughout this discourse, however, I have continuously reaffirmed the nature of the association between love and The Cosmos for the former is ascribed to products of the latter by the minds and hearts of the sentients that exist within the latter in order to achieve a sense of contentment and resolve for the longing of their hearts.

[2:75:80] Of course, in the majority of religious and spiritual traditions, love is considered as a sort of gift that is provided to humanity by God as the progenitor of all existence and while this idea is not to be disregarded and is therefore to be contemplated, its solidification in the Astronist philosophical approach to love remains non-existent.

[2:75:81] Instead, love is considered something that only sentient beings are able to express and so the notion that it remains as a gift from something higher is of course considered to be a supernatural claim rather than a plausible one and so love is addressed in regards to how sentient beings express the emotion and interpret it metaphorically through non-sentient and inanimate entities rather than the other way around.

[2:75:82] According to the Astronist Tradition, love is the emotion that manifests itself as a binding force between the sentient and the cosmic and so all questions of love to the Astronist philosophical tradition are subject to this new duality of love this described herein.

[2:75:83] The first half of this duality pertains to expressed love which relates to how both sentient beings and non-sentient beings have the ability to either express or manifest love through civilised and primitive ways respectively with sentient beings able to express love through speech, creative works, and through the making of love (sensuality) while non-sentient beings are capable of primitive expressions such as protection against danger and the caring for one's offspring.

[2:75:84] The second half of this same duality is reciprocated love which is love that is responded to or returned by the subject of love and is considered to only be conductible by sentient beings and some non-sentient beings, but not by inanimate entities such as cosmic progeny and phenomena, and not by conceptualisations such as gods, spirits, and other supernaturalities, hence the reason for the creation of interpreted love as the minor element forming an extension to the second half of this duality concerned with the nature of love.

[2:75:85] The Astronist Tradition does not simply consider love to be desire and neither should cometic love be defined by such a narrow conception of what love is, but instead love is considered to be affection that requires maintenance through providence, romantic demonstration, creative works, and through the sensuality of the couple; cometic love considers affection to be a singular act of fondness, but considers love to be the maintenance of such affection by the ways aforelisted.

[2:75:86] Cometic love warns of the laziness that one shall experience after falling in love with another and the distractions of the body and the mind that could lead one away from one's creative vocation.

[2:75:87] For an artist of any kind, the way to tell that one's love is right for them is by the principle that their love must enhance and progress their artistic craft; it must formulate a new dimension of an artist's creative works that would not have been achievable for the artist alone; love must not be a distraction from creation, but an energiser of one's virility in relation to their creative medium.

[2:75:88] Aristotelian love is further distinguished from the nature cometanic love as it focuses on philia, or the formation of friendships through which affection for others is demonstrated rather than showing affection through others by way of love.

[2:75:89] To summarise the distinctions between Aristotelian, platonic, and cometanic love, the former emphasises affection through friendship, the median emphasises affection through non-sexual physicality while the latter emphasises affection through the open emotionality, romanticity and virility of the masculine with the submission of the feminine together forming lifelong monogamy, commitment, and vision for the achievement of their shared goals.

[2:75:90] Cometanic love places a particular emphasis on the ambitions and goals of each individual in the relationship and how after marriage, the individual's ambitions and goals must become one to form the marital vision which is described as the shared vision of the future that both of the individuals in the marriage have committed to achieving in partnership.

[2:75:91] Unlike other forms and philosophies of love, cometanic love postulates the most important element for a successful marriage is the continued progression towards their achievement of the marital vision which is unique to each and every marriage (hence demonstrating a unquitarian view of marriage) and it is this marital vision, which may be to have children, to have successful careers, to have a lovely home, or to achieve all three of these elements and more, that is considered to be the primary motivator for marriage for life and the soul of marriage for marriage is life and life is a combination of the dreams we make and achieve together.

[2:75:92] By this notion, we understand the importance provided to the notion of lifelong monogamous marriage in Cometanism and presents an aspiration-oriented view of relationships and marriage because cometanic love considers love to be predicated on maintenance and the shared life ambitions that each individual brings to the relationship/ marriage are these maintainers and motivators that drive love further and heighten our receptivity to our love for our partner.

[2:75:93] I, as Cometan, stipulate herein that marriage without shared ambitions is a marriage that is doomed to fail; a successful marriage is predicated on love and love is predicated a couple's ability to imagine their shared future together; without this imagination of a shared future, how and why would anyone think that such a marriage would last beyond the initiality?

[2:75:94] I, as Cometan, also stipulate herein that cometanic love predicates the success of love and lifelong monogamous marriage according to the responsibility of the masculine to continuously demonstrate his love, virility, aspiration, loyalty, and commitment to the feminine through creating romanticies, engaging in sensuality, and by demonstrating attentiveness to the feminine.

[2:75:95] The reciprocation of these elements by the feminine is also vital to the success of love and lifelong monogamous marriage, but the initiation of these elements must always be conducted by the emotionally confident and honest masculine.

[2:75:96] The usher of humanity is love and so vividly do we see love's powers of manifestation within The Cosmos.

[2:75:97] That which is known as Petrarchism is considered to be one of the earliest precursors to the form of love espoused herein known as Cometanism, or cometanic love as Petrarchism formulated a form of love that was characteristically romantic to its core and devotional by its exterior nature through the emphasis of the demonstration of one's affection for another after the development of the practice of courtly love.

[2:75:98] The notion of whether the act of the creation of The Cosmos itself was an act of love and so therefore The Cosmos itself is a manifestation of love is to be considered post-omnidoxically by amatologists.

[2:75:99] The theory of crystallisation by Stendhal implied a dimension of imaginative readiness for love which need only a single trigger for it to be embedded and for a person's perfect fantasies to form before themselves and the person who initiated the trigger.

[2:75:100] This concept of the crystallisation of love is supported by Cometanism as it speaks of the clarification of love in a way that still leaves a mystery to the nature of love; in Cometanism, it is the balance between clarity and mystery that is considered to be the greatest determiner of the nature love for it is postulated that love cannot exist without a combination of either of these two qualities.

[2:75:101] Proust argued that inaccessibility or jealousy are the precipitants of love, however, in Cometanism, ambition, respect, and commonality in vision are considered to be the precipitants of true love.

[2:75:102] Further to this, Lacan notionised that, "love is giving something you haven't got to someone who doesn't exist," while this is contrasted herein by my saying as Cometan whom postulates that love is sharing something of meaning that is yet to be attained with someone who believes in that same meaningfulness.

[2:75:103] That which I postulate here means to say that with those whom we love we share our deepest and most meaningful elements of ourselves for we reserve the most important aspects of ourselves for those whom are the most important to us.

[2:75:104] Therefore, to share such a meaningful element of ourselves with another person and for that person to grasp that same meaningfulness or at least hold empathy with one's own belief in the meaningfulness of that shared something is a signification of their love:

essentially, Cometanism postulates that love is dualistic in that it involves sharing meaningfulness and having that meaningfulness be reciprocated.

[2:75:105] Post-Lacanian contemplators, “emphasise eroticism to the detriment of love, under the cover of sexual liberation,” and although Cometanism does share the same cautiousness for the complete embracement of eroticism, this is considered to only further cement the importance of a return to post-marital sex in order to create forms of love that are not undermined by their pre-commitment eroticisms which is arguably the reason for many examples of love today becoming extinct after short bursts of eroticism while commitment is lacking, responsibility is non-existence, and shared vision is inconsequential in comparison to the materials and passions of the present.

[2:75:106] The articulation of Cometanism as a philosophy of love is essential to the development of the persona and identity of Cometan as a philosopher for it is believed that a philosopher cannot truly call themselves a philosopher without first having contemplated the nature of the most pervasive and yet the most perplexing element of ourselves, our connection with others, and the world surrounding us; love.

—

[2:75:107] With the development of a great system of thought must come with contemplations on the nature of love for it is love that ignites the majority of our other emotions for better and for worse.

[2:75:108] Metaphilosophically, it remains important for the Astronist philosophical tradition to orient love as one of the topics that is directly studied and contemplated by philosophy as a territory of philosophy primary and a territory of religion, psychology, and other disciplines secondarily.

[2:75:109] Therefore, it remains vital that I develop a view on love that is distinctly associated with the Astronist philosophical tradition and The Philosophy of Astronism, but is also reflective of my individual beliefs as Cometan and so therefore I shall herein found a tradition concerned with addressing the nature of love that will be henceforth known as cometanic love

[2:75:110] Also known as philosophical love, cometanic love is the type of romantic, poetic, and philosophical love associated with the writings of the philosopher, Cometan, towards his one true love, Cosma.

[2:75:111] Cometanic, or philosophical love is characterised by deep, honest, and open affection from the masculine towards his partner as well as the continued contemplation of the nature of love, the uniqueness of different loves, and the varied abilities, roles, and functions of love in different circumstances.

[2:75:112] Cometanic love is also characterised by philosophical romantic gestures such as love letters and poems which are known as romanticies, dedication to one partner throughout one's life demonstrating loyalty, commitment, responsibility and maturity, and the presentation of one's affection for one's love through sexual and physical acts and so fundamentally contrasts with platonic love.

[2:75:113] The difference between Cometanic love and platonic love is that the former is characterised by intensive amorousness, emotional openness and the initiator of the demonstration of affection on behalf of the masculine, as well as the prioritisation of monogamous sensuality and the marital vision while platonic love is characterised by intimacy and affection but lacks sensuality and in addition, there are no specific directions for monogamy, or the role of the male in this form of love.

[2:75:114] Beginning with the topic of defloration to introduce the views and philosophy of Cometanism on the nature of love, defloration is the most sacred act that a man can perform to a woman and vice versa as when a woman takes a man's virginity it is to be henceforth known in the cometanic philosophical tradition as andronification, also known as andronisation which literally means to make a boy a man.

[2:75:115] These two terms do not necessarily mean that both persons are virgins so when this occurs and they take each other's virginity that is to be henceforth known as covestation, or the instance of convestity which literally means to make a girl a woman and a boy a man simultaneously and mutually.

[2:75:116] Covestity is considered to be the greatest bond that a couple can create between each other and is also considered to be the founder of a life-long relationship because of this sacred act that they have conducted for each other.

[2:75:117] Cometanism holds that male virginity and female virginity are equally sacred and special which goes against the normal assumption that female virginity holds a greater importance than male virginity.

[2:75:118] Cometanism views that defloration, andronification, and certainly covestation, should occur only after marriage between two lovers due to the public commitment that is made between them both because during the premarital period, there has been no officially public or legal demonstration of a couple's commitment to one another.

[2:75:119] Cometanism does, however, remain lenient on this topic and views sex after engagement which is to be henceforth known as postsponation to be passable, but not as hallowed as postmarital sex.

[2:75:120] Cometanism considers sex with someone that one knows one does not love in order to lose one's virginity to also be passable especially for a man, but this is also passable for a woman and this practice is to be henceforth known as condistation.

[2:75:121] Condistation is passable due to a person wishes to have gained experience before they make love to someone they actual love, but note the terminology used here for also condistation is passable, it is certainly not an encouraged practice by cometanic standards.

[2:75:122] It is only premarital sex with someone that one knows one loves and wants to build a life-long relationship with that person that is considered immoral because the foundations upon which that relationship has been built are then considered to be unstable if premarital sex occurs and depending upon the liberality of the couple and their culture, if postponation or condistation occurs which may also cause issues of immorality in the foundations of their relationship.

[2:75:123] Sponation means to publicly commit to one's love and is characterised according to a hierarchy known as the Sponative Hierarchy which a couple are expected to rise upwards through rather than mix the different stages around because rising upwards through the hierarchy is considered to be the best way to formulate a life-long, structured, and stable relationship.

[2:75:124] The Sponative Hierarchy is topped by the instance of pregnancy which is given the place of highest importance in cometanism and is considered to be the final ultimate act of a couple's demonstration of their love for one another and must only occur after marriage and cohabitation respectively.

[2:75:125] As mentioned, cohabitation is provided with the penultimate position in the Sponative Hierarchy as it is officially considered to be a postmarital act, however, the Cometanic interpretation of the Sponative Hierarchy holds a more lenient view on the notion of cohabitation and although premarital cohabitation is not encouraged, it is not considered to be detrimentally harmful as it could form a stronger premarital bond between a couple.

[2:75:126] Despite this notion, however, cohabitation remains a postmarital act with of course marriage which resides in the median place in the Sponative Hierarchy followed by engagement which is considered to be the first official act of sponation which is why both cohabitation and pregnancy before both the first act of sponation followed by marriage are considered discouragable acts.

[2:75:127] To form the foundations of the Sponative Hierarchy comes two forms of unofficial sponation that precede the official sponation of engagement, the first of which is the Courtship Announcement and preceding this and forming the first act in the Sponative Hierarchy is the Familial Announcement.

[2:75:128] The Courtship Announcement which is to be known as the act of cosseveration refers to the instance in which a couple announce their courtship with each other to their friends, coworkers, distant relatives, acquaintances, and other individuals of somewhat importance to them.

[2:75:129] The entire purpose of co-severation is to secure that which is to be known as exclusivisation before the official sponation of engagement is conducted.

[2:75:130] In this context, exclusivisation refers to the acknowledgement between the couple that neither of them are speaking to any other person romantically and that they are committed to one another in such a way that they hold the intent to become shortly become engaged to one another.

[2:75:131] Finally and foundationally, the Familial Announcement, which is to be henceforth known as the act of co-description is first joint act of a couple that is to be conducted which involves announcing to each other's close family members about their shared courtship and romance with one another and their intentions to continue to enknowledge themselves about the intricacies of each other before the act of co-severation occurs.

[2:75:132] One of the main aspects of Cometanic love to introduce herein is that which is to be known as a romanticy, and plurally known as romanticies which pertains to any type of creative work or expression of one's love for another person, usually in the form of a letter, a poem, some other written work, or in the form of a song, a drawing, or some other creative work.

[2:75:133] The creation of romanticies are considered central to the masculine expression of devotion to his partner and form an integral element of what it means to be Cometanic in one's style of love.

[2:75:134] The making, building, and creating of works of art of any kind is considered to be the highest form of the expression of one's adoration for another and although women can of course partake in the creation of romanticies, it is generally considered to be the role of the neomasculine to use his creative talents, in whatever medium they reside and in whatever quality they may exist, to demonstrate his commitment and devotion to his partner as part the neoman's overall intuitive awareness of his own emotionality and his confidence in expressing such emotions honestly and openly.

[2:75:135] Cometanism places a major emphasis on the styling of one's romanticies to personal interests, one's tastes in font, colours, and other graphics, as well as tailoring romanticies to special key events, places, moments, memories, and symbols in the couple's life as a further manifestation of their love for each other.

[2:75:136] By this notion, romanticies highlight the unquitarian nature of love and its unquity for each and every couple as well as its motionality through the entire lifespan of the relationship.

[2:75:137] The Cometanic Romanticies, as it shall henceforth be appellated, is a collective term relating to all of the romanticies authored by Cometan that are included inside The

Omnidoxy, including letters, poems, and other written works addressed to his one true love, Cosma.

[2:75:138] Additionally, the study of romanticies involving their process of their creation, their diversity, their symbolic meanings, and the comparison between different romanticies and their authors is to be a major element of amatological study henceforth due largely to the centrality of romanticies to the nature of Cometanic love.

[2:75:139] That which is to be henceforth termed as Cometanic candour, also known as coparlance, relates to the approach of the courteer (the male) during a courtship by intentionally revealing aspects of oneself that may not be perfectly desirable in order to test the reaction of the courtee (female, or male's partner).

[2:75:140] The practice of coparlance, if success, greatly deepens the bond between the two lovers, examples of which include revealing aspects about one's past or one's childhood that are difficult to speak of, or remain personal, uncontrollable crying as a vulnerabilisation of oneself, or the revelation of habits through intentionally conducting them, or simply speaking of them.

[2:75:141] Just mentioned here was the process of vulnerabilisation which is also important to the development of Cometanic forms of love, especially for the neomasculine as part of his wider emotional liberation.

[2:75:142] Vulnerabilisation involves the intentional display of emotions on the part of the neoman to his partner in a way that strips him of his persona of strength, unemotionality and unconcern to reveal the true elements of himself that are most often hidden under years worth of mental and emotional barrier building.

[2:75:143] Vulnerabilisation is not only part of a neoman's overall openness of emotionality, but it is also a demonstration of his love and adoration for the person that he vulnerabilises himself to; vulnerabilising is perhaps one of the greatest expressions of love and trust and although we speak of vulnerabilisation as an act of neomasculinity, women can of course also partake in the act by vulnerabilising to their partners with their own emotional sensitivities.

[2:75:144] That which shall henceforth be appellated as Communicative Compatibility refers to the notion in Cometanic love that entirely open communication from the outset of a couple's relationship is essential to the longevity of that relationship.

[2:75:145] Cometanism argues that communicating openly with one's partner when one is happy, sad, concerned, excited, or any other emotion is essential to the securement of the relationship as one's partner is then able to deal with the situation; Cometanism rejects such notions that silence is golden or that one's partner should be able to know exactly how his/her partner is feeling without them communicating how they feel.

[2:75:146] The communication element of the relationship is what founds the relationship, establishes it, and then builds upon it and so without this communicative aspect, there remains a distinct lack of foundation and so when the tribulations of life do inevitably arise, such relationships that do not hold a strong Communicative Compatibility will be more likely to break down and eventually collapse due to the inadequacy of the communicative structure that resides within it.

[2:75:147] Of course, the longer that a relationship has taken place for and depending upon the level of honest and open communication that has been exchanged over this time, each partner in the relationship should be able to understand when their partner feels a certain way even without their partner having to say so, but this only occurs with experience of knowing and understanding the person and must be predicated by open and honest communication and therefore a high amount of Communicative Compatibility beforehand.

[2:75:148] Essentially, according to Cometanism, the greater the level of communication between the couple in the relationship/marriage, the greater the level of love, and the greater the level of their ability to overcome the trials and obstacles that will inevitably manifest themselves before them.

[2:75:149] That which is to be henceforth known as Cometanic predisposition pertains to the notion that there exists a distinct predisposition with regards to the Cometanic approach to the nature, role, function, and style of love that is considered to be entirely centred on creativity.

[2:75:150] The Cometanic predisposition is the concept of creative love for all Cometanic approaches to understanding and expressing love are conducted via creative works and mediums hence the centrality and predisposition of creativity for the achievement and maintenance of love's path.

[2:75:151] That which is to be henceforth known as cometeros, or cometerotic romanticies, refers to any instances in which Cometanic romanticies are interpreted as being implicitly or explicitly erotic and displaying some type of energetic love expressed by Cometan and so is contrasted with non-erotic and more placid romanticies that do not reference sensuality which are to be classified as cometeros, or cometoric romanticies.

[2:75:152] That which is to be known as an incontinence in the context of Cometanic love refers to a distinct lacking in moderation or self-control with regards to sexual desire or the expression of one's desire of sensuality, especially when around a particular individual which is what Cometan felt for Cosma and the particular appellation that collectivises all the instances in which Cometan is recorded as experience incontinence are to be known as the Incontinences of Cometan.

[2:75:153] In the Cometanic tradition of love and the philosophy of love, terms of endearment are considered to be of paramount importance for they distinguish an

individual from others and are to be classified as that which is to be known as microromanticism which doesn't constitute an entire creative piece of work, but does suggest some creative as influenced by one's adorations, an example of which is the latter introduced rosette.

[2:75:154] For this reason, terms of endearment are praises in Cometanism for their creativeness on a smaller scale than actual romanticies and are considered to serve as daily reminders of a person's devotion and adoration for their partner; terms of endearment are given a high importance because of the distinction they make for one person and the position they provide a person with to define them from every other person.

[2:75:155] Cometanic terms of endearment include the following: Cosma, My Love, Baby, and My Sweet while Cocoic terms of endearment directed towards Cometan only and forever include: Darling, My Love, and My Handsome.

[2:75:156] Cometanic love is formulated by, defined as, and predicated upon the Cocoic and Cometanic love story and is premised on three omnidoxically-originate terms including telence, valence, and generence which, in combination, encapsulated the Cocoic and Cometanic love story and feed into the reasons why Cometanism takes the stances and opinions that it does about the nature of love.

[2:75:157] The first of these terms is telence which refers to love for another person from whom one is geographically separated and the notion that geographical separation further intensifies one's love for another.

[2:75:158] This is herein considered to be due to their greater level of appreciation for that person as they are not as easily contactable and there remains a lack of physical intimacy that causes the intensification of one's physical needs.

[2:75:159] It is important to note that the intensification that is described in telence is largely dependent upon one's imagination to imagine the person that they feel telence for to be with them and also requires a great deal of patience, chastity, loyalty, and trust for both sides.

[2:75:160] Telence, or telency remains one of the most important aspects of the love story between Cosma and Cometan as well as a signifying element of Cometanic love as it is believed in Cometanism that love is best initially built, preserved, and strengthened through telence for one's failure of appreciation for another is considered to be the leading cause of relationship and marital degradation.

[2:75:161] Meanwhile, telence strengthens one's appreciation for the other person due to each of their unreachability which leads on to the second element of Cometanic love which is to be henceforth known as valence.

[2:75:162] Valerence pertains to the deep and long-lasting appreciation of another person and points to one's achievement of valerence by the instance of one's horror by the notion that they may lose their love to another or to the wider world.

[2:75:163] If one holds valerence, they should be reacting to such an instance with vehement action to stop such potential instances from actually occurring.

[2:75:164] Telerence is considered to be the necessary precursor of building valerence for one's love and also consists of one's unrelenting fear of losing one's love due to the appreciation one has built up for them which leads on to the third element of Cometanic love which is to be henceforth known as generence.

[2:75:165] Generence is being oneself and not straying from this self-identity in order to please one's love because the person with whom one is in mutual love with should love one for one's inadequacies, faults, insecurities, and vulnerabilities, not just their achievements, successes, champions, confidences, and heroics.

[2:75:166] However, generence demonstrates the difference between not straying from one's identity and conducting acts that are demonstrative of immorality and an unappreciation, or invalerence for one's love such as the actions of repeated inattentiveness, a lacking of confidence in one's love, and speaking to other people in the same manner in which one speaks to one's love.

[2:75:167] The way that one speaks to one's love should remain that which is to be known as an exclusive language which is the way in which one romantically speaks to one's love and this should not ever be directed to another other person and one of the most common examples of an exclusive language are the terms of endearment that are directed toward's one's love.

[2:75:168] That which is to be henceforth known as philation, or philence is considered to be immoral is characterised by repeated uses of toying language with one's love especially when they are separated geographically during a period of telerence as such philatious practices are considered to be very damaging to overall process of telerence and especially degrading to the process of building up trust between two geographically separated loves.

[2:75:169] Examples of philation include saying that one's love should find another partner when one knows that one's love loves them and nobody else, or repeatedly expressing doubts after one's love has continued to prove their commitment and love for them and for these reasons, philation is considered to be one of the primary causes of the deconstruction of strength in telerence.

[2:75:170] The topic of Cometanic love and non-heterosexual forms of sexual orientation is addressed in a simple manner by the following statement: Cometanic love is for all and no gender, race, religion, class, or societal disapproval should hinder Cometanic love.

[2:75:171] This is because Cometanic love is philosophical by its core nature and just like in the Philosophical Spirit, we accept all approaches and in the same spirit, we say that the justification for such forms of love is the love itself that is expressed between the couple; that is justification enough and should always transcend beyond the perceived normalities of society.

[2:75:172] Adultery is considered to be an inability of a person to commit to another due to a lack of appreciation for others and a lack of love for another person and so this practice is also considered to be a demonstrator of a lack of empathy for the person with whom one is sharing a relationship with.

[2:75:173] Adultery is considered to be a reparable act through the application of Cometanism in relation to love, especially with the application of tolerance, valence, and generosity; adultery is all that Cometanic is not and adultery is not demonstrative of neomascularity; the neoman needn't fall into the trap of adulterous temptations for he holds Communicative Compatibility with his love, emotional openness and honesty, as well as strength in commitment, responsibility, and duty to the shared love vision that has established his relationship/marriage.

[2:75:174] That which is to be known as Agapist Cometanism refers to the notion that Cometanism, and wider Astronist approaches to the concept of love, espouses that love is the sole ultimate value from which all other values (hope, faith, honesty, loyalty, commitment, open-mindedness, consistency etc.) are derived from love.

[2:75:175] Paragonism is a term that originates from herein within amatological discussion and pertains to the belief orientation that approaches contemplations of cCometanism itself in that when addressing love, a guide is provided for the achievement of perfection in love by Cometan that is not realistic.

[2:75:176] It is of course held in the Astronist Tradition that paragonism is incorrect and that my approach to love, as Cometan, is predicated on the notion that perfection in love itself is realistic and is achievable and this opposing belief orientation is to be henceforth known as probitism.

[2:75:177] Probitism contrasts with paragonism and notionises that perfection in love is both what is expounded by Cometan and it is also achievable if one is loving enough, committed enough, and Cometanic enough in their approach to love and therefore considers all that are unable to achieve perfection in love as needing a greater mastery of love and the carving out of one's empathetic approach to understanding the hearts and feelings of others.

[2:75:178] Cometanism accepts the diversity of love and therefore holds respect for the majority of the forms of love that it deems ethically viable, two of which are bisexuality and all other sexual orientations as well as hypergamy/hypogamy which, in Cometanism, are both accepted practices due to the fact that neither are detrimental to any other person

outside of the relationship while the practice of polygamy from the Cometanic perspective is rejected due to the harmful effects it is considered to hold for the establishment of a family unit and stems from the affirmed monogamous marital tradition that Astronist culture and its predecessors uphold to be the only ethical form of marriage.

[2:75:179] The reason for the acceptance of hypergamy/hypogamy in Cometanism is due to the fact that love is not considered to have to conform with societal classes and any such notion that love is expected to conform to such structures is considered unnatural and detrimental to the nature of love.

[2:75:180] That which is to be henceforth known as amatory crystallisation refers to the process that leads to the third aspect of cometanic love, known as generence, because crystallisation in the amatorial sense involves the process in which a mental metamorphosis occurrence in which unattractive or strange habits, tendencies and characteristics of a person become the every elements of a person that one's love is attracted to them the most for.

[2:75:181] This amatorial crystallisation is considered to be one of the most inspiring elements of true love for cometanic and philosophical love to focus its contemplations, depictions, and encouragements of as amatorial crystallisation is considered to be the primary exemplifier of a person's true love for another in a way that is whole via not only their toleration or acceptance of the other's faults, but their love for their love's faults.

[2:75:182] That which shall herein be introduced as Love of Divine, also known as Divine love, refers to the notion that The Divine as an entity is capable of loving that which resides within it and that which it created and therefore opposes notions of divine mercilessness which is the general stance taken by the Astronist Tradition on the nature of the intercessions of The Divine.

[2:75:183] Furthermore, one should have realised at this point in the discourse the frequent use of the term one's love and this is defined as an amatological phrase relating to one's partner, either married or unmarried.

[2:75:184] In the Cometanic tradition of love, there is a strong tradition of iconism in order to manifest one's love for another which in amatology, or Cometanic love, one of the most prominent examples of such an icon is that which is to be henceforth known as a rosenette.

[2:75:185] A rosenette is an item that is symbolically associated with one's love which is either kept as a secret within one's own mind, or is spoken of to one's love and others.

[2:75:186] A rosenette is the most important example of the tradition of iconism within Cometanism and is provided with such importance because it is considered to be a microromantic and so to think so deeply about a person's identity with whom one loves so as to form a symbolic association between an item and that person that lasts for the longevity is an expression of love that displays both in-depth thought and creativity.

[2:75:187] That which is to be henceforth known as the Simerencial-Opperencial Dichotomy refers to a contrast between two forms of love that remains important to the amatological contemplation and study of love.

[2:75:188] The first part of the dichotomy is to be henceforth known as to be in a state or quality of simerence which is the love that one feels for someone or something that is similar to them; love for similarity.

[2:75:189] This is appreciated in philosophical love, but it is not considered the superior form of the two loves of the dichotomy according to the Astronist Tradition.

[2:75:190] It is the state and quality of opperence that is considered to be the superior form of the two loves and pertains to the love that one feels for someone or something that is different or even in opposition to them; essentially, this is love for difference, or love for opposition which is resonative to the Philosophical Spirit.

[2:75:191] From the perspective of the cometanic and philosophical tradition of love is considered superior because the basis of philosophy is to thrive upon opposition in order to enhance oneself and so opperence is not only considered to be the superior love, but one of the underlying foundations of how the Astronist philosophical tradition perceive the character of wider philosophy which links this amatological dichotomy to a metaphilosophical topic with the Cometanic concept of generence being a combination of both opperence and simerence.

[2:75:192] We have introduced and briefly addressed many of the different belief orientations concerned with the nature of love in this introductory omnidoxical discourse on the discipline of amatology, but we shall now introduce some further orientations that are concerned with other aspects of the nature of love and its declaration.

[2:75:193] The first of these is that which shall henceforth be known as infatuationism which encompasses the belief orientation holding that it is the duty of both partners in a relationship and later, in a marriage, to maintain their infatuation for one another through sexual pleasure and desire, romantic endeavours, declarations of love, and most importantly, remaining the person that one's love fell in love with.

[2:75:194] Infatuationists therefore notionise that it is the responsibility of both partners in the relationship to maintain the momentum of their love for each other so that it does not fade and fracture and therefore lead to straying from either side.

[2:75:195] Infatuationists, by this notion, consider relationships to be equal and therefore do not consider the male or female in the relationship to be any more responsibility for the upkeep and maintenance of the love for their partner than their partner themselves due to their gender.

[2:75:196] Infatuationists consider relationships through a scope of equality which ultimately means that there must always be an equal sharing blame for any breakdowns or fractures in the relationship rather than the blame being placed on just one person.

[2:75:197] This is held because infatuationists believe that upon entering a relationship with another person, both individuals come as one and so they by this notion they are both considered to be to blame for the potential degradation of the love in the relationship.

[2:75:198] That which shall henceforth be known as androtelefamism refers to the experience that a male endures when he enters a long-term relationship with his love characterised by a gradual process of amatory disconnection from especially the female members of his family, such as his mother, grandmother, and sisters due to his love now being directed more towards his partner/wife rather than to his female familial figures.

[2:75:199] A similar yet oppose experience is that which is to be known as gynotelefamism which refers to the experience and gradual process that a female endures when she enters a long-term relationship with her love.

[2:75:200] This experience is characterised by a gradual process of amatory disconnection with her family members for her love is instead to be directed more towards her partner/husband rather than her family members; this is most often exemplified for female in their amatory disconnection from their father, grandfather(s), brother(s), and other male familial figures.

[2:75:201] These two experiences and familial processes are considered to be natural by Cometanism due to the fact that a person's attention should be dedicated towards their love primarily and their family secondarily, but Cometanism also finds family to be an enriching element of a marriage and marriage is considered to be something that is able to be shared and is best to be shared with one's relatives, including brothers, sisters, cousins, mothers, fathers, and grandparents for in a marriage, despite it existing between two individuals, it would be ignorant to suggest that it exists in a vacuum.

[2:75:202] That which is to be henceforth known as urmatism refers to the notion that love at first sight is the purest form of love because it is instantaneous and is the perfect basis for a long-lasting and deep-seated relationship.

[2:75:203] This is considered as such because a person that experiences love at first sight is not considered to be predicated on the aesthetic attractiveness they feel towards the other, but a transcendent attractiveness that, however vague this may seem, goes beyond the present moment, solidifies one's destiny, and formulates a connection no matter a person's physical attributes, their wealth, power, sexuality, or any other factor.

[2:75:204] Essentially, urmatism is the prioritisation and superiorisation of love at first sight as the foremost avenue to the achieve of the perfection of love and perfection in love.

[2:75:205] The nature of urmatism is encouraged to be explored, contemplated, and debated post-omnidoxically by amatologists and due to its almost mystical nature, urmatism, despite being firmly rooted in the discipline of amatology, is considered to be a crossdisciplinary or transdisciplinary belief orientation that can be applied within a multitude of different disciplines as part of Astronist Philosophy.

[2:75:206] As aforeaffirmed, there exists a strong tradition of iconism in the Cometanic tradition of love from its inception and a byproduct of this iconist tradition is the symbolisation of love.

[2:75:207] Cometanic or philosophical love is supportive of the symbolisation of love through real, physical items and through gestures, an example of which is through love locks, and rosettes.

[2:75:208] That which is to be known as the notion of neomasculine leadership refers to the idea that continues to persist within the Cometanic tradition of love, it is the duty of the man to lead the romantic endeavours of the relationship, to initiate enthusiasm for marriage, to envision his marriage (such as where, when, and in what other contexts) and to always initiate and to want to make love to his partner, or wife.

[2:75:209] Neomasculine leadership is therefore considered to exist in contrast to infatuationism which notionises that the maintenance of a relationship and the momentum of love must be taken on an equal basis and therefore neither individual in the relationship be more responsible for upkeeping the love in the relationship, especially not being based on the gender of one of the individuals in the relationship.

[2:75:210] The topic of sex before marriage in Cometanism is one that is expected to be of continuous amatological debate post-omnidoxically and although Cometanism considers abstaining from premarital sex to be the superior form of the achievement of telence and a long-lasting relationship, it is not considered compulsory as one's lust for sexual intercourse with one's love is not considered to be an immoral sentiment.

[2:75:211] It is instead a natural one and a declaration of one's love for the other person for it would not be right to force any person into one decision over another, but to present each person with both options and allow them to consider these synchronously in order to form the decision that is deemed ethically correct and mutually agreeable for both individuals in the relationship is the most appropriate stance for Cometanism to take on this topic in alignment with the principles of the Philosophical Spirit.

[2:75:212] Telence is the exacerbation of the new relationship energy through the inaccessibility of one another due to geographical separation which is considered to further heighten the new relationship energy, thus leading to greater appreciation (valence), and the achievement of genence (to be loved for one's inadequacies as well as one's qualities).

[2:75:213] That which is known as philophobia in the context of Cometanic tradition refers to one's fear of falling in love and philophobia is considered to be a real epidemic psychological issue for many people that are to be known as philophobians as is demonstrated through the high rates of adultery, divorce, separation, cheating, and flirtation with someone that is not one's spouse which is why Cometanism considered philophobia in a serious manner.

[2:75:214] The extent of the naturalness of philophobia to human nature remains an important topic of debate within amatology which is expected to rage on well after the writings of The Omnidox have been disseminated throughout The Earth and beyond.

[2:75:215] Pronaturalism notionises that philophobia is a natural and innate phenomenon of human needs and wants and is therefore not based on greed, disloyalty, and an inability of a person to hold empathy.

[2:75:216] Pronaturalists are considered to be justifying manifestations of philophobia by their opposers, whom are to be henceforth known as antinaturalists which believe in antinaturalism which notionises that philophobia is not a natural or innate element of human personality, biology, or behaviour for it is instead a demonstration of one's tendencies away from loyalty, commitment, and true love towards disloyalty due to greed, lust, curiosity, and doubt of one's ability to both love and to be loved by one's partner.

[2:75:217] Further new terms that are to be introduced herein are promoralism and dismoralism, the former which pertains to the instance in which one's love makes one a moral person than there were before they met their love, either perceived and acknowledged by oneself, or those around oneself and also be referred to as the process of promoralisation, or to promoralise.

[2:75:218] The latter of which and oppositistically so is that which is to be known as dismoralism, or the action of dismoralising, or the process of dismoralisation refers to the instance in which one's love makes one become a less moral person than there were before they met their love, either perceived and acknowledged by oneself, or those around oneself.

[2:75:219] The Promoral-Dismoral Dichotomy is another of the love dichotomies within Cometanism and pertains to the effects of one's love on the ethicality of one's character, either positively, as manifested by promoralisation, or negatively, as manifested by dismoralisation.

[2:75:220] These two distinct processes involving the transformation of a person's character are both expected to be commonplace in micro forms throughout many relationships and marriages, of course with promoralism being the preferred outcome for a relationship as opposed to dismoralism as promoralisation is considered an improvement while dismoralisation is considered to be a deterioration.

[2:75:221] That which is known as saudade is considered to be the primary emotional manifestation of telence that is to be positivised in order to further strengthen one's bond with their partner in the achievement of telence and so saudade is considered to be an important emotion as part of Cometanic love.

[2:75:222] In a few different instances, the dichotomic terms of positivisation and negativisation have been used in various instances through The Omnidoxy and are expected to be used in debates as omnidoxical dichotomic terms.

[2:75:223] Positivisation, or to positivise, involving making something, especially an emotion, or concept that is connotatively negative, to manifest as something positive, such as envy being turned into love and hope rather than jealousy and hatred.

[2:75:224] That which is to be known as to negativise, or the process of negativisation pertains to how someone may make something, especially an emotion, or a concept that is connotatively either negative or positive, to manifest as something negative, such as envy, which holds negative connotations, and to negativise it would manifest envy into jealousy and hatred rather than love and hope, which would be an example of positivising the emotion of envy.

[2:75:225] This dichotomy of positivisation and negativisation presumes that emotions and concepts are ultimately neutral by their natures and they can therefore be turned either positive or negative, or can become the opposite of how they defined in their manifestation physicalities through actions and practices.

[2:75:226] That which is to be henceforth known as the action and process of amatation, or to amatate is to announce one's successful courtship after a mutual agreement to do so and involves openly speaking of one's pre-marital relationship with one's love to family members, friends, and wider society and occurs both before and after the initial sponation of the Courtship Announcement.

