material in David H. Guston and Daniel Sarewitz, “Real-time technology assessment”, *Technology in Society*, volume 24, 2002, pages 93–109. Parts of the section “Integrating societal concerns into nanotechnology” are identical with material in Erik Fisher and Roop L. Mahajan, “Contradictory intent? US federal legislation in integrating societal concerns into nanotechnology research and development”, *Science and Public Policy*, volume 33, 2006, pages 5–16. Both papers were extensively referenced throughout the relevant sections and there was no suggestion by Ebbesen that the ideas discussed were her own. However there was no indication that substantial parts of the sections mentioned above were identical with material in those cited papers. The author had no intention to mislead and sincerely regrets having given the impression that the words were her own. All reasonable steps will be taken to minimise the risk of this happening again and I sincerely apologise to the authors, David Guston and Daniel Sarewitz, and Erik Fisher and Roop L. Mahajan, to their respective publishers, Elsevier Science Ltd and Beech Tree Publishing, and to the readers of *NanoEthics* for publishing this as an original paper.
