

ERRATUM

Wesley C. Salmon, 'Objectively Homogeneous Reference Classes', *Synthese* 36 (1977), 399–414.

Professor Paul W. Humphreys has kindly pointed out that statement (5) on page 402 of my paper is incorrect. Although all sequences which are random in the sense of Kolmogorov are random under Church's criterion, the converse is not true. Since nothing else in my paper hinges upon this incidental remark, it should simply be deleted.

W.C.S.