[2:75:227] The Cometanic tradition of love in amatology holds many belief orientations within it as well as new verbs and practices, and one of these newly introduced term is to be henceforth as astralamism.

[2:75:228] Astralamism refers to the notion that star-crossed lovers and star-crossed loving, which is retermed to the practice that is to be henceforthly known astralamy in its Astronist usage because of the original term's astrological origination, is the most difficult, yet the most intensifying of all types of relationships.

[2:75:229] Astralamism understands the practice of astralamy to be the fastest way of achieving all three elements of Cometanic love and therefore departs from traditional or pre-Astronist understandings of such relationships which are that these relationships are doomed from their inceptions.

[2:75:230] On the topic of unrequited love, the Cometanic tradition considers this instance to pertain to the most disappointing of all the elements of love and refers to the instance in which one's love is not reciprocated.

[2:75:231] In this instance, despite the disappointment that pervades unrequited love, Cometanism stresses that one must always hold faith and hope that one's ability to love shall be appreciated by another that is worthy of one's love and one must appreciate the ability and choice of the beloved to reject one's love for this is their solemn right which must not be disregarded.

[2:75:232] One whom has experienced unrequited love is most likely to never love again for fear of the same occurrence happening a second time, but one whom has endured unrequited love must always hold the reconstruction of their confidence as their foremost priority so that they shall be able to love again without fear.

[2:75:233] This is because fear to love, of which unrequited love is considered to be the main cause, is the worst manifestation of love and cannot be considered true love and is not to be confused with one's fear of losing one's love meanwhile that which is known as fear to love is fear to express one's affections to another which is expected to lead to greater levels of philophobia within the individual.

[2:75:234] Many pre-Astronist forms of love and celebrations and practices of love have been addressed in this discourse from the perspective of Cometanism and another of these is Valentine's Day which, in Cometanism, is both accepted and encouraged to be celebrated.

[2:75:235] However, it must be said that the expression of one's love for their partner must not be isolated to just one day of the year and that we all should not fall into the trap of the commercialisation of love, but that we should embrace love naturally and creatively rather than associate it with any particular day.

[2:75:236] Cometanism, despite its acceptance of Valentine's Day considered every day to be Valentine's Day for a couple and encourages such behaviour that is characteristic of Valentine's Day to be conducted through microromanticies on every day of the year when practically possible; Cometanism warns against these certain elements of Valentine's Day and instead prioritises the true purity of love rather than commerciality of love.

[2:75:237] The Cometanic approach to the question of alcohol with love and sex is expected to be another popular topic of amatological debatory and contemplative concern post-omnidoxically.

[2:75:238] I, as Cometan, herein affirm never to make love drunkenly as one principle that must be upheld, though to have a sip of alcohol to take off the edges of nerves is permitted and is expected to make one a better lover for their partner as the act of lovemaking is not supposed to be one of a nerve-racking nature, but one that two people are to enjoy so

attempting to stifle one's nerves through a small consumption of alcohol, if one's religious duties do permit it, is considered to be acceptable in Cometanism due to the practical and emotional benefits of such a practice though drunkenness which is a more extreme version is of course not permitted in Cometanism.

[2:75:239] The second principle here is that one should always remain sophisticated in front of the one they love out of respect for them so opposition to this principle would involve being disorderly and being a drunkard in front of one's courtee or wife which is considered wrong from the perspective of Cometan and therefore also be Cometanism and the Astronist Tradition in their synonymity.

[2:75:240] The breasts and buttocks of the woman are the primary areas of sexual stimulation and posturation or promination while the emphasised chest (known as prepotation), abdominal muscles and toned buttocks of the man are generally the primary areas of sexual attractiveness for female admirers and the areas that are provided with the most importance for the attraction of women in neomasculinity according to Cometanism which is herein encouraged to be further expanded upon and amatologically contemplated, written of, and debated post-omnidoxically.

[2:75:241] That which is known as the act of the practice being a casting couch is herein affirmed to be considered a highly immoral act as it suggests that people needn't have real talents or ability or that they needn't work for their achievements and success, but should instead ascend through a social hierarchy by providing those with superior status with sexual pleasures which is wholly opposed to be Cometanism and promotes an unparalleled unethality.

[2:75:242] Conjugal visits are agreed with in the context of Cometanism, but sexual activity during such visits is not considered to be permissible because the prisoner is not mentally or financially able to provide a home for a child.

[2:75:243] Further to this reason, the prisoner is not a moral idol for the child, and there would not be a completely fulfilled home for the child upon his or her birth which is wrong to bring upon them as it is considered to cause more dismay for the child and is therefore the responsibility of the penal system to protect a child and his mother from this instance by disallowing sexual activity during conjugal visits.

[2:75:244] Cometanism holds that if a person commits a crime, they should also lose the rights granted to them during their marriage as it is a legal and religious ceremony with connotations of morality so all conjugal rights should be removed from the prisoner except for his/her right to stay married if their spouse wishes to continue the marriage, and one of these rights that is to be taken away is the ability of the man to impregnate his wife.

[2:75:245] The issue of lookism is a topic that is of particular interest and concern for the context of Cometanism, especially due to the fact that in some elements of Cometanism, lookist ideas may be interpreted; the debatement of lookism is to take place post-

omnidoxically by amatologists, philosophers, and others as not just its presence within Cometanism, but by considering lookism as a whole and its prevalence in different societies and its impacts on our emotionalities and mentalities.

[2:75:246] Lookism, according to the Cometanic tradition, is defined as the discriminatory treatment toward people considered physically unattractive by different societal standards, largely based in the workplace but also prevalent in the majority of social settings, and/or the preference for certain aesthetic characteristics in individuals to fulfil certain roles despite such aesthetics holding no connection to a greater ability to fulfil such a role and lookism is also considered to involve how one speaks of aesthetics in a wider context, such as assuming and affording greater intelligence, gentility, and overall attractiveness to those whom are considered more aesthetically attractive, especially in the context of friend-making or in the context of courtships.

[2:75:247] Despite the fact that lookism is not classified and prioritised in the same way as a racial, cultural, religious, or sexual discrimination, it does remain widespread nonetheless and affects how people are perceived as well as affecting their overall ability to achieve successes in different environments in terms of romantic relationships, job opportunities, and even in the context of academics.

[2:75:248] Physical attractiveness is associated with positivity as a person that is physically attractive is automatically considered to hold a better grip on their life including a healthy lifestyle, good job, positive outlook, and other attractive attributes while physical unattractiveness is associated with the opposites of these attributes and generally denotes a person that is unhealthy, not prosperous, and negative in their outlook and worldview.

[2:75:249] The message of Cometanism is to become the best and more crucially, the most authentic version of oneself and that despite how narrow views of society are regarding aesthetics and its associated attributes, the greater challenge for those whom may be considered physically unattractive are to prove those whom believe such things to be false by upholding a healthy lifestyle, having a good job, holding a positive outlook, and other non-physically dependent attributes as a way of overcoming these societal barriers that lookism has constructed.

[2:75:250] However, Cometanism, like in the rest of the Astronist Tradition, is a realistic philosophy and denotes that physical attractiveness is not to be demonised, but is to be praised for its diversity for when we speak of the superiority of physical attractiveness in lookism, we do not necessarily pinpoint any particular attributes because one person's understanding of attractiveness may greatly differ from that of another person.

[2:75:251] Cometanism promotes the notion of universal attractiveness which upholds the unquitarian principle that rests at the heart of the Astronist philosophical tradition and suggests that each and every individual holds an aesthetic that is attractive in their own unique way and that we should learn to appreciate these unique elements of ourselves that formulate our own aesthetic unquities, as they are to be henceforth appellated.

[2:75:252] Cometanism stresses that there are many different elements that can formulate one's unique aesthetic and it also argues herein that our physical attractiveness is fundamentally motional by its nature so meaning that our physical looks may be the most highly sort after in moment and then disregarded as hideous the next; the frivolousness of physical attractiveness is not to be prioritised, but it is instead one's mind, one's soul, and one's philosophicality that Cometanism and the rest of the Astronist philosophical tradition considers to be most worthy of being prioritised.

[2:75:253] By being as oneself in an authentic way and by doing what one wishes to do and being happy in doing such and by being around those one wishes to surround themselves with, their physical attractiveness is considered to automatically have increased without any synthetic enhancements to their exterior.

[2:75:254] Being happy, comfortable, and content in oneself and being confident, enthusiastic, and ambitious about one's interests and passions are considered to be fundamental to the improvement of one's physical attractiveness because by achieving these elements, one will appear brighter due to their happiness which is instantly promotes their greater physical attractiveness.

[2:75:255] Despite the fact that many people make judgements about a person according to their physical attractiveness, this is expected to be something that the vast majority of individuals will go through as not to be judged in life is unavoidable, but Cometanism notionises that we should want to be judged and be proud of other people's vehement interests in us that they would spend their time to formulate a judgement about us; perhaps this is a way of positivising a negative judgement that is directed towards ourselves.

[2:75:256] It is surprise that those whom are physically attractive do benefit from their good looks, but if I, as Cometan, were to choose between being the most handsome man in history and having the greatest brain and the most imaginative mind in history then no part of me would hesitate to choose the latter for my imagination is more precious to me than any of my other attributes, either in context of my personality or my aesthetics.

[2:75:257] If a person's competence is judged according to their physical attractiveness then we must judge the person of the good aesthetic, but instead we should judge the person that is making the judgement themselves and perhaps reconsider their authenticity for the role they have obtained, if they stand in any role at all and if they do not, then we needn't speak of their judgements any due to their own irrelevancy.

[2:75:258] Overall, physically attractive people benefit from these societally engrained benefits about aesthetics, but this persists to be one of the very fundamental issues with society today that the Astronist philosophical tradition intends to overhaul as it stresses a greater importance for a person's philosophicality, their ability to discuss and debate, their

interest in spirituality and all things that are being themselves, as well as their ability to perceive and think beyond that which materially resides in front of them.

[2:75:259] The world in which we reside today is potent of inwardness and self-obsession, but instead, the world should return to its enthusiasm for that which resides beyond the aesthetics and the material towards that which exists as the cosmic and the ethereal.

[2:75:260] Physical attractiveness is only to be remembered as one element of a person's overall attractiveness and there are many other attributes of a person that able to be postulated so as to propound their attractiveness.

[2:75:261] Perhaps the greatest of advantages of one being physically attractiveness is that one needn't prove their attractiveness for it is already manifested by their physical contours, but if it is only time and effort that a person saves by being born physical attractive with very little other qualities in this hypothetical scenario, then we should not be lazy and we shall instead have to expect that our efforts will need to be made to every person that we wish to expose our internal attractive qualities to which is altogether harder, but nevertheless rewarding in the long time and of course, the right people for one to be around will quickly see and become attracted to your internal attractive qualities.

[2:75:262] My intention here, it is also important to note, is not to attack those of physical attractiveness and not to slander them as unintelligent for many people do have the ability to imagine and have minds beyond many others whilst still holding good aesthetics, and so continuing the stereotype that attractive people are in some way intellectually inferior is also not the intention, instead the opposite intention is true and the same is for the stereotype of unattractive people being automatically intelligent.

[2:75:263] If anything, Cometanism wishes to deteriorate and eventually remove these damaging and purposeless stereotypes from society by introducing unquitarian values of considering each person to hold aesthetic unquity rather than generalised notions of aesthetic attributions.

[2:75:264] Before the first segment of this discourse is surceasioned, we must address some miscellaneous topics that still hold prominent in both Cometanic forms of love and the discipline of amatology.

[2:75:265] The first of these is the topic of sex in space which is expected and encouraged to be one of the prominentmost areas of issue particularly for the theme of the Astronist philosophical tradition and is to be both contemplated and discussed by amatologists in a post-omnidoxical context.

[2:75:266] The topic of self-sexual objectification is permitted according to Cometanism, but only between one and one's love, but one must not force one's love to sexually self-objectify in the same way if they are not comfortable to do so.

[2:75:267] The topic of sexercise is considered to be a positive and very healthy and happy lifestyle choice for couples without children, but also with children though the former is expected to be more prevalent in the popularity of its practice than that of the latter.

[2:75:268] Other immoral sexually-related activities according to the Cometanic tradition of love include stripping, virginity auctioning, cruising, prostitution, general promiscuity, and sex in public areas.

[2:75:269] That which is known as machosexualism holds a place of enquiry and contemplation in both Cometanism and in wider amatology and pertains to the desire of a man to provide for his family, or to his community and by an Astronist definitional extension, also pertains to attribute of a man of contributing to wider society through creativism which is considered to be one of the primary exhibitors of neomasculine traits.

[2:75:270] Another trait of neomascularity is the guarding of one's love from potential threats.

[2:75:271] Sexual jealousy is considered to be a positive element of love in Cometanism, but it is also highly emphasised that in Cometanic love, one's love must be free to do as they wish, dress as they wish (within the limits of social decency), go where they wish, and act as they wish (again within limits of social decency) without excessive control by their love.

[2:75:272] But in return, they must always remain loyal, committed, and remain monogamous to their love which is to be collectively known as doveny and the opposite of which is to be henceforth known as durenny which itself is to be characterised by rampant and irrational control of one's love.

—

[2:75:273] Upon exiting the plane and walking towards the passport control, my heart was pounding, my hands were sweating and shaking, and my mind was whirling cosmically from the unknownness that I was about to eject myself into and even as I write about this pivotal event, I feel tears of happiness, anxiety, and faith watering my eyes.

[2:75:274] The fear, the anticipation, and the excitement I felt in that moment will be repeatable I don't believe.

[2:75:275] As I worked towards the sliding doors to exit and meet her, I don't think I had realised that this moment would ever come.

[2:75:276] In the moment, which even now, remains both vivid and blurred, as contradictory as that sounds, time didn't seem to exist for all my mind, heart, and soul could focus on was the girl, Cosma, who, I hoped, was waiting for me beyond those doors.

[2:75:277] As I walked towards them, I saw hundreds of faces on the other side and for a split second I wondered what I had done, but my heart pushed my body onwards.

[2:75:278] Still with my hands shaking vigorously and my palms sweating and sticking to my suitcase handle, I exited through the sliding doors and was greeted by a sea of Armenian faces waiting for their family members, I presume.

[2:75:279] Some looked at me as I stood frozen in the doorway.

[2:75:280] They most likely wondered who this non-Armenian young man was blocking the doorway.

[2:75:281] I peered across the sea of faces as I took a couple of steps forward but I couldn't see the face in which I had put all my trust.

[2:75:282] I took another couple of steps to the left as my eyes scanned the faces.

[2:75:283] For a moment, I wondered if I had made a terrible mistake.

[2:75:284] But then, as if by miracle, the girl I had travelled over two-thousand miles for appeared.

[2:75:285] Her face, only partially intelligible from behind the barrier, popped up behind the rest of the people waiting.

[2:75:286] And like magnets, I drifted around the barrier and so did she and before I could really look at her I felt her full embrace.

[2:75:287] I dropped my luggage and put my arms around her.

[2:75:288] Faces in both confusion and shock peered over at us from across the airport though I wouldn't have known for at that point, only Cosma and I existed in The Cosmos and from nobody ever before had I felt a hug like that.

[2:75:289] I could feel her beating heart pressed against my chest and her shaking hand on my back, but the true magnificent story began when we pulled away from one another and I looked into her eyes for the very first time.

[2:75:290] I had never before seen anybody with eyes like Cosma and upon her eyes locking onto mine, I knew in that instant that this would be the girl I will spend the rest of my life with.

[2:75:291] If that was not love at first sight then I know not what would be for I felt, upon looking at Cosma for the first time, the deepest most powerful feeling of affection that I never knew I could ever feel.

[2:75:292] It was at that moment that I realised I had just literally walked into a lifelong love story.

[2:75:293] After the initial moment of seeing Cosma's eyes and face for the first time, I notice that she has a tear in her eye.

[2:75:294] She does the unexpected and walks passed me and rushes towards a quieter corner to sit down.

[2:75:295] I follow her, still disoriented from the moment that changed my life forever; my mind was on another planet at this point.

[2:75:296] She kept on staring at me with those eyes of hers; eyes that I thought never existed until just moments prior.

[2:75:297] She looked at me then looked away and then looked again.

[2:75:298] She touched my arm and then squeezed it and said, "Is this you? Are you really here?"

[2:75:299] I replied and she said, "I don't believe that you came."

[2:75:300] The taxi driver stepped over timidly and spoke to her and she spoke back in the Armenian language.

[2:75:301] The driver stepped away and walked off somewhere and the rest of our conversation in the airport consisted of our shared disbelief in both of our existences.

[2:75:302] She revealed to me that she genuinely believed that I wouldn't come.

[2:75:303] This was the first instance in which I saw Cosma's vulnerability.

[2:75:304] How her face looked in disbelief, how her hands were still shaking and how she refused to speak anymore due to the shock she felt by my arrival.

[2:75:305] We managed to stand up and I remained mesmerised by everything about the beautiful girl before me and she perhaps still remained in disbelief of my arrival and existence.

[2:75:306] We walked out of the airport and for the first time ever, she stood and rested her head on my chest as we waited for the taxi.

[2:75:307] It arrived, we got in and held hands as we were driven towards the glittering lights of Yerevan in the distance.

[2:75:308] One has just witnessed the first of the Diarisations of Cometan which is a collective appellation collectively relating to a copy of a diary entry with this particular diarisation pertaining to when I, as Cometan, first met Cosma and a diarisation also involves the insentencing of a diary.

—

[2:75:309] The application of appropriate instruments of study in an attempt to understand in a depth way the nature of love shall now be conducted as the next segment of this amatological discourse.

[2:75:310] The first of these instruments is abundancy which, when applied to the topic love, primarily forms the notion that love is abundant throughout the cosmic world due to its prevalence in beings both of sentience and non-sentience.

[2:75:311] Love knows no bounds I believe is the saying and this is concurred with here for we see the proof of such a statement as manifested in the natural world, of which we as humans are part.

[2:75:312] Abundance is the greatest characteristic of love for it also demonstrates the diversity of love and it is that quality of love that presents it most beautiful nature for in the world around us, we can quickly derive that love is neither linear nor homogenous and neither does it manifest itself in a singular fashion nor is it monotic by any means.

[2:75:313] Love is itself the greatest demonstrator of the quality of abundance and there also exists no greater champion for the principles held within unquitarianism than love itself for the unquities of love are direct products of the unquities of our whole persons and it is this state of unquity that unquitarianism solemnly promotes.

[2:75:314] But if abundance is one of the primary signifiers of the characteristics of love, then how can we also apply the instrument of binarity to that of love; due to the fact that abundance demonstrates far greater than two in its encompassment, anything that holds abundance is granted with the ability to hold binarity and this principle also exists for the nature of love.

[2:75:315] Love is binary at its heart in its core manifestation for love is most commonly and properly felt between two individuals whom then become as one with each other in their union of love.

[2:75:316] Without the binarity of love, love could not exist for love is binary as an essentiality of its existence.

[2:75:317] Of course, binarity is the contemplation of two components that work together to form a functionality and in this application to love, we understand that the components

of binarity in this context are the two individuals that form the relationship of love of which we speak.

[2:75:318] But of course, when we speak of the binarity of love we speak of the type of love that is felt between two people and although there are greater abundances of love meaning that love exists within larger groups, love essential between two individuals and so group love, such as between many different siblings is that which is to be termed as shared love.

[2:75:319] Shared love is a form of love that is mutually felt between each member of the group for one another in an unconditional and unique sense and though this type of love is shared out of across a group of individuals, I argue that the binarity of love still remains that these individuals continue to love each individual of the group separately and unique rather than love for the group as a whole as a greater abundance of love.

[2:75:320] The application of the instrument of study of bipolarity to the topic of love results in an interesting consequence by the notion that love is of course contrasted in its extremity by that of hatred and although we could not put two more different emotions side by side, we must also understand that the two are intrinsically interconnected to one another for they remain easily interchangeable.

[2:75:321] Love can quickly become hatred and hatred can so equally quickly become love and despite that this phenomena is considered to be a glorious topic for amatologists to contemplate and debate post-omnidoxically, it continues to be a paradox that is present in other examples in the natural world.

[2:75:322] I pose the question that how is it that extremities of each other can so quickly cross and become one another in their manifestations?

[2:75:323] All extremities, despite the meaning of the term extremity, remain consistencies of one another for their truest nature is that they remain symbiotic which, to return to the topic at hand in this discourse, pertains to the symbioticity of the nature of love.

[2:75:324] All extremities are symbiotic of one another by their core natures because they are firstly dependent upon each other for their existence for neither would be granted as extremities if the other did not exist and secondly that they are mutual beneficial to one another in the sense that love is dependent upon hate for its own contrast; this points to the notion of the necessity of contrast as it is to be henceforth known.

[2:75:325] It is the nature of The Cosmos to require contrast for its existence such as lightness and darkness, distance and proximity, and of course, love and hate which has lead to many other philosophers and their traditions to posit the nature of the duality of existence.

[2:75:326] Although there are beliefs of dualism in the Astronist philosophical tradition, I posit herein that duality does correctly assume the extremities of existence as pointing to

the duality of existence, but that by focusing on the extremities, such dualists forget all that does remain to exist between these extremities.

[2:75:327] Lightness and darkness, yes, but what about the millions of other shades that reside between them that are not perfectly light nor perfectly dark, but instead exist as unique combinations of the two?

[2:75:328] If one is to believe in the compositeness of The Cosmos, it does not suffice to notionise that The Cosmos is purely and fundamentally dualistic by its nature for that rules out the great abundance of its compositeness.

[2:75:329] Essentially, we return to unquitarianism which, in this case, postulates that there exists a unique combination of all elements in different circumstances which form to combine the different physical manifestations that we see before us and so in reality, nothing that resides within The Cosmos is able to be an extremity due to the influences of the other elements of The Cosmos that reside close to it.

[2:75:330] Unquitarianism further postulates that instead of considering the component elements of The Cosmos through a scope of dualism, one should instead consider the elements of The Cosmos through a scope of unquity for every separate natural entity of existence in The Cosmos is unique.

[2:75:331] Unquitarianians do not simply look to the extremities of something to derive the nature of The Cosmos, but they instead look in-between the extremities and consider The Cosmos as a composite entity of a unique combination of component elements rather than an absolutist dualistic entity of extremities that directly form the nature of its component elements.

[2:75:332] Also, due to the Cosmic Limitation Principle, there exists no ability for anything that is cosmic to perfectly manifest an extremity of any kind for although extremities form elements of The Cosmos that make it cosmic in nature, to reach an extremity is to itself defy its extremity which demonstrates the potentiality of the infiniteness of that which reached an extremity.

[2:75:333] Returning to the topic of our address after my short digression, the application of the instrument of study of centricity to the context of love demonstrates the multiplicity of love due to the fact that it holds multiple centricities so it is bicentral by its nature.

[2:75:334] The centricities may include a symbol, a single event, a person, an object, an idea, or anything that can be loved, can manifest love, or can perpetuate one's love for another and the bicentrality of love is due to the unquity of love as it holds a multitude of unquities for every person or for every manifestation that it holds and so to pinpoint a single centricity of love would not do justice to the true nature of love for love itself is a centricity of The Cosmos and of humanity itself.

[2:75:335] There is certainly a strong sense of chaosity when it comes to the consideration of love for love itself, due to the strength of itself as an emotional force, encourages us to conduct actions that we may not have done so previously and that we may not have considered previously without the influence of love.

[2:75:336] Another signifier of the chaotic nature of love is its unpredictability in how, when, why, and in and with whom it may manifest itself which is unknown to us before it reveals itself which demonstrates its chaosity due to the unknownness of its frequency as well as its inability to be controlled, measured, and predicted.

[2:75:337] I have spoken vastly of the composite nature of The Cosmos, but to speak of the composite nature of love is to speak of the naturity of love itself so by applying the instrument of composity to love we synonymously apply the instrument of naturity as a consequence.

[2:75:338] The application of the instrument of study of concentricity to the topic of love formulates an image of love as structured by a concentric pattern with the central nucleus of the concentricity being the binarity of the two whom feel love and the concentric rings surrounding them demonstrate either one of two things.

[2:75:339] The first is the different elements of life that love resides within and exist throughout such as marriage, the acts of love, family, children, emotion, and other qualities and manifestations of love while the second conception of the concentric rings may be the different importances the unique love around which the rings form with a closer proximity to the nucleus demonstrating a greater level of importance for the element that the ring possesses.

[2:75:340] When a person formulates their concentricity of love for their own unique love it is to be henceforth known as a concenama which can either be made conceptually or physically through a drawing, via a software, or some other creative medium and so a concenama is to also be henceforth categorised as a romanticy and references to a couple's concenama is to be an example of a microromanticy.

[2:75:341] The cosmicality of love perhaps is contrasted with the aforecontemplated chaosity of love, but Cometanism continues to maintain the notion that love is the centricity of The Cosmos metaphorically as it is firmly present in the natures of both sentient and non-sentient beings of all species in the diversity and abundance that is central to the nature of love itself.

[2:75:342] Therefore, love holds a cosmicality as it does also hold a sense of chaosity for the cosmicality of love is manifested through by the patterns by which it emerges, the compositeness by which it operates, and the functionalities it does hold; these are characteristics of cosmicality that love does display and manifest in all that it does influence and reside within.

[2:75:343] However, this assimilation to cosmicness causes an issue of naturity for amatologists for by suggesting that love is both cosmic and chaotic in nature, we do not hold a definite understanding of the true nature of love; the cosmicness or chaoticity of love is expected to be a passionate debate for amatologists to continue to hold far beyond The Omnidoxo itself.

[2:75:344] With the application of the instrument of study of dyadicity to the nature of love, we contemplate of the interactions between the different component parts or elements of love.

[2:75:345] In addition, the application of the instrument of dynamicity measures the change, the activity, and the progress of love, that which is initiated by love, and that which causes love itself.

[2:75:346] Essentially, dynamicity considers the consequences of love and the surrounding elements of life that influence love itself and its manifestations through the three components of change, activity, and progress.

[2:75:347] The application of the instruments of extrinsicity and intrinsicity to the context of love pertains to the considerations of the non-essential and the essential elements of love respectively which further pertains to the unquitarian approach to love as the extrinsicities and the intrinsicities of love are unique to the individual that is considering these two instruments of study.

[2:75:348] The application of the instrument of finity to the context of love considers the finite naturity of love which is intrinsically caused by the finite nature of The Cosmos and especially so in relation to love shared between sentients or non-sentients as such individuals are destined to perish, thus ending their love between one another due to mutual love being dependent upon two individuals due to the symbioticity of love.

[2:75:349] The functionality of love is ultimately the impregnation of one's wife as the primary purpose of love for the manifestation of new life, but love functionality is also considered to involve the construction of a home rather than just simply a house, as well as the achievement of the couple's shared ambitions and the raising of their family in shared mutual symbiotic love.

[2:75:350] With the application of the instrument of study of fusionality to love, we understand that fusionality rests at the heart of the nature of love for love itself is a fusion of two and their coming together to form one whole.

[2:75:351] A relationship is a fusion by shared emotions and marriage is the legal cementation of those shared emotions and love is the continuance of these formal declarations of shared feelings.

[2:75:352] When the instrument of study of futurity is applied to the topic of love, amatologists and philosophers should contemplate the future of love in society as well as the future of love in individual relationships which notionises that the futurity of love is ultimately unique due to the many events, moments, people, decisions, and intimacies that are yet to come in the future.

[2:75:353] The application of graduality considers the duration of love and how love has different longevities according to different relationships and the circumstances of those relationships which further makes them hold uniqueness.

[2:75:354] The application of inversivity to the nature of love is hatred which of course is also the oppositistic extremity to the nature of love and so, Cometanism notionises that a greater understanding of the inversivity of love, due to its symbiotic nature with its extremity of hatred, shall help contemplators grasp a greater understanding of the nature of love itself.

[2:75:355] Motionality is the next instrument of study to apply to the nature of love and as aforementioned at some point previously in this discourse, the nature of love is motionality itself for love is in a constant motion of progression, momentum, intensification, and later decline.

[2:75:356] The motivity of love pertains, according to the traditions of Cometanism, to the notion that ambition is the central driving motivation for a couple's commitment to their love and its subsequent officialisation of their love through the institution of matrimony.

[2:75:357] Therefore, ambition is provided with a central role in relation to the motivity of love, but derived from ambition when it is considered in this way comes the idea that marriage as an institutional manifestation of love and the home, the offspring, and the sensuality of love are also derivations of shared ambitions for how two individuals wish to construct their lives together.

[2:75:358] To understand the way in which Cometanism considers love, it is essentially so that there resides a staunch centrality provided to the notion that love is predicated on shared ambitions and that ambition exists as the beating heart of love for it is postulated that without shared ambitions in a relationship, love cannot blossom and so by providing this centrality to ambition, Cometanic love is defined from other forms and approaches to understanding the nature of love.

[2:75:359] The application of the instrument of study of mysteriosity to the context of love formulates one of the central themes understood to be essential to understanding the nature of love according to Cometanism.

[2:75:360] According to Cometanism, the mystery of love is considered to be tantamount to the mystery of The Cosmos itself for how we love, why we love, and in which instances we love are considered to hold some divinatory intercessional elements and so by

applying mysteriousity to the topic of love, I also open this amatological subject out to a theological context with the introduction of Divine elements of love that involve notions such as destined love and love that is Divinely approved.

[2:75:361] With the implementation of the instrument of orderity to the topic of love, we consider that there does indeed exist a certain level of order, pattern, and cosmically characteristic functionality to the residences and manifestations of love as seen in the similarities of the occurrences of love in certain circumstances, the orderities found in the uniformity of individuals' wants, needs, and requires of what love is for them and how it may play a role in their lives.

[2:75:362] And so by this notion of the orderities found in the nature of love, we further support and affirm the notion of the cosmicity, or cosmicness of love itself as orderity exists as one of the necessary predicators for cosmic existence.

[2:75:363] With the application of the twinstruments of progressivity and regressivity, we come to interpret and understand the notion that love is either progressive if it is positively maintained or regressive if it is not upheld and the momentum, purpose, and shared ambitions for love are not upheld.

[2:75:364] In this, we also consider the delicate and therefore unstable nature of love, thus repertaining to the aforesaid notion of the ability of love to quickly turn from one extremity which is love itself as its own extremity to its oppositistic extremity which is hatred which is further affirmed and propounded by the application of these twinstruments.

[2:75:365] The reciprocity of love is central to understanding the nature of love itself for love is dependent upon the reciprocation of emotions, ambitions, and similar and opposing worldviews that each person in the relationship admires about their partner, both the differences and the similarities.

[2:75:366] Therefore, in the instrument of reciprocity, we further see how the nature of love is symbiotic due to its dependence upon reciprocation for its successful functionality and manifestation which also demonstrates the interconnectedness of the different instruments of study and how their mutual applications to love and the subsequent derivitions of such applications are also connected to one another.

[2:75:367] With the application of the instrument of sensicality, we introduce a rational perspective on the contemplation of the nature of love and so this instrument attempts to understand love through the removal of the feelings and circumstances that surround love and to contemplate it according to a cynical, skeptical and practical apparatus.

[2:75:368] Considering love in this light removes the deeply emotional essence and the mysteriousity of love itself which are considered to be central components of its nature, but despite this, the application of sensicality to love is still considered to be important in

order to define an alternative understanding of love that is distracted by the elements aforementioned.

[2:75:369] Sensicality considers love through a scope of pure rationality which prioritises making sense of love in both its occurrences and its manifestations and additionally, that which is to be termed as practical love is formed as a result.

[2:75:370] In contrast to emotive love which is characterised by romanticity, expressions of love, creative forms of love, and other affirmed qualities associated with pure Cometic love, that which is to be known as practical love instead involves everyday elements of love such as mutual love of children and the home, falling in love for the advantages brought with marriage, or the upkeeping of microromanticies as a regular occurrences rather than the creation and expression of actual romanticies.

[2:75:371] With the application of the instrument of study of synchronicity to the context of love, we understand that in synchronous to the initiation, the manifestation and the gradual development of love are many of life's unavoidable events as well as a string of other emotions conjoined to and existing as products of love.

[2:75:372] These surrounding elements and occurrences to the manifestation and development of love shall either form as obstacles of regression to love or as propellers of love's progression towards greater heights, greener pastures, and wider horizons.

[2:75:373] Finally, similar to a couple of other instruments of study when applied to the context of love, synchronicity pertains to the surrounding elements that occur in chronologically similitude to the different stages of love and how these synchronous occurrences are influential on the progression or regression of love.

—

[2:75:374] As the penultimate segment of this discourse, I shall introduce a final dichotomy that is to still reside within amatology despite its separation in theme from that of the rest of the topics addressed in this discourse and it is to be henceforth known as the Monotic-Vivantic Dichotomy.

[2:75:375] Before introducing the two belief orientations that establish the dichotomy, it is firstly important to define each of these adjectives, the first one of which, monotic, pertains to that which is misunderstanding and ignorant of artistic eccentricity, creativity, and vocation.

[2:75:376] Meanwhile, the second of which, to be vivantic, pertains to being understanding, aware, and accepting of the idiosyncrasies of artists and creatives and remaining understanding of their eccentricities as they struggle through their vocations.

[2:75:377] A person that displays monotonic characteristics is to be henceforth known as a monot, a monotonian, or if the alternative term prosanic is used then such a person would be described as a prosan if male, or a prosaness if female, or they may also be henceforth known as a discreative or dispirant.

[2:75:378] That which shall henceforth be known as monotonism, or also referred to as either prosanism, discreativism, or dispiranism pertains to a distinct ignorance and lack of understanding and sympathy for the complex mind and the somewhat erratic behaviour that exists as a product of a highly creative individual.

[2:75:379] As well as this, monotonists misunderstand the needs, wants, annoyances and enjoyments of extremely creative individuals and artists of all mediums largely by not taking their creative ambitions seriously by dismissing them.

[2:75:380] Monotonism is considered to be rife in the world, hence the development of the applicable persona that is appellated as the Misunderstood Creative and also points to the imperativity of the introduction of these topic and its related terms in this discourse herein.

[2:75:381] For artistic purposes, one is always encouraged to distance oneself from anybody that portrays monotonic characteristics and tendencies because monotony is considered to be infectious by its nature and eternally damaging to the mastery of one's artistic craft, or any type of vocation for that matter.

[2:75:382] One must find inspirants and stick close to them for the survival of one's vocation.

[2:75:383] This becomes difficult of course when the monots in one's life are family members and although one still loves those people, it is therefore important to always separate familial matters from those of an artistic or vocational nature.

[2:75:384] Monots are not considered to be unethical people at all, they just lack the imagination to be artistically contributive and although you may like them for other aspects of their personality, they are not the same as you and they are not on the level upon which you are perched or deserve or belong to perch hence the necessity for one's disproximation from such people.

[2:75:385] Artists belong with artists, kings belong with kings, and monotonians belong with monotonians; this remains one of those most sobering, yet simply fundamental elements of life.

[2:75:386] Alternatively, we herein introduce a set of people that may or may not be artistic and creative themselves, but they hold a certain sense of empathy and understanding for the torn heart, complex mind, and passionate soul of the creatives and such understanding

fellows to be henceforth known as inspirants if they are men and inspiresses if they are female, or they may alternatively be described ignitists, or vivants.

[2:75:387] These brilliant individuals are whom creatives should vigorously surrounding themselves with for these people are expected to not only comply with the eccentricities of a creative mind and soul, but they also enjoy and thrive upon assisting the creative in any way he or she requires assistance, creatively or otherwise.

[2:75:388] Inspirants should not be confused with the pre-Astronist known as a muse for an inspirant is not necessarily the source of a creative artist's inspiration, but is instead a person that is understanding and empathetic towards the actions, eccentric thoughts, and emotions of a creative as part of a wider understanding of that which is known as the Artistic Journey.

[2:75:389] In direct oppositism to monotonism, that which is to be henceforth known as inspirism, or also known as ignitism, or vivanism refers to a belief orientation or way of life predicated on a distinct knowledge, understanding, and sympathy for the complex mind, somewhat erratic behaviour as well as the needs, wants, annoyances and enjoyments of creative individuals and artists of all mediums.

[2:75:390] Inspirism and ignitism, or alternatively known as vivanism is therefore a belief orientation that stands in contrast to monotic thinking and instead advocates for vivantic thinking is the superior form of thinking in relation to understanding creative individuals.

[2:75:391] Vivantic thinking is considered to come natural to truly creative individuals and artists while this form of thinking has to be crafted and mastered by non-creatives; essentially, they have to choose to attempt to understand the creative mind for without that understanding, one who is non-creative is expected to most likely descend into monotic thinking.

[2:75:392] This small and briefly introduced branch of amatology herein within The Omnidoxy is expected and is encouraged to become one of the foremost areas of contemplation and debate especially due to the fact that this branch of amatology is crossdisciplinary, or transdisciplinary by its very nature which automatically fuels its greater susceptibility to being more widely and vigorously debated than other topics that are monodisciplinary.

[2:75:393] Those disciplines which are herein defined as monodisciplinary pertains to topics that reside only within one discipline of study and do not connect or in any venture outside of the boundaries by way of the themes they discuss of the discipline into which they are categorised.

—

[2:75:394] Post-omnidoxical works of Cometanic love: Compilation of the Love Letters of Cometan, Compilation of the Love Poems of Cometan, Cometan's Declarations of Love, Tales of Love, Essays on Love, The Eyes of Cosma, The Love of Neomascularity, In Cosma's Honour, Cometanic & Cocoic Chastity, The Unconditional Love of Cometan, Cometanic Passion, Cocoic Desire, The Obsessions of Cometan, Lovestriken Cosma, Cometan's Limerence, Intimacies of Cometan, The Courtship of Cosma, Conjugal Desire, The Faithfulness of Cosma & Cometan, The Light Jealousies of Cometan, The Soulmate of Cometan, The Cosmos of Love, and Love of Divine Proportions.

—

[2:75:395] It is our distance physically that ignites and invigorates our emotional and sexual desire for one another.

[2:75:396] I know what I want but by some cruel order of my destiny I cannot yet have it and so the lovesickness continues.

[2:75:397] That which is to be henceforth known as cosmolimerence is another of the forms of the expression of cosmic love that is to be introduced in this discourse and pertains to the instance in which one's cosmoinfatuation holds a longevity that stretches for many years, or even throughout one's life rather than a short burst or a period of infatuation which is the particular type of infatuation that cosmoinfatuation pertains to.

The Centrality of Progression

[2:76:1] It is the belief of Astronism that humanity will progress so far towards the development of galactic colonisation and the completion of the Humanic Exploration of The Cosmos, however, what is the nature of progression?

[2:76:2] Progression is central to our beingness and our core identity; without progression, there is little purpose provided to our future.

[2:76:3] In Astronism, progression is equated with purpose and so, how we progress is the primary determinant of our existential purpose.

[2:76:4] What we become through progression is an improvement of our former selves and it is this constant improvement that we should seek cosmosward in order to achieve the ultimate form of improvement known as transcension as informed by the belief of transcensionism.

[2:76:5] But also, progression is an inevitability and it does have a considerably strange nature to it.

[2:76:6] Certain progressions we do not consider to be progressions because of how they appear to us for some progressions in fact manifestation themselves to look like setbacks or regressions.

[2:76:7] Therefore, only after the consequences of those progressions have come to light then do we understand such occurrences were indeed progressions.

[2:76:8] Progressions are not always there to improve us materially, but they may occur in order to improve us mentally, emotionally, intellectually or spiritually.

[2:76:9] There are progressions of all sorts for all reasons intertwined with our individual and our collective destiny and by all means and forms and it is important for us to master how to spot and interpret such progressions so that we may benefit and utilise them.

[2:76:10] From where progressions come is the predetermination of The Cosmos; they cannot be stopped nor should we wish them to stop; however, we should not allow them to dominate our thoughts and actions, but when they do arise, we must see them and accept them for what they are and allow ourselves to be taken up by them and dropped off wherever they do please.

The Centrality of Prophecy

[2:77:1] Prophecy in Astronism is minimal in its traditional form when in comparison to other religions and what I am speaking of here is theological prophecy; forms of prophecy which are propounded by some form of God which informs a prophet of divine will.

[2:77:2] This type of prophecy is minimal in the context of Astronism, however, prophetic notions do exist within Astronism, the most prominent one of which is the Humanic Exploration of The Cosmos which is itself a prophetic belief about the future of humanity as well as humanity's destiny.

[2:77:3] However, within this prophetic belief of the Humanic Exploration of The Cosmos, there is no involvement of a divine will, nor is there any involvement of supernatural visions or individual prophets preaching their interaction with divine beings; I am Cometan and I am no prophet and I shall never claim to be as such; I simply have beliefs about what the future of humanity holds and what the destiny of humanity will manifest itself as.

[2:77:4] I understand that some will think of me as claiming to be prophet, but I am not a prophet; the personal inspirations that have driven me to the writing of the Omnidoxy and the founding of Astronism did not come from any divine being and I have not been communicated to by any God or godly figure; this is the difference between personal inspirations which is what I proclaim to have experienced and divine revelation which is what individuals like Muhammad and Joseph Smith proclaimed to have experienced.

[2:77:5] Philosophical prophecy is the category of prophecy of which I believe I have experienced rather than a religious prophecy for I have had no interactions with divine or supernatural beings, but I have experienced many imaginations, visions, and intense periods of ideation that, to me, are not common occurrences in the ways in which they have revealed themselves to me.

[2:77:6] Therefore, I herein introduce philosophical prophecy which includes all prophecies that involve an intensive series of ideations and imaginations with the origin being the mind of the philosopher experiencing them rather than them coming from a divine source; this difference in prophetic source should not be used to undermine the prophecy, but should instead be used to question the prophecy just as divine/religious prophecy is questioned.

[2:77:7] There exists natural prophecy, preternatural prophecy, supernatural prophecy, and unnatural prophecy just as there exists three states of cosmical residence; naturality, preternaturality, supernaturality, and unnaturality.

[2:77:8] The nature of prophecy in relation to philosophy begs the question of whether prophecy is philosophical, non-philosophical or aphilosophical; it is the position of Astronism to state that prophecy can manifest itself as a proponent of all three depending

on how it is manifested and in whichever way it is applied; prophecy can soon turn to dogma and the domination of the masses and it is in that way that Astronism should not ever wish to apply the concept of prophecy.

The Nature of Truth & Reality and The Problem of Atheism

[2:78:1] The nature of truth and reality, the relationship between the two, the contradictions between the two, and the divergences between truth and reality are all of philosophical concern, but is the notion of the concept of truth actually philosophical?

[2:78:2] Astronism holds the notion of the concept of truth to be aphilosophical by its nature because truth commands that it is all that is about something for it is the truth; there is an underlying assertion here stating that without knowing this truth, one is subordinate or inferior to those whom know the truth.

[2:78:3] Truth is without philosophicality because the philosophical never asserts a finality of information and never asserts that one is true; one may assert in philosophy that one is correct or right, but one whom knows about the practice of philosophy understands that they would not ever say that they are the truth or that they know the truth.

[2:78:4] Any person that does say that they know the truth or that what they say is the truth does not understand the theory of knowledge; you can only assert that something is the truth if you know and crucially, you understand, everything that is in existence about that subject through all temporalities.

[2:78:5] To proclaim truth is a religious jargon not a philosophical one for in philosophy, there is no truth, there is just more knowledge; this is because in religion, God is provided as the authority while in philosophy, logic and rationality are provided as the authority and even though they can be used to seek out truth, they never actually reach truth because truth is unreachable for those as limited in mind and body as us.

[2:78:6] Truth is without philosophicality because truth, similar to faith, though not belief, does not comply with the notions of logic and rationality; to be the truth and to know the truth is not to be or know the truth at all; please never proclaim to know or be the truth for in doing so, you isolate yourself from the wonders of philosophical inquiry.

—

[2:78:7] There is an intrinsic problem with atheism and it must solemnly be spoken of herein because this is something atheists globally must face though this does not mean to say that any and all atheistic stances are wrong, but it is to highlight that there are issues from within atheism that are in need of address.

[2:78:8] The principal issue with atheism is that it is not a standalone belief orientation; atheism alone is the rejection or disbelief in the existence of a God or a multiplicity of gods, but this does not constitute a belief system in and of itself and herein we strike the

central issue with atheism that because it isn't a fully formed belief system because it holds no beliefs, it is unable to provide alternatives for the subjects at hand.

[2:78:9] But providing alternatives is the essential any belief or disbelief that is put forward with regard to a subject and this is the fundamental flaw of atheism which is why atheists often default to agnosticism when pressed with the matter of providing alternatives for questions such as, what did create the universe if there is no creator?

[2:78:10] But of course, defaulting to agnosticism is not true atheism, that is agnosticism, so therefore atheism cannot be described as a standalone, reliable, and withstanding system because it cannot provide alternative solutions for its followers that do not somehow include the existence of a creator.

The Eternal Oblivion

[2:79:1] It is my solemn view on the topic of death that death is simply a part of life like every other event that we experience; it is not to be feared and it is not to be avoided or attempted to be avoided for in doing so we undermine the importance of death to its dichotomised opposite which is life.

[2:79:2] It is my personal view that there exists no life after death and this is because I follow the school of naturalism within Astronism, specifically theistic naturalism which states that there is a creator, yet there is no afterlife.

[2:79:3] I have titled this short discourse The Eternal Oblivion because that we what we face upon our death; an oblivion of nothingness, but I do have good news to counteract this depressing outlook which is that we will not know of this nothingness upon its occurrence for we will be dead and so we cannot know of something if we are not conscious to know it and we must not fear death either.

[2:79:4] I believe that our mental and emotional conquering of death is our greatest existential and philosophical challenge, but it is something that we must all face; to create to avoid is not progressive, but instead, to create to enjoy and to face that which we may not like the thought of are superior in my opinion.

[2:79:5] Of course, it is important not to paint the entirety of Astronism with my views for Astronism holds a plethora of schools within it that hold dramatically different beliefs and opinions on the topic of death and the afterlife.

[2:79:6] I suspect that I hold this belief regarding death and the non-existence of the afterlife due to the lack of connection in Astronism between The Divine as the Universal creator and the creation of an afterlife; this is informed by the entirety cosmocentric worldview of Astronism, hence not needed is an afterlife for Astronists find their existential purpose through the achievement of collective transcension and freedom via cosmic exploration.

The Incentrality of Constructed Time

[2:80:1] The various scales and organisations of time that we, as a collective species, have constructed are exactly that; constructed; they serve as no significance beyond the boundaries of our civility.

[2:80:2] Humanity has formed religious and secular time, but I believe it to be important that we transition towards cosmic time; a scale of time that takes into consideration the timescales of The Cosmos in order to truly demonstrate to humanity our insignificance, to reduce our ignorance, and to increase our humility.

[2:80:3] The sooner that we realise that the measurements of temporality that we have created are unnatural and without significance beyond our own civilisation, the sooner we will reach greater humbleness as a species about our place in The Cosmos.

[2:80:4] Constructed time is therefore contrasted with natural time, the former of which is made up of religious, philosophical, and secular constructions of time, while the latter formulates a measurement of time that is in direction to The Cosmos.

[2:80:5] Of course, for practical purposes, it is more efficient and understandable for us to utilise constructed forms of timekeeping, however, the emphasis that I am making here is on the recognition that there does exist cosmic time and that our constructions of time are of no significance to cosmic time, that our constructed forms of temporality are not real to The Cosmos, and neither are they real or significant anywhere else within The Cosmos other than upon The Earth for as long as the religious, philosophical, and secular systems that constructed them are in place to maintain their form of time.

The Incentrality of Eternity & Sempiternity

[2:81:1] We cannot understand eternity because we exist within The Cosmos which is fundamentally limited and so eternity does not exist anywhere in The Cosmos and cannot exist within The Cosmos because of the fundamental nature of The Cosmos.

[2:81:2] There are many references in other religions about eternity and humanity's deliverance to eternal life after death; although the notion of sempiternity and eternal life is attractive and comforting to think about it, it does not reflect the reality of anything around us as nothing within The Cosmos presents any eternity due to the Cosmic Limitation Principle.

[2:81:3] Through such religions, humans seem to want to crave eternity and sempiternity in some form or another, perhaps because it provides us with happens to think that we will achieve some sort of eternity because eternity is comforting, secure, and predictable, unlike everything else around us in our reality which are discomfoting, insecure, and unpredictable which is the nature of The Cosmos due to our insignificant and powerless role within The Cosmos.

[2:81:4] There is no existence of eternity in The Cosmos or in relation to The Cosmos because cosmic nature does not comply with notions of eternity; eternity is temporal infinity and this cannot exist within or in relation to The Cosmos because The Cosmos is fundamentally limited.

[2:81:5] In Astronism, however, eternity is associated with The Divine and The Universe because they hold extracosmic natures meaning that they are not limited by their nature; the importance of the concept of eternity is not found at all in Astronism unlike in other religions because Astronism is cosmocentric and is therefore concerns with describing and exploring the nature of The Cosmos rather than the nature of that which is eternal by its nature.

[2:81:6] The Cosmos does have a beginning because it is ultimately limited and so therefore it is not eternal and therefore The Cosmos will also hold an endpoint because it does not hold temporal infiniteness.

The Incentrality of Immortality

[2:82:1] Immortality plays no role in Astronism, especially so in the naturalist school of eschatology because that school denies the existence of an afterlife, thereby denying the existence of immortality.

[2:82:2] But even in the most supernatural of schools of eschatology of Astronism known as the transtellationist school within which many beliefs and concepts arise, the concept immortality remains vague in discussions or all but unaddressed.

[2:82:3] This is due to the overarching principle of cosmic limitation which states that all that does exist within The Cosmos is limited by its nature and therefore, there cannot exist immortality because immortality is an example of our own temporal infiniteness by which we become divine in nature.

[2:82:4] There is nothing in The Cosmos that survives forever because The Cosmos itself is not immortal due to its limited nature in comparison to The Universe and its universal nature and The Divine and its divine nature.

[2:82:5] Unless to state that we become godly or divinely upon our death, there is no way to state that immortality is true, hence Astronism's general rejection of the notion, although I expect and do encourage a plethora of schools of thought to address this notion of immortality, to agree with and to defend it.

[2:82:6] We can have a soul, but it doesn't need to have any connection to the afterlife or immortality.

[2:82:7] Immortality's prominence within religious traditions is due to such systems wanting to fulfil the wants of humanity through the creation of immortality therefore immortality was carefully crafted to ensure the comforts of humanity were well assumed.

[2:82:8] The Astronist Tradition holds that immortality is fundamentally non-cosmical, or acosmical, and is therefore not of our nature as humans; as Astronism considers death to be a natural part of life, we must accept death and not find excuses and avoidances for it; if you wish to be provided with such comforting avoidances for death then Astronism is not for you.

The Incentrality of the Future Reality

[2:83:1] One must not concern oneself with the reality of the future, for reality is based on present means, and so, to do such is to break the boundaries of reality itself.

[2:83:2] Reality is what is at the Time present; not what may be in some future Time.

[2:83:3] Instead, one should focus on opportunity and building the resources to make the reality one wishes for their future.

[2:83:4] The only entity between the present reality and the future reality is Time.

[2:83:5] In this case, it is an ally so use it well.

[2:83:6] Time and the dedication of the individual and what they do with the Time aforementioned result in the future reality.

[2:83:7] To spend this Time speculating on the reality of the future, a most unfortunate waste that would be.

[2:83:8] Instead, one of intuition and optimism, would spend this Time completing and establishing the works that will bring them to their intended future reality.

[2:83:9] One cannot base one's life on the realities of the Time present reflected into the reality of the Time future, for in this way, one does not live at all.

[2:83:10] Beware of those whom speak of this supposed future reality often.

[2:83:11] They speak in falsity for unless they created The Cosmos, and reality itself, they cannot know what is to come for the world, or what is to come for you.

[2:83:12] One should exist for the future, and live in the present.

The Incentrality of Humanity to The Cosmos

[2:84:1] We are as central to ourselves as The Cosmos is to itself, but to intersect the two is a foolish concept, for an existence so small and one so large cannot be central upon another.

[2:84:2] To be considered only about the rest of one's own life is a waste indeed of what one could do for the world.

[2:84:3] Humanity, The World, and The Cosmos will go on long after oneself has passed; would it not be prudent to add to the entities which will no doubt live beyond oneself, than just to add to one's own existence; a drop in the ocean that is The Cosmos.

[2:84:4] Anthropoincentricity/anthropoincentrism is the belief orientation which informs the entire foundations of Astronism as a philosophy because it reduces the importance of humanity's existence in The Cosmos to such a small level that humanity may as well not exist in relation to The Cosmos.

[2:84:5] Humanity is only important because we are part of humanity, but from a purely cosmocentric viewpoint, humanity is not important and to become more humble, less ignorant, and more open-minded about what may or may not be our existential purpose, it is the belief of Astronism that anthropoincentrism should be followed as directly influenced by the view of cosmocentrism.

The Incentrality of the Past

[2:85:1] The past is unchanging and does not truly existentially exist and it certainly cannot be influenced or changed by our efforts in the metaphorical present.

[2:85:2] The incentrality of the past is at the heart of the beliefs of Astronism as Astronism considers itself to be a futurocentric religion/philosophy; it is not concerned with narratives of some ancient time, but is instead future-looking and primarily concerned with the affairs of humanity in The Cosmos.

[2:85:3] The concept of the past is a manifestation of our linear experience of temporality and it is right that we do hold the conceptuality of the past, but it is moreover important that we do not provide the past with any greater importance than its conceptuality.

[2:85:4] The past is a concept rather than a real, physical, existential state and that is what it shall remain; the conceptualisation of the past is important because we can use the past to learn from mistakes and to inform our actions for the future because only the future truly exists.

[2:85:5] Therefore, other than its utility as a knowledge resource, the past is an incentrality from the perspective of Astronism, but even the past's utility as a source of knowledge is taken into question by the notion that the past cannot truly ever be known in the exact circumstances that past events have occurred due to the obscuration of the events of the past.

[2:85:6] Anything we understand about the past must be taken with the understanding that what is known about the past is a crafted narrative of events, usually suited to a person or an organisation's motivations and intentions, therefore, even the past's utility as a knowledge source cannot be trusted.

[2:85:7] For this reason, the past is entirely incentric from the Astronist perspective and holds very little utility to us due to the obscurations that have occurred with regards to the narratives of the past; we cannot trust the past, the present only exists metaphorically, and therefore, we can only trust the future and only the future exists; the past is non-existent and holds little utility to us except for the narratives that it draws which may influence our narratives of the metaphorical present.

The Identity of Thought & The Philosophy of Identity

[2:86:1] Viewing an individual by thought, not by appearance is the superior form of perception when directed towards different individuals; we should see people through their thoughts, their convictions, and their vocations rather than seeing them through their appearance.

[2:86:2] As a culture, a distinct worldview understanding must be forged for if every cultural facet expounds principles and representations in exactity, then a distinct culture, identity, and characteristic cannot be achieved.

[2:86:3] To achieve identity is a mixture of theoretical and physical elements and it is my ambition that Astronism and wider Astronist/ Astronic culture will achieve its identity and hopefully I will still be alive to see that identity forged and established.

[2:86:4] Identity is not achieved merely through appearance, but through thought and it is this type of identity that I wish to establish in my career as the founding of Astronism; an identity of thought first and secondly, an identity of appearance.

[2:86:5] Identity is often misconceived about what we are, but in fact, identity is actually achieved by how we are and which is what informs what we are; both interpretation, perception, and knowledge are also paramount to the formation of identity.

[2:86:6] However, ultimately, our identity is only controllable by what we say and do in our lives and how we portray ourselves, but there will always be those whom attempt to distort our identity and they do often succeed in such endeavours; I believe the greatest challenge is to conserve our identities to portray ourselves how we wish to be perceived whilst also understanding that people will see what they wish to see of us and if they hold a negative slant on how are we, what we are, or what we have achieved, then they will always seek out that which is destructive to our identity.

The Philosophy of Art

[2:87:1] The principal question that is raised in concern to the philosophy of art is, what is art and what can be considered an object of art?

[2:87:2] Astronism denies the notion that everything is art, but propounds the notion that anything can be made into art for art is simply the application of practical or theoretical skill and imagination into a particular medium resulting in the creation of something new poised around a specific subject so not everything is art, anything can be made into art; I feel that this statement neither narrows the definition of art thus allowing creativity to flourish whilst also not demeaning the term art to the masses to say that everything is art.

[2:87:3] It is also the Astronist belief that philosophy itself should be considered a form of art, both theoretical philosophy in the form of writing and the creation of concepts, beliefs, and theories, as well as practical philosophy manifested by argumentation, discourse, debate, and the implementation of beliefs and concepts to physical practices.

[2:87:4] It is for this reason that I, as Cometan, do consider myself to be just as much an artist than anything else because I am creating concepts, beliefs, and theories about The Cosmos and all other issues and subjects as an expression of my personal beliefs and I see no difference between that and the expressions that a painter or drawer presents through their own mediums.

[2:87:5] There is difference in the medium, but no difference in the substance of what is being created because creativity comes out through a variety of forms and an artist is simply a creator of elements to form an expression of a whole oriented around a particular subject of their choice and passion.

The Philosophy of Cognition & Artificial Intelligence

[2:88:1] The topics of cognition and artificial intelligence are herein ascribed to be territories undertaken by the study of philosophy, especially so by their theoretical approaches.

[2:88:2] It is the belief of Astronism that artificial intelligence does and will continue to require extensive philosophical contribution so that we are able to lay the foundations for a multitude of schools of thought on this extensive topic.

[2:88:3] I expect that various Astronist schools of thought will emerge on this topic as it becomes more and more realised in the practical world in a post-omnidoxical setting just as I expect and do encourage a number of different schools of thought to emerge on future that I cannot evenly presently consider because I do not know of their existence or relevance during the writing of the Omnidoxy, but I do know that there will be a plethora of topics in the future that will be of Astronist philosophical concern and that Astronists will develop a range of different schools to tackle every angle of the subject.

[2:88:4] Can a machine have emotions? Yes, it is believed in Astronism that depending upon the level of technology applied and the extent to which the development of artificial intelligence has come that it would be possible for machines to hold emotions, however, this does not mean to say that these emotions will hold the same equity as human emotions.

[2:88:5] The Astronist belief states that if artificial intelligence is developed to an advanced stage that machines/robots will be able to cognise that a certain circumstance generates a particular emotion; this emotion of which I speak will be calculated according to the situation at hand and machines will be able to display emotions, but then the question arises as to whether the display of emotions is really having emotions?

[2:88:6] But ultimately, it is the Astronist belief that machines will one day be able to calculate the circumstance and generate an emotion in response to that circumstance which, when considered, is not too unthinkable and overly complex; the machine would simply be programmed to understand a particular situation is equated to a particular emotion and then the machine would generate that emotion through certain functions.

[2:88:7] Can a machine be self-aware? Yes, it is the belief of Astronism that machines will one day, again when artificial intelligence advances to this stage, hold the capacity to understand that they existentially reside within the cosmical realm, that they hold a physicality, that they hold a purpose, a function, and are programmed to serve that purpose and to fulfil that function or functions.

[2:88:8] Can a machine be original or creative? No, it is the belief of Astronism that even though we may one day hold the ability to make machines hold original thought and to be creative through imagination, that it is a fundamental ethical principle not to allow this to

be implemented; this is because the creative abilities of humanity are what will make us distinct from our mechanical counterparts; we must preserve our creativity and original thought to imagine and envision; by instilling the natural phenomena of imagination into a machine, this is considered to be an unethical and dangerous act.

[2:88:9] Can a machine be benevolent or hostile? Yes, Astronism concurs that machines can display emotions such as benevolence and hostility towards any subject due to their capacity for intelligence.

[2:88:10] Can a machine have a soul? No, a machine does not have the capacity for a spirit or soul, but this is also due to the Astronist belief that the soul is just a concept created by pre-Astronic religions and therefore Astronism also denies the existence of a soul altogether, hence Astronism rejection that machines can have a soul.

[2:88:11] This rejection of the soul is particularly important to the naturalist school of Astronic eschatology, but acceptance of the existence of a soul is present in the transtellationist school.

[2:88:12] Finally, it is also the opinion of Astronism to state that artificial intelligence remains and shall always remain integrated into the discipline of philosophy and that philosophy is required for our understanding of artificial intelligence to flourish and so the Astronist belief stands in alignment with many scholars on the notion that philosophy's involvement with understanding the theoretical foundations of artificial intelligence is crucial.

The Philosophy of Cosmology

[2:89:1] The development of metacosmology refers to the role of the development of different cosmologies and how it remains important to philosophical cosmology that we contemplate what a cosmology is, how it can be used and applied, and how a cosmology informs our beliefs regarding other topics.

[2:89:2] Comparacosmology therefore refers to the comparisons of different cosmologies both of a religious, scientific and philosophical nature and is to be henceforth organised as a branch of comparology.

[2:89:3] Religious or mythological cosmology is a body of beliefs based on mythological, religious, and esoteric literature and traditions of creation myths and eschatology.

[2:89:4] Philosophical cosmology, the first organised one of which is the Astronist/Astronic cosmology, is a category of cosmology that involves the infusion of logical and rational thought, though crucially not empirical evidence, into a formulated cosmology that is based on theoretical notions and ideas; a philosophical cosmology is a logical/rational cosmology, a religious/mythological cosmology is a theocentric and illogical cosmology, and a scientific cosmology is an empirical cosmology.

[2:89:5] Philosophical cosmology can be distinguished by two types of cosmological arguments; deductive and inductive cosmological arguments; the first type has a long tradition in the history of philosophy, proposed by thinkers like Plato, Aristotle, Descartes and Leibniz, and criticised by thinkers like David Hume, Immanuel Kant and Bertrand Russell, while the latter has been formulated by philosophers like Richard Swinburne.

[2:89:6] For Leibniz, all the plenum of the universe is entirely filled with tiny Monads, which cannot fail, have no constituent parts and have no windows through which anything could come in or go out. In his Aesthetics, philosopher José Vasconcelos explains his theory on the evolution of the universe and the restructuring of its cosmic substance, in the physical, biological and human orders.

[2:89:7] Philosophical cosmology tries to respond questions such as: What is the provenance of the cosmos? What are the essential constituents of the cosmos? Does the cosmos have an ulterior motive? How does the cosmos behave? How can we understand the cosmos in which we find ourselves?

The Philosophy of Entrepreneurship

[2:90:1] The nature and role of an entrepreneur is herein considered to be part of the territory of study of philosophy for I see a philosopher being an entrepreneur of ideas.

[2:90:2] I see the role of a philosopher and entrepreneur combining together to form a future in which conceptual value is placed at the forefront of our economies and those whom are able to create conceptals most prolifically and with the quality will be those whom succeed.

[2:90:3] Entrepreneurship is the process of designing, launching and running an enterprise, but I see there being very little difference between the practical context of a philosopher and that of an entrepreneur; yes, the products created by the two are very different and the intention by which they are created should be different also, however, the pure creativity, grit, ambition, and determination to succeed in the world by the gifts of our imagination are what unite the role of a philosopher with that of an entrepreneur.

[2:90:4] I, as Cometan, am a manifestation of this for I see myself as both a philosopher and entrepreneur, particularly an entrepreneur of ideas; a person whose products, services, and contributions to the world are based on concepts, beliefs, and the organisations of those different conceptals into coherent systems.

[2:90:5] With the combination of the roles of a philosopher with that of an entrepreneur, we will both make the role of a philosopher in society more understandable to the wider masses, as well as demonstrating the importance to philosophers of the marketisation of the concepts, beliefs, and systems that they have created.

The Philosophy of Marketing

[2:91:1] The marketing of a religion or philosophy is at heart of the contemplations that I am challenging myself with now as I come towards the completion of the Omnidoxy as I understand that, after completing a business and marketing degree, that marketing anything properly is essential to that subject's survival and in the context of Astronism, there is no difference.

[2:91:2] Promulgation refers to the managed circulation and distribution of conceptals to as wide an audience as possible through means of commercial marketing and advertising that are similarly used in the context of businesses.

[2:91:3] Tirition refers to the managed circulation and distribution of all types of conceptals to as wide an audience as possible, but instead of using commercial forms of dissemination like marketing and advertising, traditional missionary tactics are used with some new forms of non-commercial conceptual dissemination introduced in the writings of the Omnidoxy.

[2:91:4] Dissemination refers to the widespread multifaceted and multidirectional transmission of ideas from one source to many receivers and is therefore central to both tirition and promulgation.

[2:91:5] There are five processes that are herein identified regarding the ambitions of what The Institution intends to achieve for the context of the philosophy / religion of Astronism in particular and these five processes are as follows: the marketisation of philosophy, the economisation of philosophy, the commercialisation of philosophy, the commodification of philosophy, and the mediasation of philosophy.

—

[2:91:6] That which is herein introduced as the term shared philosophy pertains the notion that the philosophy of Astronism is a system of belief and large collection of ideas that will be directly contributed to and expanded by a multitude of authors from the moment of its inception as manifested by the publication of the Omnidoxy.

[2:91:7] It is this acceptance of the shared philosophy principle that is manifested in the operations of New Concept Development within The Institution of The Philosophy of Astronism, however, all contributions that are recognised by The Institution are contributions to Astronism are in need of verification of originality and authenticity, as well as to undergo an officialisation process, but the principle of shared philosophy, or more specific, share Astronism, is still steadfastly maintained.

The Philosophy of Masculinity

(Maleology)

[2:92:1] The discipline of maleology has been introduced and lengthily discussed elsewhere in the Omnidoxy, however, I do feel that the philosophy of masculinity does require its own shore discourse within the Duodoxy and here we are.

[2:92:2] The nature, the identiture, and the distinction of femininity, I feel, has been philosophised greatly, especially so throughout the last century of our history, and this philosophisation of what it means to be female should most certainly continue, but with this, I believe a philosophisation of masculinity has been largely overlooked and under discussed.

[2:92:3] I feel and know that there is something about masculinity and what it means to be a man that holds so much depth, meaning, and character, as well as emotional, psychological, and philosophical breadth of pressure that a discussion of what the future of masculinity could hold is discussed herein so as to herald a new era of masculinity, in order to rejoin femininity so that both genders know whom we are.

[2:92:4] There are a lot of lost men of all ages in the world who know not whom they are, so let this philosophisation be a beacon of hope for them, to regain their identitures, and to build a type of masculinity that has never yet been accomplished before.

[2:92:5] Just as I have said about the nature of all dichotomies, no matter how far removed one side of the dichotomy is from the other, you cannot escape the fact that each side is dependent upon the other for its survival so just as both elements of the dichotomy of good and evil are dependent upon one another for their existence so is the dichotomy of man and woman; neither is superior to the other and neither can any one side exist without the other for you exist as two sides of the same coin then there is no existence if one side is extinguished.

The Philosophy of Media

[2:93:1] The use of media for philosophy, the education of the world about a philosophy through media, and the importance of media for an organised philosophy as well as the nature of media and the notion that there is no bad media (omniagency).

[2:93:2] The media will be the agency through which Astronism will be transmitted throughout the world, hence the importance of the mediasation of philosophy to development and establishment of Astronism.

[2:93:3] This presents Astronism in a unique position because when other major religions were founded, the media had not developed to the extent that it has today in the modern; Astronism must take the opportunities that the media brings for the dissemination of all of its concepts, beliefs, and theories so as to achieve the worldwide promulgation of the philosophy.

[2:93:4] A friend to the media is a friend to have for a person to go far in this world for awareness is all that is; if nobody knows you then you cannot hope to make any mark in the world, but we must remember not to desecrate the type of mark we make for the sake of receiving attention.

[2:93:5] The nature of the media is that they remain on your side if they speak about you, it's when they do speak about you, then is when you should be worried.

The Philosophy of Mereology

[2:94:1] The mereological cosmos refers to one's understanding of the structure of The Cosmos only through the parts and wholes of everything that exists; understanding The Cosmos through this filter provides for mereological understanding of The Cosmos.

[2:94:2] Mereological cosmology, as it is to be distinguished from the mereological cosmos, refers to the study of the beginning and the creation of The Cosmos as well as the end times of The Cosmos through the notion of the existence of parts and wholes.

[2:94:3] The study of the parts and wholes of everything that exists in The Cosmos is essential to the development of our philosophical understanding of the cosmical realm within which we exist.

[2:94:4] The whole is a singularity while its parts are a polyarity and simultaneously alongside this, the whole and its parts are dichotomised which means that both sides of the dichotomy are dependent upon one another.

[2:94:5] The whole cannot exist without the parts, but neither can the parts exist without the whole.

[2:94:6] That which is to be termed as mereologism is a belief orientation holding that The Cosmos should only be interpreted through the dichotomy its parts and the whole which is The Cosmos itself.

[2:94:7] It is through this dichotomy that the belief of mereologism considers to be the superior form of interpreting The Cosmos.

The Philosophy of Modesty

[2:95:1] Practice modesty in person, and ostentation in the buildings and ideas in which one creates, rather than the purportedly modern craze of ostentation of oneself and one's own personality and ego, and the modesty and simplicity of the buildings we have constructed and the ideas surrounding us that we have created.

[2:95:2] An inversion seems to have occurred in the last century; now, it seems our internal beauties have been devoured and completely undermined, and our own personal, greedy, and individualistic desires for confidence, egotism, and self-importance have been bolstered.

[2:95:3] That which I herein introduce as the principle known as Etiquette Equality pertains to the principle in response to the commandment of some religions towards their followers to dress modestly, that if women should have to do that then so should men dress modestly.

[2:95:4] We pride ourselves today on living in a world of freedom and equality whilst also respecting religious principles and values, therefore, the way only to make these principles fair and not repressive is to apply them to both sexes.

[2:95:5] I preach not of the modesty of the self, but of the modesty of humanity to know that we are nothing from the perspective of The Cosmos and that we will continue to be nothing unless we do truly achieve the Humanic Exploration of The Cosmos.

The Philosophy of Money

[2:96:1] The acquisition of wealth is not considered to be the future of economics or human civilisation from the Astronist perspective; it is not considered to last as the driving force of society for instead our desire to achieve transcension through cosmic exploration will be the driving force of humanity.

[2:96:2] One of my university lecturers recently mentioned to me in passing and lightheartedly that she thought I would complete my degree, triumph in the world of business, and earn far more money than her and this exclamation struck a coincidental cord with me as I had just been contemplating existentiality that day and her mention of this caused a snowball of ideas regarding existentialism.

[2:96:3] Existentiality, as a philosophical topic, is both directly and indirectly referred to throughout the entirety of the development of the Astronist philosophical tradition, but one of the most prominent elements of that which is to be known as Cometanic existentiality, or Cometanic existentialism.

[2:96:4] This is the existential theories and concepts originating from within The Omnidoxy herein, in relation to money is that money should not be superiorised in such a way that it is considered to be the purpose of one's life, but that it should only be considered a mere function of societal interaction and advancement due to the boundment of societal capacity, both individually and collectively, with economic performance.

[2:96:5] The consideration of money as a function rather than a purpose is considered to be one's freedom from the trappings of money; it remains very interesting to me that the freedoms that money does bring can so quickly become the most tight of chains for both one's mind and one's body.

[2:96:6] Philosophers in the recent past saw the purpose of humanity founded upon the materiality surrounding them rather than the purposes expounded by religion whom many philosophers, especially those in the twentieth and nineteenth centuries, found to be antiquated and the epitome of regression.

[2:96:7] Our societal structure states that they whom accumulate the most wealth are considered the victors, but I see the one bound by money as the greatest loser in the game that is our existentiality.

[2:96:8] For their own reasons, philosophers past saw evil in religion, but I take not this stance for in religion, I see the lending of existential purpose, whether it be grounded in reality or not.

[2:96:9] A man or woman that does not part with his or her money is a man or woman that has not yet learned that the truest and purest meaning and purpose to life is to live.

[2:96:10] Monetarian, or a monetist is herein introduced as a person that holds money at the centre of their existences as is in constant need for money and is considered to be addicted to it to which Astronism is opposed but understands how hard this may be for some to stop.

The Philosophy of Peoples

[2:97:1] One must know and feel what every other feels before they truly know the struggles of the people.

[2:97:2] To be a person of the people, one must be driven by the minds of life's struggles; not the short-lived and fickle pleasures it may sometimes provide.

[2:97:3] To take, to mate, and to fight; these are the natures of the people for perfect the people are definitely not.

[2:97:4] To move the masses is such like moving The Universe, but manipulation is possible.

[2:97:5] One must feel the criticality in people's minds and hearts, and know their fractured ambitions for their lives; to know one's dreams is the key to their soul.

[2:97:6] Strike these fractures in such a way that the masses divert to your intended destination.

[2:97:7] One must strike, strike, and strike again; three time's the charm; no more, and no less.

[2:97:8] Serve nobody's side only your own for it is the nature of people to do the same, though you must do what you do with the progression of the people in mind always.

[2:97:9] The ability to guide the masses to your way of thinking is the greatest of talents for the complexity, and sensitivity of such a task is monumental.

[2:97:10] However, this task is not accomplished best through raw power, but through the subtle manipulation of one mind to domino to the next.

[2:97:11] One must plant the seed and let it grow to make the masses think that they have the power, and that they chose their own path, but in truth, it was drawn out before them like all else.

[2:97:12] If the seed does not grow as intend, plant another, and then another, but only three can any one mind take before suspicion arises, and vacate one must, though fear not; there will always be another garden of minds to plant one's seeds.

[2:97:13] Once the seed is growing as intended, one must propel selected events into motion for the world's eye to see.

[2:97:14] A series of intended events is no better ally in the guidance of the masses.

[2:97:15] Through teaching, example, and conviction are the ways in which the people's minds are made to want what has been carefully and subtly placed before them.

[2:97:16] It must be said that the greatest of all movements of the people is the awakening of them to see what you see, and how you see it so.

[2:97:17] For this, one must know for sure that how they see, will help the world see better too.

[2:97:18] This awakening, whether genuine or artificial, is the greatest of all victories in the galvanisation of the peoples to progress towards a better future.

[2:97:19] Another nature of peoples is their intrinsicity to seek out the truth of everything; if what you believe is true, the people will seek it and latch onto it.

[2:97:20] You will see the truth you believe echoed around you in life and beyond, but words and thoughts and opinions are distractions in this way; you must cherish this movement of the masses for as long as it will last.

[2:97:21] For that is another nature of peoples; their concentration is fickle and short-lived

[2:97:22] If you do not want to see your truth turn into untruth by its indoctrination to the people, then your truth should know when to let go of the peoples.

[2:97:23] Let the people progress on to their next truth, knowing in good security that your truth made a difference, despite it not lasting.

[2:97:24] A truth is pure, and does not need to be forced upon its audience.

[2:97:25] One's great diversity can soon make them into nothing.

[2:97:26] The people will find their way to the truth if what you say is genuinely the truth, and not an imposter of the truth; a distortion of the truth; a truth that may once have been pure, but has turned into a regressive version of its former self; lost in the past and waiting for the world to return to it, but also knowing the world never will.

[2:97:27] If one is to enter into the minds of the masses, then one must know truly and deeply their reason for such a path; if it is anything short of progression, then one must choose another path.

[2:97:28] Aiding the people should be a principle you hold dear, but blind aid to all sufferance will make no difference.

[2:97:29] There will always be sufferance wherever you go for that is another nature of the peoples; they make mistakes for they are far from perfect and they must suffer as a result.

[2:97:30] Aiding every individual sufferer isn't aiding in the long-term; its weakening oneself and weakening them even more.

[2:97:31] It is the internal struggles upon which one triumphs alone that makes better people.

[2:97:32] By aiding them to their triumph, you have stolen it from them; you have cheapened it.

[2:97:33] Every small fracture you weaken, weakens the whole as a result, and the one consequence of such acts is collapse of the established system.

[2:97:34] You must now ask, well what are you to do?

[2:97:35] You must establish systems in which the people triumph alone, but for the progression of the whole.

[2:97:36] You must establish order, and routine, with a smidgen of chaos, as a system too regimented is a system doomed to fall if not now, then in the future for certain.

[2:97:37] You must stamp out those in the system whom wish to exploit its benefits, and block those whom only wish to corrupt it.

[2:97:38] You must show the sufferers the paths they can take to alleviate their sufferance, yet ensure them that to stand alone is not abandonment, but a lesson that all must learn for that is the nature of our beginning and our end in this life.

[2:97:39] They must also know that if they do fall, the system, and the people will be there for them to show them new paths, but again, triumph alone must they no matter how many times they stumble.

[2:97:40] This is what you can do; a great many things that will occupy your life until death appears at your door.

[2:97:41] Knowing when to leave one to face their own battles is the kindest act of any friend, and a value that must be cherished in the context of the peoples.

[2:97:42] Another nature of the peoples is their inevitability to adapt and develop; it is the greatest test of any leader to know when to lay one's ambitions to rest and let the will of the people lead them into new heights.

[2:97:43] A mistake to make about the peoples is to presume you know their thoughts; you do not know fully and cannot know the complexity and diversity of the peoples it their greatest, and yet most misunderstood quality.

[2:97:44] Another nature of the peoples is their susceptibility to falsity; some believe what they wish to believe; some believe because they know no better; and others believe because they wish to follow a falsity that fits their agenda rather than the truth that perhaps doesn't.

[2:97:45] The ways of the peoples is the ways of the world; a lesson best learnt now than later.

[2:97:46] However, the most fascinating part about the nature of the peoples is their attraction to what is easiest; whatever will cause them the least pain and sufferance and heartbreak; this is something that cannot exist in this system of order described.

The Philosophy of Panspermia

[2:98:1] Astronism is a panspermian philosophy and therefore aligns with the beliefs that are part of panspermism/panpermianism, or the theory of panspermia; Astronism is firmly a believer in panspermia as the origins of humanity and all other life are considered to be from the stars and The Cosmos, which is highly compatible with the cosmocentric worldview that Astronism uniquely espouses.

[2:98:2] The notion that life has been distributed throughout The Cosmos by space dust, meteoroids, asteroids, comets, and planetoids is one that is highly affirmed by Astronism due to the notions and beliefs of cosmocentrism; in fact, the theory of panspermia is considered to reinforce the beliefs of cosmocentrism.

[2:98:3] It is by the occurrence of panspermation, which is the term herein ascribed to the process of the distribution of life throughout The Cosmos by means of cosmical progeny, that life exists and that this distribution is both interstellar and intergalactic by its influence.

[2:98:4] It is the affirmed belief of Astronism that life on The Earth did not originate from The Earth, but instead come from The Earth's interactions with cosmic progeny and due to the effects of cosmic phenomena which therefore makes Astronism a panspermian religion or philosophy.

[2:98:5] It is notionised within Astronism the theory of panspermia realises the beliefs of Astronism that life upon The Earth, and especially human life, is subordinate to The Cosmos, its progeny, and its phenomena, that we are descendants of The Cosmos, that we are dependent upon its progeny and phenomena, and that we are the children of The Cosmos, as humanity is expected to be sometimes colloquially referred to in an Astronist context.

[2:98:6] There are also interesting implications for the Astronist cosmology in relation to the theory of panspermia because, as the Astronist cosmology asserts that there exists The Cosmos and The Chaos, the latter of which is characterised by violent explosions, seemingly random destructions, and cosmic-scale collisions, and although these are not ascribed with evil characteristics within Astronism, they are still considered to be non-cosmical.

[2:98:7] However, the theory of panspermia states that it is through such planetary collisions, and through such chaotic progeny such as comets, meteoroids and asteroids are responsible for the creation of life; I do feel that this will ignite interesting debates for the Astronist cosmology to consider.

[2:98:8] Furthermore, it is important to note that the theory of panspermia does not focus on the origins of life itself, but instead speaks of the distribution of life throughout The Cosmos and the primary method by which life has been distributed.

[2:98:9] Although not categorised as one of The Seven Tenets of Association of Astronism, panspermism is a prominent belief held as part of Astronism, hence the dedication of this short discourse to the topic of panspermia as an affirmation of its importance of Astronist beliefs; not only does our belief in panspermism reinforce the legitimacy of the worldview of cosmocentrism at the heart of Astronism, but panspermism also supports the belief of sentientism which is itself officialised and centralised as one of The Seven Tenets of Association.

The Astronist Epistemologist

[2:99:1] This is technically a contological discourse rather than a sanitological discourse, but it can be considered a precursory introduction to the disquisition that focuses on contology which is the Astronist combination of epistemology and ethics as two major branches of pre-Astronist philosophy.

[2:99:2] That which is to be known as acatalepsy, in philosophy, refers to incomprehensibility, or the impossibility of comprehending or conceiving a thing; this can be found in the context of Astronism through the rejection that anything within The Cosmos cannot comprehend anything that exists outside of The Cosmos due to the fact that all that exists in The Universe outside of The Cosmos, such as The Omniverse, and beyond that, The Divine, and are infinite by their natures and so anything that is cosmical cannot conceive or comprehend anything that is infinite because infiniteness does not comply with our existential nature due to the Cosmic Limitation Principle.

[2:99:3] Android epistemology is an approach to epistemology considering the space of possible machines and their capacities for knowledge, beliefs, attitudes, desires and for action in accord with their mental states; thus, android epistemology incorporates artificial intelligence, computational cognitive psychology, computability theory and other related disciplines; android epistemology is concurred by the beliefs of Astronism regarding artificial intelligence which have been demonstrated elsewhere in the short discourse dedicated to topic of artificial intelligence.

[2:99:4] The appeal to the stone is a logical fallacy that consists in dismissing a statement as absurd without giving proof of its absurdity; an example for the context of Astronism is when people challenge sentientism, or another Astronist belief about The Cosmos which is probably true, yet they provide no proof or even a justification for their statement.

[2:99:5] It is this that Astronism considers to be the downfall of human intellectuality because we have become lazy in how we perceive and what we say, so much so that we accuse something, like a belief, of being absurd often without providing any proof, or even sometimes without providing a justification for why one believes their view to be correct.

[2:99:6] I accept any criticism of Astronism, but those whom challenge the beliefs of Astronism should at least provide justification for why they have stated what they have about Astronism; not because they shouldn't make accusations towards Astronist beliefs, but because there exists an opportunity for them to better themselves through their acceptance that the justification of the statements one make is superior to stating something without at least providing a justification, not least providing proof of what we believe.

[2:99:7] We must always encourage others to seek knowledge rather than to shun greater knowledge; in encouraging and instilling a culture wherein we justify what we say, we are able to achieve greater knowledge through this practice and it is this that I do encourage;

as Cometas, I will always challenge every person to justify their beliefs about any subject because this is the way of the Philosophical Spirit and this is the way of philosophy and the people that do such are the people that I wish to live in a society with because those people hold a greater and superior intelligence, perception, and understanding.

[2:99:8] Conciliationism is a view in the epistemology of disagreement according to which one should revise one's opinions closer to one's epistemic peers in the face of epistemic disagreement; this is to be rejected by the majority of Astronist philosophers.

[2:99:9] A doxastic attitude is an attitude pertaining to a belief, usually towards some proposition.

[2:99:10] Besides belief, other central doxastic attitudes include disbelief (believing something to be false) and agnosticism (withholding judgement about something); alternatively, it also pertains to states sufficiently similar to beliefs (like judgments or opinions).

[2:99:11] Epistemocracy is the designation of a utopian type of society where the leadership possesses epistemic humility; this is not concurred by Astronism.

[2:99:12] Experientialism is the philosophical theory that experience is the source of knowledge; experientialism is concurred by Astronism due to the notion that the Humanic Exploration of The Cosmos, which is at the heart of the beliefs of Astronism, is itself one large and multifaceted experience from which it is believed that not only will knowledge be achieved, but improved states of being through our physicality, mentality, emotionality, and intellectuality; therefore, one could argue that the entirety of Astronism postulated on the notion of experientialism; that experience equal knowledge.

[2:99:13] Hierarchical epistemology is a theory of knowledge which posits that beings have different access to reality depending on their ontological rank; this theory is rejected by Astronism as is the existence of different ontological ranks being connected to higher forms of revealed knowledge or reality.

[2:99:14] In philosophy, incorrigibility is a property of a philosophical proposition, which implies that it is necessarily true simply by virtue of being believed; incorrigibility is concurred by Astronism due to the denial undertaken by Astronism regarding the notion that just because a person believes something does not provide it with legitimacy to say that it is true; again, in philosophy, we do not speak of truth for that is a word used in religion, but what we should say is that if a notion is logical and rationally understood and perceived, then it should be considered as knowledge on the basis that it is believed due to its logicity, but to notionise that it is the truth is proposing something much greater.

[2:99:15] Infallibilism, in epistemology, is the idea that propositional knowledge is incompatible with a chance of being wrong; other beliefs may be rationally justified, but they do not rise to the level of knowledge unless absolutely certain given one's evidence;

infallibilism's opposite, fallibilism, is the position that a justified true belief may be considered knowledge, even if one's evidence does not guarantee its truth, or can, given one's evidence, rationally doubt it; the latter of these, fallibilism, is concurred by Astronism for philosophy is propounded by notions of belief without the guarantee of truth for in philosophy, we do not speak of truth, instead we speak of logicity of notions; if a notion is logical and rational then why may it not be considered knowledge?

[2:99:16] Logical holism is the belief that the world operates in such a way that no part can be known without the whole being known first; this view is not concurred by Astronism because Astronism holds steadfast to its belief in the interdependent nature of dichotomies, of which parts and wholes is an example, as expressed in our short discourse on mereology; however, it can be argued that The Cosmos existed prior to the parts of The Cosmos that now reside within it which would be in alignment with logical holism, however, the notion of the interdependence between dichotomies still stands.

[2:99:17] Metaknowledge is our knowledge about knowledge including patterns in researchers, relationships between education/research institutions and the confictions between different knowledges which may or may not be able to coexist; the question of metaknowledge remains important to deep philosophical contemplation because knowledge is the driving force and central instrument of our ability to contemplate, therefore, if we are not contemplating with trustworthy or whole knowledge then our contemplations are subsequently undermined.

[2:99:18] Ontologism is a philosophical system most associated with Nicholas Malebranche which maintains that God and divine ideas are the first object of our intelligence and the intuition of God is the first act of our intellectual knowledge; this relates to the Astronist belief about the existence of oneself as ultimately manifested by divine means, through directly divine progeny and phenomena of The Cosmos, and locally manifested through parentage and genealogical ancestry; hence, in Astronism, humans hold a dual form of existentiality; we have become to be through The Cosmos generally because it is the belief of Astronism that we have originated from the stars and we have also come to be through our parentage and genealogy locally.

[2:99:19] That which is known as postfoundationalism is a theory of epistemology denoting a rejection of an assumed or given authority for a specific action or belief, but arguing, in dialectical fashion, for a rationale for action or belief; Astronism concurs with this postfoundationalist view as it encourages the challenging and discussing of beliefs and actions of the authority through rational discourse without the assumption that the authority is universally correct or entitled.

[2:99:20] Preformation theory is a theistic epistemological theory that states that knowledge is possible only because God has endowed humans with certain innate ideas along with dispositions or aptitudes in certain ways; this is concurred by Astronism due to the belief that our knowledge has been predetermined through our destiny and that if we are to know of God, then God must have endowed us to know about God.

[2:99:21] That which is known a sensualism, when applied to an Astronist philosophical context, opposes the majoratively conceptual and knowledge-based nature of Astronism and calls for a greater focus on the sensational, interactional, and perceptual encounterments with Astronism through The Cosmos and its progeny and phenomena rather than focusing on concepts, terms, and other abstracts.

The Philosophy of Wealth

(Aphnology)

[2:100:1] The distinction between money and the state of wealth must herein be made as the first element of our aphnological contemplation as the two have become conflated during the materialistic takeover of much of the modern world.

[2:100:2] Money is both physical cash and the value of one's possessions, but it is also considered to be the extent of the abundance of these components while wealth is considered to be something broader than that.

[2:100:3] According to the beliefs of the Astronist philosophical tradition, wealth encompasses the extent of a person's physical wellbeing and of those around him/her, their energy, interest, and enthusiasm for new ventures, the extent of the abundance of their ideas, their philosophicality and spirituality, and their knowledge and level of education with the extent of a person's possessions and the value of those possessions comprising just one aspect of the overall nature of wealth.

[2:100:4] To be wealthy, therefore, is to be of abundance in a number of different interconnected categories; according to the beliefs of Astronism, humanity is presently not wealthy for we are missing knowledge from The Cosmos and greater philosophicality and physicality due to the fact that we remain an unfulfilled species.

[2:100:5] Wealth is tied to the notion of the accumulation of things, whether they be material or immaterial, but we must always remember that accumulation does not equate to the securing of our happiness or contentment; in fact, accumulation is often the cause of our unhappiness and discontentment for that which can be accumulated can also be quickly lost or disaccumulated, after which we will feel worse than ever before; therefore, we should not focus on wealth as the accumulation of material things, but instead, our experience of materials and our experience of immaterials, not for the purpose of the accumulation of experiences, but instead simply for the experience of experiences.

The Philosophy of Wellbeing

[2:101:1] The omnidoxical philosophy of wellbeing is focused on the notion that the achievement of wellbeing is only achievable through the achievement of hedonism which is itself motional and therefore never truly and ultimately achievable and it is this that I consider to be at the heart of the internal problems we face in today's society.

[2:101:2] I combat this, I introduced that which will henceforth be known as creativism, or also referred to as Cometanic happiness, or as Cometanic hedonism.

[2:101:3] Creativism refers to the belief orientation holding that the most long-lasting form of happiness, and therefore the achievement of hedonism, rests within contributing to or creating elements to contribute to the world in whatever form and blames rampant depression of the masses to their non-contribution to the world which leads to them holding no life purpose/meaning/vocation.

[2:101:4] This is the viewpoint of myself as Cometan because I have followed creativism personally due to the long-lasting and non-synthetic happiness that I gained from knowing that I was contributing to the world through the development of the philosophy of Astronism and my writing of the Omnidoxy.

[2:101:5] The feeling of contributivity is one that is intrinsically linked to the sustainment of happiness rather than through other forms of hedonism such as escapism (drug-induced or entertainment-induced), gluttony, faith, and lust.

[2:101:6] These forms of hedonism remain subordinate in their ability to satisfy one's happiness to one's contributions to the world according to the creativist/cometanic hedonist approach.

[2:101:7] We can endeavour to contribute to the world in whichever way we desire, which provides this theory/approach with scope for choice, however, there must be the essential premise of contribution at the core of whatever we choose.

[2:101:8] I find that those whom hold the least purpose in their lives are the least comfortable in themselves and are the least able to achieve their well-being and it is due to this lack of purpose.

[2:101:9] Well-being is also integral to the concept of the future because we often pin our well-being on the notion that the future will improve our circumstances and our frame of mind.

[2:101:10] Creativism is no different in this regard and may be even more dependent upon the notion of the future as part of the achievement of sustainable hedonism is that we receive recognition for the contributions we have made; this recognition is not essential, however, it does remain an important part in improving the creativist well-being.

The Philosophy of Worlds

[2:102:1] The Philosophy of Worlds explores our knowledge of the existence of different planets and the reality, belief, and existence of those other planets in relation to The Earth and our existence upon The Earth.

[2:102:2] We do know that other planets exist both in connection to The Earth as part of The Solar System, but also that an uncountable number of other planets exist unconnected to The Earth, in fact, existing so far away from The Earth that it takes even light to travel for years at unimaginable speeds to connect The Earth to such planets.

[2:102:3] Astronists will always intellectually bathe in the knowledge that there exists an immeasurable plethora of planets beyond The Earth, and that each of these planets holds unquity and that each of these planets holds its own geology, structure, occultations, moons, connected planets in a system, as well as the possibility of some planets, depending upon the right alignment of circumstances, to harbour different forms of life, either sentient or non-sentient.

[2:102:4] It is this love of worlds that motivates Astronists towards promoting the Humanic Exploration of The Cosmos for at its core, Astronism a religion or philosophy whose love is The Cosmos and all that it does encompass.

[2:102:5] Astronists hold a fascination with the worlds of The Cosmos and it is our itching desire to explore such worlds and discover the many unquities that they do hold; our love of worlds will drive the core tenet of Astronism known as cosmocentrism and it is our believe in the importance and destiny to explore such worlds that will formulate the entirety identity of Astronism as a belief system that cherishes The Cosmos and what beautiful cosmical entities reside within it.

The Philosophy of Writing

[2:103:1] Writing has been an instrument of humanity's creativity and emotional expression since the beginning of humanity's journey and evolution to sentience and even though the tools and devices we use to write have changed dramatically, our desire to write has not wavered.

[2:103:2] Some believe that writing is a medium that will fade out with the introduction of other mediums and with the shortening concentration spans of us humans, but I entirely disagree for I believe that writing will play an important part in the future of humanity.

[2:103:3] The development of the legacy of writing is so crucial for us to understand the importance of this medium to our societal progression; if we think about all the major events that have occurred in our history, we will find a pattern showing that writing has been at the core of these changes, it has initiated these changes, and it has commented on these changes and the Omnidoxy is a neoteric example of this.

[2:103:4] With the inevitability of the Humanic Exploration of The Cosmos that is prophesied as part of the writings herein, it remains essential that we preserve the practice of writing and the mediums through which we are able to write creatively, freely, and expressively.

[2:103:5] A religion/philosophy has been founded known as Astronism and I be the founder of this new belief system and what does remain at the core of the founding of this system? Writing of course in the form of a philosophical treatise and one of the longest works of philosophy in history so it would only be foolish to state that writing is dead.

[2:103:6] Writing as a medium holds a long future for humanity and even though the devices and tools through which we write will continue to change and evolve, as they should and as we should be excited to see, humanity's love for writing, need for writing, and dependence upon writing for our progression will not change.

[2:103:7] I am excited to see how the writings of humanity will evolve after the Humanic Exploration of The Cosmos has been initiated and established; what topics shall be written about? What emotional problems and spiritual issues will we face?

[2:103:8] Although I will not be here to see it sadly, I am excited to know that there will be writers in the future sat at a similar table to which I am sat now, but instead of being in a cafe on the terrestrial grounds of The Earth, they will be gazing out of a window at a flurry of star systems and

[2:103:9] What brilliances shall they write of during their journeys through The Cosmos I wonder? I do believe that the best writers are still to come for writers are made by the subjects they address and what more superior subject is there than beautiful celestials?

The Problem of Mind & Body

[2:104:1] The problem of mind and body is focused on the dichotomic issue between the superiority of either or of these two elements of ourselves; different philosophies hold plethoral views on this topic of which is superior.

[2:104:2] The view of Astronism on the topic of the problem of the mind and body is that neither the mind nor the body are superior over each other and subsequently denies the existence of a duality between the mind and the body.

[2:104:3] Therefore, Astronism holds a monistic view on this topic and this is because the mind cannot exist without the shell of the body to exist within, but neither could the body exist without the brilliant complexities of the mind to control its movements.

[2:104:4] A mind cannot exist on its own and neither can a body functionally exist on its own which means that neither are superior of the other and that the problem of the mind and body is not actually a problem, but is instead an existential reality that neither elements are standalone.

[2:104:5] Astronism takes the approach of monism on this topic as it considers the dichotomisation of the mind and body to be wrong as neither is self-sustaining like many other dichotomies, such as good and evil, the former of which cannot exist without the existence of latter.

The Problem of Doubt

[2:105:1] Pyrrhonism is a synonym for doubt in the context of philosophy; it is the epitome of philosophic doubt and scepticism; in Astronism, we do not applaud doubt or scepticism for they are often not accompanied by justification due to the prevalence of the logical fallacy of the appeal to the stone, but we instead applaud challenge and justification because as one quickly feels doubt about something they have been told or something they have just learned, they should just as quickly execute positivity into the matter and encourage themselves and those around them to find sparks of logicity in which they have been told or what they have learned so as to reformulate it into something that can be justified; doubt only becomes a problem when one is not proactive in trying to fix that which has caused the doubt to form.

[2:105:2] That which is to be known as cosmic scepticism encompasses all forms of doubt and scepticism that are pointed towards the existentiality, significance, centrality, or any other element of The Cosmos; cosmic scepticism is similar though not as extreme as cosmic denial or denialism, but cosmic scepticism can either be directed towards a specific belief of Astronism, or can be directed towards the existence and functions of The Cosmos itself outside of the Astronist belief system.

[2:105:3] Progenial scepticism is a branch of cosmic scepticism, but instead of being directed towards The Cosmos as a whole, this type of scepticism is directed only towards cosmical progeny, namely celestial bodies, like planets, stars, galaxies etc. and may or may not be directly attributed towards the beliefs within Astronism.

[2:105:4] Phenomenal scepticism is a branch of cosmic scepticism, but instead of being directed towards The Cosmos as a whole, this type of scepticism is directed only towards cosmical phenomena, namely astronomical events like supernovae, eclipses, occultations etc. and may or may not be directly attributed towards the beliefs within Astronism.

[2:105:5] Philosophic adiaphora is all that is not essential to the development of a person's philosophicity, or to the development of a philosophy, and these will be explored and listed post-omnidoxically.

[2:105:6] An aporia is a philosophical puzzle or state of puzzlement which leads to the development of mysticism.

[2:105:7] Aporianism believes that the instances in which humans are puzzled or incomprehension are the areas of knowledge that reside beyond human capabilities and hold the majority of the answers that we seek, but because we are incapable of reaching these areas presently, we are unable to know the answers we seek and so aporianism is partially negativistic, but is also positivistic as it suggests that this is the case only for humanity's present capabilities and that there is always possibility for human capabilities to reach those areas in the future.

[2:105:8] Astronist equanimity refers to displaying calmness and composure throughout philosophical debates as a major component of argumentological mastery.

[2:105:9] Dogma in Astronism can be considered to be all the views held within that which is known as the Astronist Tradition as it is referred to throughout the Omnidoxy, but it is important to note that the existence of dogma within Astronism does not at all equate to the presence of dogma within other religions and philosophies.

[2:105:10] These are the official Institutional stances of The Philosophy of Astronism on a multitude of topics, but it is important to note that a person can still adhere to Astronism without following the Tradition and there is a vast plethora of belief orientations, schools of thought, and concepts that exist outside of the Astronist Tradition but still exist within Astronism and the Astronist philosophical tradition because I, as Cometan, as the founder of Astronism, embrace such diversity of thought and belief.

[2:105:11] Categorisational hierarchy refers to the structure in which Astronism exists organisationally, namely the widest sense is the Astronist philosophical tradition, then secondly is The Philosophy of Astronism, and then thirdly is the Astronist Tradition.

[2:105:12] Doxa means popular belief or popular opinion and remains one of the inspirations for the appellation of the Omnidoxy, but doxy instead means a manifestation of popular belief in the form of a treatise or tome hence its suitability for the name of the founding text of Astronism.

[2:105:13] Astronist scepticism refers to the forms and tradition of sceptical attitudes that exist within and those which are applied to the Astronist philosophical tradition and its many beliefs, concepts, and theories; the development of a tradition of scepticism remains important due to the challenging nature of philosophy, however, it is important to stay in accordance with the principles of Philosophical Spirit which involves the justification of the scepticism that we do feel.

[2:105:14] Eudaimonia, in the Astronist Tradition, argues that happiness is achieved by a “playfulness of truth” which involves exploring concepts and postulations that one understands are unprovable or irrational, but one still toys with the notion that such may still be true in some form.

[2:105:15] The Astronist Tradition maintains that happiness cannot be achieved by either end of the spectrum of scepticism or blind faith, but instead a middleground of philosophicality which involves the exploration, discussion, and justification of ideas, beliefs, and notions brings happiness.

[2:105:16] Astronist Tradition argues that rampant scepticism drains the world of mystery and true philosophicality while blind faith forms a bubble around oneself that is not in touch with reality and that one will deny facts and “true truths” in an effort to defend their bubble from bursting.

[2:105:17] Noumenons in Astronism; The Cosmos is a phenomena and The Universe and The Divine are both noumenons while some elements of The Chaos may be considered both noumenal and phenomenal.

[2:105:18] Noumenism advocates for the existences of the noumenal world in addition to and beyond the phenomenal world that is The Cosmos; the noumenal world exists beyond the human senses.

[2:105:19] Astronism supports the notion of the suspension of judgement rather than prejudgement in isolated ethics situations wherein all information is both collectible and finite, but notionises that the suspension of judgement is inapplicable to other areas of philosophy because in those areas, the knowledge may neither be collectible, finite, nor entirely knowable.

[2:105:20] There will inevitably occur radical skepticism within Astronism as part of its development as a widespread philosophy; on this topic, it is the Astronist few that knowledge is ultimately motional and therefore true knowledge is non-existent because it is forever evolving for humans and if something is forever evolving then it cannot ever be considered an ultimatum and therefore because "true truth" must be an ultimatum, knowledge cannot ever be considered true and this begins to explore the problem of truth in relation to philosophy and their incompatibility with one another.

The Obstacles & Throughflows to Philosophy & Philosophical Functionality

[2:106:1] The Philosophy of Astronism has been formed with many dissimilarities to its pre-Astronist counterparts in both the religious and the philosophical territories, but one of the most important ways in which Astronism differs from all other philosophies, expectedly because it remains the first organised philosophy, is its clear understanding of the contexts of the surrounding world in which it is herein formed, particularly so in relation to the writings as part of The Omnidoxy.

[2:106:2] The specific doctoring elements of The Omnidoxy for the purposes of establishing Astronism in the current political, sociocultural, and economic circumstances of human society is unique within a founding text as other founding texts focus solely on the contents of the philosophy or the religion and leave its contextualisation, implementation, and dissemination into society for later works.

[2:106:3] Of course, the wider societal and global circumstances in which Astronism is founded and The Omnidoxy is herein writing shall quickly dissolve into historical circumstances as time moves on, but it remains important to engrain this culture of thinking in a wider context, in a global and later, an interplanetary context, as well as in a circumstantial context into the overall approach and identity of the Astronist philosophical tradition.

[2:106:4] This engrained culture of thinking according to contextualisation is to be henceforth known as circumstantialism and is expected to form one of the central elements of the identity, character, and interaction of Astronism as a philosophy with the wider in world and the associated circumstances of that world in future eras.

[2:106:5] Therefore, we shall further cement this circumstantialistic identity of Astronism and the wider philosophical tradition to which it belongs by developing this discourse which is primarily concerned with the different ideologies, cultures, some religious institutions, and other systems of thought and employs comparological concepts and theories into addressing the overall compatibility of these pre-Astronist and non-Astronist systems with Astronism and the wider Astronist philosophical tradition.

[2:106:6] This Astronist compatibility, as it is to be known, is established according to three different categories that characterise a spectrum of compatibility for Astronism and the other systems of thought that are addressed.

[2:106:7] The purpose of this discourse is to formulate an idea of how different pre-Astronist systems of thought shall react and orientationally respond to the establishment of an organised philosophy such as Astronism as well as its accompanying tenet known as reascensionism which holds cultural, social, political, and religious implications.

[2:106:8] The first of these categories is to be known as an obstacle to philosophy which is a non-philosophical system of thought, person, or institution that is aphilosophical by its nature and therefore would naturally oppose the establishment and reascension of philosophical thinking and would certainly oppose the organisation of philosophy.

[2:106:9] The second of these categories is to be known as a throughflow, or a throughflow to philosophy which is a non-philosophical system of thought, person, or institution that is philosophical by its nature and therefore would naturally support the establishment and reascension of philosophical ways of thinking and would certainly support the organisation of philosophy.

[2:106:10] The third and final of these categories is that which is to be known as the dispartisan, or dispartisanship which focuses on non-philosophical systems of thought, persons, or institutions that are considered to remain neutral on their support or opposition to the popularisation of philosophical thinking and the organisation of philosophy, or how the response of such entities remains either unknown (nondispartisan) or specific to circumstances (micropartisan).

[2:106:11] Before we begin to address the different entries into these categories, it is also important for us to address the second part of this discourse which is appellated as Philosophical Functionality for the purpose of the creation of the rubral for this discourse.

[2:106:12] Philosophical functionality concerns itself with the identification of the many different ways in which a philosophy, particularly Astronism of course, can hold an active and contributive function and role into a society into which it is introduced with the essential purpose of philosophical functionality to link together a philosophy's ideas and the overall identity of a philosophy and the practical application of those ideas and that identity into a society.

[2:106:13] Therefore, philosophical functionality is fundamentally connected to the development of Practical Astronism as one of the main Forms of Astronism as they are collectively appellated.

[2:106:14] Philosophical functionality is integral to the development of Astronism's identity as a circumstantialist philosophy because philosophical functionalities are poised to change across the spectrum of different historical eras and therefore the role and function of philosophies, particularly Astronism, in societies will also change.

[2:106:15] We see this same notion of functionality transferrable to a religious context and the current dilemma that many Churches are facing with regards to their status as residing within a postclimous circumstance, especially in the United Kingdom during the present era, in which I also believe there exists, as a natural product of secularism, a campaign of declimity to remove the Church from its established role and contributive function in our society.

[2:106:16] But what are these new terms of postclimous and declimity and what place do they hold to reside within this particular discourse and in relation to this topic; this query shall be addressed during the second part of this discourse regarding philosophical functionality, but first we must retain to the obstacles, throughflows, and dispartisans of philosophy.

[2:106:17] Now that we have gained an understanding of each of the three categories associated with the first part of this discourse, we can now begin with the obstacles to philosophy which involves appointing regimes, systems of thought, and institutions that are considered to be either partial or entire obstacles to the development of mass philosophical thinking.

[2:106:18] The first of these obstacles to philosophy is considered to be the umpiring nature and role of the Catholic Church as the lawgiver and dogmatiser, but this designation as an obstacle to philosophy notably does not cover the entirety of the Church, only its umpiring nature.

[2:106:19] This is considered to be an obstacle to philosophy because having an institution that allows some elements of thought, but does not allow us, and does not allow its followers' views to shape its direction is not considered to be philosophical by any account because it does not allow philosophical discourse to take place as it focuses on dogmatisation.

[2:106:20] But of course, this aspect of the Catholic Church is not supposed to be philosophical because it is a religious institution and must always remember this and it is for this reason that The Institution of The Philosophy of Astronism differs so greatly in its foundation, role, purpose, and abilities to that of the government of the Catholic Church.

[2:106:21] The next of the designations as being an obstacle to philosophy is the ideology and political philosophy of authoritarianism which is entirely aphilosophical due to its orientation towards the repression of free speech, persecution of opposer, execution of dissenters, and a generally violent response to any type of opposition to the ideology; it is safe to deem that there exists no system of thought that is as aphilosophical as authoritarianism, hence its designation as an obstacle to philosophy.

[2:106:22] We must always fight repression with freedom which means fighting for the reascension of philosophy as the guiding force of our society as philosophy is the beholder of freedom.

[2:106:23] The next of the obstacles to philosophy that we shall address is that of a one-party state which can be considered a product of authoritarianism, but in particular, a one-part state is the ultimate signifier of aphilosophicality due to the repressions in all areas of life that are endured during a one-party state scenario.

[2:106:24] Singularity at all in the social context is not considered to ever represent philosophical values because philosophicality is itself plurality and even though there may be a dominant thought system, other thought system still hold the ability to exist and oppose and even rise to become the dominant system of thought, but in a one-party state this freedom of thought is not granted.

[2:106:25] Another closely associated obstacle to philosophy to a one-party state is a dictatorship and, of course, again this way of political manner is exactly the opposite of what it means to be philosophical and it is herein affirmed that no man nor woman alone should ever hold the ability to control a state without regulation because no singular person can ever hold the capability to impose themselves in such a way; a party, an organisation, an institution, or a community is a different matter, but not a single individual which of course is the definition of a dictatorship, of which there is perhaps no greater extremity to that of philosophicality.

[2:106:26] Social Darwinism is herein announced as another obstacle to philosophy because to be philosophically-oriented is to accept all views and so a system of thought that goes against that very principle cannot be considered philosophical, especially due to its direct connections with racism.

[2:106:27] The next of the obstacles to philosophy is indoctrination as a general practice that can be found throughout many of the systems of thought and regimes listed as obstacles to philosophy, but I have pinpointed this particular practice as its own entry due to its particular aphilosophicality.

[2:106:28] To knowingly force others to believe what one believes just for the satisfaction of knowing that they have become similar to you in their way of thinking without actually justifying to them the reasons why they may benefit from your way of thinking or why their way of thinking it more superior to others and using only manipulative tactics to achieve such goals is completely aphilosophicality and it is this type of practice that is conducted by religious institutions and familial pressures that the Astronist philosophical tradition and The Institution are opposed to due to their adverse effects on millions and even billions of people who are forced or coerced into believing that which they most likely would not have chosen to believe if they had been given the choice.

[2:106:29] Eugenics is considered to be another obstacle to philosophy and is affirmed so by its entry herein as it promotes the control of populations for the benefit of those in power and those whom hold political and monetary influence which would have devastating effects on the freedom of the world and the ability of people to state their opinions and express beliefs, thoughts, and practices therefore eugenics is an obstacle to philosophy as it is considered to oppose the character of what it means to uphold philosophicality.

[2:106:30] Militarism as an obstacle to philosophy is one of particular important to entry herein, particularly due to the inaptronymity associated between militarism and

Millettism which does not bode well as the latter, from its founding herein, continues to want to separate itself from the former and to further separate one from the other, we herein identify militarism to be an obstacle to philosophy because the use of violence for the means of imposition of one's views onto others is the pinnacle of all that is aphiosophical.

[2:106:31] The segregation of people according to the colour of their skin as well as the repression and persecution of people according to their racial ethnicity is not only aphiosophical, it is antihuman and therefore exists as an obstacle to philosophy because racism does not allow for the connection of individuals from different ethnicities, it pulls them apart rather than working to bring them together which makes discourse between ethnicities a lot more difficult and in some extreme cases, absolutely non-existent and to think of the loss of the contributions from minority races to philosophical traditions is frightening to even begin to contemplate.

[2:106:32] Totalitarianism is another of the obstacles to philosophy that is closely linked to the previous entries of authoritarianism, one-party state, and dictatorship, but in particular focuses on the idea of the cumulation of these elements into a way of governing a state and state subservience is considered also a significant obstacle to philosophy as any state that does not allow for the plurality of opinions cannot be considered a safe or welcoming environment in which an organised philosophy can flourish without some subservience to the whims of the government.

[2:106:33] Fascism is perhaps the most hostile of all political environments for Astronism to reside within hence its entry as an obstacle to philosophy due to the combination of extreme nationalism, authoritarianism, and a militant social organisation.

[2:106:34] Identity politics, which is considered to be another obstacle to philosophy, is a widespread yet mild non-institutional and non-governmental form of aphiosophicality because it segregates people according to different religions, ethnicities and classes and is considered to be in danger of hindering intercommunal dialogue and discussion, but the establishment of identity-based politics as inspired by organised philosophies is considered to be an inevitability, but the mildness of this particular entry should be noted and lenience should be given in relation to.

[2:106:35] Fundamentalism in a general sense in whichever form it does take, whether it be religious, political, or otherwise, can also be considered an obstacle to philosophy because fundamentalist tendencies demonstrate a dislike for opposition which is what philosophicality thrives upon and in this context, fundamentalism should always be distinguished from traditionalism.

[2:106:36] Theocracy is considered to be another political environment that will cause obstacles to the proper reascension and establishment of organised philosophies in a country as the very fact that a theocracy holds dominance over a nation suggests that the religiosity of that nation is high and although high religiosity does not equate to low

philosophicality, the introduction of organised philosophies into said nation is expected to cause tensions between the religious leaders and the newly introduced philosophy and its proprieted institution.

[2:106:37] An environment in which sexism reigns is also considered to be another instance in which philosophy, due to its views on the role of women and men, may face an obstacle because institutionalised sexism against either of the sexes demonstrates an environment in which a major section of society are not treated equally to another.

[2:106:38] Another related obstacle to philosophy is supremacism in any of its forms which promotes a worldview that is tainted by the superiorisation of one group over another along racial or gender-based grounds which leads to the suppression of the underdog group and the repression of their rights for freedom of thought, belief, and practice which are essential pillars of philosophicality and therefore supremacism cannot be considered a positive environment for an organised philosophy to reascend into which is why supremacism is labelled an obstacle to philosophy herein.

[2:106:39] Homophobia in general, in whichever form it does take, and whether it remains institutionalised or non-institutionalised, also demonstrates another obstacle to philosophy and a hostile environment for the reascension of philosophy to take place within as this type of environment is bent on discourses that favour social ostracism and the oppression of non-traditional groups that may hold opinions or conduct lifestyles that are non-traditional.

[2:106:40] Bigotry, misogyny and misandry are three more obstacles to philosophy that are collectivised into one entry for the purpose of clarity in this discourse as these environments, for a philosophy to reascend within, are not ideal because they formulate the promotion of social ostracism, aphilosophicality, social isolation, and discord between different members of a society according to features of themselves such as race, gender, sexuality, belief orientations etc. which does not support notions of open philosophical discourse without fear of oppression for the practice and expression of one's ideas and beliefs.

[2:106:41] The second to last of the entries into the category of obstacles to philosophy is elitism which, by its own very nature, is predicated on the notion that one group's opinion in a society is to be superiorised over another which is not supportive to the Philosophical Spirit and neither does it promote the principle that is to be known as equality of justified opinions which rests at the heart of how philosophies are to approach differences in opinions.

[2:106:42] Opinions must always be justified and upon their justification, opinions can be considered equal to one another in their significance, accuracy, and reasonability and this is encapsulated in the principle of the equality of justified opinions.

[2:106:43] The final entry to this category of obstacles to philosophy is sectarianism which, as a wide ranging and varying applicable set of principles to different social and political circumstances, is fundamentally divisive by its nature and those whom follow this ideology feed upon the differences between groups and exploit such differences for their own gain rather than helping to bring communities together so that they can understand each other's viewpoints in a more coherent manner.

[2:106:44] It is easy to see how an organised philosophy would find it difficult to establish the reascension of philosophy in a society that is marred by sectarian divisions and violences, but it remains true that such societies are in need of the philosophical way of thinking, doing, saying and being out of all the different countries in the world so in order to positivise such a scenario, an organised philosophy could take on the challenge of entering such a society with the hope of changing it and this positivistic approach can be applied to all the instances of hostile environments and obstacles to philosophy that have been identified in this discourse.

[2:106:45] Now that we have made entries for each of the obstacles to philosophy, it is important for us to make the entry and briefly introduce and address the different dispartisans to philosophy, as categorised by either micropartisanship and nondispartisanship, the definitions of each have already been outlined at the beginning of this discourse.

[2:106:46] The first of the dispartisans is imperialism which is further categorised as a micropartisan which pertains to specific circumstances and in the sense, imperialism can be considered neutral to the reascension of philosophy and the introduction of an organised philosophy in a society when that empire or expanding nation or organisation is not discriminatory to philosophies, allows different philosophical traditions flourish within it and isn't concerned or doesn't see organised philosophy and the reascension of philosophy to be a threat to the furtherance of the imperialistic ambitions of the entity in subject.

[2:106:47] The next entry into the category of dispartisanship is a personality cult which is considered to be micropartisan in orientation because even though personality cults are largely associated with authoritarianism, totalitarianism and other associated obstacles to philosophy, personality cults themselves, unless they are specifically opposed to philosophical ways of thinking, the reascension of philosophy and the subsequent establishment of organised philosophies, they are not considered to be concerned or threatened by philosophy and therefore are not hostile to different philosophical traditions and their interactions with the society, but again, this is dependent upon the circumstances, hence the micropartisanship of personality cults.

[2:106:48] Social interventionism is categorised within dispartisanship and is considered to be nondispartisan in orientation because the extent to which social interventionist activities would involve organised philosophies and/or their proprieted institutions, or would impede on the activities of organised philosophies and/or their proprieted

institutions remains largely unknown and so social interventionism continues to be classed as neutrally unknown therefore holding a nondispartisanship.

[2:106:49] The fourth entry into dispartisanship refers to propaganda which is considered to be micropartisan by its nature because certain forms of propaganda may be supportive of philosophical reascension and The Institution of The Philosophy of Astronism is not shamed to employ the powerful instrument of propaganda for the promotion of Astronism which is considered to be naturally biased and is required to be so.

[2:106:50] Propaganda is considered micropartisan, so partially neutral and circumstantially applicative, because it is a tool and instrument that is to be used rather than a regime or a system of thought therefore it is distinguished from many of the other entries found in each of these three categories.

[2:106:51] Similarly to social interventionism, economic interventionism is considered a nondispartisan in relation to the unknownness as to whether this form of interventionism causes either an adverse or favourable environment for the development of organised philosophy and/or the reascension of philosophy in general, but in no way does this mean that there does not exist a correlation between economic activity and the stability, need, role, and function of an organised philosophy in a society because the Astronist Tradition holds that the correlation of these two factors is unmistakable which is something that Astronism as the first organised philosophy must always be conscious of in whichever it resides.

[2:106:52] That which is known as protectionism is the next of the dispartisans to be entered in this discourse and is designated a nondispartisan because of the unknown effects of this economic policy and philosophy on the overall impacts it would hold over the development of an organised philosophy or on the reascension of philosophy in a wider sense.

[2:106:53] The designation of communism as a micropartisan pertains to the circumstantial impacts of the institutionalisation of communism in a state in which an organised philosophy resides or a state in which the reascension of philosophy wishes to be initiated.

[2:106:54] The circumstantiality of communism in this context holds its roots in the different societal consequences that the communist ideology can hold upon its implementation for we only need to look at the last one-hundred years of history to see diverse impacts of communism on nations in which it is applied to, the majority of the impacts of which are negative, some of which to the most extreme of extents.

[2:106:55] Also, communism's association with authoritarianism, dictatorships, severe repression of freedoms, censorship, one-party states, and other major obstacles to philosophy support the notion that communism and organised philosophy would certainly not be conducive to one another's existence and success within the same nation.

[2:106:56] However, we must remember that communism's main adversary is that of a religious institutional nature rather than a philosophical one and although organised philosophies may hold some more similarities to religions than general philosophies, the overall identity and role of an organised philosophy differs greatly from that of a religion which communist leaders may appreciate and therefore become more tolerant of the existence of organised philosophies.

[2:106:57] The indecision held here is due to the diversity and circumstantiality that is associated with communism in relation to philosophy and organised philosophy in particular as the actual compatibility of these two entities remains uncertain until experimented upon in real world practical scenarios.

[2:106:58] The precursor to communism, socialism, is also designated as a micropartisan in the context of this discourse due to its own circumstantiality in relation to its compatibility with organised philosophy and the wider reascension of philosophy, particularly that of Astronism.

[2:106:59] However, it must be said that there exists much greater support for the notion that socialism's acceptance and compatibility with organised philosophy and philosophical reascension will be greater than that of communism due to the less repressive and more economically-oriented nature of social as opposed to communism which is cross-societal by its own nature.

[2:106:60] Therefore, socialism remains circumstantial in whether it can become compatible with organised philosophy, especially when the radical and extreme elements of socialism are reminded to us and the tendency of socialist movements to quickly turn to these fundamental and extreme forms which also reminds us of why socialism is the precursor to that of communism.

[2:106:61] To categorise conservatism as a dispartisan and to label it further as a micropartisan is considered to be the best way to approach the organisation of this particularly wide-ranging orientation which holds social, religious, political, cultural, and economic forms.

[2:106:62] Conservatism holds circumstantiality for the context of its acceptance and compatibility with philosophical reascension and organised philosophy because it can generally be associated with values that are not exclusive, but are not as inclusive as those in its rival of liberalism.

[2:106:63] For this reason, depending upon the severity of conservatism, and the ways in which it manifests itself and is applied to different countries and scenarios, conservatism may or may not be applicable to and compatible with philosophical reascension or organised philosophy, especially if the conservatism

[2:106:64] However, it must also be remembered that there are various aspects of The Philosophy of Astronism in particular that are conservative in orientation rather than being entirely liberal in character so it is also considered incorrect by The Institution and the Astronist Tradition to ever label Astronism as either conservative or liberal as its identity extends to a deeper complexity and wider diversity than either of these two terms could individually capture and encompass.

[2:106:65] Two more separate entries into the category of dispartisanship are anarchism and feminism which are both herein designated as micropartisans due to the fact that each is wide-ranging in their application and manifestation, however, the former of the two is generally considered to be very close to becoming an obstacle to philosophy.

[2:106:66] The reason why anarchism cannot be categorised as an obstacle to philosophy is because its ideology does not directly oppose the organisation of a philosophy or the reascension of philosophy in a general sense and therefore, anarchism's impacts on these factors remain circumstantial because an anarchistic society may well forge greater freedom of speech and may serve as a suitable environment for philosophy to flourish, but to assume that anarchism is aphilosophical due to the stereotypes associated with it would be unfair and also factually incorrect.

[2:106:67] Feminism's compatibility to organised philosophy and philosophical reascension remains circumstantial because there exists no theoretical reason as to why there would be a lack of compatibility, but some of the extremist tendencies within feminism are considered to spark elements of censorship and other forms of suppression of opinions that do not conform to the feminist ideology which would make this form of feminism aphilosophical in its character.

[2:106:68] Nationalism is another entry as a dispartisan that is also designated as micropartisan because a nation in which philosophical thinking and organisation holds a strong presence and influence would thrive in from the greater sense of nationalism amongst its citizens as the philosophy would be paired with the progression and betterment of the nation (the instance in which a philosophy becomes one and the same with the nation in which it resides is to be henceforth known as sophonationalisation).

[2:106:69] However, there are other aspects to nationalism, such as increased levels of ostracism of minorities, an increased tendency towards dictatorship and authoritarianism, and a generally higher risk of exclusivist ideas that make this wide-ranging and variously applicable ideology to be aphilosophical by its nature.

[2:106:70] Democracy's designation as holding micropartisanship in relation to the reascension and organisation of philosophy may be surprising to due to the values that democracies are supposed to hold largely aligning to that of a philosophical nature, however, due to the wide-ranging forms of democracy and the acorrelation (a correlation that is purported to exist, especially in theory, but does not universally exist in reality)

between democracy and philosophical values, democracy cannot be considered a throughflow.

[2:106:71] This designation is also given because of the very philosophical nature of democracy itself because it is inevitable that not all people in a nation will accept the reascension and organisation of philosophy that the Astronist philosophical tradition presents and if such views how a majority vote then it is our responsibility to accept this and not attempt to any type of coercive tactics to enter the nation in the way we had originally intended because we must hold to our philosophical values which are not entirely synonymous with, but are fairly similar to those of democratic values.

[2:106:72] We stand by the views of the people for if we do not then towards which goal do we strive?

[2:106:73] Colonialism is another of the micropartisans that is identified with this category and is considered as such because again, elements of colonialism, such as repression of various forms of rights and the imposition of cultures, religions, and political ideologies are grossly aphilosophical, but colonialism itself in theoretical terms is not directly opposed to the organisation and reascension of philosophy which makes it a circumstantial entry and therefore micropartisan by its nature.

[2:106:74] Despite the entire relevancy of colonialism in this age being called into question, it would be ignorant to disregard the return of some form of colonialism in the future, especially upon the Humanic Exploration of The Cosmos and although we certainly do not advocate for the emulation of features of historic colonialism, its return in the future should not be outrightly disregarded as impossible, hence its entry herein and its considered neutrality with regards to the specific topic of philosophical reascension and the establishment of organised philosophy.

[2:106:75] A topic of relevance in the present era is that of immigration which is herein considered to be another micropartisan to philosophy because although no particular elements of immigration as a political policy and practice are aphilosophical, the aftereffects of immigration of individuals that do not hold philosophical values may cause an obstacle to philosophy which makes immigration circumstantial and therefore micropartisan by its nature in this regard.

[2:106:76] The final two entries into the category of dispartisanship are the two nondispartisans of veganism and vegetarianism, the extent to which they oppose philosophical reascension and organisation is unknown and their relevance to the topic also remains questioned, but not it is considered ignorant to not include these two forms of lifestyle philosophy as wherever they do reside, they do tend to hold significant influence over individuals that adhere to them which will inevitably effect other aspects of such individuals' belief orientations, hence displaying more relevancy than perhaps is initially considered with regards to these two lifestyle orientations.

[2:106:77] Now that we have entered all of the different dispartisans, categorised them into micropartisans and nondispartisans, we can move on to consider that which are known as throughflows which includes regimes, ideologies, practices, and concepts that are expected to form environments in which the reascension of philosophy and the organisation of philosophy can occur safely without fear of oppression or obstacle.

[2:106:78] The first of the throughflows to introduce is environmentalism which is categorised as such because it is considered to closely emulate the values of stewardship that run deeply within Astronism and environmentalism holds at its core as a political, cultural, and social movement and philosophy a distinct understanding, care, and prioritisation of the natural elements of the world and the implementation of these principles into governmental and organisational policy which Astronism affirmatively aligns itself with.

[2:106:79] Not only this but environmentalism is considered to exist as a core element to Astronism as manifested in a cosmical context with cosmocentricity and the prioritisation of The Cosmos as an entire entity, but also the worlds and beauteous phenomena that exist within it.

[2:106:80] It remains core to Astronism that the protection, understanding, and exploration of these worlds is achieved and in the context of the Humanic Exploration of The Cosmos, the Astronist Tradition considers an environmentalist approach to be absolutely necessary to the sustainable success of this endeavour that rests at the heart of the Astronist philosophy tradition.

[2:106:81] Liberalism is the next of the throughflows to enter here and its place is well deserving due to much of the liberal values pertaining to social progression, acceptance of distraditional lifestyles and most of all, the acceptance of and justification for different opinions and the valuing of reasoned and justified opinions that may differ to one's own.

[2:106:82] It must be noted that, like in all forms of thought, there can be extreme versions and fundamentalist tendencies and liberalism does not remain exempt from this fact which is why we must consider only the formal version of liberalism as a throughflow rather than the extreme versions of liberalism which turn into forms of identity politics and even censorship, both institutionally and socially.

[2:106:83] Populism is considered another throughflow for the organisation and reascension of philosophy to flourish because a populist ideology concerns itself with the needs, wants, and values of ordinary people rather than one extreme of the political spectrum to the other which largely dominate politics.

[2:106:84] Philosophy always aligns itself with the people and their values in the context of politics which is why the practice of direct democracy is also considered to be a throughflow as a separated and emphasised entry.

[2:106:85] Of course, some ideologies will masquerade themselves as populist in order to form the illusion that their ideology is more widely agreed with than it actually is, but the essential theoretical principles of populism are considered to form a political context in which the organisation and reascension of philosophy, if agreed to by the majority of the ordinary citizens, is able to succeed.

[2:106:86] The question of whether Astronism aligns or opposes humanism is a topic of debate for another discourse, but it is not questioned herein that humanism is a throughflow indeed because of the prominences of philosophical elements in the humanist worldview such as rationality and justification for the development of a system of thought which is certainly philosophical by its identity.

[2:106:87] Humanism remains a system of thought that, despite its disagreement with other systems of thought, such as religions and their supernatural and unjustified proclamations, upholds the principles of the people's right to differing opinions as well as freedom of speech which itself is given its own separate entry herein as a throughflow for reascended and organised philosophy to flourish.

[2:106:88] The secularist approach to the formation of the government of a nation is considered to be an affirmed throughflow for philosophy to reascend and organise itself because by its most core principle, allows for a state to be without adherence to any one particular religious doctrine or institution which is considered to promote acceptance amongst the population of different philosophical and religious viewpoints due to the fact that no one viewpoint holds institutional supremacy over any other.

[2:106:89] The political orientation of democratic socialism upholds democratic principles politically with the management of the economy in a socialist format which is considered to be another throughflow for philosophy to reascend and organise itself within due to the combination of two dispartisans here and the removal of the aspects of each philosophy that had made them both become categorised as dispartisans and so with the removal of these elements we can confidently categorise this political orientation as a philosophical throughflow.

[2:106:90] There are other important throughflows that are not identifiable as political orientations or philosophies in particular, but may more accurately be considered as political and social practices both nationally and internationally that are expected to formulate circumstances that shall allow philosophy to reascend and become organised and three of these types of throughflows which all hold separate entries as throughflows include human rights, social equality (including gender, sexual, racial, religious and all other forms of equality) and globalisation which can be considered an internationally cooperative effort for economic integration with positive efforts expected for the growth and acceptance of different philosophies and other systems of thought.

[2:106:91] Multiculturalism, as a direct product of the process of globalisation, is considered to be a throughflow for philosophy because with the introduction and

promotion of new ways of thinking into a country will come a wider acceptance or at least toleration of such newly introduced systems of thought.

[2:106:92] For an organised philosophy's entrance into a new country whose populous knows nothing of the philosophy and finds its ideas foreign or against that of their own traditional views, multiculturalism is the greatest ally because under the banner of multiculturalism comes a wider tolerance of new ideas that will allow different organised philosophies to spread to regions that would have otherwise been unreceptive and perhaps outrightly hostile to.

[2:106:93] Therefore, we can consider multiculturalism to be an essential throughflow for entrance of The Philosophy of Astronism into certain countries that would find the views and ideas of The Philosophy to be entirely foreign and a threat to their own established philosophies.

[2:106:94] The second to last of the throughflows to enter and introduce in this discourse is communitarianism which, by its core principles, advocates for a society people hold a distinct interest and responsibility to the development of their community philosophically, economically, religiously, politically, environmentally, socially, and culturally and by this, we can easily see how the ethics of communitarianism and its advocacy for social stewardship via a number of different avenues is to the advantage of the goal to reascend and organise philosophy.

[2:106:95] As the final throughflow that we shall address in this discourse, localism is categorised as this due to the fact that the organisation of philosophy can take place on a more regional and local level in this form of societal governance which is expected to be easier than its organisation of a national level.

[2:106:96] Further to this, localism is also considered to be a throughflow because wherever philosophy wishes to reascend and organise itself in a country that is based on a localist ideology can formulate distinct forms of the philosophy into different regions of the country forming a diversity of the philosophy that remains unique to that particular nation which further promote philosophical plurality and the general dissemination of the organised philosophy to more remote communities that may not have been reached under a nationalist form of social organisation.

[2:106:97] Whichever way these throughflows are applied, they are considered to form a social, political, cultural, and economic environment in which philosophy can both be reascended to become a social driver as well as become organised in a way that allows it to promulgate its ideas across to the masses.

[2:106:98] There are many nations in the world presently that demonstrate these throughflow tendencies, but unfortunately, there are more nations that demonstrate tendencies of a more obstaculist or dispartisan nature which supports the belief orientation of throughflowism which states that the organisation of a philosophy and the wider

reascension of philosophy that is herein announced by the Astronist philosophical tradition should take place in a country that demonstrates a character that is more throughflowing than dispartisanic or obstaclistic.

[2:106:99] Throughflowism is just one of the six belief orientations that are inspired and derived from each of the categories and subcategories that have structured the discourse this far and we shall now introduce each of these belief orientations and explain their basic premises.

[2:106:100] Each of the belief orientations that are about to be introduced can be considered approaches to the initial launch of The Philosophy of Astronism into a particular county or group of similarly-oriented countries which therefore places these belief orientations as part of the wider latterintroduced discipline of study of tiritology.

[2:106:101] Of course, that which is to be known as throughflowism has already been introduced and can generally be described as following the approach that focuses on how a philosophy's proprieted institution should initially begin to introduce and disseminate the philosophy via people, organisations, other institutions, and governments who share the same values or whom are tolerant to the introduction of a new system of thought.

[2:106:102] Throughflowism stands in direct contrast to obstaclism that which notionises that a philosophy should first be tiritied and promulgated to countries where there many social and institutional factors that would be considered obstacles to philosophy and due to the general impracticality associated with obstaclism, this is not the chosen orientation of The Institution of The Philosophy of Astronism.

[2:106:103] However, to follow the obstaclist approach holds much nobility and bravery on behalf of the institution that chooses to follow such an approach as well as those people in the country that wish to support the institution its such efforts and if executed correctly, the obstaclist approach can form a very powerful nationwide movement as long as it remains well-funded and supported by those whom hold some influence in the country, or by a majority of the country's citizenry.

[2:106:104] It could be argued that obstaclism is best reserved for pre-established philosophies that hold strong funding networks and partnerships with other organisations to help them successfully enter hostile countries rather than protophilosophies that do not hold the same extent of resources which demonstrations obstaclism as an approach that is best pursued after a philosophy has gained acceptance and adherence in throughflow countries.

[2:106:105] The next of the belief orientations to introduce herein is that which shall be known as partisanism which pertains to the approach to tirition characterised by focusing on gaining funding, greater influence, and a more resourceful utilisation of those whom already support one's philosophy rather than looking towards those whom don't support or don't know about the philosophy and trying to promulgate to them.

[2:106:106] Partisanism can perhaps be described as retentionist in its character and overall orientation, but is defined from retentionism as partisanism can be considered the precursor to retentionism.

[2:106:107] Partisanism is applied during the early phases of a philosophy's development and advocates for the alternative option of the utilisation and extraction of resources from those whom already follow the philosophy in order to put these resources towards the philosophy's furtherance rather than looking for new followers and subsequently looking for new resources while retentionism is a wider view for a more developed philosophy that advocates for the philosophy's promulgation only to those whom already follow the philosophy and so retentionism doesn't necessarily focus on the utilisation of the resources that the philosophy and its proprieted institution already hold to greatest extent to which those resources may be utilised.

[2:106:108] The partisanist approach to tiriton therefore understands the importance of the resources already owned or retained by The Institution and so formulates a plan whereby those resources are to be efficiently utilised for the development of The Institution in friendly territories so that The Institution is best positioned to enter territories wherein many obstacles exist; the partisan approach essentially advocates for a logical plan of the utility of resources amongst supporters and the application of such resources in territories of obstaclity.

[2:106:109] The next of the belief orientations to introduce is that which is to be henceforth known as dispartisanism and is characterised the notion that in order to be successful in a nation, the philosophy and subsequently its proprieted institution must compromise to the will of the government of that country in order for the philosophy to be acceptedly and legally able to tirit and promulgate within that country's borders.

[2:106:110] Dispartisanism is expected to be controversial because it suggests that a philosophical institution should compromise to a government even if that government's values do not correspond to those of a philosophical nature just for the purposes of being able to legally operate and promulgate the philosophy into the nation over which that government presides.

[2:106:111] Despite the ethical issue that does inevitably arise with this approach, the Astronist Tradition and so subsequently The Institution of The Philosophy of Astronism are expected to often employ the dispartisanist approach largely because it is seen as more proactive than its opposer which is to be henceforth known as nondispartisanism.

[2:106:112] Nondispartisanism holds to the principle that any philosophical institution should never compromise its own beliefs and principles for the purposes of being accepted to have its philosophy enter a country officially and legally and therefore this often results in an underground form of the philosophy, but also an increase in the level of persecution of its followers by the government.

[2:106:113] It is important to state that The Institution of The Philosophy of Astronism and the Astronist Tradition do not openly advocate for the compromise of their beliefs and principles as nondispartisans would have one believe, but that they are willing to consider the larger picture in relation to The Institution's entry into the country with the aim of curtailing persecution of its followers there and by avoiding a micropartisanic scenario.

[2:106:114] Therefore, the Astronist Tradition herein poses that which is to be henceforth known as a dispartisan accord which is essentially a document that entails The Institution and the government's decision to agree to disagree with The Institution compromising on some of its elements in order for it to freely, openly, legally, and officially operate and disseminate in the country with the government understanding that universally and in other countries, the values of The Institution and The Philosophy of Astronism over which it holds proprietorship have not and will not change.

[2:106:115] Tactically, The Institution considers it to be more to its advantage to compromise and work with governments in order to enter and hold a presence in the country over which they govern rather than take the nondispartisanist approach and discontinue compromises without any advantage gained by either party which is why the nondispartisanist approach to this issue is considered reactive rather than proactive.

[2:106:116] Finally, that which is to be henceforth known as micropartisanism, also known as extrapartisanism, refers to the belief orientation and approach to tirtion holding that a philosophy and its proprieted institution should focus on gaining influence in a county from the outside rather than the inside.

[2:106:117] This is expected to form a scenario in which a philosophy exists in such a way that it remains under the radar of the government and other authorities, but still holds a strong and influential following despite the fact that it may not be an officialised and legalised philosophy.

[2:106:118] The micropartisanist approach to tirtion under the circumstances of a hostile country involves the use of digital mediums, the expatriate population, immigration, tourism, non-government backed media outlets for the dissemination and promulgation of the philosophy.

[2:106:119] It is necessary in the micropartisanist approach to employ these such practices along with many others that can be thought of in order to reach the people in a country that are not so easily reached due to the hostility of the government and banning of the philosophy in that country.

[2:106:120] It also remains important to note that micropartisanism can take two main forms, the first is of an institutional nature, known as institutional micropartisanism which involves micropartisan techniques that are directly and systematically adopted by a philosophical institution as part of a wider micropartisanic plan.

[2:106:121] The second is of a miscellaneous nature which is to be known as dwellerism and involves the adoption of micropartisan techniques and practices by the adherent citizens of the nation rather than that which is directly overseen by the philosophy's proprieted institution; dwellerism refers to a citizen-initiated effort to disseminate and promulgate the philosophy without direct institutional support and the practitioners of which are to be known as dwellerists or dwellerites.

[2:106:122] Now that we have introduced all the different forms of obstacles to philosophy, the dispartisans and the throughflows to philosophy as well as having introduced the different belief orientations pertaining to approaches to tiration that are inspired by these categories of obstacle, dispartisan, and throughflow, the time has now come to address the second part of our discourse which pertains to the subject of philosophical functionality.

[2:106:123] Philosophical function or functionality relates to the different possible and identified functions or roles that philosophy, in its Astronist and/or its organised sense, can provide upon its introduction into a society.

[2:106:124] By this notion, we understand that philosophy in general in its organised form, or of a particular philosophical tradition, can be understood in drastically different ways depending upon the current circumstances at the time of the philosophy's introduction into a particular country.

[2:106:125] One of the hallmarks of organised philosophy is the emphasis that for philosophy to practically exist in a country or amongst a group, or for oneself personally, it must hold a function for if not we then stray into that which is to be henceforth termed as functionless philosophy.

[2:106:126] The functionality of a philosophy is therefore pluralistic in nature, but it can also be considered dualistic because the function of a philosophy is determined by both The Institution, depending upon its strategy for the entry of the philosophy over which it holds proprietorship, as well as being determined by the society itself as an entirety which includes the public, the government, businesses, the media, religious leaders, and other influential societal forces that will inevitably hold opinions about the philosophy or attempt to represent it in a certain way.

[2:106:127] These two factors control the functionality of an organised philosophy with respect to a particular nation which makes philosophical functionality dualistic and the extent to which the proprieted institution holds influence or the wider society is to be henceforth known as the functionality scale as one is always expected to dominate over another with an equal balance between the two considered possible, but not likely.

[2:106:128] We mentioned that which is to be known as a functionless philosophy and this term collectively relates to non-organised forms of philosophy that do not contribute to a society upon their application, and do not intend to create any particular function for

themselves and can usually be identified as singular concepts, as philosophical systems that hold no practical applicability, or as systems that hold very little to no relevancy for the operations of human society either in a sense of visionality or in a sense of habituality.

[2:106:129] Visionality pertains to the instance in which a philosophy's function is poised towards the achievement of a vision of the future and relates to a consistency of a philosophy that focuses on wider humanity, concepts and issues beyond one's individual self and works towards the solution of such issues or the realisation of such a vision through the development of its system of thought.

[2:106:130] Habituality refers to the instance in which a philosophy's function is identified as focusing more on people's individual and personal needs, habits, and desires and the rectification and improvement of these elements of a person rather than focusing on wider society and the needs and desires of humanity.

[2:106:131] The Visionality-Habituality Dichotomy, as it shall henceforth be appellated, can be considered a major distinguishing contribution to the development of Astronist metaphilosophy as this dichotomy single-handedly and directly contributes to that which shall henceforth be known as reformulationism.

[2:106:132] Reformulationism is the idea initiated by Cometan in the writing of the Omnidoxy herein and subsequently during the development of Astronist metaphilosophy upholding the notion that both the role of philosophy and the identity of the philosopher should be reformulated to prepare for the reascension of both philosophy and philosophers and this reformulation is considered to have taken place during and as a subsequent completed and become a product of the writing of the Omnidoxy.

[2:106:133] Reformulationism is essential to the predications of what philosophy is and how it is perceived by the Astronist philosophical tradition as it consists of both a belief orientation as well as an entire system of thought that understands philosophy to be in requirement for a reformulation as inspired by how it had previously existed and it is expected to exist in the future by the vision of the Astronist philosophical tradition.

[2:106:134] It is stipulated herein as an omnidoxical statement that without reformulationism there cannot exist Astronist metaphilosophy because reformulationism is the essential predication for the development of this branch and contribution to Astronist Philosophy.

[2:106:135] As part of the topic of philosophical functionality, we consider the different periods and stages that a philosophy is considered to go through during its existence and residence in a particular country which formulates an overall understanding of the life cycle of a philosophy, but this can also be applied to other types of thought systems including both religions and ideologies.

[2:106:136] The first of these stages is to be henceforth known as preclimation, or the state of preclimity, which pertains to the period and instance in which a philosophy holds a contributive and active function and established role in a society, but this philosophy is not universally influential throughout the nation and its function and role may not be universally accepted by all major groups.

[2:106:137] Preclimation is a period that may last for a philosophy, or any other type of thought system throughout the entirety of its existence in a country due to it never attaining a function or role that resembles that of a state of climity.

[2:106:138] Some correlations can be made between preclimity and the nature of the thought system that resides within it such as it being a minority in terms of the number of adherents it retains, its relatively short history in the country, and the lack of its influence and strong relations with the government and other powerful figures, institutions, and organisations in the country meanwhile correlations of climity resemble the exact opposite of each of these elements.

[2:106:139] Climition, or being in a state of climity refers to the period and instance in which a philosophy holds an established role and actively contributes to the society in the way that it is considered to best contribute from the opinion of the propried institution that presides over that philosophy.

[2:106:140] Climity may or may not be the most ideal of statuses for a philosophy to reside within because a philosophy that holds climity has to perform certain ceremonial duties that it remains responsible for, there is expected to be a sense of fear with regards to a philosophy that holds climity as its institution fears losing its status of climity to another philosophy or for an aphiosophical campaign to achieve declimity.

[2:106:141] These negative elements of climity are contrasted with the benefits of climity which include the fact that a philosophy that holds climity exists with a privileged position within the society (such as being recognised as that nation's official philosophy or national or ethnic philosophy), holds strong relations with organisations and the government to achieve the philosophy's goals, and demonstrates high adherence levels in the country which pertains to a philosophy's overall influence.

[2:106:142] Achieving a status of climity for a philosophy may be the central goal of an institution that holds propriety over said philosophy, but the maintenance of that climity is considered to be a challenging task with the privileged status, strong funding networks, and high number of adherents in the nation being beneficial elements that may not outweigh the responsibility of hold that status of climity.

[2:106:143] Of course, in a nation, especially one of large diversity, there may be an instance of multiclimity which refers to when a two or more philosophies, or two or more other types of thought systems hold the status of climity simultaneously, but it also remains important to note that when different types of thought systems hold climity this is

instead known as polyclimity so as to distinguish the fact that the systems of thought that hold climity are not of the same variety.

[2:106:144] The period that follows on from that of climity is to be henceforth known as postclimity, or postclimity, which pertains to the period and instance in which a philosophy no longer holds the same established role and active contribution as it once did during its time of climity and so its role and contributions become obscured during this time.

[2:106:145] Postclimity essentially entail of how a philosophy, religion, or ideology, but in this context a philosophy loses declines in its overall identity which is characterised by a excessive decline in the number of active adherents of the philosophy, the obscuration of the beliefs, ideas, and practices of that philosophy as well as the reduction in its overall exposure to the public.

[2:106:146] To be in a state of postclimity is an issue for the institution that holds proprietorship over the philosophy because it may demonstrate an overall philosophical decline if the major philosophy a country descends into postclimity, but it is also important to note that a philosophy can go into postclimity without another philosophy, or another type of system of thought taking its place which then leaves an instance of aclimity which is when there is no philosophy or system of thought that is considered to hold the status of climity in a country.

[2:106:147] That which is to be henceforth known as the state of disclimity, or the process of disclimation refers to the instance in which a philosophy's role and active contributions are established, but not in the way that its institution or its followers consider it to be best contributive to the society.

[2:106:148] Disclimity, rather than pertaining to a wrong or unethical way of a philosophy's role and contributive status, instead relates to an insufficient way in which a philosophy's role and contributions are made to the society or a disportioncate way in comparison to the philosophy's potential to contribute.

[2:106:149] Disclimity, despite it being a negative status for a philosophy to be in, presents an opportunity for the institution that holds proprietorship over said philosophy to promulgate and form a campaign that works towards the development of a philosophy in a such a way that its role and contributive status is how its proprieted institution intends it to be so we must always to the positivist approach turn disclimity which holds negative connotations into an opportunity for betterment.

[2:106:150] That which is to be henceforth known as reclimity, or the process of reclimation refers to the instance and period in which a philosophy regains, through various different reasons including social movements, political revolutions or other mass restructures of society, its previously held established role and functionality in the society in which it resides.

[2:106:151] Reclimity is the best scenario for a philosophical institution as it demonstrates a successful proclimitive campaign or the process of proclimitation which pertains to the state of proclimity which involves the running of a campaign to ascend a philosophy to its considerably best contributive role and active functionality in a society, either for the first time or as part of reclimitation.

[2:106:152] It remains important to note that there are two forms of reclimitation, or the reclimitive process, the first of which involves proclimitation and is either institutionally induced or by way of dwellerism as this term, which has been aforedefined, pertains to a wider meaning of anything that is citizen-initiated as contrasted from that which is institutionally or governmentally initiated.

[2:106:153] The second form of reclimitation is when the process occurs naturally without any institutional, governmental, or citizen initiation and involves the citizen's opinions gradually levitated back towards the philosophy in subject rather than an official campaign that is lead such as through proclimitation.

[2:106:154] The final contribution to make about this discussion of the different periods and stages to philosophical functionality is that which shall henceforth be known as declimitation, or as holding the status of declimity.

[2:106:155] Declimitation involves a campaign to remove a philosophy from its established role and active contributory function in a society, especially as part of an aphilosophical campaign to remove philosophy from a society altogether so as to achieve aclimity which would make this declimitation aclimitive in orientation.

[2:106:156] Alternatively, the campaign may hold the intention to replace the philosophy rather than to remove philosophy altogether which can be considered either reclimitive or proclimitive in orientation with the forming applied if a philosophy is returned to a climitive status that it once held and the latter is to be applied when the philosophy that is being campaigned to hold climity has never held such a position previously.

[2:106:157] Finally, it is important to note that philosophical functionality is motional by its core nature; it remains within a chronologically shifting apparatus that is three-pronged according to the past, the present, and the future circumstances but it remains important not to correspond these time periods with preclimity, climity, and postclimity as these do not strictly correspond to time periods, but of course rather they correspond to statuses.

[2:106:158] There are many social movements and processes that are expected to greatly impact upon the functionality of a philosophy including both the extent of its functionality and the nature of it.

[2:106:159] One of the most important concepts and social processes is liberation which, when applied to the context of Astronist Philosophy, is cross-disciplinary by the notion

that it exists as a concept in different disciplines of study with a variety of definitions and applications.

[2:106:160] Organised philosophy is henceforth considered to be a practical and physical manifestation of freedom as well as a conceptual symbol for freedom for countries that remain oppressed or where persecution of minorities is rife because the fundamental principles of organised philosophy are predicated upon halting such mass oppressions and persecutions through the promotion of the freedom of philosophy.

[2:106:161] Cosmocentralisation refers to the societal application of cosmocentricity and the realisation of the cosmocentric perspective and thought in order to achieve the goals of the Humanic Exploration of The Cosmos, the manifestation of a society that is devoted to The Cosmos and whose societal functions and operations revolve around and are inspired by The Cosmos.

[2:106:162] Philosophisation refers to the societal process involving both the successful reascension of philosophy into a society, the organisation of one or more philosophies in a society, and the ability for such organised philosophies to reside and expand within the nation of which we speak; this is considered to form a citizenry and a government that are philosophical in their thinking, doing, being, and saying.

[2:106:163] Astronomisation refers to the manifestations of cosmocentricity into a society and is a major societal process and may also be known as Astronisation with regards to the specific form of astronomisation initiated by Astronism.

[2:106:164] Astronomisation can be characterised by a number of different manifestations including the building of sopheriums and their centralisation in a community, the manufacturing of Astronist renditions, the regular depiction of astronomically-related topics in the media and in advertising, as well as the introduction of astronomy and philosophy into the education system from young ages.

[2:106:165] The final of the social processes that we shall address herein is that of a revolution which is essential to understanding the previous three processes as each of these can be described as non-violent revolutions and so without a grasp of how and why revolutions occur in societies in need of change, we cannot begin to understand why cosmocentralisation, philosophisation, and astronomisation/Astronisation must occur as Astronist forms of revolution.

[2:106:166] We shall now make a list of countries and regions and the systems of thought that are in statuses of preclimity, climity, and postclimity in those particular territories in order to formulate a greater understanding of the theory and to apply it to current reality of the world's countries and firstly we shall begin with the application of this algorithm to a religious context followed by the ideological context.

- [2:106:167] Abkhazia – Republic of Abkhazia — (Preclimity - Islam and Astronism) — (Climity - Christianity) — (Postclimity - Abkhaz native religion)
- [2:106:168] Afghanistan – Islamic Republic of Afghanistan — (Preclimity - Christianity and Astronism) — (Climity - Islam) — (Postclimity - Zoroastrianism, Hinduism and Buddhism)
- [2:106:169] Åland – Åland Islands (Autonomous province of Finland) — (Preclimity - Astronism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:170] Albania – Republic of Albania — (Preclimity - Irreligion and Astronism) — (Climity - Islam) — (Postclimity - Christianity)
- [2:106:171] Algeria – People's Democratic Republic of Algeria — (Preclimity - Astronism) — (Climity - Islam) — (Postclimity - Christianity and Judaism)
- [2:106:172] American Samoa – Territory of American Samoa (US overseas territory) — (Preclimity - Buddhism and Astronism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:173] Andorra – Principality of Andorra — (Preclimity - Judaism and Astronism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:174] Angola – Republic of Angola — (Preclimity - Islam and Astronism) — (Climity - Christianity) — (Postclimity - African traditional religion)
- [2:106:175] Anguilla (UK overseas territory) — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:176] Antigua and Barbuda — (Preclimity - Rastafarianism, Islam, Judaism, Astronism and Hinduism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:177] Argentina – Argentine Republic — (Preclimity - Irreligion, Islam, Astronism and Judaism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:178] Armenia – Republic of Armenia — (Preclimity - Islam, Irreligion, Astronism and Yazidism) — (Climity - Armenian Christianity) — (Postclimity - Paganism)
- [2:106:179] Aruba (Self-governing country in the Kingdom of the Netherlands) — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:180] Ascension Island (Dependency of the UK overseas territory of Saint Helena) — (Preclimity - Astronism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:181] Australia – Commonwealth of Australia — (Preclimity - Islam, Astronism, Buddhism, Judaism, Sikhism, and Hinduism) — (Climity - Christianity and Irreligion) — (Postclimity - Indigenous religions)

[2:106:182] Austria – Republic of Austria — (Preclimity - Islam, Irreligion, Astronism and Buddhism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:183] Azerbaijan – Republic of Azerbaijan — (Preclimity - Christianity, Judaism, Astronism and Irreligion) — (Climity - Islam) — (Postclimity - Zoroastrianism)

[2:106:184] Bahamas, The – Commonwealth of The Bahamas — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:185] Bahrain – Kingdom of Bahrain — (Preclimity - Christianity, Astronism, Hinduism, Buddhism, Folk religion, Irreligion and Judaism) — (Climity - Islam) — (Postclimity - n/a)

[2:106:186] Bangladesh – People's Republic of Bangladesh — (Preclimity - Sikhism, Astronism, Buddhism, Christianity, and Indigenous religion) — (Climity - Islam) — (Postclimity - Hinduism)

[2:106:187] Barbados — (Preclimity - Bahai Faith, Hinduism, Islam, Astronism, and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:188] Belarus – Republic of Belarus — (Preclimity - Islam, Astronism and Judaism) — (Climity - Christianity and Irreligion) — (Postclimity - Paganism)

[2:106:189] Belgium – Kingdom of Belgium — (Preclimity - Islam and Astronism) — (Climity - Christianity and Irreligion) — (Postclimity - n/a)

[2:106:190] Belize — (Preclimity - Irreligion, Judaism, Baha'i Faith, Hinduism, Astronism, Buddhism, and Islam) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:191] Benin – Republic of Benin — (Preclimity - Irreligion and Astronism) — (Climity - African traditional religion, Christianity and Islam) — (Postclimity - n/a)

[2:106:192] Bermuda (UK overseas territory) — (Preclimity - Irreligion, Astronism and Islam) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:193] Bhutan – Kingdom of Bhutan — (Preclimity - Hinduism, Astronism, Irreligion, Bon, Christianity and Islam) — (Climity - Buddhism) — (Postclimity - n/a)

[2:106:194] Bolivia – Republic of Bolivia — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:195] Bosnia and Herzegovina — (Preclimity - Irreligion and Astronism) — (Climity - Islam and Christianity)— (Postclimity - n/a)

[2:106:196] Botswana – Republic of Botswana — (Preclimity - Irreligion, Astronism, Baha’i Faith, Islam, and Hinduism) — (Climity - Christianity) — (Postclimity - Folk religion)

[2:106:197] Brazil – Federative Republic of Brazil — (Preclimity - Spiritism, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:198] Brunei – Negara Brunei Darussalam — (Preclimity - Christianity, Astronism and Buddhism) — (Climity - Islam) — (Postclimity - Indigenous religion)

[2:106:199] Bulgaria – Republic of Bulgaria — (Preclimity - Islam, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:200] Burkina Faso — (Preclimity - Christianity, Astronism and Irreligion) — (Climity - Islam) — (Postclimity - Indigenous religion)

[2:106:201] Burundi – Republic of Burundi — (Preclimity - Islam, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:202] Cambodia – Kingdom of Cambodia — (Preclimity - Islam, Astronism, Folk religion, Christianity and Irreligion) — (Climity - Buddhism) — (Postclimity - n/a)

[2:106:203] Cameroon – Republic of Cameroon — (Preclimity - Islam, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Traditional African religion)

[2:106:204] Canada — (Preclimity - Islam, Astronism, Hinduism, Sikhism, Buddhism and Judaism) — (Climity - Christianity and Irreligion) — (Postclimity - n/a)

[2:106:205] Cape Verde – Republic of Cape Verde — (Preclimity - Irreligion, Astronism and Islam) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:206] Cayman Islands (UK overseas territory) — (Preclimity - Irreligion, Astronism and Judaism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:207] Central African Republic — (Preclimity - Islam and Astronism) — (Climity - Christianity) — (Postclimity - Traditional African religion)

[2:106:208] Chad – Republic of Chad — (Preclimity - Christianity, Animism, Astronism and Irreligion) — (Climity - Islam) — (Postclimity - Traditional African religion)

[2:106:209] Chile – Republic of Chile — (Preclimity - Irreligion, Islam, Astronism and Judaism) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:210] China – People's Republic of China — (Preclimity - Christianity, Astronism and Islam) — (Climity - Atheism) — (Postclimity - Confucianism, Buddhism, Taoism, Folk salvationism, Chinese tradition religion)

[2:106:211] Taiwan – Republic of China — (Preclimity - Christianity, Irreligion, Astronism, Yiguandao, Tiandism, Miledadao, Zailiism, and Xuanyuanism) — (Climity - Buddhism and Taoism) — (Postclimity - n/a)

[2:106:212] Christmas Island – Territory of Christmas Island (Australian overseas territory) — (Preclimity - Buddhism, Astronism, Taoism, Confucianism, and Islam) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:213] Cocos (Keeling) Islands – Territory of Cocos (Keeling) Islands (Australian overseas territory) — (Preclimity - Christianity and Astronism) — (Climity - Islam) — (Postclimity - n/a)

[2:106:214] Colombia – Republic of Colombia — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:215] Comoros – Union of the Comoros — (Preclimity - Christianity and Astronism) — (Climity - Islam) — (Postclimity - Indigenous religion)

[2:106:216] Congo, Democratic Republic of the – Democratic Republic of the Congo — (Preclimity - Islam, Irreligion, Astronism and Kimbanguism) — (Climity - Christianity) — (Postclimity - Indigenous religion)

[2:106:217] Congo, Republic of the – Republic of the Congo — (Preclimity - Kimbanguism, Astronism and Islam) — (Climity - Christianity) — (Postclimity - Traditional African religion)

[2:106:218] Cook Islands (Associated state of New Zealand) — (Preclimity - Irreligion, Astronism, Islam, Buddhism, and Hinduism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:219] Costa Rica – Republic of Costa Rica — (Preclimity - Irreligion, Astronism, Islam and Buddhism) — (Climity - Christianity (Roman Catholicism)) — (Postclimity - n/a)

[2:106:220] Ivory Coast – Republic of Côte d'Ivoire — (Preclimity - Irreligion, Astronism and Baha'i Faith) — (Climity - Christianity, Islam and Animism) — (Postclimity - n/a)

[2:106:221] Croatia – Republic of Croatia — (Preclimity - Irreligion, Astronism, Islam and Buddhism) — (Climity - Christianity) — (Postclimity - n/a)

- [2:106:222] Cuba – Republic of Cuba — (Preclimity - Hinduism, Astronism, Chinese folk religion, Buddhism, Judaism and Islam) — (Climity - Irreligion) — (Postclimity - Christianity)
- [2:106:223] Cyprus – Republic of Cyprus — (Preclimity - Islam, Judaism, Astronism, Baha’i Faith and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:224] Czech Republic — (Preclimity - Judaism, Astronism and Slavic native religion) — (Climity - Irreligion) — (Postclimity - Christianity)
- [2:106:225] Denmark – Kingdom of Denmark — (Preclimity - Irreligion, Islam, Astronism, Buddhism, Hinduism and Baha’i Faith) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:226] Djibouti – Republic of Djibouti — (Preclimity - Christianity and Astronism) — (Climity - Islam) — (Postclimity - n/a)
- [2:106:227] Dominica – Commonwealth of Dominica — (Preclimity - Rastafarianism, Astronism, Islam, Buddhism, Baha’i Faith and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)
- [2:106:228] Dominican Republic — (Preclimity - Irreligion, Judaism, Vodou, Astronism and Islam) — (Climity - Christianity) — (Postclimity - Indigenous religion)
- [2:106:229] Ecuador – Republic of Ecuador — (Preclimity - Irreligion, Buddhism, Judaism, Astronism and Islam) — (Climity - Christianity) — (Postclimity - Indigenous religion)
- [2:106:230] Egypt – Arab Republic of Egypt) — (Preclimity - Judaism, Astronism, Baha’i Faith, and Irreligion) — (Climity - Islam) — (Postclimity - Coptic Christianity and Ancient Egyptian religion)
- [2:106:231] El Salvador – Republic of El Salvador — (Preclimity - Islam and Astronism) — (Climity - Christianity and Irreligion) — (Postclimity - n/a)
- [2:106:232] Equatorial Guinea – Republic of Equatorial Guinea — (Preclimity - Baha’i Faith, Astronism, Islam and Irreligion) — (Climity - Christianity) — (Postclimity - Indigenous beliefs)
- [2:106:233] Eritrea – State of Eritrea — (Preclimity - Irreligion and Astronism) — (Climity - Christianity and Islam) —(Postclimity - Traditional African religion and animism)
- [2:106:234] Estonia – Republic of Estonia — (Preclimity - Neopaganism, Astronism, Buddhism, and Hinduism) — (Climity - Irreligion) — (Postclimity - Christianity)

[2:106:235] Ethiopia – Federal Democratic Republic of Ethiopia — (Preclimity - Irreligion, Astronism and Baha’i Faith) — (Climity - Christianity and Islam) — (Postclimity - African Traditional religion)

[2:106:236] Falkland Islands (UK overseas territory) — (Preclimity - Baha’i Faith, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:237] Faroe Islands (Self-governing country in the Kingdom of Denmark) — (Preclimity - Judaism, Buddhism, Astronism, Baha’i Faith, Islam and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:238] Fiji – Republic of the Fiji Islands — (Preclimity - Islam, Sikhism, Irreligion and Astronism) — (Climity - Christianity and Hinduism) — (Postclimity - Indigenous religion)

[2:106:239] Finland – Republic of Finland — (Preclimity - Islam, Buddhism, Hinduism, Judaism, Astronism and Finnish paganism) — (Climity - Christianity and Irreligion) — (Postclimity - Paganism)

[2:106:240] France – French Republic — (Preclimity - Islam, Judaism, Buddhism, Hinduism, Astronism and Sikhism) — (Climity - Christianity and Irreligion) — (Postclimity - n/a)

[2:106:241] French Polynesia (French overseas community) — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:242] Gabon – Gabonese Republic — (Preclimity - Islam, Animism, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Traditional African religion)

[2:106:243] Gambia, The – Republic of The Gambia — (Preclimity - Christianity and Astronism) — (Climity - Islam) — (Postclimity - African Traditional religion)

[2:106:244] Georgia — (Preclimity - Islam, Neopaganism, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Paganism)

[2:106:245] Germany – Federal Republic of Germany — (Preclimity - Islam, Buddhism, Judaism, Astronism and Hinduism) — (Climity - Christianity and Irreligion) — (Postclimity - Paganism)

[2:106:246] Ghana – Republic of Ghana — (Preclimity - Islam, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - Traditional African religion)

[2:106:247] Gibraltar (UK overseas territory) — (Preclimity - Islam, Hinduism, Judaism, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:248] Greece – Hellenic Republic — (Preclimity - Irreligion, Islam, Sikhism, Astronism and Hinduism) — (Climity - Christianity) — (Postclimity - Hellenic Paganism)

[2:106:249] Greenland (Self-governing country in the Kingdom of Denmark) — (Preclimity - Irreligion, Astronism and Baha'i Faith) — (Climity - Christianity) — (Postclimity - Inuit spiritual beliefs)

[2:106:250] Grenada — (Preclimity - Rastafarianism, Astronism and Irreligion) — (Climity - Christianity) — (Postclimity - n/a)

[2:106:251] Guam – Territory of Guam (US overseas territory) — (Preclimity - Buddhism, Hinduism, Astronism, Islam, Judaism, Folk Religion and Irreligion) — (Climity - Christianity) — (Postclimity - Indigenous beliefs)

[2:106:252] Guatemala – Republic of Guatemala — (Preclimity - Irreligion and Astronism) — (Climity - Christianity) — (Postclimity - Mayan religion)

[2:106:253] Guinea – Republic of Guinea — (Preclimity - Christianity, Astronism and Animism) — (Climity - Islam) — (Postclimity - Indigenous beliefs)

[2:106:254] Guinea-Bissau – Republic of Guinea-Bissau — (Preclimity - Irreligion and Astronism) — (Climity - Islam, Christianity and Animism) — (Postclimity - Indigenous beliefs)

[2:106:255] Guyana – Co-operative Republic of Guyana — (Preclimity - Islam, Irreligion, Astronism, Buddhism, Rastafarianism and Baha'i Faith) — (Climity - Christianity and Hinduism) — (Postclimity - Indigenous religion)

[2:106:256] Haiti – Republic of Haiti — (Preclimity - Irreligion and Astronism) — (Climity - Haitian Vodou and Christianity) — (Postclimity - Indigenous beliefs)

[2:106:257] Honduras – Republic of Honduras — (Preclimity - Irreligion, Astronism and Islam) — (Climity - Christianity) — (Postclimity - Mayan religion)

[2:106:258] Hong Kong – Hong Kong Special Administrative Region of the People's Republic of China — (Preclimity - Christianity, Astronism, Islam, Hinduism, and Sikhism) — (Climity - Chinese folk religion, Buddhism, Taoism, Irreligion and Confucianism) — (Postclimity - n/a)

[2:106:259] Hungary – Republic of Hungary — (Preclimity - Islam, Astronism, Buddhism, Judaism and Neopaganism) — (Climity - Christianity and Irreligion) — (Postclimity - n/a)

[2:106:260] Iceland – Republic of Iceland — (Preclimity - Icelandic Heathenry, Astronism, Zuism, and Irreligion) — (Climity - Christianity) — (Postclimity - Indigenous beliefs)

[2:106:261] India – Republic of India — (Preclimity - Islam, Astronism, Christianity, Sikhism, Jainism, Zoroastrianism and Irreligion) — (Climity - Hinduism) — (Postclimity - Buddhism)

[2:106:262] Indonesia – Republic of Indonesia — (Preclimity - Christianity, Astronism, Confucianism and Irreligion) — (Climity - Islam) — (Postclimity - Indigenous beliefs, Hinduism and Buddhism)

[2:106:263] Iran – Islamic Republic of Iran — (Preclimity - Christianity, Astronism, Judaism, Baha'i Faith, Hinduism and Irreligion) — (Climity - Shia Islam) — (Postclimity - Zoroastrianism, Yarsanism, Mandaicism, Tribal religions)

[2:106:264] Iraq – Republic of Iraq — (Preclimity - Hinduism, Astronism, Baha'i Faith, Ishikism, Yazdanism, and Judaism) — (Climity - Islam) — (Postclimity - Zoroastrianism, Mandaicism, Yazidism, Tribal religions, and Christianity)

[2:106:408] Now that we have applied this algorithm of preclimity, climity, and postclimity to the context of religions, we shall now conduct the same application but direct it towards the different ideologies of these countries.

[2:106:409] We must remember that for the purposes of clarity for the context of The Omnidoxy, the entire ideological history of such countries will not be captured here due to the greater complexity, but an extraomnidoxical application of this algorithm would be able to provide a more complex application of the algorithm through the wider exploration of the climities of the ideologies throughout the history of each country to which the algorithm is applied.

[2:106:410] Abkhazia – Republic of Abkhazia — (Preclimity - Astronarianism) — (Climity - Republicanism) — (Postclimity - Communism)

[2:106:626] Trinidad and Tobago – Republic of Trinidad and Tobago — (Preclimity - Social liberalism and Astronarianism) — (Climity - Democratic socialism, Social democracy, and Third Way) — (Postclimity - Colonialism)

[2:106:627] Tristan da Cunha (Dependency of the UK overseas territory of Saint Helena) — (Preclimity - Astronarianism) — (Climity - n/a) — (Postclimity - n/a)

[2:106:628] Tunisia – Tunisian Republic — (Preclimity - Left-wing nationalism, Democratic socialism, Liberalism, Progressivism, Astronarianism, Pan-Arabism, Green politics, Centrism, Arab nationalism, Nasserism, Populism, and Agrarianism) — (Climity - Bourguibism, Social democracy, Social liberalism, Big tent, Secularism, Conservative democracy, Religious conservatism, Economic liberalism, Moderate Islamism, and Islamic democracy) — (Postclimity - Colonialism)

[2:106:629] Turkey – Republic of Turkey — (Preclimity - Democratic socialism, Radical democracy, Ultranationalism, Pan-Turkism, Astronarianism, Liberal conservatism, Pro-Europeanism, Sunni Islamism, Conservatism, Eurasianism, Left-wing nationalism, Kurdish nationalism, and Marxism-Leninism) — (Climity - Islamism, Islamic democracy, Conservative democracy, Social conservatism, National conservatism, Right-wing populism, and Neo-Ottomanism) — (Postclimity - Secularism, and Kemalism)

[2:106:630] Turkmenistan — (Preclimity - Astronarianism) — (Climity - Turkmen nationalism, Secularism, and Authoritarianism) — (Postclimity - Communism, Marxism-Leninism, and Socialism)

[2:106:631] Turks and Caicos Islands (UK overseas territory) — (Preclimity - Astronarianism) — (Climity - Social liberalism and Territorial autonomy) — (Postclimity - n/a)

[2:106:632] Tuvalu — (Preclimity - Astronarianism) — (Climity - Non-partisan democracy) — (Postclimity - Colonialism)

[2:106:633] Uganda – Republic of Uganda — (Preclimity - Conservatism, Astronarianism, Liberal conservatism, African nationalism, African socialism, Obotism, and Social

democracy) — (Climity - Ugandan nationalism, Pan-Africanism, and Social conservatism) — (Postclimity - Colonialism)

[2:106:634] Ukraine — (Preclimity - Social conservatism, Astronarianism and National conservatism) — (Climity - Liberal conservatism, Christian democracy, Civic nationalism, and Pro-Europeanism) — (Postclimity - Communism, Marxism-Leninism, and Socialism)

[2:106:635] United Arab Emirates — (Preclimity - Astronarianism) — (Climity - Federal, Presidential, and Constitutional Monarchism) — (Postclimity - n/a)

[2:106:636] United Kingdom – United Kingdom of Great Britain and Northern Ireland — (Preclimity - Social democracy, Astronarianism, Democratic socialism, Scottish nationalism, Scottish independence, Civic nationalism, Regionalism, Liberalism, Social liberalism, Classical liberalism, British nationalism, National conservatism, Right-wing populism, Social conservatism, Irish republicanism, Left-wing nationalism, Green politics, Environmentalism, Socialism, Welsh nationalism, Welsh independence, and Regionalism) — (Climity - Royalism, Economic liberalism, British unionism, Conservatism, Internal factions: Hard Euroscepticism, Soft Euroscepticism and Pro-Europeanism) — (Postclimity - Absolute monarchism)

[2:106:637] United States – United States of America — (Preclimity - Majority: Modern liberalism, Astronarianism, Social liberalism, Factions: Centrism, Democratic socialism, Left-wing populism, Progressivism, and Social democracy) — (Climity - Majority: Conservatism, Economic liberalism, Federalism, and Social conservatism, Factions: Centrism, Fiscal conservatism, Fusionism, Libertarianism, Neoconservatism, Paleoconservatism, and Right-wing populism) — (Postclimity - Colonialism)

[2:106:638] Uruguay – Oriental Republic of Uruguay — (Preclimity - Uruguayan liberalism, Batllism, Astronarianism, Uruguayan nationalism, National conservatism, Economic liberalism, Christian democracy, Christian humanism, Communism, Marxism-Leninism, Socialism, Left-wing populism, and Internal factions: Herrerism, and Wilsonist Current) — (Climity - Democratic socialism and Social democracy) — (Postclimity - Colonialism)

[2:106:639] Uzbekistan – Republic of Uzbekistan — (Preclimity - Islamism, Civic nationalism, Statism, Astronarianism, Uzbek nationalism, Modernisation, Social democracy, Environmentalism, and Green politics) — (Climity - Populism, Third Way, and Authoritarianism) — (Postclimity - Communism, Marxism-Leninism, and Socialism)

[2:106:640] Vanuatu – Republic of Vanuatu — (Preclimity - Centrism, Francophone, Melanesian socialism, Democratic socialism, Astronarianism, Anglophone interests, Vanuatuan nationalism, Social democracy, Liberalism, Reformism, Socialism, and Labour rights) — (Climity - Green politics and Social welfare) — (Postclimity - Colonialism)

[2:106:641] Vatican City – State of the Vatican City — (Preclimity - Astronarianism) — (Climity - Absolute monarchism) — (Postclimity - n/a)

[2:106:642] Venezuela – Bolivarian Republic of Venezuela — (Preclimity - Social liberalism, Social democracy, Astronarianism, Democratic socialism, Progressivism, Christian democracy, Communism, Libertarianism, and Humanism) — (Climity - Bolivarianism, Chavismo, Left-wing populism, Marxism, and Socialism) — (Postclimity - Colonialism)

[2:106:643] Vietnam – Socialist Republic of Vietnam — (Preclimity - Anti-communism, Social conservatism, National conservatism, Astronarianism, Liberal conservatism, Democratic socialism, Liberalism, and Liberal democracy) — (Climity - Communism, Socialist-oriented market economy, Socialism, Vietnamese nationalism, Ho Chi Minh Thought, and Marxism-Leninism) — (Postclimity - Colonialism)

[2:106:644] British Virgin Islands – British Virgin Islands (UK overseas territory) — (Preclimity - Territorial autonomy, Astronarianism, Grassroots democracy, Reformism, Conservatism, Fiscal conservatism, Social conservatism, Economic liberalism, Green politics, and Environmentalism) — (Climity - Liberalism) — (Postclimity - n/a)

[2:106:645] U.S. Virgin Islands – Virgin Islands of the United States (US overseas territory) — (Preclimity - Astronarianism) — (Climity - n/a) — (Postclimity - n/a)

[2:106:646] Wallis and Futuna – Territory of Wallis and Futuna Islands (French overseas community) — (Preclimity - Astronarianism) — (Climity - n/a) — (Postclimity - Colonialism)

[2:106:647] Western Sahara – Sahrawi Arab Democratic Republic — (Preclimity - Islamism and Astronarianism) — (Climity - Sahrawi nationalism and Social democracy) — (Postclimity - n/a)

[2:106:648] Yemen – Republic of Yemen — (Preclimity - Islamism, Sunni Islamism, Salafism, Tribalism, Arab nationalism, Astronarianism, Arab socialism, Social democracy, Democratic socialism, Nasserism, Yemeni unionism, Ba'athism, and Pan-Arabism) — (Climity - Yemeni nationalism, Arab nationalism, and Big tent) — (Postclimity - Socialism, Communism, and Marxism-Leninism)

[2:106:649] Zambia – Republic of Zambia — (Preclimity - Liberalism and Astronarianism) — (Climity - Social democracy, and Democratic socialism) — (Postclimity - Colonialism)

[2:106:650] Zimbabwe – Republic of Zimbabwe — (Preclimity - Democratic socialism, Socialism, Astronarianism and Social liberalism) — (Climity - Social democracy, Left-wing nationalism, Left-wing populism, Conservatism, National liberation, Anti-imperialism, and Pan-Africanism) — (Postclimity - Colonialism)

[2:106:651] One must also note that the preclimities, climities, and postclimities that have been outlined herein are ascribed according to the present known circumstances of countries with the available resources at the present time and rather than focusing on the contents of these two applications of the algorithm, one should focus more on the extent and nature of the applications of the algorithm.

The Sorites Paradox & Why Is There Something Rather Than Nothing?

[2:107:1] The Astronist approach to the Sorites Paradox is that the moment something is taken from a heap or collection, that collection is no longer to be considered the same than it had previously been considered.

[2:107:2] To apply to an astronomical context, if one looks up the stars at night but one was able to remove one of those stars from the night sky, that night sky is not the same as the previously night sky that had included that missing star.

[2:107:3] Essentially, when a thing is taken from a collection of things, that collection is no longer to be considered the same as it was previously, however, this is dependent upon the existence of knowledge; if a person does not know that the star is missing from the night sky then that night sky is still to be considered the same as it was when the missing star was present.

[2:107:4] The Astronist approach and solution to the Sorites Paradox is that the collection of things changes if one is able to see a visual change of the collection upon the removal of a part; it is the visual change that is crucial so with the heap of sand analogy that is often used to explain the Sorites Paradox, that heap is to no longer be considered a heap if one can see a physical difference between the heap before the grain of sand was taken just like the analogy of the missing star, if a person cannot see a physical difference between when the star was there and when it was not, then the collection is still the same; it is one's notice of change that is central to the solution of the paradox.

[2:107:5] A metaphysical ultimatum is manifested in the question of why is there something rather than nothing?

[2:107:6] A mystical encounterment is termed as such because it relates to how a person encounters the question of why something exists rather than nothing by utilising the mystical notions to explain this metaphysical ultimatum.

[2:107:7] The notion that there first has to be something for there to be nothing is to henceforth be known as prenilism which therefore opposes and denies the notions set forth by nihilism and so Astronism can be anti-nihilistic by its own orientation as Astronism considers itself to be a proponent of prenilism.

[2:107:8] Nothing is a comparative by its nature and of course compares to something rather than nothing, but this suggests that there exists a fundamental symbiotic nature between something and nothing for both cannot exist without the other as something is also a comparative and compares to nothing.

[2:107:9] Therefore, without something there is no concept of nothing and without nothing there is not concept of something; something cannot exist without nothing having been therefore beforehand and nothing cannot exist without something to have existed beforehand also.

[2:107:10] Nothing must be compared to something for it to be nothing and this is the ultimate metaphysical issue that pushes the human mind to the point of incomprehension and is a difficult contemplation to explore without degrading into issues of semantics.

[2:107:11] The Astronist Tradition considers semantics to be one of the primary difficulties in the discussion of deep philosophical ideas and the argumentation of notions because meaning, despite the prevalence of definition, still remains subjective to each person and especially in a metaphysical arena, the meanings of the words that we use to tackle such deep metaphysical concepts are not nearly suitable enough in capturing the nature of the concepts we do address and this is because meanings are provided by human capacities and this is the ultimate issue for a philosophers to grapple with and it is an issue from which we cannot escape because we are inherently and intrinsically incapable, limited, and incomprehensible in our abilities.

On The Nature of Religion

[2:108:1] First of All, one thing must be said; like all else, religion will be what you make of it, and not a vendetta do the following passages hold, but a summary of what some in humanity have made religion become.

[2:108:2] What has happened to religion could easily, and has easily happened to many other systems, schools of thought, and ideologies.

[2:108:3] The nature of something is just what it is; no judgement is needed for what something is at its core is not something that can be changed so easily.

[2:108:4] However, it must also be said, that religion, in its very core nature is the authority, control, and order of its followers, perhaps it is humanity's own personal Cosmos.

[2:108:5] Before religion, there was philosophy, and before philosophy, which was the precursor of religion, we had an unordered and unorganised world with little knowledge, culture, or civilisation to speak of.

[2:108:6] Without religion, it is certain that humanity would not be what it is today, perhaps a good thing, perhaps a bad, but it does not do us any good to dwell.

[2:108:7] It is the core nature of religion to oppose another religion; this is just the same for a political ideology, or any system, or method.

[2:108:8] Two systems of governance cannot run alongside one another, just as two systems of morality, authority, and legality cannot operate in parallel.

[2:108:9] There are no countries in the world currently whereby two religions are equally populated and hold equal influence without any conflict.

[2:108:10] To those whom force their beliefs; a disservice you are doing to that which you worship for the trueness of what you believe should be enough to attract All in the end without force, or fear.

[2:108:11] Religion is a system; a system of beliefs, and values, and the icons, and rituals that one worships, and practices are a reflection of the system one believes, and the way in which one conducts their life.

The Five Lost Ologies

[2:109:1] Ologies form the basis of the organisational structure and arrangement of components within Astronist Philosophy which are then manifested by The Philosophy of Astronism and later interpreted by the Astronist Tradition.

[2:109:2] However, when referencing the ologies of Astronist Philosophy, one is collectivising all of the disciplines of study of Astronist Philosophy into one term and so when we speak of the rubral of this discourse, we understand that there are five disciplines of study of Astronist Philosophy that remain lost, both in the organisational structure and in their arrangement within The Omnidoxy, thus further demonstrating the organic essence of my philosophisations and therefore, the natural structure of The Omnidoxy itself as a documentation.

[2:109:3] But before we begin to address of each of these five supposedly lost ologies, we must first explore why they have been appellated with such an adjective.

[2:109:4] To be lost is not to be inexistent, but is instead to be separate from a larger group and this is how we refer to these five different lost disciplines of study including homogenology, divergetology, omnitology, infinetics, and divinology.

[2:109:5] Not only are they separated chronologically within The Omnidoxy from other disciplines, but they are also philosophically distinct from all the other disciplines of Astronist Philosophy due to the unique, specific, and/or largely transcendent or the traditionally non-philosophically related topics that they do address; each discipline of study holds a separate reason for its designation as one of the Lost Ologies, but let us delay our discourse of them no longer and so we begin with introducing the fundamentals of the minor discipline of study of homogenology.

The Homogenous Origination (Homogenology)

[2:110:1] The first discipline within The Five Lost Ologies is the smallest in terms of its expanse of concepts and in terms of the length of its discourse herein; this is due to the specific aspect of Astronist cosmology that it deals and concerns itself with.

[2:110:2] Homogenology deals with the notion made by the Astronist Tradition as inspired by the Astronist cosmology that all that exists holds the same origination which is transformed into the belief orientation that is to be known as homogenism which stands in opposition to heterogenism.

[2:110:3] Heterogenism notionises that all that does exist does so by unique origination rather than common origination, but because homogenism is the prevailing belief orientation of the Astronist Tradition, heterogenism's discipline of study, known as heterogenology, is henceforth classified as a branch of homogenology rather than existing as its own discipline of study and is therefore to be labelled as a subdiscipline.

[2:110:4] All things in The Cosmos and all other cosmoses came from the same origin which pertains to the limited nature of The Cosmos and its infinite amount of cosmic siblings within The Omniverse.

[2:110:5] From its very foundations in this discourse, it should be known that homogenology is certainly a crossdisciplinary discipline of study as it involves the contemplation of concepts and the invocation of methods, theories, and belief orientations from many other discipline of study within the Astronist philosophical tradition as what it addresses holds implications for many other areas of cosmic philosophical study.

[2:110:6] That which is known as cosmic homogenation pertains to the principle that explores the nature of The Cosmos by notionising that homogeneous originations form heterogenous phenomena which essentially points to the fact that even though all phenomena holds the same source of origin, the diversity of that phenomena in shape, size, structure, colour, ability, identity, and general beingness supports the idea that all phenomena also holds a diverse, but not heterogenous nature that is ultimately founded by homogeneity.

[2:110:7] One of the bases for the Astronist Tradition's orientation towards homogenism is because of the involvement of The Divine in the Astronist cosmology and its transcendent all-creating role for The Universe all that it encompasses which demonstrates our fundamentally homogenous nature at the highest and most transcendent of levels

[2:110:8] Homogenologists are also responsible for exploring the notion of the fifth dimension which notionises that in that dimension, there would exist the possibility to travel through all the different possible instances along the chronology of existence.

[2:110:9] One could explore every parallel chronology because the origin of everything is the same which relates to the prevalence of The Divine and also homogenologists are expected to contemplate and discuss whether the other dimensions of string theory either align with existential homogenism or whether they oppose or weaken it.

[2:110:10] The Divine in the Astronist Cosmology, depending on a person's interpretation of The Divine, presents a monistic understanding of existence and it is this notion that leads the Astronist Tradition to align itself with homogenism as a belief orientation.

[2:110:11] In order to form the conclusion of this very short introductory discourse on the discipline of study of homogenology, we shall introduce one of the prominentmost notions within the small discipline that is to be known as pluralistic universalism.

[2:110:12] Pluralistic universalism notionises that The Universe is ultimately plural by its nature because of its infinite nature and that this plurality has derivated itself into the diversity of all phenomena as is expounded by the notion of cosmic homogenation.

[2:110:13] Of course, this discourse remains brief and this has been allowed for a purpose; to provide homogenologists with an open study and contemplative field that they can hopefully expand and form into a major discipline like the other disciplines that make up The Five Lost Ologies which shall take place in a post-omnidoxical setting.

The Divergency of Existence (Divergetology)

[2:111:1] The next of The Five Lost Ologies is that which is to be henceforth known as divergetology and concerns itself with the notion that stands as the oppositism to notion introduced and considered by the discipline of the previous discourse, homogenology.

[2:111:2] The notion that the dimension in which everything that does exist has a unique origin from all other existence, and disregards the homogenous origin from The Universe and The Divine thereafter, thus allowing one to travel to any possible world or cosmos no matter their origin.

[2:111:3] Therefore, itself diverges from the Astronist cosmology and really divergetology and divergism encompasses the study of any divergences from the Astronist cosmology.

[2:111:4] Therefore, also as part of this discourse, we shall address many pre-Astronist or generally non-Astronist philosophical theories, concepts, and proclamations and the approach taken by the Astronist Tradition towards considering these theories, concepts, and proclamations and the subsequent conclusions formed by the application of Astronist thought towards these different philosophical theories.

[2:111:5] Therefore, divergetologists hold a vast range of contemplations for their responsibility to address with the primary one of course being the aforementioned notion of the unique origin of all that does exist and therefore a divergency of existence is formed as a result.

[2:111:6] This approach to understanding philosophical cosmology is intrinsically atheistic, non-theistic, or advinical by its nature and therefore the divergist approach notionises that possibility of intercosmic travel, or cosmoperegrination which the Astronist Tradition rejects as a notion because of the Cosmic Limitation Principle and the wider nature of The Universe.

[2:111:7] Post-omnidoxically, divergetologists are herein tasked with the responsibility of further developing divergism as a fully formed cosmology, as the Divergist Cosmology as it shall henceforth be appellated.

[2:111:8] Not only this but divergetologists are also tasked with contemplating the nature of divergence both conceptually and physically and the many forms that divergency make take.

[2:111:9] Divergism notionises that all that does exist does so by a unique, or heterogenous origination point including all matter in all existences rather than holding an homogenous origination point, but the Astronist Tradition upholds that divergism and the subsequent

notions and theories that it has to support are both illogical and directly contrary to the rationalities espoused in the Astronist approach to cosmology.

[2:111:10] Now has come the time for us to move onto the many pre-Astronist theories and notions and their address from an Astronist philosophical perspective and the first of these is known as compossibility.

[2:111:11] Compossibility refers to how a complete individual thing (for example a person) is characterised by all its properties, and these determine its relations with other individuals.

[2:111:12] The Astronist Tradition concurs with this concept and encourages post-omnidoxical philosophers and other thinkers and contributors to further explore the applicability of this concept to different element of Astronism as well as the formulation of theories and belief orientations that are able to have this concept incorporated into them.

[2:111:13] The next of the pre-Astronist philosophical terms to address is known as conatus which refers to an innate inclination of a thing to continue to exist and enhance itself which is considered one of the inherent qualities of what it is to hold a human nature and perhaps this will be inherent in other forms of sentient nature too.

[2:111:14] Conatus does not demonstrate any ethical issues for the Astronist Tradition, except if in the process of one enhancing oneself, the intentional degradations of others occurs as a consequence, in which case this becomes negated conatus which pertains to an overt urge to enhance oneself, so much so that one's ethicality is distorted or tarnished.

[2:111:15] One of the most distinguishing elements of the Astronist cosmology of Astronist Philosophy is the belief in the Cosmic Limitation Principle which has defined the entire orientation of what it means to be Astronist in approaching cosmology, ontology, metaphysics, and in other branches of philosophy.

[2:111:16] Despite this, it remains important for the maintenance of the designation of Astronism as a philosophy to introduce belief orientation that are even so fundamentally opposed to the Astronist approach to philosophy, hence we introduce that which is to be known as apeironism.

[2:111:17] Apeironism pertains to the belief orientation that The Cosmos from the Astronist cosmology is in fact limitless by its nature and therefore defies both the Cosmic Limitation Principle and the Astronist Tradition in the majority of its stances that derive from the principle of Cosmic Limitation.

[2:111:18] Apeironists are of course rejected by the Astronist Tradition due to their fundamental divergence from the Astronist cosmology, but it remains important to demonstrate these divergences so that we are able to further develop and enhance that which we do believe and align ourselves with.

[2:111:19] Apeironism notionises that The Cosmos is limitless by its nature and therefore anything within The Cosmos is also limitless and therefore able to be infinite, but by notionising this, the Astronist cosmology breaks down as the distinction made between The Cosmos and The Universe is no longer made and this also puts into question the existence of The Omniverse and even The Divine itself; this is the reason why apeironism is fundamentally rejected and is considered a dangerous belief orientation by the entirety of the Astronist philosophical tradition.

[2:111:20] The process of abstraction is used throughout the disquisitions of The Omnidoxy, mainly in order to apply non-Astronist or pre-Astronist notions or just general concepts to Astronist philosophical structures, such as the Astronist cosmology, in order to derive notions, theories, and belief orientations.

[2:111:21] Instrumentation is a form of abstraction that is characteristic of the Astronist philosophical tradition's utility of its instruments of study which efficiently ignite notions and concepts and subsequently aid in the formation of theories and belief orientations.

[2:111:22] Therefore, abstraction remains elemental to the development of the Astronist approach to philosophy and pervades throughout Astronism, particularly due to its intertwinement with the application of different instruments of study.

[2:111:23] That which is known as the causal adequacy principle is a pre-Astronist theory notionising that "the cause of an object must contain at least as much reality as the object itself, whether formally or eminently".

[2:111:24] This principle is concurred by the Astronist Tradition because it relates to the wider theory of intralism that is Astronistally-originate which notionises that for something to exist either within, from, upon, or in conjunction with something else, the origin (or primary entity) must hold either equal or more properties than the product (or secondary entity) for the latter is dependent upon the former.

[2:111:25] However, once the product has detached itself from the origin and is able to sustain and fulfil itself, its own properties are able to surpass that of the origin and it is this that is to be henceforth known as the Intralistic Process.

[2:111:26] Intralism is a prominent contribution derived from divergetology that is to be transferred into the branch of philosophy of ontology which is to be henceforth known as the process of transdisciplinisation (when one concept, theory, or belief orientation originates from within one discipline, but is later transferred into another discipline).

[2:111:27] By this single notion and as further demonstrated by latterintroduced terms, concepts, and theories, we comprehend the importance of divergetology due to its functionality of amalgamating wide-ranging concepts under one discipline, but then

transdisciplinising these concepts so that they are able to find their correct disciplines that they should properly reside within.

[2:111:28] Therefore, we understand that there exists an intrinsic contributory nature to divergetology.

[2:111:29] That which is known as a causal chain pertains to “an ordered sequence of events in which any one event in the chain causes the next,” and this remains a central element to the Astronist cosmology as the different component and composite parts of the cosmology are integral to the development of the sequence of events that have formed the cosmology.

[2:111:30] The Divine causes the creation of The Universe which subsequently causes the creation of The Omniverse which subsequently develops the many Cosmoses and all the matter, progeny, and phenomena that exist inside each of them; this is the cosmological causal chain and demonstrated as integral to the Astronist cosmology.

[2:111:31] From the term ancient Greek metakosmia becomes its Astronisation herein which involves its capitalisation and appellation which transforms it into The Metakosmia which is a lesser known existence that forms part of the Astronist cosmology and so should be henceforth transdisciplinised into compendology after its divergetological introduce herein.

[2:111:32] The Metakosmia is described as a state of transition at the edge of each of Cosmoses of The Omniverse as the properties of all that exist within it transition to become universal rather than cosmic.

[2:111:33] This is to be known as the process of cosmouniversalisation while The Metakosmia is the place in which this process occurs, but it is this process that the Astronist Tradition believes that a entity of cosmic matter cannot successfully survive, whether it is animate or not.

[2:111:34] The Astronist philosophical tradition provides a new home for the term of metakosmia as inspired by its ancient meaning and this type of process is to be henceforth known as reaccommodation as a combination of the reassignment and redefinition of the term.

[2:111:35] That which shall be known as supervenience is a pre-Astronist term that pertains to a relation between sets of properties or sets of facts; to be entailed by or consequent on the existence or establishment of another; essentially, ontologically dependent.

[2:111:36] The application of this concept to the Astronist cosmology notionises that The Cosmos is dependent upon The Universe (supervenieny) and The Universe is also dependent upon The Divine (hypervenieny) and pertains to the structure of the

relationships between different existences within the Astronist cosmology and further demonstrates their natures.

[2:111:37] An example of this is supervenience's application to The Chaos from the Astronist cosmology which results in us understanding that The Chaos holds hypervenieny as it must be ontologically dependent upon The Divine, but its supervenieny on The Universe, or its hypovenieny on The Cosmos remain disputed due to the unknownness associated with the nature of The Chaos.

[2:111:38] Therefore, the Astronist Tradition extends the notion of supervenience in both directions to form hypervenience (dependence upon The Divine, of which all existence and non-existence holds) and hypovenience (directly dependent upon The Cosmos rather than directly dependent upon The Universe or The Divine).

[2:111:39] It is therefore important to note that only The Universe can be directly dependent or directly hypervenient because it is The Universe that holds the closest proximation to The Divine while all other existences hold only direct supervenience despite all existence and non-existence hold both indirect hypervenience and all existence within The Universe hold indirect supervenience; essentially, this structural hierarchy pertains to ontological dependency of different existences and entities within them which further connotes and affirms their natures and places within the wider notion of the cosmological hierarchy.

[2:111:40] The next of the pre-Astronist concept to address is known as the well-founded phenomenon which, when applied to an Astronist context, alters it meaning and pertains to The Cosmos, particularly its phenomena and progeny, and how The Cosmos is the primary well-founded phenomenon according to the Astronist philosophical tradition and it is towards this phenomenon that we must concentrate our hearts and focus our minds.

[2:111:41] Another of the pre-Astronist concepts to concern ourselves with is that which is known as world disclosure which designated as that which the Astronist philosophical tradition's main ambition remains for The Cosmos.

[2:111:42] The presentation of The Cosmos's intelligibility, meaningfulness, relevancy, and ontological, metaphysical, practical, and philosophical pertinence to all of humanity is the primary goal of the Astronist philosophical tradition's establishment of its core tenet of cosmocentricity.

[2:111:43] World disclosure is therefore retermed to that which shall be known as cosmic disclosure which is the presentation of The Cosmos through the scope of the cosmocentric thought process which can be considered the primary motivation for the establishment of the entire Astronist philosophical tradition and having derived the concept of cosmic disclosure from a pre-Astronist concept, despite its retermation, this demonstrates the importance of looking towards pre-Astronist concept and applying them to the Astronist

context which is itself an important philosophical action and process that is to be known as pre-Astronistation.

[2:111:44] That which is known as genidentity which pertains to “an existential relationship underlying the genesis of an object from one moment to the next and therefore an object really consists of multiple entities, which are the phases of the object at various moments in the overall chronology of the existence of the object.”

[2:111:45] The concept of genidentity is fundamental to all that exists within The Cosmos as it is an existence of motionality and all that exists within The Cosmos is motional and mutable by its nature and therefore what we consider to be an object really consists of multiple entities, which are the phases of the object at various times which is the essential premise of Lewin’s concept of genidentity which the Astronist philosophical tradition herein reterms as phasic identity which demonstrates the concurrence of the Astronist Tradition with this particular concept and its strong applicability to the Astronist cosmology.

[2:111:46] That which is known as grounding in the context of philosophy pertains to how “one entity is sometimes said to "ground" another when the first in some way accounts for the being of the second”.

[2:111:47] We see many examples of the application of grounding to the Astronist cosmology as well as wider Astronist Philosophy in a more conceptual sense in addition to the physical sense as the Astronist Tradition maintains that concepts also hold ontologies too despite their beingness holding a difference in essence than a physical ontology, hence they are categorised as holding conceptual ontologies.

[2:111:48] Another pre-Astronist philosophical concept is that which is known as the knight of faith which pertains to “an individual who has placed complete faith in himself and in God and can act freely and independently from the world.”

[2:111:49] This notion of individual identity and assurance is very closely related to creativism when applied to an Astronist context which addresses personal identity and the achievement of sustainable happiness and provides a solution to attain securement in both of these elements.

[2:111:50] The creativist angle on the knight of faith concept interprets putting faith in oneself to mean one’s ambitions, interests and the way in which one wishes to contribute to the world and the faith in God element demonstrates an awareness of the individual that there are forces, whether they are deities or worshipped or not, that hold greater influence and power than oneself which is a humbling notion to ascribe to as it is considered to prevent egotism.

[2:111:51] The second element of the concept is also interpreted by the creativist perspective to understand that if one does pursue one’s ambitions and interests and

intends to contribute to the world to bring meaning to their life then they have freed themselves automatically and in a psychological element, they can reside independently from all responsibilities that they do not desire to have for they shall only take on that which they want and are interested in rather than that which they must or are told to and compared to this, there is no greater personal freedom.

[2:111:52] An important pre-Astronist philosophical process is that which is known as leveling which derives from Kierkegaard's philosophy and pertains to "a social process in which the uniqueness of the individual is rendered non-existent by assigning equal value to all aspects of human endeavours, thus missing all the intricacies and subtle complexities of human identity."

[2:111:53] This is solemnly rejected by the Astronist Tradition due to its application of the unquitarian stance in which every individual is considered according to their unique qualities, characteristics, ambitions, interests, emotions, and psychologies which can be considered derivationistic by its nature because it is deconstructing the elements of a mass of people and does not allow them to be categorised while Kierkegaard's approach is collectivistic whereby he attempts to categorise masses of people under encompassing headings.

[2:111:54] The Astronist Tradition does not disagree that with a mass of individuals, there will be patterns, overlaps, and similarities that form between the individuals and the various parameters by which we consider individuality, but it is also maintained that each person holds their unquity as a core aspect that forms of their sentience and even though some of a mass of people may be able to be grouped due to their similarities with one another, the Astronist Tradition that due to the vast amounts of different combinations that are constructed during the development of a person's individuality, there will be no two people that hold complete resemblance to one another, hence leveling as a social process is valued for its categorical abilities, but its premise is rejected due to the Astronist alignment with unquitarianism.

[2:111:55] That which is pre-Astronistically known as a limit-experience, yet is herein retermed to become gruesancy, a practitioner of which is to be known as gruesanist, pertains to a type of largely unethical actions or experiences which approach the edge of living in terms of their intensity and their seeming impossibility and has formed that which is to be known as dark mysticism.

[2:111:56] To make further additions to this concept, the Astronist Tradition continues to maintain that gruesancy involves an intentional exploration of the most extreme elements of human experience and the subsequent consequences on the mind and body from such experiences and includes abandonment, promiscuity, murder, suffering, insanity, greed, and the manipulation of others.

[2:111:57] Practitioners of this are either to be known as gruesanists, as aforeintroduced, or as dark mysticists; these are people that intentional practice unethical and largely

criminalistic actions for the purpose of indulging in the consequences of such actions that they claim deeper their philosophical knowledge and connection with The Cosmos and form a stronger personal identity, but this is a rejected notions by the Astronist Tradition.

[2:111:58] Despite this rejection, the conceptual exploration of dark mysticism, of which gruesancy is a branch, is accepted by the Astronist Tradition because it is only when these concepts are put into unethical and criminal action that they are rejected and therefore anyone who does explore dark mysticism is recommended to only do so if their minds are strong enough to keep them from enacting such unethicalities.

[2:111:59] The next of the pre-Astronist terms that we are to address is that which is known as metarepresentation which pertains to “the capacity to represent a representation, for example, a drawing is the representation of something and someone who looks at the drawing would represent it in his or her mind,” though not exactly it as it is represented due to their own individual beliefs, biases, and experiences that influence their overall comprehension and interpretation.

[2:111:60] The notion of metarepresentation is herein considered to be a responsibility of divergetologists to philosophise upon and shall include the nature of representation, the distortions and reasons for such distortions in metarepresentations, as well as the intentions of and relations between representers and their audiences; essentially, according to the Astronist Tradition, metarepresentation is broadened to encompass the entire contemplation of all aspects of representation and its subsequencies.

[2:111:61] That which is known as mimesis pertains to imitation and is a pre-Astronist philosophical term, but when this is applied to the Astronist cosmology, it is understood that mimicry is an inextricable quality of all that is cosmic by nature rather than that which is universal or divine by nature as the former of these encompasses all that is cosmic and so it encompasses all imitations and the latter is transcendent far beyond that which is imitated which leaves The Cosmos and all its fellow Cosmoses in The Omniverse.

[2:111:62] Whether mimicry exists in other Cosmoses is unknown to us for we cannot extend our conscioues outside of The Cosmos in which we reside, but we can look towards the many examples of mimicry that are exist as a part of the natural order in The Cosmos and derive from this that it remains the nature of The Cosmos and all that exists within it, as encompassed by cosmic order, to be mimical by its core penchant.

[2:111:63] That which is known as metaxy is a term derived from Plato’s *Symposium* and relates to the in-between or the middleground, particularly when it pertains to a place rather than a conceptual notion as a middleground is often used conceptually throughout Astronist Philosophy.

[2:111:64] Therefore, when used in the context of Astronist Philosophy, a metaxy is a physical in-between place while a middleground is a conceptual in-between place and it is expected that metaxy shall inspire much contemplation post-omnidoxically within the

Astronist philosophical tradition about the nature of in-between physicalities, especially so the nature of The Betwixity from within the Astronist cosmology.

[2:111:65] The broadening of the definition and the applicability of the term metaxy so that it encompasses a wider contemplation and discussion of in-betweenness in The Cosmos and in other existences is the ambition of the Astronist Tradition with regards to this term and it is herein vested a joint disciplinary responsibility of both compendologists and divergetologists to contemplate in-betweenness in all its physical (metaxical) and conceptual (middleground) forms.

[2:111:66] That which is known as mimpathy is the next of the pre-Astronist concepts/terms that shall address so as to further form our divergetological discourse and mimpathy pertains to the instance of the sharing of another's feelings on a matter without necessarily experiencing feelings of sympathy.

[2:111:67] The Astronist Tradition does not consider mimpathic practices and instances to be any less ethical in comparison to actual empathy and sympathy, but it argues that mimpathy shows an even greater ethicality as it demonstrates a person's understanding that another person requires consolation and reassurance even if one does not consider their counterpart's predicament to be worthy of sympathy.

[2:111:68] Mimpathic approaches cast aside one's own views on the matter at hand and put the needs of the other first and are considered to also be realistic because not every person is going to relate to every other person's fears, hopes, and worries and so mimpathy prioritises the demonstration of sympathy over actually feeling sympathy which is not a universal feeling and is largely subjective as to how and when it is felt.

[2:111:69] Therefore, this demonstrates those whom practice mimpathy to prioritises the feelings of others of their own which is an ethical approach to the situation of consolation and reassurance of those whom we care about when they are facing or dealing with difficult scenarios in their lives.

[2:111:70] The further contemplation and discussion of mimpathy, due to its pre-Astronist status, is herein ascribed to the responsibility of divergetologists, whom are also expected to incorporate contological notions, belief orientations, and theories into the mimpathic discussion as another transdisciplinised concept.

[2:111:71] We must now move on in order to address another pre-Astronist term known as nomological which denotes "something resembling general laws, especially laws that lack logical necessity or theoretical underpinnings" due to their own foundational nature.

[2:111:72] The Cosmic Limitation Principle is the prominentmost example of a nomological in the Astronist philosophical tradition according to the Astronist Tradition and henceforth divergetologists are tasked with recognise other elements of Astronist concepts, theories, and belief orientations as nomological by their natures.

[2:111:73] Additionally, the term noema pertains an object or content of a thought, judgement or perception and although this is not an Astronistally-origivative term, its utility to refer to Astronist ideas and theories is herein not only permitted, but it is encouraged.

[2:111:74] Another pre-Astronist term that holds Astronist Tradition permission and encouragement is that of palingenesis which pertains to any concept of rebirth or recreation.

[2:111:75] Palingenism is the Astronistically-origivative notion that The Cosmoses of The Omniverse in The Universe are continuously rebirthing themselves whenever they do eventually collapse to form new cosmoses in the same place.

[2:111:76] Palingenism is of course concurred by the Astronist Tradition despite its absence from the official structure of the Astronist cosmology which is largely due to the origins of its root word being non-Astronist nevertheless it holds an important role in understanding the nature of the end of each Cosmos.

[2:111:77] Despite the concurrence from the Astronist Tradition, many other creationist theories reside within the Astronist cosmology regarding the beginning and ends of Cosmoses in The Universe so the concurrence of palingenism perhaps holds not the same gravity as other forms of concurrence that have been outlined in The Omnidoxy.

[2:111:78] Inspired from the pre-Astronist term of privation, that which shall henceforth be known as sophoprivation relates to the absence of philosophy in person's life which can either pertain to a person's aphilosophical or non-philosophicality, or more generally, an absence of philosophical thinking in the person's psychology, logic, and general though processes.

[2:111:79] That which is known as the transworld identity pertains to another pre-Astronist concept, but this particular concept is both herein retermed to become transexistentialism and is redefined when applied to the Astronist cosmology and thereafter pertains to the notion that any object is able to exist exactly as it does in two separate Cosmoses in The Omniverse of The Universe.

[2:111:80] Transexistentialism is a controversial notion within the Astronist cosmology, but is herein only partially rejected by the Astronist Tradition (which is to be known as an instance of semidecliny).

[2:111:81] This semideclination occurs in this context because it is not against the Cosmic Limitation Principle, and therefore it is not against the Astronist cosmology to suggest that one entity, such as a light bulb, can exist exactly the same as it does in one Cosmos as it does in another because the dimensions in those two Cosmoses may be the same and the same principle occurs conceptually in relation to ideas; two ideas can exist exact to one

another in two separate Cosmoses, therefore two entities, especially those of a manufactured nature, can also exist exact to one another in two different Cosmoses.

[2:111:82] The reason for the semideclination or partial rejection of this notion by the Astronist Tradition is that transexistentialist thinking is considered to be a precursor to further non-Astronist ideas such as the notion that the different entities within The Cosmoses of The Omniverse are able to communicate with one another, or that the different Cosmoses are connected with one another which is contrary to the Cosmic Limitation Principle.

[2:111:83] Since it has been introduced in this discourse, semidecliny as a function of the Astronist Tradition is herein vested as another responsibility of the contemplations of divergetologists and as well as this, divergetologists are also vested with the responsibility of contemplating and debating the wider nature of the rejection and concurrence functionality of the Astronist Tradition and the role of The Institution of The Philosophy of Astronism in such cases of concept/notion/belief orientation/theory rejection and concurrence.

[2:111:84] As an extension of the transvaluation of values theory created by Friedrich Nietzsche whom asserted that Christianity is “the struggle against sin” and that Buddhism is “the struggle against suffering”, we shall now also apply all the other major religious and philosophical systems of thought to this same “struggle” paradigm, but instead includes “for” instead of “against” into the algorithm and therefore reassigns Christianity and Buddhism.

[2:111:84a] Christianity is “the struggle for salvation.”

[2:111:84b] Buddhism is “the struggle for alleviation.”

[2:111:84c] Astronism is “the struggle for freedom.”

[2:111:84d] Islam is “the struggle for submission.”

[2:111:84e] Judaism is “the struggle for unification.”

[2:111:84f] Hinduism is “the struggle for ascension.”

[2:111:84g] Gnosticism is “the struggle for knowledge.”

[2:111:84h] Sikhism is “the struggle for oneness.”

[2:111:84i] Confucianism is “the struggle for social order.”

[2:111:84j] Taoism is “the struggle for harmony.”

[2:111:84k] Spiritism is “the struggle for spirituality.”

[2:111:84l] Jainism is “the struggle to conquer.”

[2:111:84m] Zoroastrianism is “the struggle for happiness.”

[2:111:85] Therefore, the Astronist philosophical tradition notionises that the “struggle algorithm” is the most efficient way of recognising the core intentions of a system of thought for it reduces that often complex and diverse system down to a singular notion of intent and denotes the fundamental reason for the construction of that particular system of thought.

[2:111:86] That which is known as unicity is the last of the pre-Astronist philosophical terms that we shall discuss in this discourse of divergetology which relates to the notion holding that “each event, each living being, each object, each person or each circumstance has the characteristic of its uniqueness, of its particularity and so these similar events, living beings, objects, persons or circumstances may exist, but never the same entity.”

[2:111:87] This Notion of Unicity, as it is sometimes appellated and referred to when applied to Astronist Philosophy is a view that is concurred by the Astronist Tradition due to the Tradition’s own development of unicity which holds closely tied principles to that of unicity, but it is the role of post-omnidoxical divergetologists to further explore the applicability of the Notion of Unicity to different parts of Astronist Philosophy and to specifically explore the intrinsic agreements between the Notion of Unicity and the belief orientation of unicity.

[2:111:88] As we now exit the pre-Astronist concepts and terms that we are to address in a divergetological capacity, we come to the point at which we must clarify some elements of Astronist philosophical terminology as well as introduce some new terms that are to be transdisciplinised across the entirety of Astronist Philosophy for their applications far outstretch one singular discipline.

[2:111:89] The first of these terms to introduce herein is that which shall be henceforth known as the Cosmological Trichotomy which is an alternative address that collectivises The Cosmos, The Universe, and The Divine as the three essential existences in the Astronist cosmology and they together form the Trichotomy of Existence which is also another alternative appellation to collectivise the three.

[2:111:90] It is now time for us to introduce another appellation which pertains both to The Divine itself and a potential element of its divinical nature and this to be known as the Immanent Divine.

[2:111:91] The Immanent Divine, also known as immanenism, is The Divine according to the postulation that it exists within The Universe and The Cosmos rather than as a transcendent entity beyond the two existences, and therefore places The Universe at the

top of the Astronist cosmological hierarchy which is an action that is to be henceforth known as universism.

[2:111:92] There are other forms of this type of upgrading an existence to the top of the Astronist cosmological hierarchy, but before we introduce each, it is important to explain what the Astronist cosmological hierarchy is.

[2:111:93] The Astronist cosmological hierarchy pertains to the conceptual structure of the Astronist cosmology by the notion that each of the existences in the cosmology do not hold equal value, influence, or extent and therefore a hierarchy is created that places these different existences above one another according to one's view of the cosmology.

[2:111:94] According to the Astronist Tradition, the cosmological hierarchy is topped by The Divine, which is to be known as the ranking of apexity, second to The Divine is The Universe, which is to be known as the ranking of deuterity, third to The Divine and second to The Universe is The Cosmos, which is to be known as the ranking of triterity.

[2:111:95] According to the Astronist Tradition, there are the three lesser existences of The Chaos, The Mytra, and The Betwixity, as well as those which are known as the three subservient existences which includes The Metagalaxy, The Metakosmia, and The Omniverse and all six of these existences hold the ranking of miserity which pertains to their general miscellany when compared to the three essential existences.

[2:111:96] Like in all elements of Astronist Philosophy, individuals can interpret the cosmology according to how they perceive and believe it, but this is the Astronist Tradition's maintenance of events, but as aforeaffirmed with the introduction of immanenism, the rankings of each of the existences in the Astronist cosmological hierarchy are mutable yet they are only subject to justification because the ranking of an existence in the cosmological hierarchy is intrinsically linked to the nature, role, and general character of that existence so any changes must always be justified on the part of the philosopher that suggests the change in their own tradition of Astronist Philosophy.

[2:111:97] Now that we have grasped a greater understanding of how the Astronist cosmological hierarchy works, we can now introduce the different mutabilities that are available, each of which form belief orientations about both the existence that they raise in the cosmological hierarchy and about the other existences that this change effects because for one existence to be lowered or raised in the hierarchy, others must be either raised or lowered in simultaneity.

[2:111:98] Additionally, it is also possible for existences to hold equal rankings within the divergetological version of the Astronist cosmological hierarchy which is to be known as the instance of correspondation.

[2:111:99] The belief orientations associated with upgrading (to be known as sedication with the prefix sedi- meaning upwards) and downgrading (to be known as vodication

with the prefix vodi- meaning downwards) are not to be introduced for we have already introduced universism.

[2:111:100] Then next is divinism which, in this particular context, is when The Divine is placed at the top of the cosmological hierarchy which is the Astronist Tradition's particular following while that which is to be known as cosmosism is when The Cosmos is placed at the top of the cosmological hierarchy.

[2:111:101] There are also belief orientations associated with each of the three lesser existences, the first of these is mytranism which is when The Mytra is placed at the top of the hierarchy, chaosism is when The Chaos is placed at the top and betwixism pertains to when The Betwixity is placed at the top of the hierarchy.

[2:111:102] In addition to these belief orientations, there are herein introduced belief orientations ascribed to each of the three subservient existences of the Astronist cosmology known as metagalaxism, metakosmism, and omniversism, each existence to which these orientations pertain notionises their ascent to the apexity of the cosmological hierarchy.

[2:111:103] The entire topic of the Astronist cosmological hierarchy is also, like much of the contents of divergetology, transdisciplinised or transdisciplinary in nature as it remains both a topic of study within compendology and divergetology, which itself of course remains within the inclusive discipline of sanitology.

[2:111:104] That which is herein introduced as the term transvenience pertains to the instance or state in which one existence in the Astronist cosmological hierarchy is sedicated more than one ranking above its original ranking and so the majority of the belief orientations that we have just introduced are examples of how an existence transvene the hierarchy, but an example to satisfy this definition would be how cosmosism sedicates The Cosmos more than one ranking higher than its original positions as it transvenes both The Universe and The Divine according to cosmosism.

[2:111:105] It is also important to note the terminology herein used as when I refer to the original positions, I pertain to the positions held by the Astronist Tradition for its beliefs about the positions of the different existences are the original positions posited to the Astronist cosmological hierarchy.

[2:111:106] As we now move on from the topic of the cosmological hierarchy, we come to introduce that which is to be henceforth referred to as the notion of organisation which relates to the suggestion that all entities in existence hold a distinct organisation that makes them what they are.

[2:111:107] This particular organisation formulates their unique existence and it is the patterns that we identify of similar entities that demonstrates similarities in organisation, of which orientation is a major element.

[2:111:108] Organisation, in this sense, is essentially the developmental process of the creation of an entity's essence by utilising its different identified and derived qualities and the post-omnidoxical study and contemplate of organisation is to be transdisciplinised primarily between divergetology, ghenology, and contology, but with the influence of other disciplines and inclusive disciplines due to its wide-ranging extent.

[2:111:109] Therefore, according to this notion of organisation, we understand that qualities are organised in such a way that develops the entity's essence (qualities - organisation - essence).

[2:111:110] There are different forms of organisation that are largely assigned to the different branches of philosophy:

[2:111:110a] Ontological organisation which pertains to the organisation of being and is the most pertinent branch of philosophy to which this topic is connected as the study of an entity's essence is a closely related to the study of the nature of being as essence is considered to be a feature of beingness.

[2:111:110b] Ethical organisation pertains to the organising of one's ethical stances in order to formulate one's overall ethical essence which is the combination of one's different beliefs about certain topics and the specific values that one abides by in their life.

[2:111:110c] Metaphysical organisation pertains to the organisation of one's anatomy at birth and the development of one's mind and the growth of one's body throughout their childhood as a formulation of their existential or metaphysical essence.

[2:111:110d] Cosmic organisation pertains to the cosmical orderity and is encompassed by compendology as it focuses on the way in which The Cosmos has achieved its essence and also deals with all attempts to define cosmical essence which is not necessarily an easy essence to characterise due to the vastity of The Cosmos and all its composite parts.

[2:111:110e] Aesthetic organisation is the formation of an entity's qualities of beauty that subsequent create its beauteous essence and is therefore distinct from metaphysical or anatomical essence for beauty is socially constructed and personally subjective rather than biologically formed.

[2:111:110f] The final two forms of organisation are epistemic and logical organisation (the organisation of knowledge while the latter involves the organisation of notions as either logical or illogical in order to determine the notion's overall logicity, or logical essence.

[2:111:111] We shall now also introduce that which is to be henceforth referred to the problem of semantics which is considered to be a fundamental issue in both pre-Astronist and post-Astronist philosophy according to the Astronist Tradition as I shall herein explain.

[2:111:112] The problem of semantics is an omnidoxically proposed problem pertaining to some philosophical theories and suggests that some of these are either wholly or partially dependent upon differences in semantics of certain key words in the formation of the theory without there existing any tangible notion within the theory, or any particular requirement for its existence.

[2:111:113] For example, the Astronist Tradition maintains that which is to be henceforth known appurtenism which notionises that all that does exist within the Astronist Tradition's auspices is relevant to the development of The Philosophy of Astronism because that is irrelevant or non-contributory is not made pertinent by the Tradition as one of the Tradition's responsibilities.

[2:111:114] Furthermore, appurtenism notionises that the prominence of relevancy in the Astronist Tradition is essential to the development and designation of The Philosophy of Astronism as an organised philosophy and so having this appurtenist notion in mind, it is understandable that when I, as Cometan, came to study pre-Astronist philosophy, I found that a number of different supposed theories and notions actually held no significance to human life as well as a lack of direction or inclusivity within a system of thought hence these theories were floating around without any purpose or organisation, hence my creation of organised philosophy in addition to my concern for the obscuration of philosophy.

[2:111:115] Such may therefore be termed as a false theory which is a philosophical theory that lacks any tangible, relevant, or purposive reason for its existence due to a distinct lack of contribution to wider thought or to a specific system of thought that itself holds a goal such as Astronism's goal to achieve humanwide cosmocentricity.

[2:111:116] It is herein stated to be the prominentmost element of Astronism as a distinct philosophy that appurtenism be considered as such because the very core notion that appurtenism holds demonstrates the new approach to philosophy that the Astronist philosophical tradition takes and so appurtenists not only considered reascensionism to invoke the reascension of philosophy, but also the revolution of philosophy.

[2:111:117] That which is to be herein introduced and henceforthly known as philosophic progression, also known as subsequentialism, pertains to the notion presented herein that my philosophical understanding and outlook, as Cometan, shall develop, broaden, and subsequently improve throughout my life.

[2:111:118] Therefore, my approach to Astronist Philosophy shall also develop and sharpen as my experiences and knowledge pertaining to philosophical understanding shall become further enriched, hence the reason for the development of the sister philosophy of Cometanism alongside that of Astronism for the former serves to demonstrate my progression in approaching, discussing, and understanding the latter.

[2:111:119] We shall also herein introduce a newly formed instrument of study that shall be henceforth referred to as durity which the extent of something's existence or functionality in relation to time; the duration of an entity's ontology, an event or it may also be applied in a conceptual way to pertain to some element of a concept's duration and therefore durity is to be added to the rest of the instruments of study within the discipline of Instrument Theory.

[2:111:120] Before we end this discourse by addressing the important area of contemplation and study for divergetologists known as biactuality, we shall first clarify our definitions of certain central terms that are used in The Omnidoxy at a rate of abundance.

[2:111:121] These five terms are to be henceforth collectively appellated as The Five Determiners and the first of which is the most commonly used term of notion which relates to an abstract proposal or suggestion that doesn't hold a specific appellation; a notion focuses on providing a description or suggesting an element about something rather than simply introducing its existence.

[2:111:122] Now we come to the secondly most used term known as a concept which is clarified to be an abstract idea that may or may not hold an appellation; a concept focuses on the notion of the existence of something rather than its justification which is instead left to the third term of The Five Determiners known as theory which is a type of notion that is formulated, appellated, and justified, typically in order to solve an issue.

[2:111:123] The fourth term to clarify is a belief orientation which pertains to a systemised combination of both a concept and a notion that also holds its own appellation, usually an ism, and typically exists in opposition to other orientations while the fifth of The Five Determiners is a principle which relates to a fundamental proposition that serves as the basis for a belief orientation or theory.

[2:111:124] A simple example of these different elements of philosophisation is as follows: A dog is barking (concept). That dog is barking loudly and aggressively (notion). If we give the dog some food, then the dog will stop barking (principle); "Foodism" supports this principle (belief orientation). If the dog is barking then he must want to gain a person's attention for some reason and the most probable reason is that he is hungry and therefore requires feeding so we shall test this by feeding the dog to see if he stops barking (theory).

[2:111:125] Now that we have made those clarifications of terms that rest at the heart of the Astronist philosophical terminology, we shall end this discourse on divergetology by introducing that which is to be henceforth known as biactuality and subsequently, biactualism.

[2:111:126] Biactuality pertains to a principle, concept, belief orientation, notion, or theory that may be rejected by any one of types of Five Determiners by the Astronist Tradition,

but still exists within the Astronist philosophical tradition as these two remain distinct entities from one another.

[2:111:127] The Astronist Tradition is the interpretation of The Philosophy of Astronism, which resides as part of the wider Astronist philosophical tradition, by The Institution of The Philosophy of Astronism and it is therefore the Astronist Tradition that The Institution promotes as its proclaimed omnidoxical version of Astronism.

[2:111:128] Understanding this difference allows us to gain a greater understanding of a concept/notion/theory/principle/belief orientation being biactual, or in a state of biactuality and the contemplation and discussion of biactuality and the wider discussion about concurrence and rejection of different concepts/notions/theories/principles/belief orientations is to remain a responsibility of divergetologists.

[2:111:129] Biactuality is considered to be one of the primary signifiers of a philosophy as distinct from a religion because although a concept/belief orientation/notion/theory may be rejected by the Astronist Tradition's interpretation of Astronism, it still remains an open and free point of discussion for the wider philosophical tradition which is not something that is recognised in the context of a religion due to the a religion's requirement of dogma in order to assert its divine and revelational proclamations.

[2:111:130] Furthermore and finally, biactualism proclaims that biactuality is the foremost differentiator of a philosophical system of thought from a religious, or ideological one.

The Omniverse in The Universe

(Omnitology)

[2:112:1] The third of The Five Lost Ologies is that which shall herein and henceforth be known as omnitology which remains a discipline of study categorised within sanitology dealing with the notion of the existence of The Omniverse, also known as The Multicosmos.

[2:112:2] Omnitologists, those individuals whom dedicate their philosophicality to the study of omnitology, are to contemplate the nature of this notion, particularly whether The Omniverse is itself a realm of existence distinct from that of The Universe and The Cosmos themselves rather than its consideration as collectivity by the Astronist Tradition.

[2:112:3] Therefore, the place and identity of The Omniverse within the Astronist cosmology is expected to vary greatly depending on the individual hypotheses and contemplations presented by different omnitologists.

[2:112:4] As well as this, the nature of The Omniverse itself is another major area of consideration including The Omniverse's mutability and immutability, its eternality or its temporality, and its infinity or its limitation; these different elements of The Omniverse's character are to be combined differently in order to determine The Omniverse's overall identity.

[2:112:5] In order to form the foundations of our omnitological discussion, we must define what The Omniverse is according to the Astronist Tradition's approach to the Astronist cosmology.

[2:112:6] Critically, The Omniverse, according to the Astronist Tradition, is a perspective that can be taken in understanding and viewing The Universe from the Astronist cosmology which is characterised by considering all the different possible cosmoses as composite entities within The Universe which in turn are considered as a collectivity which forms The Omniverse as a collectivity of cosmoses.

[2:112:7] Essentially therefore, the appellation of The Omniverse pertains to a perspective that can be taken on The Universe.

[2:112:8] The Omniverse is considered according to the composite natures of all The Cosmoses and the gaps between each cosmos while The Universe is considered according to the holistic natures all The Cosmoses and considers these cosmoses as a whole, thus forming the existence of The Universe.

[2:112:9] Therefore, The Omniverse and The Universe are the same entity from two different perspectives and the study and contemplation of the nature of the relationship

and interactions between these two existences is expected to remain one of the most foremost contemplations for omnitologists.

[2:112:10] That which is termed as The Universe in the Astronist cosmology actually pertains to the mainstream term of the multiverse while the appellation of The Cosmos actually pertains to the non-Astronist mainstream term of the universe.

[2:112:11] The dimension in which one can compare all the possible cosmologies and laws of existence in all the possible cosmoses which in turn creates The Omniverse, which becomes part of The Universe and formulates an integral part of the Astronist cosmology.

[2:112:12] Along with divinology and infinetics, omnitology is appellated as the Ultimation Discipline for it reaches towards the furthest edges of the human ability to imagine, perceive, and conceive notions as these notions are dependent upon the human ability to imagine by our natural cosmic means in such a way that is universal rather than cosmical.

[2:112:13] Not only this but the Astronist Tradition considers the establishment of omnitology as a discipline herein to be the signifier that the contemplation and study of the notion of The Multicosmos (Astronist) or the multiverse (pre-Astronist and non-Astronist) is to be henceforth a philosophical territory primarily.

[2:112:14] This is rather than being a scientific territory of study with the main argument in favour of this being that science deals with the laws of the physical reality while the mere existence of The Omniverse is neither proven nor provable due to its extracosmicity and universality.

[2:112:15] Therefore, it must be philosophised about as it cannot be experimented, measured, or analysed which are three main elements of the scientific approach to the study of any topic.

[2:112:16] As a wider general principle, any topic that cannot be sufficiently experimented, measured, or analysed, and its relevance to philosophy is provided, then it should become a territory of philosophy for if one cannot apply these methods of learning, then all there is left to do is philosophise.

[2:112:17] Additionally, it is also important to herein and now introduce that which is to be known as the All That We Know problem of The Omniverse which involves the notion that if The Omniverse beyond The Cosmos does exist and there is not just a Universe beyond The Cosmos in which no other cosmoses reside then all that we know and have enknnowledged ourselves of cannot be universal for all our knowledge and all the events that occurred of The Cosmos, including that of the Big Bang are only cosmically relative to this Cosmos and therefore pertains that firstly, there cannot ever exist a universality for each cosmos of The Omniverse/Universe is unique, and that secondly, each event, pattern, and structure in The Cosmos that has been observed is an accident of The Cosmos in which we reside and therefore allows for no relativity outside our own Cosmos.

[2:112:18] Again, this is an omnitological and wider compendological issue that is to be further explored and debated post-omnidoxically.

[2:112:19] In many instances in The Omnidoxy, I have mentioned about post-omnidoxical exploration, contemplation, and discussion and this remains essential to understanding the nature, the role, the position, and the functionality of The Omnidoxy as a text.

[2:112:20] Essentially, The Omnidoxy is foundational at its heart and not to go into too much depth herein about this omnidoxicological topic, but it is important to note that it is not the primary role of The Omnidoxy to explore the Astronist philosophical tradition to its furthest extent, but instead its primary role is focused on the introduction and foundational development of The Philosophy of Astronism as part of the wider Astronist philosophical tradition.

[2:112:21] The Omnidoxy is therefore the necessary precursor and foundational determiner of The Philosophy of Astronism and it is the role of post-omnidoxical literatures, philosophers, and writers to explore in further depth The Philosophy of Astronism as well as the wider Astronist philosophical tradition.

[2:112:22] Therefore, it is for this reason that there many instances on The Omnidoxy that I write that such discussions and further contemplations shall take place post-omnidoxically; it is due to the state of foundationality of The Omnidoxy exists within and is predicated upon and it is this foundationality that determines The Omnidoxy's overall identity as a whole literature in and of itself, especially so when considered within The Grand Centrality.

[2:112:23] Returning to the topic of our discourse herein, we shall consider as part of omnitology six different major areas of contemplation as part of our overall philosophical study of The Omniverse in The Universe.

[2:112:24] The first of these pertains to the nature of the gaps between different cosmoses which is characterised as part of the lesser existence of The Betwixity from the Astronist cosmology; therefore, it is important to note so as to avoid confusion that The Omniverse does not compromise only of the gaps between cosmoses, but The Cosmoses themselves as a infinite collectivity and it is The Betwixity that pertains to these gaps.

[2:112:25] Due to the infinite nature of The Omniverse in The Universe, it is important to remind ourselves that the Astronist Tradition upholds the notion that the gaps between each of The Cosmoses of The Omniverse in The Universe are infinite gaps themselves and so there shall be any possibility of there being a cosmic clash which is the notion that a cosmos in The Omniverse could, during the process of its expansion, clash with another cosmos that is also accelerating in its own expansion.

[2:112:26] By reminding ourselves of this particular nature of The Omniverse, we understand more about the extent of The Betwixity as one of the existences in the Astronist cosmology and understand that The Betwixity, due to the infiniteness of The Omniverse, and it existing as an essential element to The Omniverse, that The Betwixity must also be infinite by its nature and therefore also extracosmical by its nature.

[2:112:27] This discovery about The Betwixity within our omnitological discussion is also demonstrative of another nature of The Betwixity that is perhaps not unique to it as other existences are expected to hold such a nature, but that is firstly and herein introduced in relation to our discussion of The Betwixity and this nature I speak of is to be henceforth known as metadimensionalism.

[2:112:28] Metadimensionalism is an existential quality of something that allows for it to change according to the dimension or circumstance in which it exists, but that it still remains the same; in the context and in its application to The Betwixity as an existence, the metadimensionality of The Betwixity is demonstrated through its ability to be both finite and infinite.

[2:112:29] This is exemplified through The Betwixity's finite existence within The Cosmos in addition to its infinite existence within The Universe as a fundamental part of The Omniverse; this is what is considered to be metadimensionality as it highlights a change of something's essential nature according to the different instances of its existence in different circumstances and dimensions.

[2:112:30] Metadimensionalism as a notion is accepted by the Astronist Tradition, but it is also important to note that the application of metadimensionalism to all instances may not be accepted by the Astronist Tradition such as the application of metadimensionalism to The Cosmos, The Universe, or The Divine which is not accepted by the Astronist Tradition therefore we now understand how a notion in its general unapplied sense may be accepted by the Tradition, but after its application to a subject, it may not be accepted.

[2:112:31] This notion so far in our discussion of the Astronist cosmology has been largely left out of discussion and so therefore it is perhaps the destiny of metadimensionalism to be introduced in association with the existence known as The Betwixity.

[2:112:32] The next of the topics to address as part of omnitology is the notion of the possibilities of different cosmoses which is also transformed into a belief orientation that is to be henceforth known as multicosmism.

[2:112:33] Again, like extraspatialism, multicosmism is another default orientation that the Astronist cosmology takes for its fundamental development and is therefore also ascribed to by the Astronist Tradition.

[2:112:34] Multicosmist ideas are essential to the development of The Omniverse in The Universe because it is the postulation that there are multiple cosmoses that is also the purpose to the development of extraspatialism.

[2:112:35] Therefore, multicosmism can be labelled as another of those foundational default belief orientations that is essential to Astronist cosmology and is also therefore essential to not only the Astronist Tradition, but also the wider Astronist philosophical tradition.

[2:112:36] The next of the topics to address within our omnitological discourse is concerns itself with the ontology of The Cosmoses that make up the infinite collectivity that is appellated as The Omniverse.

[2:112:37] This branch of omnitological study is transdisciplinary because it also extends into ontology as part of the inclusive discipline of ghenology and concerns itself with the overall state of being of The Omniverse which shall be explored post-omnidoxically, but will be further founded during our omnitological instrumentation which shall take place at the end of this discourse.

[2:112:38] This branch of omnitology also deals with the contemplation of whether there is ever a possibility to enter different cosmoses as part of the nature of being of those cosmoses as a collectivity forming The Omniverse, this notion of which is of course rejected by the Astronist Tradition, but it's contemplation and further exploration post-omnidoxically still remains central to this branch of discipline.

[2:112:39] The introduction of different belief orientations with regards to the nature of the cosmoses of The Universe is another of the reasons for the creation of this discourse which we have already begun to embark upon completing and we shall continue to fulfil as this discourse continues.

[2:112:40] Of course, not only should this discourse be the introducer of different omnitological belief orientations, but the majority of belief orientations of omnitology should be developed post-omnidoxically as a further exploration of the discipline of omnitology by post-omnidoxical philosophers, writers, and specified omnitologists.

[2:112:41] Another area for omnitologists to consider in relation to their exploration of omnitology are the similarities and differences between different cosmoses with the main similarity that is introduced herein being cosmic limitation which is held to be a pervading quality of all the different cosmoses of The Omniverse as limitation is what makes each of these cosmoses cosmic in their nature according to the Astronist Tradition as inspired by the Astronist cosmology.

[2:112:42] The introduction of further similarities as well as the potential differences between the different cosmoses of The Omniverse should be explored post-omnidoxically and it is expected that many different belief orientations will emerge during that time

because of the abundance of opinions that can be held with regards to the nature of whole cosmoses and their relations to other cosmoses which further determines omnitology as a vast discipline encompassing many areas that require deep contemplation.

[2:112:43] We have already addressed the question of whether the expansion of different cosmoses may eventually cause collisions with other cosmoses, known as cosmic clashes, and according to the Astronist Tradition this could not occur due to the infiniteness of The Omniverse in The Universe in which these cosmoses reside, however, this question forms an area of contemplation for omnitologists to approach in different ways in the formulation of belief orientations that address the topic from different angles.

[2:112:44] That which is known as the growing block universe upholds the notion that the past and present exist and the future does not exist and therefore must also notionise that the present is an objective property to be comparable to that of a moving spotlight.

[2:112:45] By the passage of time more of the world comes into being; therefore, the block universe is said to be growing and this growth of the block is supposed to happen in the present, a very thin slice of spacetime, where more of spacetime is continually coming into being.

[2:112:46] This remains an alternative approach to understanding the chronology of existence from eternalism according to which past, present, and future all exist equally and presentism according to which only the present exists.

[2:112:47] The Astronist Tradition herein formulates its own approach to addressing the chronology of existences according to these different categorisations of temporality that is to be henceforth known as futurism, or as philosophical futurism, and is a contribution to the philosophy of time by omnitology.

[2:112:48] Therefore, in an Astronist context, futurism pertains to the notion that only the future exists and therefore rejects both eternalism and presentism in the context of the philosophy of time.

[2:112:49] Futurism postulates that the past is no longer in existence because it has of course occurred and shall not ever occur again due to the linearity of time and therefore it cannot be correctly said to exist.

[2:112:50] Meanwhile, according to the Astronist futurist perspective, the present is not provided with the same level of meaning as the past and the future because something can either have happened or is going to happen and considers that which is happening to be split between the past and the future, the balance of such a split is dependent upon how much of the subject has happened or is going to happen.

[2:112:51] The category of the present is therefore considered to be more conceptual rather than an actual fixture in temporality because it does not hold the same physicality that

both the past and the future do; the present of which I speak here is not the extended present as is often used in colloquial terms as the present may extend to a second, a minute, an hour, or longer.

[2:112:52] Instead, the present of which I speak is the actual literal present time, of which there is no existence because of the continuous motionality of time and therefore the Astronist approach to understanding and contemplating the philosophy of time is characterised by futurism and its disbelief in the existence of the present in the same way that as the past and the future.

[2:112:53] To reiterate, futurism also denies the existence of the past upon the entry of an event or a person into the past and therefore superiorises the futurism by notionising that only the future exists, but this discussion of the Astronist approach to the philosophy of time shall take place in our durantological disquisition that is latterconstructed.

[2:112:54] That which shall henceforth be known as homocosmism refers to the notion that each of The Cosmoses that form The Omniverse in The Universe are physically structured similarly and therefore each of these Cosmoses may hold unique characteristics and qualities, but their fundamental structure holds a continuity with that of all The Cosmoses.

[2:112:55] Homocosmic thinking links each of The Cosmoses of The Omniverse in The Universe together through the notion that they hold similar structures to one another which is largely concluded to be because of their homogenous origination from The Universe and subsequently The Divine depending upon the theological orientation of the perceiver.

[2:112:56] Meanwhile, and oppositistically, that which is to be henceforth known as heterocosmism pertains to the notion that each of The Cosmoses that form The Omniverse in The Universe are physically structured differently and therefore each of these Cosmoses are unique from one another.

[2:112:57] This heterocosmic, or heterocosmist view of The Cosmoses of The Omniverse in The Universe understands there to be unique heterogenous origins of all that exists rather than a homogenous origination which it, and many other views on existential origination is to be explored as part of Origin Theory, which is herein established as a major branch of Creation Theory and an important contributor to Finality Theory which, when joined with Existential Theory, are collectively appellated and referred to as the Three Theory Pools.

[2:112:58] On the top of The Cosmoses of The Omniverse in The Universe, we now introduce different belief orientations that exist in relation to this topic, the first of which is to be henceforth known as numeralism which is characterised by the notion that a set number of cosmoses exist to form The Omniverse in The Universe.

[2:112:59] Numeralist hold that this number of cosmoses does not and will not ever change for there is a set number of cosmoses that could possibly exist and so therefore calls into

question the infiniteness of The Omniverse in The Universe, but also exists as a precursory element to the development of that which shall be latterintroduced as discontinuationism.

[2:112:60] In opposition to the numeralists is that which shall be introduced as innumeralism which pertains to the oppositistic notion that an infinite amount of cosmoses exist to form The Omniverse in The Universe.

[2:112:61] Therefore, innumeralists infer support for the infiniteness of The Omniverse and The Universe which falls closer in alignment with the orientation of the Astronist Tradition on this matter and innumeralism also remains the necessary precursor to the latterintroduced orientation of supplementalism.

[2:112:62] To further complement these foundational orientations with regards to omnitological contemplation, we shall now introduce that which is to be known as discontinuationism which involves the notion that all The Cosmoses that were ever going to be created have been created already to form The Omniverse in The Universe and that no more cosmoses will be created because their inceptions have already occurred at the beginning of existence either by Divine creation or by autocreational means depending upon one's theological orientation.

[2:112:63] Discontinuationists are herein not supported by the Astronist Tradition because their notion suggests that both The Omniverse and The Universe are not infinite by their natures as it is postulated that there exists only a finite amount of cosmoses within them which does not align with the natures of each existence that have been outlined in the Astronist cosmology, however, the discontinuationistic retains its importance to be considered within all omnitological discussions and contemplations.

[2:112:64] Oppositistically to discontinuationism, we now introduce that which shall be known as supplementalism which holds the notion that not all The Cosmoses have been created that are intended to be created and so cosmoses will continue to be created either eternally (which is to be known as the suborientation of prosupplementalism) or to some end (which is to be known as the suborientation of consupplementalism).

[2:112:65] Supplementalism is therefore multifaceted by its own core nature as there exists suborientations within itself and it is the suborientation of consupplementalism that the Astronist Tradition ascribes itself to as it believes in the eternal creation of new cosmoses in the infiniteness of The Omniverse in The Universe.

[2:112:66] With the introduction of these different belief orientations, which remains one of my most joyous of activities to conduct, we enhance and enrich the tradition of Astronist philosophy as we open it to a wider variety of opinions and contributions to which the tradition is always open to welcoming and this shall remain so forevermore.

[2:112:67] Before we introduce and address those which are to be appellatively collectivised as The Eleven Omniversal Forms, we shall introduce another belief

orientation that remains key to the development of the Astronist cosmology and is to be known as extraspatialism, also spelt as extraspatialism.

[2:112:68] Extraspatialism maintains the notion that there exists dimensions beyond that of space itself which is essential to the Astronist cosmology due to its belief in The Cosmos in The Universe.

[2:112:69] Despite the fundamentality of this notion and its introduction so far into the depth of The Omnidoxy, it does seem as though we have taken our belief in extraspatial dimensions as a default position due to its integrality in the development of the Astronist cosmology.

[2:112:70] Extraspatialism is essential and consequential to the creation of the Astronist cosmology which remains at its extraspatialist in its fundamental orientation and it is herein expected that different philosophies within the Astronist philosophical tradition shall diverge from one another in this foundational sense with regards to the question of extraspatiality.

[2:112:71] Extraspatialism can also be applied to other non-Astronist philosophies and religions in order to determine their orientations on such a matter that remains at the heart of the Astronist philosophical enquiry.

[2:112:72] Extraspatialism can therefore be described as fundamentally orienting the Astronist philosophical tradition as it exists as an essential element to the tradition rather than just a belief orientation that may or may not be adhered to within the tradition.

[2:112:73] Before we embark upon the omnitological instrumentation that shall define the closing segment of this discourse, we shall first introduce and briefly explore those which are collectively appellationed as The Eleven Omniversal Forms, or The Eleven Omnitologies, each of which is a belief orientation that notionises about some part, or about the entirety of the creation or functionality of The Omniverse.

[2:112:74] Some of these eleven belief orientations directly oppose one another, some overlap with each other, and some direct their notionises towards unconnected aspects of the creation and functionality of The Omniverse.

[2:112:75] The Eleven Omniversal Forms are an Astronistised, or Astronistised version of Brian Greene's nine types of multiverses which are herein philosophically reinterpreted, codified, and reappellationed to form eleven new omnitologies and so these omnitological belief orientations are inspired by, but not exactly emulative of that which is appellationed herein as Greeneism which is appellation created by the Astronist Tradition to collectivise the nine types of multiverses that Brain Greene did formulate.

[2:112:76] These Eleven Omnitologies deeply explore the different possible natures of The Omniverse and are expected and encouraged to be added to during post-omnidoxical discussions and contemplations regarding the omnitological topic.

[2:112:77] The first of The Eleven Omniversal Forms is that which shall henceforth be known as solutionism which is characterised by the belief that within The Omniverse there exists an infinite amount of cosmoses in order to fulfil every possible event that could occur an infinite number of times in an infinite number of different existences, hence the requirement for an infinite amount of cosmoses in order to fulfil each of these possibilities.

[2:112:78] Solutionism is herein appellated as such because it postulates that by notionising that there exists an infinite amount of cosmoses, a solution is provided that allows for the all possibilities events, and existences to occur with overlapping or clashing with one another; solutionism is characterised by the idea of parallel existence which is when the same entities and events exist in a different cosmos, but there are subtle differences that differ them from The Cosmos in which we reside.

[2:112:79] The second of The Eleven Omniversal Forms is that which shall henceforth be known as neoformationism which involves the notion that The Omniverse is composed of various pockets in which inflation fields collapse and form new cosmoses, but not from pre-existing cosmoses and so therefore brand new cosmoses are formulated each time which may either be autocreared or created in another way depending upon one's orientation within Creation Theory and theology.

[2:112:80] The opposite belief orientation to this is that which is to be known dilationism which postulates the notion that The Omniverse is composed of various pockets in which inflation fields collapse and form new cosmoses, but diverging from the neoformationist perspective, dilationists hold that these cosmoses are created from pre-existing cosmoses rather than brand new cosmoses and so the newly created cosmos is a dilation of the previous rather than a neoformed cosmos (a cosmos that has not derived its creation from another cosmos).

[2:112:81] The Neoformed-Dilated Dichotomy is expected to be one of the most interesting areas of omnitological contemplation post-omnidoxically and is also crossdisciplinary by its nature because it involves many other disciplines, such as Creation Theory, Finality Theory, theology, ontology, as well as philosophical cosmology.

[2:112:82] The next of the Eleven Omnitologies to introduce herein is that which shall be known as cyclicalism which is predicated on the notion that each of The Cosmoses of The Omniverse in The Universe operate on an eternally continuous cycle of birth, death, and rebirth and so are therefore autocreational in their orientations of Creation Theory.

[2:112:83] It is also important to note that within these eleven different omnitologies, some belief orientations can be applied and added to others, and now we shall find such an

example because cyclicalism can be applied to by dilationism which formulates dilationist cyclicalism and by neoformationism which formulates neoformationist cyclicalism.

[2:112:84] Dilationist cyclicalism holds that the rebirth element of cyclicalism is directly from a pre-existing cosmos (usually the exact same cosmos that had previously existed) meanwhile neoformationist cyclicalism holds that the rebirth element of cyclicalism is formed into a cosmos that had not existed previously, but holds some connection to a previous cosmos, such as existing in the exact same location as the previously existing cosmos being the main example.

[2:112:85] That which shall henceforth be known as collisionalism puts forth another approach to understanding which notionises that any one of the cosmoses of The Omniverse in The Universe could and will at some point collide with one another due to their mutually accelerating expansions which is known as cosmic clash and is rejected as being a possible scenario by the Astronist Tradition due to the infiniteness of The Omniverse.

[2:112:86] Another of the Eleven Omnitologies that I wish to introduce herein is that which is to be known as diversionism which involves the notion that every time a diversion in events occurs in one cosmos, there automatically formulates a new dimensional cosmos that also forms a new part of The Omniverse in The Universe.

[2:112:87] Diversionist ideas are not accepted by the Astronist Tradition as it is not believed that whenever a divergence in events has occurred that a new dimension or a whole new cosmos is automatically created (which is a belief that is known as a divergent cosmology), but is instead adhered to vanarianism which holds that a divergent event in The Cosmos is exactly that, a possible event that could have occurred, but did not.

[2:112:88] Vanarian ideas, or vanarianism, is not one of the Eleven Omniversal Forms that we are introduce herein, but it does exist as a crossdisciplinary belief orientation to which the Astronist Tradition is firmly prescribed.

[2:112:89] Vanarianism can be defined as the wide-ranging belief orientation that anything that has not occurred or that deviates from that which holds existence or has occurred is only a concept of possibility and therefore not a real existential entity.

[2:112:90] Vanarianism can be described as a reaction to notions about the creation of new dimensions because of the divergences of events and entities in order to fulfil infinite scenarios, but the Astronist Tradition, the founder of vanarianism herein, rejects notions that that which could have occurred in one cosmos has instead done so in another due to the infiniteness of The Omniverse.

[2:112:91] The Astronist Tradition holds that to presume that because there are divergent events in occurrence that these events instead take place in other cosmoses is without

rationality and logic because the Cosmic Limitation Principle and therefore the very nature of The Cosmos disallows such transmissions of events into other cosmoses to occur.

[2:112:92] This is why vanarianism is and shall remain an essential part of how the Astronist Tradition understands The Omniverse and interactions and natures of The Cosmoses within The Omniverse because vanarianism also essentially notionises that there cannot be anything, whether it be a concept, an event, and certainly not an entity that is ever able to leave The Cosmos to transplant itself into another cosmos in order to fulfil the infiniteness of The Omniverse.

[2:112:93] Vanarianism, as a deeply important and pervading undertone through the Astronist approach to cosmological understanding, is to be addressed by all relevant disciplines henceforth and shall also be encouraged to be at the centre of many discussions post-omnidoxically.

[2:112:94] Returning to the Eleven Omnitologies, that which is to be known as simulationism pertains to the notion that The Cosmos in which we reside is a simulation or product of another cosmos of The Omniverse in The Universe.

[2:112:95] Therefore, simulationism directly opposes the previously introduced and discussed position of vanarianism as simulationists notionise that The Cosmos in which we reside now is not the originality and that the events, entities, and entire structure of this cosmos has been transplanted or extracosmically transmitted from another cosmos as part of The Omniverse in The Universe and of course, due to its clear divergence from the Astronist cosmological structure and the natures of each of the existences of that structure, the Astronist Tradition remains opposed to simulationism.

[2:112:96] That which is to be known as oblivionism in the context of it being an omnitological belief orientation pertains to the notion that black holes are the propagators and sustainers of cosmoses to form The Omniverse in The Universe and that The Cosmos in which we reside actually exists within an oblivion that exists as one of many possible oblivions to form The Omniverse in The Universe.

[2:112:97] Oblivionist ideas uniquely invoke The Chaos into the discussion of The Omniverse in The Universe and although the Astronist Tradition holds no official position on this orientation, oblivionism is expected to be further explored and discussed as part of post-omnidoxical philosophical contemplations.

[2:112:98] Another dichotomy that is herein introduced as an omnitological dichotomy is that which is to be appellated as the Pro & Pre Sentient Dichotomy, the first contributor to which is the belief orientation of prosentientism and the second contributor to which is presentientism.

[2:112:99] Prosentientism is characterised by the notion that in every one of The Cosmoses of The Omniverse in The Universe does exist sentient life while its dichotomised opposer

is known as presentientism is the notion that in only a selective few of The Cosmoses of The Omniverse in The Universe does sentient life exist and show how this dichotomy is crossdisciplinary by its nature as it concerns itself with a sentientologically-themed topic.

[2:112:100] The Astronist Tradition's approach to this dichotomy aligns with presentientism as the Astronist Tradition believes that sentient life is existent in every maturely formed cosmos, that is a cosmos that has formed to the point at which it holds a metagalactic superstructure and countless star systems in which planets given the time to form and the process of evolution is given time to take place in order to develop sentient life.

[2:112:101] The final of the Eleven Omniversal Forms is that which is to be henceforth known as layerism which is characterised by the notion that instead of The Cosmoses of The Omniverse in The Universe existing independently and disproximatedly from one another, they are instead layered upon one another or are connected to one another and can therefore be travelled to and from one another mainly through oblivions as part of extracosmical transmission, intercosmicity, intercosmicalism, transcosmicalism/transcosmism/transcosmicism, intercosmical transplantation, or it may also known as cosmoperegrination.

[2:112:102] Layerist ideas in omnitology formulate their own branch of study within omnitology that is to be henceforth known as morphomnitology which deals with the contemplation of the physical shapes, approximations, disproximations, positions, hierarchies, and interactions between The Cosmoses of The Omniverse in The Universe.

[2:112:103] As part of morphomnitological study and contemplation, it is expected that many different belief orientations will emerge with layerism being the original founding member of this specific branch of omnitological study and even despite the fact that layerism is rejected by the Astronist Tradition due to the fact that the Astronist Tradition does not believe in cosmoperegrination.

[2:112:104] The Astronist Tradition's disbelief in layerism also stems from its disbelief in the notion that The Cosmoses of The Omniverse in The Universe ever come close to and certainly do not interact with one another due to the infiniteness of The Omniverse which is encapsulated by the Astronist Tradition established of and adherence to that which is to be latterintroduced and known as disconjectionism.

[2:112:105] Now that we have addressed each of the Eleven Omnitologies inspired by Greeneism, we shall now turn our attentions to the conduction of an instrumentation regarding the topic of The Omniverse.

[2:112:106] The first of the instruments that we are to apply is abundancy which initially one would surmise that this instrument rests at the heart of omniversality, but like its latterapplication to infinity itself, the application of abundancy to an infinite existence such as The Omniverse does not apply because The Omniverse remains immeasurable

due to its infinite and although one may describe it as abundant, that is not the correct term to relate to it and that which exists within it.

[2:112:107] Essentially, The Omniverse is not abundant of cosmoses, but it is instead infinite of cosmoses because the amount of cosmoses that reside within and form the collectivity of The Omniverse cannot be counted or otherwise measured and so therefore to described them as abundant, which denotes measurability of a large amount of something, is not the correct term to apply to the neither nature of The Omniverse itself, nor the amount of cosmoses that form its collectivity.

[2:112:108] The instruments of study of binarity and bipolarity both hold statuses of inapplication when it comes to addressing The Omniverse due to the infiniteness of The Omniverse and the subject that these two particular instruments address being rooted in cosmicity.

[2:112:109] However, the application of both centricity and corality pose the question of whether The Omniverse holds a centre or not.

[2:112:110] From the Astronist Tradition's understanding of infinity, we would assume no to this answer by the notion that The Omniverse is infinite and no infinite entity or existence holds a central point because its central point is illocatable due to the immeasurability of anything that holds an infinite nature and therefore also holds infinite properties and dimensions.

[2:112:111] However, considering that The Omniverse is not just any infinite entity and that it is a collectivity of cosmic entities, this perhaps strikes up the idea that The Omniverse could well have a core, or central point due to how it differs from The Universe as part of further contemplative areas of study about the relationship between these two existences and their differences in nature despite their shared nature of infiniteness.

[2:112:112] Henceforth, those whom consider The Omniverse to hold an infinite nature that is somewhat different from The Universe in numerous and perhaps unspecified ways are to be known as demarcationists while those whom notionise that there exists no differences between the infinite nature of The Omniverse and the infinite nature of The Universe are to be henceforth known as semblenists.

[2:112:113] The application of chaosity to The Omniverse denotes that The Chaos is existent throughout The Omniverse due to the unknown atmosphere that surrounds both the nature, function, and true extent of The Omniverse as well as its relationship with chaotic entities such as oblivions, and its largely unknown relationship to The Universe and all The Cosmoses that reside with it as part of the Cosmic Collectivity, as The Omniverse may alternatively be appellated.

[2:112:114] The Astronist Tradition postulates that compositeness rests at the heart of both the nature of The Omniverse as well as its functionality, identity, and overall purpose

because each of The Cosmoes of The Omniverse are considered to be composite parts of it that form the Cosmic Collectivity.

[2:112:115] Therefore, The Omniverse is intrinsically composite by its core nature due to the fulfilment of its purpose as a collectiviser that ultimately holds compositeness to be a central element of its functionality and purpose.

[2:112:116] When we apply the instrument of study of concentricity to The Omniverse, we formulate the question of whether the same concentric pattern as The Cosmos does exist as the pattern that structure The Omniverse.

[2:112:117] Again, the truth regarding the actual concentricity of The Omniverse remains unknown to us and even though concentricness is traditionally associated with cosmicity, but the attribution of a concentric structure to The Omniverse does not lessen its infiniteness and so because its nature isn't compromised by the application of a concentric structure to The Omniverse, there is no reason to suggest that The Omniverse does have a concentric patterned structure, but this is expected to remain disputed due to the close association between concentricity and cosmicity.

[2:112:118] Of course, the most important aspect of the nature of The Omniverse is that it remains fundamentally universal mainly due to its residence outside of any cosmos and its infinite characteristics, but with the application of the instrument of cosmicity, we pose the question of what extent does The Omniverse share a cosmical nature if it does hold a nature that does not exactly resemble The Universe?

[2:112:119] The Astronist Tradition holds no conclusive view on this question, but with greater contemplation about the nature of The Omniverse, it can be understood that there is certainly a defined functionality and order to The Omniverse which is an aspect of its nature that it does share with The Cosmoes that reside within it, but whether The Omniverse does hold a definite cosmical nature remains an open question for post-omnidoxical omnitologists, philosophers, and the wider public to contemplate and hold discussions over.

[2:112:120] The application of the instrument of dyadicity to The Omniverse derives that The Omniverse does hold two fundamental elements, including The Cosmoes and The Betwixity that exist within The Omniverse which therefore concludes that The Omniverse does hold a dyadic nature.

[2:112:121] With the application of dynamicity to The Omniverse, we raise the topic of whether The Omniverse holds an instrumental effect on the change, activity, and progressions made in The Cosmos and all other cosmoes that reside within The Omniverse.

[2:112:122] The dynamicity of The Omniverse is of course unknown to us because we cannot determine the extent of the interactions and impacts that The Omniverse holds

over The Cosmos specifically, but we can derive that due to the intrinsic nature of The Omniverse in relation to the existence and collectivity of The Cosmos extracosmically that The Omniverse must hold some effect over the externality of The Cosmos, but notably not the internality due to our adherence to disconnectionism.

[2:112:123] The application of the instrument of study of eternity raises the notion that due to the infiniteness of The Omniverse, that means that it must also be eternal in its duration, but as we have seen the true nature of The Omniverse has been somewhat disputed and is considered to be unknown and undetermined without conclusion, but due to the structure of the Astronist cosmology, the Astronist Tradition maintains that The Omniverse holds an infinite nature that is distinctly different from the nature of The Universe which demonstrates the Astronist Tradition as holding semblenistic approach to the omnitological discussion regarding the nature of The Omniverse.

[2:112:124] Formity is another instrument of study that we must apply to The Omniverse which derives the notion that the formation of The Omniverse is tied to both The Universe and The Cosmoses rather than The Omniverse being an independent formation which is to be henceforth known as proformation.

[2:112:125] Therefore, The Omniverse's formation is instead a dependent formation upon at least two other collectivised existences of The Universe and The Cosmoses which is to be henceforth known as anteformation, or dependent formation because without The Universe and The Cosmoses that The Universe encompasses, there would be no purpose, function, or ability for The Omniverse to even form.

[2:112:126] That which is known as functionality is another instrument of study that is to be applied to The Omniverse and in this particular instrumentation, we shall focus upon the primary function of The Omniverse which forms a part of its core nature and that is its ability and role to collectivise and provide an existence for The Cosmoses to reside within that is further encompassed by The Universe, but of course, this suggests that The Universe as a separate existence does not hold the function of collectivisation which perhaps reveals to us more about the nature of the relationship between The Omniverse and The Universe and their mutuality, symbioticity, and connection to each other.

[2:112:127] The application of futurity to the context of The Omniverse formulates that which is to be known as omnitological finality which is a branch omnitology that concerns itself with contemplating the end of The Omniverse and it is from this area of contemplation that many belief orientations are expected to arise and be explored, introduced, and discoursed and this is to take place post-omnidoxically.

[2:112:128] With the application of the instrument of graduality to The Omniverse, there is a question that is posed that consisted of whether The Omniverse, despite its infiniteness, has existed according to a gradual growth within The Universe unlike The Universe's nature, but of course, this opposes the notion that The Omniverse is a truly infinite entity

so here we see much confliction that is not omnidoxically resolved and must be explore after the founding of omnitology within the Astronist philosophical tradition.

[2:112:129] The notion that The Omniverse is intrinsic to the collectivity of The Cosmoes that reside within it and remains essential to their underpinning and encompassment points to the incredible extent of intrinsicity that The Omniverse holds in relation to its essentiality to the exist of The Cosmoes as well as the very existence of cosmicity itself despite the unknownness of the extent to which The Omniverse holds accountability for the development of cosmicity which is to be added as another of the many omnitological mysteries that have been discovered during this founding discourse on the subject.

[2:112:130] Motionality is another of the instrument of study that remains important to apply The Omniverse as it derives that because The Cosmoes are moving within The Omniverse which we know because of the accelerating expansion of The Cosmos, this raises the question of whether The Omniverse itself as an entirety is also motional?

[2:112:131] The Astronist Tradition notionises that motionality is only a product and quality of cosmicity, or cosmicness because that which is infinite already fulfils all the space that is available for it to fill and further to this, The Omniverse is not an entity for it is an existence and so existences, especially not if they are extracosmical, do not move, but the entities within them move.

[2:112:132] This raises the interesting point that from the extracosmical perspective, each of The Cosmoes can be considered as an entity rather than as an existence because entities hold motionality, especially if they are cosmical by their nature, and so even The Cosmos is an existence for us as we reside within and dependent upon it, when it is considered in its entirety and when it is collectivised with other cosmoes, it is considered to be an entity rather than an existence though its title of being an existence must remain for it does remain an existence from the perspective of that which resides within it despite it not remaining as such for that which resides outside of it.

[2:112:133] The application of the instrument of study of mysteriosity determines another interesting area of contemplation for omnitologists because there does remain a distinctly large amount of mystery and unknownness in relation to The Omniverse from the perspective of The Omnidoxy due to the lack of knowledge that can be known about The Omniverse mainly due to its extracosmicality.

[2:112:134] We cannot make any particular certainties about what or how The Omniverse is because we cannot base our ideas upon that which we already know which is something that we can do whenever the topic is intracosmical which is known as the basing method, an example of which would be to say that because we know the nature of The Cosmos is limited, we can say that that which resides beyond The Cosmos will hold an unlimited nature due to its superiority and encompassment of The Cosmos as the minor existence in comparison to The Universe for example.

[2:112:135] What the basing method does is that it uses knowledge that we know, such as cosmic knowledge, and uses it to such an extent that we are able to make conclusions and derivations about partially unknown existences or entity that reside beyond that cosmicality.

[2:112:136] With the application of the instrument of orderity to the context of The Omniverse, we also apply a sense of cosmicality to The Omniverse which always occurs when we apply orderity to any subject.

[2:112:137] The collectivisation role that The Omniverse plays is critical to its purpose and functional existence which makes it nature seem more cosmical than universal as universal nature is not generally associated with a fixed orderity because universality is all-encompassment so an orderity isn't required which raises questions about the true nature of The Omniverse, especially when compared to The Universe.

[2:112:138] Symbioticity, when applied to an omniversal context, pertains to the notion that there certainly exists a symbiotic relationship between The Omniverse and The Universe and between The Cosmos and The Omniverse which makes The Omniverse a multisymbiotic existence because it is symbiotic to different entities and existences so symbioticity, according to the Astronist Tradition, can be considered to rest at the heart of The Omniverse's nature which perhaps further distances omniversal nature from the nature of The Universe.

[2:112:139] Synchronocity's application to this context focuses on the potential for the synchronous nature of the relationship between The Omniverse and The Universe due to their considered close proximities to one another due to their shared infinite natures and the notion that the Astronist Tradition upholds which states that The Omniverse and The Universe exist cosubstantially, equally (due to their shared infiniteness), but functionally different.

[2:112:140] This is because The Universe holds an underpinning and encompassing nature for both The Omniverse and The Cosmoses that are collectivised and reside within The Omniverse; the Astronist Tradition notionises that there is certainly a synchronous element to the relationship between The Universe and The Omniverse which further supports the notion that these two existences hold a symbiotic relationship with one another.

[2:112:141] As this discourse of omnitology comes to a close, we understand that this discipline holds the potential to eclipse many others in both its breadth and depth due to the general unknownness and mysteriousness surrounding all that is extracosmical which leaves this discipline open to huge amounts of contemplation, discussion, and opposing opinions about the nature of The Omniverse, its relationship with other entities and existences, and the entire being, or ontology of The Omniverse which pertains to its creation, its function, its purpose, its extent, and its finality.

The Infinite Universe

(Infinetics)

[2:113:1] According to the Astronist cosmology, the most striking difference between the nature of The Cosmos and the nature of The Universe is the limitation of the former and the infinite nature of the latter and although The Divine shares this infinite nature too, it also may be described as transcendent even beyond infinity for infinity still does remain a parameter for measure, beyond which The Divine resides.

[2:113:2] In this discourse, we shall introduce a discipline of study and area of contemplation that is to be henceforth known as infinetics which primarily concerns itself with the nature of infiniteness, the implications that infiniteness has for different entities, elements, and existences as well as the applicability of different instruments of study to the notion of infinity.

[2:113:3] Infineticists are herein tasked with the systematic contemplation of what it means to be infinite, what infiniteness is in terms that we as disinfinite entities can understand, and in addition to this, the establishment of infinetics as a discipline of study also territorialises the topic of infinity as one that is part of philosophy.
